Subject: Attn: Weyman Lee - Comments on Russel City Energy Plant Permit

Dear Sir,

Please Do Not allow the permit for the Russel City Energy Plant Permit to go forward. The plant will be in violation of EPA emissions rules and the Flight governing board group had previously found the plumes of emissions would interfere with air flights to the airport. Additionally, this money could be better spent to increase energy conservation and generation at the local level (i.e. solar generation at the rooftop level).

The hypocrisy of the air district regulating my fireplace burning and then allowing a large scale polluter like this to be permitted should be examined closely.
Thank you, Patrick Turney
