Dear Mr. Weyman Lee,

I am writing this letter to oppose the construction of the fossil fuel plant that is going to be built in Hayward. As a student in environmental leadership I am aware of the problems that your plant would bring to our city. One of the major problems would be that your plant would release 12.2 tons of sulphur dioxide per year. As I'm sure you know this would be a harmful combination with rain. This would lead to a lot of destruction and would put people's health at risk. Another issue would be that your plant would release 393.3 tons of Carbon Monoxide a year. With global warming going on this would really affect our everyday life for the years to come. Another major issue would be that this plant would release 121,000lb of ammonia. So this could be a huge impact on many people's health and how our cities will run. I strongly believe that you are a smart man and will make the choice to not build this plant. If this plant really needs to be built I suggest a solar plant. It would really benefit everyone and isn't harmful. If you were to live here I'm sure you wouldn't want this plant built.

Sincerely,

Jennifer Martinez
