

Public Workshops on Air Quality

Climate Pollutants, Odors, VOCs, Toxics

The Air District invites the Bay Area community to learn about the development of these new air quality regulations:

Regulation 13: Climate Pollutants would establish uniform definitions and requirements for regulating emissions of greenhouse gases and related pollutants.

Rule 13-1: Significant Methane Releases will be the Air District's first rule specifically focused on regulating methane, a powerful greenhouse gas. The purpose of this rule is to address large scale methane releases from any sources in the Bay Area.

Rule 13-2: Organic Material Handling aims to minimize emissions of methane and odors from all facilities processing organic materials through the application of best management practices, odor impact monitoring, and strengthening of odor control standards.

Rule 13-3: Composting Operations aims to minimize and control emissions of volatile organic compounds, methane and odors from composting operations by providing consistency in the permitting and compliance of composting facilities.

Rule 13-4: Waste Water Treatment Operations

Rule 8-34: Solid Waste Disposal Sites

Join us for presentations and discussion with Air District staff on the development of these new regulations.
