Subject: Calpine/Hayward- My personal health

Dear Weyman,

I noticed that yesterday and today are spare the air days. Since there has been an active campaign educating the public about pollution, will the proposed power plant close production on these days as well? I am concerned that the air quality in Hayward will get worse, especially if the power plant is running and the ambient air quality is poor, such as spare the air day. Could you advise me on what this will be like?

Also, during the winter months, I notice that you also have aggressive campaigns going on concerning fireplaces. If the power plant is built will they be required to shut down operations also on the spare the air days during the winter months since it's the particulate matters that are quite dangerous to us?

Given the number of spare the air days and with the new proposed power plant, should I consider moving as I have been a life-long suffer of acute asthma? My uncle died from acute asthma at an early age of 67 and I would really like to live longer than he did.

I really don't want to hear the answer that the choice is mine whether to move or not, I know that. I am looking to you as an expert air quality professional that knows more about particulates, etc. than I do. I need to trust your opinion and judgement.

Please, I would sincerely appreciate answers to my questions.

Thank you kindly.
Holly Rogers
