### **Air District issues eleventh Spare the Air Alert for smog**

*Unhealthy smog levels worsened by smoke in the Bay Area*

**SAN FRANCISCO** – The Bay Area Air Quality Management District is issuing its eleventh Spare the Air Alert for smog this year in addition to the ongoing **Air Quality Advisory** for smoke due to wildfires.

**Air quality is forecast to be unhealthy tomorrow, Monday, September 3, 2018, due to pollution from millions of automobiles in the region and smoke from wildfires.** There is no free transit tomorrow. Wood burning is highly discouraged but not banned.

“The millions of cars on Bay Area roads each day combined with hot temperatures and ongoing wildfire smoke are expected to cause poor air quality in the Bay Area,” said Jack Broadbent, executive officer of the Air District. “Help protect the health of Bay Area residents by carpooling and taking transit every day to reduce transportation-related smog.”

Spare the Air Alerts for smog are issued when ozone pollution is forecast to reach unhealthy levels. Ozone, or smog, can cause throat irritation, congestion, chest pain, trigger asthma, inflame the lining of the lungs and worsen bronchitis and emphysema. Long-term exposure to ozone can reduce lung function. Ozone pollution is particularly harmful for young children, seniors and those with respiratory and heart conditions. When a Spare the Air Alert is issued, outdoor exercise should be done only in the early morning hours when ozone concentrations are lower.

If the smell of smoke is present, it is important that Bay Area residents protect their health by avoiding exposure. If possible, stay inside with windows and doors closed until smoke levels subside. Set air conditioning units and car vent systems to re-circulate to prevent outside air from moving inside.

Smoke can irritate the eyes and airways, causing coughing, a scratchy throat and irritated sinuses. Elevated particulate matter in the air from smoke can trigger wheezing in those who suffer from asthma, emphysema or COPD. Elderly persons, children and individuals with respiratory illnesses are particularly susceptible to elevated air pollution levels and should take extra precautions to avoid exposure.
