Subject: Energy sources..

09/16/09

Dear Mr. Weyman

My name is Ana Santana and I am a student at San Lorenzo High School and it's a pleasure for me to write you this letter to oppose the construction of this plant on

The Hayward Shoreline. I believe that it's very sad that carbon dioxide that the plant would emit would worsen Global warming, 1,926,399 metric of Co2/year this contributes to Global warming, they should use more solar energy for example, and they need energy fusel instead of alternative energy. Another issue is that they should develop more energy. A 14 - story high fossil fuel plant. 1000 ft. High Plume takes off a lot of fire and contaminates the air. It also makes carbon, 389.9 tons per year. Co2 is the main contributor of Global warming. Emits 121,000 lbs of ammoning (NH4) carbon dioxide.
