Subject: The Russell City Project

Dear Mr. Weyman ,

Hello my name is Khalidah Wilhelm i am a Sophmore at SLZ and im writing you today about the Russell City Project . Building this powerplant will cause alot of harm to our enviorment . Even though you don't think so you also don't have to live and breath the chemicals the powerplants would be releasing day after day . If you build this powerplant you will be releasing 389.3 tons of carbon monoxide , 12.2 tons of sulfer dioxide , 121,000 lb of ammonia , and 1,926,399 metric tons of carbon dioxide per year . All of that will go in the air and /or water and affect the people that live her everyday . Carbon dioxide is also a mojour contributor to global warming . If you build this powerplant on the Hayward shorline that may cause harm to the sealife . Polution can spill out from the powerplant and kill hundreds of sealife . Polution can also get in the air and affect the people with Asthma , like my cousin . Also the power from that palnt is not even going to even come to the citezens in Hayward its going to San Mateo . I fell that if its absoulty nessasairy to build this plant then you should try a alternative type ofe poer like solar wind , or tidal OR build the plant in the city that its getting built in . Thank you for reading my opi on i hope you will take it into consi derati on .
