III. GENERALLY APPLICABLE REQUIREMENTS

The permit holder shall comply with all applicable requirements, including those specified in the BAAQMD and SIP Rules and Regulations and other federal requirements cited below. These requirements apply in a general manner to the facility and/or to sources exempt from the requirement to obtain a District Permit to Operate. The District has determined that these requirements would not be violated under normal, routine operations, and that no additional periodic monitoring or reporting to demonstrate compliance is warranted. In cases where a requirement, in addition to being generally applicable, is also specifically applicable to one or more sources, the requirement and the source are also included in Section IV, Source-Specific Applicable Requirements, of this permit. This section also contains provisions that may apply to temporary sources.

The dates in parentheses in the Title column identify the versions of the regulations being cited and are, as applicable:

1. BAAQMD regulation(s): The date(s) of adoption or most recent amendment of the regulation by the District Board of Directors
2. Any federal requirement, including a version of a District regulation that has been approved into the SIP: The most recent date of EPA approval of any portion of the rule, encompassing all actions on the rule through that date

The full language of the SIP requirements is posted on EPA Region 9's website. The address is:

<http://yosemite.epa.gov/r9/r9sips.nsf/Agency?ReadForm&count=500&state=California&cat=Bay+Area+Air+Quality+Management+District-Agency-Wide+Provisions>.

NOTE:

There are differences between the current BAAQMD rules and the versions of the rules in the SIP. All sources must comply with both versions of the rule until US EPA has reviewed and approved (or disapproved) the District's revision of the regulation.

VII. APPLICABLE LIMITS & COMPLIANCE MONITORING REQUIREMENTS

This section has been included only to summarize the applicable emission limits contained in Section IV, Source-Specific Applicable Requirements, of this permit. The following tables show the relationship between each emission limit and the associated compliance monitoring provisions, if any. The monitoring frequency indicates whether periodic (P) or continuous (C) monitoring is required. For periodic monitoring, the frequency of the monitoring has also been shown using the following codes: annual (A), quarterly (Q), monthly (M), daily (D), or on an event basis (E). No monitoring (N) has been required if the current applicable rule or regulation does not require monitoring, and the operation is unlikely to deviate from the applicable emission limit based upon the nature of the operation.

This section is only a summary of the limits and monitoring requirements. In the case of a conflict with any requirement in Sections I-VI, the preceding sections take precedence over Section VII.

IX. PERMIT SHIELD

A. Non-applicable Requirements

Pursuant to District Regulations 2-6-233 and 2-6-409.12, the federally enforceable regulations and/or standards cited in the following table[s] do not apply to the source or group of sources identified at the top of the table[s]. Enforcement actions and litigation may not be initiated against the source or group of sources covered by this shield based on the regulatory and/or statutory provisions cited, as long as the reasons listed below remain valid for the source or group of sources covered by this shield.

Table IX A - 1
Permit Shield for Non-applicable Requirements
S10, S11, S12, GLASS MELTING FURNACES

Citation	Title or Description (Reason not applicable)
40 CFR 60, Subpart CC	Standards of Performance for Glass Manufacturing Plants (Rebricking of the furnace, which occurs every several years, does not meet the definition of reconstruction under 40 CFR 60.15.)

X. REVISION HISTORY

Title V Permit Issuance (Application 25846):	January 5, 2000
Minor Revision/Administrative Permit Amendment: (no application) Corrections in capacity of S11, Furnace; S12, Furnace; and S39, Raw Material Unloading Station. Change in the deadline for installation of NOx monitor. Change in recordkeeping for glass production. Condition I.J added to standard conditions regarding enforceability of stated capacity.	October 2, 2000
Replacement of Responsible Official (no application)	September 24, 2001
Significant Revision (Applications 6869/6876) Deletion source test requirement for S39, S57, S75-S77, S79-S81, S83, S84, S97 Corrected citation of abatement devices for S43, S44, S48, S50, S52, S56, S58 Monitoring has been removed from S43 and S44 The description of the BAAQMD 6-301 limit in BAAQMD Condition 15855, part 2 has been corrected to say "for no more than three minutes in any hour." The description of the BAAQMD 6-301 limit in Section VII has been corrected to say "for \leq 3 min/hr." BAAQMD 6-310 and 6-311 were deleted from the Section IV and VII tables for S39, S57, S75-S77, S79-S81, S83, and S84, because these standards apply only to sources that have stacks. The term "TSP" in Section VII has been changed to "FP", which means "filterable particulate." The dates in Section I.A.1 were updated. Section I.A.11, which requires the responsible official to certify all documents submitted, was added to conform to changes in Regulation 2, Rule 6. Section I.E.1 requiring the permit holder to provide any information, records, and reports requested or specified by the APCO, was added because it was omitted in error. Section I.H was modified to conform to the current standard.	July 15, 2004
Significant Revision, continued (Applications 6869/6876) The Abatement device table, II-B, has been modified so that there is no confusion between the citation of standards and the standards themselves.	July 15, 2004
