Proposed Amendments to Regulation 2, Permits – Technical Working Group Meeting

District staff held a public workshop on February 22, 2012, to discuss proposed amendments to Regulation 2, Rules 1, 2, 4 and 6. At the workshop, participants requested a follow-up meeting to review the text of specific provisions affected by the proposed amendments. District staff convened a technical working group to do so and held an initial meeting on February 28, 2012. District staff have scheduled a further technical working group meeting for Thursday, March 8, 2012 at 9:30 a.m. in the District's 2nd Floor Training Room (939 Ellis Street, San Francisco). All interested stakeholders who would like to discuss the text of the proposed amendments are invited to attend this meeting. Due to size limitations, please RSVP for this meeting by sending an email to Carol Lee at clee@baaqmd.gov or by calling 415-749-4689. This meeting will NOT be webcast.

In addition, due to the technical complexity of the proposed amendments, several of the members of the technical working group asked for more time to prepare and submit written comments. District staff are therefore extending the March 2 deadline for submitting comments until March 27, 2012 in order to allow interested stakeholders to fully consider and comment on the language of the current proposal. District staff request that any comments on major policy issues raised by the current proposal (e.g., issues surrounding the proposal to add a District BACT requirement for PM$_{2.5}$ at a 10 lb/day threshold, the proposal to add GHG permitting requirements at the 100,000 tpy CO$_2$e effective threshold under EPA's tailoring rule, the proposal to seek a SIP-approved PSD permitting program, etc.) be submitted by the original March 2 deadline in order that the District can begin to consider them.

Further Technical Working Group Discussion of Text of Proposed Amendments to Regulation 2, Rules 1, 2, 4 and 6
Thursday, March 8, 2012
9:30 am – 12:30 pm
Air District Office, 939 Ellis Street, San Francisco
2nd floor Training Room
