# Air District extends Spare the Air Alert for smoke through Monday

*Smoke continues to blanket the Bay Area*

**SAN FRANCISCO** – The Bay Area Air Quality Management District is extending the Spare the Air Alert for wildfire smoke through Monday, September 14. This will be the 26<sup>th</sup>, 27<sup>th</sup> and 28<sup>th</sup> consecutive Spare the Air Alert called.

Smoke from the many fires throughout California, Oregon and Washington is continuing to heavily impact the Bay Area and is forecast to produce unhealthy air quality throughout the region through Monday. **It is illegal for Bay Area residents and businesses to use their fireplaces, wood stoves, pellet stoves, outdoor fire pits or any other wood-burning devices during a Spare the Air Alert for particulate pollution.**

“A thick blanket of smoke from the many wildfires blazing in California and Oregon is causing unhealthy air quality in the Bay Area,” said Jack Broadbent, executive officer of the Air District. “More than ever this weekend, residents should track air quality conditions in their communities and protect their health and avoid smoke exposure by staying indoors.”

Spare the Air Alerts are issued when ozone or particulate matter pollution is forecast to reach unhealthy levels. If the smell of smoke is present or visible, it is important that Bay Area residents protect their health by avoiding exposure. If possible, stay inside with windows and doors closed until smoke levels subside. If temperatures are too hot indoors, visit an air-cooling center or other building that provides filtered air. It is also recommended that Bay Area residents set air conditioning units and car vent systems to re-circulate to prevent outside air from moving inside.

Smoke can irritate the eyes and airways, causing coughing, a dry scratchy throat and irritated sinuses. Elevated particulate matter in the air can trigger wheezing in those who suffer from asthma, emphysema or COPD. Elderly persons, children and individuals with respiratory illnesses are particularly susceptible to elevated air pollution levels and should take extra precautions to avoid exposure.
