Subject: Opposition to Russell City Energy Project - Chabot College

Mr. Lee,

I understand that there is a new project at hand for energy in the Hayward area. Of course, energy is a necessity, however, exposing thousands of people (mostly children and young adults going to the various elementary and middle schools, as well as the thousands of students that go to Chabot College daily) to harmful chemicals and atmospheric pollutants without truly informing the public of hazards that may arise.

As a Registered Nurse I fear for the population with already existing respiratory problems, and would imagine many more developing for the nearby residents if a constant flow of pollutants is inhaled daily. Is there no way to offset these emissions? A proposition elsewhere? The athletes that train on the Chabot campus will suffer. The student body will suffer. All in all its a bad proposition.

Victor R. Lopez
