Subject: Russell City Energy Plan in Hayward

Dear Mr. Lee and Air Quality Management Team,

As a Resident of Castro Valley, I can assure you no one wants this Energy Plant in Hayward. As you are well aware, this Energy Plant would be surrounded by very populated cities and extremely heavy traffic conditions, which is an extremely unhealthy mix with No2, CO, POC, PM2, PM10, SO2, Ammonia, Benzene, Formaldehyde, Diesel particulate matter and Polycyclic Aromatic Hydrocarbons, and soot on a population of this gigantic proportion.

It is your SOLE responsibility to protect the Health and Air Quality of the Bay Area, please do your job, making an honest, sincere decision, protecting our health. Please do not issue this permit, be a leader in this cause and stand up like a true Californian for our environment, the whole Nation looks at us for guidance and leadership concerning our environment, do what is ethically correct, do we really NEED this plant NOW?

A couple of last thoughts, Hayward has two (2) colleges within minutes of this Power Plant, you are putting the lives of thousands of young student at health risks. As you already must know Breast Cancer statistically shows it is the highest in Alameda County.

Hayward Area Recreation District (HARD) is one of many local agencies against this power plant, they have worked hard to establish healthy wetlands and outdoor spaces for the population. We do not want to now look like a Pittsburg or Richmond!

Also, Weyman and Team.....This project will effect all of us, because, baby, the air blows all over, even, across the bay to San Francisco.

Sincerely,

Barbara V. and Family
