Subject: Here is the startup NOx emission spreadsheet we talked about

Brian

This shows how we built the startup NOx emissions over the 30 minute period. Let me know if you have any questions about this. I will see you tomorrow in Sacramento.

Best Regards - jsl

(See attached file: backup for startup emissions to BAAQMD.xls)

NOx 20.83 lb/hour cold temperature mass emission rate for 2.5 ppm NOx
 75 lb/hour cold temperature mass emission rate for 9 ppm NOx (assumed by scaling based on ppm)

14 pounds is cumulative NOx emissions during first 11 minutes of startup (to reach 9 ppm)
 12 pounds is cumulative NOx emissions during a 6 minute shutdown

Assume linear decrease in mass emissions of NOx during minutes 28-30 to reach 2.5 ppm
