Subject: Fossil Fuel Power Plant.

Dear Mr. Weyman Lee,

My name is Nicole Quinzon I go to San Lorenzo High School. I'm a sophomore student 15 years old. I'm involved in the green academy as a Environment Leader. Mr. Weyman Lee if you built a new Power Plant there would be no way that we could save our mother earth because CO2 is the main contributor of global warming, our teachers and parents influences us to save our Earth to save global warming. As a teenager I'm very concern because I have asthma and it will get worse if we keep polluting earth.

Since the power plant emits 121,000 pounds per year of ammonia, 12.2 tons per year of sulphur dioxide, 389.3 tons of carbon monoxide per year. This will be all bad for the future. Instead of building a fossil fuel power plant build a environmental friendly alternative energy center, like solar energy or wind power energy.

Sincerely Nicole Quinzon
