**Subject:** CO catalyst cost

Kathleen, the CO catalyst bid provided to you from BASF did not include the cost for additional HRSG modules which are needed for housing the catalyst. The additional cost of \$250,000 was added to each of the quotes.

For example, the cost to control CO from 9 ppm down to 2 ppm is:

Catalyst \$489,000  
Frame \$90,000  
HRSG Modules \$250,000  
Total: \$829,000

Regards.

*Gregory Darvin*
