Green Letter

Dear Mr. Weyman,

Hi, my name is Calvin SaeLee and I am a 10th grader in San Lorenzo High. I am writing this letter in opposition to the construction of the power plant on the Hayward Shoreline. I am concerned about the harm that would be inflicted in the area of this plant, and the effects it would have on our already much polluted atmosphere. I am not going to bore you with the facts you probably already know and grow tired of, but, let me remind you of 2 things.

1. If you decide to build this power plant you would be poisoning all of the living things in the area.

2. You would be contributing to the already hundreds of factories poisoning our atmosphere in this area.

Let me ask you this. Do you care for the thousands of children/grand children that live in this area? Did you know that you are helping to make things worse for the next generation to clean up after? You may have already heard these things but don't do this. Don't make this plant for the millions of the next generation to clean up after. And if you really need the energy make something else like a solar power plant or even a wind power plant. You would be doing mankind a generous favor for not building this harmful plant. Thank you for taking the time to read my letter.

Sincerely,

Calvin SaeLee
