Air District issues air quality advisory for Friday & Saturday

SAN FRANCISCO – The Bay Area Air Quality Management District is issuing an air quality advisory for wildfire smoke for Friday and Saturday, August 27 and 28.

Smoke from wildfires across California is predicted to impact the Bay Area on Friday and Saturday. Lofted smoke is expected to cause hazy and smoky skies, but pollution levels are not expected to exceed federal health standards and **no Spare the Air Alert is in effect**. Air quality is expected to be in the moderate range on the Air Quality Index. The Air District will be closely monitoring air quality throughout the region for smoke impacts from the fires.

If the smell of smoke is present, it is important that Bay Area residents protect their health by avoiding exposure. If possible, stay inside with windows and doors closed until smoke levels subside, if temperatures allow. It is also recommended that those impacted by smoke set their air conditioning units and car vent systems to re-circulate to prevent outside air from moving inside.

Smoke can irritate the eyes and airways, causing coughing, a scratchy throat and irritated sinuses. Elevated particulate matter in the air can trigger wheezing in those who suffer from asthma, emphysema or COPD. Elderly persons, children and individuals with respiratory illnesses are particularly susceptible to elevated air pollution levels and should take extra precautions to avoid exposure.
