Subject: MEP: Technical Information to Support the Proposed BACT Emission Levels for the Mariposa Energy Project

Good Evening Madhav and Brenda,

Per the BAAQMD's request, Mariposa Energy is providing the attached technical information to support the proposed emission levels for the Mariposa Energy Project of 2.5 ppm NOx (1-hour), 2.0 ppm CO (3-hour), 2.0 ppm POC (1-hour), and 2.5 lb/hr PM. To simplify your review of this information we have prepared it in a similar format to the Marsh Landing PDOC document. A PDF copy of the footnote reference material (and index) has been provided with the exception of the reference materials that were the same as those found in the Marsh Landing Generating Station PDOC.

If you have any questions regarding the attached materials or if you need any additional information, please give me a call.

Thank you,

Keith McGregor
