Dear WeymanLee,

September 17, 2009

Hello my name is Maria Alatorre. I'm 15 years old. I'm a student in San Lorenzo high school where I'm taking a class called Environmental Leadership in Action. I'm writing this letter because I oppose the construction of the power plant on Hayward Shoreline. It would emit 121,000lb. per year of ammonia and 1,926,399 metric tons of carbon dioxide. Carbon dioxide is the main contributing factor in global warming. This power plant also would affect people and animals alike. This also would be bad in the future for people that have asthma or have other health problems. Instead of building a fossil fuel power plant, build a solar plant or wind power plant.

Sisterly,

Maria Alatorre
