

NEW SOURCE REVIEW

This station will emit more than 10 lbs of VOC in a single day. Thus the BACT requirement of Regulation 2-2-301 is triggered.

BACT for GDFs is considered the use of CARB-certified EVR Phase-I and EVR Phase-II vapor recovery equipment. State law prohibits the District from requiring vapor recovery equipment that is not CARB-certified. This facility will comply with this requirement.

Emissions from this station will remain less than 10 tpy. Per Regulation 2-2-302, offsets are not required.

TBACT

The increased risk from this project exceeds 1 per million, triggering the use of TBACT equipment per Regulation 2-5-301. TBACT for GDFs is considered the use of CARB-certified Phase-I and Phase-II vapor recovery equipment. State law prohibits the District from requiring vapor recovery equipment that is not CARB-certified.

COMPLIANCE

A. Permits – General Requirements, Regulation 2, Rule 1

1. **California Environmental Quality ACT (CEQA), Regulation 2-1-311:** This project is considered to be ministerial under Regulation 2-1-311 and therefore is not subject to CEQA review. The engineering review for this project requires only the application of standard permit conditions and standard emission factors in accordance with Permit Handbook Chapter 2.3 and therefore is not discretionary as defined by CEQA.
2. **Public Notice, Schools, Regulation 2-1-412:** The facility is located within 1000 feet of the outer boundary of Napa Junction Elementary School and within ¼ mile of Calvary Baptist Christian Academy. It is therefore subject to the public notification requirements of Regulation 2-1-412. A public notice will be sent to all parents of students of the above-mentioned school and all residents within 1000 feet of the facility. There will be a 30-day public comment period.

B. Permits – New Source Review, Regulation 2, Rule 2

1. **Best Available Control Technology (BACT), Regulation 2-2-301:** BACT is triggered because the facility will emit more than 10 lbs of VOC per single day. The facility complies with BACT for GDFs.
2. **Offsets, Regulation 2-2-302:** Because the total facility emissions will be less than 10 tons per year, the facility is not required to provide offsets.

C. Permits – New Source Review of Toxic Air Contaminants, Regulation 2, Rule 5

1. **Best Available Control Technology for Toxics (TBACT), Regulation 2-5-301:** TBACT is triggered since the increased cancer risk from this project exceeds 1 per million. The facility complies with TBACT for GDFs.

2. **Project Risk Requirement, Regulation 2-5-302:** The increased cancer risk does not exceed 10 in one million, the chronic and acute hazard indexes do not exceed 1, and therefore the project complies with the project risk requirement.

D. **Fees – Regulation 3**

All applicable fees have been paid.

E. **Gasoline Dispensing Facilities, Regulation 8, Rule 7**

The facility shall comply with Regulation 8-7-301 and 302 (Phase I and Phase II) and CARB Executive Orders VR-101 and VR-202C.

RECOMMENDATION

I recommend that an Authority to Construct be issued to Chevron #306915 reflecting the installation of the Phase II EVR system and the throughput increase to 18.81 million gallons of gasoline per year.
