Air District issues sixth Spare the Air Alert for smog

Unhealthy smog levels worsened by smoke in the region

SAN FRANCISCO – Today, the Bay Area Air Quality Management District is issuing its sixth Spare the Air Alert for smog this year in addition to the ongoing **Air Quality Advisory** for wildfire smoke.

Air quality is forecast to be unhealthy tomorrow, Thursday, August 9, 2018, due to pollution from millions of automobiles in the region and smoke from wildfires. Starting Friday, air quality conditions are expected to improve through the weekend with increased onshore winds. There is no free transit tomorrow. Wood burning is highly discouraged but not banned.

“The Bay Area is suffering an air quality one-two punch – smog from auto exhaust and smoke from multiple wildfires,” said Jack Broadbent, executive officer of the Air District. “Bay Area residents should continue to protect their health and remain alert of current air quality conditions as wildfires continue to burn and as we move into the hottest weeks of summer.”

Spare the Air Alerts for smog are issued when ozone pollution is forecast to reach unhealthy levels. Ozone, or smog, can cause throat irritation, congestion, chest pain, trigger asthma, inflame the lining of the lungs and worsen bronchitis and emphysema. Long-term exposure to ozone can reduce lung function. Ozone pollution is particularly harmful for young children, seniors and those with respiratory and heart conditions. When a Spare the Air Alert is issued, outdoor exercise should be done only in the early morning hours when ozone concentrations are lower.

If the smell of smoke is present, it is important that Bay Area residents protect their health by avoiding exposure. If possible, stay inside with windows and doors closed until smoke levels subside. Set air conditioning units and car vent systems to re-circulate to prevent outside air from moving inside.

Smoke can irritate the eyes and airways, causing coughing, a scratchy throat and irritated sinuses. Elevated particulate matter in the air from smoke can trigger wheezing in those who suffer from asthma, emphysema or COPD. Elderly persons, children and individuals with respiratory illnesses are particularly susceptible to elevated air pollution levels and should take extra precautions to avoid exposure.
