

BAY AREA
AIR QUALITY
MANAGEMENT
DISTRICT

PUBLIC NOTICE

March 20, 2013

TO: Parents or guardians of children enrolled at the following schools:

Holy Angels Elementary School
Margaret Pauline Brown Elementary School

All residential and business neighbors located within 1,000 feet of the proposed new or modified source of air pollution listed below.

FROM: Bay Area Air Quality Management District

RE: Permit Application #25087 for the following source of air pollution:

Soil Vapor Extraction System
Antea Group
3001 Junipero Serra Boulevard, Daly City, CA 94014

The Bay Area Air Quality Management District (the “District”) is a local agency that regulates stationary sources of air pollution such as factories, industrial sites, and gasoline stations.

Whenever we receive a permit application for a new or modified source of toxic air contaminants located within 1,000 feet of a school site, State law requires that we notify the public. To comply with this requirement, we distribute or mail a Public Notice to the parents or guardians of students enrolled at schools located within ¼ mile, and all residents and businesses located within 1,000 feet, of the proposed source.

You are receiving this Public Notice because a permit application has been filed with the District for the above referenced source of air pollution. A description of the proposed project follows:

On behalf of 76 (Former BP) Service Station, Antea Group has applied an Authority to Construct and/or Permit to operate. To remedy an existing contamination problem, a Soil Vapor Extraction and Treatment System has been proposed for this site. Underground storage tanks formerly located at the site leaked gasoline into the surrounding soil and contaminated both the soil and groundwater. The leaking tanks have since been removed from the site. Antea Group has proposed a system consisting of a vacuum blower to extract petroleum vapor from wells drilled at the site. Treatment of the extracted vapor will be accomplished by Electric Catalytic Oxidizer / Carbon adsorption. Emissions from the proposed source will be significantly controlled.

PRELIMINARY EVALUATION

The District has evaluated the permit application for the proposed project and has made a determination that the project is expected to comply with all applicable District, state, and federal air quality-related regulations, including the health risks resulting from toxic air contaminant emissions. The preliminary recommendation is to issue a permit for this project. After considering all comments received, the District will make a final determination.

ADDITIONAL INFORMATION

If you are interested in getting more information, you may request copies of the the District's evaluation report by calling the District at the telephone number listed at the end of this notice. This information also accessible on the District website at:
