Subject: Russel City Pollution Plant

The last thing the bay area needs is another source of pollution. How old is the design for the proposed power plant? Who owns Calpine Corporation? This wouldn't be another Texas based money making scheme aimed at bilking the citizen's of the bay area out of millions of dollars and while adding to the problem of air pollution in the basin that includes the bay area?

No to any permits for power plant construction within the bay area. No to the lung clogging additional 86.8 tons per year of Particulate Matter. No to the smog making of an additional 134.6 tons of Nitrogen Oxides per year. No to the displacement of breathable air by an additional 389.3 tone of Carbon Monoxide per year.

No to the collusion of EPA or Bay Area Air Quality Management District offices with out-of-state corporations that promote their bottom line over the local quality of life of area residents. Let the owners of Calpine build their homes over the smoke stacks of their previously built power plants and watch how their families prosper.
