

December 11, 2004

Mr. Dharam Singh
Bay Area AQMD Engineering
939 Ellis Street
San Francisco, CA 94109

011412

Dear Mr. Singh:

On behalf of my client, Acme Fiberglass, Inc. I am attaching an application for emission reduction credit on behalf of Acme Fiberglass, Inc. (Facility #A0575). Due to the loss of important contracts the owner has decided to shut down the business. Operations continued through September, 2004 and on October 28, 2004 all equipment and supplies were sold at auction. The operations have shut down permanently and will not be relocated. The emission reductions are based on the 3-year operations history of units 1, 2 and 3 commencing September 2001 through September 2004. Unit #4 was an inactive resin storage tank and does not result in emission reductions. The emissions were calculated from operating logs and emission reports submitted to the District. The basis of emission calculations are purchase records and plastic composite emission factors as published in Subpart WWWW to 40 CFR Part 63.

It is the intention of Acme Fiberglass, Inc. to surrender the operating permits, including the recently issued Major Facility Review Permit A0575. The facility owner should be invoiced for the any fees related to this application. As the business has shut down, any correspondence should be addressed to the ERC owner indicated on the application:

Bill Gonsalves
3000 F Danville Blvd No. 333
Alamo, CA 94507
(510) 409-1691

In summary, this is an application for emission reduction credit from the shutdown of three permitted sources and will result in termination of the local and federal operating permits. Technical questions concerning this application and the emission factors should be directed to Tom Hadden, at the location indicated on the letterhead and application. Please do not hesitate to call me at (916) 939-4444 if you have any questions.

Sincerely

Thomas S. Hadden
