Explanation of Terms

MAX HR / MAX 8-HR / MAX 24-HR

The highest average contaminant concentration over a one-hour period, an eight-hour period, or a 24-hour period.

NAT'L DAYS

The number of days during the year for which the monitoring station recorded contaminant concentration levels in excess of the national standard.

CAL DAYS

The number of days during the year for which the station recorded contaminant levels in excess of the California standard.

3-YR AVG

The average number of days per year in excess of the national ozone standard, based on the previous three-year period. *An average higher than 1.0 means the region will be considered out of attainment by the EPA.*

PM₁₀

Particulate matter under ten microns in size. (PM₁₀ is only sampled every sixth day. *Actual days over standard can be estimated as six times the number shown.*)

ANN GEO MEAN

The annual geometric mean concentration level for PM₁₀.

Concentrations

ppm = parts per million

pphm = parts per hundred million

ppb = parts per billion

$\mu\text{g}/\text{m}^3$ = micrograms per cubic meter

HEALTH-BASED AMBIENT AIR QUALITY STANDARDS

California Standard

Ozone 9 pphm (1-hour avg.)

Carbon Monoxide 9 ppm (8-hour avg.)

Nitrogen Dioxide 25 pphm (1-hour avg.)

Sulfur Dioxide 40 ppb (24-hour avg.)

Particulates < 10 microns 30 $\mu\text{g}/\text{m}^3$ (ann. geo. mean)

50 $\mu\text{g}/\text{m}^3$ (24-hour avg.)

National Standard

12 pphm (1-hour avg.)

9 ppm (8-hour avg.)

—

140 ppb (24-hour avg.)

—

150 $\mu\text{g}/\text{m}^3$ (24-hour avg.)
