Dear Mr. Weyman Lee

Hi, I'm Aldrin Delos Reyes; I'm a student of San Lorenzo high school. I'm sophomore. I'm in environment leader class (Green Academy) why are you making a big and dangerous power plant? You can just use a wind bill to save money and help our nature and the global warming get down. And if you create that thing some of the people might in danger. Because of the gas that the factory will make more pollution. Will make the world more in danger and the earth will get warmer and warmer. Do you know? What that thing can do in the future when you create? The future is in danger. And do you know that thing emit 389, 3 ton (1 ton = 2,000 l .b) of carbon monoxide per year? And more like sulphur dioxide, ammonia, and 1, 926, 399 metric tons of carbon dioxide is the main contributor of global warming. So please think about future or the people in the world. So please don't make that thing so that in the future the people are not in danger. Your family my family everyone's family and that well gave us a good future. And all will be happy ^^

Sincerel y b

Aldri n Del os Reyes
