### **Air District issues air quality advisory for Thursday**

**SAN FRANCISCO** – The Bay Area Air Quality Management District is issuing an air quality advisory for wildfire smoke for tomorrow, Thursday, August 12.

Northerly winds are expected to bring smoke from the Northern California and Southern Oregon wildfires into the Bay Area. Smoke is expected to be mostly aloft with intermittent periods of smoke mixing to the surface, particularly at higher elevation locations in the North and East Bay regions. Air quality is not expected to exceed the federal health standard and therefore, no Spare the Air Alert is in effect. Due to active wildfires and changing wind patterns, smoky, hazy skies may be visible and air quality throughout the Bay Area could be impacted. The Air District will be closely monitoring air quality throughout the region for smoke impacts from the fires.

If the smell of smoke is present, it is important that Bay Area residents protect their health by avoiding exposure. If possible, stay inside with windows and doors closed until smoke levels subside, if temperatures allow. It is also recommended that those impacted by smoke set their air conditioning units and car vent systems to re-circulate to prevent outside air from moving inside.

Smoke can irritate the eyes and airways, causing coughing, a scratchy throat and irritated sinuses. Elevated particulate matter in the air can trigger wheezing in those who suffer from asthma, emphysema or COPD. Elderly persons, children and individuals with respiratory illnesses are particularly susceptible to elevated air pollution levels and should take extra precautions to avoid exposure.
