Subject: Russell City Power Plant Proposal

I work at Chabot College, and I am very much opposed to the proposed power plant. We should all consider the adverse climate effects of such a plant but also the effects on the health of the students and staff at Chabot College.

We will not stop global warming and the damage to our planet and our local environment with measures that are comfortable to all of us in our energy use. We will have to do what is best for all of us even if it means sacrificing some comfort, and you should be leading the way.
