The overall budget to include all elements of this project is $2,126,586.00. The budget includes $1,345,423 for Co-Applicants is Groundwork Richmond, Richmond Trees, and the Watershed Project. This includes $948,315 for project staff salaries and wages, $225,748 for trees and necessary equipment, $14,600 for youth and Block Ambassador trainings, and $156,760 for indirect and contingency costs.

$612,946 is for the City of Richmond Parks and Landscaping Lead Worker (100 percent FTE), Intern (55 percent FTE), Project Manager (3.50 percent FTE), Associate Management Analyst (4.50 percent FTE), and Administrative Assistant (8.00 percent FTE) to support execution of this project, ensure completion of grant commitments, coordinate community engagement and collaboration across projects, and manage contracting, invoicing, and payments. Also, $13,293 will support CSC and other community meetings, shared spaces, and Richmond Rising Together outreach materials.

The budget includes $29,164 for UC Berkeley for a Project Director (16.6 percent FTE) and a $50/hour x 208 hours PhD student researcher to prepare annual and end-of-project reports, manage a project data dashboard, and capture the impact of the projects in reducing negative mental health impacts. $70,760 is for STEAM the Streets for a Project

Manager (29 percent FTE) and a Creative Program Lead (17 percent FTE) with program and administrative costs for one year to produce community-centered storytelling that highlights local air quality and climate solutions across Richmond. Funds will also provide two youth stipends and additional promotional materials.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The project aligns with the City of Richmond Urban Greening Master Plan, City of Richmond Climate Adaptation Plan, Richmond Resilience Roadmap, and Richmond General Plan 2030 - Community Health and Wellness Element, Economic Development Element. These plans prioritize increasing urban tree canopy, reducing exposure to air pollution, mitigating extreme heat, and improving watershed health. The project directly advances these goals by expanding urban vegetation and green stormwater infrastructure within the neighborhoods identified as highly impacted by environmental burdens. Richmond's General Plan 2030 Community Health and Wellness Element noted that the city has a higher rate of air quality incidents per capita than the Bay Area average and includes Policy HW9.1, through which the City commits to working with stakeholders to reduce impacts associated with air quality on disadvantaged neighborhoods and to meet or exceed air quality standards. The traffic-calming benefit of street tree planting also aligns with the city's Local Roadway Safety Plan. By integrating air quality improvement, climate adaptation, road safety and workforce development, the project contributes to regional efforts to reduce $PM_{2.5}$ air pollution while building community resilience to climate change. At the regional and state level, the project supports the goals of the Bay Area Air District's Community Health Protection Program and the California Air Resources Board's Community Air Protection Program (both implementing AB 617), which prioritize reducing exposure to air pollution in communities disproportionately impacted by emissions. The project is consistent with California's Proposition 4, which aims to support efforts such as watershed improvement and workforce development and to reduce the risks of climate change impacts on communities.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The City received $1 million in grant funding from the California Strategic Growth Council's Transformative Climate Communities (TCC) Program in 2022 to fund the

planting of 1000 trees over 5 years in the Iron Triangle, Santa Fe, and Coronado neighborhoods. Groundworks Richmond is a partner in this tree planting project. This work is part of a larger $35 million grant to fund a constellation of community resilience projects over 5 years through a project called Richmond Rising. The 10 Richmond Rising projects address air quality and health issues in the community through active transportation projects, resilient homes and landscapes programs, and health and well-being projects. The City also received grant funding from CAL Fire and the US Environmental Protection Agency in 2012 to conduct previous tree inventory and tree ordinance update efforts.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

In considering the factors in long-term success of tree plantings, the most effective, efficient, and proactive maintenance strategy and the factor over which the City and partners have the most control is appropriate site selection: choosing sites that best support trees and minimize problems created by trees, which may include future root growth that cracks or lifts pavement and branch growth that causes problems with power lines. For this reason, this project invests heavily in upfront coordination on planting sites. The City of Richmond will dedicate two years of 1.0 FTE parks and landscaping lead worker as well as 2.0 FTE of intern support during the grant period to the coordinate partners and planting sites.

The City will provide ongoing staff time funded through the City's General Fund for ongoing maintenance of planted trees. The City recently invested in capacity for tree maintenance, increasing the number of arborists on staff from zero to four over the past year and have hired two tree trimmer positions. The City has a long history of partnering with community organizations to conduct tree planting activities; therefore, the City is able to focus on maintenance activities.

The City will leverage work already underway to ensure that planting efforts are targeted to areas with the greatest need, ensure efficiency in planting strategy, and support maintenance past the end of the grant period. The City received grant funds from the Hellman Foundation to conduct a tree inventory update, select an improved software product to manage tree maintenance, establish a Tree Maintenance Plan, and develop an Urban Forest Management Plan. Planting needs identified through the inventory will be fulfilled by the partners in this project, and the trees planted will in turn be supported by the forthcoming maintenance strategy and the City's recent investment in staffing.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- *Readiness documents, such as documentation demonstrating any necessary approvals, permits, or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.*
- *If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.*
- *Indicate "N/A" if the question is not applicable to the project*

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

Residential rain gardens and tree plantings generally do not require discretionary permits. Wherever it applies, City of Richmond staff will work with community partners to ensure permits can be approved in an efficient manner. Site preparation will follow all standard safety and utility protocols, including 811 utility locating prior to excavation. Because the City of Richmond will be working closely with partners on this project, and because partners have extensive experience with coordinating with the City on permitting and approvals for tree planting.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

The project is expected to qualify for a CEQA Categorical Exemption under Section 15304 (Minor Alterations to Land). The City of Richmond will confirm and document CEQA compliance prior to implementation.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

For trees that will be planted in the City's right-of-way, such as street trees, the City already has control of these sites because they are within publicly owned land. No property acquisition, leasehold, or easements are required for project implementation. For trees planted on private property, partners will secure site control through voluntary

participation and maintenance agreements with homeowners, including signed installation permissions and maintenance agreements.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Project partners will maintain trees during the two- to three-year establishment period. After the grant term, maintenance responsibility will transition to the City for public trees and participating residents for trees on private property, supported through General Fund staffing and future grant opportunities.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Potential barriers to project implementation include site suitability constraints for trees on publicly owned sites, engagement of and coordination with residents for trees on privately owned sites, or trees in the Adopt-a-Tree program, ensuring consistent tree establishment during early growth and vandalism:

- **Site Suitability.** Street tree planting in the public right-of-way requires careful site selection to avoid conflicts with utilities, infrastructure, and spacing limitations. The City of Richmond will work with its community partners to review sites in advance and ensure all plantings meet established standards.
- **Resident Engagement and Coordination.** Resident participation is important, as adjacent property owners play a role in supporting long-term tree care when trees are planted on private property when residents commit to help care for trees planted in the public realm. Project partners will mitigate this risk through direct outreach, clear communication, and engagement during and after the planting process to ensure residents are informed and supportive.
- **Tree Establishment:** Ensuring consistent watering and care during the establishment period is another key consideration. This will be addressed through structured maintenance plans. The project's dedicated maintenance phase further reduces the risk of early tree loss.
- **Vandalism.** Vandalism of the trees may also be a challenge. The project addresses this risk by working closely with the community to ensure widespread awareness and support for the project's goals and creating a sense of ownership through volunteer workdays, workforce development programs, and the Block Ambassador program.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Rooted: Expand Richmond's tree canopy, increase climate resilience, and foster interconnected neighborhoods by planting 600 trees and 10 rain gardens in neighborhoods disproportionately impacted by air pollution, extreme heat, and flooding. Over the five-year grant term, the project will improve air quality, reduce urban heat-island effects, strengthen neighborhood stewardship of green infrastructure, and create workforce development and green job training opportunities for Richmond youth and adults through community-based urban forestry and climate adaptation activities.

Measurable Outcome	Indicator(s)
1. By the end of the five-year grant term, expand urban tree canopy and climate-resilient green infrastructure in Richmond by planting 600 trees and installing 10 rain gardens or stormwater capture systems in neighborhoods disproportionately impacted by air pollution, extreme heat, and flooding. This work will contribute to improved neighborhood air quality, reduced urban heat-island effects, and increased stormwater infiltration capacity.	• Number of trees planted (target: 600) • Number of rain gardens planted (target: 10 rain gardens)
2. By the end of the five-year grant term, increase community participation in climate resilience and urban greening activities and strengthen long-term neighborhood stewardship of urban forestry and green infrastructure projects by building and deploying a network of 10 Block Ambassadors to promote urban greening and engage with at least 200 Richmond community members.	• Number of block ambassadors trained and delivering outreach and urban greening activities (target: 10) • Number of tree care and/or planning events held (target 4-8 per year) • Number of attendees at public workshops (target: 50) • Number of interns hired (target: 10) • Number of households contacted through door-to-door canvassing and outreach (target: 200)
3. By the end of the five-year grant term, increase workforce readiness and access to green-economy career pathways for Richmond and Contra Costa County youth and adults through paid internships, apprenticeship opportunities, workforce development programming, and hands-on urban forestry and climate resilience training.	• Number of youth employment programs held (target: 5) • Number of workforce development employees hired (target: 2-4) • Number of Richmond and Contra Costa County youth and adults through apprenticeship and internship programs (target: 20) • Number of landscape contractors trained in green infrastructure (target: 20) • Number of interns hired (target: 10)

Project Name: Rooted
Lead Applicant Name: City of Richmond
Term for this budget (in year 5 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Parks and Landscaping Lead Worker (100% FTE, Years 1-2)	Overall project coordination, site selection coordination, reporting, field work with partners as needed	$408,282.00
Personnel/Staff Costs	Direct	Intern (55% FTE, Years 1-2)	Supporting site coordination and planting activities, field work with partners as needed, updating tree data in management software	$60,197.00
Personnel/Staff Costs	Direct	Concrete removal	City removal of concrete from tree wells	$55,000.00
Community Engagement	Direct	Richmond Rising Together Community Engagement Materials	Public materials for CSC meeting agendas and slides, reports as necessary for public review; branded outreach and informational materials: flyers, pamphlets, banners, and postcard mailers. $2,000/year for printing and copying + $1500/year for translation = $3500 x 5 years = $17,500. Cost to project at 1/12th for 1 of 12 projects participating: $1458	$1,458.00
Other Direct Costs	Direct	Richmond Rising Together Hub	Rental of building space for a publicly accessible office and meeting space for grant partner meetings, trainings/workshops, and community events. $1,390/month x 41 months = $56,990. Cost to project at 1/12th for 1 of 12 projects participating: $4,749	$4,749.00
Other Direct Costs	Direct	Cellular phones and service	Cellular phones and cellular service for PM I and AAA Staff. One time purchase of phones ($600/each) and monthly costs of $50/month per phone for 41 months. $600 x 2 + $50 x 41 months = $5,300. Cost to project at 1/12th for 1 of 12 projects participating: $442	$442.00
Community Engagement	Direct	Refreshment, Childcare, and Interpretation for Community Meetings	$400/event for refreshments for 30 community members + $80/event for childcare + $200/event interpretation = $680 per meeting. 41 CSC monthly meetings + 4 additional events/year x 5 years = 61 meetings x $680/meeting = $41,480. Cost to project at 1/12th for 1 of 12 projects participating: $3,457	$3,457.00
Capacity-Building and Training	Direct	City of Richmond Staff Training Costs	Workshop and conference fees ($800/year per staff member) + meals during training ($92/day x 4 days/year per staff member) = $968/staff member/year x 5 years x 3 staff = $14,520.00. Cost to project at 1/12th for 1 of 12 projects participating: $1,210	$1,210.00
Travel	Direct	Local Transportation	20 miles/month for staff to attend related community meetings throughout the City and region. 60 months x 20 miles x $0.70/mile = $840. Cost to project at 1/12th for 1 of 12 projects participating: $70	$70.00
Community Engagement	Direct	Community Workproduct Compensation for Richmond resident members of CSC	Each resident CSC member receives a $50 VISA gift card per meeting. Estimate includes 6 members at each monthly Collaborative Stakeholder Committee meeting, for 41 months. $50 card + $4 purchasing fee = $54/card x 6 residents x 41 months = $13,284. Cost to project at 1/12th for 1 of 12 projects participating: $1,107	$1,107.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Richmond Rising Together Project Website	Richmond Rising Together webpage for posting meeting materials (agendas, minutes, recordings), key reports and documents, community opportunities for project involvement, and other public information. Estimated at $50/month based on historic costs x 60 months = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Subcontractors & Vendors	Direct	Graphic Design Consultant	Development of website and project outreach materials. $150/hr for 20 hours = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Data Management Software (Airtable)	Airtable is used for tracking project budgets, deliverables, expenditures and reimbursements to-date, and other key coordination data. $720/year for 5 years based on historic costs = $3,600. Cost to project at 1/12th for 1 of 12 projects participating: $300	$300.00
Personnel/Staff Costs	Direct	City of Richmond Project Manager	Project Manager provides overall leadership in grant execution and implementation across projects. Project-specific allocation, based on anticipated support to be provided: 3.50% FTE x $17,754.47 monthly salary x 41 months = $25,477.66; Benefits at 77% of salary = $19,617.80.	$45,095.00
Personnel/Staff Costs	Direct	City of Richmond Associate Management Analyst	Project Analyst coordinates partners for CSC meetings, preparation and submission of required reports and invoices, and ongoing budget management across projects. Project-specific allocation: 4.50% FTE x $13,623.72 monthly salary x 41 months = $25,135.76; Benefits at 77% of salary = $19,354.53.	$44,490.00
Personnel/Staff Costs	Direct	City of Richmond Administrative Assistant	Administrative Assistant provides logistical and coordination support for all projects, including CSC meeting preparation, timely payment of project partner invoices, and project delivery support. Project-specific allocation: 8.00% FTE x $9,453.37 monthly salary x 41 months = $31,007.04; Benefits at 77% of salary = $23,875.42.	$54,882.00

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Richmond Rising Together
Lead Applicant Name	City of Richmond
Project Location	Richmond, CA
Overall Funding Request	$15,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Total Transit Access
Project Lead	City of Richmond
Project Location	Citywide
Project Funding Request	$1,114,691

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The Total Transit Access Pilot Program (TTA Pilot) strives to build economic resilience for residents and promote transit use by providing unlimited transit passes for participants in workforce development programs operated by Co-Applicants on the Richmond Rising Together grant application. These programs focus on building pathways for disadvantaged youth and adults in Richmond toward careers in health and sustainability fields. The TTA Pilot is a collaboration with the Clipper BayPass program, which is operated by the Metropolitan Transportation Commission (MTC) and Bay Area Rapid Transit (BART). Through the TTA Pilot, participants in Co-Applicant workforce programs will receive a Clipper Card loaded with BayPass, which enables unlimited rides on all transit agencies in the San Francisco Bay Area. This includes BART, AC Transit, SF Bay Ferry, and others that serve Richmond. Participants will use BayPass for the duration of their participation in the workforce programs. Upon completion, the passes are transferred to the next workforce development program cohort. The TTA Pilot aims to serve 250 participants annually for five years. Upon completion, the program will benefit 1,250 participants, all of whom will be Richmond residents.

The TTA Pilot – the first of its kind for the City and MTC/BART – is a culmination of multiple concurrent efforts to alleviate transportation cost burden for Richmond residents while expanding transit access, two concerns identified by Richmond residents (see Question 4). The program is inspired by Universal Basic Mobility (UBM) programs, which provide free or reduced fare services for eligible participants and focus on transportation affordability. In pilot projects hosted by other cities in California, UBM programs have been successful in addressing transportation poverty, typically defined as a household spending more than 10 percent[1] The TTA Pilot will remove transportation cost barriers to participation in workforce programs and increase transit use. It aspires to encourage participants to continue to choose public transit over driving after they have experienced the benefits of public transit, thereby contributing to a cleaner and healthier Richmond. Upon completion of the TTA Pilot, the City will use the lessons learned to inform discussions for an expansion or a permanent, potentially citywide, UBM transit access program for Richmond residents.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

[1] UC Davis. Institute of Transportation Studies. ucits.org/research_products/policy-brief-universal-basic-mobility-pilot-programs-in-oakland-and-bakersfield-are-combatting-transportation-poverty/

Reduce Air Pollution and Improve Health Outcomes: The TTA Pilot aligns with the strategy to reduce air pollution and improve health outcomes by reducing vehicular trips. The TTA Pilot will give participants opportunities to use public transit to access workforce program sites and other destinations, which will reduce trips taken using personal vehicles and reduce greenhouse gas (GHG) emissions. Approximately 60 percent of Richmond workers 16 years or older drive alone to commute to work.[2] A mode shift in residents' commute patterns from personal vehicle to public transit will amount to an impactful reduction in air pollution. In the longer term, the City will experience net community benefits from having fewer vehicles on the City's roadways and less air pollution, which will improve health outcomes for all residents. Taking transit also opens opportunities for people to meet and socialize while riding or waiting for transit service. This community-building aspect of transit use helps reduce social isolation and loneliness - important public health challenges deemed as an epidemic in a 2023 report by the U.S. Surgeon General [3]

Build Economic Resilience for a Just Transition: The TTA Pilot advances the strategy to build economic resilience for just transition by alleviating the burden of high transportation cost for participants. Publicly available datasets indicate that many Richmond residents experience transportation poverty. Citywide, the Median Household Income (MHHI) is $95,391, while the MHHI for the San Francisco Bay Area is $137,100, a difference of $41,709.[4,5] Annual transportation expenditures average $17,692 for Bay Area families, and Richmond residents pay a disproportionately higher percentage of household income for transportation compared to the rest of the Bay Area.[6]
Multiple studies and articles show a clear link between transportation access and access to employment and economic opportunity, including those published by the National League of Cities and in the Regional Science Journal. An estimated 87 percent of all public transportation trips connect riders to employment opportunities and local businesses.[7] By providing free transit access, this program enables participants to reliably travel to and from their worksites with reduced impact on their household budget. In turn, this supports participants to generate and save income and build economic resilience. Participants will also build familiarity and comfort with different public transit services and operators in the Bay Area through the program, which will prepare them to access future employment and meet other household needs.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The TTA Pilot will be available for participating members of workforce development, skills development, and training programs offered as part of Richmond Rising Together and to participants in other programs offered by Co-Applicants. At a minimum, participants in LifeLong Medical Care's Asthma Health Promoters program, RYSE's youth programs, and Rich City Rides' Youth Fellow Program, will participate in the TTA Pilot.

LifeLong Medical Care's Asthma Health Promoters: The program trains and deploys members also known as Promoters to the neighborhoods they serve to support home visit services with asthma patients and families. The William Jenkins Health Center (Jenkins Clinic), at 150 Harbour Way, Richmond, CA 94801, will serve as the primary supervision site for the program. Home visits will be conducted in the homes of enrolled patients residing in the Iron Triangle and surrounding Richmond neighborhoods, including North Richmond, Atchison Village, Coronado, and Santa Fe, Pullman, and other nearby areas based on patient enrollment.

RYSE Youth Programs: RYSE offers multiple fellowship and internship programs for youths in Richmond to gain hands on experience. The primary worksite location is the RYSE Center at 3939 Bissell Avenue, Richmond, CA 94805.

Rich City Rides' Youth Fellows Program: The program provides young people in Richmond with paid job readiness training through hands-on community engagement activities, such as organized community bike rides, informational outreach, participation in town hall meetings, and professional development workshops focused on public speaking, community organizing, environmental justice education, and more. The program will be hosted at 1600 Nevin Avenue, Richmond, CA, 94801, where the fellows participate in the trainings. The majority of their work will take place in various locations within the Coronado, Iron Triangle, and Santa Fe neighborhoods in Richmond.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The TTA Pilot was developed in response to pressing community needs to alleviate the burden of transportation costs while providing better access to transit in the City of Richmond – dual challenges the City understands based on comments received from multiple community engagement efforts.

Outreach for the Richmond Area Community-Based Transportation Plan (CBTP): A comprehensive community outreach approach was used as part of the planning process to develop the CBTP, published in 2020. The CBTP was developed by Contra Costa Transportation Authority to address transportation challenges in low-income Communities of Concern across areas in Richmond, San Pablo, El Cerrito, and unincorporated Contra Costa County. The consulting team for the CBTP had multiple meetings with a steering committee and project working group and attended six community meetings to identify community priorities. The CBTP states that accessible public transit serves as a mobility backbone for disadvantaged communities in the Bay Area and beyond, which was echoed by Richmond area residents who participated in the plan development, many of whom were predominantly low-income, youth, and elderly residents.

City of Richmond 2023 Community Survey: Every two years since 2007, the City of Richmond has conducted a community survey to help City officials evaluate services, measure resident satisfaction/use of current service, benchmark ratings for services provided by the City, and help plan for Richmond's future. The 2023 Community Survey was conducted between August 28, 2023, and October 16, 2023, and provided the opinions of a representative sample of 430 residents. According to the summary report, respondents shared that the ease of travel by public transportation has gotten more difficult compared to the pandemic years. In the 2021 survey, 47 percent of respondents reported ease of travel by public transportation as excellent or good. In contrast, the 2023 survey received 35 percent, a 12 percent decrease. Meanwhile, residents reported a higher rate of using public transit instead of driving in the 12 months prior to the 2023 survey (55 percent), compared to the 2021 survey, where only 41 percent did. While the rate increased by 14 percent, it is still lower than pre-pandemic levels where 66 percent of respondents took public transit instead of driving in the past 12 months. These results indicate that despite more difficulties in traveling via public transit, there is a growing demand for access to public transportation.

Richmond Rising Collaborative Stakeholder Committee (CSC): the City's Richmond Rising project is funded by a $35 million Transformative Climate Communities (TCC) Implementation Grant from the California Strategic Growth Council. The Richmond Rising CSC meets monthly, and membership is comprised of representatives from community-based organizations who are involved in Richmond Rising projects, most of whom with deep roots in Richmond. The Richmond Rising program includes several infrastructure projects to improve transportation access. The City has repeatedly heard through conversations with the CSC about these transportation projects that it is critical to continually explore additional low-cost transportation options to support Richmond families. In response to the input received through these conversations, City staff presented low-income transportation options such as the Clipper START program, R-Transit Paratransit, R-Transit RAPID Program w/Lyft, and Richmond Moves on-

demand shuttle service to the CSC in October 2025. The presentation was well received, and residents have since been following up with inquiries on programs they can apply for to reduce transit costs. Richmond Rising staff has been sharing the ones available from BART, but not all residents who have inquired are eligible based on the age and/or income limits.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The TTA Pilot Program is a novel approach to creatively alleviating transportation cost burden for Richmond residents, while expanding transit use and addressing environmental justice, public health, and just transition challenges. The City initially explored Universal Basic Mobility (UBM) programs, which provide free or reduced fare services for eligible participants, in response to community needs for lower-cost transportation solutions and increased transit accessibility. According to researchers at the University of California (UC) Davis Institute of Transportation Studies studying UBM pilots across the United States, a lack of affordable options is an important component of transportation poverty, typically defined as a household spending more than 10 percent[8] The researchers noted that transportation poverty primarily impacts low-income households who are more likely to spend large amounts of time and/or income to reach their destinations. A study on the impacts of UBM pilots in East Oakland and Bakersfield found that participants in both locations reported better transportation experience during the pilots in aspects that address transportation poverty, including having access to multiple low-cost transportation options[9] These findings align with the City's goals to address community transportation needs.

Earlier in the year, City staff met with staff from nearby municipalities to better understand operational challenges and opportunities for administering a citywide program for universal transit access. Based on the recommendations from the conversations, City staff reached out to Clipper BayPass representatives from MTC and BART to design the pilot program for this grant application. The TTA Pilot is scaled down from a citywide free transit program due to costs and the innovative nature of the effort, with eligibility constrained to participants in the workforce development programs administered by Co-Applicants of this grant application for the pilot program. The TTA Pilot will provide more

[8] Institute of Transportation Studies, 2026, UBM Pilots in the United States. https://ubmpilots.ucdavis.edu/pilot-programs.

[9] UC Davis. Institute of Transportation Studies. https://ubmpilots.ucdavis.edu/transportation-poverty

clarity and lessons learned on the processes, opportunities, and challenges for a larger citywide UBM program and may influence the cost model offered by Clipper's BayPass program.

In addition to transportation burdens, Richmond residents are exposed to high levels of air pollution every day. The Chevron Richmond Refinery has been located adjacent to residential areas of the city for more than a century. While it is one of the city's largest employers, the refinery is also the biggest source of GHG emissions and chemical pollutants in the city. Large freeways and roadways such as Interstate (I-) 580, I-80, and Richmond Parkway, as well as railroad tracks from Burlington Northern Santa Fe, Union Pacific, and Richmond Pacific crisscross the city, transporting people and goods throughout the city and beyond. Meanwhile, the Port of Richmond handles high volumes of goods, as evident in its ranking as number one port for liquid bulk and automobile tonnage among ports on San Francisco Bay. These industrial economic drivers also emit high volumes of GHG emissions. According to CalEnviroScreen 4.0, multiple neighborhoods in the city rank in the 80th to 90th percentile of pollution burden, particularly in neighborhoods adjacent or near the Chevron Refinery and industrial and transportation corridors.[10]

The TTA Pilot will address public health and environmental justice challenges by affording participants with opportunities to use public transit – a more sustainable mode of transportation. The shift from driving vehicles to taking transit will lower GHG emissions and contribute to a healthier and cleaner Richmond. The TTA Pilot will contribute to a just transition by helping participants reliably travel to their worksites and build economic resilience. At the same time, participants become skilled in navigating transit services and operators in the Bay Area and more comfortable with taking transit for other household needs, such as medical appointments, buying groceries, and going to school – which will have a positive impact on public health.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

The City and Co-Applicant partners will promote the program benefits as part of the recruitment effort for the workforce programs and administer before and after surveys to understand participant experiences with the program. Initially, the City will collaborate

[10] OEHHA, 2023, May 1, CalEnviroscreen 4.0. https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-40.

with the Co-Applicants to promote the passes as an essential component of the overall stipend in their recruitment efforts. The passes will serve as an incentive for residents who have limited transportation options or are financially burdened to apply and become part of the workforce development programs. In concert with MTC/BART, the City will prepare educational materials and work with Co-Applicants in participating workforce programs to inform every incoming cohort about their Clipper BayPasses, their benefits, and how to use them. The educational materials will also include information to educate members about other transportation options to get around the city. Examples include R-Transit, Richmond Moves, Clipper START program, bike share, E-bike Lending Library, and the City's bicycle and pedestrian networks. The City envisions this educational component to occur as a part of each respective program's orientation or similar onboarding activities.

As an effort to evaluate and better understand the effectiveness of the program, the City will conduct digital surveys to evaluate travel mode preferences before and after using Clipper BayPasses. The surveys will include questions such as whether participants' transit use increases, decreases, or stays the same; how participants use the BayPasses; their level of comfort taking transit; and their familiarity with transit services in the city and Bay Area. The after survey will also contain questions that solicit feedback for the program, as well as sentiment about a potential citywide Universal Basic Mobility program. The City will work with Co-Applicants to administer the before survey as a part of workforce program orientation or similar onboarding activities, while the after survey will be completed at the end of the workforce program cohort. The City will analyze the surveys on an annual basis.

The surveys will complement the records that the BayPass program keeps track to understand how users use the BayPasses. MTC/BART prepares quarterly reports for participating institutions. The reports contain information such as number of active participants, trips taken by operator, trip counts, and number of transit transfers. Findings from the BayPass records, along with the before and after surveys, will provide valuable insights to evaluate the intended project goals and guide discussion for a citywide UBM program. Meanwhile, feedback gathered from the after survey will help refine the program for the subsequent years.

As part of the Richmond Rising Together initiative, a Collaborative Stakeholder Committee (CSC) made up of a representative from each Co-Applicant organization as well as key stakeholders and compensated community member participants will meet monthly at the Nevin Community Center. During these meetings, Co-Applicants will share project status updates and directly engage the CSC and community members in discussions on project design and implementation. This structure ensures lessons learned across projects are leveraged towards the broader collaborative effort while

creating meaningful opportunities for residents most impacted by poor air quality to learn about and engage in projects and share meaningful feedback based on their lived experiences. To reduce potential barriers and ensure maximum opportunities for community participation, these meetings are hybrid (hosted in person and simultaneously on Zoom) and include free childcare, Spanish interpretation, and meals for community members. Meetings are recorded and posted online for viewing in Spanish and English.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Project Vision

The Total Transit Access Pilot will reduce transportation costs, advance economic resilience, and promote transit usage in Richmond by providing participants with access to unlimited transit access and encouraging participants to take public transit over driving for their everyday and commuting transportation needs.

Major Project Components and the Role of the Applicant

The project consists of four major components. The City will be the lead implementer for all project components, and the City will coordinate with participating Co-Applicant partners to advance project deliverables.

Coordination with MTC/BART to participate in the Clipper BayPass program. The City will continue to collaborate with MTC/BART to finalize the terms, conditions, and administrative processes for participation in the Clipper BayPass program and management of the TTA Pilot. Once completed, the City will enter into a contract with MTC/BART to retain it as a vendor to help implement the program. On a quarterly basis, the City will review transit usage data provided by Clipper Baypass to understand the program's impact. If program participation is low, the City will conduct additional outreach to participants to encourage transit usage. At the end of each fiscal year, the City will partner with MTC/BART to reevaluate the pricing per pass and make refinements to the program as necessary.

Develop promotional material for recruitment and educational materials. The City, with assistance from MTC/BART, will prepare promotional materials about the Clipper BayPass program for Co-Applicant partners to use in their recruitment efforts for each new cohort. The City will also create educational materials for Co-Applicants to use in their orientations for each new cohort.

Participant recruitment and coordination with workforce development Co-Applicants. The City will have ongoing coordination with Co-Applicants such as LifeLong Medical Care, RYSE, and Rich City Rides to recruit at least 250 participants annually, distribute promotional material as a part of recruitment efforts, share education materials to every cohort, administer before and after surveys, and keep track of the passes for each workforce development participant. This process will repeat over five years for each new cohort in each participating organization.

Before and after survey administration. The City will prepare the before and after surveys. Once completed, the City will analyze the survey results. Based on comments received from the surveys and other survey findings, the City will coordinate with MTC/BART to make refinements to the program as necessary.

Role of Co-Applicant Partners

Co-Applicants will assume the following responsibilities:

- Recruit cohort members to participate in the TTA Pilot as part of the overall recruitment effort for their workforce development program.
- Coordinate with the City through the onboarding process, including sharing Clipper card information to activate the BayPasses.
- Distribute the before surveys as a part of the onboarding process and collecting the after survey upon program completion.

UC Berkeley's Center Global Healthy Cities (CGHC) will prepare annual and end-of-project reports of data across all project Co-Applicants, along with a public facing dashboard to track progress. The dashboard will include a public comment section. CGHC will work with all Co-Applicants to co-create validated survey questions to capture the mental health impacts of air pollution and climate change (e.g., climate anxiety), and whether and how project interventions are reducing stress, anxiety, and related psychosocial influences on well-being.

Measurable Outcomes

Through the program's five-year period, the City seeks to achieve the following four measurable outcomes:

- Lower the cost of transportation by 20% aggregated across all participants by replacing vehicle trips with transit trips.
- Reduce transportation-based GHG emissions by 25% aggregated across all participants to improve air quality through increased transit usage.
- Increase in the knowledge of and comfort using transportation options in the city and the Bay Area for 75% of all participants across 5 years through increased exposure to and practice using transit.
- Increase in the interest in mode shift from driving to taking transit for 50% of

participants across 5 years through increased awareness of transit options.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The total project request is $1,114,691 over five years. Of this, $559,000 (50 percent) will be used to fund the Clipper BayPass program for 300 participants per year for five years, with the target of retaining 250 participants per year. A portion of the budget is allocated to 0.17 FTE Transportation Program Coordinator for five years for project coordination and implementation. The budget includes funding for a consultant to assist with developing program materials ($25,000), a small amount ($5,000) for outreach and engagement efforts, and 10 percent reserved for contingency.

The project budget is allocated between the City of Richmond (the Lead Applicant) and one Co-Applicant: The University of California, Berkeley. Of the project budget total, $72,234 is allocated to the City of Richmond for a 1.75% FTE Project Manager position, a 2.25% FTE Associate Management Analyst position, and a 4.00% FTE Administrative Assistant position. Together, these three positions support execution of this project ensure completion of grant commitments, coordinate community engagement and collaboration across projects, and manage contracting, invoicing, and payments. $13,293 will support CSC and other community meetings, shared spaces, and Richmond Rising Together outreach materials.

$29,164 is allocated to UC Berkeley for a 17% FTE Project Director and a $50/hour x 210 hours PhD student researcher to prepare annual and end-of-project reports, manage a project data dashboard, and capture the impact of the projects in reducing negative mental health impacts.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The TTA Pilot advances multiple local, regional, and statewide planning efforts. At the City level, the TTA Pilot helps to execute General Plan Action CR1.B in the Circulation Element, Public Transit, and Paratransit Service Improvements as well as Policy ED 3.2, Workforce Training and Recruitment, in the Economic Development Element. Through the TTA Pilot, participants will have unlimited transit access to reach their worksites, as well as for their everyday needs. This would eliminate transit costs and create more

accessible and affordable transportation options, while supporting workforce training for Richmond residents.

On the regional level, the TTA Pilot offers an innovative solution to address transit concerns documented in the Richmond Area Community-Based Transportation Plan (CBTP), as discussed in Question 4, Community Engagement. While the recommendations for the CBTP focused on physical infrastructure improvements, it is clear that transit accessibility is a critical challenge for Richmond-area communities.

At the state level, the TTA Pilot strongly aligns with the Community Air Protection Program (AB 617). As discussed in Question 5: Community Needs, Richmond residents are exposed to heavy pollution burdens from the Chevron Refinery, large transportation facilities such as freeways and freight railroads, and port activities. The focus of AB 617 is to reduce exposure in communities that are most impacted by air pollution. By reducing transportation cost burden and improving access to jobs through public transit, the project supports AB 617's goal of emissions reduction. The long-term project vision is for participants to experience the benefits of public transportation and encourage continued use of transit after they have completed the workforce development program, shifting their preferred mode choice from driving to taking transit.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The City of Richmond has an excellent record of managing and implementing innovative solutions to improve transportation access and quality of life for Richmond residents. Two transportation programs with similar scope and size that the City manages and implements are Richmond Moves and R-Transit. The City continues to successfully implement these programs and continually seeks new opportunities for improvement and expansion.

Richmond Moves: Since April 2022, the City has partnered with Via, a technology-based transit operator, to provide the City's first on-demand public shuttle service. The program expanded access to efficient, equitable, and sustainable transportation in the Richmond community, particularly for neighborhoods that are underserved by other mobility options. The service enables residents to easily connect with key transit hubs in the region such as Amtrak stations, BART stations, and the Richmond Ferry Terminal without a private car. In a November 2025 evaluation program survey, the City found that 80 percent of travelers who took transit via Richmond Moves would use the service again. Since May 2025, the program has expanded from a 5.6-square-mile pilot to a citywide service area of 20 square miles, with annual ridership surveys indicating that the service is a lifeline to a majority of participants.

R-Transit: Since 1976, R-Transit has provided safe and reliable transportation for seniors (55 and older) and individuals with disabilities to improve their access to community services and activities, to decrease their experience of social isolation, and to enhance their abilities to remain living independently in their chosen communities. The R-Transit program's newest addition, RAPID, offers R-Transit clients a subsidy to use Lyft for on-demand trips in the Richmond and nearby municipalities to expand transit options for users.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The City will dedicate 0.17 FTE to the role of Project Coordinator (or equivalent title). The Project Coordinator will manage and administer all major aspects of program implementation. They will act as the key point of contact for the program, including communication with MTC/BART and participating Co-Applicant partners. The TTA Pilot can also leverage many existing resources from the City of Richmond, Co-Applicants, and peer grant programs like the TCC program for informational outreach.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

N/A; The proposed project would not include construction, ground disturbance, or permanent installation, so no land use or regulatory approvals are needed. The project is implementation-ready and can proceed immediately upon execution of the Grant Agreement.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

N/A; The proposed project would not include construction, ground disturbance, or permanent installation. Therefore, the proposed project would have no environmental impacts and would be exempt from CEQA.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

N/A; The proposed project would not include property acquisition, leasehold, or easements. Therefore, no site controls are required for project implementation.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

N/A; The proposed project would not involve physical infrastructure development. Therefore, this project would not require any operations or maintenance of physical infrastructure.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

As a pilot program, the City acknowledges challenges that could impede project implementation and has taken a proactive approach to mitigate foreseen challenges and address risks. Key challenges to implementation include responding to unforeseen challenges, cost of the Clipper BayPass, tracking the Clipper cards, fiscal challenges for transit service providers, and pivoting to alternative measures if the terms and conditions for the Clipper BayPass program change.

Unforeseen Challenges in Program Design and Development. This TTA Pilot is a new and innovative approach to address pressing transportation needs in the city. The City of Richmond, in collaboration with MTC/BART, has developed a program framework based on the organizations' experience managing and implementing similar programs. However, since the TTA Pilot will be a novel endeavor for both the City and MTC/BART, the organizations anticipate that there would be unforeseen challenges and that the program will evolve and be refined throughout the grant period to better achieve the project vision and serve the Richmond community. As such, the City will be responsive to community feedback through the communication channels discussed in Question 6: Community Engagement (which includes before and after surveys) and will adjust the program to best meet community needs over time.

Cost of the Clipper BayPass. The cost of the Clipper BayPass for future years could change annually. MTC/BART utilizes a specialized model to develop a custom price for each participating organization. The model calculates pricing using many factors, including total possible participants, the locations the City has identified as worksites, and available transit options. The price per pass strives to cover the actual cost of use, as the program reimburses the many transit agencies that participate in Clipper and BayPass for the actual costs incurred. Thus, if BayPass usage varies from what the model predicts, MTC/BART will accordingly adjust the cost per pass. As mentioned previously, this TTA Pilot is the first of its kind for MTC and BART; as such, the model used to predict the custom price is subject to more uncertainty, compared to the pricing model typically used for Clipper BayPass participants. At the end of each contracting year, the City will collaborate with MTC/BART to re-evaluate the cost for the program. The budget includes anticipated change in year-over-year cost to account for potential cost differences.

Tracking BayPasses among participants. The City will work with Co-Applicants to distribute the passes to each cohort in participating workforce development programs. Since there are multiple cohorts across multiple programs, it could be difficult to track all the passes that are distributed. To mitigate this barrier, the City will manage users in an online tracking system provided by the BayPass Program and develop a program schedule in collaboration with Co-Applicants to plan and track participants using the passes. The BayPass online tracking system will allow the City to request activation/ deactivation of passes using the tracking code available for each Clipper card.

Fiscal Challenges for Transit Service Providers. Transit operators, including BART and AC Transit, are facing budget deficits, which could lead to cuts in bus services, station closures, and more. These actions may discourage TTAP participants to take public transit and reduce the program's intended impact. To respond to these potential challenges, the City will use some of the contingency budget to conduct additional outreach to participants about alternative transportation options available, such as Richmond Moves and opportunities to bike using the City's bicycle infrastructure.

Changes to the Terms and Conditions for the Clipper BayPass program. The BayPass program operated by MTC and BART is itself a pilot program. Now in its second phase, the program has recently won approval for continuation for three more years. Should the terms and conditions for the Clipper BayPass program change or the program cease to exist, the City of Richmond will adjust the TTA Pilot to provide Clipper Cards with a set credit amount per month to participants.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	**Total Transit Access Pilot Program:** Reduce transportation costs, advance economic resilience, and promote transit usage in Richmond by providing participants with access to unlimited transit access and encouraging participants to take public transit over driving for their everyday and commuting transportation needs.

Measurable Outcome	Indicator(s)
1. Within five years, lower the cost of transportation by 20% aggregated across all participants by replacing vehicle trips with transit trips.	• # of participants in the Pilot Program (target: 250 participants annually; 1,250 over the grant term). • % of transportation cost reduction as reported in the after survey (target: 20%)
2. Within five years, reduce transportation-based GHG emissions by 25% aggregated across all participants to improve air quality through increased transit usage.	• # of transit trips taken by program participants based on BayPass usage.
3. Within five years, increase in the knowledge of and comfort using transportation options in the city and the Bay Area for 75% of all participants across 5 years through increased exposure to and practice using transit.	• % of participants that indicate that they have gained better knowledge of transportation options in the after surveys (target: 75% of participants).
4. Within five years, increase in the interest in mode shift from driving to taking transit for 50% of participants across 5 years through increased awareness of transit options.	• % of participants that express an interest in taking more transit based on the after surveys (target: 50% of participants). • % of participants that stated they tried a new transit option based on the after surveys (target: 50% of participants).

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Within five years, lower the cost of transportation by 20% per year, aggregated across all participants by replacing vehicle car trips with transit trips.	A. Sign contract to retain MTC/BART as a vendor to administer the Clipper BayPass Program.	1. Continue to collaborate with MTC/BART to finalize the terms and conditions.	City of Richmond	MTC/BART	Months 1-2
		2. Enter into a contract with MTC/BART to retain them as a vendor to help implement the program.	City of Richmond	MTC/BART	Months 2-3
		3. At the end of each fiscal year, reevaluate the pricing per pass and make refinements to the program as necessary.	City of Richmond	MTC/BART	Annually
	B. Enroll 300 participants annually.	1. Work with MTC/BART to create an administrative process to track the passes. At a minimum, on a biweekly basis, use the process to track the passes.	City of Richmond	MTC/BART	Month 3
		2. Collaborate with Co-Applicant partners to enroll participants in the program. This includes preparing one editable digital and physical flyer with information about the Clipper BayPass that Co-Applicants use in their recruitment efforts, as well as a slide deck for them to use in the onboarding process.	City of Richmond		Months 4-5
		3. On a monthly basis, track participant use of the BayPass using the agreed upon administrative process with MTC/BART.	City of Richmond	MTC/BART	Monthly
	C. Conduct before and after surveys to better understand whether participants have seen a reduction in transportation costs, how participants use the passes and their knowledge about transportation options, and	1. Develop the before and after surveys.	City of Richmond		Months 4-5
		2. Work with partners to conduct a "Before Program Participation" survey at orientation/ onboarding.	City of Richmond	Partners	Ongoing
		3. Collaborate with partners to administer a "After Program Participation" survey upon completion of the workforce development program.	City of Richmond	Partners	Ongoing

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	if the mode shift to transit is likely to occur.	4. Analyze the survey and prepare findings.	City of Richmond		Months 54-60
2. Within five years, reduce transportation-based GHG emissions by 25% aggregated across all participants per year and to improve air quality through increased transit usage.	A. 25% GHG reduction from transit trips taken by participants.	1. Obtain quarterly report from MTC/BART on transit usage by participants.	City of Richmond	MTC/BART	Quarterly from Month 7 to Month 54
		2. Evaluate the trips taken by participant based on the quarterly reports.	City of Richmond		Months 54-60
3. Within five years, increase in the knowledge of and comfort using transportation options in the city and the Bay Area for 75% of all participants across 5 years through increased exposure to and practice using transit.	A. 75% or more participants indicate that they have gained better knowledge of transportation options in the after surveys.	1. Develop information materials to be shared with participants at orientation/onboarding.	City of Richmond		Months 2-3
		2. Provide participants with informational materials	City of Richmond	Partners	Ongoing
		3. Administer before and after surveys (see task 1.C.2 and 1.C.3)	City of Richmond	Partners	Ongoing

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
4. Within five years, increase in the interest in mode shift from driving to taking transit for 50% of participants across 5 years through increased awareness of transit options.	A. 50% or more participants show their interest in taking more transit based on the after surveys.	1. Develop information materials to be shared with participants at orientation/onboarding (see task 3.A.1)	City of Richmond	Partners	Months 2-3
		2. A Provide participants with informational materials (see task 3.A.2)	City of Richmond	Partners	Ongoing
		3. Administer before and after surveys (see task 1.C.2 and 1.C.3)	Partners	City of Richmond	Ongoing
	B. 50% of participants that stated they tried a new transit option based on the after surveys	1. Develop information materials to be shared with participants at orientation/onboarding (see task 3.A.1)	City of Richmond	Partners	Months 2-3
		2. Provide participants with informational materials (see task 3.A.2)	City of Richmond	Partners	Ongoing
		3. Administer before and after surveys (see task 1.C.2 and 1.C.3)	Partners	City of Richmond	Ongoing

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	City of Richmond TTA Project Coordinator	Project management and implementation, including coordination with MTC/BART, collaboration with the partners, and program evaluation and refinement. 17% FTE x $17,754.47 monthly salary x 60 months = $181,095.59; Benefits at 77% of salary = $139,443.61.	$320,539.00
Professional Services & Consultants (≤25% of Direct Costs at APPLICATION level)	Direct	Consultant for Program Materials	Develop program materials (pre/post program surveys, outreach materials, and presentations)	$25,007.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Clipper BayPass Program	Participate in MTC/BART Clipper BayPass Program and obtain passes for 300 participants per year.	$559,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Printing	Outreach materials prints for each participating cohort.	$4,550.00
Contingency (≤10% of Direct Costs at PROJECT level)	Contingency	Contingency	Contingency	$90,904.00
Community Engagement	Direct	Richmond Rising Together Community Engagement Materials	Public materials for CSC meeting agendas and slides, reports as necessary for public review; branded outreach and informational materials: flyers, pamphlets, banners, and postcard mailers. $2,000/year for printing and copying + $1500/year for translation = $3500 x 5 years = $17,500. Cost to project at 1/12th for 1 of 12 projects participating: $1458	$1,458.00
Other Direct Costs	Direct	Richmond Rising Together Hub	Rental of building space for a publicly accessible office and meeting space for grant partner meetings, trainings/workshops, and community events. $1,390/month x 41 months = $56,990. Cost to project at 1/12th for 1 of 12 projects participating: $4,749	$4,749.00
Other Direct Costs	Direct	Cellular phones and service	Cellular phones and cellular service for PM I and AMA Staff. One time purchase of phones ($600/each) and monthly costs of $50/month per phone for 41 months. $600 x 2 + $50 x 41 months = $5,300. Cost to project at 1/12th for 1 of 12 projects participating: $442	$442.00
Community Engagement	Direct	Refreshment, Childcare, and Interpretation for Community Meetings	$400/event for refreshments for 30 community members + $80/event for childcare + $200/event interpretation = $680 per meeting. 41 CSC monthly meetings + 4 additional events/year x 5 years = 81 meetings x $680/meeting = $41,480. Cost to project at 1/12th for 1 of 12 projects participating: $3,457	$3,457.00
Capacity-Building and Training	Direct	City of Richmond Staff Training Costs	Workshop and conference fees ($600/year per staff member) + meals during training ($92/day x 4 days/year per staff member) = $968/staff member/year x 5 years x 3 staff = $14,520.00. Cost to project at 1/12th for 1 of 12 projects participating: $1,210	$1,210.00
Travel	Direct	Local Transportation	20 miles/month for staff to attend related community meetings throughout the City and region. 60 months x 20 miles x $0.70/mile = $840. Cost to project at 1/12th for 1 of 12 projects participating: $70	$70.00
Community Engagement	Direct	Community Workproduct Compensation for Richmond resident members of CSC	Each resident CSC member receives a $50 VISA gift card per meeting. Estimate includes 6 members at each monthly Collaborative Stakeholder Committee meeting, for 41 months. $50 card + $4 purchasing fee = $54/card x 6 residents x 41 months = $13,284. Cost to project at 1/12th for 1 of 12 projects participating: $1,107	$1,107.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Richmond Rising Together Project Website	Richmond Rising Together webpage for posting meeting materials (agendas, minutes, recordings), key reports and documents, community opportunities for project involvement, and other public information. Estimated at $50/month based on historic costs x 60 months = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Subcontractors & Vendors	Direct	Graphic Design Consultant	Development of website and project outreach materials. $150/hr for 20 hours = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Data Management Software (Airtable)	Airtable is used for tracking project budgets, deliverables, expenditures and reimbursements to-date, and other key coordination data. $720/year for 5 years based on historic costs = $3,600. Cost to project at 1/12th for 1 of 12 projects participating: $300	$300.00
Personnel/Staff Costs	Direct	City of Richmond Project Manager	Project Manager provides overall leadership in grant execution and implementation across projects. Project-specific allocation, based on anticipated support to be provided: 1.75% FTE x $17,754.47 monthly salary x 41 months = $12,738.83; Benefits at 77% of salary = $9,808.90.	$22,548.00
Personnel/Staff Costs	Direct	City of Richmond Associate Management Analyst (AMA)	Project Analyst coordinates partners for CSC meetings, preparation and submission of required reports and invoices, and ongoing budget management across projects. Project-specific allocation: 2.25% FTE x $13,823.72 monthly salary x 41 months = $12,567.88; Benefits at 77% of salary = $9,677.27.	$22,245.00
Personnel/Staff Costs	Direct	City of Richmond Administrative Assistant	Administrative Assistant provides logistical and coordination support for all projects, including CSC meeting preparation, timely payment of project partner invoices, and project delivery support. Project-specific allocation: 4.00% FTE x $9,453.37 monthly salary x 41 months = $15,503.52; Benefits at 77% of salary = $11,937.71.	$27,441.00

Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Richmond Rising Together
Lead Applicant Name	City of Richmond
Project Location	Richmond, CA
Overall Funding Request	$15,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	**Resilient Homes**
Project Lead	GRID Alternatives (GRID)
Project Location	Richmond, CA
Project Funding Request	$2,066,653.00

STRATEGY ALIGNMENT (10 points)

1. Provide a short summary (1-2 paragraphs) that outlines this project.

GRID Alternatives (GRID), in partnership with the City of Richmond and MCE Community Choice Energy (MCE), will deliver roof repairs and electrical panel upgrades for up to 100 income and solar-qualified families in Richmond. Home repairs and upgrades are often required to access solar and home electrification keeping it out of reach for the families who would most benefit, and this project is intended to fill this gap. Supporting home repairs that allow for solar installations and home electrification directly improves a home's health and safety while reducing greenhouse gas emissions and improving air quality which benefits the health of neighborhoods. The project area will include the Iron Triangle, Coronado, and Santa Fe neighborhoods of Richmond. GRID's model for solar installation includes workforce training for residents and paid on-site solar installation experience. The project as a whole will benefit homeowners by improving indoor and local air quality through solar energy-efficiency measures, needed home upgrades, and will provide an estimated 3,000 hours of training to 15-20 local trainees.

2. Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:

- *Reduce air pollution and improve health outcomes*
- *Build economic resilience for a just transition*

The project aligns with both Local Community Benefit Fund strategies of (1) reducing air pollution and improving health outcomes and (2) building economic resilience for a just transition.

<u>Reducing air pollution and improving health outcomes</u>

Supporting roof repairs and electrical main panel upgrades directly increases the adoption of solar and home electrification, improves a home's air quality, and benefits the overall health of the neighborhood. GRID has found time and time again that the home upgrades typically required to access solar have often kept energy improvements or solar installations out of reach for the families who could benefit the most. By reducing the most common barriers of roof repairs and main panel upgrades GRID can combine its solar offerings and where possible MCE's energy offerings of comprehensive efficiency measures to reduce all three types of asthma triggers within a Richmond home while reducing greenhouse gas (GHG) emissions. MCE's air sealing and insulation measures remove air leaks to improve indoor air quality. Electrification measures remove the need for combustion appliances, which improve indoor air quality and safety for residents and prevent potential fire hazards. This project also includes health and safety measures such as pest management, mold and water leak mitigation,

and roof repair. These measures have a direct impact on the indoor air quality of a home and its residents' health and would traditionally prevent energy improvements or solar from being installed.

Solar installation decreases dependence on traditional energy sources and directly reduces GHGs. Electrification will reduce indoor air pollution for residents and improve air quality in the Iron Triangle, Coronado, and Santa Fe neighborhoods. Project outcomes will cut an estimated 300 metric tons of CO_2 per year, or 7,500 tons over a 25-year life span, contributing to healthier, more resilient homes and neighborhoods.

Building economic resilience for a just transition

Supporting solar electrification provides job training and on-site training experience in a green industry, which aligns with the strategy of building economic resilience for a just transition. The project is estimated to provide up to 3,000 hours of training to 15-20 local trainees. In partnership with the City and other community-based organizations, GRID will recruit trainees from the City of Richmond. Our ongoing solar skills training program provides classroom training combined with hands-on experience and on-the-roof learning opportunities. We pay all training program graduates for their time and provide opportunities to connect with hiring companies after they complete at least 40 hours with GRID. In addition, we refer potential job seekers to partner organizations that perform energy-efficiency work for more job training opportunities. Funding from the Bay REPAIR Program and our partnership with the City of Richmond will enable more Richmond area families to overcome these barriers to solar, further enabling economic mobility, housing affordability, climate resilience, and improved standards of living.

Roof repairs remain one of the most costly, pervasive, and daunting barriers standing between GRID clients and solar. The project improves energy affordability for income-qualified homeowners. Too often the highest need families are left behind because an expensive roof repair or electrical upgrade may be needed to support the installation of their solar system. Poor roof conditions can quickly lead to greater issues as well—leaks, moisture buildup, and mold growth—that pose serious financial risks in addition to adverse health impacts. In GRID and MCE's experience working in the Bay Area over the past 22 years, over 30 percent of solar installation projects in Richmond are unable to be completed due to roof quality issues that require replacement or repair. This is the highest rate of roof issues in any Bay Area municipality served by GRID. This has left generations of residents in Richmond with higher repair costs, higher exposure to climate-driven events, and inadequate public services.

The TCC Implementation Grant awarded through the California Strategic Growth Council, locally called Richmond Rising, enabled GRID and MCE to embark on an

ambitious program of solar and home upgrades in Richmond. Costs to complete these repairs and upgrades have risen in the last three years, and the gap of inactive projects have grown and cannot be covered with Richmond Rising funds alone. Further investment is needed to see these projects through, ensuring that the families who will benefit most from solar energy are able to receive those services. By leveraging support from the Bay Area Air District in partnership with City of Richmond, GRID Alternatives will be in a prime position to complete these roof and electrical upgrades for up to100 more residential homes, delivering approximately 450 kilowatts (kW) of solar power. Based on an internal estimate calculated based on existing project details, on average, each system installed will save homeowners an estimated $17,000 in lifetime energy costs, contributing to building greater local economic resilience.

COMMUNITY IMPACT (20 points)

3. Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.

The project will be in the City of Richmond, with a particular focus on the Iron Triangle, Coronado, and Santa Fe neighborhoods. These are three of the City's oldest neighborhoods that are definitive of the area's history of unjust racial segregation and land use practices, including dividing residential communities with freeways. This includes areas with the city's highest concentrations of income-qualified homeowners as well as those areas on the Office of Environmental Health Hazard Assessment CalEnviroScreen 4.0 Map[1] scoring above 75. The Richmond Rising and [2] areas are located in this area, which focus on households with incomes at or below 80 percent of the county's area median income. Totaling 2.3 square miles, these neighborhoods are bounded by heavy transportation and industrial land uses: the Burlington Northern Santa Fe Railroad to the north and west as well as the Chevron Richmond Refinery to the west, Port of Richmond to the south, and Bay Area Rapid Transit (BART), Amtrak, and Southern Pacific Railroad to the east. The Project Area has also high percentage of non-English speaking households (primarily Spanish).

[1] Office of Environmental Health Hazard Assessment CalEnviroScreen 4.0 Map https://oehha.ca.gov/calenviroscreen/maps-data

[2] Office of Environmental Health Hazard Assessment CalEnviroScreen 4.0 Map https://oehha.ca.gov/calenviroscreen/maps-data

4. ***Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.***

Community needs were primarily determined by the City of Richmond's Climate Action Plan, adopted in 2016, which used community input and cross-sector collaboration to prioritize action and outcomes with the greatest community benefits for the Richmond community. Climate Action Plan objectives and strategies were co-developed by the City and members of the public during community workshops and meetings, and through consultations with key local community groups and agencies. With close collaboration from hundreds of residents, the University of California Berkeley Department of City and Regional Planning and School of Public Health, the Center for Cities and Schools Y-PLAN, the West Contra Costa Unified School District, and local community-based organizations, the City co-developed a plan that serves the needs of the Richmond community and allowed residents to become an active participant in the global effort to address climate change. Four community needs were identified. First, the plan calls for increased use of energy efficiency. Second, the plan proposes to increase the use and generation of renewable energy and GRID Alternatives was identified as a key implementation partner. Third, the plan identifies the need for resiliency to climate change in housing and the need for improvements in public health and health equity. Finally, the plan calls for the increased adoption of zero emission vehicles.

Community needs for roof repairs and equipment upgrades were also identified through site assessments conducted with each qualifying household. As GRID qualifies clients during the intake process, their eligibility and the current state of both their home and their appliances are determined. Following this, GRID and MCE schedule site visits to check the state of their roofs, how much energy they use, if there are any drafts from windows, doors, etc. Appliances are checked as well, and we collectively gather this data to provide retrofits customized to the state of their homes. On average, approximately 30 percent of residential solar projects GRID identifies are disqualified and unable to move forward in the Richmond area due to needing roof repairs. The proposed project will be able to fill that gap.

As part of Richmond's GB2 strategy within the Climate Action Plan, green workforce development has also been emphasized through Policy EC5.1 Green Businesses and Jobs. This policy promotes green industries to provide goods and services to fill the growing need for clean and sustainable technologies, fuels, vehicles, and equipment, while providing jobs and training to Richmond residents. The green business and industry objective includes encouraging existing businesses and industries to become

increasingly environmentally progressive, as well as focusing on a local employment base of Richmond residents who face barriers to employment to receive job skills training; these actions will help this community to become economically and climate resilient.

GRID has over 12 years of experience administering workforce development programs and training job seekers in the growing green economy. To date, GRID has provided over 506,000 job training hours nationwide and over 20,000 hours in the Bay Area alone, with over 34,600 participants nationally receiving hands-on experience. GRID has partnered with 40 Bay Area job training organizations, providing hard skill training and hands-on experience to complement partners' classroom job readiness and construction curricula.

5. ***Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.***

<u>How our project addresses community needs</u>

Solar installation decreases dependence on traditional energy sources and directly reduces GHGs. Supporting solar electrification and home upgrades also directly improves a home's air quality by reducing harmful emissions and particles associated with traditional electricity sources. By implementing solar, residents can easily run ventilation systems, air purifiers, and fans, making the air inside much cleaner and healthier. This project is estimated to offset 300 metric tons of CO_2 per year, or 7,500 tons over a 25-year life span. Solar installation and other energy-efficiency measures also reduce home energy bills, which allows families to spend money on other necessities. On average, each system installed saves homeowners an estimated $17,000 in lifetime energy costs, contributing to building greater local economic resilience.

<u>Environmental justice, public health, and/or just transition challenge(s) that our application seeks to address</u>

Historically underserved communities typically face the highest barriers to participating in the transition to renewable energy due to unreasonably high utility costs and deferred home maintenance. In some cases, an inability to pay utility bills altogether results in evictions or foreclosures. Poor roof conditions quickly lead to greater issues as well—leaks, moisture buildup, and mold growth—that pose serious financial risks in addition to health risks for homeowners and their families. This project seeks to address these

barriers by ensuring critical roof repairs are completed for families to be able to benefit from solar installation.

Since GRID began work in Richmond in 2004, an average of 30 percent of solar projects have required an upgrade to the existing main service panel (MSP) to bring the homes up to code, reduce fire risk, and make the home solar ready. GRID and MCE are only able to provide solar if homes are up to code, so this piece is critical for the success of the project. These upgrades are not only necessary for renewable energy technologies but also represent a significant improvement in fire safety from outdated and dangerous existing infrastructure. On average, two-thirds of full MSP upgrades average $6,500, and minor upgrades average $680.

According to a recent study on the local causes of asthma by LifeLong Medical, University of California (UC) Berkeley, and UC San Francisco, the prevalence of asthma in Richmond is close to 25 percent, compared to just 13 percent for the rest of California. Asthma attack rates in Richmond are also nearly double the state rate. In 2015, the Institute of Medicine's literature review of asthma triggers found causal evidence for two types of home-based asthma triggers, allergens (pests and outdoor irritants) and dampness-related agents (poor moisture control), and suggestive evidence for a third, irritants (combustion appliances, poor ventilation). Through critical roof repairs and home upgrades, this project will mitigate these health challenges.

According to Richmonder.org, "Housing affordability data collected by the federal government for the period from 2017 to 2021 found more than a third of Richmond households had incomes that were 50% or less of the median family incom[3] Additionally, HUD's Office of Policy Development and Research (PD&R) Comprehensive Housing Affordability Strategy (CHAS) data shows that, as of 2022, about 17 percent of Richmond homeowners have incomes less than 50 percent of the median family income. Our project seeks to address this challenge through the integration of workforce development, providing direct hands-on training to residents.

<u>How measurable outcomes will demonstrate progress towards achieving community impact</u>

Project outcomes will show progress toward making a positive community impact by measuring the total kW installed and GHGs offset, the number of home upgrades and roof replacements completed to bring homes up to code, and tracking the annual savings per household to highlight how much their utility costs have been reduced. GRID will also keep track of how many residents enroll in hands-on training and the

[3] Richmonder.org, "Amid affordable housing push, homes for the lowest incomes are a tough nut to crack." 2025.

number of training hours they receive to show how many individuals are benefiting from receiving hands-on training, and to measure readiness for green industry jobs. Ultimately, by addressing community needs identified in Richmond's Climate Action Plan and through home site assessments, the project will reduce GHGs, benefit low-income residents, and improve indoor and local air quality, thus addressing health equity.

COMMUNITY ENGAGEMENT (10 points)

6. ***Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.***

GRID has a strong partnership with the City of Richmond and has extensive experience doing outreach in Richmond due to the ongoing work with Richmond Rising and DAC-SASH. To engage with eligible households, GRID will send targeted mailers and emails to likely qualifying households, partner with community organizations, attend community events, and perform door-to-door canvassing. Other outreach materials will include multilingual, culturally appropriate fliers, postcards, door hangers, a PowerPoint deck, an installation site safety map, resources, and digital content explaining project goals and benefits. GRID will host community workshops for interested households to learn more and apply for the program.

Every solar installation is also a great opportunity for real-time community outreach as neighbors pass by and are inevitably curious about what is happening on their neighbor's roof. During installation, GRID invites nearby residents to watch, sharing information about the benefits of solar and encouraging them to apply for the program. GRID receives referrals from previous solar recipients and will do referral drives where we will call solar clients to check on how their systems are working and see if they have any friends or family who might be interested in the program.

To gather community feedback, GRID will set up feedback channels like surveys and community forums to evaluate how well our engagement efforts are working, the solar installation process, and to hear from qualifying homeowners. Input will also be collected from residents about their experience using the system and any challenges they face, so future engagement strategies can be refined.

As part of the Richmond Rising Together initiative, a Collaborative Stakeholder Committee (CSC) made up of a representative from each Co-Applicant organization as well as key stakeholders and compensated community member participants will meet monthly at the Nevin Community Center. During these meetings, Co-Applicants will share project status updates and directly engage the CSC and community members in discussions on project design and implementation. This structure ensures lessons learned across projects are leveraged towards the broader collaborative effort while creating meaningful opportunities for residents most impacted by poor air quality to learn about and engage in projects and share meaningful feedback based on their lived experiences. To reduce potential barriers and ensure maximum opportunities for community participation, these meetings are hybrid (hosted in person and simultaneously on Zoom) and include free childcare, Spanish interpretation, and meals for community members. Meetings are recorded and posted online for viewing in Spanish and English.

STEAM the Streets will produce high-quality, community-centered storytelling that highlights local air quality and climate solutions across Richmond. In Year 1, this work will focus on highlighting solar installations and energy-efficiency upgrades for low-income homeowners in partnership with MCE and GRID Alternatives, capturing real-time footage and stories that illustrate how clean energy investments are reducing emissions, lowering energy costs, and improving quality of life in frontline communities. This storytelling will serve as the foundation for a broader community engagement campaign that translates on the ground climate solutions into culturally relevant, accessible media. Footage captured from the MCE and GRID Alternatives project will be incorporated directly into Air Shift, the youth-powered community engagement campaign, and featured within the flagship climate action anthem and music video, ensuring that real, local solutions are embedded at the center of the campaign's storytelling. The campaign will bring increased visibility to these efforts, heighten awareness of available resources and solutions, and broadcast this local movement so that Richmond residents of all ages are more aware of and connected to the work happening in their community.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

In partnership with City of Richmond and MCE, major components of the project include identifying qualified homeowners in the Project Area, contracting with homeowners, conducting necessary home repairs, and installation of the solar systems to deliver an estimated 450 kW of solar power across approximately 100 residential properties in Richmond. GRID will provide an estimated 3,200 hours of hands-on training to 15-20 residents.

MCE leads home assessments, energy-efficiency installs, appliance electrification, and home rehabilitation to enable clean energy measure installation. GRID performs all the solar installation tasks from intake to install and uses a unique workforce development model to allow for greater community benefits, including reduced energy costs for families and access to clean energy careers. All solar installations that will be performed as part of this project will be installed by expert GRID staff alongside local job trainees.

Before entering into an agreement with a homeowner to install the project's clean energy measures, GRID will obtain documentation, including prior year tax returns, to ensure the household income eligibility requirements are met. The project will focus its efforts on single-family properties. Property owners or landlords would be required to provide documentation that no current residents will be displaced, nor will the rent be increased because of the project improvements.

Participants the Resilient Homes project's workforce development component will also be participants in the Total Transit Access Pilot Program (TTA Pilot) for the duration of their participation in the workforce program. The TTA Pilot will bolster Resilient Homes workforce development goals by providing unlimited transit passes for participants to access work sites, which will reduce transportation cost burden and encourage use of public transit for future work opportunities and personal use.

UC Berkeley's Center Global Healthy Cities (CGHC) will prepare annual and end-of-project reports of data across all project partners, along with a public facing dashboard to track progress. The dashboard will include a public comment section. CGHC will work with all Co-Applicants to co-create validated survey questions to capture the mental health impacts of air pollution and climate change (e.g., 'climate anxiety'), and whether and how project interventions are reducing stress, anxiety, and related psychosocial influences on well-being.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

$1,801,234 of the requested budget is for GRID, including $701,720 for GRID staff salaries and wages, $270,000 for a licensed roofing subcontractor, $85,000 for MCE home assessments and energy-efficiency installs, $469,750 for construction materials, and $274,764 for indirect and contingency costs.

$173,362 is for the City of Richmond Project Manager (4.20% FTE), Associate

Management Analyst (5.40% FTE), and Administrative Assistant (9.60% FTE) to support execution of this project, ensure completion of grant commitments, coordinate community engagement and collaboration across projects, and manage contracting, invoicing, and payments. $13,293 will support CSC and other community meetings, shared spaces, and Richmond Rising Together outreach materials.

$29,164 is for UC Berkeley for a Project Director (16.6% FTE) and a $50/hour x 208 hours PhD student researcher to prepare annual and end-of-project reports, manage a project data dashboard, and capture the impact of the projects in reducing negative mental health impacts.

$49,600 is for STEAM the Streets for a Project Manager (29% FTE) and a Creative Program Lead (17% FTE) with program and administrative costs for one year to produce community-centered storytelling that highlights local air quality and climate solutions across Richmond.

ECOSYSTEM ALIGNMENT (10 points)

10. Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).

The project directly implements the goals of the Richmond 2030 Climate Equity Action Plan – Building and Energy (BE) and Community (C) – and is aligned with the following objectives:

- Objective BE-2: Maximize energy efficiency, performance and resilience in all existing buildings
    - Strategy BE-2.1: Residential Energy Burden: Implement measures to reduce the energy burden of Richmond's most vulnerable communities and improve residential resilience to climate change
- Objective BE-3: Ensure all Richmonders have equitable access to affordable and renewable clean energy.
    - Strategy BE-3.1: Solar Energy Education & Outreach: Provide equitable education and outreach to make homes and small businesses healthy, safe, and affordable through solar installations, focusing on frontline communities reducing disproportionately high energy burden in these neighborhoods
    - Strategy BE-3.2: Solar Installation Incentives and Access: Encourage solar installations through the removal of zoning restrictions, incentivizing opportunities, and increasing funding for microgrids.

- Objective C-2: Increase the Richmond community's social resilience to climate change.
    - Strategy C-2.3: Organizational Collaboration: Partner with community leaders, organizations, and businesses to build community capacity for climate resilience.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

GRID's Oakland-based team has been installing solar photovoltaic (PV) systems for income-qualified families for 22 years. GRID has installed solar for more than 2,200 homeowners in the greater Bay Area, including more than 500 such homes in the City of Richmond, as well as for 18 community facilities, including multifamily affordable housing properties. GRID Alternatives, Inc. was selected by the California Public Utilities Commission to administer the $8.5 million DAC-SASH program in Richmond. GRID is the lead entity providing solar power, EV charging, energy-efficiency measures, and appliances electrification to income-qualified families in the Iron Triangle, Santa Fe, and Coronado neighborhoods that adjoin the historical heavy industrial zones in Richmond as part of a $6.97 million Richmond Rising project funded by the 2023-2028 TCC grant awarded through the California Strategic Growth Council.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

There will be eight GRID positions dedicated to project implementation, with resources equaling between 0.85 and 1.5 FTE depending on the phase of the project:

- Deputy Director for programmatic design, oversight, resource allocation
- Senior Outreach Manager for outreach program management and resource allocation
- Outreach Manager for Richmond client identification, contracting, and coordination
- Construction Operations Specialist for site visits and in-house roof replacement program management
- Construction Operations Manager for construction scheduling, materials management, staff allocation, and project management
- Senior Electrician for main panel upgrade program management and installations
- Workforce Development Coordinator for trainee recruitment within project area
- Workforce Development Director for program management and administration

MCE will support as a subcontractor to lead home assessments, conduct energy-efficiency installations, and review documentation for any projects that have overlapping MCE and GRID installation components. MCE will coordinate with GRID to ensure repairs and installation measures that are relevant to solar are completed beforehand.

GRID supplements program funding both through fundraising efforts as a registered 501(c)(3) nonprofit and through leveraging state and local rebates intended to encourage the deployment of renewable energy in income-qualified communities. These rebates include the DAC--SASH program administered by the California Public Utilities Commission. Additionally, funds will be leveraged with the 2023-2028 TCC grant awarded through the California Strategic Growth Council. Because roof repairs and electrical upgrades are repairs that cannot always be completed using other funding sources due to caps on allocations to home repairs and MSP upgrades, funding this work will enable residents to access solar installations funded by other grant programs such as TCC. An estimated 65 TCC projects, totalling approximately 300 kW, would be unblocked by this grant, as well as additional projects leveraged by separate grants.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

Permits are required for multiple measures that this project will provide. Solar PV installation requires parties to submit a building permit and site plan to the City. The site plan must include information about the owner, site diagram and roof plan, electrical plan, equipment labeling, structural plan, and equipment manufacturers cut sheets and listings for all equipment, as needed. Permits are also required for roof repair and replacement, duct work repair and replacement, water heating upgrades and HVAC or

electrification installations. Roof plans will include the arrangement of panels, total number of modules, and conduit runs, as well as existing conditions and equipment on or near the roof. The electrical plan will show the locations of the main service or utility disconnect, modules and their associated strings, conductor type and size, and the supporting calculations for the system. Permit needs will be determined on a project-by-project basis once an assessment has been completed and scope of work has been approved. As laid out in the contract between GRID and the homeowner, GRID will help prepare and submit the solar permits to the city. MCE will prepare and submit the remaining City of Richmond Building permits for efficiency measures and home upgrade work and schedule the required inspections per the City's mandates. To ensure that permits and approvals can be obtained within the grant term, GRID and MCE will coordinate with the City of Richmond grant staff to help troubleshoot internally as needed. Approval times typically take 45 to 60 days, but the City participates in SolarApp+ permitting, which reduces review times to three days. Therefore, the permitting process is not expected to be a barrier to completing installations within the grant term.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

The proposed project would undergo CEQA compliance through filing a Notice of Exemption for a statutory exemption per Public Resources Code (PRC) Section 21080.35. The City of Richmond, acting as the Lead Agency, will complete CEQA review and file the appropriate Notice of Exemption prior to project implementation, and CEQA compliance can be completed within the grant term without delaying project deployment.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

N/A; No property acquisition, leasehold, easement, or right-of-way is required for this project. The proposed project involves installing solar panels on approximately 100 income-qualified families in Richmond. The solar panels will be installed on owner-occupied homes. Therefore, any site control is secured through the homeowner agreement, and additional site control is not required for this project. Please refer to template homeowner agreement in supporting documents.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Warranties for the solar systems are factored into the solar installation's initial costs and are provided at no additional cost to participating households. GRID will repair and service any issues under a 10-year labor and no-cost repair warranty, starting from the date of solar installation completion. These warranties do not cover issues unrelated to the solar system or any pre-existing conditions. These terms are outlined the homeowner agreement, which is attached as a supporting document. The typical long-term maintenance required is keeping the panels clean and free of additional shade.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Uncertainty around rate increases across electricity providers is a potential barrier to implementing the project successfully include. These rate fluctuations can affect the value of solar for participating households. Though these fluctuations are outside of the organization's direct influence, GRID will continue to seek value-adds and other opportunities to continue to provide value to potential participants.

Bringing in new applicants also poses a potential barrier to project implementation, as the process requires trust to be built between the organization and community members. To mitigate this possible barrier, GRID intends to collaborate closely with the City of Richmond and MCE and employ the following community-centric outreach strategies:

- Host quarterly "Solar Workshops" to provide information on our solar programs and provide live opportunities for residents to begin the application process for solar;
- Enhance marketing efforts via a multi-tiered outreach plan consisting of digital marketing, canvassing, City of Richmond supported mailings, and event outreach;
- Hire independent contractors to identify potential participants;
- Share program information with local partners and their networks to amplify outreach efforts;
- Obtain feedback from prior clients to improve program design and remove participation barriers; and
- Increase in-person opportunities for interested residents to learn about the program.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	**Resilient Homes :** Improve indoor and neighborhood air quality in Richmond through solar electrification, energy-efficiency measures, and needed home repairs for income-qualified homeowners, reducing greenhouse gas emissions by an estimated 7,500 metric tons over 25 years while lowering energy costs, strengthening community resilience, and creating hands-on green workforce training opportunities for local residents.

Measurable Outcome	Indicator(s)
1. Within five years, improve indoor air quality and home health and safety while generating an estimated $17,000 in lifetime energy bill savings per household through home repairs, solar installations, and energy efficiency measures for approximately 100 income-qualified families in Richmond, with a focus on the Iron Triangle, Coronado, and Santa Fe neighborhoods.	• kW of solar installed to Richmond homes (target: approximately 450 kW). • Number of roof repairs or replacements completed (target: 75 homes). • Number of homes brought up to safety code (electrical, roof, mold, moisture buildup, leaks, etc.) (target: 25 homes). • Homeowner feedback regarding improvements in energy affordability, comfort, and home conditions.
2. Increase green workforce skills and hands-on solar installation experience for approximately 15-20 Richmond residents over the five-year grant terms.	• Number of workers trained in green industry (target: 15-20). • Number of training hours conducted (target: 3,000).

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Within five years, improve indoor air quality and home health and safety for approximately 100 income-qualified families in Richmond, with a focus on the Iron Triangle, Coronado, and Santa Fe neighborhoods, by delivering approximately 450 kW of solar power and related home upgrades while generating an estimated $17,000 in energy bill savings per household over the 25-year lifespan of the solar systems.	A. Conduct targeted community outreach and enroll eligible households in the solar and home upgrade program.	1. Develop multilingual outreach materials for income-qualified households.	GRID	City of Richmond	Months 1-3
		2. Conduct targeted outreach through mailers, community events, workshops, digital outreach, and door-to-door canvassing in the Iron Triangle, Coronado, and Santa Fe neighborhoods.	GRID	City of Richmond, community partners	Months 4-60
		3. Screen and enroll eligible households through intake assessments and documentation review.	GRID	MCE	Months 4-60
		4. Collect homeowner feedback and participation data to improve outreach effectiveness and program accessibility	GRID	City of Richmond	Months 4-60
	B. Complete home assessments and determine required health, safety, and energy-efficiency upgrades for participating households.	1. Use information collected during the intake assessments to determine the current state of the home and appliances.	GRID	MCE	Months 4-60
		2. Perform site visits to assess roofs, electrical panels, appliances, ventilation, and energy use and identify required	GRID	MCE	Months 3-60

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		repairs, upgrades, and efficiency measures.			
	C. Complete required roof repairs, electrical upgrades, and home safety improvements to prepare homes for solar installation.	1. Secure necessary permits for required roof repair and replacement, duct work repair and replacement, water heating upgrades and/or HVAC or electrification installations.	GRID	MCE, City of Richmond	Months 3-60
		2. Perform all needed repairs, replacements, and/or upgrades to make participating homes solar ready and bring them up to code.	GRID	City of Richmond	Months 4-60
	D. Install and activate approximately 450 kW of residential solar systems across participating households.	1. Design solar systems with goal of 450 kW of solar PV installation – approximately 100 systems at 4.5 kW	GRID	City of Richmond	Months 4-60
		2. Secure all necessary homeowner permissions, required eligibility documents, signed contracts, and City permits.	GRID	City of Richmond	Months 4-60
		3. Complete solar PV installations, and conduct final inspections and utility connection activities.	GRID	City of Richmond	Months 4-60

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		4. Track solar installation progress, estimated GHG reductions, and household energy savings throughout the grant term.	GRID	City of Richmond	Months 4-60
		5. Provide ongoing support, maintenance, and warranties for installed solar systems.	GRID	City of Richmond	Months 4-60
2. Increase access to green workforce training and hands-on solar installation experience for approximately 15-20 Richmond residents over the five-year grant term and support future employment and training opportunities.	A. Develop and implement a workforce recruitment plan for Richmond residents.	1. Develop a local recruitment plan.	GRID	City of Richmond	Months 1-6
		2. Conduct outreach through digital and print postings, community organizations, and community gathering places, and engagement with Richmond's Workforce Development Board and others.	GRID	City of Richmond	Months 4-60
	B. Enroll eligible Richmond residents into the Installation Basics Training (IBT) Program.	1. Enroll participants into installation basics training (IBT).	GRID	City of Richmond	Months 4-60
		2. Track participant enrollment, participation, and feedback throughout the training program.	GRID	City of Richmond	Months 4-60
	C. Deliver hands-on solar installation training and workforce	1. Provide classroom training combined with hands-on solar installation experience.	GRID	City of Richmond	Months 4-60

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	development opportunities to Richmond residents.	2. Provide paid on-site and on-the-roof learning opportunities during solar installations	GRID	City of Richmond	Months 4-60
	D. Support participants' ongoing professional development.	1. Connect trainees with hiring companies and workforce opportunities after completion of training hours with GRID	GRID	Workforce partners	Months 4-60

Total Project Cost Including Other Sources (All Applicants))	$7,051,848.00

Project Name: Resilient Homes
Lead Applicant Name: City of Richmond
Term for this budget (in year 5 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Community Engagement	Direct	Richmond Rising Together Community Engagement Materials	Public materials for CSC meeting agendas and slides, reports as necessary for public review; branded outreach and informational materials: flyers, pamphlets, banners, and postcard mailers. $2,000/year for printing and copying + $1500/year for translation = $3500 x 5 years = $17,500. Cost to project at 1/12th for 1 of 12 projects participating: $1458	$1,458.00
Other Direct Costs	Direct	Richmond Rising Together Hub	Rental of building space for a publicly accessible office and meeting space for grant partner meetings, trainings/workshops, and community events. $1,390/month x 41 months = $56,990. Cost to project at 1/12th for 1 of 12 projects participating: $4,749	$4,749.00
Other Direct Costs	Direct	Cellular phones and service	Cellular phones and cellular service for PM I and AAA Staff. One time purchase of phones ($600/each) and monthly costs of $50/month per phone for 41 months. $600 x 2 + $50 x 41 months = $5,300. Cost to project at 1/12th for 1 of 12 projects participating: $442	$442.00
Community Engagement	Direct	Refreshment, Childcare, and Interpretation for Community Meetings	$400/event for refreshments for 30 community members + $80/event for childcare + $200/event interpretation = $680 per meeting. 41 CSC monthly meetings + 4 additional events/year x 5 years = 61 meetings x $680/meeting = $41,480. Cost to project at 1/12th for 1 of 12 projects participating: $3,457	$3,457.00
Capacity-Building and Training	Direct	City of Richmond Staff Training Costs	Workshop and conference fees ($600/year per staff member) + meals during training ($92/day x 4 days/year per staff member) = $968/staff member/year x 5 years x 3 staff = $14,520.00. Cost to project at 1/12th for 1 of 12 projects participating: $1,210	$1,210.00
Travel	Direct	Local Transportation	20 miles/month for staff to attend related community meetings throughout the City and region. 60 months x 20 miles x $0.70/mile = $840. Cost to project at 1/12th for 1 of 12 projects participating: $70	$70.00
Community Engagement	Direct	Community Workproduct Compensation for Richmond resident members of CSC	Each resident CSC member receives a $50 VISA gift card per meeting. Estimate includes 6 members at each monthly Collaborative Stakeholder Committee meeting, for 41 months. $50 card + $4 purchasing fee = $54/card x 6 residents x 41 months = $13,284. Cost to project at 1/12th for 1 of 12 projects participating: $1,107	$1,107.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Richmond Rising Together Project Website	Richmond Rising Together webpage for posting meeting materials (agendas, minutes, recordings), key reports and documents, community opportunities for project involvement, and other public information. Estimated at $50/month based on historic costs x 60 months = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Subcontractors & Vendors	Direct	Graphic Design Consultant	Development of website and project outreach materials. $150/hr for 20 hours = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Data Management Software (Airtable)	Airtable is used for tracking project budgets, deliverables, expenditures and reimbursements to-date, and other key coordination data. $720/year for 5 years based on historic costs = $3,600. Cost to project at 1/12th for 1 of 12 projects participating: $300	$300.00
Personnel/Staff Costs	Direct	City of Richmond Project Manager	Project Manager provides overall leadership in grant execution and implementation across projects. Project-specific allocation, based on anticipated support to be provided: 4.20% FTE x $17,754.47 monthly salary x 41 months = $30,573.19; Benefits at 77% of salary = $23,541.36.	$54,115.00
Personnel/Staff Costs	Direct	City of Richmond Associate Management Analyst	Project Analyst coordinates partners for CSC meetings, preparation and submission of required reports and invoices, and ongoing budget management across projects. Project-specific allocation: 5.40% FTE x $13,623.72 monthly salary x 41 months = $30,162.91; Benefits at 77% of salary = $23,225.44.	$53,388.00
Personnel/Staff Costs	Direct	City of Richmond Administrative Assistant	Administrative Assistant provides logistical and coordination support for all projects, including CSC meeting preparation, timely payment of project partner invoices, and project delivery support. Project-specific allocation: 9.60% FTE x $9,453.37 monthly salary x 41 months = $37,208.45; Benefits at 77% of salary = $28,650.51.	$65,859.00

Application Title	Richmond Rising Together
Lead Applicant Name	City of Richmond
Project Location	Richmond, CA
Overall Funding Request	$15,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	**Asthma Health**
Project Lead	LifeLong Medical Care
Project Location	Richmond, CA
Project Funding Request	$1,231,734

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Richmond's Iron Triangle and surrounding neighborhoods are home to the communities most burdened by air pollution and most vulnerable to its health effects. These predominantly low-income Black, Latinx/Hispanic, and BIPOC residents face elevated rates of asthma, chronic obstructive pulmonary disease (COPD), and other respiratory conditions driven by proximity to the Chevron Richmond Refinery, freeways, railroads, and ship and industrial emissions. Census tracts in and around the Iron Triangle rank in the 90th percentile or higher for pollution burden under CalEnviroScreen 4.0, and the City of Richmond has identified raising local awareness and building community resilience around air quality as a key priority. LifeLong Medical Care (LifeLong), a Federally Qualified Health Center serving low-income communities since 1976, operates the William Jenkins Health Center (Jenkins) at the center of this community, where 92 percent of patients live below 200 percent of the federal poverty level and 73 percent identify as Black/African American or Hispanic/Latinx. This funding will support LifeLong in expanding and strengthening its established Asthma Health (Health Promoters) program to mitigate the health impacts of air pollution, including particulate matter exposures, for high-risk patients and families identified through Jenkins and the broader Richmond community. Licensed clinical providers at Jenkins will identify and refer patients with poorly controlled or persistent chronic respiratory conditions, including asthma, for home visit services and provide clinical oversight to ensure services align with each patient's care plan. LifeLong will deploy up to 15 Health Promoters per year from the neighborhoods they serve to deliver structured home visits, health education, and resource navigation to at least 20 high-risk households annually, reaching 100 households over the five-year grant period.

Health Promoters work as part of an integrated, interdisciplinary team that includes clinical providers, community health specialists, program staff, and the Director of Community Engagement. Together, this team helps families identify and reduce indoor asthma triggers, lower household exposure to particulate matter and other pollutants, strengthen asthma self-management, and connect to clinical care and supportive resources. Building on its current Health program, LifeLong will also expand community outreach and education for the broader Richmond community through at least 10 outreach events and recurring sessions at Jenkins and neighborhood settings, with a projected reach of at least 1,000 community encounters annually. These activities create multiple access points for residents to receive asthma education, learn exposure reduction strategies, connect to Medi-Cal enrollment and primary care, and engage as active partners in protecting respiratory health. This community-led approach holistically addresses community needs by strengthening the program's reach and cultural

responsiveness while building a workforce pipeline that keeps health knowledge and capacity rooted in the communities most affected by air pollution.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

Reduce Air Pollution and Improve Health Outcomes

LifeLong's Asthma Health Program advances the Local Community Benefits Fund strategy to reduce air pollution and improve health outcomes by directly reducing household and community exposure to air pollution and mitigating its health impacts among low-income Richmond residents who bear the greatest burden. At Jenkins, 73 percent of patients with asthma or related respiratory conditions identify as Black or Hispanic/Latinx, reflecting the disproportionate burden of living near Richmond's industrial and transportation corridors. These disparities underscore the need for interventions that reach residents where they live, not only when they seek care. Patients identified through clinical review who do not enroll in home visits will be connected to health education and community programming, ensuring the project's reach extends beyond intensive services.

This project advances the strategy by:

- **Directly reducing indoor air pollution exposure** through structured home visits that assess environmental triggers, provide HEPA air filtration, and support remediation for the households most affected by pollution.
- **Mitigating health impacts** through asthma education, reinforcement of proper inhaler use, and strengthening adherence to individualized Asthma Action Plans (personalized care plans developed during the home visit that guide patients in managing daily medications, recognizing worsening symptoms, and knowing when to seek care) with linkage back to primary care for follow-up needs.
- **Expanding access to health care and respiratory health management through community outreach events and recurring education sessions** at Jenkins and neighborhood settings, focused on indoor air quality, respiratory health management, and exposure reduction, with direct navigation support to help community members access primary care and Medi-Cal enrollment.
- **Demonstrating measurable improvements in health outcomes** through standardized symptom and asthma control assessments at the start and end of the home visit cycle, with a 90-day follow up conducted with most enrolled households to assess implementation and identify any ongoing needs, pre/post surveys in group education sessions to track changes in knowledge, confidence, and exposure-reduction behaviors.

Build Economic Resilience for a Just Transition

The Asthma Health Program is designed not only as a service delivery approach, but as a community-rooted workforce strategy that advances economic resilience for a just transition alongside improved health outcomes. By recruiting residents from the neighborhoods most affected by the harmful effects of fossil fuel-based air pollution, the project draws on lived experience, language access, and trusted community relationships that make outreach more effective and culturally responsive. Structuring these roles as paid opportunities is equally important, because it removes financial barriers to participation for low-income residents, recognizes community knowledge as valuable expertise, and creates an accessible entry point into the Bay Area's large and growing health services sector. In this way, the project strengthens implementation in the near term while helping Richmond residents build practical experience, transferable skills, and clearer pathways into longer-term employment in community health and related environmental health roles.

This project advances the strategy by:

- **Providing paid training and applied experience** through recruitment and training of up to 15 Health Promoters annually, with stipends provided for both training and outreach activities.
- **Building transferable skills** through training that covers respiratory health, environmental trigger mitigation, patient communication, and HIPAA compliance, equipping Promoters with foundational competencies relevant to community health and environmental health roles.
- **Strengthening career readiness** through professional development supports such as at least one resume and professional development workshop per cohort, leadership development opportunities, and exposure to LifeLong's organizational network and partner pathways.
- **Creating realistic pathways to employment** by informing high-performing Promoters of opportunities for paid roles within LifeLong and supporting connections to additional training or employment pathways as available, consistent with LifeLong's practice of hiring from within the communities it serves.

Beyond workforce development, the project advances economic resilience by reducing the day-to-day instability that pollution-related illness creates for low-income families. Asthma and other respiratory conditions can lead to missed work, missed school, avoidable medical costs, and recurring household stress in Richmond neighborhoods that have long borne the burden of industrial pollution. By helping residents better manage symptoms, reduce exposure to indoor triggers, and connect to preventive care and practical supports, the project helps families avoid disruptions that threaten employment, school attendance, and household stability.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The project is based at the William Jenkins Health Center, at 150 Harbour Way, Richmond, CA 94801, in the Iron Triangle neighborhood. Jenkins serves as the primary site for clinical services, Promoter supervision, and patient referrals. Home visits will be conducted in the homes of enrolled patients residing in the Iron Triangle and surrounding neighborhoods, including North Richmond, Atchison Village, Coronado, Santa Fe, Pullman, and other nearby areas based on patient enrollment. Group-based health education sessions and outreach activities will take place at Jenkins and additional community sites throughout Richmond as needed. Community events will also be in and around these areas.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

LifeLong designed this project based on evidence generated through its ongoing clinical and community-based work in Richmond, together with needs and priorities identified through local public health and air quality planning. LifeLong brings more than 50 years of experience assessing patient and community needs through multiple internal and external data sources, including annual patient surveys, periodic patient and community focus groups, a Patient Voice Collaborative, and ongoing input from staff and volunteers, many of whom have lived experience and were hired from within the communities served. LifeLong also maintains a patient-majority board of directors, ensuring a strong community voice in strategic planning, organizational priorities, and service delivery models.

LifeLong's clinical data and community engagement efforts, including surveys, focus groups with current and past Asthma Health Promoter cohorts, and ongoing documentation of community experiences, have identified recurring respiratory health needs and barriers among residents in Richmond. This feedback has directly shaped program design, for example, recognizing that not all community members are comfortable with home-based services, LifeLong is creating clinic-based pathways at Jenkins to ensure families can access health education and resources. Promoters, recruited from these same communities, bring direct understanding of neighborhood needs and disparities, reinforcing what the clinical data shows and adding context that only comes from being in the community. At the close of the current program year, LifeLong is hosting a focus group with its current cohort of Asthma Health Promoters to

gather direct input on what is working, what families are reporting, and what the next iteration of the program should prioritize, findings that will directly inform refinements to the design and implementation of the project. Together, these clinical and community-based inputs shaped a program that combines health education, home-based support, and connection to care and mitigation resources.

This project also benefits from LifeLong's active partnerships with community-based organizations and local stakeholders. These include Healthy Contra Costa, which highlights healthcare access for low-income and immigrant populations; the City's Richmond Rising initiative, funded by a $35 million Transformative Climate Communities (TCC) Implementation Grant from the California Strategic Growth Council; Urban Tilth, a partner in food access and environmental justice; and Aliados Health. LifeLong also partners with Vision y Compromiso, a statewide organization that supports the development of promotoras and community health workers, strengthening the training and professional identity of Health Promoters in this program. These partnerships help LifeLong amplify the voices and needs of local residents and address pressing needs at the intersection of air quality and health equity.

Priority needs identified through this engagement include the need to reach underserved residents through outreach, education, and enrollment; to target health education, services, and resources to residents most vulnerable to the impacts of poor air quality; and to reduce exposure to environmental triggers in the home. The project is also responsive to priorities reflected in Richmond’s Path to Clean Air Community Emissions Reduction Plan, which emphasizes reducing exposure where people live, expanding healthcare and supportive services for low-income residents, and improving access to clean air at home for communities disproportionately harmed by environmental injustice. Consistent with those priorities, LifeLong is proposing a community-rooted model that helps residents better understand how air pollution affects health, strengthens respiratory self-management, reduces exposure to household triggers, and connects to available care and supports.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

LifeLong’s Asthma Health program addresses the environmental justice and public health needs identified by combining a targeted household intervention with broader community-based health education, outreach, and resource navigation. The program

will benefit low-income residents in Richmond's Iron Triangle and surrounding neighborhoods who face disproportionate exposure to pollution and related health burdens. For Jenkins' patients with poorly controlled or persistent respiratory conditions the program offers intensive home visit services. For community members reached through outreach and health education, the program will use a broader prevention and education strategy. In response to the cumulative barriers identified through LifeLong's clinical data, community engagement, and local planning efforts, the program provides structured home visits, community health education, practical supports such as HEPA air purifiers, and navigation to primary care, Medi-Cal enrollment, and related services. Over the five-year grant term, LifeLong will serve at least 20 households each year, with a goal of reaching 100 households over the grant term through a minimum of 60 home visits annually (three visits per family), while expanding community access to information and supports through recurring education sessions and outreach activities.

Progress toward community impact will be demonstrated through measurable outcomes that track both reach and change over time. For the home visits, LifeLong will track the number of households enrolled, home visits completed, HEPA air purifiers and other exposure reduction supplies distributed, and completion of a 90-day follow-up for at least 75 percent of enrolled households. Health improvement for home visit participants will be measured through baseline and follow-up symptom and asthma control assessments at the start and end of the home visit cycle, with a 90-day follow-up to assess sustained changes in asthma control, medication adherence, respiratory symptoms, confidence in managing their condition at home, and ability to implement trigger-reduction strategies learned during visits. For community capacity building for improved health management, LifeLong will track at least 10 outreach events and recurring health education sessions annually, with a projected reach of at least 1,000 community encounters annually, measured through attendance, outreach contacts, and post-session feedback on changes in knowledge, confidence, and exposure-reduction behaviors. For workforce development and economic empowerment, LifeLong will train and deploy up to 15 Health Promoters annually, creating paid opportunities that strengthen local capacity and keep health knowledge rooted in the communities most affected. Together, these outcomes will demonstrate progress toward healthier households, greater community understanding of pollution-related health risks, improved access to practical supports and care, and stronger neighborhood capacity to respond to ongoing environmental health burdens.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members.*

Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.

LifeLong will engage community members through ongoing outreach, education sessions, and direct communication with patients and families participating in the program. Health Promoters, who are recruited from the communities they serve, will play a central role in communicating project activities, implementation progress, available services, and program updates through home visits, group education sessions, community events, and clinic-based engagement. Information about services, eligibility, and project benefits, including home visits, health education, exposure reduction resources, and navigation support, will also be shared through Jenkins' and LifeLong's established patient and community communication channels. LifeLong will also coordinate community outreach and education activities with community-based organizations engaged through the City of Richmond's Transforming Climate Communities initiative and Richmond Rising Together, as well as partners such as Healthy Contra Costa, the Latina Center, and Aliados Health, to diversify the program's reach.

To solicit community feedback, the program will implement structured participant surveys following home visit cycles and group education sessions to assess satisfaction, perceived benefit, and areas for improvement. Health Promoters will also gather informal feedback during outreach and engagement activities and relay common themes to program leadership during regular supervision meetings. A 90-day follow-up reassessment will include additional questions about service effectiveness and ongoing needs. LifeLong will also engage past and current cohorts as key partners in implementation feedback and community engagement. Beginning in the second year of the grant, LifeLong will host an annual focus group to gather direct input on what is working, what families are reporting, and how to strengthen the program. Past participants will also be invited to support community engagement activities, outreach events, and education sessions alongside current cohorts, expanding the program's reach and deepening community connections. Feedback from all sources will be reviewed quarterly by program leadership and used to adjust service delivery, outreach strategies, and resource allocation as LifeLong has done in prior cohorts, where participant input led to the creation of clinic-based pathways at Jenkins for families who were not comfortable with home-based services.

STEAM the Streets will produce community-centered storytelling that highlights local air quality and climate solutions across Richmond. In Year 4, this work will focus on the Asthma Health Program. Through real-time footage and storytelling, this work will illustrate how community health interventions can reduce exposure, improve respiratory

outcomes, and connect residents to critical resources and care. The footage will be incorporated into a broader campaign that will bring increased visibility to the Richmond Rising Together initiative, heighten awareness of resources and solutions, and share and connect with resident with the work happening in their community.
As part of the Richmond Rising Together initiative, a Collaborative Stakeholder Committee (CSC) comprised of a representative from each Co-Applicant organization as well as key stakeholders and compensated community member participants will meet monthly at the Nevin Community Center. During these meetings, Co-Applicants will share project status updates and directly engage the CSC and community members in discussions on project design and implementation. This structure ensures lessons learned across projects are leveraged towards the broader collaborative effort while creating meaningful opportunities for residents most impacted by poor air quality to learn about and engage in projects and share meaningful feedback based on their lived experiences. To reduce potential barriers and ensure maximum opportunities for community participation, these meetings are hybrid (hosted in person and on Zoom) and include free childcare, Spanish interpretation, and meals for community members. Meetings are recorded and posted online for viewing in Spanish and English.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Project Vision

Combine clinical referral of high-risk patients; structured home-based support; and community health education, outreach, and resource navigation to reduce exposure to air pollution and improve respiratory health for residents in Richmond's Iron Triangle and surrounding neighborhoods. Over the five-year grant term, the project will strengthen asthma self-management and exposure-reduction practices for high-risk households, expand community awareness of pollution-related health risks, and build local workforce capacity through a paid Health Promoter model that creates economic opportunities for residents from communities disproportionately impacted by air pollution.

Major Components

The project builds on LifeLong's established Asthma Health Promoter Program, which has been in place since 2012. Each program year, Health Promoters will be recruited in the first quarter, trained in the second quarter, and deployed for outreach, education, and home visit support thereafter. Home visit enrollment will occur on a rolling basis for approximately 10 months, with each household completing 3 visits over 6 months. The community education and outreach component will require additional planning during year one. Beginning in year two, the fourth quarter of each program year will serve as

the formal planning period for the following year, informed by participant feedback, Promoter input, and program data.

Measurable Outcome: Structured Home Visits and Community Health Outreach

Within five years, reduce indoor air pollution exposure and improve respiratory health outcomes for at least 100 high-risk households in Richmond's Iron Triangle and surrounding neighborhoods through structured home visits, asthma education, exposure-reduction support, and coordinated clinical follow-up.

Measurable Outcome: Community Capacity Building for Improved Health Management Within five years, build community capacity and empower Richmond residents to better manage their own health outcomes by delivering culturally responsive respiratory health education, exposure-reduction strategies, and resource navigation through deployment of trained local Health Promoters, recurring education sessions, outreach events, and clinic-based engagement totaling at least 1,000 annual community encounters.

Measurable Outcome: Workforce Development and Economic Empowerment

Within five years, create paid workforce development opportunities for Richmond residents through recruitment, training, and deployment of local resident Health Promoters to provide education and outreach through paid, skill building opportunities.

Role of Applicant and Partners

LifeLong will serve as the lead implementer for all project components. LifeLong's community engagement team will lead outreach in coordination with trained Health Promoters, while licensed clinical providers will provide clinical oversight and follow-up protocols**.** Licensed clinical providers and program staff will oversee training delivery, home visit implementation, and documentation workflows. LifeLong will also partner with community-based organizations engaged through the City's Richmond Rising TCC initiative and Richmond Rising Together to support recruitment, host community health education activities, and expand outreach to diverse populations across Richmond. UC Berkeley's Center Global Healthy Cities (CGHC) will prepare annual and end-of-project reports of data across all project partners, along with a public facing dashboard to track progress. The dashboard will include a public comment section. CGHC will work with all Co-Applicants to co-create validated survey questions to capture the mental health impacts of air pollution and climate change (e.g. 'climate anxiety'), and whether and how project interventions are reducing stress, anxiety, and related psychosocial influences on well-being.

Members from LifeLong Medical Care's Asthma Health Promoters Program will also be participants in the Total Transit Access Pilot Program (TTA Pilot) for the duration of their participation in the workforce program. The TTA Pilot will bolster Asthma Health's workforce development goals by providing unlimited transit passes for participants to access work sites, which will reduce transportation cost burden and encourage use of public transit for future work opportunities and personal use.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*
9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The total project budget is $1,231,734 over five years, including $1,000,000 for LifeLong. The majority of funding supports a dedicated and experienced project team, including a Program Manager (0.65 FTE), Respiratory Therapist (0.15 FTE), Director of Community Engagement (declining from 0.13 to 0.07 FTE across the grant term), and Outreach Specialist (0.3 FTE). Salary projections assume a 3 percent annual increase with fringe benefits calculated at 28 percent. Other operating costs include Health Promoter stipends for training completion ($500 per Promoter), home visit encounters ($75 each), and outreach and workshop events activities ($75 each). The budget also includes 50 HEPA air purifiers ($100 each) and exposure-reduction supplies ($200 per household) for participating families, as well as $25 gift cards for families who complete home visits. Annual program supplies (approximately $2,000) will cover training materials, graduation costs, educational materials, printed outreach materials, and event-related expenses such as tabling. Local mileage reimbursement will be provided at the IRS standard rate.

$144,467 is for the City of Richmond Project Manager (3.50% FTE), Associate Management Analyst (4.50% FTE), and Administrative Assistant (8.00% FTE) to support execution of this project, ensure completion of grant commitments, coordinate community engagement and collaboration across projects, and manage contracting, invoicing, and payments. $13,293 will support CSC and other community meetings, shared spaces, and Richmond Rising Together outreach materials.

$29,164 is for UC Berkeley for a Project Director (16.6% FTE) and a $50/hour x 208 hours PhD student researcher to prepare annual and end-of-project reports, manage a project data dashboard, and capture the impact of the projects in reducing negative mental health impacts.

$49,600 is for STEAM the Streets for a Project Manager (29% FTE) and a Creative Program Lead (17% FTE) with program and administrative costs for one year to produce community-centered storytelling that highlights local air quality and climate solutions across Richmond.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

LifeLong's project is consistent with the California Air Resources Board's Community Air Protection Program (AB 617) and implements key priorities identified in the Air District's Path to Clean Air Community (PTCA) Emissions Reduction Plan for Richmond–North Richmond–San Pablo. AB 617 prioritizes community-led emissions reduction, exposure reduction in disproportionately burdened communities, and meaningful engagement of residents in shaping air quality solutions. LifeLong's model reflects each of these priorities through community-rooted Health Promoters recruited from fenceline neighborhoods, direct reduction of household exposure to indoor pollutants, and ongoing community engagement that informs program design.

The project directly advances PTCA Strategy 2, Reduce Air Pollution at Home, by delivering structured home visits that assess environmental triggers, distributing HEPA filtration devices, and supporting indoor exposure reduction for high-risk households with asthma and other respiratory conditions. It also advances the plan's public health and exposure reduction priorities by expanding healthcare access for low-income PTCA residents through Medi-Cal enrollment assistance, linkage to primary care at Jenkins, and community health education that builds awareness of air quality risks and exposure reduction strategies.

Additionally, the project advances the City of Richmond's Climate Action Plan (CAP), which prioritizes health equity and reducing environmental health risks for the city's most vulnerable residents, including low-income families, communities of color, and individuals with chronic disease. The CAP identifies a role for community-based organizations to educate and engage the public using culturally and linguistically responsive approaches and calls for improved indoor air quality in homes to reduce allergens that contribute to and exacerbate asthma. LifeLong implements those priorities through home-based exposure reduction, community health education, resource navigation, and linkage to primary care services at Jenkins.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

A Federally Qualified Health Center operating since 1976, LifeLong has a current (FY26) annual operating budget of $141,274,000 and provides integrated medical, dental, and behavioral health services for over 50,000 patients annually. To support a broad array of services, LifeLong achieves and effectively manages over $35,000,000 in grant revenue each year from public, private, and philanthropic sources. Led by an Executive Leadership Team with clinical, operational, and fiscal management expertise, LifeLong maintains the full range of resources and capabilities to implement the proposed project, including a Planning and Grants Management department that

oversees post-award requirements, a Finance and Grants Accounting team ensuring appropriate allocation and documentation of grant funds, a Community Engagement team leading community-facing activities, and a Population Health and Data Analytics department developing data reports, refining metrics, and evaluating program achievements.

LifeLong is well positioned to lead this project because its model of care extends beyond clinic walls. The organization has deep experience implementing culturally responsive, community-based health programs that combine clinical care, prevention education, outreach, care coordination, resource navigation, and trusted messenger strategies.

Past projects of a similar size and scope are rooted in LifeLong's Health Promoter model, a cornerstone of this culturally responsive approach. Launched in 2012 as the Asthma Health Promoter Program through asthma home visits in Oakland and later expanded to West Contra Costa County, the model recruits, trains, and supports community members to serve as trusted messengers, educators, and connectors within their own neighborhoods. LifeLong currently operates four programs that supervise and deploy community members through paid stipends and structured outreach activities. Since 2023, the Climate Health Promoter program alone has trained 180 Promoters and is currently implementing a youth-focused cohort. This track record demonstrates LifeLong's ability to manage recruitment, curriculum delivery, participant support, stipend administration, outreach coordination, data tracking, and performance reporting across multiple concurrent community-based programs. LifeLong has also created pathways from Promoter roles into longer-term employment. Members of the current project team, including staff leading implementation, began as Health Promoters themselves. While employment is not guaranteed, LifeLong's practice of investing in and hiring from the communities it serves reflects an ongoing commitment to building local workforce capacity.

LifeLong also brings experience managing complex, multi-stakeholder, grant-funded projects, including creation of Jenkins in Richmond, with an accredited Family Medicine Residency Program (supported by federal and state funds) in which LifeLong serves as the sponsoring institution, and delivery of a broad array of grant-supported homeless services (supported by County, City, corporate, and private funds) primarily in Alameda County, including six street medicine teams, two clinics focused on serving homeless adults, and numerous public housing sites where LifeLong provides Permanent Supportive Housing Services.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources*

that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.

A Program Manager (0.65 FTE) will lead day-to-day implementation, including Promoter recruitment and support, coordination of training, home visits, and community education programming, partner engagement, and grant reporting. A Respiratory Therapist (0.15 FTE) will provide clinical oversight, support identification of high-risk patients for home visit enrollment, co-develop and deliver training content, and advise on home visit protocols and workshop curriculum. The Director of Community Engagement (0.13 FTE in year one, declining to 0.07 FTE by year five to reflect higher engagement during project ramp-up) will supervise the program team, ensure alignment with departmental goals, and support cross-team coordination and quality. An Outreach Specialist **(**0.3 FTE) will conduct community and patient outreach, support Promoter recruitment, promote education sessions, provide resource navigation, including Medi-Cal enrollment and linkage to care, and support follow-up engagement and retention.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

N/A; The project does not involve any construction or physical infrastructure requiring permits or approvals. The project is implementation-ready and can proceed immediately upon execution of the Grant Agreement.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

N/A; The proposed project would expand LifeLong's existing Asthma Health program and would not include construction, ground disturbance, or permanent installations. Therefore, the proposed project would have no environmental impacts and would be exempt from CEQA.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

N/A; The proposed project would expand LifeLong's existing Asthma Health program and would not include property acquisition, leasehold, or easements. Therefore, no site controls are required for project implementation.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

N/A; The proposed project would expand LifeLong's existing Asthma Health program and would not involve physical infrastructure development. Therefore, this project will not require any operations or maintenance of physical infrastructure.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Participant hesitancy around home visits. Some families are hesitant to allow home visits, particularly given concerns around privacy and distrust of institutions. This feedback directly informed the program design, which offers multiple ways for patients to engage beyond home visits, including health education sessions at the Jenkins and community outreach events ensuring they can still access asthma education, exposure-reduction strategies, and resource navigation through these alternative pathways.
Tracking outreach-to-clinic connections. LifeLong is currently working to upskill all outreach staff in electronic health record documentation to better capture when community members reached through outreach events connect to clinical services at Jenkins. This tools will be used to collect participant information to enter into the electronic health record to support referral tracking.
Measuring community engagement reach. Tracking unique individuals at outreach events and education sessions is inherently challenging, particularly in communities where residents may be hesitant to share detailed personal information due to immigration concerns, privacy preferences, or distrust of formal data collection. LifeLong will use a combination of methods to capture reach without requiring personally identifying information, including attendance counts, sign-in sheets where appropriate, post-session feedback surveys, and Promoter-reported engagement tallies.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	LifeLong's Asthma Health Promoter Program: Combine clinical referral of high-risk patients; structured home-based support; and community health education, outreach, and resource navigation to reduce exposure to air pollution and improve respiratory health for residents in Richmond's Iron Triangle and surrounding neighborhoods. Over the five-year grant term, the project will strengthen asthma self-management and exposure-reduction practices for high-risk households, expand community awareness of pollution-related health risks, and build local workforce capacity through a paid Health Promoter model that creates economic opportunities for residents from communities disproportionately impacted by air pollution.

Measurable Outcome	Indicator(s)
1. Within five years, reduce indoor air pollution exposure and improve respiratory health outcomes for at least 100 high-risk households in Richmond's Iron Triangle and surrounding neighborhoods through structured home visits, asthma education, exposure-reduction support, and coordinated clinical follow-up.	• Number of households enrolled in home visit services (target: 20 annually; 100 over grant term) • Number of home visits completed (target: minimum 60 annually; 300 over grant term) • Number of households receiving High-Efficiency Particulate Air (HEPA) filtration units and/or exposure-reduction supplies target 50 per year, 250 total) • Percent of participants with documented baseline and follow-up ACT scores demonstrating improvements (target: at least 75%) • Percent of participants completing structured 90-day reassessment (target: 75%)

	• Percent of participants reporting improvement in confidence managing respiratory health and reducing indoor exposure triggers (at least 75%)
2. Within five years, build community capacity and empower Richmond residents to better manage their own health outcomes by delivering culturally responsive respiratory health education, exposure-reduction strategies, and resource navigation through deployment of trained local Health Promoters, recurring education sessions, outreach events, and clinic-based engagement totaling at least 1,000 annual community encounters.	• Number of Promoters deployed to deliver education and outreach (target: 15 annually; 75 over grant term) • Percent of Health Promoters reporting an increase in knowledge, skills, or confidence related to community health outreach and respiratory health education (target: 90%) • Percent of participants reporting increase in knowledge or confidence in exposure-reduction strategies (target: at least 75%) • Number of community-based health education sessions delivered (target: at least 4 annually; 20 over grant term) • Number of annual community encounters (target: 1,000; 5,000 over grant term)
3. Within five years, create paid workforce development opportunities for Richmond residents through recruitment, training, and deployment of local resident Health Promoters to provide education and outreach through paid, skill building opportunities.	• Number of Health Promoters completing training (target: 15 annually; 75 over grant term)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Within five years, reduce indoor air pollution exposure and improve respiratory health outcomes for at least 100 high-risk households in Richmond's Iron Triangle and surrounding neighborhoods through structured home visits, asthma education, exposure-reduction support, and coordinated clinical follow-up.	A. Identify and enroll home visit participants.	1. Identify eligible patients through provider referral and electronic health record review.	LifeLong	Richmond Rising Transforming Climate Communities (TCC) and the Richmond Rising Together (RRT)	Months 8, 20, 32, 44, 56
		2. Enroll at least 20 households annually and schedule Visit 1.	LifeLong	--	Months 8, 20, 32, 44, 56
	B. Deliver structured home visit services, including assessment, education, and exposure-reduction support.	1.Conduct 3 home visits per household to assess triggers and provide exposure-reduction support and education.	LifeLong	--	Months 10, 22, 34, 46, 58
		2. Distribute HEPA filtration and exposure-reduction supplies and provide hands-on training.	LifeLong	--	Months 10, 22, 34, 46, 58
		3. Provide hands-on education on asthma care, medication use, and exposure reduction strategies.	LifeLong	--	Months 10, 22, 34, 46, 58
	C. Track outcomes and conduct follow up evaluation.	1. Document baseline asthma control test (ACT) at Visit 1 and follow-up ACT at Visit 3 for enrolled households.	LifeLong	--	Months 10, 22, 34, 46, 58

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		2. Administer a brief participant feedback survey after completion of the home visit cycle to assess satisfaction and perceived benefit.	LifeLong	--	Months 10, 22, 34, 46, 58
		3. Conduct a structured 90-day reassessment for at least 75% of enrolled households, in coordination with a licensed clinical provider, using escalation protocols for clinical follow-up as needed.	LifeLong	--	Yearly, Months 4-13 rolling
2. Within five years, build community capacity and empower Richmond residents to better manage their own health outcomes by delivering culturally responsive respiratory health education, exposure-reduction strategies, and resource navigation through deployment of trained local Health	A. Conduct public meetings and attend community events	1. Recruit local Promoters.	LifeLong	TCC, RRT	Months 3, 15, 27, 39, 51
		2. Deliver structured training (approximately 8 hours) covering core competencies, asthma, and exposure reduction content.	LifeLong		Months 4, 16, 28, 40, 52
		3. Provide stipends upon training completion and confirm at least 15 Promoters complete training.	LifeLong		Months 4, 16, 28, 40, 52
		4. Assign Promoters to outreach, education sessions, and home visit support roles.	LifeLong		Months 12, 24, 36, 48, 60
		5. Provide stipends for outreach activities following training.	LifeLong		Months 12, 24, 36, 48, 60
		6. Provide supervision and coaching and track participation and outreach activity counts.	LifeLong		Months 12, 24, 36, 48, 60

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
Promoters, recurring education sessions, outreach events, and clinic-based engagement totaling at least 1,000 annual community encounters.	B. Conduct public meetings and attend community events	1. Identify priority relevant education topics based on seasonal air quality risks, content expert insights, and community input.	LifeLong		Months 12, 24, 36, 48, 60
		2. Schedule at least one education session per quarter at the Wellness Center.	LifeLong		Months 3, 6, 9, 12, 15, 18, 21, 24, 27, 30, 33, 36, 39, 42, 45, 48, 51, 54, 57, 60
		3. Develop outreach materials and referral pathways	LifeLong		Months 1-3, 12, 24, 36, 48, 60
	C. Conduct public meetings and attend community events	1. Conduct outreach to patients and community members to promote sessions and resources.	LifeLong	TCC, RRT	Months 3, 6, 9, 12, 15, 18, 21, 24, 27, 30, 33, 36, 39, 42, 45, 48, 51, 54, 57, 60
		2. Deliver quarterly education sessions focused on indoor air quality, exposure reduction strategies, and managing pollution-related respiratory risks	LifeLong		Months 3, 6, 9, 12, 15, 18, 21, 24, 27, 30, 33, 36, 39, 42, 45, 48, 51, 54, 57, 60

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		3. Provide resource navigation and referrals to exposure-reduction supports as needed.	LifeLong		As needed throughout the grant period
		4. Distribute HEPA units to education session participants identified as having respiratory conditions.	LifeLong		As needed throughout the grant period
	D. Conduct public meetings and attend community events	5. Collect brief participant surveys after sessions.	LifeLong		Months 3, 6, 9, 12, 15, 18, 21, 24, 27, 30, 33, 36, 39, 42, 45, 48, 51, 54, 57, 60
		6. Review attendance, feedback, and outreach results quarterly.	LifeLong		Months 3, 6, 9, 12, 15, 18, 21, 24, 27, 30, 33, 36, 39, 42, 45, 48, 51, 54, 57, 60
		7. Adjust topics, format, and outreach strategies throughout the grant period.	LifeLong		Months 12, 24, 36, 48, 60
3. Within five years, create paid workforce	A. Provide professional	1. Conduct at least one resume workshop per cohort.	LifeLong		Months 12, 24, 36, 48, 60

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
development opportunities for Richmond residents through recruitment, training, and deployment of local resident Health Promoters to provide education and outreach through paid, skill building opportunities.	development and pathway support.	2. Share information about employment and education opportunities, including potential roles within LifeLong and partner networks	LifeLong		Months 3, 6, 9, 12, 15, 18, 21, 24, 27, 30, 33, 36, 39, 42, 45, 48, 51, 54, 57, 60
		3. Collect Promoter feedback to refine training and supports throughout the grant period.	LifeLong		Months 12, 24, 36, 48, 60
		4. Conduct annual Promoter focus group to gather structured feedback on training, deployment, and program experience.	LifeLong		Months 12, 24, 36, 48, 60
		5. Distribute HEPA units to Promoters through annual focus group	LifeLong		Months 12, 24, 36, 48, 60

Project Name: Asthma Health
Lead Applicant Name: City of Richmond
Term for this budget (in year 5 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Community Engagement	Direct	Richmond Rising Together Community Engagement Materials	Public materials for CSC meeting agendas and slides, reports as necessary for public review; branded outreach and informational materials: flyers, pamphlets, banners, and postcard mailers. $2,000/year for printing and copying + $1500/year for translation = $3500 x 5 years = $17,500. Cost to project at 1/12th for 1 of 12 projects participating: $1458	$1,458.00
Other Direct Costs	Direct	Richmond Rising Together Hub	Rental of building space for a publicly accessible office and meeting space for grant partner meetings, trainings/workshops, and community events. $1,390/month x 41 months = $56,990. Cost to project at 1/12th for 1 of 12 projects participating: $4,749	$4,749.00
Other Direct Costs	Direct	Cellular phones and service	Cellular phones and cellular service for PM I and AAA Staff. One time purchase of phones ($600/each) and monthly costs of $50/month per phone for 41 months. $600 x 2 + $50 x 41 months = $5,300. Cost to project at 1/12th for 1 of 12 projects participating: $442	$442.00
Community Engagement	Direct	Refreshment, Childcare, and Interpretation for Community Meetings	$400/event for refreshments for 30 community members + $80/event for childcare + $200/event interpretation = $680 per meeting. 41 CSC monthly meetings + 4 additional events/year x 5 years = 61 meetings x $680/meeting = $41,480. Cost to project at 1/12th for 1 of 12 projects participating: $3,457	$3,457.00
Capacity-Building and Training	Direct	City of Richmond Staff Training Costs	Workshop and conference fees ($600/year per staff member) + meals during training ($92/day x 4 days/year per staff member) = $968/staff member/year x 5 years x 3 staff = $14,520.00. Cost to project at 1/12th for 1 of 12 projects participating: $1,210	$1,210.00
Travel	Direct	Local Transportation	20 miles/month for staff to attend related community meetings throughout the City and region. 60 months x 20 miles x $0.70/mile = $840. Cost to project at 1/12th for 1 of 12 projects participating: $70	$70.00
Community Engagement	Direct	Community Workproduct Compensation for Richmond resident members of CSC	Each resident CSC member receives a $50 VISA gift card per meeting. Estimate includes 6 members at each monthly Collaborative Stakeholder Committee meeting, for 41 months. $50 card + $4 purchasing fee = $54/card x 6 residents x 41 months = $13,284. Cost to project at 1/12th for 1 of 12 projects participating: $1,107	$1,107.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Richmond Rising Together Project Website	Richmond Rising Together webpage for posting meeting materials (agendas, minutes, recordings), key reports and documents, community opportunities for project involvement, and other public information. Estimated at $50/month based on historic costs x 60 months = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Subcontractors & Vendors	Direct	Graphic Design Consultant	Development of website and project outreach materials. $150/hr for 20 hours = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Data Management Software (Airtable)	Airtable is used for tracking project budgets, deliverables, expenditures and reimbursements to-date, and other key coordination data. $720/year for 5 years based on historic costs = $3,600. Cost to project at 1/12th for 1 of 12 projects participating: $300	$300.00
Personnel/Staff Costs	Direct	City of Richmond Project Manager	Project Manager provides overall leadership in grant execution and implementation across projects. Project-specific allocation, based on anticipated support to be provided: 3.50% FTE x $17,754.47 monthly salary x 41 months = $25,477.66; Benefits at 77% of salary = $19,617.80.	$45,095.00
Personnel/Staff Costs	Direct	City of Richmond Associate Management Analyst	Project Analyst coordinates partners for CSC meetings, preparation and submission of required reports and invoices, and ongoing budget management across projects. Project-specific allocation: 4.50% FTE x $13,623.72 monthly salary x 41 months = $25,135.76; Benefits at 77% of salary = $19,354.53.	$44,490.00
Personnel/Staff Costs	Direct	City of Richmond Administrative Assistant	Administrative Assistant provides logistical and coordination support for all projects, including CSC meeting preparation, timely payment of project partner invoices, and project delivery support. Project-specific allocation: 8.00% FTE x $9,453.37 monthly salary x 41 months = $31,007.04; Benefits at 77% of salary = $23,875.42.	$54,882.00

Project Name: Asthma Health
Co-Applicant 1 Name: By Any Means Visionary LLC dba STEAM the Streets
Term for this budget (in year 5 Years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Project Manager	Responsible for program oversight, coordination, reporting, and partner engagement. Project Manager: 0.29 FTE x $67,000 salary x 5 years = $98,000; approximately 1 year (i.e. 18%) of this cost is billed to this project = $17,640	$17,640.00
Personnel/Staff Costs	Direct	Creative Program Lead	Responsible for guiding creative development and producing campaign media. Creative Program Lead: 0.17 FTE x $108,000 salary x 5 years = $94,000; approximately 1 year (i.e. 18%) of this cost is billed to this project = $16,920	$16,920.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Software	Software & Digital Tools (editing software, licenses) ($800/year x 5 years = $4,000); 1 year (i.e., 20%) of this cost is billed to this project = $800	$800.00
Community Engagement	Direct	Marketing and outreach	Marketing materials, printing, social media ads to promote videos ($200 printing costs per year + $700 social media ads per year = $900 per year x 5 years = $4,500); 1 year (i.e., 20%) of this cost is billed to this project = $900	$900.00
Contingency (≤10% of Direct Costs at PROJECT level)	Contingency	Contingency	Contingency funds will support unforeseen costs related to program delivery and outreach needs to ensure successful implementation. Year 4 at 18% of $10,000 = $2,000	$1,800.00
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	Administrative Overhead	Occupancy, insurance, and other overhead expenses Year 4 at 18% of $37,500 = $7,500	$6,750.00

Project Name: Asthma Health
Co-Applicant 4 Name: LifeLong Medical Care
Term for this budget (in year 5 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Program Manager	Leads day-to-day implementation, recruits and supports Promoters, and coordinates training, home visits, workshops, partner engagement, and reporting. Calculation: 0.65 FTE × $75,000 base salary in Year 1, with 3% annual increase. Y1 ($75,000×0.65=$48,750) + Y2 ($77,250×0.65=$50,213) + Y3 ($79,568×0.65=$51,719) + Y4 ($81,955×0.65=$53,271) + Y5 ($84,414×0.65=$54,869) = $258,822.	$258,822.00
Personnel/Staff Costs	Direct	Respiratory Therapist	Provides clinical oversight, identifies high-risk patients, co-develops training, and advises on home visit protocols and workshop content. Calculation: 0.15 FTE × $105,556 base salary in Year 1, with 3% annual increase. Y1 ($105,556×0.15=$15,833) + Y2 ($108,723×0.15=$16,308) + Y3 ($111,985×0.15=$16,798) + Y4 ($115,345×0.15=$17,302) + Y5 ($118,805×0.15=$17,821) = $84,062.	$84,062.00
Personnel/Staff Costs	Direct	Director of Community Engagement	Supervises the program team, ensures alignment with departmental goals, and supports cross-team coordination and quality. FTE declines from 0.128 in Year 1 to 0.07 in Year 5 to reflect higher engagement during project ramp-up. Calculation: Y1 ($150,648×0.128=$19,283) + Y2 ($155,167×0.110=$17,068) + Y3 ($159,822×0.090=$14,384) + Y4 ($164,617×0.072=$11,852) + Y5 ($169,556×0.070=$11,869) = $74,456.	$74,456.00
Personnel/Staff Costs	Direct	Outreach Specialist	Conducts community and patient outreach, supports Promoter recruitment, promotes education sessions, provides resource navigation including Medi-Cal enrollment and linkage to care, and supports follow-up engagement. Calculation: 0.30 FTE in Years 1–4, declining to 0.255 in Year 5, × $52,000 base salary in Year 1 with 3% annual increase. Y1 ($52,000×0.30=$15,600) + Y2 ($53,560×0.30=$16,068) + Y3 ($55,167×0.30=$16,550) + Y4 ($56,822×0.30=$17,047) + Y5 ($58,527×0.255=$14,924) = $80,189.	$80,189.00
Personnel/Staff Costs	Direct	Fringe Benefits	Fringe benefits cover health insurance, retirement contributions, and payroll taxes. Calculation: 28% × $497,529 (total 5-year salaries) = $139,308.	$139,308.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Program Supplies	Training materials, graduation costs, educational materials, printed outreach materials, and event-related supplies such as tabling. Calculation: approximately $2,000/year × 5 years = $10,739 (varies slightly year to year to reflect programming needs).	$10,739.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	HEPA Air Purifiers	HEPA air purifiers distributed to home visit households and to community members reached through outreach and education sessions. Calculation: 50 units/year × $100/unit × 5 years = $25,000 (20 units to home visit households annually, plus additional units distributed through education sessions and to Promoters).	$25,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Exposure-Reduction Supplies	Asthma-safe cleaning supplies, protective bedding, and other supplies that reduce indoor air pollution exposure for participating families. Calculation: 20 households/year × $200/household × 5 years = $20,000.	$20,000.00
Community Engagement	Direct	Patient Incentives – Home Visits	Small incentive for families participating in the home visit cycle. Calculation: 20 families/year × $25/family × 5 years = $2,500.	$2,500.00
Community Engagement	Direct	Promoter Stipends – Home Visits	Stipends for Health Promoters supporting home visit cycles, with 2 Promoters per visit. Calculation: 60 visits/year × $75/visit × 2 Promoters = $9,000/year × 5 years = $45,000.	$45,000.00
Community Engagement	Direct	Promoter Stipends – Workshops/Events	Stipends for Health Promoters supporting community outreach events and education sessions, with at least 2 Promoters per event. Calculation: 10 events/year × $75/event × up to 2 Promoters = $1,500/year × 5 years = $7,500.	$7,500.00
Capacity-Building and Training	Direct	Promoter Stipends – Training	Stipends for Health Promoters completing 8 hours of structured training. Calculation: 15 Promoters/year × $500/Promoter × 5 years = $37,500.	$37,500.00
Travel	Direct	Local Mileage Reimbursement	Local mileage reimbursement at the IRS standard rate for Health Promoter and staff travel to conduct home visits and community outreach across Richmond. Calculation: 1,500 miles/year × $0.725/mile × 5 years = $5,438.	$5,438.00
Contingency (≤10% of Direct Costs at PROJECT level)	Contingency	Contingency	Reserved to cover unforeseen expenses or unexpected costs that may arise during the grant term. Calculation: 10% × $790,514 (total direct costs) = $79,051.	$79,051.00
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	Indirect Costs	Covers shared administrative functions including finance, HR, IT, and facilities. Calculation: 15% × $869,565 (direct costs + contingency) = $130,435, equal to 13.04% of the total project budget ($1,000,000).	$130,435.00

Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Richmond Rising Together
Lead Applicant Name	City of Richmond
Project Location	Richmond, CA
Overall Funding Request	$15,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Climate Ambassadors
Project Lead	Rich City Rides
Project Location	Richmond, California
Project Funding Request	$1,242,734

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Climate Ambassadors is a youth fellowship program designed to provide marginalized youth in Richmond with meaningful leadership, workforce, and environmental learning experiences. The program will serve three youth cohorts, with each cohort participating in a one-year fellowship experience. Youth fellows will engage in approximately 10 hours of programming and activities per month, creating consistent opportunities for learning, environmental advocacy, skill development, and community engagement.

Each youth cohort will gain exposure to environmental literacy, civic engagement, and workplace skills through a structured series of educational modules, including:

- Climate equity
- Community organizing and advocacy
- Local and regional air quality impacts and policies
- Richmond Rising Together mission, projects deep-dive, and project benefits

The modules will be complemented by workplace development training opportunities, including job shadowing within the Richmond Rising Together projects, resume and cover letter development, public speaking, social media strategy, and community engagement. Furthermore, youth fellows will be able to collaborate, become involved, and create discourse between community members about the vision and progress of the Richmond Rising Together projects. Together, these components are designed to equip youth fellows with the knowledge and practical skills needed to become informed leaders, advocates, and future professionals within the green-blue workforce sector. The program uses a learn–practice–apply model, allowing fellows to reinforce concepts not only through educational presentations but taking that information and applying it through their community engagement with Richmond community members and through their collaboration with Richmond Rising Together. Participants will engage in activities such as organizing and participating in community bike rides, providing bike safety education and informational presentations regarding environmental impacts of cycling, conducting park clean-ups and providing information on how to maintain our local parks , leading informational tabling efforts regarding the Richmond Rising Together projects, and becoming involved in the community engagement piece of the Richmond Rising Together and Bay Area Air District-related projects and events. The fellowship will culminate in a community-facing capstone project in which youth fellows will create and present projects through various artistic mediums that examine local environmental and air quality challenges while highlighting the role of the Richmond Rising Together initiative in addressing them. Fellows may utilize visual art, video, and interactive

installations to share their work and engage community members while demonstrating their contributions toward advancing environmental awareness and equity.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - Reduce air pollution and improve health outcomes
    - Build economic resilience for a just transition

This project aligns with the Local Community Benefit Fund strategies by building economic resilience for a just transition while also reducing air pollution and improving health outcomes.

The project supports economic resilience by exposing youth fellows to Richmond Rising Together projects and initiatives focused on environmental and community improvement, including solar installation and energy-efficiency efforts, tree planting initiatives, and active transportation programs. Through these experiences, along with workforce development training and job shadowing opportunities, fellows will gain practical skills, career exposure, and knowledge of pathways within environmentally focused sectors. These experiences help build long-term workforce readiness and create opportunities for economic mobility while preparing participants to contribute to a just transition economy.

The project also advances efforts to reduce air pollution and improve community health through its focus on active transportation and environmental education. According to the California State Transportation Agency's Climate Action Plan for Transportation Infrastructure (CAPTI), transportation-related emissions account for more than 40 percent of California's polluting emissions, highlighting the importance of expanding sustainable transportation options to achieve long-term climate goals. Community bike rides and bike safety workshops encourage cycling as an alternative transportation option while promoting increased physical activity. In the short term, pre- and post-program surveys can measure increases in participants' confidence and likelihood of using bicycles for transportation and recreation. Over time, increased adoption of active transportation habits can contribute to reduced vehicle emissions, improved air quality, and healthier communities.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Our youth fellows work in various locations within the Coronado, Iron Triangle, and Santa Fe neighborhoods in Richmond, California. The primary building where youth

fellows receive their training is at 1600 Nevin Avenue, Richmond, California, 94801. The secondary location is the Bike Hub at Unity Park at 1605 Ohio Avenue, a small shed used as a meeting place where Rich City Rides hosts community activities.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Community needs and priorities for this project were identified through ongoing engagement efforts conducted through the Richmond Rising Together project, including informational tabling, outreach events, and direct conversations with youth, residents, parents, educators, community-based organizations, and local partners. Through these efforts, stakeholders consistently identified a need for expanded professional development opportunities for youth, increased access to and improvement of green spaces, stronger environmental education, and more meaningful opportunities for youth leadership and civic participation. Community members emphasized the importance of creating pathways for youth to actively shape and contribute to a healthier and more sustainable Richmond, while local partners advocated for greater youth representation and participation in community spaces such as town halls, outreach events, and local initiatives.

This feedback directly informed the design of the proposed fellowship and its emphasis on youth-led community engagement, workforce development, environmental education, and active participation in Richmond Rising Together initiatives and related community projects. Youth will serve as leaders and ambassadors through activities such as community bike rides, informational tabling, environmental advocacy, volunteer opportunities, and community engagement efforts. Research further supports the value of youth civic engagement and leadership opportunities. A 2023 study published in JAMA Network Open found that volunteering was associated with significantly higher odds of flourishing among adolescents, as well as improved overall health and fewer behavioral challenges. Similarly, research from the University of Illinois found that adolescents with a stronger sense of purpose, often developed through civic engagement, reported greater life satisfaction and more positive emotional well-being. By centering youth leadership and community voice, the project ensures activities remain responsive to community priorities while strengthening connections among residents, organizations, and future community leaders.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

This project addresses community-identified needs for expanded youth leadership opportunities, environmental education, workforce development, and cleaner, healthier neighborhoods in Richmond's historically marginalized communities that are disproportionately impacted by poor air quality. In Richmond, where more than 80 percent of residents are people of color and the median household income falls below the California state average, children experience asthma rates nearly twice as high as the county average, highlighting ongoing environmental justice and public health disparities.

Through the fellowship, youth participants will receive environmental education focused on clean air, climate equity, and active transportation while gaining workforce and leadership experience through hands-on activities, community outreach, bike rides, park clean-ups, and Richmond Rising Together initiatives. The project promotes biking and active transportation as healthier and lower-emission alternatives while increasing community awareness around air quality and environmental impacts. Research has shown that increased use of biking and e-bikes can reduce emissions, lower transportation costs, and increase physical activity, particularly benefiting lower-income communities.

Measurable outcomes will include youth participation and retention, number of community outreach events and bike rides conducted, volunteer engagement, capstone projects completed, and pre- and post-program surveys measuring increases in environmental knowledge, leadership skills, and likelihood of using bicycles for transportation. Together, these outcomes will demonstrate progress toward stronger youth leadership, increased environmental awareness, and healthier community practices.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Community members will be engaged on project implementation progress and benefits through consistent, youth-led outreach and communication strategies. Youth fellows will

share Air District program updates and resources during informational tabling, community bike rides, workshops, and local events, as well as through social media and partnerships with local organizations and schools. These efforts will ensure that residents are informed about program activities, opportunities for involvement, and the environmental and health benefits associated with the Air District initiatives. Youth fellows will serve as key messengers, helping to build trust and strengthen connections between the project and the broader community.

Community feedback will be actively solicited throughout the grant implementation period using both formal and informal methods. These include surveys, feedback forms at events, and direct conversations during outreach efforts, as well as ongoing input from youth fellows who regularly engage with residents. Feedback from community members, parents, and partners will be reviewed and used to adjust program activities, outreach strategies, and areas of focus to ensure responsiveness to community needs. This continuous feedback will help maintain a community informed approach, ensuring the project remains intentional, inclusive, and impactful.

As part of the Richmond Rising Together initiative, a Collaborative Stakeholder Committee (CSC) made up of a representative from each Co-Applicant organization as well as key stakeholders and compensated community member participants will meet monthly at the Nevin Community Center. During these meetings, Co-Applicants will share project status updates and directly engage the CSC and community members in discussions on project design and implementation. This structure ensures lessons learned across projects are leveraged towards the broader collaborative effort while creating meaningful opportunities for residents most impacted by poor air quality to learn about and engage in projects and share meaningful feedback based on their lived experiences. To reduce potential barriers and ensure maximum opportunities for community participation, these meetings are hybrid (hosted in person and simultaneously on Zoom) and include free childcare, Spanish interpretation, and meals for community members. Meetings are recorded and posted online for viewing in Spanish and English.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The project vision is to develop a youth-led pipeline that strengthens environmental awareness, workforce readiness, and community leadership while supporting healthier and more sustainable communities in Richmond. Through a three-year fellowship program consisting of three year-long youth cohorts, participants will gain environmental

education, leadership development, and hands-on experience that prepares them to become advocates and future professionals in environmentally focused fields. The project also seeks to strengthen connections between youth and Richmond Rising Together initiatives by creating meaningful opportunities for youth participation and community engagement.

Rich City Rides will serve as the project lead and will oversee program implementation, recruitment, fellowship coordination, curriculum delivery, workforce development activities, mentorship, and youth engagement. Rich City Rides will facilitate educational modules on climate equity, community organizing, air quality, and Richmond Rising Together initiatives, while coordinating hands-on activities, including community bike rides, park clean-ups, informational tabling, and community outreach efforts. Bay Area Air District and Richmond Rising Together partners will support the project by providing subject matter expertise, project education, engagement opportunities, and direct exposure to community initiatives, such as solar and energy-efficiency projects, tree planting efforts, and active transportation initiatives. Partners will also provide opportunities for youth fellows to participate in events, outreach activities, and community-based environmental projects.

Over the three-year program period, measurable outcomes will include successful recruitment and participation of three youth cohorts; delivery of monthly fellowship sessions and educational modules; youth participation in workforce development activities and community engagement efforts; number of community bike rides, outreach events, and volunteer activities conducted; participation in Richmond Rising Together-related projects and events; completion of youth capstone projects; and pre- and post-program surveys measuring growth in environmental knowledge, leadership skills, workforce readiness, and likelihood of adopting sustainable transportation behaviors. Fellows participating in the program will also participate in the Total Transit Access Pilot Program, receiving unlimited transit access to reduce transportation barriers, increase access to program activities and work opportunities, and encourage long-term use of public transit.

The University of California (UC) Berkeley's Center Global Healthy Cities (CGHC) will prepare annual and end-of-project reports of data across all project partners, along with a public facing dashboard to track progress. The dashboard will include a public comment section. CGHC will work with all Co-Applicants to co-create validated survey questions to capture the mental health impacts of air pollution and climate change (e.g., climate anxiety), and whether and how project interventions are reducing stress, anxiety, and related psychosocial influences on well-being.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The proposed budget of $1,242,734 supports three year-long cohorts of the youth fellows program focused on environmental education, workforce development, and community engagement in Richmond. The majority of funds are allocated to personnel, ensuring strong program implementation, youth support, and sustained community impact. The Youth Fellows Project Manager (1.0 FTE) will lead curriculum development, recruitment, and overall program oversight, while the Community Organizer (1.0 FTE) will collaborate and assist the Youth Fellow Program Manager during trainings, collaboration with Richmond Rising Together partners and community engagement activities. Associated benefits (30 percent) cover taxes, healthcare, and cost-of-living adjustments. Youth fellows (10 annually) will receive stipends for participating in modules, trainings, and community-based activities, ensuring equitable access and consistent engagement.

Community engagement costs support outreach and program visibility through supplies such as food, printed materials, decorations, and participation incentives (e.g., bike lights, reflectors), which are essential for successful youth-led events, including bike rides, workshops, and tabling. The budget also accounts for the cost of League Cycling Instructor (LCI) certifications, which are important in building internal capacity to deliver bike safety education and expand career pathways for staff and youth, as well as ensuring staff have proper certifications to lead community bike rides and bike riding lessons. A 10 percent contingency is included to address unforeseen costs and ensure program continuity. Indirect costs (15 percent), including administrative overhead and support organizational operations, compliance, and grant management. Overall, the budget reflects a strategic investment in staffing, youth stipends, and community engagement resources necessary to achieve measurable outcomes in youth leadership and environmental awareness.

The budget includes $216,702 for the City of Richmond 5.25 percent FTE Project Manager, 6.75 percent FTE Project Analyst, and 12.00 percent Administrative Assistant to support execution of this project, ensure completion of grant commitments, coordinate community engagement and collaboration across projects, and manage contracting, invoicing, and payments. Also, $13,293 will support CSC and other community meetings, shared spaces, and Richmond Rising Together outreach materials.

The budget includes $29,164 for UC Berkeley for a 17 percent FTE Project Director and a $50/hour x 210 hours PhD student researcher to prepare annual and end-of-project reports, manage a project data dashboard, and capture the impact of the projects in reducing negative mental health impacts.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project is consistent with key local, regional, and statewide initiatives, including the Community Air Protection Program (Assembly Bill 617), the Richmond Climate Action Plan, the Richmond Bicycle and Pedestrian Action Plan, the Richmond Department of Children and Youth Community Needs Assessment, the Richmond General Plan 2030, the California Climate Adaptation Strategy, the California Scoping Plan, the Climate Action Plan for Transportation Infrastructure (CAPTI), and California's Active Transportation Program. Together, these initiatives prioritize reducing emissions, improving air quality in disproportionately impacted communities, increasing access to active transportation, advancing environmental justice, and creating pathways toward workforce development and a just transition economy.

These initiatives directly informed the design of the youth fellowship by shaping its focus on air quality education, sustainable transportation, environmental justice, and youth leadership. Community priorities identified across these plans, including expanding access to safe active transportation, increasing environmental education, improving community health, strengthening youth engagement, and building pathways into green careers, are reflected throughout the fellowship structure. Through workforce development opportunities, community bike rides, environmental education, and participation in local initiatives related to energy efficiency, tree planting, and community health, the project advances shared local and statewide goals around climate action, public health, youth development, and equitable community investment.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Rich City Rides has over a decade of experience designing, implementing, and managing community-based programs that integrate youth development, environmental justice, and active transportation. Since its founding in 2012, Rich City Rides has led multiple large-scale initiatives serving historically underserved and marginalized communities in Richmond, with a focus on building leadership pathways for Black,

Indigenous, and People of Color (BIPOC) youth while addressing systemic inequities in mobility, public health, and access to green space.

Rich City Rides has successfully managed multi-year, publicly funded programs of similar scope and complexity, including serving as a key partner in the Richmond Rising Transformative Climate Communities (TCC) initiative and partnering with Contra Costa Health to organize bike clubs through the Walk and Bike Leaders (WABL) Project across multiple schools throughout West Contra Costa County. Through this work, Rich City Rides has developed and implemented youth fellowship programming that combines structured curriculum, workforce development, and hands-on community engagement. Programs have included educational modules on climate equity, community organizing, and public health, paired with applied learning opportunities, such as community bike rides, outreach campaigns, park activations, and environmental stewardship activities.

In addition to program delivery, Rich City Rides has demonstrated strong operational capacity in managing staff, coordinating partnerships, and delivering measurable outcomes. The organization has an established history of collaborating with the Bay Area Air District, schools, local government agencies, and community-based organizations to align programming with environmental and public health priorities. Rich City Rides also brings extensive experience in youth workforce development and leadership training, supporting young people in developing transferable skills such as public speaking, advocacy, job readiness, and community organizing while creating tangible community impact through youth-led events and outreach efforts.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The project will be led by a dedicated Youth Fellows Program Manager (1.0 FTE), who will oversee all aspects of implementation, including curriculum development, recruitment, onboarding, and ongoing supervision of youth fellows. The Program Manager will also be responsible for ensuring alignment with project goals, tracking deliverables, and coordinating with Richmond Rising Together partners.

A Community Organizer (1.0 FTE) will support day-to-day program execution by coordinating outreach, facilitating community engagement activities, and supporting youth fellows in implementing events such as bike rides, workshops, tabling, and park clean-ups.

The project will also directly support approximately 10 youth fellows annually, each participating at approximately 0.23 FTE. Youth fellows will engage in structured program activities, workforce development training, and hands-on community engagement, while also serving as ambassadors who extend the reach of the program into the broader community.

There are no additional sources of funding being leveraged for this project. The requested grant funding will fully support all staffing, programmatic, and operational costs necessary to successfully implement and complete the project.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

N/A; the proposed project would develop a youth fellowship program. The proposed project would not include construction, ground disturbance, or permanent installation. Because the project does not involve new construction or physical infrastructure development, no land use or regulatory approvals are needed. The project is implementation-ready and can proceed immediately upon execution of the Grant Agreement.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

N/A; the proposed project would develop a youth fellowship program and would not include construction, ground disturbance, or permanent installation. Therefore, the proposed project would have no environmental impacts and would be exempt from CEQA.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

N/A; the proposed project would develop a youth fellowship program and would not include property acquisition, leasehold, or easements. Therefore, no site controls are required for project implementation.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

N/A; the proposed project would develop a youth fellowship program and would not involve physical infrastructure development. Therefore, this project will not require any operations or maintenance of physical infrastructure.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Several potential barriers may impact project implementation, including maintaining consistent youth participation, transportation challenges, and varying levels of awareness or trust in environmental initiatives. Youth participants may face competing responsibilities such as school, work, extracurricular activities, or family obligations that can affect attendance and sustained involvement. To address this, the program will provide flexible scheduling, engaging hands-on activities, ongoing mentorship, and youth stipends that encourage participation and help reduce barriers to involvement.

Transportation can also create challenges for consistent participation and access to program activities. To address this barrier, youth fellows will participate in the Total Transit Access Pilot Program, which will provide unlimited transit access throughout their participation in the fellowship, reducing transportation costs and improving access to program activities, worksites, and community events.

Another potential challenge is limited familiarity with or trust in environmental initiatives and publicly funded programs among some community members. To address this, youth fellows will serve as trusted messengers and leaders through culturally relevant, peer-led outreach approaches that strengthen community relationships and increase participation. Partnerships with local organizations, schools, and the Bay Area Air District will further support outreach efforts, strengthen program credibility, and expand community reach. Continuous feedback mechanisms, including surveys and direct community input, will ensure the program remains responsive and can adapt strategies as needed throughout implementation.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Climate Ambassadors for Change: Build youth leadership and workforce readiness in Richmond through climate education, community engagement, and hands-on learning experiences that increase awareness of air quality and community health and prepare youth for future opportunities in green-blue career pathways.

Measurable Outcome	Indicator(s)
1. By the end of the grant term, increase environmental knowledge, leadership skills, and community engagement among 30 Richmond youth participating in the Climate Ambassadors for Change fellowship program through climate education and hands-on community engagement activities.	▪ Number of youth fellows participating in the fellowship program (target: 30 total youth across three cohorts) ▪ Percentage of youth fellows reporting increased knowledge of climate equity, air quality, environmental justice, and sustainable transportation through pre- and post-program surveys (target: 75%) ▪ Number of youth-led community bike rides, bike safety workshops, park clean-ups, and related community engagement activities conducted across all three fellowship cohorts (target: 21-27)
2. By the end of the grant term, increase workforce readiness and exposure to environmentally focused career pathways among 30 Richmond youth through mentorship, job shadowing, and applied learning opportunities.	▪ Percentage of youth fellows reporting increased workforce readiness through pre- and post-program surveys (target: 70%) ▪ Percentage of youth fellows reporting increased awareness of environmentally focused career pathways through pre- and post-program surveys (target: 70%)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. By the end of the grant term, increase environmental knowledge, leadership skills, and community engagement among 30 Richmond youth participating in the Climate Ambassadors for Change fellowship program through climate education and hands-on community engagement activities.	A. Youth fellowship cohorts recruited, onboarded, and engaged in climate education programming.	1. Recruit and enroll Richmond youth fellows into the Climate Ambassadors for Change fellowship program.	TCC Youth Fellow Program Manager	TCC Community Organizer	Months 3, 15, 27
		2. Deliver educational modules and fellowship sessions on climate equity, air quality, environmental justice, sustainable transportation, and community health.	TCC Youth Fellow Program Manager	TCC Community Organizer	Months 9, 21, 33
		3. Administer pre- and post-program surveys assessing environmental knowledge and transportation behaviors.	TCC Youth Fellow Program Manager	TCC Community Organizer	Months 9, 21, 33
	B. Youth fellows participate in hands-on community engagement and environmental stewardship activities	1. Organize and conduct youth-led community bike rides and bike safety workshops.	Youth Fellows	TCC Community Organizer	Months 9, 21, 33
		2. Organize and conduct park clean-ups and related environmental stewardship activities.	Youth Fellows	TCC Youth Fellow Program Manager and TCC Community Organizer	Months 9, 21, 33

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		3. Youth Fellows collaborate with the TCC Youth Fellow Program Manager and the Community Organizer to plan, coordinate, and execute youth-led informational tabling about the youth fellowship and Richmond Rising Together initiatives.	Youth Fellows	TCC Youth Fellow Program Manager and TCC Community Organizer	Months 9, 21, 33
2. By the end of the grant term, increase workforce readiness and exposure to environmentally focused career pathways among 30 Richmond youth through mentorship, job shadowing, and applied learning opportunities.	A. Workforce development and career readiness training implemented across all fellowship cohorts	1. Deliver workforce development trainings on resume development, public speaking, social media strategy, and workplace readiness.	TCC Youth Fellow Program Manager	TCC Community Organizer	Months 12, 24, 36
		2. Connect youth fellows with mentorship, job shadowing, and applied learning opportunities related to environmentally focused careers.	TCC Youth Fellow Program Manager	TCC Community Organizer	Months 12, 24, 36
		3. Administer pre- and post-program surveys assessing workforce readiness and awareness of environmentally focused career pathways.	TCC Youth Fellow Program Manager		Months 12, 24, 36

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	B. Youth fellows complete applied learning and career exposure activities connected to environmentally focused career pathways	1. Youth Fellows participate in Richmond Rising Together projects and community-based applied learning opportunities.	Youth Fellows	TCC Youth Fellow Program Manager, and TCC Community Organizer	Months 12, 24, 36
		2. Youth Fellows complete capstone projects related to climate equity, transportation, environmental stewardship, or community engagement.	Youth Fellows	TCC Youth Fellow Program Manager	Months 12, 24, 36
		3. Youth fellows present capstone projects or share fellowship experiences to the public.	Youth Fellows	TCC Youth Fellow Program Manager	Months 12, 24, 36

Total Project Cost Including Other Sources (All Applicants))	$1,242,734.00

Project Name: Climate Ambassadors
Lead Applicant Name: City of Richmond
Term for this budget (in year 5 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Community Engagement	Direct	Richmond Rising Together Community Engagement Materials	Public materials for CSC meeting agendas and slides, reports as necessary for public review; branded outreach and informational materials: flyers, pamphlets, banners, and postcard mailers. $2,000/year for printing and copying + $1500/year for translation = $3500 x 5 years = $17,500. Cost to project at 1/12th for 1 of 12 projects participating: $1458	$1,458.00
Other Direct Costs	Direct	Richmond Rising Together Hub	Rental of building space for a publicly accessible office and meeting space for grant partner meetings, trainings/workshops, and community events. $1,390/month x 41 months = $56,990. Cost to project at 1/12th for 1 of 12 projects participating: $4,749	$4,749.00
Other Direct Costs	Direct	Cellular phones and service	Cellular phones and cellular service for PM I and AAA Staff. One time purchase of phones ($600/each) and monthly costs of $50/month per phone for 41 months. $600 x 2 + $50 x 41 months = $5,300. Cost to project at 1/12th for 1 of 12 projects participating: $442	$442.00
Community Engagement	Direct	Refreshment, Childcare, and Interpretation for Community Meetings	$400/event for refreshments for 30 community members + $80/event for childcare + $200/event interpretation = $680 per meeting. 41 CSC monthly meetings + 4 additional events/year x 5 years = 61 meetings x $680/meeting = $41,480. Cost to project at 1/12th for 1 of 12 projects participating: $3,457	$3,457.00
Capacity-Building and Training	Direct	City of Richmond Staff Training Costs	Workshop and conference fees ($600/year per staff member) + meals during training ($92/day x 4 days/year per staff member) = $968/staff member/year x 5 years x 3 staff = $14,520.00. Cost to project at 1/12th for 1 of 12 projects participating: $1,210	$1,210.00
Travel	Direct	Local Transportation	20 miles/month for staff to attend related community meetings throughout the City and region. 60 months x 20 miles x $0.70/mile = $840. Cost to project at 1/12th for 1 of 12 projects participating: $70	$70.00
Community Engagement	Direct	Community Workproduct Compensation for Richmond resident members of CSC	Each resident CSC member receives a $50 VISA gift card per meeting. Estimate includes 6 members at each monthly Collaborative Stakeholder Committee meeting, for 41 months. $50 card + $4 purchasing fee = $54/card x 6 residents x 41 months = $13,284. Cost to project at 1/12th for 1 of 12 projects participating: $1,107	$1,107.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Richmond Rising Together Project Website	Richmond Rising Together webpage for posting meeting materials (agendas, minutes, recordings), key reports and documents, community opportunities for project involvement, and other public information. Estimated at $50/month based on historic costs x 60 months = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Subcontractors & Vendors	Direct	Graphic Design Consultant	Development of website and project outreach materials. $150/hr for 20 hours = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Data Management Software (Airtable)	Airtable is used for tracking project budgets, deliverables, expenditures and reimbursements to-date, and other key coordination data. $720/year for 5 years based on historic costs = $3,600. Cost to project at 1/12th for 1 of 12 projects participating: $300	$300.00
Personnel/Staff Costs	Direct	City of Richmond Project Manager	Project Manager provides overall leadership in grant execution and implementation across projects. Project-specific allocation, based on anticipated support to be provided: 5.25% FTE x $17,754.47 monthly salary x 41 months = $38,216.49; Benefits at 77% of salary = $29,426.70.	$67,643.00
Personnel/Staff Costs	Direct	City of Richmond Associate Management Analyst	Project Analyst coordinates partners for CSC meetings, preparation and submission of required reports and invoices, and ongoing budget management across projects. Project-specific allocation: 6.75% FTE x $13,623.72 monthly salary x 41 months = $37,703.64; Benefits at 77% of salary = $29,031.80.	$66,735.00
Personnel/Staff Costs	Direct	City of Richmond Administrative Assistant	Administrative Assistant provides logistical and coordination support for all projects, including CSC meeting preparation, timely payment of project partner invoices, and project delivery support. Project-specific allocation: 12.00% FTE x $9,453.37 monthly salary x 41 months = $46,510.56; Benefits at 77% of salary = $35,813.13.	$82,324.00

Lead Applicant Name	City of Richmond
Project Location	Richmond, CA
Overall Funding Request	$15,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Advanced Energy Homes
Project Lead	Richmond Community Foundation
Project Location	Richmond, CA
Project Funding Request	$1,157,718

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

This project will purchase and convert blighted and abandoned homes into Advanced Energy homes that are sold to first-time, low- and moderate-income homebuyers. Richmond Community Foundation (RCF) first works with local communities to identify priority sites for acquisition and then completes extensive renovations as necessary, including environmental assessment and remediation, structural renovation, installation of Advanced Energy features, and connection to a virtual power plant (VPP). Once these renovations are completed, RCF works in partnership with the SparkPoint Richmond Center to educate and prepare interested first-time homebuyer, low- and moderate-income Richmond residents to purchase these properties at submarket rates. This project works with a variety of local stakeholders to prevent the issues caused by abandoned homes, bring neighbors together, and increase the availability of affordable housing stock.

This project is funded through multiple funding streams; as part of this BayREPAIR grant, RCF is requesting funding specifically for installation of the Advanced Energy features. These Advanced energy features include solar panels, batteries, electric vehicle (EV) chargers, and high-performance heating and cooling systems and appliances. Features to be installed depend on the capacity of the building to incorporate these features. Retrofitting existing homes to use electric appliances, such as heat pumps, EV chargers, and electric stoves, are known to significantly reduce greenhouse gas (GHG) emissions as well as reduce resident exposure to $PM_{2.5}$ in disadvantaged communities.[1] When combined with installation of solar panels and battery storage systems, electric appliances can also reduce utility costs and support ongoing affordability for low-income homeowners. Additionally, RCF works with Marin Clean Energy (MCE) to connect these homes to a VPP. VPPs coordinate automated use of home solar panels, batteries, and smart appliances to increase the reliability and use of the renewable electricity grid by balancing energy use during peak demand periods, increasing renewable energy use.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This project will reduce air pollution and improve health outcomes for low- and moderate-income Richmond residents. Through electrification of indoor appliances, the project will reduce indoor air pollutants such as $PM_{2.5}$, a known pollutant that causes serious health

[1] Fournier, Federico, Cudd, Pincetl, Ricklefs, Costa, Jerrett, Garcia-Gonzales (2022). Net GHG emissions and air quality outcomes from different residential building electrification pathways within a California disadvantaged community. Sustainable Cities and Society.

problems, including respiratory diseases, heart conditions, and reduced lung function, while also reducing GHG emissions. Additionally, RCF addresses dangerous health and safety issues present in the blighted homes purchased as part of this program, including peeling of lead-based paint, mold resulting from water intrusion, and asbestos. Mold exposure is associated with respiratory illness, asthma development, and exacerbation of existing asthma conditions, particularly among children and sensitive populations.[2] Exposure to lead and asbestos are extremely harmful toxins that can lead to serious long-term health problems, including brain and nervous system damage and cancer.[3, 4] According to CalEnviroScreen 4.0, these neighborhoods have high exposure to lead from housing, toxic releases from facilities, cleanup sites, asthma, and diesel particulate matter.

The project will build economic resilience for Richmond residents through homeownership opportunities for low- and moderate-income residents, lower utility costs, reduced dependence on fossil fuels, and green workforce employment opportunities. As shown in a study commissioned by the U.S. Department of Energy, building electrification strategies such as this project help generate well-paying jobs, including occupations such as heating, ventilation, and air conditioning (HVAC) technicians, plumbers, electricians, and general residential construction and remodeling. Additionally, providing affordable homeownership opportunities is a key strategy for generational wealth accumulation, particularly in disadvantaged communities, and helps prevent displacement.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

This project serves several historically underserved neighborhoods throughout Richmond. Blighted homes are often located in disadvantaged neighborhoods, such as Coronado, Santa Fe, North Richmond, Belding Woods, the Iron Triangle, Pullman, and Cortez/Stege. These communities are situated near major transportation corridors—Interstate (I-) 80, I-580, and Richmond Parkway—and are adjacent to large industrial facilities such as the Chevron Richmond Refinery, who have been fined by the Air District for release of toxic pollutants. As a result, residents in these neighborhoods experience disproportionate exposure to environmental pollutants and associated health burdens.

---

[2] Ramírez, A. Susana, et al. "Public awareness of air pollution and health threats: challenges and opportunities for communication strategies to improve environmental health literacy." *Journal of Health Communication* 24.1 (2019): 75-83.

[3] Girardi, Flavia Araujo, et al. "Burden of cancer attributable to occupational asbestos exposure in the Americas, 1990–2023: an analysis using the Global Burden of Disease Study 2023." *The Lancet Regional Health–Americas* 58 (2026).

[4] https://www.cdc.gov/lead-prevention/prevention/paint.html

According to CalEnviroScreen 4.0, these neighborhoods consistently rank in the 80th and 90th percentile or higher for cumulative pollution burden and vulnerability indicators. These neighborhoods are predominantly Black, Latino, Asian, and immigrant populations, and experience a higher cumulative pollution burden compared to other regions in California, resulting in elevated health risks and respiratory disease burdens. Additionally, household incomes are among the lowest in the region, reflecting longstanding economic disinvestment and limited access to resources. This project directly targets these high-need neighborhoods, seeking to reduce environmental burdens, improve health outcomes, and advance equity for residents who have historically borne a disproportionate share of environmental and economic hardship through neighborhood air quality and quality of life improvements, workforce development, and affordable housing opportunities for first-time homebuyers.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The community engagement strategy focused on identifying whose input was essential, how best to reach them, whether language barriers existed, which organizations were critical partners, the community's baseline understanding of Advanced Energy homes, and how blighted properties were affecting daily life. RCF sought to understand whether residents had concerns about specific blighted sites. Richmond's robust neighborhood councils emerged as a leading venue for deep, place-based engagement. Based on our priorities for neighborhoods that contained both blighted homes and petroleum-impacted sites, engagement efforts targeted three neighborhoods in the urban core:

- Santa Fe: Bounded by 2nd Street on the west, Ohio Avenue on the north, Harbour Way on the east, and I-580 on the south.
- Coronado: Bounded by Ohio Avenue on the north, Harbour Way on the west, I-580 on the south, and 23rd Street on the east.
- Iron Triangle: Bounded by Richmond Parkway on the west, Ohio Avenue on the south, Union Pacific right-of-way on the east.

These neighborhoods are home to approximately 25,000 residents, according to the 2020 U.S. Census data for Census Tracks 3760, 3770, 3790, and 3800.02. RCF presented at the monthly meetings for each neighborhood council and were able to engage their support in reaching out to residents to gather key data through their existing telephone trees. RCF reached more than 2,600 residents using this method; key input from these contacts is summarized in Question 5.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Key themes from community discussions and direct resident outreach centered around public safety, health, and stronger neighborhoods.

- **Public Safety**: Residents described abandoned homes as significant safety threats, citing drug activity, prostitution, and other illicit behavior. Many feared fires in vacant structures could spread to occupied homes, and some avoided walking past these properties altogether. They believed that once the homes were renovated and sold to first-time homebuyers, there would be increased safety, renewed confidence in walking to local parks, and greater willingness to invest in improvements to their own homes. They also expressed interest in the features of Advanced Energy homes, especially solar panels and battery storage, followed by high-efficiency appliances, lighting, HVAC systems, heat pump water heaters, and even smart plugs. There were questions about the VPP as well as interest in participating.
- **Health**: Community members worried that abandoned properties contained toxins that could migrate into the soil or onto neighboring properties. Residents reported that the renovated homes would not pose health risks to the community and if they had Advanced Energy features, they would actually promote health.
- **Stronger Neighborhoods**: Residents noted that the engagement process itself helped bring neighbors together, strengthening relationships and fostering greater neighborhood cohesion. Residents also provided key properties in their neighborhood that they would like to see rebuilt for new homeowners.

Residents in these neighborhoods understand that decades of disinvestment—driven by redlining and proximity to heavy industry—have shaped their living conditions and their health. Many have experienced environmental hazards such as lead-based paint and inefficient gas wall heaters that worsen indoor air quality. Asthma rates, for example, are significantly higher in these communities than in other parts of Contra Costa County. Residents' lives are a patchwork of environmental justice, public health, and just transition challenges: poor outdoor air quality, substandard and unsafe housing conditions, asthma rates, diabetes rates, mental health, underemployment, high living costs, and dependence on fossil fuels for transportation and employment. Residents are therefore deeply invested in reclaiming abandoned properties and transforming them into

advanced energy homes as a meaningful step toward healthier, more resilient neighborhoods.

Rehabilitating blighted homes and converting them into Advanced Energy homes directly addresses environmental justice and public health inequities faced by low- and moderate-income households in historically disinvested neighborhoods. Families in these communities are more likely to live in aging, inefficient housing with gas appliances that contribute to poor indoor air quality, higher asthma risk, and unsafe living conditions. By eliminating on-site gas combustion and installing high-efficiency electric technologies, Advanced Energy homes reduce residents' exposure to harmful indoor pollutants while improving comfort, safety, and overall health. Energy-efficient design significantly lowers monthly utility costs, reducing energy burden and protecting households from volatile and rising gas prices. An Advanced Energy home features high-performance heating and cooling systems, efficient appliances, and optimized building materials that reduce energy use while improving comfort. Because these homes do not burn gas, they provide cleaner indoor air and reduce GHG emissions of Advanced Energy homes include efficient design, outage preparedness, healthy and safe technologies, and connection to the VPP.[5] These include:

- Efficient Design: Walls, windows, roofs, and appliances are selected to maximize comfort while minimizing energy and water consumption.
- Outage Preparedness: Where possible, homes will include a battery system that provides emergency electricity during power outages for essential needs such as lighting, Wi-Fi, medical equipment, and refrigeration. Rooftop solar panels will recharge the battery daily, supporting extended outages. All homes will receive solar panels and batteries, except those homes surrounded by three- and four-story buildings, where solar power is infeasible due to limited sun access.
- Healthy and Safe Technologies: While configurations vary by home, all include smart thermostats and all-electric, high-efficiency appliances such as induction cooktops and heat pumps for space heating, water heating, and clothes drying.
- Virtual Power Plant (VPP): Through the VPP, the utility provider (MCE) can shift electrical demand during peak times, reducing reliance on power plants, helping create a cleaner, more reliable grid.

[5] USEPA, 2026, Understanding the Issue: Household Energy and Clean Air | US EPA, https://www.epa.gov/indoor-air-quality-iaq/understanding-issue-household-energy-and-clean-air.

This project supports a just transition to clean energy by ensuring that low-income first-time homebuyers—who are often excluded from the clean-energy economy—are among the first to benefit from electrification. As part of this grant, RCF will rehabilitate 12 homes, install energy-efficient features, and sell them to 12 first-time low- or moderate-income homeowners. The project ensures that housing is not only affordable to purchase, but affordable to operate over the long term, preventing energy costs from undermining housing stability and advances environmental justice outcomes by aligning climate, health, and housing solutions at the household and community level.[6] By restoring blighted homes, we aim to revitalize neighborhoods and expand access to safe, healthy, energy-efficient homeownership for Richmond residents.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

We will use a combination of structured and relationship-based engagement methods to keep residents informed about project progress and ensure they understand the benefits available to them. Our approach builds on our demonstrated success engaging more than 2,600 residents using neighborhood-based outreach and regular updates, partnerships with established community organizations, multilingual communication tools, and public meetings and open houses at project sites.

1. **Neighborhood-based outreach and regular updates:** We will continue door-to-door outreach, street-level canvassing, and tabling at local events to provide residents with project updates. These in-person contacts are essential in neighborhoods that have historically experienced disinvestment and where residents value face-to-face communication.[7] Updates will include renovation progress, anticipated construction timelines, upcoming purchase opportunities, and information about advanced energy features, including their benefits.
2. **Partnerships with established community organizations:** We will work directly with neighborhood councils, organizations involved in Richmond Rising, and local utility providers such as MCE within the three target neighborhoods. These groups help us reach residents who may not respond to traditional outreach and ensure that communications are culturally relevant and

[6] Grunwald, Taylar, Wael Kanj, and Alexandria Herr, Rewiring America, 2024, *In the Air Tonight: How Residential Electrification Can Lead to Cleaner Air and Better Healt*h, Summer Study on Energy Efficiency in Buildings, 20240722160821828_77d49516-2d72-4d23-a843-5086459d4375.pdf.

[7] Krabbe J, Jiao S, Guta A, et al. 2021, "Exploring the operationalisation and implementation of outreach in community settings with hard-to-reach and hidden populations: protocol for a scoping review," *BMJ Open* 2021;11:e039451. doi: 10.1136/bmjopen-2020-039451.

accessible. They will also assist in distributing materials and hosting joint community meetings.

3. **Multilingual communication tools:**
   To address language barriers, project information will be shared through multilingual (Spanish and English) flyers, social media posts, and community newsletters.
4. **Public meetings and open houses at project sites:**
   We will host quarterly community meetings and on-site open houses to walk residents through project progress, discuss site assessments, and demonstrate advanced energy features such as heat pumps, induction stoves, and battery backup systems. These events allow residents to see firsthand how blighted homes are transformed into healthy, efficient, all-electric housing.

Community members are prepared to become homeowners through SparkPoint Contra Costa (SPCC). SPCC aims to decrease the number of people who live in poverty in Contra Costa County by helping them build financial stability through high-quality services that empower clients to improve credit, increase income, and build/preserve savings and assets including homeownership.

As part of the Richmond Rising Together initiative, a Collaborative Stakeholder Committee (CSC) made up of representatives from each Co-Applicant organization as well as key stakeholders and compensated community member participants will meet monthly at the Nevin Community Center. During these meetings, Co-Applicants will share project status updates and directly engage the CSC and community members in discussions on project design and implementation. This structure ensures lessons learned across projects are leveraged towards the broader collaborative effort while creating meaningful opportunities for residents most impacted by poor air quality to learn about and engage in projects and share meaningful feedback based on lived experiences. To reduce potential barriers and ensure maximum opportunities for participation, these meetings are hybrid (hosted in person and simultaneously on Zoom) and include free childcare, Spanish interpretation, and meals for community members. Meetings are recorded and posted online for viewing in Spanish and English.

STEAM the Streets will produce high-quality, community-centered storytelling that highlights local air quality and climate solutions across Richmond. In Year 2, this work will focus on highlighting RCF's efforts to reclaim blighted homes, integrate advanced energy features, and make them available to low- and moderate-income first-time homebuyers. Through real-time footage and storytelling, this work will illustrate how housing revitalization and energy efficiency can reduce emissions, improve living conditions, and expand access to sustainable homeownership opportunities in frontline communities. This storytelling will serve as the foundation for a broader community engagement campaign that translates on-the-ground climate solutions into culturally relevant,

accessible media. Footage captured from the RCF project will be incorporated directly into the youth-powered campaign and featured within the flagship climate action anthem and music video, ensuring that real, local solutions are embedded at the center of the campaign's storytelling. The campaign will bring increased visibility to these efforts, heighten awareness of available resources and solutions, and broadcast this local movement so that Richmond residents of all ages are more aware of and connected to the work happening in their community.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The project aims to revitalize historically disinvested Richmond neighborhoods by reclaiming abandoned and blighted homes, remediating environmental hazards, and transforming them into healthy, advanced energy homes for low- and moderate-income first.[8,9] The vision is to strengthen neighborhood safety, improve community health, expand equitable access to clean-energy housing, and rebuild community pride in areas historically impacted by redlining, industrial exposure, and chronic underinvestment.

The major components of the project are:

- Community engagement and outreach
  - Conduct ongoing multilingual, neighborhood-based outreach in the Santa Fe, Coronado, and Iron Triangle neighborhoods.
  - Provide continuous updates on renovation progress, environmental assessments, and opportunities for homeownership.
  - Facilitate community meetings, site-based open houses, surveys, and focus groups to maintain a feedback loop with residents.
- Environmental assessment and remediation
  - Assess petroleum-impacted sites and remediate environmental hazards using brownfield protocols.
- Renovation of blighted properties
  - Restore abandoned properties and structures, and prepare them for full conversion into advanced energy homes.

[8] Jenkins E, Nardo JE, Salehi S, 2022 December 1, "A systematic review of the 60 year literature: Effects of outreach programs in supporting historically marginalized and first-generation, low-income students in healthcare education." *PLoS One* 17(12): e0278453. doi: 10.1371/journal.pone.0278453. PMID: 36454878; PMCID: PMC9714932.

[9] ACEEE, 2023 July, *Empowering Electrification through Building Envelope Improvements*, https://www.aceee.org/sites/default/files/pdfs/empowering_electrification_through_building_envelope_improvements_-_encrypt.pdf.

- Advanced energy home development
  - Install high-performance electric appliances and building systems, including heat pumps, induction stoves, smart thermostats, solar panels, and battery storage.
  - Integration with MCE's Virtual Power Plant (VPP)
  - Enroll completed homes into MCE's VPP to support grid reliability, increase renewable energy utilization, and provide bill credits to homeowners.
- Affordable homeownership for local residents
  - Sell completed advanced energy homes to low- and moderate-income first-time homebuyers.

Measurable Outcomes

Number of resident engagement contacts (at least 1,800), measured by sign-in sheets at meetings and records of personal contacts at neighborhood council meetings and other events.

Number of properties assessed, remediated, and restored. Five per year as measured and tracked by residential purchase agreements, occupancy permits secured, building permits approved, and Advanced Energy features installed.

Number of Health and safety improvements, such as reductions in exposure to toxins through the elimination of gas appliances, lead-based paint, etc.

Energy and environmental outcomes, including reduced household energy use, lower GHG emissions, and participation in the MCE VPP. Via MCE's platform, we'll measure energy usage, energy produced by solar panels and energy flowing into the power grid.

Neighborhood revitalization indicators, including increased resident confidence, improved perception of safety, and strengthened community cohesion as measured by new homeowner surveys and focus group data.

RCF leads all aspects of project implementation, including:

- Coordinating community engagement activities.
- Overseeing site acquisition, environmental assessment, and remediation.
- Managing renovation and conversion of homes to include Advanced Energy features using local contractors.
- Ensuring compliance with brownfield and environmental requirements so that any contamination is identified and mitigated using US EPA brownfield funds.

- Facilitating partnerships with community organizations, contractors, MCE, and environmental consultants.
- Supporting homebuyer outreach and facilitating the sale of renovated homes to income-eligible residents, including down payment assistance to reduce mortgage cost.
- Monitoring progress and reporting outcomes to the grantor and community.

University of California (UC) Berkeley's Center for Global Healthy Cities (CGHC) will prepare annual and end-of-project reports of data across all project partners, along with a public-facing dashboard to track progress. The dashboard will include a public comment section. CGHC will work with all Co-Applicants to co-create validated survey questions to capture the mental health impacts of air pollution and climate change (e.g., climate anxiety), and whether and how project interventions are reducing stress, anxiety, and related psychosocial influences on well-being.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The key costs in the budget include one FTE Program Director, with benefits calculated at 27 percent, Advanced Energy features for 12 homes and a 15 percent administrative overhead fee for insurance, audits, financial reporting and oversight, and employee supervision.

The budget includes $72,234 for the City of Richmond Project Manager (1.75 percent FTE), Associate Management Analyst (2.25 percent FTE), and Administrative Assistant (4.00 percent FTE) to support execution of this project, ensure completion of grant commitments, coordinate community engagement and collaboration across projects, and manage contracting, invoicing, and payments. Also, $13,293 will support CSC and other community meetings, shared spaces, and Richmond Rising Together outreach materials.

The budget includes $29,164 for a UC Berkeley Project Director (16.6 percent FTE) and a $50/hour x 208 hours PhD student researcher to prepare annual and end-of-project reports, manage a project data dashboard, and capture the impact of the projects in reducing negative mental health impacts.

Also, $49,600 is for STEAM the Streets for a Project Manager (29 percent FTE) and a Creative Program Lead (17 percent FTE) with program and administrative costs for one year to produce community-centered storytelling that highlights local air quality and climate solutions across Richmond.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project strongly aligns with multiple community, local, regional, and statewide initiatives focused on climate action, environmental justice, improved air quality, and equitable development.

This project aligns with Richmond's Climate Action Plan (CAP), which prioritizes reducing GHG emissions, improving public health, and advancing climate justice—particularly through healthy, efficient housing and clean-energy deployment.

The project is also consistent with the AB 617 Community Air Protection Program, which focuses on reducing air pollution exposure in communities disproportionately impacted by industrial emissions, including Richmond. By eliminating indoor combustion, remediating environmental hazards, and improving air quality in formerly abandoned homes, the project directly supports AB 617 goals for cleaner air and health equity in these fence line communities.

Regionally and statewide, the project supports California's clean-energy and climate-resilience priorities by electrifying homes, expanding access to solar and battery storage, reducing GHG emissions, and strengthening grid reliability through participation in the VPP.[10]

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

RCF, founded in Richmond 25 years ago, has more than a decade of direct experience completing projects of similar scope. Over the past 10 years, RCF has renovated 35 properties, creating affordable homeownership opportunities for low- and moderate-income first-time buyers. During the last seven years, RCF has expanded this work to incorporate advanced energy features, including high-efficiency electric systems, solar, battery storage, and healthy-home upgrades for approximately 30 homes.

RCF also has extensive grant management experience. The organization administers both an US EPA Brownfield Assessment Grant and an EPA Brownfield Revolving Loan Fund, overseeing environmental assessments, remediation planning, compliance, and community engagement. These programs directly contribute to the scope of work

[10] California Air Resources Board, 2026, May 28 (accessed), Building Decarbonization, https://ww2.arb.ca.gov/our-work/programs/building-decarbonization.

required for this project, including environmental oversight, multi-stakeholder coordination, and project reporting.

In addition, RCF serves as the lead partner on a Catalyst Grant supporting the East Contra Costa Healthy Homes Collaborative. This initiative advances California's net-zero goals through whole-home electrification, healthy-housing improvements, and high-road workforce development. As lead partner, RCF is responsible for:

- Finalizing a community-specific retrofit implementation plan
- Conducting resident engagement to inform project design
- Developing a community engagement plan for implementation
- Designing a contractor and workforce development plan, including an RFQ informed by contractor input

Together, these accomplishments demonstrate that RCF has the capacity, technical expertise, grant-management experience, and community-centered approach necessary to successfully implement this project.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

RCF will manage implementation through a coordinated team structure supported by dedicated staff, established project management systems, and leveraged funding. The Program Director (1.0 FTE) to be hired will oversee implementation, including coordination of environmental assessment, renovation schedules, contractor oversight, community engagement, and compliance reporting. This position currently oversees the EPA Brownfield Assessment Grant and Brownfield Revolving Loan Fund. This position will ensure environmental compliance, documentation, and coordination with environmental consultants. This position will work closely with:

- Senior Director of Marketing and Development - responsible for resident outreach, public meetings, surveys, and maintaining communication with neighborhood partners.
- Finance and Grants staff, dedicated to financial reporting, procurement compliance, invoicing, and tracking match/leverage contributions.

RCF will draw on their construction management team, Harrington Construction, and homeownership counseling partner, Richmond Neighborhood Housing Services, as needed. These roles provide cross-functional support without requiring additional FTE commitments.

Technical specialists, such as MCE and Stantec, will support major components of the project—consistent with RCF's existing housing rehabilitation model. These partnerships ensure timely progress, technical accuracy, and high-quality advanced energy home installations.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

RCF currently has permits for five housing units and will obtain additional permits as properties are acquired.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

Most of the renovations are categorically exempt from CEQA per CEQA Guidelines Section 15301 projects involving existing facilities; however, as new properties are acquired CEQA review will be completed.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

RCF has acquired five properties and has site control of these properties. Additional properties will be acquired during the grant term, and site control will be obtained prior to any funds being used to install advanced energy features.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Once homes are renovated and sold to their new homeowners, there is no maintenance required by the Project Lead. The VPP feature is maintained by MCE as part of their program.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

A primary barrier to project completion occurs at the point of sale, where high mortgage interest rates can limit the ability of low- and moderate-income first-time homebuyers to qualify for financing. To overcome this barrier, RCF has established two dedicated down payment assistance funds (one funded by US Bank, the other by private donors) to lower the financial burden on homebuyers. These funds can be used to cover closing costs, reduce required down payments, and buy down interest rates, ensuring that homes remain affordable even in higher-rate environments.

In addition, the organization's long-standing relationships with local lenders and homebuyer counseling services help buyers navigate financing options and take advantage of available programs. Together, these strategies ensure that market-driven interest-rate fluctuations do not impede successful project completion.

Other barriers are cost overruns during construction. To address this, RCF uses total cost contracting with contractors to eliminate change orders and other factors that can increase costs. Other factors that can delay a home include permitting delays and procurement delays of Advanced Energy equipment/appliances. RCF uses experienced designers to support permits and works with contractors on purchasing equipment early to ensure timely delivery.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Advanced Energy Homes: The vision is to strengthen neighborhood safety, improve community health, expand equitable access to clean-energy housing, and rebuild community pride in areas historically impacted by redlining, industrial exposure, and chronic underinvestment. The project aims to revitalize historically disinvested Richmond neighborhoods by reclaiming abandoned and blighted homes, remediating environmental hazards, and transforming these properties into healthy, all-electric advanced energy homes for low- and moderate-income first-time homebuyers.

Measurable Outcome	Indicator(s)
1. Effectively engage the community to improve neighborhood safety in the Iron Triangle, Santa Fe, and Coronado neighborhoods within 3 years	• 1,800 contacts made over the term of the grant • Identification of blighted homes that are impacting the neighborhoods • Police data on property crime (before and after intervention) (target: 25% reduction) • Number of abandoned and blighted homes acquired (target: 15 homes) • Build community connection for neighborhood safety by co-hosting 1 annual neighborhood presentation with Neighborhood Council leaders in each of 3 neighborhoods influencing 150-200 residents within 3 years.
2. Expand equitable access to clean-energy housing	• Acquire and rehab 5 properties per year for 3 years • Installation of advanced energy features • Opportunities for low- and moderate-income affordable homeownership
3. Remediate environmental and health hazards for 15 properties within 3 years	• Brownfield Phase 1 assessments (target:15 properties) • Brownfield Phase 2 assessments and clean up (target: as required) • Remove gas-powered appliances and HVAC systems (target: 15 homes)
4. Transforming 15 properties into healthy, all-electric advanced energy homes within 3 years	• Install all Advanced Energy home features, including HVAC, Solar, Battery Storage, Energy efficient appliances, smart plugs, Virtual Power Plant in each home (target: 15 homes) • Install electric vehicle chargers in garages (target: as available)

Measurable Outcome	Indicator(s)
5. Increase opportunities for low and moderate income affordable homeownership for 15 new homeowners within 3 years	• Graduates of local first-time homebuyer programs purchase reclaimed homes (target: 15 graduates) • Reduced energy bills for new homeowners from efficiency (target: 15% reduction from conventional home) • Reduced energy bills for new homeowners from credits for solar contributing to Virtual Power Plant (target: 50% reduction from conventional home)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Effectively engage the community to improve neighborhood safety in the Iron Triangle, Santa Fe, and Coronado neighborhoods within 3 years	A. identify properties suitable for the program to reduce the number of blighted homes impacting their community	1. Presentations to Neighborhood Councils	RCF		Ongoing
		2. Scheduling presentations			
	B. Create New web site pages on RCF website outlining program	1. Develop text and photos along with ways for web visitors to take action.	RCF		Month 3
		2. As homes become available, add the homeownership opportunities to the web site			
2. Expand equitable access to clean-energy housing	A. Analysis with Code Enforcement Department to identify properties	1. Review code enforcement lists of their worst properties	RCF	City of Richmond	
		2. Evaluate acquisition strategy			
	B. Meeting with Neighbor Councils to identify properties	1. Come up with resident priority lists	RCF	Neighborhood Councils	
		2. Evaluate acquisition strategy			

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	C. Purchase properties	1. Acquire property through direct sale, tax sale, or other means	RCF	Fisher Realtors	
3. Remediate environmental and health hazards for 15 properties within 3 years	A. Environmental Hazard Assessment and Remediation	1. Conduct environmental assessments	Stantec		
		2. Conduct necessary environmental clean up	Harrington Construction		
4. Transforming 15 properties into healthy, all-electric advanced energy homes within 3 years	A. Installation of Advanced Energy Features	1. Conduct an energy assessment			
		2. Outline technology required			
		3. Purchase and install technology			
5. Increase opportunities for low and moderate income affordable homeownership for 15 new homeowners within 3 years	A. Completion of home	1. List for sale			
		2. Complete sale

Project Name: Advanced Energy Homes
Lead Applicant Name: City of Richmond
Term for this budget (in year 5 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Community Engagement	Direct	Richmond Rising Together Community Engagement Materials	Public materials for CSC meeting agendas and slides, reports as necessary for public review; branded outreach and informational materials: flyers, pamphlets, banners, and postcard mailers. $2,000/year for printing and copying + $1500/year for translation = $3500 x 5 years = $17,500. Cost to project at 1/12th for 1 of 12 projects participating: $1458	$1,458.00
Other Direct Costs	Direct	Richmond Rising Together Hub	Rental of building space for a publicly accessible office and meeting space for grant partner meetings, trainings/workshops, and community events. $1,390/month x 41 months = $56,990. Cost to project at 1/12th for 1 of 12 projects participating: $4,749	$4,749.00
Other Direct Costs	Direct	Cellular phones and service	Cellular phones and cellular service for PM I and AAA Staff. One time purchase of phones ($600/each) and monthly costs of $50/month per phone for 41 months. $600 x 2 + $50 x 41 months = $5,300. Cost to project at 1/12th for 1 of 12 projects participating: $442	$442.00
Community Engagement	Direct	Refreshment, Childcare, and Interpretation for Community Meetings	$400/event for refreshments for 30 community members + $80/event for childcare + $200/event interpretation = $680 per meeting. 41 CSC monthly meetings + 4 additional events/year x 5 years = 61 meetings x $680/meeting = $41,480. Cost to project at 1/12th for 1 of 12 projects participating: $3,457	$3,457.00
Capacity-Building and Training	Direct	City of Richmond Staff Training Costs	Workshop and conference fees ($600/year per staff member) + meals during training ($92/day x 4 days/year per staff member) = $968/staff member/year x 5 years x 3 staff = $14,520.00. Cost to project at 1/12th for 1 of 12 projects participating: $1,210	$1,210.00
Travel	Direct	Local Transportation	20 miles/month for staff to attend related community meetings throughout the City and region. 60 months x 20 miles x $0.70/mile = $840. Cost to project at 1/12th for 1 of 12 projects participating: $70	$70.00
Community Engagement	Direct	Community Workproduct Compensation for Richmond resident members of CSC	Each resident CSC member receives a $50 VISA gift card per meeting. Estimate includes 6 members at each monthly Collaborative Stakeholder Committee meeting, for 41 months. $50 card + $4 purchasing fee = $54/card x 6 residents x 41 months = $13,284. Cost to project at 1/12th for 1 of 12 projects participating: $1,107	$1,107.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Richmond Rising Together Project Website	Richmond Rising Together webpage for posting meeting materials (agendas, minutes, recordings), key reports and documents, community opportunities for project involvement, and other public information. Estimated at $50/month based on historic costs x 60 months = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Subcontractors & Vendors	Direct	Graphic Design Consultant	Development of website and project outreach materials. $150/hr for 20 hours = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Data Management Software (Airtable)	Airtable is used for tracking project budgets, deliverables, expenditures and reimbursements to-date, and other key coordination data. $720/year for 5 years based on historic costs = $3,600. Cost to project at 1/12th for 1 of 12 projects participating: $300	$300.00
Personnel/Staff Costs	Direct	City of Richmond Project Manager	Project Manager provides overall leadership in grant execution and implementation across projects. Project-specific allocation, based on anticipated support to be provided: 1.75% FTE x $17,754.47 monthly salary x 41 months = $12,738.83; Benefits at 77% of salary = $9,808.90.	$22,548.00
Personnel/Staff Costs	Direct	City of Richmond Associate Management Analyst	Project Analyst coordinates partners for CSC meetings, preparation and submission of required reports and invoices, and ongoing budget management across projects. Project-specific allocation: 2.25% FTE x $13,623.72 monthly salary x 41 months = $12,567.88; Benefits at 77% of salary = $9,677.27.	$22,245.00
Personnel/Staff Costs	Direct	City of Richmond Administrative Assistant	Administrative Assistant provides logistical and coordination support for all projects, including CSC meeting preparation, timely payment of project partner invoices, and project delivery support. Project-specific allocation: 4.00% FTE x $9,453.37 monthly salary x 41 months = $15,503.52; Benefits at 77% of salary = $11,937.71.	$27,441.00

Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Richmond Rising Together
Lead Applicant Name	City of Richmond
Project Location	Richmond, CA
Overall Funding Request	$15,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Richmond ACT
Project Lead	Rising Juntos
Project Location	Richmond, CA
Project Funding Request	$636,924

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Richmond ACT: Advancing Climate Transformation Together is a community-driven initiative to improve air quality and advance climate health justice in Richmond, California. The project engages low-income families, communities of color, immigrants, renters, seniors, and unhoused residents — those most impacted by pollution and climate risks— to lead a participatory climate needs assessment and develop community-defined interventions for air quality.

Richmond ACT advances four core goals:

1. Increase residents' understanding of climate health, air quality, and equity.
2. Assess air quality and clean energy needs in vulnerable communities.
3. Develop a *Richmond Climate Health Road Map*, outlining community priorities for air quality, climate resiliency, and energy efficiency.
4. Strengthen resident leadership and advocacy for climate health justice.

Through **participatory research, community engagement,** and **advocacy,** residents will identify priority issues and shape solutions that address air quality, housing conditions, and climate resilience. Our initiative will expand access to pollution-reducing programs, and advance equitable policies and public investments for improved health.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

Richmond ACT advances the Local Community Benefit Fund's goal of **reducing air pollution and improving health outcomes** by supporting residents in neighborhoods disproportionately burdened by climate harm to identify air quality challenges and drive solutions that improve their daily lives.

Through participatory research and advocacy, residents most impacted by pollution — including low-income and BIPOC communities, immigrants, renters, seniors, families with young children, and unhoused residents—document their experiences with air pollution, identify shared priorities, and advocate for increased investments and policies that improve health.[1]

[1] PSE, 2020, PSE Healthy Energy - Richmond Air Monitoring Network

In the short term, residents will surface immediate health concerns such as asthma triggers and poor indoor air quality, increase awareness of exposure risks, and connect to existing mitigation resources, including home air filtration services and supports.[2]

In the medium term, residents use these findings to advocate for specific changes, such as enforcement of housing quality standards, expanded access to clean energy incentive programs, or traffic-calming measures on high-traffic corridors near homes and schools, as well as promote effective climate health programs to underrepresented communities.

In the long term, Richmond ACT builds sustained leadership and organizing power to influence public investment and policy decisions that reduce pollution at its source. This could include advancing policies that limit industrial emissions near residential areas, expanding affordable access to clean energy upgrades in rental housing, and embedding community-defined environmental justice priorities into city planning processes. Over time, these shifts reduce chronic exposure to air pollutants and contribute to lower rates of asthma, cardiovascular disease, and other pollution-related health conditions.

By combining community-based data collection with leadership development and advocacy focused on the city's most vulnerable residents, Richmond ACT enhances the city of Richmond's efforts to respond to immediate health concerns while building the infrastructure for long-term, community-driven reductions in air pollution and more equitable health outcomes.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Richmond ACT will take place across multiple neighborhoods in Richmond, with a focus on communities most impacted by air pollution and climate-related health risks. Priority areas include North, Central, and South Richmond, particularly neighborhoods adjacent to major sources of pollutions such as Interstate (I-) 80, I-580, and the Chevron refinery and industrial areas.[3]

Key focus neighborhoods include the Iron Triangle (roughly bordered by 23rd Street, Macdonald Avenue and Bay Area Rapid Transit [BART] corridor), Atchison Village (near the Richmond Greenway), and the Cutting Boulevard corridor. These communities

[2] University of California San Francisco, 2026, "Richmond Environment and Asthma Community Health (REACH) Study." Collaborative Learning for Equity and Respiratory Health Lab.

[3] Krans, Brian. 2024, August 5, "What's in Richmond's air? New studies provide clarity on pollution and its sources" *Richmondside*. https://richmondside.org/2024/08/05/richmond-ca-air-pollution-sources-chevron-chemtrade-freeways/.

experience high exposure to diesel truck traffic and industrial emissions due to their proximity to major highways industrial land uses.[4]

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Community engagement is the foundation of Richmond ACT rooted in more than 20 years of organizing by the project lead, Rising Juntos, alongside a volunteer membership base of low-income, Black, Latino/e, and immigrant families in Richmond. This deep community trust and track record of securing millions in investments and dozens of policies for health, racial, and economic equity has positioned Rising Juntos to identify **air quality, housing conditions, and environmental health** as urgent, interconnected priorities—and to organize residents to drive solutions.

Community needs were identified not through a single assessment but through sustained organizing rooted in everyday community life. Rising Juntos conducts culturally relevant, sustained, resident organizing through 11 monthly meetings annually, door-to-door canvassing across impacted Richmond neighborhoods, and outreach to thousands of residents each year. Through participatory assessments on housing, health, and parks, as well as dozens of local advocacy campaigns, residents have shared firsthand experiences with asthma, substandard housing, and exclusion from public decision making. These recurring concerns shaped the development and focus of Richmond ACT.

Engagement has been intentionally designed to reach those most impacted by racial, health, and economic injustice. Outreach takes place where low-income Black and Brown residents already live and gather, including apartment complexes, schools, churches, shelters, and parks. Meetings are held in the evenings and on Saturdays to accommodate working families, and include interpretation, childcare, and healthy meals to ensure optimal participation.

Rising Juntos' multi-generational membership plays a central role in outreach and facilitation, building peer trust and ensuring participation from those often excluded from traditional planning processes. Staff-supported organizing and bilingual communications, including social media and printed materials, further expand reach to residents not connected to formal networks.

[4] Bay Area Air District, 2023, November. "Ambient Air Monitoring Reference Guide for the Richmond-North Richmond-San Pablo Area." https://www.baaqmd.gov/~/media/files/ab617-community-health/richmond/quarterly-report-documents/ptca-monitoring-data-inventory-pdf.pdf?rev=035218b4e730422fa5bee32b9259850b&sc_lang=en.

Through these sustained organizing efforts, residents have identified air quality and related health impacts as a priority while Rising Juntos members have called for participatory research to further define community needs and drive solutions--leading directly to the development of Richmond ACT.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Richmond ACT responds to these identified community needs by conducting a participatory air quality needs assessment and building resident-led advocacy to drive health promotion programs, investments, and policies benefiting Richmond's low-income Black and Brown communities. As previously described, residents have identified interconnected challenges--poor indoor and outdoor air quality, substandard housing, and marginalization from public decision-making processes--rooted in decades of discriminatory land use, State-sanctioned segregation and disinvestment, and industrial and highway siting near residential neighborhoods. While existing data confirms disproportionately high pollution and asthma rates in Richmond, particularly among Black children, critical gaps remain in understanding residents' specific barriers, priorities, and lived experiences. Richmond ACT is designed to close those gaps and directly inform city strategies for health equity.

To do so, Richmond ACT will engage priority populations—including low-income immigrants and Black residents — as co-researchers and decision makers through multilingual, culturally responsive outreach, including surveys, small-group discussions, and community town halls. Trained resident leaders (Climate Ambassadors) will shape research questions, collect, and analyze data, validate findings, and lead subsequent advocacy—ensuring that solutions reflect the wisdom and priorities of those most affected. Longstanding partnerships with community-based organizations, service providers, and climate advocacy groups, as well as collaboration with the City of Richmond, Healthy and Active Before 5, and Urban Habitat, will ensure inclusive engagement, access to relevant research, and strategic coordination.[5]

Progress toward community impact will be measured through outcomes spanning immediate capacity-building to long-term systemic change.

[5] Everhart RS, Haley AD, Regan GG, Romo S, Dempster KW, Barsell DJ, Corona R, Mazzeo SE, Schechter MS; Engaging Richmond Team. "Engaging with the Richmond Community to Reduce Pediatric Asthma Disparities: Findings from a Community-engaged Needs Assessment." *Am J Community Psychol*. 2020 Dec;66(3-4):222-231. doi: 10.1002/ajcp.12439. Epub 2020 Jun 24. PMID: 32578886; PMCID: PMC12535693.

- Increased resident knowledge of air quality and climate health
- Engagement of diverse residents in participatory research, prioritizing underrepresented communities, including low-income immigrants, Black residents, families with young children, seniors, renters, and unhoused community members
- Community-generated data that fills critical gaps in existing information
- Development of a *Richmond Climate Health Roadmap* reflecting resident priorities
- Expanded participation of impacted residents in public decision-making processes
- Community-driven programs, investments, or policies influenced or adopted

Together, these outcomes create a clear, accountable pathway from resident engagement to climate health equity in Richmond.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Richmond ACT will engage residents throughout all phases of implementation, ensuring that community members actively shape both process and outcomes.

Climate Ambassadors:

Resident leaders from Black, Latino/e, immigrant, and other impacted communities recruited through Rising Juntos' membership network, partner organizations, social media, and community outreach serve as the primary leadership body guiding the project from design through advocacy.

Planning:
Climate Ambassadors will receive training in their first year on climate health, air quality, and systemic drivers of inequity in Richmond. Drawing on this foundation, they will co-design the participatory assessment—defining research questions, priority focus areas, methodology, and outreach strategies—ensuring the assessment is shaped by those with the deepest stake in its outcomes.

Outreach and Data Collection:
Led by Climate Ambassadors and Rising Juntos staff, feedback will be gathered from residents on their lived experiences with air quality, housing quality, barriers to accessing health and climate programs, and desired investments and policy changes. Engagement methods will include surveys, small-group discussions, town halls, and informal outreach

though door-to-door canvassing; engagement at grocery stores, laundromats, parks, shelters, and transit corridors; and outreach at schools, churches, and community events, and existing Rising Juntos programming. All materials and outreach will be multilingual and culturally responsive to ensure accessibility and inclusivity.

Analysis and Validation:
Climate Ambassadors and survey participants will collectively review findings, validate data, and identify shared priorities through multiple community meetings and forums. This continuous feedback loop ensures results reflect lived experience and that community voice drives the interpretation of data.

Policy Advocacy and Implementation:
Building directly on community-generated data and validated resident priorities, Climate Ambassadors and project partner staff will collaboratively develop the *Richmond Climate Health Roadmap*—a community-owned action agenda reflecting the concerns, barriers, and solutions identified throughout the assessment process. Residents will then lead advocacy efforts to advance Roadmap priorities through public processes and with decision makers, ensuring the project's findings translate into equitable programs, investments, and policy change.

Throughout all phases, community feedback on the process will be continuously reviewed by staff and Climate Ambassadors to refine outreach strategies, adjust project direction, and maintain accountability to resident priorities. Progress updates will be regularly shared with the City of Richmond and broader community to ensure transparency and ongoing responsiveness.

As part of the Richmond Rising Together initiative, a Collaborative Stakeholder Committee (CSC) comprised of a representative from each Co-Applicant organization as well as key stakeholders and compensated community member participants will meet monthly at the Nevin Community Center. During these meetings, Co-Applicants will share project status updates and directly engage the CSC and community members in discussions on project design and implementation. This structure ensures lessons learned across projects are leveraged towards the broader collaborative effort while creating meaningful opportunities for residents most impacted by poor air quality to learn about and engage in projects and share meaningful feedback based on their lived experiences. To reduce potential barriers and ensure maximum opportunities for community participation, these meetings are hybrid (hosted in person and simultaneously on Zoom) and include free childcare, Spanish interpretation, and meals for community members. Meetings are recorded and posted online for viewing in Spanish and English.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Richmond ACT: Advancing Climate Transformation Together is a community-driven initiative advancing air quality and climate health equity in Richmond by placing impacted residents--low-income communities, people of color, immigrants, renters, seniors, and unhoused residents--at the center of research, planning, and advocacy.

The project's vision is to build community power to identify and address air quality and climate harms in neighborhoods disproportionately burdened by pollution, generating actionable data and driving community advocacy for more equitable programs, investments, and policies. Findings will be summarized in a *Richmond Climate Health Roadmap* to guide decision makers towards equitable investments in air quality, energy efficiency, green infrastructure, housing conditions, and health equity.

<u>Project Components</u>

1. **Resident Leadership Development**: A cohort of 25 Climate Ambassadors will be recruited from Black, Latino(e), immigrant, and other priority communities and trained in air quality, energy-efficiency, and environmental health justice. Bi-monthly sessions—hosted by Rising Juntos and supported by Healthy & Active Before 5, Urban Habitat, and local content experts--will explore climate risks, health data, root causes, and structural barriers, preparing Ambassadors to lead the needs assessment and subsequent advocacy. Training will be delivered in residents' primary languages, grounded in community experience, and designed to build from lived knowledge while developing technical expertise.
2. **Participatory Climate Health Needs Assessment:** Climate Ambassadors and project partners will co-design and implement a participatory needs assessment--defining research questions that reflect community priorities, developing survey tools, conducting stakeholder interviews, and establishing data analysis methods. Ambassadors will shape what is asked and how, ensuring the assessment captures the specific barriers, lived experiences and priorities of Richmond's most impacted residents regarding air quality, housing quality, and access to public programs and decisions.
3. **Community Engagement and Outreach:** The project will engage a minimum of 1,000 residents through multilingual, culturally responsive outreach including door-to-door canvassing, peer interviews, community events, and town halls. Outreach will be led by trusted community partners who share language, culture, and lived experience with priority populations; materials will be developed in residents' primary languages with plain-language materials and engaging residents in trusted community spaces—

schools, churches, parks, laundromats, shelters, and transit corridors—rather than institutional settings that can create barriers to participation.

4. **Richmond Climate Health Roadmap Development:** Assessment data, resident surveys, stakeholder interviews, and community town hall sessions will be synthesized into a comprehensive *Richmond Climate Health Roadmap* by Rising Juntos (project lead) Healthy & Active Before 5 (data analysis), Urban Habitat (report drafting and design), with Climate Ambassadors ensuring the final document authentically reflects resident voice and priorities. The Roadmap will outline community recommendations for air quality, housing, energy-efficiency, and climate resilience, and will serve as a living tool for advocates and decision makers to guide equitable interventions and investments.
5. **Policy Advocacy and Implementation:** Advocacy will be phased to match the project's progression. In early phases (through Month 36), Climate Ambassadors will receive policy advocacy training and build relationships with decision makers and coalitions. In mid-phases (Months 36–48), residents and project partners will develop campaign priorities directly from assessment findings and begin engaging elected officials and agencies. In final phases (Months 48–60), residents will present *Roadmap* recommendations at public hearings and formal public processes, advancing adoption of community priorities—with project partners tracking policy, program, and investment outcomes beyond the grant period.

Measurable Outcomes:

Richmond ACT will achieve the following measurable outcomes during the grant period:

- **Increased resident leadership capacity**, as demonstrated by 25 Climate Ambassadors recruited, trained, and actively participating in 6 planning meetings, leading research, and advocating in their communities.
- **Expanded community voice in air quality and climate research**, as demonstrated by 300 completed resident surveys, 2 community town halls conducted, and 5–10 stakeholder interviews documenting impacted residents' climate needs and priorities.
- **Deepened engagement of impacted residents**, as demonstrated by 1,000 residents engaged through canvassing, events, workshops, and community gatherings focused on climate education and assessment.
- **Community-driven climate action agenda established**, as demonstrated by the completion and public release of the *Richmond Climate Health Roadmap* summarizing assessment findings, community priorities, and recommendations for equitable investments and policy change.
- **Increased resident influence in public decision making**, as demonstrated by residents and partners presenting at five or more policy

meetings, presentations, or public hearings to advance equitable programs, investments, and policies for air quality.

Project Leadership and Roles:

Richmond ACT will be implemented by a collaborative team, with the expertise, capacity, and community credibility to drive this initiative.

Rising Juntos serves as the project lead, coordinating Climate Ambassador recruitment and training, participatory assessment design, community outreach, data collection, and advocacy—bringing deep trust and longstanding relationships with Black, Latino/e, immigrant, and low-income communities in Richmond.

Healthy & Active Before 5 will support data collection, analysis, and policy research.

Urban Habitat will contribute regional climate equity analysis, lead report drafting and design, and ensure the *Roadmap* is accessible and ready for publication.

Environmental and technical experts, including Greenbelt Alliance and others (yet to be determined), will provide climate science expertise and support Ambassador training.

Together, this partnership ensures Richmond ACT is both deeply community-led and grounded in evidence-based practice—producing lasting, resident-driven solutions for climate equity and air quality in Richmond.

University if California (UC) Berkeley's Center Global Healthy Cities (CGHC) will prepare annual and end-of-project reports of data across all project partners, along with a public facing dashboard to track progress of the measurable outcomes. The dashboard will include a public comment section. CGHC will work with all Co-Applicants to co-create validated survey questions to capture the mental health impacts of air pollution and climate change (e.g., climate anxiety), and whether and how project interventions are reducing stress, anxiety, and related psychosocial influences on well-being.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The proposed budget totals $450,000 over five years and supports a combination of staffing, community engagement, subcontractors, and indirect costs. Together these expenditures represent a cost-effective, equity-centered investment in community-driven

climate research and advocacy designed to build lasting resident leadership and produce community-owned solutions that extend beyond the grant term.

Personnel expenses make up the largest share, including $85,540 for a Project Manager (0.175 FTE) providing overall project coordination and partner communication, and $167,960 for a Community Organizer (0.50 FTE) leading Climate Ambassador recruitment, training, community engagement, outreach, and advocacy support. The Executive Director (0.10 FTE) will contribute approximately four hours per week in project leadership, reporting, and budget oversight as an in-kind match from Rising Juntos, not charged to the grant.

The budget allocates $100,000 for Healthy & Active Before 5 ($20,000/year) to provide specialized expertise in assessment data management, participatory research design, data analysis, and Climate Ambassador training. Community engagement costs total $51,500, including $37,500 in Climate Ambassador stipends ($7,500/year distributed equitably across 25 Ambassadors), $5,000 for interpretation and translation services, $5,000 for catering at community meetings and events, and $4,000 for childcare beginning in Year 2 when large community convenings begin. Urban Habitat will contribute regional climate equity analysis, policy research, and report drafting as in-kind support, not charged to the grant. The budget includes $45,000 in indirect costs, calculated at a 10 percent fiscal sponsorship fee covering grant administration, accounting, payroll, compliance, and reporting.

The budget includes $144,467 for the City of Richmond Project Manager (3.50 percent FTE), Associate Management Analyst (4.50 percent FTE), and Administrative Assistant (8.00 percent FTE) to support execution of this project, ensure completion of grant commitments, coordinate community engagement and collaboration across projects, and manage contracting, invoicing, and payments. Also, $13,293 will support CSC and other community meetings, shared spaces, and Richmond Rising Together outreach materials.

The budget includes $29,164 for UC Berkeley for a Project Director (16.6 percent FTE) and a $50/hour x 208 hours PhD student researcher to prepare annual and end-of-project reports, manage a project data dashboard, and capture the impact of the projects in reducing negative mental health impacts.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

Richmond ACT closely aligns with local, regional, and statewide climate and air quality initiatives, by strengthening community participation and contributing locally grounded data.

At the statewide level, the project supports the goals of **California Assembly Bill (AB) 617** by expanding engagement in air quality planning among residents most impacted by pollution and often underrepresented in formal processes. Our participatory assessment will generate community-driven data to inform AB 617 implementation and emissions-reduction strategies.

Locally, Richmond ACT advances the City of Richmond's Climate Action Plan priorities, including greenhouse gas reduction, energy efficiency, healthy housing, and community informed planning, by elevating resident input and building community support for effective, equitable solutions.

Regionally, the project complements efforts led by the Bay Area Air District by increasing community voice—particularly among historically marginalized communities—in policies and programs aimed at reducing emissions and improving public health.

Overall, Richmond ACT strengthens these initiatives by grounding them in resident leadership, improving alignment between community needs and policy solutions, and supporting more impactful implementation.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The project lead, Rising Juntos, brings over 20 years of experience implementing community-driven initiatives that integrate participatory research, leadership development, and policy advocacy. Rising Juntos has built deep trust with low-income, Black, Latino/e, and immigrant communities in Richmond, and has a strong track record of elevating underrepresented voices to influence public decisions and investments.

Rising Juntos has led multiple participatory community assessments that produce tangible policy and funding outcomes, including: (1) Concord and Antioch CHANGE housing assessments that led to historic renter protection policies in both cities; (2) parks assessments across Richmond, San Pablo, Concord, Bay Point, Pittsburg and Antioch, resulting in $20 million in park improvement investments; and (3) a countywide 2020 pandemic assessment that identified urgent needs and helped direct hundreds of thousands of dollars in financial assistance to low-income residents. These efforts demonstrate Rising Juntos' ability to manage complex, multiphase projects and translate community input into measurable results.

Our work is driven by a talented resident membership base and a network of longstanding partners with technical expertise and broad reach. Rising Juntos has extensive experience managing grant-funded projects (including a Contra Costa Measure X grant for an East County participatory climate assessment), coordinating across

partners, and delivering on timelines, outcomes, and reporting requirements. Our organization also maintains strong relationships with city and county departments, academic institutions, community-based organizations, and local government leaders, ensuring effective collaboration and alignment with broader climate and public health efforts. Together, these assets position Rising Juntos and its partners to successfully implement a project of this scale.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

Rising Juntos will manage implementation through dedicated staff leadership, resident engagement, and partner coordination.

A Project Manager (estimated 0.175 FTE) will oversee overall coordination, timelines, partnerships, and reporting. Community Organizing staff (approximately 0.50 FTE) will lead outreach, recruit and support Climate Ambassadors, and facilitate engagement and participatory research. Climate Ambassadors—supported by Organizing staff—will lead outreach, data collection, and advocacy.

Rising Juntos' Executive Director will coordinate closely with project partners who will provide technical expertise, research, policy analysis, and report writing, with clear roles and regular communication to ensure alignment and timely implementation. The Executive Director (0.10 FTE) will support grant management, including budget oversight, progress tracking, and reporting.

In addition to grant funding, Richmond ACT will leverage existing staff time, volunteer leadership, and ongoing programming, along with in-kind and complementary partner resources. These combined resources ensure effective implementation and strong accountability to project outcomes.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits, or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the Application Instructions document. Indicate the file name(s) of any supporting documentation in your response.

- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate N/A if the question is not applicable to the project.

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

N/A; the proposed project would create a climate needs assessment and develop community-defined interventions for air quality. The proposed project would not include construction, ground disturbance, or permanent installation. Because the project does not involve new construction or physical infrastructure development, no land use or regulatory approvals are needed. The project is implementation-ready and can proceed immediately upon execution of the Grant Agreement.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

N/A; the proposed project would create a climate needs assessment and develop community-defined interventions for air quality. The proposed project would not include construction, ground disturbance, or permanent installation. Therefore, the proposed project would have no environmental impacts and would be exempt from CEQA.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

N/A; the proposed project would create a climate needs assessment and develop community-defined interventions for air quality. The proposed project would not include property acquisition, leasehold, or easements. Therefore, no site controls are required for project implementation.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

N/A; the proposed project would create a climate needs assessment and develop community-defined interventions for air quality. The proposed project would not involve physical infrastructure development. Therefore, this project would not require any operations or maintenance of physical infrastructure.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Richmond ACT is designed to operate within real-world conditions that can affect participation and implementation.

First, **limited resident time and capacity**—as many community members are managing work, caregiving, housing and economic instability, and other urgent needs—can limit sustained engagement. The project addresses this through flexible scheduling, accessible engagement opportunities, and stipends for Climate Ambassadors.

Second, **fear and reduced participation among immigrant communities due to federal immigration threats** can suppress engagement in public or semi-public processes. Richmond ACT mitigates this through trusted peer messengers, long-standing community relationships, multilingual and culturally responsive outreach, and engagement in safe, familiar community spaces. Rising Juntos is also active in the Contra Costa Immigrant Rights Alliance, ensuring residents have up-to-date information, legal resources, and needed supports.

Despite these challenges, Richmond ACT is structured to sustain strong participation and continuity through trust-based engagement, flexibility, and integration into existing community infrastructure. Rising Juntos is confident in our ability to deliver this project given our strong relationships, proven organizing, and deep experience with similar initiatives.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Richmond Advancing Climate Transformation Together (ACT): Build resident leadership and community-driven climate health solutions in Richmond by engaging low-income Black, Latino/e, immigrant, renter, senior, and unhoused residents in participatory air quality research, climate advocacy, and policy development that advances equitable investments, reduces pollution impacts, and improves long-term community health outcomes over the five-year grant term.

Measurable Outcome	Indicator(s)
1. By the end of the five-year grant term, increase knowledge of air quality, climate health, and environmental justice among Richmond residents most impacted by pollution while increasing their civic participation and advocacy through culturally responsive outreach, education, and leadership development.	• Number of Climate Ambassadors recruited, trained, and engaged in project implementation (target: 25) • Percentage of Climate Ambassadors reporting increased knowledge of climate health, air quality, and environmental justice issues (target: 80%) • Number of residents engaged through outreach, workshops, town halls, canvassing, and community events (target: 1,000) • Percentage of participating residents reporting increased awareness of air quality and climate health concerns (target: 70%)
2. By the end of the grant term, complete a participatory climate health needs assessment and prepare a community-driven Richmond Climate Health Roadmap that identifies resident-defined priorities and strategies to improve air quality, housing conditions, climate resilience, and public health outcomes in Richmond neighborhoods disproportionately impacted by pollution.	• Number of resident surveys collected through the participatory assessment (target: 300) • Number of stakeholder interviews completed (target: 5-10) • Number of qualitative resident testimonials, stories, or reflections collected regarding pollution and climate health impacts (target: 25+) • Completion and public release of the Richmond Climate Health Roadmap (target: 1)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. By the end of the five-year grant term, increase knowledge of air quality, climate health, and environmental justice among Richmond residents most impacted by pollution while increasing their civic participation and advocacy through culturally responsive outreach, education, and leadership development.	A. Climate Ambassador cohort recruited, onboarded, and trained in climate health and air quality issues.	1. Recruit Climate Ambassadors from low-income Black, Latino/e, immigrant, renter, senior, and other impacted Richmond communities.	Rising Juntos	Healthy & Active Before 5	Month 6
		2. Conduct trainings on climate health, air quality, environmental justice, and systemic drivers of inequity.	Rising Juntos	Healthy & Active Before 5; Urban Habitat; Greenbelt Alliance	Month 12
		3. Facilitate bi-monthly planning meetings and leadership development sessions for Climate Ambassadors.	Rising Juntos	Healthy & Active Before 5; Urban Habitat	Month 15
	B. Community outreach and climate health education activities implemented across priority Richmond neighborhoods.	1. Climate Ambassadors and Rising Juntos staff conduct multilingual outreach through canvassing, workshops, town halls, schools, churches, shelters, parks, laundromats, and transit corridors.	Rising Juntos	Healthy & Active Before 5	Month 24

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		2. Climate Ambassadors and Rising Juntos staff gather resident feedback regarding lived experiences with air quality, housing quality, and climate health concerns through outreach and engagement activities.	Rising Juntos	Healthy & Active Before 5	Month 36
	C. Residents participating in public engagement and community leadership activities related to climate health and environmental justice.	1. Provide Climate Ambassadors with advocacy and public engagement training.	Rising Juntos	Urban Habitat; Healthy & Active Before 5	Month 36
		2. Climate Ambassadors and Rising Juntos staff support resident participation in public hearings, policy meetings, and community engagement opportunities related to climate health and environmental justice.	Rising Juntos	Urban Habitat; Healthy & Active Before 5	Month 60
		3. Climate Ambassadors, Rising Juntos, and project partners present community findings and Roadmap priorities to	Rising Juntos	Urban Habitat; Healthy & Active Before 5	Month 60

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		elected officials, agencies, and public forums.			
2. By the end of the grant term, complete a participatory climate health needs assessment and prepare a community-driven Richmond Climate Health Roadmap that identifies resident-defined priorities and strategies to improve air quality, housing conditions, climate resilience, and public health outcomes in	A. Participatory climate health needs assessment framework and community engagement approach finalized.	1. Co-design research questions and assessment priorities with Climate Ambassadors and residents.	Rising Juntos	Healthy & Active Before 5; Urban Habitat	Month 15
		2. Develop resident survey tools and stakeholder interview protocols.	Healthy & Active Before 5	Rising Juntos	Month 18
		3. Finalize participatory assessment methods, outreach strategy, and community engagement approach.	Rising Juntos	Healthy & Active Before 5; Urban Habitat	Month 18
	B. Resident surveys, stakeholder interviews, and community validation	1. Climate Ambassadors and Rising Juntos staff conduct resident surveys documenting air quality concerns, housing conditions, and pollution-related health impacts.	Rising Juntos	Healthy & Active Before 5	Month 24

Project Name: Richmond ACT
Lead Applicant Name: City of Richmond
Term for this budget (in year 5 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Community Engagement	Direct	Richmond Rising Together Community Engagement Materials	Public materials for CSC meeting agendas and slides, reports as necessary for public review; branded outreach and informational materials: flyers, pamphlets, banners, and postcard mailers. $2,000/year for printing and copying + $1500/year for translation = $3500 x 5 years = $17,500. Cost to project at 1/12th for 1 of 12 projects participating: $1458	$1,458.00
Other Direct Costs	Direct	Richmond Rising Together Hub	Rental of building space for a publicly accessible office and meeting space for grant partner meetings, trainings/workshops, and community events. $1,390/month x 41 months = $56,990. Cost to project at 1/12th for 1 of 12 projects participating: $4,749	$4,749.00
Other Direct Costs	Direct	Cellular phones and service	Cellular phones and cellular service for PM I and AAA Staff. One time purchase of phones ($600/each) and monthly costs of $50/month per phone for 41 months. $600 x 2 + $50 x 41 months = $5,300. Cost to project at 1/12th for 1 of 12 projects participating: $442	$442.00
Community Engagement	Direct	Refreshment, Childcare, and Interpretation for Community Meetings	$400/event for refreshments for 30 community members + $80/event for childcare + $200/event interpretation = $680 per meeting. 41 CSC monthly meetings + 4 additional events/year x 5 years = 61 meetings x $680/meeting = $41,480. Cost to project at 1/12th for 1 of 12 projects participating: $3,457	$3,457.00
Capacity-Building and Training	Direct	City of Richmond Staff Training Costs	Workshop and conference fees ($600/year per staff member) + meals during training ($92/day x 4 days/year per staff member) = $968/staff member/year x 5 years x 3 staff = $14,520.00. Cost to project at 1/12th for 1 of 12 projects participating: $1,210	$1,210.00
Travel	Direct	Local Transportation	20 miles/month for staff to attend related community meetings throughout the City and region. 60 months x 20 miles x $0.70/mile = $840. Cost to project at 1/12th for 1 of 12 projects participating: $70	$70.00
Community Engagement	Direct	Community Workproduct Compensation for Richmond resident members of CSC	Each resident CSC member receives a $50 VISA gift card per meeting. Estimate includes 6 members at each monthly Collaborative Stakeholder Committee meeting, for 41 months. $50 card + $4 purchasing fee = $54/card x 6 residents x 41 months = $13,284. Cost to project at 1/12th for 1 of 12 projects participating: $1,107	$1,107.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Richmond Rising Together Project Website	Richmond Rising Together webpage for posting meeting materials (agendas, minutes, recordings), key reports and documents, community opportunities for project involvement, and other public information. Estimated at $50/month based on historic costs x 60 months = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Subcontractors & Vendors	Direct	Graphic Design Consultant	Development of website and project outreach materials. $150/hr for 20 hours = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Data Management Software (Airtable)	Airtable is used for tracking project budgets, deliverables, expenditures and reimbursements to-date, and other key coordination data. $720/year for 5 years based on historic costs = $3,600. Cost to project at 1/12th for 1 of 12 projects participating: $300	$300.00
Personnel/Staff Costs	Direct	City of Richmond Project Manager	Project Manager provides overall leadership in grant execution and implementation across projects. Project-specific allocation, based on anticipated support to be provided: 3.50% FTE x $17,754.47 monthly salary x 41 months = $25,477.66; Benefits at 77% of salary = $19,617.80.	$45,095.00
Personnel/Staff Costs	Direct	City of Richmond Associate Management Analyst	Project Analyst coordinates partners for CSC meetings, preparation and submission of required reports and invoices, and ongoing budget management across projects. Project-specific allocation: 4.50% FTE x $13,623.72 monthly salary x 41 months = $25,135.76; Benefits at 77% of salary = $19,354.53.	$44,490.00
Personnel/Staff Costs	Direct	City of Richmond Administrative Assistant	Administrative Assistant provides logistical and coordination support for all projects, including CSC meeting preparation, timely payment of project partner invoices, and project delivery support. Project-specific allocation: 8.00% FTE x $9,453.37 monthly salary x 41 months = $31,007.04; Benefits at 77% of salary = $23,875.42.	$54,882.00

Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Richmond Rising Together
Lead Applicant Name	City of Richmond
Project Location	Richmond, CA
Overall Funding Request	$15,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	**Facilities Pathways**
Project Lead	RYSE, Inc.
Project Location	3939 Bissell Avenue, Richmond, CA 94805
Project Funding Request	$364,691

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

RYSE is a community youth center and resilience hub located at 3939 Bissell Avenue Richmond, CA 94805, creating safe spaces grounded in social justice that build youth power for young people ages 13 to 24 to love, learn, educate, heal, and transform lives and communities. RYSE will implement a Facilities and Environmental Health Pathways Program, a paid, hands-on workforce development internship engaging 10 youth (2 per year) in facility operations, air quality monitoring and management, emergency preparedness, and community outreach. Through a six-month internship meeting twice weekly and based at RYSE Center, participants will gain knowledge and hands-on experience in maintaining a community-serving facility and resilience hub, developing safety protocols for climate-driven events and emergencies, and create educational materials that reach 1,000 community members on protecting their health and safety during climate-driven events. The program will strengthen RYSE's capacity to support 100 youth and community members with clean air space and resource distribution during climate-driven events.

Richmond communities — particularly youth and low-income households — face disproportionate pollution burdens and climate risks, while ongoing research highlights the need for expanded environmental health literacy, community engagement, and access to trusted resources in historically impacted neighborhoods (CERCH, UC Berkeley; California Air Resources Board; Bay Area Air District). Our program addresses this gap by preparing local young people to access and deliver critical environmental health and safety supports. In strengthening RYSE's role as a resilience hub that is staffed by trained youth leaders, our project will build neighborhood-level capacity to respond to poor air quality events, reduce health risks for vulnerable residents, and create pathways into stable, non-extractive careers for young people. In doing so, our program will advance both immediate community health protection and build towards long-term economic resilience in Richmond.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

Reduce air pollution and improve health outcomes:
Founded in the early 2000s, RYSE Center has grown into an anchor institution in Richmond, serving as a safe and liberatory home for young people ages 13 to 24 to love, learn, educate, heal, and transform their lives and communities. Engaging young

people most marginalized by our systems, RYSE's integrative model provides a wide range of supports across youth leadership development, mental health services, creative expression, and identity exploration. The Facilities & Environmental Health Pathways Program will play a new and exciting role in this model, integrating environmental health, air quality event preparedness, and emergency response into the daily operations of RYSE. The project will inform young people and families about air quality issues in Richmond, its disproportionate health impacts, and ensure they have a trusted, well-equipped space to turn to during poor air quality events or climate-driven events. Through outreach, workshops, and distribution, programs offered at RYSE Center and supported by youth interns will reduce exposure to harmful air, and improve health outcomes for Richmond residents. In Richmond, community-based outreach, partnerships, and engagement strategies are central to building local capacity, advancing health equity, and improving health outcomes for residents facing environmental and social risk factors.[1]

Build economic resilience for a just transition:
The Program creates a paid workforce pathway for Richmond youth into high-demand, non-extractive sectors such as facilities management, environmental justice, and climate resilience. Interns will be trained in indoor air quality monitoring, resilience hub infrastructure and facility operations, emergency preparedness and response, and outreach material design. Through technical skills-building and career exposure, the project supports a just transition by preparing Richmond youth for stable employment outside of polluting industries.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

This project will take place at RYSE Center at 3939 Bissell Avenue, Richmond, CA 94805. Richmond has endured decades of systemic neglect and environmental injustice. The city is shaped by an overwhelming presence of the Chevron Refinery, which has contributed to toxic air conditions and longstanding racial inequities. Medical research has found that these environmental exposures put Richmond residents at a much higher risk for asthma, heart attacks and heart disease, diabetes, stroke, and low birth rates. The asthma rate in Richmond is 25 percent, nearly double the state's asthma rate. Residents described the unjust conditions they navigate daily as an "atmospheric distress" that consumes them at school, at home, in their neighborhoods,

[1] City of Richmond; UC Davis Center for Regional Change; Bay Area Air District).

and all areas of their lives.[2] RYSE was founded out of a youth organizing movement after a string of youth homicides near Richmond High School in the early 2000s. Richmond residents have faced elevated levels of gun violence alongside persistent poverty and food insecurity, with violent crime rates exceeding national averages and of the community experiencing economic hardship and hunger. These challenges are compounded by documented racial disparities in policing across California and locally reported over-policing of low-income Black and Brown communities, contributing to long-term, multigenerational inequities in health, safety, and opportunity. Young people called on adults and systems to work together to build a more just and equitable city. Since then, RYSE has grown into an anchor community institution in Richmond, engaging more than 12,000 young people ages 13 to 24 (over 800 per year) and centering those most marginalized from our social care systems. Our integrative model meets young people where they are, with programming and services in health and healing justice, media arts and culture, youth justice, and education and economic justice. Our youth membership is 41 percent Black, 42 percent Latinx, 9 percent Asian American, 18 percent LGBTQ+, and over 90 percent low income. The majority of RYSE's membership live in Richmond zip codes 94801, 94804, 94805, and 94806. Over 30 percent of current staff were formerly RYSE youth members who grew into leadership roles as coordinators, managers, directors, and board members.

For years, young people have expressed their needs and dreams for more spaces in Richmond to rest, heal, dream, and build community. In 2017, RYSE began visioning to expand their building footprint, engaging 300 young people in design charettes and listening sessions around what they would like a new space to look and feel like. In 2022, RYSE Center expanded into a 45,000-square-foot campus. Young people stressed that climate resilience must be a key feature within the design. In partnership with the Asian Pacific Environmental Network, RYSE's new space has been designed to serve as a resilience hub. Equipped with solar panels, solar storage and backup power, an indoor air monitoring system, on-site laundry, and a community garden, RYSE Center has the capacity to support our community during climate emergencies (i.e., extreme heat, unhealthy air conditions, and power outages) and build community power to transform the unjust conditions that affect young people's daily lives and futures.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

[2] RYSE Listening Campaign, 2013.

This project builds on over 17 years of ongoing inquiry with young people around environmental injustices, climate resilience, and workforce development needs. All that we do at RYSE Center – programming, mental health services, partnerships, building design, and strategy – is shaped by young people's dynamic needs and priorities. Young people are co-creators at RYSE Center through multilayered feedback loops, including our annual Member Liberation Impact Tool (Member LIT) evaluation surveys, participatory design, and listening campaigns:

1. Annual Member LIT survey: RYSE's annual Member LIT survey explores youth members' sense of safety, belonging, relationships, love, agency, access to services, and areas for needed improvements at RYSE Center. The Member LIT has been cited nationally and used as a model for the City of Richmond's Fund for Children and Youth program evaluation. In our 2025 Member LIT (completed by 91 members) and consistently over previous years, our youth members expressed the need and desire for a wider range of paid, career-building internship opportunities.

2. Participatory Design of RYSE Center's expansion: RYSE engaged 300 young people in participatory design sessions and charettes for expanding its building footprint. See Question 3 for more about the engagement process, as well as youth feedback for RYSE Center to serve as a resilience hub.

3. Listening Campaign 2.0: In 2024, RYSE interns launched RYSE's Listening Campaign 2.0, in partnership with Ceres Policy Research, to research issues in their community and identify community-based solutions. Through story collection methods (photovoice research, journaling, voice memos, dialogue sessions, and gallery walks), interns engaged 150 youth and adult allies, documenting how the spaces youth navigate across Richmond are neglected and under-resourced. Community needs related to air quality, transportation, health, and economic opportunity in Richmond were woven within their findings.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Through RYSE's Member LIT survey, participatory design sessions of RYSE Commons, and RYSE's Listening Campaign 2.0, young people identified core needs as:

- Workforce development and career building opportunities

- Access to safe, third spaces as refuge during climate emergencies
- Access to safe, third spaces that build power to transform environmental injustices

RYSE's Facilities and Environmental Health Pathways Program is a direct response to these youth-led calls. It integrates workforce development with community health by engaging youth in paid internships where they build skills in facilities operations, indoor air quality, and emergency preparedness while contributing to the health and safety of their community. The program will also strengthen RYSE Center's role as a resilience hub. During climate-driven events that include poor air quality, extreme heat, and wildfire smoke, youth will be notified via social media and one-on-one communications and able to access clean air and cooling spaces at RYSE's facility; receive educational materials on air quality safety, emergency preparedness, and best practices for reducing smoke exposure; and access resources, including personal protective equipment (PPE), transportation assistance to safe spaces, water, and wellness supplies.

Our measurable outcomes will demonstrate impact through both individual and community-level change: youth gaining skills and accessing career pathways, while their work strengthens RYSE as a trusted resilience hub for the broader community. Reaching over 1,000 youth and families with protecting health during air quality events will reflect increased preparedness, reduced exposure to harmful air, and growing community capacity to respond to longstanding environmental injustices in Richmond.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Pathway Engagement and Feedback Methods: RYSE will conduct at least one month of outreach with youth to solicit interest in the pathway program. Engagement methods include in-person outreach with current RYSE members, at local schools, and throughout the community; sharing internship flyers on social media and at RYSE Center; and working with RYSE staff to identify and refer youth interested in career development opportunities. RYSE engages in ongoing inquiry with young people to improve programming. A core method is the Member LIT Survey, which includes sections on internship participants' growth in knowledge and skills related to their program focus area, as well as feedback on how RYSE can improve its specific programs. The Member LIT is reviewed by staff each year and is used to refine

programming. RYSE anticipates that 75 percent of interns in the program will improve their knowledge or skills in indoor air quality monitoring, resilience hub, operations, and emergency preparedness.

Community Engagement and Feedback Methods: While creating educational materials on protecting health and safety during air quality events, interns will work with staff to develop a community dissemination plan. Engagement methods will include peer-to-peer engagement, workshops, conversations with family and community members, and sharing educational content through social media.

During climate-driven events, RYSE will ensure youth and other community members are informed about available resources, including clean air and cooling spaces, PPE, transportation support, and emergency supplies at RYSE. Engagement methods include social media posts, direct phone calls and texts to youth members, and communications with local partners.

Youth have previously designed and implemented surveys to gather input from the broader community, and similar methods will be used throughout the grant period related to creation of educational materials as well as after climate-driven events. A target of 50 percent of community members responding to surveys will increase their knowledge of protective health actions. This feedback will be regularly reviewed by staff and interns and used to refine educational materials, outreach strategies, resource identification, and safety protocols.

As part of the Richmond Rising Together initiative, a Collaborative Stakeholder Committee (CSC) made up of a representative from each Co-Applicant organization as well as key stakeholders and compensated community member participants will meet monthly at the Nevin Community Center. During these meetings, Co-Applicants will share project status updates and directly engage the CSC and community members in discussions on project design and implementation. This structure ensures lessons learned across projects are leveraged towards the broader collaborative effort while creating meaningful opportunities for residents most impacted by poor air quality to learn about and engage in projects and share meaningful feedback based on their lived experiences. To reduce potential barriers and ensure maximum opportunities for community participation, these meetings are hybrid (hosted in person and simultaneously on Zoom) and include free childcare, Spanish interpretation, and meals for community members. Meetings are recorded and posted online for viewing in Spanish and English.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Project Vision: Facilities and Environmental Health Pathways: RYSE Center will engage 10 Richmond youth (2 per year) in a paid, six-month internship in facilities operations, indoor air quality monitoring, and emergency preparedness, building workforce skills for a just transition while strengthening RYSE's resilience hub to protect the health and safety of 1,000 youth and community members in Richmond, CA over the five-year grant term.

Measurable Outcomes:

1. By the end of the five-year grant term (Month 60), 10 Richmond youth will complete a paid six-month internship in the Facilities and Environmental Health Pathways Program, demonstrating increased knowledge and practical skills in indoor air quality monitoring, resilience hub operations, and air quality emergency preparedness, and gaining demonstrated skills and career exposure in facilities management and climate resilience.
2. By the end of the five-year grant term (Month 60), at least 1,000 youth, families, staff, and partners in Richmond will be reached through intern-developed air quality emergency protocols, educational and outreach materials, and resilience hub improvements, with post-outreach surveys used to assess changes in community awareness of protective health actions during air quality events.
3. Over the five-year grant term (Months 6–60), RYSE Center will directly serve at least 100 Richmond youth and community members during air quality emergencies by activating its resilience hub to provide access to clean air space, PPE, and emergency resources, with post-event surveys used to assess changes in participants' knowledge of protective health actions.

Key Components:

- Interns receive hands-on training in resilience hub maintenance and facilities operations at RYSE Center (i.e., air quality monitoring, drain maintenance, RYSE’s safety protocol procedures). and complete post-internship assessments to document growth in knowledge and practical skills.
- Interns will co-develop four to five safety protocols to help protect youth and staff during air quality events and environmental emergencies, including wildfire smoke response and extreme heat

- Interns will create four to five education or outreach materials to help youth, families, staff, and partners protect their health and safety during air quality events and environmental emergencies, reaching 1,000 community members.
- Interns and staff will participate in citywide feedback loops, public art, and policy efforts related to air pollution, bike lanes, public transportation, and climate resilience.
- RYSE will support youth, families, and community members in accessing clean air space, PPE, and other emergency resources during poor air quality conditions and environmental emergencies, reaching at least 100 community members.

Members from RYSE's Facilities and Environmental Health Pathways Program will also be participants in the Total Transit Access Pilot Program (TTA Pilot) for the duration of their participation in the workforce program. The TTA Pilot will bolster RYSE's Facilities and Environmental Health Pathways Program workforce development goals by providing unlimited transit passes for participants to access work sites, which will reduce transportation cost burden and encourage use of public transit for future work opportunities and personal use.

Role of Project Lead: RYSE's Facilities Team will lead the Facilities and Environmental Health Pathways Program, providing hands-on supervision and guidance to each intern. RYSE can share best practices in resilience hub infrastructure and emergency response planning with other Co-Applicants and can offer a multipurpose room that can accommodate over 150 people for events.

UC Berkeley's Center Global Healthy Cities (CGHC) will prepare annual and end-of-project reports of data across all project partners, along with a public facing dashboard to track progress. The dashboard will include a public comment section. CGHC will work with all Co-Applicants to co-create validated survey questions to capture the mental health impacts of air pollution and climate change (e.g., climate anxiety), and whether and how project interventions are reducing stress, anxiety, and related psychosocial influences on well-being.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The proposed budget totals $364,691 over five years and supports a combination of staffing, internship wages, outreach and communications supplies, air quality event response supplies, and contingency.

Personnel expenses make up the majority of the budget, including $77,622 for a Facilities Manager providing oversight and program management at 12.5 percent FTE, and $50,711 for a Facilities Coordinator providing direct implementation support at 10 percent FTE. The budget also allocates $52,423 to support 10 part-time youth interns (2 interns per year over 5 years, approximately $20/hour) who will develop educational materials, safety protocols, and support the RYSE's resilience hub infrastructure and facility operations. Intern payroll taxes (12.4 percent) and staff benefit rates (47 percent) inclusive of payroll taxes, health insurance, retirement, and paid time off are included in personnel totals above.

The remaining budget supports direct community engagement and resilience activities, including $7,500 for outreach events and trainings, $5,000 for printing and signage, and $2,500 for communications and social media outreach. An additional $4,978 is dedicated to resilience hub and air quality response supplies, including PPE, air quality monitors, and emergency preparedness materials identified through intern recommendations. The budget also includes $19,156 in contingency and $30,110 in indirect costs at the 15 percent de minimis rate to support administrative and operational capacity for successful program implementation.

$72,234 is for the City of Richmond Project Manager (1.75 percent FTE), Associate Management Analyst (2.25 percent FTE), and Administrative Assistant (4 percent FTE) to support execution of this project, ensure completion of grant commitments, coordinate community engagement and collaboration across projects, and manage contracting, invoicing, and payments. $13,293 will support CSC and other community meetings, shared spaces, and Richmond Rising Together outreach materials. $29,164 is for UC Berkeley for a Project Director (16.6 percent FTE) and a $50/hour x 500 hours PhD student researcher to prepare annual and end-of-project reports, manage a project data dashboard, and capture the impact of the projects in reducing negative mental health impacts.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

RYSE's Facilities and Environmental Health Pathways Program is consistent with local, regional, and statewide initiatives focused on air quality, climate action, and equitable workforce development:

Community Air Protection Program (AB 617): Richmond's AB 617 Path to Clean Air Program, managed by the Bay Area Air District, focuses on implementing community-driven air quality monitoring and emissions reduction. RYSE's program supports these goals by training youth in air quality monitoring techniques and building local knowledge and community engagement around air quality in Richmond.[3]

City of Richmond Climate Action Plan: RYSE's program aligns with three of the plan's goals: reduce greenhouse gas emissions, build a healthy and resilient community, and engage community and educate youth.[4] RYSE's program will address all three of these goals, providing youth interns with paid opportunities and pathways to gain skills and knowledge in environmental health, air quality, climate resilience, and resilience hub operations.

Plan Bay Area 2050: The program aligns with the plan's Environmental and Economy elements by creating training for local youth residents to enter the workforce and building community capacity for local climate resilience and greenhouse gas reduction.[5]

In alignment with these plans and initiatives, RYSE's program will play a small piece in the larger movement with Richmond Rising Together to build a safer, healthier, and more climate resilient Richmond.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

RYSE is a trusted anchor institution for young people in Richmond, with more than 17 years of experience in running youth development, workforce readiness, and community health programs. Reaching young people most marginalized from our communities, our integrative model weaves together mental health services, restorative justice, creative arts and expression, basic needs, and leadership development pathways.

RYSE has successfully managed multiyear, multipartner grants and has established strong systems for program implementation, fiscal oversight, and outcomes tracking

[3] AB 617, *Richmond-San Pablo Community Air Monitoring Plan*, 2020.
[4] City of Richmond, 2016, *Richmond Climate Action Plan*, page 3.
[5] MTC and ABAG, 2026, March, *Plan Bay Area 2050*, page 8.

with City, County, and State-level grants. Previous collaborations with the City of Richmond include:

- **California Violence Intervention Program (CalVIP), Sub-grantee of the City of Richmond Office of Neighborhood Safety ($1,000,000):** Over a three-year period, RYSE delivered violence intervention, mental health, and positive youth development services to 160 system-impacted youth, meeting all contractual deliverables and reporting requirements.
- **Richmond Fund for Children and Youth (RFCY), Grantee and Sub-grantee ($1,500,000 total):** RYSE currently manages two concurrent three-year grants, including (1) career pathways programming serving 200 youth annually, and (2) violence intervention, grief support, and mental health services for youth impacted by community violence.
- **Roots of Success Environmental Careers Pre-Apprenticeship, Sub-grantee ($45,000):** In partnership with Roots of Success, RYSE implemented an environmental careers pre-apprenticeship program serving Richmond youth through a structured curriculum, paid work experience, and wraparound supports. Youth participants gained environmental literacy, job readiness skills, and exposure to career pathways in sectors such as energy, water, waste, and building operations, culminating in an industry-recognized pre-apprenticeship credential.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

This project will be led by RYSE's Facilities Manager and supported by the Facilities Coordinator. For the past three to four years, both individuals currently in these roles have been leaders in RYSE's resilience hub design, maintenance, air quality monitoring, emergency preparedness training and protocol development, and outreach and engagement with staff and young people. Our Facilities team is deeply integrated within RYSE's daily activities, often supporting programming with safety presentations, member engagement, and crisis response coordination. Both roles are deeply committed to ensuring that RYSE is a safe space for all youth, partners, and community members. The proposed project builds on these foundations and will strengthen our resilience hub strategies and workforce development programming by formalizing these learning opportunities into a structured environmental health and facilities workforce pathway for young people.

The Facilities team will be supported by RYSE's broader program infrastructure, including staff with extensive experience managing youth internships, workforce development programs, and case management. This includes support with curriculum development, participant recruitment, supervision best practices, and ongoing coaching to ensure a high-quality internship experience. Additional organizational resources, including RYSE's finance and administrative teams, will support grant management, reporting, and compliance.

RYSE will also leverage existing general operating funding and in-kind resources to support project success, including staff time, facility space, additional equipment, and wraparound services such as mental health support, meals, and transportation assistance for participants.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

N/A. No permits or approvals are required to operate this program. RYSE fully owns and operates the building where the internship will be held. Additionally, the program would not include construction, ground disturbance, or permanent installation. Because the project does not involve new construction or physical infrastructure development, no land use or regulatory approvals are needed. The project is implementation-ready and can proceed immediately upon execution of the Grant Agreement.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

N/A. The proposed project would provide an internship program for youth in the Richmond area and would not include construction, ground disturbance, or permanent installation. Therefore, the proposed project would not have the potential to cause a significant effect on the environment and would be exempt from CEQA review.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

N/A. The proposed project would provide an internship program for youth in the Richmond area and would not include property acquisition, leasehold, or easements. Therefore, no site controls are required for project implementation.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

N/A. The proposed project would provide an internship program for youth in the Richmond area and would not involve physical infrastructure development. Therefore, this project would not require any operations or maintenance of physical infrastructure.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

RYSE has identified several potential barriers to project implementation and has developed strategies to mitigate these risks.

Youth recruitment and retention amidst rising instability: Young people are growing up in a world of increasing instability -- from the ongoing impacts of the pandemic and housing crisis to rising social isolation, fears of deportation, political violence, and economic insecurity. RYSE is seeing this show up for young people in increased mental health crises, isolation, and disconnection from school, family, and community. Youth across the country are experiencing a growing mental health crisis, with high school students reporting persistent feelings of sadness or hopelessness.[6] RYSE recognizes that interns may face barriers to consistent participation due to competing responsibilities and instability in their daily lives. RYSE's integrative model is designed

[6] Youth Mental Health: The Numbers | Adolescent and School Health | CDC.

to adapt and respond to these realities. To support recruitment and retention, the internship will provide $20-22 per hour wages and transportation support (Richmond Moves, Total Transit Access Pilot, Clipper Cards, and rideshares as needed). All RYSE youth members have access to daily meals and snacks, grocery support through monthly Pantry Packs, and a Youth Emergency Fund for rental assistance and urgent needs. Additional wraparound services, including case management, mental health support, and peer support groups, are accessible and encouraged for young people if desired. These supports help counterbalance rising instability for youth.

First-time implementation of a formal facilities-based internship: This will be the RYSE Facilities team's first time leading a structured internship program, which may create potential challenges in internship management and curriculum development. The Facilities team will be supported with deeper integration into Program Staff meetings focused on internship management, youth supervision, and care review, as well as weekly supervision from the Director of Operations and Partnerships. The internship workplan will be reviewed and approved by the Director team. The program will build on RYSE's existing internship models and best practices already used across RYSE's career pathways programming. The feedback received from interns will help continual refinement of the new program to ensure it accomplishes the intended goals.

Language barriers: Richmond youth and their families speak a wide range of languages, and some participants or caregivers may have limited English proficiency, which can create barriers to engagement, communication, and participation. The majority of Richmond youth and families with limited English proficiency are Spanish speaking. RYSE's full Facilities and Administrative Team (Facilities Manager, Facilities Coordinator, Program Administrative Manager, and Director of Operations and Partnerships) is bilingual in Spanish and can provide direct communication and instruction in both English and Spanish, which will remove potential language barriers for the majority of participants and their caregivers.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Facilities and Environmental Health Pathways: RYSE Center will engage 10 Richmond youth (2 per year) in a paid, six-month internship in facilities operations, indoor air quality monitoring, and emergency preparedness, building workforce skills for a just transition while strengthening RYSE's resilience hub to protect the health and safety of 1,000 youth and community members in Richmond, CA over the five-year grant term.

Please note that the examples for these statements include a named outcome, a goal for change impact (number), a target group, and a time parameter.

Measurable Outcome	Indicator(s)
1. By the end of the five-year grant term (Month 60), 10 Richmond youth will complete a paid six-month internship in the Facilities and Environmental Health Pathways Program, demonstrating increased knowledge and practical skills in indoor air quality monitoring, resilience hub operations, and air quality emergency preparedness, and gaining demonstrated skills and career exposure in facilities management and climate resilience.	• Number of youth who complete the six-month internship program (target: 10 youth). • Number of completing interns who demonstrate increased knowledge and practical skills in indoor air quality monitoring, resilience hub operations, and emergency preparedness, based on post-internship assessment (target: 75 percent) • Intern reflections and supervisor assessments describing growth in confidence and readiness for workforce pathways in facilities management and climate resilience (target: 10 youth)
2. By the end of the five-year grant term (Month 60), at least 1,000 youth, families, staff, and partners in Richmond will be reached through intern-developed air quality emergency protocols, educational and outreach materials, and resilience hub improvements, with post-outreach surveys used to assess changes in community awareness of protective health actions during air quality events.	• Number of community members reached through intern-developed educational materials, workshops, peer outreach, and social media (Target: 1,000 youth, families, staff, and partners over the grant term) • Number of air quality emergency protocols and educational and outreach materials co-developed by interns and disseminated to the community (Target: 4–5 protocols and 4–5 materials over the grant term) • Feedback from community members receiving materials indicating changes in awareness of protective health actions during air quality events (Target: 50 percent)

Measurable Outcome	Indicator(s)
3. Over the five-year grant term (Months 6–60), RYSE Center will directly serve at least 100 Richmond youth and community members during air quality emergencies by activating its resilience hub to provide access to clean air space, PPE, and emergency resources, with post-event surveys used to assess changes in participants' knowledge of protective health actions.	• Number of youth and community members accessing clean air space, PPE, or emergency resources at RYSE during air quality emergencies (Target: 100 youth and community members over the grant term) • Percentage of community members served during emergencies who report changes in knowledge of protective health actions following RYSE engagement, based on post-event surveys (Target: 50 percent)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. By the end of the five-year grant term (Month 60), 10 Richmond youth will complete a paid six-month internship in the Facilities and Environmental Health Pathways Program, demonstrating increased knowledge and practical skills in indoor air quality monitoring, resilience hub operations, and air quality emergency preparedness, and gaining demonstrated skills and career exposure in facilities management and climate resilience.	**A.** Internship program design complete Completion date: Month 3	1. Facilities Manager and Facilities Coordinator draft internship curriculum covering indoor air quality monitoring, resilience hub operations, and emergency preparedness	RYSE	--	Months 1-3
		2. Facilities team integrates into Program Staff meetings focused on internship management, youth supervision, and care review to align curriculum with RYSE's existing internship best practices	RYSE	--	Month 1, ongoing
		3. Director of Operations and Partnerships reviews and approves internship workplan and curriculum before first cohort launch.	RYSE	--	Month 3
	B. First intern cohort recruited, hired, and onboarded Completion date: Month 6	1. Conduct at least one month of in-person and social media outreach to recruit youth applicants at RYSE Center, local schools, and in the community	RYSE	--	Months 3-4, annual recurring (annually)
		2. Conduct two rounds of interviews and select two youth interns for the first cohort	RYSE	--	Month 5, annual recurring
		3. Complete one week of onboarding for hired interns, including orientation to RYSE Center, the Facilities team, and internship expectations	RYSE	Community partners	Month 6 , annual recurring

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	C. Each annual intern cohort completes the six-month internship. Completion date: Month 12 (annual recurring)	1. Interns meet with supervising Facilities staff twice weekly for six months, engaging in hands-on training in resilience hub maintenance, air quality monitoring, and facility operations	RYSE	--	Months 6-12
		2. Deliver 1–2 skill-building trainings per cohort year in resilience hub infrastructure, facility operations, and indoor air quality monitoring	RYSE	--	Months 8-9
		3. Deliver 1–2 skill-building trainings per cohort year in air quality emergency response, community outreach, peer training, and safety protocol development.	RYSE	--	Months 9-10
		4. Collect post-internship assessments and intern reflections on skill growth and workforce readiness.	RYSE	--	Month 12
2. By the end of the five-year grant term (Month 60), at least 1,000 youth, families, staff, and partners in Richmond will be reached through intern-developed air quality emergency protocols, educational	**A.** First set of air quality emergency protocols co-developed and documented. Completion date: Month 12	1. Interns and Facilities staff identify priority topics for the first 1–2 protocols, such as wildfire smoke response or extreme heat, based on community needs and RYSE's existing emergency preparedness work	RYSE	--	Months 6-8
		2. Interns and Facilities staff draft, review, and finalize the first 1–2 protocols, incorporating input from RYSE staff and community partners	RYSE	--	Months 8-11

Term for this budget (in year 5 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Community Engagement	Direct	Richmond Rising Together Community Engagement Materials	Public materials for CSC meeting agendas and slides, reports as necessary for public review; branded outreach and informational materials: flyers, pamphlets, banners, and postcard mailers. $2,000/year for printing and copying + $1500/year for translation = $3500 x 5 years = $17,500. Cost to project at 1/12th for 1 of 12 projects participating: $1458	$1,458.00
Other Direct Costs	Direct	Richmond Rising Together Hub	Rental of building space for a publicly accessible office and meeting space for grant partner meetings, trainings/workshops, and community events. $1,390/month x 41 months = $56,990. Cost to project at 1/12th for 1 of 12 projects participating: $4,749	$4,749.00
Other Direct Costs	Direct	Cellular phones and service	Cellular phones and cellular service for PM I and AAA Staff. One time purchase of phones ($600/each) and monthly costs of $50/month per phone for 41 months. $600 x 2 + $50 x 41 months = $5,300. Cost to project at 1/12th for 1 of 12 projects participating: $442	$442.00
Community Engagement	Direct	Refreshment, Childcare, and Interpretation for Community Meetings	$400/event for refreshments for 30 community members + $80/event for childcare + $200/event interpretation = $680 per meeting. 41 CSC monthly meetings + 4 additional events/year x 5 years = 61 meetings x $680/meeting = $41,480. Cost to project at 1/12th for 1 of 12 projects participating: $3,457	$3,457.00
Capacity-Building and Training	Direct	City of Richmond Staff Training Costs	Workshop and conference fees ($600/year per staff member) + meals during training ($92/day x 4 days/year per staff member) = $968/staff member/year x 5 years x 3 staff = $14,520.00. Cost to project at 1/12th for 1 of 12 projects participating: $1,210	$1,210.00
Travel	Direct	Local Transportation	20 miles/month for staff to attend related community meetings throughout the City and region. 60 months x 20 miles x $0.70/mile = $840. Cost to project at 1/12th for 1 of 12 projects participating: $70	$70.00
Community Engagement	Direct	Community Workproduct Compensation for Richmond resident members of CSC	Each resident CSC member receives a $50 VISA gift card per meeting. Estimate includes 6 members at each monthly Collaborative Stakeholder Committee meeting, for 41 months. $50 card + $4 purchasing fee = $54/card x 6 residents x 41 months = $13,284. Cost to project at 1/12th for 1 of 12 projects participating: $1,107	$1,107.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Richmond Rising Together Project Website	Richmond Rising Together webpage for posting meeting materials (agendas, minutes, recordings), key reports and documents, community opportunities for project involvement, and other public information. Estimated at $50/month based on historic costs x 60 months = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Subcontractors & Vendors	Direct	Graphic Design Consultant	Development of website and project outreach materials. $150/hr for 20 hours = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Data Management Software (Airtable)	Airtable is used for tracking project budgets, deliverables, expenditures and reimbursements to-date, and other key coordination data. $720/year for 5 years based on historic costs = $3,600. Cost to project at 1/12th for 1 of 12 projects participating: $300	$300.00
Personnel/Staff Costs	Direct	City of Richmond Project Manager	Project Manager provides overall leadership in grant execution and implementation across projects. Project-specific allocation, based on anticipated support to be provided: 1.75% FTE x $17,754.47 monthly salary x 41 months = $12,738.83; Benefits at 77% of salary = $9,808.90.	$22,548.00
Personnel/Staff Costs	Direct	City of Richmond Associate Management Analyst	Project Analyst coordinates partners for CSC meetings, preparation and submission of required reports and invoices, and ongoing budget management across projects. Project-specific allocation: 2.25% FTE x $13,623.72 monthly salary x 41 months = $12,567.88; Benefits at 77% of salary = $9,677.27.	$22,245.00
Personnel/Staff Costs	Direct	City of Richmond Administrative Assistant	Administrative Assistant provides logistical and coordination support for all projects, including CSC meeting preparation, timely payment of project partner invoices, and project delivery support. Project-specific allocation: 4.00% FTE x $9,453.37 monthly salary x 41 months = $15,503.52; Benefits at 77% of salary = $11,937.71.	$27,441.00

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Richmond Rising Together
Lead Applicant Name	City of Richmond
Project Location	Richmond, CA
Overall Funding Request	$15,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Environmental Data Fellows
Project Lead	The Black Neighborhood
Project Location	Richmond, California
Project Funding Request	$504,159

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The Environmental Data Fellows project is a youth environmental workforce development fellowship led by The Black Neighborhood (TBN) serving Richmond youth from neighborhoods disproportionately impacted by pollution and environmental health inequities. Through two paid fellowship cohorts over three years, the project will provide environmental justice education, workforce-readiness training, environmental data interpretation and communication skill-building, professional mentorship, field-based learning experiences, and community-facing engagement opportunities connected to environmental and climate-related career pathways.

The fellowship is designed to help Richmond youth better understand how environmental conditions, public health, transportation systems, industrial activity, and infrastructure decisions affect their communities while also building practical and transferable workforce skills. Fellows will participate in workshops, virtual learning sessions, field-based partner experiences, environmental learning activities, and final portfolio and presentation development connected to real-world environmental challenges affecting Richmond neighborhoods. The project supports broader just-transition, climate resilience, and environmental justice goals by helping prepare local youth for participation in environmental and public health-related workforce pathways while increasing community understanding of environmental conditions affecting Richmond residents.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
   - *Reduce air pollution and improve health outcomes*
   - *Build economic resilience for a just transition*

The Environmental Data Fellows project aligns most directly with the Local Community Benefits Fund strategy to build economic resilience for a just transition by preparing Richmond youth for environmental, air quality, climate resilience, and public health-related career pathways.

The project responds to a key challenge facing many Richmond youth and families: while significant investments are being made in environmental improvement, air quality, climate resilience, and public health initiatives across Richmond, many local residents do not have clear pathways into the educational, workforce, and leadership opportunities connected to this work. Richmond residents in neighborhoods most impacted by pollution and environmental burden also experience higher rates of economic hardship and lower levels of educational attainment than many surrounding

communities.[1] The fellowship helps address this gap by providing Richmond youth with paid participation, environmental justice education, workforce-readiness training, professional exposure, and foundational environmental data interpretation and communication skills.

Through the fellowship, youth will build transferable skills in environmental data interpretation, public speaking and presentation development, professional communication and teamwork, civic engagement, and workforce-readiness and career pathway exploration. Participants will also gain exposure to organizations and professionals working in fields connected to air quality, environmental health, transportation, urban ecology, climate resilience, and community planning.

While workforce development is the primary focus of the project, the fellowship also supports broader environmental justice and public health goals by increasing youth and community understanding of how pollution and environmental conditions affect Richmond neighborhoods. Fellows will learn how industrial activity, transportation systems, infrastructure patterns, and environmental investment decisions influence neighborhood conditions and public health outcomes.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The Environmental Data Fellows project will be based in Richmond, California, with priority focus on neighborhoods within the eligible Path to Clean Air Community Emissions Reduction Plan area, including Iron Triangle, North Richmond, Santa Fe, and Coronado.[2] The project will serve youth and families from historically overburdened Richmond neighborhoods affected by industrial activity, transportation corridors, and cumulative environmental burdens.

These neighborhoods were selected because they experience longstanding environmental and public health disparities connected to industrial activity, transportation emissions, and environmental inequities. People living in the Richmond-San Pablo area experience higher asthma than other areas of the county.[3]

[2] California Air Resources Board, 2026, "Richmond-North Richmond-San Pablo." https://ww2.arb.ca.gov/capp/com/cip/richmond-north-richmond-san-pablo.
[3] Bay Area Air Quality Management District, Richmond-San Pablo Community Emissions Reduction Plan (AB 617); Community Health Protection Program.

Primary workshop activities will take place at the Richmond Rising Hub at 1600 Nevin Plaza, Richmond, CA 94801, adjacent to the Richmond Bay Area Rapid Transit (BART) station.

Additional project activities may occur at community-based partner locations, environmental learning sites, coalition-aligned venues, and field-based learning environments connected to environmental, public health, and workforce development learning opportunities. Example partner and learning environments may include University of California (UC) Berkeley, urban greening or shoreline restoration projects, transportation and mobility-related learning sites, and local community-serving organizations connected to environmental education or public health initiatives.

These learning environments are intended to help fellows better understand how pollution sources, land use, transportation systems, industrial activity, public health, environmental planning, and climate resilience intersect across Richmond communities while also exposing youth to workforce pathways connected to these sectors.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

TBN's community engagement approach is grounded in direct relationships with Richmond youth, families, schools, community members, and neighborhood-serving organizations. Through previous youth programming, outdoor leadership programs, youth cohorts, food distribution efforts, and community events, TBN has consistently engaged Richmond residents in ways that are relationship-based, culturally responsive, and community-centered.

Community needs and priorities for this project were identified through TBN's ongoing work with Richmond youth and families, conversations with community members at TBN programs and events, participant feedback from prior youth cohorts, collaboration with project co-applicants and community-based partners, and awareness of local environmental justice and workforce development priorities in Richmond. These engagement efforts consistently point to the need for paid youth opportunities, career exposure, environmental education, practical skill-building, and accessible pathways for young people to participate in Richmond's environmental and just-transition work.

TBN's engagement approach is intentionally accessible because Richmond residents may face practical barriers that limit participation in formal planning, workforce, and technical environmental discussions. The City of Richmond's PY 25–28 Local Plan identifies access to essential stabilizing supports—including transportation, childcare,

health services, counseling, nutrition, housing, and other critical services—as key factors that affect residents' ability to prepare for and participate in career pathways. These barriers can also affect whether youth and families are able to attend meetings, complete programs, engage with technical information, or participate consistently in community-based opportunities.

As a trusted community-based organization with experience facilitating youth and family-centered programming in Richmond, TBN will continue using relationship-based engagement methods such as youth outreach, family communication, partner referrals, community events, participant reflections, and youth-led presentations to ensure residents can engage with the project in ways that are familiar, practical, and culturally responsive.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The Environmental Data Fellows project addresses identified community needs by creating a practical, paid, and community-rooted pathway for Richmond youth to build environmental justice knowledge, environmental data interpretation skills, leadership capacity, and workforce readiness while connecting their learning to real environmental and public health issues affecting Richmond communities.

The project is designed to benefit Richmond youth and families from neighborhoods experiencing high environmental burden, particularly youth who may not otherwise have direct access to environmental education, professional networks, workforce development opportunities, or career pathways connected to air quality, climate resilience, public health, and environmental planning.

The community needs this project responds to include limited access to paid youth workforce development opportunities; limited exposure to environmental and climate-related career pathways; limited access to technical skill-building opportunities, including environmental data analysis and interpretation; the need for stronger community understanding of local environmental conditions and pollution impacts; the need for trusted, culturally grounded outreach and youth engagement; and the need to connect environmental investments and just-transition initiatives in Richmond to visible local pathways for participation and advancement.

These needs are directly connected to environmental justice, public health, and just-transition challenges affecting Richmond communities. The Richmond–North Richmond–San Pablo Path to Clean Air / Community Emissions Reduction Plan identifies the broader community as being impacted by fuel refining, industrial manufacturing, railways, and vehicle and freight traffic, all of which contribute to harmful air pollution and related health concerns. Within Richmond, priority neighborhoods such as North Richmond, Iron Triangle, Santa Fe, and Coronado also face overlapping social and economic burdens. As shown in Figure 1, the Environmental Data Fellows project is focused in Richmond neighborhoods located near industrial, transportation, rail, and shoreline-related environmental conditions. Figure 2 further summarizes selected burden indicators, including that the Richmond target area has been identified as having the greatest density of residents in poverty in Contra Costa County, and that households without vehicle access are significantly higher in Iron Triangle at 26.4 percent and North Richmond/Santa Fe at 24.4 percent, compared to 6.5 percent countywide. These conditions illustrate the disproportionate environmental and access burdens faced by Richmond youth and families, while also underscoring the importance of creating local pathways into environmental, public health, and climate-related education and workforce opportunities. At the same time, environmental improvement, climate resilience, air quality, and public health investments are being advanced across Richmond, creating a growing need for local residents, especially youth, to have access to the skills, knowledge, and workforce pathways connected to this work.

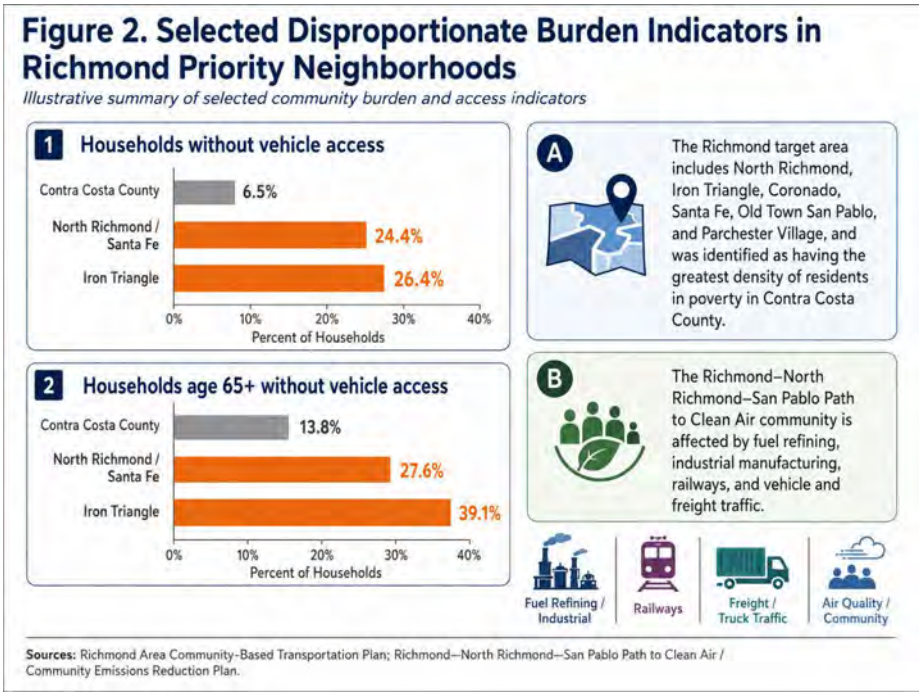

Figure 1. Environmental Data Fellows Project Geography & Environmental Context

Illustrative map for proposal use

Neighborhoods shown are approximate and intended to communicate project geography and environmental context.

Illustrative map for proposal use. Neighborhoods shown are approximate and intended to communicate project geography and environmental context.

Illustrative summary of selected community burden and access indicators.

The project addresses these challenges by implementing two paid six-month fellowship cohorts for Richmond youth focused on environmental workforce development,

environmental justice learning, and environmental data literacy. Fellows will participate in in-person workshops, virtual learning sessions, field-based partner experiences, mentorship opportunities, portfolio development, and public-facing presentations connected to environmental conditions affecting Richmond communities.

Through the fellowship, youth participants will learn how pollution and environmental conditions affect different Richmond neighborhoods, how environmental data can be used to identify patterns and communicate community impacts, and how organizations, public agencies, and environmental professionals work to address air quality, public health, transportation, urban ecology, and climate resilience challenges.

Project success will be defined by Richmond youth leaving the fellowship with stronger environmental knowledge, increased confidence, practical workforce and communication skills, meaningful professional exposure, and clearer pathways into environmental, public health, climate resilience, and community-based career opportunities.

Progress toward community impact will be measured through the number of youth recruited, enrolled, retained, and completing the fellowship; number of workshops, virtual sessions, and field-based learning experiences completed; increases in participant understanding of environmental justice, air quality, and environmental data; increases in participant awareness of environmental and climate-related career pathways; number of youth completing Environmental Insights Portfolios and final presentations; number of community members reached through youth-led presentations, outreach, and engagement activities; and number of fellows connected to internships, training opportunities, mentorship, alumni engagement opportunities, or next-step workforce pathways where available.

These outcomes will demonstrate the project's impact in preparing Richmond youth with environmental knowledge, workforce skills, career exposure, and community engagement experience while strengthening broader community understanding of environmental conditions, public health impacts, and environmental justice challenges affecting Richmond neighborhoods.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

TBN will engage community members throughout implementation through youth-led presentations, fellowship showcases, resident-facing events, and partner-connected outreach activities. Updates on implementation progress and available project benefits will be shared through in-person outreach, printed flyers, social media, and coalition communication channels. To support accessibility, TBN will host activities in familiar Richmond community spaces, schedule events at community-friendly times, and provide food and small engagement supports where appropriate.

Community feedback will be collected through resident conversations, brief surveys, participant reflections, and ongoing dialogue with youth and community stakeholders. Feedback will be used to refine engagement strategies, workshop topics, fellowship activities, and participant supports, and shared with community partners where relevant to strengthen alignment with Richmond community priorities. Fellows will also complete a post-program survey at the conclusion of each cohort to assess individual growth in environmental justice knowledge, workforce readiness, and career pathway awareness.

As part of the Richmond Rising Together initiative, a Collaborative Stakeholder Committee (CSC) made up of a representative from each Co-Applicant organization as well as key stakeholders and compensated community member participants will meet monthly at the Nevin Community Center. During these meetings, Co-Applicants will share project status updates and directly engage the CSC and community members in discussions on project design and implementation. This structure ensures lessons learned across projects are leveraged toward the broader collaborative effort while creating meaningful opportunities for residents most impacted by poor air quality to learn about and engage in projects and share feedback based on their lived experiences. To reduce potential barriers and support community participation, these meetings are hybrid, hosted in person and simultaneously on Zoom, and include free childcare, Spanish interpretation, and meals for community members. Meetings are recorded and posted online for viewing in Spanish and English.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The project's primary component is two paid fellowship cohorts over the three-year grant term, each serving approximately 10 Richmond youth over a six-month period in Years 1 and 2. Each cohort will follow a hybrid model of in-person workshops, virtual learning sessions, and field-based partner experiences covering environmental justice, environmental data interpretation, workforce readiness, and professional exposure, culminating in a Youth Environmental Insights Portfolio and final community

presentation. In Year 3, TBN will conduct outreach to cohort alumni, facilitate networking events and advanced pathway connections with environmental and public health professionals, and compile cumulative fellowship data for evaluation and final reporting.

Post-program surveys will assess whether at least 70 percent of fellows report increased knowledge of environmental justice, air quality, and climate resilience, and whether at least 70 percent report increased workforce readiness and awareness of environmental and public health career pathways. TBN will also track pathway connections for each fellow, documenting internships, training opportunities, mentorship relationships, and next-step workforce opportunities secured during or following the fellowship.

TBN will lead project design and implementation, participant recruitment and support, fellowship facilitation, guest instruction and field experience coordination, outcome tracking, and partner coordination. Richmond Rising Together and community-based partners may contribute subject-matter learning, field-based experiences, guest instruction, mentorship, and internship or workforce exposure opportunities connected to environmental and climate-related fields.

Members from the Environmental Data Fellows will also be participants in the Total Transit Access Pilot Program (TTA Pilot) for the duration of their participation in the workforce program. The TTA Pilot will bolster Environmental Data Fellow's workforce development goals by providing unlimited transit passes for participants to access work sites, which will reduce transportation cost burden and encourage use of public transit for future work opportunities and personal use.

UC Berkeley's Center Global Healthy Cities (CGHC) will prepare annual and end-of-project reports of data across all project partners, along with a public facing dashboard to track progress. The dashboard will include a public comment section. CGHC will work with all Co-Applicants to co-create validated survey questions to capture the mental health impacts of air pollution and climate change (e.g., climate anxiety), and whether and how project interventions are reducing stress, anxiety, and related psychosocial influences on well-being.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The proposed budget totals $504,159 over three years and supports staffing, youth stipends, fellowship programming, materials and equipment, workforce readiness activities, and contingency. The budget is structured around one paid fellowship cohort in Year 1, one in Year 2, and alumni engagement, workforce pathway support, and sustainability activities in Year 3.

Personnel expenses make up the largest share, including $85,000 for a Project Lead/Program Director (~0.25 FTE) and $55,000 for a Program Coordinator/Lead Facilitator (~0.35 FTE). Salary, wages, and fringe are included in both figures. The budget allocates $50,000 in youth stipends averaging $2,500 per fellow across two cohorts of 10, plus $6,000 for fellowship food and gatherings and $2,000 in participant accessibility support to reduce short-term barriers to attendance.

The remaining budget covers materials and equipment ($13,000, including participant laptops, software, program supplies, and printing), guest professional honoraria and workforce readiness materials ($7,000), limited staff mileage and emergency travel ($1,000), indirect costs at 6 percent ($15,000), and a 4 percent contingency ($10,000).

$216,702 is for the City of Richmond Project Manager (5.25 percent FTE), Associate Management Analyst (6.75% FTE), and Administrative Assistant (12 percent FTE) to support execution of this project, ensure completion of grant commitments, coordinate community engagement and collaboration across projects, and manage contracting, invoicing, and payments. $13,293 will support CSC and other community meetings, shared spaces, and Richmond Rising Together outreach materials.

$29,164 is for UC Berkeley for a Project Director (16.6% FTE) and a $50/hour x 208 hours PhD student researcher to prepare annual and end-of-project reports, manage a project data dashboard, and capture the impact of the projects in reducing negative mental health impacts.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The Environmental Data Fellows project is consistent with local, regional, and statewide initiatives focused on workforce development, just transition, air quality, and climate resilience.

Most directly, the project aligns with the City of Richmond's Green-Blue New Deal and Just Transition effort, which focuses on creating green jobs for Richmond residents and

connecting workforce development to climate resilience, environmental health, and equitable economic opportunity. It also supports the Richmond Rising Place-Based Workforce Development Strategy, which prioritizes paid learning opportunities, skill-building, and career pathway development for youth from Richmond neighborhoods including Iron Triangle, Santa Fe, and Coronado. By preparing Richmond youth with environmental data skills, professional exposure, and career readiness in air quality, public health, and climate resilience sectors, the fellowship directly advances both of these local workforce priorities.

The project further aligns with California's AB 617 Community Air Protection Program and the Richmond-North Richmond-San Pablo Community Emissions Reduction Plan, which focus on reducing pollution burdens, increasing community participation, and addressing environmental health disparities in Richmond. Fellows will build firsthand understanding of how environmental data, neighborhood conditions, and public health connect to Richmond's air quality challenges and community-led solutions. The fellowship is also consistent with the Richmond Climate Action Plan, Richmond General Plan 2030, Richmond Resilience Roadmap, Contra Costa County Climate Action and Adaptation Plan, and Contra Costa County 2045 General Plan, all of which emphasize environmental sustainability, climate resilience, public health equity, and economic opportunity for Richmond residents.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

TBN is a trusted community organization in Richmond with substantial experience designing and implementing paid youth leadership initiatives, cohort programs, educational enrichment, and workforce-connected pathways for Richmond youth and families. With approximately $540,000 in active grant funding, TBN has successfully managed multiple grant-funded programs including the Richmond Fund for Children and Youth Grant, ECIA-supported youth programming, Youth Aspire Afterschool programming, and overnight camp and outdoor leadership initiatives. TBN previously operated a recurring after-school program over three years serving 15–18 students annually through structured enrichment, mentorship, and leadership development, and has facilitated paid youth cohort models focused on college readiness, civic engagement, workforce exposure, and pathway-building.

TBN uses exit tickets, Google surveys, participant reflections, and program review tools to assess youth experience and program quality. In a 2023 Youth Empowerment Program with Aspire Maynard Academy, TBN served 10–15 middle school youth over 12 weeks with bi-weekly workshops and field trips covering leadership, college

readiness, entrepreneurship, financial literacy, and healing-centered development. Post-program feedback was strong: 100% of respondents reported learning something new and said they would refer a friend, with 60% rating workshops as Excellent.[1]

TBN's leadership also brings deep lived experience and longstanding roots in Richmond. [redacted] and several TBN co-founders are Black men born and raised in Richmond from multi-generational families, with firsthand experience of the environmental conditions shaping their neighborhoods — including refinery-related incidents and family members affected by asthma and respiratory illness. This foundation of trust and lived experience strengthens TBN's ability to reach and retain Richmond youth and build authentic relationships with families and the broader community.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

TBN will manage implementation of the Environmental Data Fellows project through two part-time roles. The Project Lead/Program Director (0.25 FTE) will oversee overall project leadership, including fellowship design, coalition and partner coordination, budget and reporting, curriculum direction, and Year 3 alumni engagement and sustainability planning. The Program Coordinator/Lead Facilitator (0.35 FTE) will lead day-to-day implementation, including participant recruitment and onboarding, workshop facilitation, field experience coordination, attendance tracking, portfolio support, and pathway connections for fellows.

Co-applicant and community partners will strengthen the fellowship by contributing subject-matter expertise, guest instruction, field-based learning opportunities, mentorship, and workforce exposure — helping fellows connect environmental data skills to real professional roles and career pathways. TBN does not require additional funding sources to operate the core fellowship as proposed, though partner contributions such as guest speakers, site visits, and academic evaluation support will further enrich the experience.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness

documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.

- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

N/A; No major permits or construction-related approvals are required for this project. The proposed project would not include construction, ground disturbance, or permanent installation. Because the project does not involve new construction or physical infrastructure development, no land use or regulatory approvals are needed. The project is implementation-ready and can proceed immediately upon execution of the Grant Agreement.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

N/A; The Environmental Data Fellows project does not anticipate activities that would require CEQA review. The proposed project would provide a fellowship program for youth in the Richmond area and would not include construction, ground disturbance, or permanent installation. Therefore, the proposed project would not have the potential to cause a significant effect on the environment and would be exempt from CEQA review.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

N/A; The proposed project would provide a fellowship program for youth in the Richmond area and would not require property acquisition, lease agreements, easements, rights-of-way, or permanent site control. Therefore, no site controls are required for project implementation.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

N/A; The proposed project would provide a fellowship program for youth in the Richmond area and would not involve physical infrastructure development. Therefore, this project would not require any operations or maintenance of physical infrastructure.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

One potential challenge is youth recruitment and consistent participation over the six-month fellowship period. Some youth may face competing school, family, or work responsibilities that affect engagement. TBN will address this through relationship-based recruitment, partner and school referrals, family communication, and regular SMS and phone outreach. The fellowship structure will be designed to fit within youth schedules, and paid stipends will recognize participant time and reduce financial barriers to engagement. To support ongoing participation, workshops will be interactive and community-connected rather than academic, with food provided, activities hosted at accessible Richmond locations, and consistent session reminders sent to fellows and caregivers.

Coordination across coalition and community partners may also create scheduling and implementation challenges. Because the fellowship includes guest professionals, field experiences, and partner-supported learning, shifts in partner availability may occur. TBN will address this by identifying partner roles early, planning activities well in advance, and structuring the fellowship so the core program can continue successfully even if individual guest sessions or field experiences need to be adjusted. Similarly, available internships and workforce connections will vary depending on external organizations. The fellowship is designed to focus primarily on workforce readiness, skill-building, and pathway preparation rather than guaranteed placements, giving TBN flexibility to connect fellows to relevant opportunities as they become available.

Finally, implementation needs may evolve as TBN, fellows, and partners identify what works best. The project budget includes contingency funding and a focused staffing structure to support adaptability, strong participant support, and responsible program management throughout the grant term.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Environmental Data Fellows: Build a long-term youth environmental workforce pathway that helps Richmond youth understand environmental conditions affecting their communities, develop practical data interpretation and communication skills, and connect to real-world professional and community opportunities.

Measurable Outcome	Indicator(s)
1. By the end of the budget term (Month 36), increase environmental justice knowledge, environmental stewardship, and understanding of how environmental conditions and infrastructure decisions affect community health among 20 Richmond youth participating in the paid Environmental Data Fellows program.	• Number of youth participating in paid Environmental Data Fellows cohorts (target: 20) • Percentage of fellows reporting increased knowledge of environmental justice, air quality, climate resilience, and public health issues through post-program surveys (target: 70%) • Number of fellows completing a Youth Environmental Insights Portfolio and final community presentation (target: 20) • Number of in-person workshops, virtual learning sessions, and field-based learning experiences completed across both cohorts (target: 10-12)
2. By the end of the budget term (Month 36), increase workforce readiness and exposure to environmental and public health career pathways among 20 Richmond youth participating in the Environmental Data Fellows program.	• Percentage of fellows reporting increased workforce readiness and awareness of environmental and public health career pathways through post-program surveys (target: 70%) • Number of fellows connected to internships, training opportunities, mentorship, or next-step workforce pathways (target: 70%)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. By the end of the grant term, increase environmental justice knowledge, environmental stewardship, and understanding of how environmental conditions and infrastructure decisions affect community health among 20 Richmond youth participating in the paid Environmental Data Fellows	A. Youth fellows recruited and engaged in environmental education and environmental data learning activities. (Months 12, 24)	1. Recruit and onboard youth fellows into paid Environmental Data Fellows cohorts.	The Black Neighborhood (TBN)	Coalition partners, Community partners	Months 3, 15
		2. Coordinate with coalition partners to identify and schedule professional learning sessions, field experiences, and demonstrations aligned with cohort topics.	TBN	Coalition partners	Months 12, 24
		3. Facilitate field-based learning experiences and environmental data interpretation and communication skill-building activities.	TBN	Coalition partners, Community partners	Months 12, 24
	B. Youth fellows receive training and direct experience with environmental stewardship and community engagement activities. (Months 12, 24)	1. Youth Fellows conduct community-facing engagement connected to environmental and climate-related topics	TBN	Community partners	Months 12, 24
		2. Youth Fellows develop portfolios connected to environmental challenges affecting Richmond neighborhoods and present them to the community.	TBN	Community members	Months 12, 24
		3. Administer post-program surveys to all completing fellows assessing increases in environmental justice, air quality, climate resilience, and public health knowledge.	TBN	--	Months 12, 24

program. (Month 36)					
2. By the end of the grant term, increase workforce readiness and exposure to environmental and public health career pathways among Richmond youth participating in the Environmental Data Fellows program. (Month 36)	A. Workforce-readiness and professional development activities implemented across fellowship cohorts. (Months 12, 24, 36)	1. Deliver workforce-readiness training activities focused on professional communication, teamwork, civic engagement, and presentation skills.	TBN	Coalition partners, Community partners	Months 12, 24, 36
		2. Administer post-program surveys assessing workforce readiness, career pathway awareness, and environmental justice knowledge.	TBN	Coalition partners, Community partners	Months 12, 24, 36
		3. Facilitate advanced workforce pathway connections for interested alumni, including referrals to internships, training programs, mentorship opportunities, and environmental and public health organizations.	TBN	Coalition partners, Community partners	Months 25-36

Total Project Cost Including Other Sources (All Applicants))	$504,159.00

Project Name: Environmental Data Fellows
Lead Applicant Name: City of Richmond
Term for this budget (in year 5 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Community Engagement	Direct	Richmond Rising Together Community Engagement Materials	Public materials for CSC meeting agendas and slides, reports as necessary for public review; branded outreach and informational materials: flyers, pamphlets, banners, and postcard mailers. $2,000/year for printing and copying + $1500/year for translation = $3500 x 5 years = $17,500. Cost to project at 1/12th for 1 of 12 projects participating: $1458	$1,458.00
Other Direct Costs	Direct	Richmond Rising Together Hub	Rental of building space for a publicly accessible office and meeting space for grant partner meetings, trainings/workshops, and community events. $1,390/month x 41 months = $56,990. Cost to project at 1/12th for 1 of 12 projects participating: $4,749	$4,749.00
Other Direct Costs	Direct	Cellular phones and service	Cellular phones and cellular service for PM I and AAA Staff. One time purchase of phones ($600/each) and monthly costs of $50/month per phone for 41 months. $600 x 2 + $50 x 41 months = $5,300. Cost to project at 1/12th for 1 of 12 projects participating: $442	$442.00
Community Engagement	Direct	Refreshment, Childcare, and Interpretation for Community Meetings	$400/event for refreshments for 30 community members + $80/event for childcare + $200/event interpretation = $680 per meeting. 41 CSC monthly meetings + 4 additional events/year x 5 years = 61 meetings x $680/meeting = $41,480. Cost to project at 1/12th for 1 of 12 projects participating: $3,457	$3,457.00
Capacity-Building and Training	Direct	City of Richmond Staff Training Costs	Workshop and conference fees ($600/year per staff member) + meals during training ($92/day x 4 days/year per staff member) = $968/staff member/year x 5 years x 3 staff = $14,520.00. Cost to project at 1/12th for 1 of 12 projects participating: $1,210	$1,210.00
Travel	Direct	Local Transportation	20 miles/month for staff to attend related community meetings throughout the City and region. 60 months x 20 miles x $0.70/mile = $840. Cost to project at 1/12th for 1 of 12 projects participating: $70	$70.00
Community Engagement	Direct	Community Workproduct Compensation for Richmond resident members of CSC	Each resident CSC member receives a $50 VISA gift card per meeting. Estimate includes 6 members at each monthly Collaborative Stakeholder Committee meeting, for 41 months. $50 card + $4 purchasing fee = $54/card x 6 residents x 41 months = $13,284. Cost to project at 1/12th for 1 of 12 projects participating: $1,107	$1,107.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Richmond Rising Together Project Website	Richmond Rising Together webpage for posting meeting materials (agendas, minutes, recordings), key reports and documents, community opportunities for project involvement, and other public information. Estimated at $50/month based on historic costs x 60 months = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Subcontractors & Vendors	Direct	Graphic Design Consultant	Development of website and project outreach materials. $150/hr for 20 hours = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Data Management Software (Airtable)	Airtable is used for tracking project budgets, deliverables, expenditures and reimbursements to-date, and other key coordination data. $720/year for 5 years based on historic costs = $3,600. Cost to project at 1/12th for 1 of 12 projects participating: $300	$300.00
Personnel/Staff Costs	Direct	City of Richmond Project Manager	Project Manager provides overall leadership in grant execution and implementation across projects. Project-specific allocation, based on anticipated support to be provided: 5.25% FTE x $17,754.47 monthly salary x 41 months = $38,216.49; Benefits at 77% of salary = $29,426.70.	$67,643.00
Personnel/Staff Costs	Direct	City of Richmond Associate Management Analyst	Project Analyst coordinates partners for CSC meetings, preparation and submission of required reports and invoices, and ongoing budget management across projects. Project-specific allocation: 6.75% FTE x $13,623.72 monthly salary x 41 months = $37,703.64; Benefits at 77% of salary = $29,031.80.	$66,735.00
Personnel/Staff Costs	Direct	City of Richmond Administrative Assistant	Administrative Assistant provides logistical and coordination support for all projects, including CSC meeting preparation, timely payment of project partner invoices, and project delivery support. Project-specific allocation: 12.00% FTE x $9,453.37 monthly salary x 41 months = $46,510.56; Benefits at 77% of salary = $35,813.13.	$82,324.00

Project Name: Environmental Data Fellows
Co-Applicant 10 Name: The Black Neighborhood
Term for this budget (in year 3 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Project Lead/Program Director	Approx. 0.25 FTE. Oversees fellowship design, coalition coordination, partner engagement, staffing supervision, implementation oversight, reporting, budget management, alumni pathway planning, and overall project leadership across the 3-year grant term. Includes salary/wages and fringe.	$85,000.00
Personnel/Staff Costs	Direct	Program Coordinator / Lead Facilitator	Approx. 0.35 FTE. Coordinates recruitment, participant communication, cohort scheduling, weekly session delivery, field experience logistics, portfolio support, and pathway planning. Includes salary/wages and fringe across the 3-year project term.	$55,000.00
Community Engagement	Direct	Youth Fellow Stipend	Approximate stipend support averaging $2,500 per fellow for approximately 10 Richmond youth per cohort × 2 cohorts. Supports participation in workshops, virtual sessions, field experiences, portfolio development, final presentations, and environmental workforce learning activities.	$50,000.00
Community Engagement	Direct	Fellowship Food & Cohort Gathering Support	Food, refreshments, and modest gathering support for regular fellowship workshops, orientation sessions, community briefings, final presentations, and 1–2 larger cohort gatherings per fellowship cycle. Estimated at approximately $2,000 per year across fellowship implementation activities.	$6,000.00
Community Engagement	Direct	Participant Accessibility Support	Small, limited support fund intended to reduce barriers to participation for youth and families, including emergency participation support or short-term needs affecting fellowship attendance and engagement. Youth transit passes will primarily be supported through coalition/community resources.	$2,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Printing, Copying, & Signage	Printing of outreach materials, flyers, recruitment materials, surveys, presentation materials, portfolio materials, and community-facing educational resources across fellowship cohorts.	$1,500.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Software / Data Tools / Platform Licenses	Standard software/platform subscriptions supporting participant communication, virtual learning sessions, environmental data learning activities, portfolio development, and presentation support.	$3,000.00
Professional Services & Consultants (≤25% of Direct Costs at APPLICATION level)	Direct	Community-Based Guest Professionals & Workshop Honoraria	Modest honoraria and support costs for environmental justice professionals, public health practitioners, urban greening leaders, transportation/mobility experts, planners, and community-based subject matter speakers participating in fellowship workshops and learning sessions. Many partners will participate through coalition collaboration and in-kind support, this is for individuals out-of-network.	$4,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Participant Technology Package	Purchase of laptops or tablets needed to support environmental data learning, participant research, portfolio development, and presentations across fellowship cohorts. Equipment will remain TBN program assets supporting ongoing implementation.	$4,500
Materials, Supplies & Equipment (> $5K itemized)	Direct	Participant Technology Package	Purchase of related technology accessories and setup supplies, such as protective cases, chargers, adapters, storage devices, headphones, and basic software or setup needs to support participant learning and presentations.	$1,500.00
Capacity-Building and Training	Direct	Program Materials & Supplies	Curriculum materials, binders, notebooks, clipboards, workshop supplies, presentation materials, field-learning materials, and portfolio development supplies for fellowship implementation.	$3,500.00
Travel	Direct	Workforce Readiness & Training Materials	Resume materials, interview preparation tools, and workforce preparation resources tied to internships, training, leadership development, and alumni support.	$3,000.00
Travel	Direct	Limited Staff Mileage / Emergency Travel Support	Minimal travel support at 0.4% for limited staff mileage or urgent project-related transportation needs only.	$1,000.00
Contingency (≤10% of Direct Costs at PROJECT level)	Indirect	Indirect / Administrative Costs	Indirect costs at 6% supporting project implementation, including rent, utilities, accounting, bookkeeping, insurance, general administration, and IT infrastructure allocable to the project.	$15,000.00
Contingency (≤10% of Direct Costs at PROJECT level)	Contingency	Contingency / Adaptive Project Management	4% contingency allocation supporting responsible multi-year project implementation, including alumni engagement opportunities, operational cost fluctuations, expanded workforce pathway opportunities, participant support needs, and unforeseen implementation adjustments.	$10,000.00

Overall Narrative

General Instructions:

- The "Overall Narrative" is scored out of 50 points.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 7 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Catalyst Grant Applications in Benicia:

- Due to the ongoing strain on the Benicia community's civic and organizational capacity resulting from the impending refinery closure, Co-Applicants are not required for Catalyst Grant applications in Benicia.
- Therefore, Catalyst Grant applications in Benicia should **not** answer questions related to "Partnership Structure" (Qs #3-6). Applicants should leave these questions blank, and will not receive a score for these questions.
- The "Overall Narrative" for Catalyst Grant applications in Benicia will be scored out of 30 points.

Application Information	
Application Title	North Richmond Community Resilience Initiative
Lead Applicant	County of Contra Costa
Application Location	North Richmond
Overall Funding Request	$14,846,557.81
Grant Term Request	5 Years

PROPOSAL VISION (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
    - *Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.*
    - *Advance integrated projects to holistically meet community needs.*
    - *Strengthen community-driven and collaborative solutions.*

The North Richmond Community Resilience Initiative is a coalition-led, place-based response to the compounding air quality, public health, housing, and climate resilience challenges facing 4,000 residents of North Richmond — a community in the 99th percentile statewide for asthma rates, the top 12% nationally for toxic air releases, and among the most pollution-burdened communities in California. Led by Contra Costa County with six co-applicants, the Initiative delivers six integrated projects across the same census tract: Urban Tilth will complete construction and activate the North Richmond Farm Community Resiliency Center as a permanent clean air shelter, emergency refuge, and year-round health and wellness hub; The Watershed Project will plant 120 large-canopy trees and improve one mile of the Wildcat Creek Trail, reducing PM2.5 exposure and surface temperatures while employing 50 North Richmond community members through a paid stewardship workforce; CHDC will fully electrify three Las Deltas duplexes and the Corrine Sain Family and Senior Center, installing rooftop solar with battery backup and high-efficiency filtration to reduce indoor air pollution and provide backup power during emergencies; Richmond LAND will rehabilitate four Las Deltas duplexes and place eight homes into permanent affordability through a community land trust, prioritizing displaced former Las Deltas residents; Contra Costa County in partnership with BayREN will retrofit at least 35 single-family homes with heat pumps, induction cooktops, and solar and battery storage — making at least 10 fully all-electric — reducing household GHG emissions and energy burden for low-income homeowners; and Contra Costa Health will deliver Safe Routes to School education and active transportation programming across six school sites beginning in Year 3, building on corridor improvements delivered by The Watershed Project in the initiative's early years.

Together these six projects advance all three LCBF program goals — reducing residents' exposure to PM2.5, NO_2, and transportation-related emissions; concentrating complementary interventions within a single census tract so that benefits compound rather than arrive in isolation; and building on a decade of coalition governance anchored by the North Richmond Municipal Advisory Council and North Richmond Coalition Steering Committee, sustained throughout the grant term by a dedicated Resident Leaders Manager hired from and embedded in the community, who will map air monitors across North Richmond, facilitate community conversations about air quality, and serve as the connective link between residents and the full portfolio of improvements being delivered across the Initiative.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

North Richmond was established as a refuge for African Americans seeking employment at the Kaiser Shipyards during World War II and has since become a predominantly Hispanic community — 68% Hispanic and 16% Black, with 61% of residents primarily speaking Spanish at home — bearing the compounded weight of historical disinvestment, displacement, and environmental injustice. As an unincorporated area chronically underserved in infrastructure, public safety, and health services, the community carries one of the heaviest environmental burdens in the nation: proximity to the Chevron Richmond Refinery, petroleum industry operations, a refuse transfer station, railroad lines, three highways, and a deep water port places North Richmond in the top 4% of census tracts nationally for proximity to hazardous sites, the top 12% for toxic releases to air, the top 16% for diesel particulate matter, and the top 18% for air toxics cancer risk. The heat island effect, inadequate tree canopy, and aging housing stock compound these risks for the community's most vulnerable residents.

The North Richmond residents who will benefit from this Initiative are those bearing the greatest share of this cumulative burden: low-income renters and homeowners whose aging, gas-reliant homes are sources of indoor air pollution and inadequate shelter during emergencies; children and youth with elevated asthma rates and daily exposure to diesel emissions on routes to school; low-income seniors lacking air conditioning and transportation during extreme heat and poor air quality events; immigrant residents who lack access to healthcare, emergency services, and disaster relief; and low-income households facing food insecurity compounded by environmental stress. This Initiative was developed in direct response to the priorities these residents and their community organizations have identified — and at approximately $750 per resident per year over five years, it represents one of the most cost-effective community-wide investments in air quality, health, housing, and climate resilience that North Richmond has ever received.

PARTNERSHIP STRUCTURE (20 points)

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

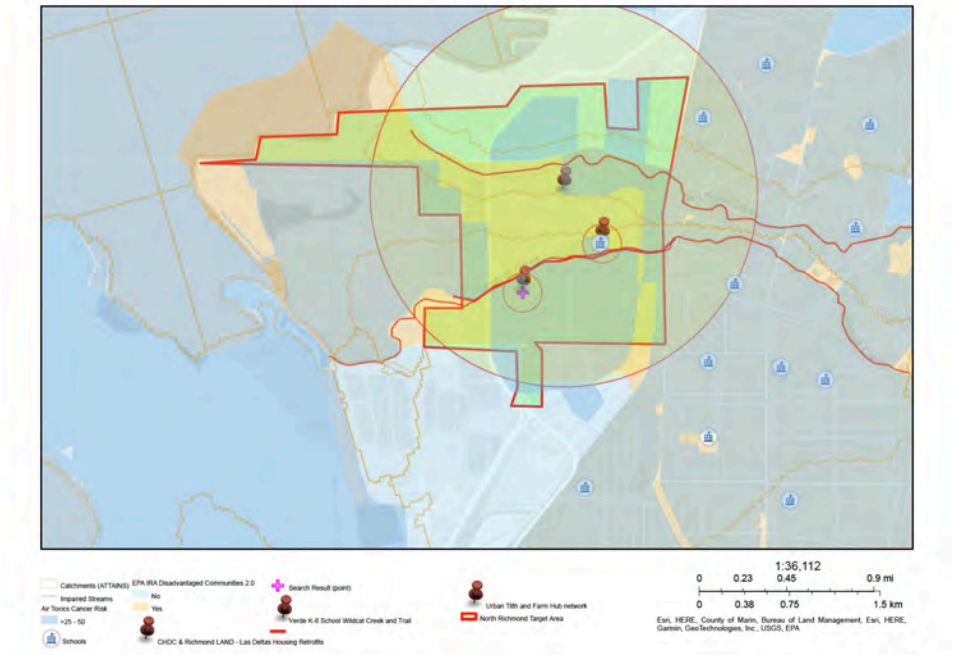
Lead Applicant Contra Costa County's Department of Conservation and Development facilitates implementation of the County's Climate Action and Adaptation Plan and has served North Richmond — an unincorporated community entirely within the County's jurisdiction — for decades. The County established the North Richmond Municipal Advisory Council more than 30 years ago in partnership with community members and is uniquely positioned to coordinate across government departments, facilitate permitting, and ensure that public investments in this historically underserved community are sustained over the long term.

Co-Applicant 1, Urban Tilth, founded in 2005, is a community-based organization rooted in Richmond dedicated to cultivating a more sustainable, healthy, and just food system

through urban farming, workforce development, and community building. Over 20 years, Urban Tilth has transformed vacant, blighted lots into thriving community hubs in North Richmond, and has spent eight years developing the North Richmond Farm and Community Resiliency Center through a community design process that engaged over 1,000 local residents.

Co-Applicant 2, Contra Costa Health's Building Healthy Communities Program, uses a population health approach to address the root causes of health disparities by improving the built environment and preventing injury and illness before they occur. CCH has served North Richmond and surrounding communities through Safe Routes to School programming and active transportation initiatives within the West Contra Costa Unified School District, and brings an established relationship with school and community partners across the six sites included in this application.

Co-Applicant 3, The Community Housing Development Corporation of North Richmond (CHDC), works to create and sustain vibrant communities for low- to moderate-income individuals, seniors, and families through high-quality affordable housing, economic development, and supportive services, serving households across the San Francisco Bay Area with a focus on those at or below 80% of area median income. CHDC has been directly engaged in the Las Deltas redevelopment effort since the Housing Authority of Contra Costa County closed the campus in 2019, participating in community meetings with former residents and working in coordination with HACCC to acquire the scattered-site properties that are the subject of this application.



Co-Applicant 4, Richmond LAND, is a member-based community land trust organization led by women of color, dedicated to creating pathways for everyday people to organize, acquire, and co-steward land and properties as community assets that build long-term staying power. Richmond LAND is working in coordination with HACCC and CHDC to acquire Las Deltas scattered-site properties as part of the broader redevelopment of North Richmond's former public housing sites, with a goal of stabilizing the neighborhood, preventing speculative acquisition, and enabling a right of return for displaced former residents.

Co-Applicant 5, The Watershed Project, envisions a future where everyone has equitable access to a healthy environment that provides clean air and water, and has built deep roots in North Richmond through creek restoration, urban greening, and its Green Collar Corps paid youth workforce development program. The Watershed Project completed the award-winning North Richmond Watershed Connections Project in 2023 and has planted 85 trees in the community through a successful pilot program that directly precedes the work proposed in this application.

Co-Applicant 6, The Bay Area Regional Energy Network (BayREN), is a local government coalition of the nine Bay Area counties supporting communities to equitably achieve California's climate and energy goals. BayREN delivers targeted, integrated, and regional-scale programs focused on energy efficiency, electrification, and resilience, with an explicit equity mandate to address systemic barriers to energy services for communities that disproportionately face energy burdens and climate impacts. Contra Costa County has served as BayREN's county lead since BayREN's inception, with Demian Hardman-Saldana serving in that role, making this partnership an extension of

a long-standing institutional relationship. BayREN is partnering with Contra Costa County on the Clean Home Retrofits project, leveraging its existing single-family program infrastructure, Home Energy Advisor network, and county marketing relationships to expand low barrier clean energy retrofit services to at least 35 North Richmond homeowners.

Figure 1: Project Area Map

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

This initiative builds upon the North Richmond Coalition Steering Committee — which includes the County, Urban Tilth, The Watershed Project, CHDC, and Richmond LAND — a governance body that has been meeting collaboratively for years with a shared commitment to improving the quality of life for North Richmond residents. This application formalizes and funds work the Coalition has long advocated for, and expands the partnership to include Contra Costa Health and BayREN as co-applicants delivering complementary projects within the same census tract.

The County serves as Lead Applicant with overall responsibility for grant management, fiscal oversight, compliance, and direct implementation of the Clean Home Retrofits project. Each co-applicant leads their discrete project area under a subaward agreement with the County: Urban Tilth leads the Community Resiliency Center; The Watershed Project leads the Greener North Richmond greening and trail improvement project; CHDC leads the Affordable Housing Retrofits project; Richmond LAND leads the North Richmond Ecovillage Phase 1; and Contra Costa Health leads the Bicycle and Pedestrian Safety project. All co-applicants participate in monthly governance committee meetings convened by the County, where implementation activities are coordinated, issues are surfaced, and decisions requiring cross-partner input are made.

Decision-making authority is clearly delineated. The County holds final authority on matters of budget, subaward terms, deliverables, and grant compliance. Where disagreements arise, the partnership agreement establishes a structured resolution process: direct resolution between parties first, followed if needed by a designated third-party mediator. This governance structure reflects the coalition's longstanding practice of collaborative decision-making and shared accountability to North Richmond residents.

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to:*
    - *Coordinate overall community engagement activities.*
    - *Track and report on indicators to assess progress towards measurable outcomes.*
    - *Collect and process reporting, reimbursement and invoicing requirements.*

Community engagement across this initiative is anchored in each co-applicant's project-specific activities — resident meetings, on-site walkthroughs, school stakeholder sessions, and community events — and coordinated at the initiative level through a monthly governance committee convened by the County, where co-applicants align engagement activities, share community feedback, and coordinate messaging. Urban Tilth's dedicated Resident Leaders Manager, hired from and embedded in the North Richmond community throughout the grant term, serves as the initiative-wide connective link: conducting door-to-door canvassing, attending Municipal Advisory Council meetings, and participating in church and school PTA events to ensure that monolingual Spanish speakers, seniors, and immigrant households are informed about the full portfolio of improvements being delivered across the Initiative, while bringing ground-level community input directly into the monthly governance committee.

Each co-applicant will operate under a subaward agreement with the County defining eligible costs, invoicing timelines, and reporting obligations tied to the project-specific indicators and milestone completion dates in their Measurable Outcomes Plan. Co-applicants will submit invoices and progress reports quarterly; the County's program manager will review all invoices for compliance before payment is processed, reconcile expenditures against the grant budget on an ongoing basis, and review construction draw requests against project schedules before approval. The County will synthesize co-applicant progress data into consolidated reports submitted to the Air District and will convene an annual evaluation review with all co-applicants to assess cumulative progress, identify implementation challenges, and incorporate lessons learned into the following year's work plans.

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.*

On May 19, 2026, the Contra Costa County (Lead Applicant) Board of Supervisors authorized the County’s Conservation and Development Director, or designee, to apply for and accept, if awarded, the Bay Area Air Quality Management District Reinvesting

Penalties for Air Improvement and Resilience grant program for a $15 million Catalyst grant from the Local Community Benefits Fund for Richmond and Surrounding Communities. Urban Tilth, The Watershed Project, CHDC, Richmond LAND, and Contra Costa Health are each governed by boards of directors. Each co-applicant board has been briefed on this application and has authorized organizational participation. Formal board resolutions from each co-applicant will be in place prior to execution of the Grant Agreement.

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

Contra Costa County's Department of Conservation and Development brings extensive institutional experience and dedicated staffing capacity to the management of this grant. The County's Sustainability Team will lead overall implementation of the North Richmond Community Resilience Initiative, with day-to-day grant management led by Jody London, Sustainability Coordinator, and Demian Hardman-Saldana, Principal Planner.

Ms. London has over 36 years of experience implementing complex projects for local governments and nonprofits. She founded and has led the County's sustainability program since 2016, focused on implementing the County's Climate Action and Adaptation Plan. Ms. London has significant experience working with coalitions and partnerships, having led a statewide advocacy group of local governments and served as an elected member of the Oakland School Board. At Contra Costa County she regularly manages multi-partner grants including the 2023 *Healthy Lands, Healthy People* carbon sequestration feasibility study and ongoing *Tree Plan*, both successfully completed or progressing on time and within budget. Mr. Hardman-Saldana has worked for 18 years on community planning and improvement programs for Contra Costa County. He managed the County's 2009 American Recovery and Reinvestment Act Energy Efficiency Conservation Block Grant — a $3.57 million, three-year residential retrofit program completed on time and within budget — and co-designed the Contra Costa Asthma Initiative, a multi-agency partnership linking emergency room asthma patients to weatherization and energy efficiency programs. Together, Ms. London and Mr. Hardman-Saldana bring the full range of skills required to manage this initiative: multi-partner coordination, federal and state grant compliance, construction project oversight, community engagement, and environmental programming.

Grant management will be supported by approximately 0.9 FTE annually, allocated across County staff from the Department of Conservation and Development responsible for day-to-day grant management, subaward oversight, financial tracking, compliance, and reporting. This cost is reflected in the Lead Applicant tab of each Co-Applicant's budget, allocated as Grant Management. This staffing level reflects a total of $1,326,821.33 in grant administration personnel costs across the five-year grant term. Indirect costs will further support financial management, procurement, and administrative staff within the Department of Conservation and Development to support compliance, reporting, and subaward management across all co-applicants. As a county

department with an annual operating budget well in excess of the grant amount requested on an annual basis, Contra Costa County comfortably meets the threshold that grant funds not constitute more than 50% of the organization's annual budget.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

Contra Costa County operates under comprehensive financial management policies and internal controls approved by the Board of Supervisors, and has a demonstrated, multi-decade track record of managing complex public grant programs across a diverse portfolio without material audit findings. Between fiscal years 2020-21 and 2025-26, the County's Department of Conservation and Development has administered over $100 million in grants from more than 20 federal, state, and regional funding sources, with annual grant portfolios ranging from approximately $9 million to $28 million. This portfolio includes CDBG (averaging $4.6 million annually), HOME (averaging $3.3 million annually), Emergency Solutions Grants (federal and state), HOME-ARP, HOPWA, BayREN energy efficiency programs, Permanent Local Housing Allocations, EPA Brownfield grants, Urban Forest grants, Caltrans Sustainable Communities grants, and Keller Canyon Mitigation funds, among others. All reporting for these programs has been completed on time, expenditures have been within budget, and the County has no unresolved material audit findings related to financial management or grant compliance.

Grant funds for this initiative will be maintained in a dedicated project cost center within the County's financial management system, enabling real-time budget-to-actual tracking by project, co-applicant, and budget category. Monthly budget reviews will be conducted by Department of Conservation and Development financial staff, with variances flagged for prompt review and corrective action. The County's internal control framework includes strict segregation of duties across invoice review, program account reconciliation, and payment authorization, with additional oversight provided by the Board of Supervisors' Internal Operations and Finance Committees.

Subaward financial oversight will follow the County's established sub-recipient monitoring procedures. Each co-applicant will execute a subaward agreement with the County prior to receiving funds, defining eligible costs, invoicing procedures, reporting timelines, and audit requirements. Co-applicants will submit quarterly invoices with supporting documentation; County program and financial staff will review each invoice for allowability, allocability, and reasonableness before payment is approved. Construction draw requests from co-applicants undertaking capital projects will be reviewed monthly against project schedules and architect or engineer certifications prior to release. The County's financial management system tracks expenditures by project and budget category in real time, allowing the program manager to identify and resolve variances before they become compliance issues. As a county government with institutional reserves and a diversified revenue base, Contra Costa County is equipped to advance costs if needed during the grant period and has the financial standing to sustain program management functions through any temporary funding gaps.

North Richmond Community

Project #	Project Title (3 words maximum)	Project Summary (1-3 sentences)	Strategy Alignment	Project Lead	% Co-Applicant Allocation (Min of 25% of Total Application Budget)	Total Project Budget - Direct Costs	Total Project Budget - Professional Services & Consultants	% Professional Services & Consultants (Max of 25% of Application Direct Costs)	Total Funds Requested	Lead Applicant Budget	Co-Applicant 1 Budget	Co-Applicant 2 Budget	Co-Applicant 3 Budget	Co-Applicant 4 Budget	Co-Applicant 5 Budget	Co-Applicant 6 Budget
1	Community Resilience Center	Urban Tilth will complete construction and activate the North Richmond Farm Community Resiliency Center — a certified clean air shelter, emergency preparedness hub, and year-round health and wellness facility serving 4,000 North Richmond residents — providing Breathing Center operations during poor air quality events, off-grid solar power for up to three days, overnight emergency shelter, fresh food access, preventive health programming, and a dedicated Resident Leaders Manager to provide air quality education to at least 200 residents and develop a community-informed air quality navigation strategy.	Reduce Air Pollution and Improve Health Outcomes	Urban Tilth	89.7%	$ 6,509,451	$ -	0.0%	$ 7,235,869	$ 746,300	$ 6,489,569	$ -	$ -	$ -	$ -	$ -
2	Building Healthy Communities	Contra Costa Health will deliver Safe Routes to School education, hands-on bicycle and pedestrian safety training, and targeted community outreach across six school sites beginning in Year 3 — building directly on green infrastructure improvements delivered by The Watershed Project — to reduce vehicle trips, lower transportation related emissions, and increase active transportation participation among North Richmond students and families.	Reduce Air Pollution and Improve Health Outcomes	Contra Costa Health	89.7%	$ 883,437	$ -	0.0%	$ 992,118	$ 102,326	$ -	$ 889,792	$ -	$ -	$ -	$ -
3	Affordable Housing Retrofits	CHDC will fully electrify three Las Deltas duplexes and the Corrine Sain Family and Senior Center, installing rooftop solar with battery backup, high-efficiency heat pumps, and MERV-13 filtration and SAFE/Corsi-Rosenthal Box air-cleaning systems to eliminate indoor combustion pollutants and provide clean, resilient shelter for six low-income households and an estimated 150 seniors and families served weekly at the Center.	Reduce Air Pollution and Improve Health Outcomes	Community Housing Development Corporation	89.7%	$ 1,168,088	$ 100,000.00	8.6%	$ 1,447,131	$ 149,256	$ -	$ -	$ 1,297,875	$ -	$ -	$ -
4	North Richmond Ecovillage	Richmond LAND will rehabilitate four Las Deltas duplexes into eight permanently affordable condominium homes through a Community Land Trust model, incorporating improved ventilation, upgraded building systems, and code-compliant safety features to reduce indoor environmental hazards and prevent displacement of longtime North Richmond residents.	Reduce Air Pollution and Improve Health Outcomes	Richmond LAND	89.7%	$ 816,975	$ -	0.0%	$ 1,012,141	$ 104,391	$ -	$ -	$ -	$ 907,750	$ -	$ -
5	Greener North Richmond	The Watershed Project will plant 120 large-canopy trees along 2 miles of priority sidewalk corridors, improve 1 mile of the Wildcat Creek Trail adjacent to Verde K-8 School, revegetate riparian banks with 450 native plants, and refresh the Urban Nature Loop wayfinding — reducing PM2.5 exposure and surface temperatures — while training and certifying 50 North Richmond community members through a paid stewardship workforce.	Reduce Air Pollution and Improve Health Outcomes	The Watershed Project	86.5%	$ 1,530,326	$ -	0.0%	$ 1,784,875	$ 240,817	$ -	$ -	$ -	$ -	$ 1,544,058	$ -
6	Clean Home Retrofits	BayREN, in partnership with Contra Costa County, will deliver no-cost or low-cost clean energy retrofits to at least 40 single-family homes in North Richmond — including heat pump HVAC systems and water heaters, induction cooktops, solar panels, and battery storage — with a focused intervention at five licensed residential daycare facilities to eliminate gas appliances and reduce indoor NO_2 exposure for young children. Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The “Project Narrative” is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	North Richmond Community Resilience Initiative
Lead Applicant Name	County of Contra Costa
Project Location	North Richmond
Overall Funding Request	$14,902,316.02
Grant Term Request	5 Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Community Resilience Center
Project Lead	Urban Tilth
Project Location	North Richmond
Project Funding Request	$7,235,868.00

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Urban Tilth will complete construction and launch operations of the North Richmond Farm Community Resiliency Center (CRC) — a community hub providing clean air refuge, emergency preparedness, preventive health access, food distribution, and environmental education for the approximately 4,000 residents of North Richmond, a community in the 99th percentile statewide for asthma rates and in the top 12% nationally for toxic air releases. Once operational, the CRC will serve as a Breathing Center during poor air quality events through certified air filtration and HVAC systems, provide off-grid power for up to three days via a photovoltaic system with battery backup, and offer overnight shelter with cots, first aid equipment, and portable showers during refinery accidents, wildfire smoke events, and extreme heat emergencies. Year-round, the CRC will house the Farm Store — the only location in North Richmond where residents can access fresh, locally grown produce seven days a week — an expanded community supported agriculture (CSA) and Veggie RX produce distribution program serving over 600 families each week, 48 weeks a year, a community commercial kitchen, a Children's Garden serving K–6 youth with afterschool nutrition education, weekly health and wellness programming for seniors and families, free emergency response, first aid, and CPR certification training for North Richmond women, seniors, and youth, and a community room for resident-led meetings, workshops, and events. Urban Tilth will also lead initiative-wide community outreach, climate leadership development, and emergency preparedness programming throughout the grant term.

A dedicated Resident Leaders Manager, funded through this project, will serve as the connective link between North Richmond residents and the full scope of climate action and air quality improvement work underway across the community. The Resident Leaders Manager leads the North Richmond Resident Leaders Program — a structured, multi-year civic leadership initiative that trains 5 to 10 North Richmond community members to serve as informed civic participants and accountability agents for the community's just transition priorities. In Year 1, the Manager and Resident Leaders cohort will focus on air quality data literacy: mapping all active air quality monitors across North Richmond, building a bilingual online interface integrating data from multiple sources, and facilitating community workshops to help residents understand, access, and act on air quality information. Beginning in Year 2, Resident Leaders will expand their role to track and help advance up to 10 of the 58 just transition and pollution reduction projects identified through the community-led "Not for Us, Without Us" planning process, serving as accountability agents for community-identified priorities. Resident Leaders will hold voting membership in North Richmond MOU

Coalition's Community Development Working Group alongside co-applicant organizations. The CRC serves as the hub for this work.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

The North Richmond Farm Community Resiliency Center directly aligns with the Local Community Benefits Fund's strategy to **reduce air pollution and improve health outcomes** for a community bearing one of the most severe pollution burdens in California. Every community bordering the Chevron facility sits in the 99th percentile statewide for asthma rates, and the area experiences 50 times the rate of particulate matter emissions from diesel fuel compared to the rest of California. The Chevron Refinery emits volatile organic compounds (VOCs), nitrogen oxides (NOx), sulfur dioxide (SO2), particulate matter (PM), and greenhouse gases — pollutants that drive the respiratory illness, cardiovascular disease, and elevated cancer risk that define health outcomes in North Richmond. These chronic exposures become acutely life-threatening during California's ever-lengthening wildfire season, when refinery emissions and wildfire smoke compound in a community of 4,000 residents with no designated clean air refuge within reach.

The CRC reduces unprotected exposure to these hazards through certified air filtration enabling Breathing Center operations during poor air quality events, off-grid power for up to three days to sustain HVAC and refrigeration during power outages, and overnight shelter with cots, first aid equipment, and portable showers during refinery accidents, wildfire smoke events, and extreme heat emergencies. Year-round, the CRC improves health outcomes by providing the only location in North Richmond where residents can access fresh, locally grown produce seven days a week, a community commercial kitchen, a Children's Garden with afterschool nutrition education for K–6 youth, weekly health and wellness programming for seniors and families, and free emergency response, first aid, and CPR certification training for North Richmond women, seniors, and youth. In partnership with Lifelong Medical Care and North Richmond Center for Health, the CRC will connect at least 500 residents living with pollution-related chronic conditions — including asthma and cardiovascular disease — to preventive care and condition management education. A dedicated Resident Leaders Manager, hired from the North Richmond community, will provide air quality education to at least 200 residents, map air monitors across the neighborhood, and develop a community-informed air quality navigation strategy — equipping residents to know when to shelter, when to activate the CRC as a clean air refuge, and how to interpret monitoring data from multiple sources to protect their health.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The North Richmond Farm Community Resiliency Center is located at 323 Brookside Dr. in Richmond, on the 10-acre North Richmond Farm situated on Urban Tilth's property in unincorporated North Richmond, California — a community adjacent to the Richmond Chevron refinery, entirely encircled by the city of Richmond and situated within Contra Costa County. The project area encompasses U.S. Census Tract 06013365002, which represents the entirety of North Richmond.

North Richmond is a severely overburdened community by every environmental and socioeconomic measure. According to the EPA EJScreen Community Report, the total population of the project area is 5,313. Of that, 96% are people of color — 68% Hispanic and 19% Black. Sixty-one percent of residents report speaking Spanish at home as their primary language, and 70% of residents speak a language other than English in their household. The median per capita income stands at $24,610, representing only 54% of the California per capita income and 60% of the national figure. Thirty-seven percent of residents are considered low-income, compared to 28% statewide and 31% nationally. Over 50% of renters are cost burdened, and the community has a history of housing insecurity.

The environmental burden concentrated in North Richmond is among the most severe in the nation. The community ranks in the top 4% of census tracts nationally for proximity to hazardous sites, top 5% for Superfund proximity, top 11% for proximity to Risk Management Plan (RMP) facilities, top 12% for toxic releases to air, top 13% for traffic proximity, top 16% for diesel particulate matter, and top 18% for air toxics cancer risk. Transportation access compounds these vulnerabilities, with inadequate roadway and sidewalk maintenance and a lack of connected walking and biking infrastructure limiting residents' ability to reach services or evacuate during emergencies.

The North Richmond Farm is the site of the Community Resiliency Center and will serve as a geographic and programmatic anchor of the broader Community Resilience Initiative led by Contra Costa County, through which our co-applicants will simultaneously deliver all-electric housing upgrades, green infrastructure improvements, nature-based solutions, and active transportation improvements across the same census tract, creating an integrated, place-based response to the compounding environmental, health, and economic burdens that North Richmond residents face every day.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how*

community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.

After 20 years of grassroots work to improve the health and wellness of North Richmond residents, Urban Tilth has built its community engagement approach for the CRC on a consistent principle: all project design starts with community input. The CRC is not a project that was designed and then presented to the community for approval — it is a project the community asked for, designed, and has continued to shape through every phase of development.

The community design process for the CRC engaged over 1,000 local residents through more than 30 community engagement and outreach events. These events spanned a wide range of methods and settings, including nightly community meetings, free farm stand events, site tours, youth focus groups, church and school PTA events, door-to-door canvassing, house meetings, emails, phone calls, and online and in-person surveys. The result was a CRC design that reflected the community's own vision: a site where residents could feel safe and comfortable visiting, learning, and accessing healthy food. The community-informed design included not only emergency preparedness infrastructure but an educational history walk, an Ohlone reflection garden, and safe walking and biking access from the North Richmond residential community. Each element of the CRC's scope traces directly back to community input gathered through this process.

In early 2026, Urban Tilth deepened this commitment through a structured community engagement process called "Not for Us, Without Us!" — designed to ensure that North Richmond residents directly shaped decisions about investments and projects affecting their neighborhood. Rather than presenting predetermined solutions, organizers worked with researchers and community-based partners to translate dense technical planning materials — including the Richmond Parkway Plan, Pathway to Clean Air, the Healthy Contra Costa Quality of Life Plan, and city and county climate action plans — into an accessible community review process. Residents evaluated 58 projects across six focus areas, including air pollution and health, asking not whether projects met technical metrics, but whether they would improve air quality, expand job opportunities, strengthen housing stability, and meaningfully improve daily life. One of the clearest messages to emerge was that residents want to be informed and stay involved. That demand directly informs the Resident Leaders Manager role funded through this project, which will embed a North Richmond community member in ongoing air quality navigation, outreach, and education work throughout the grant term.

Urban Tilth utilizes overlapping community advisory structures, ensuring resident input will continue to shape CRC implementation, programming, and governance throughout the grant term. The Community Advisory Committee (CAC) will meet monthly to advise

program staff and Urban Tilth's Board of Directors on CRC implementation and programming, and to receive and respond to public feedback and complaints. The CAC is composed of local residents representing North Richmond's prominent ethnic groups, seniors, food box program participants, youth job training program participants, and two Urban Tilth staff members who live in the project area. Partner meetings will convene quarterly to coordinate service delivery, align collective community engagement activities, and gather feedback across the collaborative. The CRC Stakeholder Group will meet twice annually and include key local government emergency response agencies, community-based organizations providing support services during emergencies, and CAC members.

Across all of Urban Tilth's programs, including the CRC, outreach is conducted with explicit attention to populations that face barriers to participation. Community engagement staff are drawn from the local community and bring first-hand knowledge, language skills, and cultural competence to their work. All materials are translated into Spanish and key AsianPacific Islander (API) languages. Urban Tilth's bilingual outreach infrastructure, including an email list-serve reaching over 8,000 area residents, social media platforms, and a quarterly newsletter distributed via mail and email, ensures that engagement reaches residents across multiple channels, including those without digital access. Throughout this project, engagement activities will include priority outreach to individuals with physical, developmental, or intellectual disabilities; chronic conditions or injuries; limited English proficiency; older adults, children, and pregnant people; and low-income, unhoused, and transportation-disadvantaged residents.

The Resident Leaders Manager (RL Manager) role in this application reflects the same community-driven commitment that is part of the fabric of Urban Tilth. Community members have consistently identified a gap between the air quality data that exists about North Richmond and their own ability to access, understand, and act on that information. The RL Manager, a North Richmond community member hired and embedded in the community throughout the grant term, will formalize the community engagement work that addresses this gap directly. By mapping air monitors across the neighborhood, facilitating community conversations to surface how residents experience air quality in their daily lives, and building on the County's Community Assessment, this role ensures that the technical infrastructure of air quality monitoring is meaningfully connected to the people it is meant to serve. The RL Manager's work is a natural extension of Urban Tilth's community engagement activities, rooted in our 20-year relationship with North Richmond residents and our ongoing commitment to ensuring that community members shape the solutions designed for their neighborhood.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit.*

Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.

The CRC represents a commitment to engaging, listening to, honoring, and responding to a community that has suffered disproportionate environmental and economic burdens for generations. The CRC is in direct response to ongoing community engagement efforts and addresses the intersection of environmental, health, and economic challenges for the 4,000 residents of North Richmond. The programming will include a particular focus on the community's most vulnerable populations: low-income seniors, children and youth, residents with pollution-related chronic conditions including asthma and cardiovascular disease, immigrant residents who lack access to healthcare and disaster relief, and low-income households facing food insecurity. The CRC provides what this community has never had: a permanent, community-owned clean air refuge during wildfire smoke events and refinery accidents, a designated Breathing Center during poor air quality events, overnight emergency shelter, and year-round access to fresh food, preventive health programming, and workforce development — housed in a single, walkable location at the center of the neighborhood.

The measurable outcomes achieved through this project will demonstrate community impact across three interconnected dimensions. First, the completion and activation of the CRC as a fully operational clean air shelter — evidenced by certificate of occupancy, system commissioning, and documented shelter activations during the grant term — will demonstrate that a community bearing a 99th-percentile asthma burden now has physical infrastructure specifically designed to protect residents during acute air quality events. Second, the emergency preparedness training program hosted at the CRC will demonstrate increased community capacity to respond to environmental health emergencies, measured through certification completion and participant confidence surveys. Third, the RL Manager’s community air quality navigation work will demonstrate that the gap between existing air monitoring data and residents' ability to use it has been meaningfully reduced — measured through resident participation in community conversations and self-reported increases in confidence interpreting air quality information and taking protective action. Together, these outcomes represent progress toward the vision North Richmond residents articulated through 20 years of engagement with Urban Tilth: a community that is not only cleaner and healthier, but one whose residents have the knowledge, skills, and infrastructure to protect themselves and each other.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Urban Tilth will keep North Richmond residents consistently informed about CRC construction milestones, program launches, and project benefits through a multilingual, multi-channel communications approach. Bilingual information — in English and Spanish — will be disseminated through weekly social media posts reaching more than 6,000 followers, quarterly mail and email newsletters distributed to over 8,000 local residents, an annual report mailed to all North Richmond households, and geo-targeted digital posts centering residents within the project service area. Urban Tilth will also develop and distribute a North Richmond-specific Emergency Response Handbook to ensure residents understand how to access and use the CRC before a crisis occurs. Scheduled engagement activities tied to implementation milestones will include a CRC Grand Opening event, an Emergency Response Simulation Event in Year 3, and a Project Completion Celebration in Year 5, alongside weekly community outreach events, monthly CAC meetings, quarterly partner meetings, and bi-annual CRC Stakeholder Group meetings throughout the grant term.

The dedicated Resident Leaders Manager, hired from and embedded in the community throughout the grant term, will serve as the connective bridge between residents and the full North Richmond Community Resilience Initiative. Through door-to-door canvassing, attendance at Municipal Advisory Council meetings, church and school PTA events, and free Farm Stand events, the RL Manager will ensure that the hardest-to-reach residents including monolingual Spanish speakers, seniors, and immigrant households are informed about CRC services and the air quality improvement projects being implemented by co-applicants across the Initiative. The RL Manager will distribute and collect surveys, facilitate house meetings and listening sessions, and bring that ground-level input directly into Urban Tilth's formal advisory structures.

Urban Tilth’s overlapping advisory structures to ensure community feedback continuously informs project implementation. Feedback collected through all advisory structures and the RL Manager’s ongoing canvassing will be formally reviewed at stakeholder group convenings, where learnings are documented and used to produce concrete, documented changes to how the CRC operates and how the larger Community Resilience Initiative communicates with North Richmond residents.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Urban Tilth will complete construction and activate the North Richmond Farm Community Resiliency Center (CRC), a permanent clean air shelter, emergency preparedness hub, and year-round community wellness center serving the 4,000 residents of North Richmond, a community in the 99th percentile statewide for asthma rates, the top 12% nationally for toxic air releases, and the top 16% for diesel particulate matter. The CRC will provide certified air filtration for Breathing Center operations during poor air quality events, off-grid power for up to three days via solar PV with battery backup, cold food storage, and overnight shelter capacity during refinery accidents, wildfire smoke events, and extreme heat emergencies. Year-round operations will include the Farm Store (the only source of fresh, locally grown produce in North Richmond, open seven days a week), an expanded CSA and produce distribution program, weekly health and wellness programming in partnership with Lifelong Medical Care and North Richmond Center for Health, and free emergency response, first aid, and CPR certification training for North Richmond women, seniors, and youth.

The Resident Leaders Manager will lead the North Richmond Resident Leaders Program and serve as the ongoing connective link between community members and the full scope of climate action investment in North Richmond. In Year 1, the Manager and Resident Leaders cohort will implement a community-informed air quality navigation strategy: mapping all active air quality monitors across North Richmond in a bilingual, publicly accessible format, training at least 5-10 Resident Leaders, and launching the North Richmond Climate Resilience Resource Hub — a bilingual online platform giving residents ongoing access to project updates, monitoring data, and protective action guidance. Beginning in Year 2, the Resident Leaders Program expands its scope: a trained cohort of 5 to 10 North Richmond residents will track and help advance up to 10 of the 58 just transition and pollution reduction projects identified through the "Not for Us, Without Us" community planning process, serving as accountability agents for community-identified priorities. Resident Leaders will hold voting membership in the North Richmond Resiliency Coalition's Community Development Working Group alongside co-applicant organizations, ensuring that community voice is structurally embedded in how this initiative moves forward. In partnership with Lifelong Medical Care and North Richmond Center for Health, the project will connect at least 500 residents with asthma, cardiovascular disease, or other respiratory conditions to preventive care, condition management education, and nutrition support — including 4,000 respiratory health kits distributed over the

grant term. Urban Tilth serves as Co-Applicant and project lead for the CRC; Contra Costa County serves as Lead Applicant and provides grant management and coordination across the broader North Richmond Community Resilience Initiative.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The total BAAD funds requested for Urban Tilth's Community Resilience Center project are approximately $7,235,869, comprising $746,300 from the County of Contra Costa (Lead Applicant) for grant management and $6,489,569 from Urban Tilth (Co-Applicant 1) for project implementation. Urban Tilth's budget is anchored by $5,000,000 in construction costs to complete the CRC superstructure, building systems (HVAC/air filtration, solar PV and battery backup, electrical, plumbing), interior buildout, site improvements, and landscaping under secured permit BICO23-000087. Personnel costs total $678,316, covering a Program Manager and Resident Leaders Manager at 0.75 FTE each across the five-year grant term, plus a 26% fringe benefit rate. Community engagement costs of $112,000 cover venue rental for monthly and special community meetings, bilingual translation and interpretation services, and outreach materials and postage. There is a $20,000 allocation for the design and maintenance of a website for North Richmond at the Table Just Transition projects and a community-wide air monitoring map and resource hub. Residents will assemble and distribute 4,000 respiratory health kits across the grant term, budgeted at $50,000. A $500,000 construction contingency (10% of construction costs) is included to cover unanticipated costs within the CRC construction scope. Indirect has been calculated at approximately 15% of direct costs, exclusive of construction, for a total of $129,252. This equates to 2.2% of all direct costs when including construction.

The project leverages $10,100,445 in other funding sources, including approximately $2,108,285 in prior investment already expended on the CRC foundation and preconstruction work, $7,000,000 in Urban Tilth's own funds and other grants committed to non-CRC North Richmond Farm construction elements, and $992,160 in North Richmond Farm Capital Campaign funds dedicated to ongoing architect construction administration services, a dedicated construction project manager, and construction insurance and bonding. These leveraged funds demonstrate that the CRC project is

substantially de-risked and that the BAAD investment will complete and activate infrastructure that is already well underway.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The North Richmond Farm Community Resilience Center is directly responsive to a layered set of community, regional, and statewide planning frameworks — each of which identifies the needs this project addresses before a shovel has broken ground.

AB 617 / Community Air Protection Program - The CRC is explicitly aligned with the BAAD Community Air Protection Program (AB 617) and the Portland/Tara Hills/Coronado Area (PTCA) Community Emissions Reduction Plan (CERP). The PTCA CERP identified clean air emergency shelter infrastructure, community health programming, and air quality education as priority interventions for the North Richmond community — and the CRC was designed to fulfill each of these. As a designated Breathing Center during poor air quality events and an off-grid clean air shelter during refinery accidents and wildfire smoke events, the CRC operationalizes the CERP's core objective of protecting the community's most vulnerable residents during acute air pollution events.

North Richmond Coalition and the Revived North Richmond MOU - The CRC emerged from the North Richmond Coalition — a growing collaboration of community-based organizations, including Urban Tilth, CHDC, Richmond LAND, The Watershed Project, and Contra Costa County Supervisor John Gioia's office — which has been steering a community-led revival of the North Richmond Memorandum of Understanding (MOU). The original 2004 MOU committed the County, City, and community to investing in North Richmond's public infrastructure. The revived coalition expanded that vision to include climate resiliency, economic revitalization, housing, community development, and community outreach. The CRC represents the physical embodiment of that expanded vision, providing the community hub that coalition partners have advocated for through years of organizing and planning.

Contra Costa County Climate Action and Adaptation Plan - The CRC supports implementation of the Contra Costa County Climate Action and Adaptation Plan, which the County's Sustainability Team — the Lead Applicant on this grant — is responsible for implementing. The CRC's off-grid power capacity, clean air shelter function, and emergency preparedness programming directly advance the County's climate resilience goals for unincorporated communities like North Richmond that face the greatest

exposure to climate-driven air quality emergencies and lack existing public emergency infrastructure.

North Richmond Municipal Advisory Council - For over three decades, the North Richmond Municipal Advisory Council — established by Contra Costa County in partnership with the community — has provided a formal governance forum where community priorities are identified, vetted, and elevated. Urban Tilth, CHDC, Richmond LAND, and The Watershed Project all hold leadership roles within the Council. The CRC's programming priorities, from food access and workforce development to emergency preparedness, were shaped through this ongoing community governance process and have been consistently validated through Council meetings over the course of the project's eight-year development.

California State Frameworks - At the state level, the CRC aligns directly with California's Climate Adaptation Strategy and with the California Strategic Growth Council's Community Resilience Centers program, a $270 million state investment to plan and construct neighborhood resilience centers that provide shelter and year-round community programming in communities facing increasing wildfire smoke and extreme heat events. North Richmond's designation as both a Justice40 community and an EPA IRA Disadvantaged Community — reflected in its EJScreen Supplemental Demographic Index score of 2.25 at the 85th state percentile — underscores the statewide policy imperative to prioritize infrastructure investments of this kind in this location. The CRC is in perfect alignment with the type of project California's climate resilience frameworks envision for communities bearing the greatest cumulative environmental and economic burdens.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Urban Tilth has 20 years of experience creating community programs that provide jobs, offer healthy food, and share resources that build community power and support community healing. We hold deep organizational expertise in community-driven project development, multi-funder capital campaigns, green workforce training, food systems programming, and complex construction project management. This experience directly parallels the scope and complexity of the work proposed under this grant.

Urban Tilth has raised more than $9.3 million toward our larger North Richmond Farm transformation effort to date, completing underground utilities, soil infrastructure, ADA accessibility improvements, and bringing five new buildings to 65% completion. Although the EPA Community Change Grant that would have funded CRC construction was rescinded before full implementation, Urban Tilth has continued advancing the broader North Richmond Farm project — five new farm buildings now stand on the site,

bringing the farm's educational and food systems infrastructure to 65% completion, and laying the groundwork for the CRC that will serve as the Farm's community resilience hub. This demonstrates our ability to develop and manage multi-million-dollar capital projects in a complex regulatory environment, with multiple funders and community stakeholders.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

Doria Robinson has served as Executive Director of Urban Tilth since 2007 and is a third-generation resident of Richmond. Under her leadership, Urban Tilth has grown from a grassroots farming initiative into a multi-program community organization managing capital assets, workforce programs, food systems infrastructure, and multi-stakeholder partnerships. She is co-founder of the Richmond Food Policy Council, former co-chair of the US Food Sovereignty Alliance Western Region, and a member of the Climate Justice Alliance Food Sovereignty Working Group. Her combination of deep community roots, organizational leadership experience, and expertise in food and environmental justice systems makes her uniquely positioned to lead implementation of the CRC's programming and community engagement work.

The program manager will manage all the staff that are assigned to this project. That includes the resident leader manager, the just transition organizers funded by other Grants. They will. This position will also manage all of our consultants, the graphic designers and work with our communications team to create our materials. They'll be responsible for all reporting management of timeline management of outcomes and deliverables. They also manage the budget they will be responsible for a researching and drafting the operations plan for the CRC, including the planning of all programming the facilitation of partnerships and partnership agreements the scheduling of the facility once it's built they'll interface with the construction management team and the resident leaders team to make sure that all of the work they're doing are informed by community feedback

The resident leaders manager will be responsible for managing the recruitment, training, and facilitation of 5 to 10 resident leaders for 2 to 3 consecutive two-year terms. Resident leaders schedule the facilitation of their stipends, their participation in the planning of programming and other offerings at the CRC and their facilitation and participation in the air quality monitoring project as well as other just transition projects that are related to in generated by the North Richmond at the table project. They'll be supervised by the program manager.

The construction team for this project includes Adele Ho, our construction project manager. She's a civil engineer with over 40 years of experience as Public Works Director for the City of San Pablo, now retired. She has been the construction project manager for the last seven years on the North Richmond farm project. She will manage all of our construction contractors, including our general contractor and any architect or architect and their subs. She manages all billing invoicing and tracking of construction expenses, and interfaces with permitting agencies for inspections. Also, a part of the construction team is our Executive Director. She works with the construction project manager to make any management decisions that need to be made throughout the construction process and generally overseas the interface of community and our staff team for the delivery of programming

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

All permits required for the North Richmond Farm Community Resilience Center project have been secured. Phase 1 site work — including Fred Jackson Way frontage improvements (sidewalk, rain gardens, and bike lane), underground utilities, and site rough grading — has been fully completed, with the Public Works Encroachment Permit work finished in March 2023 and the grading permit (BIG22-006804) secured. All Phase 2 farm building permits have been secured, covering the soil storage shed (BIMIC22-008971), row crop outdoor classroom (BIMIC22-008972), orchard outdoor classroom (BIMIC22-008973), greenhouse and hardening yard (BICO22-008974), toolshed and breakroom (BICO22-008975), composting toilet (BICO22-008976), watershed workshop (BICO22-008977), and shade house complex (BICO22-007386). The Phase 3 Main Barn/CRC building permit (BICO23-000087) was secured as of

January 2024, with final architectural and engineering drawings complete and CEQA compliance finalized. Urban Tilth owns all parcels comprising the project site — 323, 355, 377, and 411 Brookside Drive — and the CRC is fully designed, permitted, and ready to begin construction upon grant award. No outstanding permit approvals are required within the grant term.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

CEQA compliance for the North Richmond Farm Community Resilience Center project is complete. Urban Tilth conducted a full California Environmental Quality Act (CEQA) review process in 2018. A Notice of Determination was adopted by the Contra Costa County Board of Supervisors and filed with the County Clerk of Contra Costa County, covering the development of Urban Tilth's growing spaces, classrooms, agricultural infrastructure, buildings — including the Barn/CRC structure — and open spaces on the North Richmond Farm site. The CEQA analysis concluded that use of the site as planned by Urban Tilth has no significant negative effects on the environment.

A supplemental traffic analysis taking into account anticipated future development in the surrounding area was completed in 2021, further affirming the appropriateness of the site for the project as designed. No additional CEQA review is required for the CRC construction scope funded under this grant. The CRC building is an extension of the multi-use Barn structure already evaluated under the 2018 CEQA process, and the project has been fully designed and permitted accordingly. Building permit BICO23-000087 for the Main Barn/CRC was secured as of January 2024.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

Urban Tilth owns and operates the property where the CRC is located and will demonstrate site control at the time of the execution of the Grant Agreement.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Urban Tilth maintains all buildings and infrastructure on the North Richmond Farm through a dedicated facilities and operations team and a contracted cleaning service that services all buildings on a regular schedule. Upon completion of the CRC, Urban Tilth will expand both the facilities and operations team and the cleaning service to incorporate the new building into existing maintenance and custodial care. As part of

this expansion, Urban Tilth will hire a Maintenance Manager responsible for maintaining the CRC's specialized building systems, including the HVAC and air filtration system, solar PV array, and battery backup. These are ongoing operational costs carried in Urban Tilth's general operating budget and are not included in the capital construction request for this project.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The primary barrier associated with this project is construction cost variability and the risk of delays inherent in any large-scale capital construction project. Urban Tilth has already navigated funding disruptions related to the CRC, including the rescission of the EPA Community Change Grant that had been awarded to fund the CRC's construction scope. Urban Tilth has structured this BAAQMD application to directly address those risks: the $500,000 construction contingency (10% of construction costs) provides a buffer against unanticipated cost increases; the project's design is fully completed, permits are secured, and CEQA is finalized, eliminating the most common sources of pre-construction delay. In addition, over $10.1 million in other funding sources — including $2.1 million already expended on foundation and preconstruction work — demonstrates that the project's risk is substantially mitigated and that construction can begin immediately upon grant award. Contra Costa County's established risk management practices, including regular progress evaluations and financial audits honed through years of managing large-scale federal and state grants, will provide an additional layer of oversight and accountability throughout implementation, ensuring that any deviations from schedule or budget can be identified and corrected promptly within the five-year grant term.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	**Community Resiliency Center**: Establish and activate a permanent air shelter, emergency preparedness hub, and year-round respiratory health programming, reducing air pollution exposure and building long-term community resilience within North Richmond.

Measurable Outcome	Indicator(s)
1. By the end of the grant term, establish the North Richmond Farm Community Resiliency Center as a fully operational clean air shelter and emergency refuge, providing certified air filtration, a minimum three-day off-grid power supply, cold food storage, and overnight shelter capacity for up to 100 North Richmond residents during refinery accidents, wildfire smoke events, and extreme heat emergencies.	• Certificate of occupancy issued for the completed CRC building • Air filtration and HVAC system operational and verified to meet clean air shelter standards (documented by system commissioning report) • Solar + battery backup system tested and confirmed for minimum 3-day off-grid operation • Completion and distribution of the Emergency Response Handbook to North Richmond's 4000 residents • Train 20 residents per year (100 total over the grant term) in emergency preparedness trainings such as CPR first aid, CERT and emergency / disaster response and communications
2. By the end of the grant term, increase the capacity of North Richmond residents to understand, access, and act on local air quality data, and to serve as active civic leaders and accountability agents for the	• Number of air monitors mapped and data collected defined across North Richmond and documented in a publicly accessible, bilingual format (target: all active monitors identified and published by end of Year 1)

community's just transition priorities, through the North Richmond Resident Leaders Program — a multi-year initiative led by the Resident Leaders Manager and implemented by a trained cohort of 5 to 10 North Richmond community members.	● Number of Resident Leaders trained and actively tracking progress on just transition and pollution reduction projects identified in the "Not for Us, Without Us" planning process (target: 5 to 10 Resident Leaders; up to 10 projects tracked by end of grant term; tracked through program enrollment records and quarterly accountability reports) ● Development of a North Richmond Climate Resilience Resource Hub, which will be an online source of project and community updates that residents can access to increase confidence in understanding and using local air quality data to take protective action; and to track the development of climate resiliency projects impacting their community.
3. By the end of the grant term, improve pollution-related health outcomes for at least 500 North Richmond residents with asthma, cardiovascular disease, or other respiratory conditions by connecting them to preventive care, condition management education, and nutrition support through Lifelong Medical Care and North Richmond Center for Health services and weekly health programming delivered at the Community Resiliency Center.	● Number of North Richmond residents living with (or caretakers of those living with) a documented pollution-related chronic condition (asthma, cardiovascular disease, or respiratory illness) receiving health and wellness services at the CRC annually (target: 500, tracked through intake & event sign-in) ● Number of residents receiving a warm handoff referral to Lifelong Medical Care and North Richmond Center for Health preventive services through CRC referral or on-site programming (target: 100, tracked through Lifelong Medical Care partnership records) ● Percentage of participants in health programming reporting improved ability to understand and manage their pollution-related condition in annual survey (target: 25-30%, baseline set in year 1)

	• Number of respiratory health kits assembled and distributed to North Richmond residents who suffer from respiratory illnesses, prepared by volunteers that are recruited and managed by the Just Transition Coordinators (target: 800 annual; 4000 total)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. By the end of the grant term, establish the North Richmond Farm Community Resiliency Center as a fully operational clean air shelter and emergency refuge, providing certified air filtration, a minimum three-day off-grid power supply, cold food storage, and overnight shelter capacity for North Richmond residents during refinery accidents,	A. CRC building construction completed and certificate of occupancy obtained	1. Complete superstructure, site improvements, landscaping, building interior, furnishings, and equipment	Urban Tilth	General Contractor	June 30, 2029
		2. Complete installation of air filtration/HVAC system and commission for clean air shelter use	Urban Tilth	General Contractor	June 30, 2029
		3. Complete solar PV and battery backup installation and test off-grid capacity	Urban Tilth	General Contractor	June 30, 2029
		4. Obtain certificate of occupancy from Contra Costa County	Urban Tilth	Contra Costa County Permitting	September 30, 2029
	B. CRC Emergency Operations Plan finalized and staff trained for shelter activation	1. Hire Resiliency Center Manager to oversee CRC operations and emergency programming	Urban Tilth		June 30, 2029
		2. Develop North Richmond-specific Emergency Response Handbook	Urban Tilth	Contra Costa County	December 31, 2029

wildfire smoke events, and extreme heat emergencies.		3. Train CRC staff on shelter activation protocols, HVAC/air filtration operation, and off-grid systems	Urban Tilth		September 30, 2029
		4. Coordinate with Contra Costa County Fire, Public Works, and Emergency Services on activation procedures	Urban Tilth	Contra Costa County Fire, Public Works, and Emergency Services, Lifelong Medical Care	September 30, 2029
	C. CRC Grand Opening and year-round community operations launched	1. Design and implement Grand Opening outreach plan reaching North Richmond residents through email list-serve (8,000+), social media (6,000+ followers), newsletter, and door-to-door outreach	Urban Tilth	Latina Center, Lifelong Medical Care	April 30, 2029
		2. Launch year-round CRC programming including Farm Store (7 days/week), emergency response education, health and wellness activities, and community room events	Urban Tilth		October 1, 2029
		3. Conduct emergency preparedness training & emergency response simulation event with community participation	Urban Tilth		December 31, 2031
		4. Host kick-off meeting of CRC Stakeholder Group including local government emergency response agencies and community advisory committee	Urban Tilth		July 1, 2029

2. By the end of the grant term, increase the capacity of North Richmond residents to understand, access, and act on local air quality data, and to serve as active civic leaders and accountability agents for the community's just transition priorities, through the North Richmond Resident Leaders Program — a multi-year initiative led by the Resident Leaders Manager and implemented by a trained cohort of 5 to 10 North Richmond community members.	A. Launch air quality monitor map and resident outreach process	1. Hire Resident Leaders Manager to lead resident-facing air quality outreach and facilitation	Urban Tilth	North Richmond MOU Coalition	January 31, 2027
		2. Map all active air quality monitors across North Richmond and publish findings in a bilingual, publicly accessible format	Urban Tilth	North Richmond MOU Coalition	June 30, 2027
		3. Design resident engagement process for community conversations, including bilingual outreach materials and facilitation guide	Urban Tilth	North Richmond MOU Coalition	April 30, 2027
	B. Develop and launch North Richmond Climate Resilience Resource Hub	1. Design and develop bilingual online Climate Resilience Resource Hub with air quality data, Just Transition and pollution reduction project updates, and protective action guidance	Urban Tilth	Contra Costa County, North Richmond MOU Coalition	September 30, 2027
		2. Launch Resource Hub and promote through CRC outreach channels (email list-serve, social media, newsletter, and door-to-door outreach)	Urban Tilth	Contra Costa County, North Richmond MOU Coalition	December 31, 2027
		3. Update Hub content quarterly and track resident engagement; administer annual survey on resident confidence in accessing and using local air quality data	Urban Tilth	Contra Costa County, North Richmond MOU Coalition	June 30, 2028

	C. Design resident engagement process for community conversations, including bilingual outreach materials and facilitation guide	1. Facilitate community conversations to determine the appropriate mechanism for mapping, tracking, and sharing data	Urban Tilth	North Richmond MOU Coalition	December 31, 2027
		2. Train Resident Leaders in air quality data interpretation	Urban Tilth	North Richmond MOU Coalition	September 30, 2028
		3. Host quarterly community workshops focused on understanding, accessing, and interpreting data	Urban Tilth	North Richmond MOU Coalition	December 31, 2031
	D. Facilitate community conversations & complete data gap analysis	1. Conduct baseline & annual air quality knowledge survey (5 total)	Urban Tilth	North Richmond MOU Coalition	December 31, 2031
		2. Facilitate at least 200 residents in community conversations on air quality data, monitoring coverage, and protective actions over the grant term	Urban Tilth	North Richmond MOU Coalition	December 31, 2031
		3. Document resident input on gaps between available monitoring data and community needs; compile findings into a gap analysis report	Urban Tilth	North Richmond MOU Coalition	December 31, 2028
		4. Share gap analysis findings with BAAQMD and community stakeholders; present at North Richmond Municipal Advisory Council, aimed at improving communication across all data sources	Urban Tilth	North Richmond MOU Coalition. Contra Costa County	December 31, 2031
3. By the end of the grant term, improve	A. Launch health and wellness programming at the CRC in partnership with	1. Execute partnership agreement with Lifelong Medical Care and North Richmond	Urban Tilth	Lifelong Medical Care & North	June 30, 2027

pollution-related health outcomes for at least 500 North Richmond residents with asthma, cardiovascular disease, or other respiratory conditions by connecting them to preventive care, condition management education, and nutrition support through Lifelong Medical Care and North Richmond Center for Health Services and weekly health programming delivered at the CRC.	Lifelong Medical Care & North Richmond Center for Health Services	Center for Health defining referral protocols, data sharing, and co-programming roles		Richmond Center for Health Services	
		2. Create and launch health and wellness programming calendar at the CRC, including condition management education, nutrition support, and referral intake	Urban Tilth	Lifelong Medical Care & North Richmond Center for Health Services	December 31, 2029
		3. Establish intake and sign-in tracking system to document participant demographics, health conditions, and service referrals on an ongoing basis	Urban Tilth	Lifelong Medical Care & North Richmond Center for Health Services	December 31, 2029
	B. Residents with pollution-related conditions connected to preventive care and tracked	1. Provide warm-handoff referrals to LMC & NRCHS preventive services for at least 100 CRC participants with documented pollution-related conditions over the grant term	Urban Tilth	Lifelong Medical Care & North Richmond Center for Health Services	December 31, 2031
		2. Assemble and distribute respiratory health kits to North Richmond residents with respiratory illness, prepared by volunteers managed by Just Transition Coordinators (target: 800 annually; 4,000 total over grant term)	Urban Tilth		December 31, 2031
		3. Administer annual participant survey tracking self-reported improvements in ability to understand and manage pollution-related	Urban Tilth		December 31, 2031

		health conditions (target: 25–30% of participants)			
	C. Nutrition access integrated into health programming through Farm Store and CSA	1. Operate Farm Store seven days per week and establish CSA program prioritizing households with documented respiratory conditions	Urban Tilth		Ongoing
		2. Track number of households with a member with a documented respiratory condition receiving regular fresh produce through the Farm Store or CSA program (tracked through intake)	Urban Tilth		Ongoing
		3. Conduct annual evaluation of health programming reach and referral outcomes; share findings with CRC Stakeholder Group and partner organizations (baseline established year 1)	Urban Tilth		December 31, 2031

Project Name: Community Resilience Center
Lead Applicant Name: County of Contra Costa
Term for this budget (in years): 5

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Grant Management Staff	Overseeing the management of subrecipient activity implementation, expense documentation, budget spend down, and data collection.	$648,956.88
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	Indirect	Calculated at 15%	$97,343.53

Project Name: Community Resilience Center
Co-Applicant 1 Name: Urban Tilth
Term for this budget (in years): 5

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Program Manager	1 FTE. $35/hr × 8 hrs/wk × 52 wks/yr. 3% COLA applied annually across 5-year term. Oversees CRC emergency preparedness planning, CRC programming design and implementation and activation.	$193,252.54
Personnel/Staff Costs	Direct	Resident Leaders Manager	1 FTE. $35/hr × 8 hrs/wk × 52 wks/yr. 3% COLA applied annually across 5-year term. Manages community engagement activities, resident outreach throughout the grant term.	$386,505.09
Personnel/Staff Costs	Direct	Fringe for staffing	26% fringe rate applied to total personnel costs. Includes payroll taxes, health insurance, retirement.	$150,736.98
Other Direct Costs	Direct	Venue Rental	Venue Rental for monthly and special community meetings of Resident Leaders and North Richmond Community Development sub committee at approximately $500 per meeting for 60 meetings	$30,000.00
Community Engagement	Direct	Interpretation & Translation	Translation services fees for community meetings and resident organizing. $10,000 per year for 5 years	$50,000.00
	Direct	Printing & Marketing	Printing of bilingual outreach and collateral materials, printing of maps and project information, and postage for project mailers. Supports community engagement activities led by Community Leadership Manager. $10,000 per year for 5 years	$50,000.00
Construction	Direct	Construction Costs	Completion of CRC/Main Barn superstructure, building systems (HVAC/air filtration, solar PV + battery backup, electrical, plumbing), interior buildout, site improvements, and landscaping. Permit BICO23-000087 secured. CEQA NOD adopted 2018. Foundation completed.	$5,000,000.00
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	Indirect	Calculated at 15% of direct costs, excluding construction	$129,074.19
Contingency (≤10% of Direct Costs at PROJECT level)	Contingency	Contingency	Calculated at 10% of construction costs only	$500,000.00

TOTAL: $6,489,568.81

Co-Applicant 1 Budget Summary (auto-calculated)

Total Direct Costs	$5,860,494.61
Total Indirect Costs	$129,074.19
Total Prof. Services & Consultants	$0.00
Total Contingency	$500,000.00
Total Funds Requested	$6,489,568.81
Cross-check Total Budget	YES
Indirect as % of Direct	2.2%
Prof. Services & Consultants as % of Direct	0.0%
Contingency as % of Direct	8.5%

Other Sources of Project Funding

Use this section only if your project has funding sources in addition to the Air District request.

Other Sources of Project Funding	Description and Status (application submitted, verbal commitment, award letter received, grant agreement signed, funds received, etc.)	Amount
Prior investment — CRC (foundation, preconstruction)	Work Already Completed: Urban Tilth own funds and other grants. Foundation poured; preconstruction architecture, permits, and inspections complete (~$2.1M spent pre-award).	$2,108,285.00
Phase 3 - Non CRC construction (landscaping, children's garden, farm store, history walk)	Urban Tilth own funds and other grants. Construction of non-CRC project elements: landscaping, children's garden, farm store, history walk. Committed — work already completed.	$7,000,000.00
North Richmond Farm Capital Campaign individual donors and foundation	Ongoing architect CA services for CRC construction through certificate of occupancy. Includes design modifications, RFI responses, submittal review, site visits, and coordination with contractor.	$700,000.00
North Richmond Farm Capital Campaign	Dedicated construction PM. [redacted] Oversees contractor performance, schedule, budget compliance, and prevailing wage monitoring for CRC construction.	$92,160.00
North Richmond Farm Capital Campaign	Includes builder's risk insurance, performance and payment bonds, special inspections, testing, and permit fees for remaining CRC construction scope.	$200,000.00

Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The “Project Narrative” is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	North Richmond Community Resilience Initiative
Lead Applicant Name	County of Contra Costa
Project Location	North Richmond
Overall Funding Request	$14,902,316.02
Grant Term Request	5 Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Building Healthy Communities
Project Lead	Contra Costa Health
Project Location	North Richmond
Project Funding Request	$900,560.17

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

North Richmond's most vulnerable residents breathe some of the most polluted air in the Bay Area, driven in large part by the vehicle trips that move through and around their neighborhood every day. Transportation is both a major source of that pollution burden and one of the most actionable levers for reducing it. The Building Healthy Communities project targets that lever directly: by shifting students and families at six North Richmond school sites from single-occupancy vehicle trips to walking, biking, and rolling, the project will measurably reduce vehicle miles traveled (VMT) and the tailpipe emissions of fine particulate matter (PM2.5) and greenhouse gases that accompany them. Contra Costa Health (CCH) will deploy a combination of Safe Routes to School education, hands-on bicycle and pedestrian safety training, community outreach, targeted billboard and bus advertising campaigns, and up to 500 free safety incentive items to make that mode shift achievable, safe, and sustained for low-income communities of color that carry a disproportionate share of North Richmond's air quality burden.

This project is designed as the demand-side complement to a coordinated, two-part investment in North Richmond's active transportation infrastructure. In Years 1 and 2 of the grant term, The Watershed Project will implement the Greener North Richmond project, planting 120 large-canopy trees along 2 miles of priority sidewalks and the Wildcat Creek Trail, improving 1 mile of the Wildcat Creek Trail corridor running alongside Verde K-8 School, and refreshing the Urban Nature Loop self-guided walking tour with updated Safe Routes to School wayfinding along Giaramita Street, Chesley Avenue, and Fred Jackson Way. CCH's Safe Routes to School programming launches in Year 3 to build directly on that foundation, delivering safety education, hands-on training, and community outreach that shifts students and families toward walking, biking, and rolling on corridors that will be cooler, greener, and more connected. This supply-first, demand-second sequencing reflects best practice in active transportation programming: behavior change is more effective and more durable when the infrastructure is already in place.

In the first implementation year (Year 3 of the grant term), CCH will initiate bicycle and pedestrian safety education activities at Verde Elementary in North Richmond, serving as a pilot site to inform expansion to Peres Elementary, Grant Elementary, Coronado Elementary, Richmond Charter Academy, and Richmond High School, for a total of six school sites.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*

- *Build economic resilience for a just transition*

The Building Healthy Communities project aligns directly with LCBF Strategy 1 to reduce air pollution and improve health outcomes. North Richmond ranks among the most pollution-burdened census tracts in California, scoring above the 90th percentile on CalEnviroScreen 4.0, which evaluates cumulative environmental and health burdens across the state. Transportation is a leading driver of that burden. The community sits at the convergence of Interstate 80 and Interstate 580, with elevated vehicle traffic volumes on local streets and high-injury network corridors where pedestrian-involved crashes resulting in serious injuries or fatalities increased by 29% between 2013 and 2022. A lack of safe walking and biking infrastructure has historically forced residents, particularly low-income communities of color, into dependence on single-occupancy vehicle travel, compounding both the emissions burden and the physical safety risks they face daily.

The Building Healthy Communities project attacks that causal chain at the behavior level. By delivering Safe Routes to School education, hands-on bicycle and pedestrian safety training, and targeted media campaigns across six school sites, CCH will increase active transportation participation among students and families, reducing the single-occupancy vehicle trips that are a leading source of local air pollution. Estimated reductions in VMT and associated PM2.5 emissions will be modeled from annual walk and roll counts and pre- and post-program survey data, providing a measurable, evidence-based account of the project's air quality contribution. Consistent with Contra Costa County's 2024 Climate Action and Adaptation Plan and guided by the Six E's framework (Education, Engineering, Encouragement, Enforcement, Evaluation, and Equity) and Vision Zero principles, this work is designed not only to improve safety but to make mode shift achievable and durable for the residents who stand to benefit most from cleaner air.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Beginning with Verde Elementary as a pilot site, the project will scale to surrounding schools, using data-driven and community-informed strategies to expand impact across North Richmond.

Primary site: Verde K-8, situated in the northwestern part of the North Richmond neighborhood, sits along the San Francisco Bay shoreline just west of Interstate 580, directly serving students and families within the project's primary focus community.

Expansion sites:

- **Peres Elementary School**: Peres Elementary School is located within North Richmond and serves as a key neighborhood school, providing direct access to students and families living in the project's core focus area.
- **Grant Elementary School:** Grant Elementary School, located in nearby Richmond, serves students from North Richmond and surrounding communities, acting as an important connection point for expanding program reach beyond the immediate neighborhood.
- **Coronado Elementary School:** Coronado Elementary School is situated in a residential area of Richmond that serves families from North Richmond and adjacent neighborhoods, supporting broader community access to safety education programming.
- **Richmond Charter Academy:** Richmond Charter Academy, centrally located in Richmond, draws a diverse student population that includes youth from North Richmond, making it a critical partner site for extending program impact.
- **Richmond High School:** Richmond High School is located in central Richmond and serves a large student population, including many from North Richmond, positioning it as a key site for reaching older youth within the focus community.

Total: 6 school sites serving North Richmond and surrounding communities

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Between 2010 and 2014, Contra Costa Health Services (CCHS) played a central role in the City of Richmond-led Health Impact Assessment known as the Richmond Livable Corridors Project, which rigorously examined city engineering, land use planning, traffic safety, and equity-centered mobility improvements through a public health lens. To demonstrate the linkage between broader built environment conditions, transportation patterns, and health disparities experienced by vulnerable populations, CCHS and its cross-sector partners facilitated an informed and localized assessment process that gathered qualitative and quantitative data through community listening sessions, targeted resident surveys, neighborhood walk audits, public workshops, and the evaluation of emerging environmental and transportation-related data from monitoring agencies. These efforts helped identify longstanding community concerns related to unsafe street conditions, limited walkability and bicycle access, high traffic injury corridors, air pollution exposure, and barriers to active transportation in historically underserved Richmond neighborhoods. The school communities in Richmond and the

surrounding West Contra Costa County played a particularly important role in shaping community priorities. Students, parents, school staff, and residents provided direct insight into needed equitable transportation improvements designed to reduce emissions, improve mobility access, and support healthier, lower-pollution communities.

Building on these earlier community-informed planning efforts, Contra Costa Health and its partners continue to prioritize engagement strategies that elevate resident voices and promote upstream prevention approaches that reduce vehicle miles traveled (VMT), improve neighborhood safety, and encourage shifts toward walking, biking, rolling, and transit use.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

In Contra Costa County, North Richmond and surrounding communities within the Path to Clean Air (PTCA) boundary are among the most environmentally burdened areas in the Bay Area. Due to proximity to major freeways (I-80 and I-580), rail corridors, industrial uses, and the Chevron refinery, residents face disproportionately high exposure to air pollution, particularly fine particulate matter (PM2.5). These conditions are linked to elevated rates of asthma, cardiovascular disease, and reduced life expectancy. Longstanding inequities driven by historical redlining, industrial zoning, and underinvestment in pedestrian infrastructure have disproportionately impacted low-income communities and communities of color, including Black, Latino, and Asian Pacific Islander populations that make up much of North Richmond.

School-aged youth are especially vulnerable to these conditions. Barriers to safe active transportation in North Richmond include inadequate sidewalks, unsafe crossings, speeding traffic, and limited bike infrastructure. Contra Costa County ranks among the highest in the state for pedestrian injuries among youth, and minority groups are disproportionately affected, particularly in Equity Priority Communities. These challenges are most evident around key school sites serving North Richmond, including Verde Elementary (primary site), along with Peres Elementary, Grant Elementary, Coronado Elementary, Richmond Charter Academy, and Richmond High School. Verde Elementary, located in North Richmond near the San Francisco Bay and Interstate 580, serves a predominantly low-income student population, with over 90% of students

qualifying for free or reduced-price meals, reflecting broader socioeconomic barriers faced by the community.

These schools are located within or serve neighborhoods connected to high-injury network corridors, where pedestrian-involved crashes resulting in serious injuries or fatalities increased by 29% between 2013 and 2022. Unsafe conditions discourage walking and biking, reduce physical activity, and increase reliance on vehicle travel—further contributing to air pollution and greenhouse gas emissions. Collectively, these six school sites represent a critical, place-based network for addressing transportation safety, environmental health, and equity challenges impacting North Richmond and surrounding communities.

The project will benefit predominantly low-income communities of color that experience disproportionate impacts from traffic-related injuries and air pollution. Through Safe Routes to School programming, hands-on safety education, community outreach, and targeted safety interventions, the project advances a mode shift toward walking, biking, transit, and micro mobility options. This reduces reliance on single-occupancy vehicles while improving access and safety for vulnerable road users.

This project addresses key environmental justice and public health challenges, including elevated exposure to transportation-related emissions, inequitable infrastructure conditions, and higher rates of pedestrian and cyclist injuries in communities of color. By integrating Vision Zero and Safe System principles with community-informed strategies, the project promotes safer street design, reduces greenhouse gas emissions, and supports healthier, more resilient communities. Measurable outcomes, including increased active transportation participation, improved safety knowledge and behaviors, and reductions in youth bicycle and pedestrian-related injuries, will demonstrate progress toward community impact. These outcomes will be tracked through surveys, participation data, and safety metrics, providing clear evidence of improved air quality conditions, enhanced mobility access, and strengthened community capacity to sustain long-term transportation safety and health improvements.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Community members will be engaged throughout project implementation through consistent, accessible, and considerate culturally responsive communication and

outreach that keep residents informed of benefits and progress. Methods will include regular updates at PTA and stakeholder meetings, school-based communications, community events, and multilingual outreach materials such as flyers, social media posts, and email newsletters. CCH will also conduct community canvassing and participate in local events to share information about program activities, safety resources, and opportunities to get involved. Progress updates will be shared through key stakeholders and school networks to ensure information reaches families and residents most impacted by the project.

To solicit community feedback, the project will use participant surveys, feedback forms at events and meetings, and facilitated focus groups with students, families, and community members where possible. Interactive engagement opportunities, such as pop-up demonstrations and hands-on activities, will also provide real-time avenues for residents to share input on safety conditions and program effectiveness. Feedback will be systematically collected, reviewed, and incorporated into ongoing program adjustments, including modifications to outreach strategies, education activities, and implementation approaches. This continuous feedback loop ensures that community voices remain centered for the project and that programming remains responsive to the needs and priorities of North Richmond residents.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The Building Healthy Communities project advances a measurable mode shift away from single-occupancy vehicle trips in North Richmond by delivering Safe Routes to School education, hands-on bicycle and pedestrian safety training, and targeted community outreach across six school sites: Verde K-8 (primary pilot site), Peres Elementary, Grant Elementary, Coronado Elementary, Richmond Charter Academy, and Richmond High School. The project launches in Year 3 of the five-year grant term, building directly on green infrastructure and trail improvements that The Watershed Project will complete along the same school corridors in Years 1 and 2. Contra Costa Health serves as project lead, with the West Contra Costa Unified School District, Verde K-8 PTA, The Watershed Project, and Urban Tilth serving as supporting partners that will not receive funding from this project.

The project delivers two measurable outcomes over its implementation period. The first outcome targets a reduction in vehicle trips and transportation-related emissions by increasing active transportation participation among students and families at all six

school sites, demonstrated by a measurable increase in walk and roll counts and a reduction in single-occupancy vehicle drop-offs during school arrival and dismissal. This will be achieved through six formal school partnership agreements with WCCUSD schools, a tailored e-bike safety curriculum with hands-on demonstrations and bike rodeos, Street Smart Contra Costa bicycle and pedestrian safety education delivered in-school and after-school settings, hands-on outdoor active transportation activities, helmet fittings, and distribution of up to 500 safety incentive items. Progress will be tracked through annual walk and roll counts, pre- and post-surveys on self-reported behavior change, and modeled estimates of vehicle miles traveled and associated PM2.5 emissions reductions. The second outcome targets increased community awareness of safe walking, biking, and rolling routes among North Richmond residents through three targeted billboard campaigns placed on high-injury network corridors, three paid bus advertising placements on routes serving the project area, and a pop-up climate resilience and bike safety demonstration using a tactical urbanism approach. Progress will be measured through pre- and post-community surveys on resident awareness of safe routes, percentage increase in Safe Routes to School activities across the six school sites, and modeled estimates of emissions reductions among residents reporting mode shift in post-campaign surveys.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The Building Healthy Communities budget is structured to directly fund the two measurable outcomes at the center of this project. Personnel costs carry Outcome 1: the Program Manager, Senior Health Education Specialist, and Health Education Specialist together provide the staffing capacity to secure school partnerships, develop and deliver bicycle and pedestrian safety curriculum, conduct hands-on trainings and bike rodeos, administer surveys, and sustain active transportation programming across six school sites over the 36-month implementation period. Subcontractor, materials, and other direct costs carry Outcome 2: the billboard campaigns reach North Richmond residents at scale on high-injury network corridors, the e-bikes enable hands-on demonstration activities that make mode shift tangible and achievable, and the safety incentive items and community meeting costs support the outreach and engagement that translate awareness into behavior change. Together, these investments are sufficient to achieve both outcomes within the grant term.

The total BAAQMD funds requested for the Building Healthy Communities project are $992,118 over 36 months, split between the Lead Applicant ($102,326) for project management and Contra Costa Health ($889,792) for program implementation. No other funding sources are identified for this project.

The Lead Applicant budget of $102,326 covers project management personnel costs of $88,979 and indirect costs of $13,347 calculated at 15% of direct costs.

Contra Costa Health's budget of $889,792 is anchored by $579,957 in personnel costs funding three staff members over the 36-month grant term. A Program Manager at 0.5 FTE ($272,847, including 55% fringe) will oversee all aspects of grant implementation, supervise program staff, and manage internal administrative processes. A Senior Health Education Specialist at 0.25 FTE ($122,568, including 55% fringe) will coordinate and implement direct pedestrian and bicyclist safety programming and collaborate with community-based organizations. A Health Education Specialist at 0.5 FTE ($184,542, including 55% fringe) will facilitate safety programming in school and community settings, conduct outreach, and support distribution of safety items.

Subcontractor costs of $195,000 fund three annual safety media billboard campaigns at approximately $65,000 per year, covering climate health and safety messaging development and ad placement to reach North Richmond residents at scale.

Materials and equipment costs total $18,500, covering three e-bikes of varying classes for hands-on safety trainings and demonstrations — a Class 1 pedal-assist e-bike ($3,500), a Class 2 throttle and pedal-assist e-bike ($4,000), and a Class 3 high-speed pedal-assist e-bike ($5,500) — along with vinyl banner printing ($3,000 over three years) and 500 pedestrian and bicycle safety items including helmets, bike lights, and reflective gear ($2,500).

Other direct costs of $1,000 support approximately 20 community meetings and engagement sessions over the grant term. Indirect costs of $95,335 are calculated at 12% of Contra Costa Health's direct costs.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The Building Healthy Communities project is one component of a coordinated, multi-year investment strategy within the North Richmond Community Resilience Initiative, led by Contra Costa County with Contra Costa Health, The Watershed Project,

and other co-applicants delivering integrated work across the same census tract. The project's Year 3 launch date is intentional and reflects deliberate sequencing with The Watershed Project's Greener North Richmond project, which advances green infrastructure in the early years of the grant term. During that period, TWP will plant 120 large-canopy trees along 2 miles of priority sidewalk corridors, including Giaramita Street, Chesley Avenue, and Fred Jackson Way, improve 1 mile of the Wildcat Creek Trail running alongside Verde K-8 School, and refresh the Urban Nature Loop Safe Routes to School wayfinding infrastructure. These improvements directly serve the same six school sites at the center of this project, reducing surface temperatures, improving shade coverage, and completing pedestrian and bicycle connections that currently stop at a railroad track. CCH's active transportation programming is designed to activate those improved corridors, building the safety knowledge, skills, and community habits that turn physical infrastructure into sustained mode shift. This supply-first, demand-second sequencing reflects best practice in active transportation programming and ensures that CCH's behavior change work lands in an environment where walking and biking is already safer, more comfortable, and more connected than it is today.

The strategies in Building Healthy Communities are consistent with multiple community, local, regional, and statewide plans that prioritize air quality, public health, and transportation equity. At the state level, the project supports implementation of California's Assembly Bill 617 Community Air Protection Program by reducing vehicle emissions and promoting cleaner modes of transportation in the Richmond, North Richmond, and San Pablo Path to Clean Air (PTCA) Community Emissions Reduction Plan area, one of the most pollution-burdened communities in the Bay Area and a priority community under AB 617.

At the local level, the project directly implements the City of Richmond's Bicycle and Pedestrian Action Plan (BPAP), adopted by City Council on February 7, 2023, which provides a five-year blueprint for improving walking and biking conditions in Richmond and identifies near-term safety investments on high-injury network corridors serving the six school sites at the center of this project. The project also advances Contra Costa County's 2024 Climate Action and Adaptation Plan, which calls for active transportation investments and emissions reductions in communities disproportionately impacted by pollution.

At the regional level, the project is directly consistent with Plan Bay Area 2050, the Metropolitan Transportation Commission's adopted Regional Transportation Plan and Sustainable Communities Strategy, which includes a dedicated Complete Streets investment program prioritizing active transportation infrastructure in Equity Priority Communities. North Richmond qualifies as an Equity Priority Community under Plan

Bay Area 2050's criteria, and CCH's Safe Routes to School programming represents precisely the kind of behavior change investment that complements the physical infrastructure improvements Plan Bay Area 2050 targets in communities like North Richmond. The project also aligns with countywide Vision Zero strategies that aim to eliminate traffic fatalities and serious injuries while improving safety and mobility for vulnerable road users.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The CCH Building Healthy Communities (BHC) Project Lead has extensive experience managing and implementing projects of similar scope and size, particularly in the areas of active transportation, injury prevention, and built environment improvements. The lead coordinated and oversaw a 4-year Caltrans-funded, non-infrastructure active transportation grant project that established youth-led programming across 7 high school sites within the West Contra Costa Unified School District. The lead has a proven track record of managing grant-funded projects, including budget oversight, invoicing, and reporting, while maintaining alignment with funder guidelines. The lead regularly provided technical assistance to schools, community-based organizations, and local agencies to support Safe Routes to School initiatives, integrating public health and equity perspectives into program design and implementation to improve safety and increase physical activity in underserved communities.

The project lead is currently spearheading the CCH Safe Routes to School (SRTS) Program, which delivers a menu of SRTS offerings to 94 unserved public schools (K-12) in West Contra Costa County and all Central and East Contra Costa public high schools (grades 9-12), with priority for schools located in Equity Priority Communities (EPCs) and in which at least 50% of students are eligible for Free and Reduced Price Meals. The lead also brings a strong experience in cross-sector collaboration, data-driven decision-making, and community engagement, all of which are critical to successful project implementation. As a former resident of Richmond and San Pablo, the project lead brings both a personal connection and over six years of professional experience serving the Richmond and North Richmond communities, enabling them to effectively build partnerships with school districts, city staff, transportation planners, and community organizations to advance coordinated strategies that improve the built environment and reduce injury risk.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources*

that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.

The Project Lead, Contra Costa Health's (CCH) Building Healthy Communities (BHC) Program, will manage implementation through a structured, team-based approach that ensures strong oversight, coordination, and delivery of all project components. The Program Manager/Project Lead (0.25 FTE) will provide overall leadership, including grant management, budgeting, reporting, and coordination with the Air District, school district partners, and community stakeholders. The Senior Health Education Specialist (0.25 FTE) will support program coordination, stakeholder engagement, and alignment across school and community-based activities, including partnerships with West Contra Costa Unified School District and local agencies. The Health Education Specialist (0.50 FTE) will lead direct program implementation, including delivery of bicycle and pedestrian safety education, outreach, event coordination, and hands-on trainings. Together, this staffing structure prioritizes direct service delivery while maintaining sufficient administrative and strategic oversight to ensure timely and effective project implementation.

The Project Lead will leverage existing organizational infrastructure and partnerships to support project success and sustainability. Additional resources include established Street Smarts Contra Costa safe routes to school curriculum, existing relationships with school districts and community-based organizations, and internal coordination with CCH communications, finance, and administrative teams to support outreach, reporting, and fiscal compliance. The project lead will also enhance program reach, support staffing capacity, and ensure alignment with broader county and regional transportation safety initiatives. This coordinated approach ensures efficient use of resources, avoids duplication of efforts, and strengthens long-term program sustainability beyond the grant term.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.

- Indicate “N/A” if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

The following approvals are anticipated and currently pursued for the implementation of this project within school settings. CCH expects to have MOUs secured on an annual basis with school partners prior to our implementation of this project in year three of the grant term.

- The West Contra Costa Unified School District (WCCUSD) Non-Direct Service Agreements (required annually)
- WCCUSD Contract Request Form (as applicable)

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance. N/A*

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement. N/A*

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses. N/A*

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The proposed project may encounter several implementation barriers, including limited community comfort and trust that supports behavioral modification, competing priorities within school settings, and structural challenges related to the built environment in North Richmond. A historically disinvested community such as North Richmond may experience skepticism toward new programs or face barriers to participation, such as time constraints, language access, and transportation limitations. WCCUSD schools often operate within tight academic schedules that can limit availability for programming. External factors such as staffing capacity and coordination across multiple partners may also introduce uncertainty in project delivery, particularly for outdoor activities and community events. To address these challenges, the project will implement a proactive

and flexible approach grounded in community engagement and strong partnerships, including culturally responsive outreach, multilingual materials, and collaboration with trusted community-based organizations to build trust and increase participation. Coordination with school administrators will ensure alignment with school schedules and integration into existing programs, while established partnerships with local agencies will support efficient implementation. Contingency planning, such as alternative indoor activities and adaptable scheduling, along with ongoing feedback and data monitoring, will allow the project team to respond to challenges in real time and ensure effective delivery throughout the grant term.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Contra Costa Health | Building Healthy Communities | We will reduce transportation-related air pollution and improve public health outcomes in North Richmond by shifting students and families from single-occupancy vehicle trips of 3 miles or less to walking, biking, and rolling through Safe Routes to School education, hands-on bicycle safety training, and targeted outreach across six school sites, measurably reducing vehicle miles traveled and tailpipe emissions on high-injury network corridors serving North Richmond's most vulnerable road users.

Measurable Outcome	Indicator(s)
1. By the end of the grant term, reduce vehicle trips and transportation-related emissions in North Richmond by increasing active transportation participation among students and families at six school sites, demonstrated by a measurable increase in walk and roll counts and a reduction in single-occupancy vehicle drop-offs during school arrival and dismissal.	• Walk and roll counts at six school sites (baseline Year 1 of each school's participation, annual comparison) • Self-reported behavior changes by community residents; pre- and post-surveys; participation in family-focused events (baseline year 1; annual comparison; target: 20% mode shift to cycling for trips of 3 miles or less) • Estimated reduction in vehicle miles traveled and associated PM2.5 emissions, modeled from participation data and average trip distance for the school service area (modeled/proxy)
2. By the end of the grant term, demonstrate a measurable reduction in single-occupancy vehicle trips and associated transportation-related emissions in North Richmond, with a target of at least 35% increase in self-reported awareness of safe walking,	• Percentage of surveyed residents in the campaign zone reporting awareness of safe walking, biking, and rolling routes before and after campaign placement (pre/post community survey; target: 35% increase) • Percentage of post-campaign survey respondents in the campaign zone reporting a shift away from single-occupancy

biking, and rolling routes among residents in the campaign zone, achieved through three targeted billboard campaigns, three paid bus advertising placements, and community demonstration activities designed to shift residents away from vehicle travel.	vehicle trips for short-distance travel, as a proxy for transportation-related emissions reduction (target: 30%) ● Percentage increase in Safe Routes to School activities at 6 schools (target: 15%)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
By the end of the grant term, reduce vehicle trips of 3 miles or less, mitigating transportation-related emissions in North Richmond, by increasing active transportation participation among students and families at six school sites, demonstrated by a measurable increase in walk and roll counts and a reduction in single-occupancy vehicle drop-offs during school arrival and dismissal.	A.Secure & maintain six (6) executed school partnership agreements	1. Present the program project plan to school sites' administrative leadership to gain program approval	CC Health	WCCSD	June 30, 2029
		2. Present the project plan to LCBF stakeholders, the PTA group, WCCSD, and other LIA agency partners	CC Health	WCCUSD; Urban Tilth; Verde PTA; BAAQMD	June 30, 2029
		3. Maintain regular communication, documentation updates, and compliance monitoring to ensure alignment with project goals and timelines	CC Health	–	June 30, 2031
		4. Sign MOUs with six schools (updated annually)	CC Health	WCCUSD	July 30, 2029
	B. Conduct mode shift bicycle and pedestrian safety education in-school and after-school settings	1. Develop and implement a tailored youth e-bike safety curriculum that integrates safe riding practices, rules of the road, and environmental awareness.	CC Health	Safe Routes to School Partnership; Richmond Bicycle Pedestrian Advisory Committee	June 30, 2030
		2. Deliver two (2) hands-on e-bike safety trainings at participating school sites annually to include demonstrations and bike rodeos	CC Health	WCCUSD	June 30, 2031

		3. Deliver a minimum of two (2) presentations/workshops per school year utiltizing the Street Smart Contra Costa curriculum	CC Health	WCCUSD	June 30, 2031
	C. Implement hands-on outdoor active transportation activities that promote safer mobility and support reductions in transportation-related air pollution across participating school communities.	1. Deliver at least one (1) hands-on outdoor active transportation safety activities at participating school sites annually	CC Health	WCCUSD	June 30, 2031
		2. Engage students and families in climate resilient mobility education and demonstrations.	CC Health	WCCUSD, TWP, Urban Tilth	June 30, 2031
		3. Promote at least one (1) recognized climate/environmental awareness campaign annual at participating school sites	CC Health	WCCUSD, TWP, Urban Tilth	June 30, 2030
	D. Administer surveys to evaluate program activities and inform continuous improvement efforts.	1. Conduct baseline and endpoint assessment via student travel tally counts at each participating school	CC Health	–	June 30, 2029
		2.Distribute and collect participant satisfaction surveys to evaluate program activities	CC Health	–	June 30, 2029
		3. As requested, present survey reports to parent groups, school administration, school board, City Council, Bike and Pedestrian Advisory Committees, etc	CC Health	–	June 30, 2030
By the end of the grant term, demonstrate a measurable reduction in single-occupancy vehicle trips and associated	A. Coordinate and/or participate in family bicycling and walking events that encourage the adoption of alternative modes of travel to reduce carbon emissions and GHGs	1. Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The “Project Narrative” is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	North Richmond Community Resilience Initiative
Lead Applicant Name	County of Contra Costa
Project Location	North Richmond
Overall Funding Request	$14,902,316.02
Grant Term Request	5 Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Affordable Housing Retrofits
Project Lead	Community Housing Development Corporation
Project Location	North Richmond
Project Funding Request	$1,447,130.63

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The Affordable Housing Retrofits project rehabilitates three formerly vacant Las Deltas scattered-site duplexes — six units of long-vacant affordable housing — and upgrades the Corrine Sain Family and Senior Center in North Richmond. The Las Deltas scattered-site properties were originally built in the 1950s as part of a federally funded low-rent housing program and represented a central source of affordable housing for North Richmond for decades. When chronic underfunding made the properties no longer viable to operate, the Housing Authority of Contra Costa County (HACCC) stopped leasing units beginning in 2013, relocated remaining residents between 2017 and 2020, and subsequently disposed of the scattered-site properties through the HUD Rental Assistance Demonstration and Section 18 Demolition and Disposition process. CHDC purchased three duplexes through HACCC's community-inclusive disposition process, which prioritized mission-driven nonprofit developers with roots in North Richmond. These properties have sat vacant for years, and several have suffered from blight, vandalism, and deterioration that has affected the surrounding neighborhood. This project restores them to productive use as safe, climate-resilient, all-electric affordable homes, and opens a pathway for former Las Deltas residents and current North Richmond residents to purchase them under a 20-year affordability covenant restricting sale to households at or below 80% of area median income.

The full scope of work includes comprehensive interior renovation of all six units, replacement of exterior siding, windows, and insulation, and full electrification of heating, water heating, cooking, and appliances, along with rooftop solar photovoltaic systems with integrated battery storage. Indoor air quality improvements — including MERV-13 mechanical filtration and SAFE/Corsi-Rosenthal Box portable air-cleaning units — will be installed at both the duplexes and the Corrine Sain Family and Senior Center, reducing residents' and seniors' exposure to wildfire smoke, combustion byproducts, and fine particulate matter. All building upgrades will comply with California Title 24 and CALGreen standards. Together, CHDC's work and Richmond LAND's parallel rehabilitation of additional scattered-site properties represent a coordinated neighborhood-scale effort to reclaim blighted affordable housing, eliminate sources of community nuisance, and return displaced residents to homes that are modernized, energy-efficient, and climate resilient — a model with potential for replication across similarly situated communities.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

The project directly advances the Local Community Benefits Fund strategy to reduce air pollution and improve health outcomes. For the low-income households and seniors served by this project, aging gas-reliant housing stock and a community facility without

adequate filtration compound these outdoor pollution burdens indoors — the very spaces where residents spend the most time. This project eliminates on-site fossil fuel combustion entirely across three duplexes and the Corrine Sain Center, installs MERV-13 filtration and portable air-cleaning units at all sites, and provides rooftop solar with battery backup to ensure residents have a clean indoor environment during the acute wildfire smoke and grid outage events that North Richmond experiences regularly. The project's focus on formerly vacant, blighted properties ensures that these air quality and health benefits reach households that currently have no clean indoor refuge.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The proposed project is located in the North Richmond community in unincorporated Contra Costa County, which has experienced disproportionate impacts from air pollution and climate-related hazards. The project spans multiple sites strategically selected to maximize neighborhood-scale health and resilience benefits.

Project locations include:

- Las Deltas Scattered-Site Homes: Three existing duplex residential properties located within the Las Deltas neighborhood of Richmond. These sites will receive comprehensive all-electric renovations, building envelope improvements, solar and battery installations, and associated site upgrades.
- Corrine Sain Family and Senior Center**:** A community facility located in Richmond that serves seniors and families from surrounding neighborhoods. The Center will receive all-electric upgrades, solar and battery storage, electrical improvements, and enhanced indoor air-quality systems.

Specific street addresses will be provided during application follow-up or the grant agreement phase. All project sites are located within eligible Local Community Benefits Fund geographies and are coordinated to deliver cumulative air-quality, public-health, and climate-resilience benefits.

Although the map below depicts organizational ownership categories for scattered-site properties, it also identifies specific residential parcels; it is redacted by the Air District staff out of an abundance of caution to protect the privacy of current and future residents.

Figure 1: Las Deltas Scatter Sites, CHDC Project Sites

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Community engagement for the Affordable Housing Retrofits project has been shaped by ongoing community input through multiple channels connected to North Richmond's planning and governance structures, as well as direct engagement with the populations this project serves.

The North Richmond Municipal Advisory Council (MAC) provides a standing forum through which community members and stakeholders raise concerns and priorities related to neighborhood conditions, public health, and quality of life in North Richmond. MAC board meetings have surfaced recurring themes around air quality, housing conditions, and the need for community facilities that can serve as safe refuges during heat events and air quality emergencies — themes that directly informed the project's focus on all-electric upgrades, indoor air quality improvements, and resilience infrastructure.

At the Corrine Sain Family and Senior Center, engagement led by CHDC's Community Engagement Director and the Center's Resident Manager with seniors and Center staff produced the most direct evidence of community-identified need. Seniors who rely on the Center as a primary community gathering space expressed a clear and consistent need for air conditioning and for the Center to function as a designated cooling center during extreme heat events, a critical resource given the community’s asthma rates and the disproportionate health vulnerability of the senior population served. This community-identified priority directly shaped the project's inclusion of high-efficiency

HVAC and heat pump systems at the Center, along with the filtration and backup power investments that will allow it to serve as a gathering spot during both heat events and wildfire smoke episodes.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The Affordable Housing Retrofits project addresses environmental justice and public health challenges that are acute and well-documented in North Richmond. According to the EPA EJScreen Community Report, North Richmond ranks in the top 4% of census tracts nationally for proximity to hazardous sites, the top 5% for Superfund proximity, the top 12% for toxic releases to air, the top 16% for diesel particulate matter, and the top 18% for air toxics cancer risk. The California Environmental Protection Agency places every community bordering the Chevron facility in the 99th percentile statewide for asthma rates, and the area experiences 50 times the rate of particulate matter emissions from diesel fuel compared to the rest of California. The community is 93% people of color — 68% Hispanic and 16% Black — with a per capita income of $33,747, 38% of residents considered low-income, and 20% of households with limited English proficiency. Ten percent of residents are 65 or older, and 12% live with a disability — populations with the highest vulnerability to air pollution exposure and the least capacity to protect themselves during acute events.

These outdoor burdens are compounded indoors. The Las Deltas duplexes were built in the 1950s and rely on gas appliances without adequate ventilation or filtration, meaning the six low-income households who will occupy the renovated units are currently exposed to combustion byproducts — including nitrogen dioxide and fine particulate matter — in the spaces where they spend the most time.

Seniors and families at the Corrine Sain Family and Senior Center, which serves an estimated 150-200 people weekly through their food bank and senior lunch programs, face the same risks during peak-use hours. These vulnerabilities are acute during wildfire smoke events and refinery incidents — conditions the community experienced in November 2023, when the Chevron refinery produced visible emissions for nearly 12 hours, triggering three BAAQMD notices of violation, with no clean indoor refuge available to residents in aging, unfiltered buildings.

The project addresses these conditions directly and comprehensively. Full electrification eliminates on-site fossil fuel combustion and the combustion byproducts it generates. MERV-13 mechanical filtration and SAFE/Corsi-Rosenthal Box portable air-cleaning units reduce indoor particulate matter exposure by up to 90% during wildfire smoke events. Rooftop solar with integrated battery backup ensures these protections remain

operational during grid outages, which disproportionately affect overburdened communities during extreme weather events.

Progress toward community impact will be demonstrated through measurable outcomes tied directly to the conditions described above. Pre- and post-installation indoor NO_2 measurements will document reductions of 30–70% across all duplex units and the Corrine Sain Center, and pre- and post-installation PM2.5 measurements will document reductions of 50–75% under typical conditions and up to 90% during wildfire smoke events — translating abstract pollution statistics into verified improvements in the indoor environments where residents and seniors spend their daily lives. Verified backup power capacity of at least 24 hours at each site will confirm that protections remain available during the grid outages and smoke events that North Richmond experiences regularly. Post-occupancy surveys administered with residents and Center users will capture self-reported improvements in indoor air quality, thermal comfort, and confidence during smoke events, grounding the technical measurements in the lived experience of the people the project serves. Taken together, these outcomes will demonstrate that the project has delivered meaningful, measurable reductions in the indoor air pollution burden facing some of North Richmond's most vulnerable residents — and that CHDC's work, alongside Richmond LAND's parallel rehabilitation of additional scattered-site properties, represents a replicable model for restoring blighted former public housing as climate-resilient, community-rooted affordable homeownership.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

During implementation, CHDC will engage Corrine Sain Family and Senior Center users and prospective duplex buyers through a structured, bilingual communication approach tied to project milestones. CHDC's Community Engagement Director will manage day-to-day community communication, ensure that implementation progress is shared with affected residents and Center users in a timely and accessible manner, and serve as the primary point of contact for questions and concerns throughout the construction period.

Prior to construction at the Corrine Sain Center, CHDC will conduct informational meetings with Center users and staff to explain the project scope, construction timeline, temporary impacts on Center programming, and what users can expect during the construction period. Bilingual project information materials in English and Spanish will be distributed at the Center. For the Las Deltas duplexes, CHDC's Homebuyer Department will engage prospective income-qualified buyers as they are identified and screened, ensuring that buyers understand the full scope of improvements, the systems installed in their homes, and their responsibilities as homeowners prior to closing.

Progress updates will be shared with Center users and staff at key construction milestones through on-site walkthroughs that explain completed work and upcoming activities. CHDC will administer a mid-project feedback survey with Center users and staff at approximately the midpoint of the construction period to assess communication quality, flag emerging concerns, and identify any adjustments needed to construction sequencing or accommodations for ongoing Center programming. Feedback collected through surveys and direct conversations will be reviewed jointly by the Community Engagement Director and Project Manager. Where feedback identifies concerns requiring a response, the Project Manager will determine whether adjustments to implementation are warranted, document the decision and rationale, and communicate outcomes back to affected Center users and staff. Any resulting changes to implementation will be noted in grant progress reports submitted to BAAQMD.

At project close, CHDC will deliver individual system orientation sessions to each duplex buyer household and to Corrine Sain Center staff, covering the operation and maintenance of all new systems in English and Spanish, and will provide written system guides for each site. Duplex buyers will receive orientation on heat pump, filtration, solar, and battery systems prior to taking possession of their homes, ensuring they are equipped to operate and maintain all improvements from day one.

Across the grant term, implementation progress and community feedback will be elevated to the North Richmond Coalition's quarterly advisory committee meetings, which bring together CHDC, Urban Tilth, The Watershed Project, Richmond LAND, and Contra Costa County to align priorities and track progress across the full initiative. This structure ensures that community input at the project level informs decision-making at the initiative level.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

CHDC will deliver integrated all-electric upgrades, clean energy, and indoor air quality improvements across three Las Deltas duplexes and the Corrine Sain Family and Senior Center in North Richmond. The project will eliminate on-site fossil fuel combustion, reduce indoor air pollution exposure for six low-income households and an estimated 150-200 seniors and families served weekly at the Center, install on-site renewable energy with backup power capacity, and improve housing quality and durability with no reduction in affordable units and no permanent displacement of existing residents.

The project delivers three measurable outcomes. Outcome 1 reduces indoor air pollution exposure for residents of all three duplexes and Center users by eliminating all gas combustion across both sites — verified through the decommissioning of all gas heating, water heating, cooking, and appliance systems — and installing MERV-13 mechanical filtration and SAFE/Corsi-Rosenthal Box portable air-cleaning systems in residential units and Center spaces, targeting a 30–70% reduction in indoor NO_2

concentrations and a 50–75% reduction in indoor PM2.5 under typical conditions. Outcome 2 installs rooftop solar photovoltaic systems with integrated battery storage across all sites, providing a minimum 24-hour backup power capacity during grid outages and wildfire smoke events, while reducing annual greenhouse gas emissions. Modeled CO_2 reductions will be calculated using pre-installation gas consumption data and California grid emissions factors, along with household energy burden for duplex residents, with post-installation utility data collected in Year 2 to verify modeled savings. Outcome 3 improves housing quality and durability for duplex residents through comprehensive retrofits. We will engage residents and Center users throughout implementation through bilingual communication and structured feedback, ensuring all beneficiaries receive orientation on new building systems and that long-term affordability protections are documented for all Las Deltas properties prior to sale. Indoor NO_2 concentrations are expected to decrease by 30–70%, while PM2.5 concentrations are expected to decrease by 50–75% under typical conditions and up to 90% during wildfire smoke events in filtered spaces.

CHDC serves as project lead, responsible for all planning, coordination, procurement, permitting, community engagement, and grant reporting. An IAQ Consultant will conduct pre- and post-installation indoor air quality assessments and support filtration system design. An Energy Consultant will establish the pre-installation utility baseline, develop the energy model, and calculate final GHG and energy savings at project close. A Solar Developer and Solar Contractor will design, permit, and install all photovoltaic and battery storage systems. A licensed General Contractor will manage all construction activities across both site types, including electrification, building envelope upgrades, and interior renovations. Contra Costa County will issue all required permits and conduct inspections. All work will comply with California Title 24 and CALGreen standards.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The total BAAD funds requested for the Affordable Housing Retrofits project are $1,447,130.63, comprising $149,255.63 from the County of Contra Costa for grant administration and $1,297,875 from CHDC for project implementation across three Las Deltas duplexes and the Corrine Sain Family and Senior Center.

The project budget reflects the true cost of comprehensive gut rehabilitation of severely blighted, long-vacant structures built in the 1950s. These properties require full systems replacement across every major building component simultaneously — electrical, mechanical, plumbing, building envelope, interior finishes, appliances, solar photovoltaic systems with battery storage, and indoor air quality systems. Completing this scope of work in a single, integrated intervention across the grant term is more cost-effective

than phased rehabilitation across multiple funding cycles, which would incur repeated mobilization costs, extended vacancy, and continued blight impacts on the surrounding neighborhood. CHDC's budget was developed based on its direct experience delivering affordable housing rehabilitation in the Bay Area and reflects realistic costs for this level of intervention in Contra Costa County. Prevailing wage requirements apply to construction activities and are reflected in the construction cost estimates.

CHDC's direct costs total $1,038,300 and are organized around the two site types. Construction costs total $683,000, covering solar and battery backup installation and a full all-electric upgrade at the Corrine Sain Center ($400,000), solar and battery backup installation and full all-electric upgrades across the three duplexes ($230,000), indoor air quality system installation at the Center ($35,000), and indoor air quality kit installation across the six duplex units ($18,000). Materials and equipment total $118,800, including six heat pump systems for the three duplexes ($15,000), a high-efficiency HVAC system for the Corrine Sain Center ($80,000), high-efficiency appliances for six duplex units ($13,800), and high-efficiency stove, freezer, and refrigerator for the Center ($10,000). Personnel costs of $136,500 cover a Project Manager at 0.5 FTE including fringe, responsible for overall coordination, contractor management, reporting, and milestone tracking across the grant term. Professional Services total $100,000, covering an IAQ Consultant to conduct pre- and post-installation air quality assessments and support filtration system design ($50,000) and a Solar Consultant to plan and evaluate solar energy needs across all sites ($50,000) — representing approximately 9.6% of CHDC's direct costs, well under the 25% application-level cap.

Indirect costs are $155,745 (15% of direct costs, at the allowable cap), covering administrative overhead. A contingency of $103,830 (10% of direct costs) is included to address construction cost variability across long-vacant residential and community facility sites, where unforeseen conditions — including structural issues, hazardous materials, and utility service complications are common in properties of this age and condition.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The Affordable Housing Retrofits project is consistent with and directly advances community, regional, and statewide initiatives focused on reducing air pollution, improving public health, and accelerating all-electric building conversions in overburdened communities.

At the community level, the project aligns with the AB 617 Community Air Protection Program's Portland, Tara Hills, and Coronado Avenue (PTCA) Community Emissions Reduction Plan (CERP), which identifies North Richmond as a priority community for air

quality intervention and establishes emissions reduction strategies targeting indoor and outdoor pollution sources. The project's full all-electric building upgrades, MERV-13 filtration, and portable air-cleaning system installations directly implement CERP strategies to reduce residents' exposure to combustion byproducts and fine particulate matter in the community's most pollution-burdened households and facilities. North Richmond's designation as an AB 617 community reflects a documented, community-driven determination that concentrated investment in emissions reduction is warranted — and this project delivers that investment in the specific residential and community facility settings where exposure is most acute.

The project also advances the Las Deltas Redevelopment initiative, which has explicit documented support from Supervisor Gioia's office, HACCC, the Contra Costa County Department of Conservation and Development, and the North Richmond Municipal Advisory Council. That initiative established the community-inclusive framework through which CHDC acquired these properties and committed to restoring them as climate-resilient affordable housing. This project fulfills that commitment, and its implementation reinforces the broader neighborhood stabilization and health improvement goals that local government and community stakeholders have endorsed through the disposition process.

At the regional level, the project advances BAAD's goals under the Bay Area Clean Air Plan and the Local Community Benefits Fund itself, which was established to direct penalty funds toward emissions reduction and public health improvements in communities like North Richmond that bear disproportionate pollution burdens. The project's electrification and filtration investments reduce criteria pollutant emissions associated with gas appliances and lower greenhouse gas emissions, directly contributing to regional air quality improvement targets.

At the statewide level, the project aligns with California's all-electric building decarbonization, including compliance with Title 24 and CALGreen standards, expansion of all-electric buildings, and integration of solar photovoltaic systems with battery storage. North Richmond's designations under SB 535 and SB 1000 — based on its CalEnviroScreen score ranking in the 96th percentile overall in California — establish it as a priority community for climate and environmental justice investment under state policy frameworks, further affirming the appropriateness of this project as a target for LCBF funding.

CAPACITY (10 points)

11. *Describe the Project Lead’s experience managing and implementing projects of similar scope and size.*

The Community Housing Development Corporation of North Richmond (CHDC) is a Bay Area nonprofit specializing in real estate development, homebuyer services, and supportive services for low- and moderate-income households, primarily those at or below 80% of area median income. CHDC serves communities across the San Francisco Bay Area, including Oakland, Richmond, Vallejo, and Berkeley, with a mission focused on creating vibrant, affordable communities free of blight, crime, and pollution

where residents have access to housing, healthcare, education, and economic opportunity.

CHDC brings direct, site-specific experience to this project through its ongoing Las Deltas redevelopment work. In coordination with the Housing Authority of Contra Costa County and Richmond LAND, CHDC has been engaged in the acquisition and planned redevelopment of the Las Deltas scattered-site properties surrounding Verde K-8 School in North Richmond — the same properties that are the subject of this application. This work has required multi-party coordination with a public housing authority, navigation of HUD-approved preference policies for displaced residents, and active community engagement with former Las Deltas residents and North Richmond stakeholders through multiple community meetings. CHDC's Homebuyer Department is fully operational and equipped to recruit, screen, counsel, and provide down payment assistance to income-qualified buyers, which is the intended post-renovation disposition pathway for the Las Deltas units in this project.

CHDC has demonstrated its technical capacity to deliver rehabilitation, all-electric upgrades, and solar-related construction projects through several completed developments in North Richmond and the surrounding region. At the Community Heritage Senior Apartments, CHDC successfully installed a full on-site solar photovoltaic system designed to offset common area energy costs, while the building itself is largely all-electric, with all systems operating on electricity except for a centralized hot water boiler. Similarly, the Heritage Point Apartments project reflects CHDC’s early adoption of all-electric strategies, with primarily all-electric residential units aside from the central hot water system. While full building all-electric upgrades is a more recent focus for CHDC—with limited all-electric projects delivered prior to 2022—the organization has since made it a standard practice for all current and future developments. This transition is demonstrated by recently completed projects such as the Legacy Court Townhomes in North Richmond, a 42-unit all-electric development, and Friendship Senior Housing in Oakland, a 50-unit all-electric community incorporating solar energy systems, completed in 2026. In addition, CHDC has substantial experience delivering large-scale residential construction, including Parkway Estates, an approximately 87-home affordable housing development. Together, these projects provide clear, concrete evidence of CHDC’s ability to integrate renewable energy, advance all-electric buildings in affordable housing, and successfully manage complex construction projects at scale.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

Project implementation will be managed by CHDC's Project Manager at 0.5 FTE, including fringe benefits, across the full grant term. The Project Manager will be responsible for overall project coordination, contractor procurement and management, permitting, financial tracking, milestone monitoring, and grant reporting. CHDC's

Community Engagement Director will manage all community-facing communication, coordinate bilingual outreach at the duplex sites and Corrine Sain Center, and administer mid-project feedback processes throughout the construction period.

CHDC will engage licensed contractors and specialized consultants — including an IAQ Consultant, Solar Consultant, and licensed General Contractor — to deliver the technical scope of work, and will coordinate with Contra Costa County on permitting and inspections throughout. All construction activities will be managed under formal subcontract agreements with scope, schedule, and performance requirements tied to grant milestones.

Upon project completion, the three Las Deltas duplexes will be sold to income-qualified buyers at or below 80% of area median income, consistent with the 20-year affordability covenant on the properties. Former Las Deltas residents and current North Richmond residents will be prioritized as buyers. All net proceeds from the sales are retained by CHDC and reinvested directly into its affordable housing mission, with a particular emphasis on serving North Richmond. Reinvested proceeds seed future development activities, support additional housing rehabilitation or production, and sustain programs that increase housing accessibility for low- and moderate-income households, including closing cost and down payment assistance. A portion of proceeds is directed specifically toward CHDC's Real Estate Development department to maintain a pipeline of affordable housing opportunities in the community. Where sales generate value above the cost basis of grant-funded renovations, that value is captured by CHDC and redeployed to deepen community benefit rather than distributed externally, ensuring long-term public return on the grant investment. CHDC's model functions as a revolving reinvestment strategy in which proceeds are recycled back into mission-driven activities that extend the impact of the initial investment beyond the grant term.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

Required permits for the Affordable Housing Retrofits project include building permits, electrical permits, mechanical permits, and solar installation permits for work at each of the three Las Deltas duplex sites and the Corrine Sain Family and Senior Center. All permits will be obtained through standard Contra Costa County Building Inspection Division processes. Utility interconnection approvals from PG&E will be required for rooftop solar photovoltaic and battery storage installations at all sites and will be pursued concurrently with permit applications following execution of the grant agreement.

For the three Las Deltas duplexes, CHDC submitted planning approval applications to Contra Costa County in March 2026 and the process is advancing without issue. This early initiation of the permitting process demonstrates project readiness and positions construction to begin promptly following grant award and execution of the grant agreement.

For the Corrine Sain Family and Senior Center, permit applications have not yet been initiated, pending grant award. Based on CHDC's experience with comparable rehabilitation projects in Contra Costa County and the straightforward nature of the permit scope for an existing facility, all required permits for the Center are expected to be obtainable well within the grant term. The project's Measurable Outcomes Plan allocates the first eight months of the grant term to pre-construction activities including design finalization, permitting, and procurement across all sites, providing adequate runway to complete the Center's permitting process before construction mobilization.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

CHDC has completed an EPA environmental review for the project and no additional environmental compliance requirements were identified. No further CEQA documentation is required for this project.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

CHDC has site control for all project locations, including the three Las Deltas scattered-site duplexes and the Corrine Sain Family and Senior Center. The Las Deltas duplexes were purchased by CHDC from HACCC and are owned by CHDC. The deeds for the duplexes and Corrine Sain Family and Senior Center will be submitted prior to the beginning of the performance period.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Operations and maintenance for project improvements will be assured through long-term ownership and property management structures tailored to each project site.

For the three Las Deltas duplexes, the renovated units will be sold to income-qualified buyers at or below 80% of area median income following project completion, consistent with the 20-year affordability covenant restricting the properties under HACCC's disposition terms. Upon sale, homeowners will assume responsibility for ongoing operations and maintenance of all building systems. Prior to transfer, the homes will be delivered with new, high-efficiency, all-electric systems, rooftop solar photovoltaic installations with battery storage, and durable building envelope upgrades designed to minimize maintenance requirements and reduce long-term operating costs. Each buyer will receive individual system orientation and written system guides covering operation, maintenance schedules, and warranty utilization for all installed systems, ensuring homeowners are equipped to maintain improvements effectively over time.

For the Corrine Sain Family and Senior Center**,** ongoing operations and maintenance will continue to be provided by the existing property management company, consistent with current practice. The Center’s upgraded systems—including high-efficiency heat pumps, electrical improvements, solar and battery storage, and indoor air-quality measures—will be incorporated into established facility maintenance plans and budgets. Energy-cost savings resulting from electrification and on-site renewable generation are expected to help offset ongoing operational expenses and support long-term sustainability beyond the grant term.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The primary barriers associated with this project are characteristic of comprehensive rehabilitation of long-vacant residential properties built in the 1950s and are anticipated and plannable rather than speculative.

The first barrier is the potential presence of hazardous materials — including lead paint and asbestos — common in residential structures of this age. A hazardous materials assessment will be completed during the pre-construction phase, and any required abatement will be addressed within the project's 10% contingency allocation, which is specifically sized to cover unforeseen conditions of this type.

The second barrier is construction cost variability and supply chain uncertainty across a multi-site project. CHDC will mitigate this risk through early contractor engagement and equipment procurement during the pre-construction phase, phased construction

scheduling that allows flexibility in sequencing across sites, and the contingency allocation described above.

The third barrier is coordination in occupied and community-facing facilities. The Corrine Sain Family and Senior Center serves an estimated 150 people weekly, and construction activities must be sequenced to minimize disruption to ongoing programming. CHDC will address this through early coordination with Center staff on construction scheduling, phased work sequencing that maintains core facility operations throughout the construction period, and the bilingual resident and user communication approach described in the Community Engagement section.

Overall, CHDC considers the project feasible, implementation-ready, and structured to address known risks proactively within the allocated budget and grant term.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	CHDC | Affordable Housing Retrofits | Deliver integrated all-electric, clean energy, and indoor air quality improvements across three existing Las Deltas duplexes and the Corrine Sain Family and Senior Center in North Richmond that eliminate on-site fossil fuel combustion, measurably reduce residents' indoor exposure to NO_2 and PM2.5, provide reliable backup power during wildfire smoke events and grid outages, and improve housing quality and durability for low-income households and seniors. All improvements will maintain existing housing capacity with no displacement and will comply with California Title 24 and CALGreen standards.

Measurable Outcome	Indicator(s)
1. By the end of the grant term, measurably reduce indoor air pollution exposure for residents of three Las Deltas duplexes and users of the Corrine Sain Family and Senior Center by eliminating all on-site fossil fuel combustion and installing high-efficiency mechanical and portable filtration systems, targeting a 30–70% reduction in indoor NO_2 concentrations and a 50–75% reduction in indoor PM2.5 under typical conditions, and up to 90% during wildfire smoke events.	• Number of gas heating, water heating, cooking, and appliance systems decommissioned and replaced with all-electric systems across three Las Deltas duplexes and the Corrine Sain Family and Senior Center (target: zero remaining gas systems at project close) • Number of HVAC systems upgraded to MERV-13 filtration and SAFE/Corsi-Rosenthal Box units deployed in residential and Center spaces
2. By the end of the grant term, install rooftop solar photovoltaic systems with integrated battery storage and complete comprehensive building all-electric retrofits across three Las Deltas duplexes and the Corrine Sain Family and Senior Center, reducing annual greenhouse gas emissions and providing a	• Total solar PV capacity installed across all sites (kW) and utility interconnection approvals obtained • Number of battery storage systems installed and backup power duration verified through testing (target: minimum 24-hour critical load coverage per site) • Modeled annual energy savings (kWh) and estimated household energy burden reduction for Las Deltas duplex residents

minimum 24-hour backup power capacity during grid outages and emergencies for residents and Center users.	• Modeled annual reduction in CO_2 emissions (MT CO_2e) attributable to full all-electric retrofits of heating, water heating, cooking, and appliances across three Las Deltas duplexes and the Corrine Sain Family and Senior Center (target: modeled estimate reported at project close)
3. By the end of the grant term, improve housing quality, durability, and habitability for residents of three Las Deltas duplexes through comprehensive building envelope upgrades, interior renovations, and site improvements — with no reduction in affordable units and no permanent displacement — while engaging residents and Corrine Sain Family and Senior Center users throughout implementation through bilingual communication and structured feedback, ensuring the community understands and can effectively use all new building systems.	• Number of residential units renovated with new siding, windows, insulation, interior finishes, and all-electric appliances (target: 8 units across 4 duplexes) • Affordability covenants, resale restrictions, or deed restrictions documented for all Las Deltas duplexes to protect long-term community benefit • Number of renovated units verified as meeting or exceeding California Title 24 insulation, air sealing, and ventilation requirements, reducing infiltration of outdoor pollutants including wildfire smoke and diesel particulate matter (target: all six units across three duplexes)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
By the end of the grant term, measurably reduce indoor air pollution exposure for residents of three Las Deltas duplexes and users of the Corrine Sain Family and Senior Center by eliminating all on-site fossil fuel combustion and installing high-efficiency filtration, targeting 30–70% NO_2 reduction and 50–75% PM2.5 reduction under typical conditions, and up to 90% during wildfire smoke events.	A. Pre-installation air quality baseline established and electrification and filtration systems designed and permitted	Collect baseline indoor NO_2 and PM2.5 measurements at all duplex units and Corrine Sain Center spaces; document priority rooms and systems for intervention	CHDC	IAQ Consultant	Month 2
		Finalize electrification designs, MERV-13 filtration specifications, and Corsi-Rosenthal Box unit quantities and placement for all sites; complete construction documents	CHDC	Design Team, IAQ Consultant	Month 5
		Obtain all required building, electrical, and mechanical permits from Contra Costa County; procure MERV-13 filters and Corsi-Rosenthal Box components for all sites	CHDC	Local Permitting Agencies, Vendors	Month 8
	B. Gas systems decommissioned, all-electric systems installed, and filtration systems deployed across all sites	Decommission gas heating, water heating, and cooking systems at all three duplexes and Corrine Sain Center; complete utility service transitions	Contractor	Utility Provider	Month 12
		Install heat pump HVAC and water heating systems; upgrade electrical panels and wiring; install all-electric cooking appliances at duplexes and complete all-electric kitchen transition at Corrine Sain Center	Contractor	HVAC Subcontractor, Electrical Subcontractor,	Month 16

				Appliance Vendors	
		Install MERV-13 filters in all HVAC systems; deploy SAFE/Corsi-Rosenthal Box units in designated duplex and Center spaces; train residents and Center staff on filter maintenance and portable unit use with bilingual guides	Contractor/ CHDC	IAQ Consultant, Facility Managers	Month 17
	C. Post-installation air quality measured, results documented, and community informed of health benefits achieved	Conduct post-installation indoor NO_2 measurements at all sites; compare to baseline and document reduction against 30–70% target	CHDC	IAQ Consultant	Month 20
		Conduct post-installation indoor PM2.5 measurements under typical conditions and during a wildfire smoke event or elevated-smoke simulation; document reduction against 50–75% typical and up to 90% smoke event targets	CHDC	IAQ Consultant	Month 22
		Share air quality results with residents and Center users in accessible, bilingual format; submit NO_2 and PM2.5 reduction documentation to BAAQMD as part of grant reporting	CHDC	IAQ Consultant	Month 24

By the end of the grant term, install rooftop solar photovoltaic systems with integrated battery storage and complete comprehensive building all-electric across three Las Deltas duplexes and the Corrine Sain Family and Senior Center, reducing annual GHG emissions and providing a minimum 24-hour backup power capacity during grid outages and emergencies.	A. Pre-project energy baseline established and solar, battery, and all-electric systems designed and approved	Compile 12 months of pre-project utility billing data for all duplex and Center sites; develop energy models projecting post-installation kWh savings and GHG reductions by site and system type	CHDC/ Energy Consultant	Utility Providers	Month 4
		Conduct structural and electrical feasibility assessments for rooftop solar at all sites; finalize solar PV and battery system sizing; submit utility interconnection applications	Solar Developer	Electrical Engineer, Utility Provider	Month 5
		Secure utility interconnection approvals and solar installation permits; procure solar PV and battery equipment for all sites	Solar Developer	Utility Provider, Local Permitting Agencies	Month 9
	B. Solar PV and battery storage systems installed, commissioned, and backup power capacity verified at all sites	Install rooftop solar PV systems at all three duplexes and Corrine Sain Center	Solar Contractor	Electrical Subcontractor	Month 14
		Install and commission battery storage systems integrated with solar PV; complete utility inspections and permission-to-operate	Solar Contractor	Electrical Subcontractor, Utility Provider	Month 17

		Test backup power functionality under simulated outage conditions to verify minimum 24-hour critical load coverage at each site; provide resident and Center staff orientation on solar monitoring, backup operation, and utility billing	Solar Contractor/ CHDC	CHDC	Month 19
	C. Post-installation energy performance verified, GHG reductions calculated, and results reported	Collect 6 months of post-installation utility data at all sites; compare actual energy use and costs to pre-project baseline	CHDC	Utility Providers, Energy Consultant	Month 22
		Calculate final annual energy savings (kWh), GHG reductions (MT CO_2e), and estimated household energy burden reduction for Las Deltas duplex residents based on pre- and post-installation utility costs	Energy Consultant	CHDC	Month 24
		Submit final energy and GHG reduction report to BAAQMD; document Corrine Sain Center projected energy cost savings for long-term sustainability planning	CHDC	Energy Consultant	Month 24
By the end of the grant term, improve housing quality, durability, and habitability for residents of three Las Deltas duplexes	A. Resident engagement infrastructure established and building envelope and exterior improvements	Establish bilingual resident communication protocol; conduct pre-construction informational meetings at each duplex site and Corrine Sain Center explaining scope, timeline, resident	CHDC	Contractor	Month 6

through comprehensive building envelope upgrades, interior renovations, and site improvements — with no reduction in affordable units and no permanent displacement — while engaging residents and Corrine Sain Center users throughout implementation through bilingual communication and structured feedback, ensuring the community can effectively use all new building systems.	completed at all duplex sites	responsibilities, and temporary impacts			
		Replace exterior siding, windows, and doors at all three duplexes; install insulation meeting or exceeding Title 24 requirements; complete exterior site improvements including landscaping, permeable paving, carports, and accessibility upgrades	Contractor	Suppliers, Energy Consultant	Month 14
		Conduct exterior inspections; administer mid-project feedback survey with residents and Center users on construction experience and communication quality; document and respond to community input	CHDC	Local Inspectors	Month 15
	B. Interior renovations completed, units returned to service, and affordability protections documented	Renovate kitchens and bathrooms at all duplex units; install new fixtures, finishes, and high-efficiency all-electric appliances; complete final interior inspections and punch-list items	Contractor	Subcontractors, Vendors, Local Inspectors	Month 17
		Obtain certificates of occupancy for all renovated units; return units to service with no net reduction in affordable housing capacity	CHDC	Property Management, Local Inspectors	Month 18

		Document all affordability covenants, resale restrictions, or deed restrictions applicable to Las Deltas duplexes post-renovation to protect long-term community benefit; file with appropriate authorities	CHDC	Legal Counsel	Month 20
	C. Resident and Center user system orientation delivered and post-project outcomes documented	Deliver individual system orientation sessions with each duplex household and Corrine Sain Center staff covering heat pump, filtration, solar, and battery operation, maintenance schedules, and warranty utilization in English and Spanish	CHDC	Contractors, Solar Developer	Month 21
		Administer post-occupancy survey with residents and Center users measuring satisfaction, system confidence, and self-reported improvements in indoor air quality, thermal comfort, and energy costs	CHDC		Month 23
		Submit final project report to BAAQMD documenting all measurable outcomes, community engagement activities, lessons learned, and long-term O&M plan for all sites	CHDC	Energy Consultant, IAQ Consultant	Month 24

Project Name: Affordable Housing Retrofits
Lead Applicant Name: County of Contra Costa
Term for this budget (in years): 5

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	County Staff	County staff to manage grant administration activities for project. Includes grant managment staff and accounting staff for grant reporting.	$129,787.50

Project Narrative

Instructions:

- The “Project Narrative” is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	North Richmond Community Resilience Initiative
Lead Applicant Name	County of Contra Costa
Project Location	North Richmond
Overall Funding Request	$14,902,316.02
Grant Term Request	5 Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	North Richmond Ecovillage
Project Lead	Richmond LAND
Project Location	Unincorporated, North Richmond CA
Project Funding Request	$1,012,141.25

Air District staff decided to redact the residential street number out of an abundance of caution to protect the privacy of future residents.

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Richmond LAND requests $1,012,141.25 to complete Phase 1 of the North Richmond Ecovillage, a healthy homes and climate resilience initiative targeting four formerly vacant duplexes at [redacted] Giaramita Street in North Richmond's Las Deltas neighborhood. These properties were selected because they sit at the intersection of cumulative environmental burdens, bounded by Interstate 80 and the Chevron Richmond Refinery corridor, in one of Contra Costa County's most economically disinvested census tracts. As part of the rehabilitation of the four duplexes into eight permanently affordable homes, this project will conduct retrofits that will eliminate indoor air pollution from fossil fuel combustion by replacing all gas appliances with fully electric systems, including heat pump HVAC, heat pump water heaters, and induction stoves. These upgrades will directly reduce exposure to nitrogen dioxide (NO_2) and PM2.5 for 16 residents and will lower greenhouse gas emissions across all eight units. Rooftop solar photovoltaic systems and battery storage installed at all four duplexes will provide reliable backup power during grid outages, wildfire smoke events, and extreme heat emergencies, improving health resilience for seniors and households with respiratory vulnerabilities.

The 4-duplex, 8-unit scope is Phase 1 of a larger community land trust ecovillage vision, designed as a pilot-scale demonstration that will establish proof of concept, build a replicable financing and governance model, and position North Richmond for future phases of investment. The North Richmond Ecovillage integrates permanently affordable homeownership through Richmond LAND's Community Land Trust model with green infrastructure, shared community spaces, and resident stewardship. This combination ensures that the health and economic benefits of electrification and clean energy reach the households most burdened by environmental inequity, while creating a blueprint for community-controlled, climate-resilient development across the region.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

The North Richmond Ecovillage directly advances Strategy 1, reducing air pollution and improving health outcomes, by fully electrifying four rehabilitated duplexes at [redacted] Giaramita Street in North Richmond's Las Deltas neighborhood. These eight homes were selected because they sit within one of Contra Costa County's highest cumulative burden areas, where residents face compounding exposure to diesel particulate matter from Interstate 80, refinery emissions from the Chevron Richmond corridor, and indoor air pollution from aging gas appliances. By replacing all fossil fuel combustion systems with heat pump HVAC, heat pump water heaters, and induction stoves, the project will eliminate the primary sources of indoor NO_2 and PM2.5 exposure for 8 households. Rooftop solar and battery storage will provide clean backup power during grid outages, wildfire smoke events, and extreme heat emergencies,

directly protecting seniors and residents with respiratory conditions.

Permanently affordable homeownership through Richmond LAND's Community Land Trust (CLT) model ensures that the health benefits of this investment reach and remain with the households most burdened by environmental inequity. Without affordable ownership structures, clean energy upgrades risk accelerating displacement, pricing out the very residents the project is designed to protect. The CLT model provides the health benefits while ensuring that low-income North Richmond residents benefit from the long-term value of all-electric buildings and solar energy.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The North Richmond Ecovillage Phase 1 is located at [redacted] Giaramita Street in unincorporated North Richmond, on the site of four duplexes (8 units) that were part of the Las Deltas scattered-site public housing development decommissioned by the Housing Authority of Contra Costa County. These properties are currently vacant and boarded up — the former homes of North Richmond's most vulnerable residents, now an opportunity to demonstrate that community-controlled land, permanent affordability, and clean energy retrofits can be delivered at the same site where public housing failed.

Giaramita Street is a 5-block corridor and one of North Richmond's most actively used community connectors. The project site anchors the north end of the street, which links Verde Elementary School to Wildcat Creek, passes the senior center parking lot where the North Richmond Municipal Advisory Council meets, and ends at Shields Reid Park and Community Center — all within a ten-minute walk.

Air District staff redacted the map because it identifies specific residential parcels and ownership categories, including private buyers.

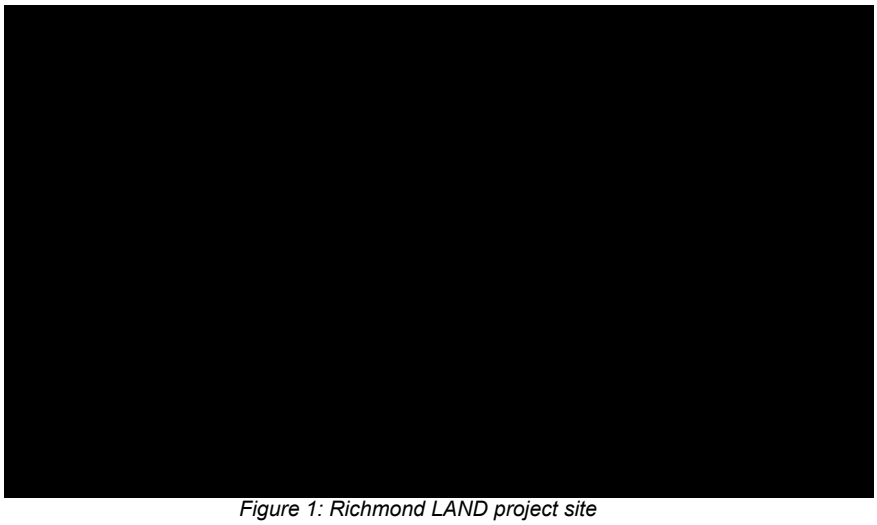

Figure 1: Richmond LAND project site

The Las Deltas site was selected because it sits at the nexus of cumulative environmental burdens and decades of disinvestment. It is bordered by Interstate 80 to the south and the Chevron Richmond Refinery corridor to the east and sits squarely in one of the most economically disinvested census tracts in Contra Costa County and within the AB 617 PTCA

community air monitoring zone. The 4-duplex, 8-unit Phase 1 scope is a pilot-scale demonstration within Richmond LAND's Ecovillage and is designed to establish proof of concept, build a replicable financing and governance model, and position Richmond LAND and its partners to scale the Ecovillage across additional Las Deltas-era sites in future phases. Additional components of the full Ecovillage development will include: Garden Beds, 1 to 1 parking, Picnic/BBQ Area, and native plants and trees.

Giaramita Street has long hosted the volunteer-driven Safe Routes to School Walking School Bus, reflecting the community's commitment to healthy, safe, and environmentally friendly transportation. The site is a 3-minute walk (0.3 miles) from the nearest bus stop serving the #376 and #76 lines on Market Avenue, and within walking distance of Rancho Market and Deli (0.5 miles), the North Richmond Farm via Wildcat Creek Trail (0.6 miles), and the North Richmond Lucky A's Baseball Field. The Richmond Parkway provides quick access to adjacent neighborhoods and the I-580 freeway. This geographic positioning also aligns well with two additional co-applicant projects, Greening North Richmond by The Watershed Project and Building Healthy Communities by Contra Costa Health.

Immediately adjacent to the project site along the creek, a stand of native oaks, willows, and cottonwoods provides natural air filtration, ecological habitat, and learning opportunities for residents and the surrounding community. Richmond LAND intends to protect and integrate these natural resources into the larger Ecovillage design and programming to the greatest extent practicable.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Richmond LAND has been actively serving North Richmond by advancing community-controlled land ownership, permanently affordable housing, and resident leadership development in one of West Contra Costa County's most historically disinvested communities. The organization has supported equitable housing policies such as the Just Right to Return and Local Preference frameworks, engaged residents in planning and advocacy efforts, and built partnerships that prioritize community voice in redevelopment decisions. In addition to housing development, Richmond LAND promotes neighborhood stability, wealth-building pathways, and ecological stewardship, ensuring that growth in North Richmond benefits longtime residents rather than displacing them.

Richmond LAND actively communicates with community stakeholders, consistently presenting to the North Richmond Municipal Advisory Committee, Shield Reid Neighborhood Counsel, The Corrine Senior Center, the North Richmond Resource Center & Verde Elementary.

Residents of North Richmond have been actively shaping the future of their neighborhood through the Not For Us, Without Us series of 6 community meetings, hosted by Urban Tilth, Contra Costa County Supervisor John Gioia's office, Contra Costa Sustainability Office, CHDC, The Watershed Project, and Richmond Land.Through small-group conversations and Q&A

sessions, participants helped build a prioritized list of Just Transition projects focused on cleaner air, better transportation, and local jobs and economic opportunity.

- Richmond LAND hosted the very 1st “Buy Back The Jets” Housing Resource Fair in North Richmond creating awareness of the housing opportunities from the former Las Deltas Projects in the unincorporated North Richmond CA.
- Richmond LAND is also historically known to host the “Christmas Light Display” at the former Las Deltas Projects in North Richmond CA.
- Richmond LAND's Building Power program supports a cohort of Richmond area residents to design, research and bring to life community development and housing project concepts that serve low-income residents of color. Through the first year of the program, Richmond LAND has begun building out plans for a Tiny Home Eco Village in North Richmond. The project concept was developed by Princess Robinson and Fonze Leon, Urban Tilth fellows in our Building Power Fellowship. The project seeks to revitalize vacant public housing land to create in-fill density for current residents and stewards of North Richmond.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

North Richmond is a historically Black, unincorporated community that has borne decades of compounding environmental injustice. Residents face disproportionate exposure to diesel particulate matter from Interstate 80, refinery emissions from the Chevron corridor, and indoor air pollution from aging housing stock, contributing to asthma rates in the 99th percentile statewide. The Las Deltas public housing development, located on Giaramita Street at the heart of this environmental burden, was decommissioned by the Housing Authority of Contra Costa County and left vacant for years, a physical symbol of the disinvestment that has long defined North Richmond's relationship with public institutions.

The North Richmond Ecovillage directly addresses this history by transforming the blighted Las Deltas site into eight permanently affordable, fully electrified homes for the households that need them most. By replacing all fossil fuel combustion appliances with heat pump HVAC, heat pump water heaters, and induction stoves, and installing rooftop solar PV and battery storage at all four duplexes, the project will eliminate the primary source of indoor NO_2 and PM2.5 exposure for 16 residents living in one of California's most pollution-burdened Census tracts.

The project is anchored by a groundbreaking Right to Return and Local Preference Policy developed in partnership with the Housing Authority of Contra Costa County, the Partnership for the Bay's Future, and CHDC. The policy grants former Las Deltas residents first priority, and current or former North Richmond residents second priority, to purchase Ecovillage homes before they are offered to the general public. This policy moved from paper to practice in June 2025, when a 120-day offer period launched giving former Las Deltas residents first access to

purchase scattered-site homes. Richmond LAND has been a key advocate and implementation partner in this effort, co-hosting the "Buy Back the Jets" housing resource fair in August 2025, which drew over 300 residents and former residents to North Richmond for food, music, and hands-on homebuying support. A second annual event is planned for fall 2026. This policy ensures that those who bore the greatest burden of environmental injustice in North Richmond are at the forefront of new opportunity, not displaced by it.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Richmond LAND will implement a robust resident and community engagement strategy to ensure that Ecovillage households and the broader North Richmond community are active participants throughout the project. Over the course of the grant term, Richmond LAND will host at least six community information sessions, including bilingual outreach with a minimum of two sessions conducted in Spanish, to provide updates on construction timelines, retrofit improvements, resident rights, and long-term benefits of the electrification and resilience upgrades.

The engagement process is designed to build resident knowledge and confidence in using the new systems installed in their homes, including heat pumps, induction stoves, solar power, and battery backup systems. Prior to occupancy or project completion, residents will participate in orientation and training sessions to ensure they understand how to safely operate and maintain the technologies. Richmond LAND aims for at least 75% of participating households to demonstrate working knowledge of these systems through post-orientation surveys and educational assessments.

To strengthen accountability and community ownership, Richmond LAND will also establish an ongoing resident feedback mechanism, allowing households to share concerns, recommendations, and lived experiences throughout implementation. Feedback collected annually will be documented and incorporated into project improvements, ensuring the initiative remains community-centered, culturally responsive, and aligned with resident needs.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Richmond LAND requests $1,012,141.25 to implement Phase 1 of the North Richmond Ecovillage, a healthy homes and climate resilience initiative that will improve indoor air quality and reduce combustion-related health burdens for 8 low-income households in North Richmond's Las Deltas neighborhood. The project will fully electrify all heating, water heating, and cooking systems and install rooftop solar PV and battery backup across four rehabilitated

duplexes, permanently removing gas appliances as a source of indoor NO_2 and PM2.5 exposure in homes located near Interstate 80 and the Chevron Richmond Refinery corridor. The 4-duplex, 8-unit scope is a pilot-scale demonstration designed to establish proof of concept and build a replicable model for community-controlled, climate-resilient development across additional Las Deltas-era sites in future phases. These eight units will be placed into permanent affordability through Richmond LAND's Community Land Trust model, ensuring that the health benefits of all-electric buildings reach households who could not access clean energy upgrades on their own.

The project will achieve three measurable outcomes by the end of the grant term. First, all eight homes will become fully electric, with all gas appliances replaced by heat pump HVAC, heat pump water heaters, and induction stoves, eliminating the primary source of indoor air pollution for 8 households, with modeled annual greenhouse gas reductions documented at project close. Second, rooftop solar PV and battery storage will be installed and commissioned at all four buildings, providing clean backup power during grid outages, wildfire smoke events, and extreme heat emergencies, reducing annual household energy costs based on modeled system specifications and local utility rates, and ensuring households with documented respiratory conditions or heat-related vulnerabilities have access to backup power for medical equipment and cooling. Third, Richmond LAND will conduct a sustained bilingual community engagement process including at least six information sessions over the grant term with a minimum of two conducted in Spanish, individualized pre-occupancy orientations for all eight households documented through both signed acknowledgment forms and a post-orientation survey, with a target of at least 75% of households demonstrating working knowledge of their installed retrofit measures, and an annual resident feedback mechanism to ensure long-term community participation and energy literacy.

Richmond LAND serves as project lead, responsible for construction coordination, community engagement, CLT stewardship, and grant reporting through two dedicated staff positions. Community Housing Development Corporation (CHDC) serves as joint venture development partner, providing construction management, financial underwriting, contractor coordination, and permitting oversight, with both Richmond LAND and CHDC compensated through the developer fee collected from the project. Preston Lam of Densify Lab serves as development consultant, bringing over 14 years of affordable housing development experience to the project. The Housing Authority of Contra Costa County is facilitating site transfer of the formerly decommissioned Las Deltas properties. MITHUN Architects is contributing $35,000 in in-kind architectural services to support design and programming.

The eight homes will be stewarded through Richmond LAND's Community Land Trust model and permanently priced for affordability, prioritizing longtime North Richmond residents vulnerable to displacement, first-time homebuyers priced out of market-rate ownership, working families earning below area median income, and multigenerational families with deep community ties to North Richmond. The project is further anchored by the Right to Return and Local Preference Policy, which grants former Las Deltas residents first priority to purchase Ecovillage homes, ensuring those most harmed by the site's history are the first to benefit from its transformation.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Richmond LAND will dedicate two full-time staff positions to project implementation, with a portion of each role funded by the grant and the remainder contributed as organizational in-kind support, ensuring both strong technical oversight and sustained community engagement throughout the 60-month grant term.

The Real Estate Manager serves as lead project manager for the full development lifecycle of the North Richmond Ecovillage, overseeing site acquisition, joint venture partnership management, and design-build programming to define the electrification and solar PV and battery storage scope across all eight units. This position advances entitlement and permitting processes, manages gap financing, oversees general contractor relationships through construction, and ensures all retrofit measures are completed and documented per unit in compliance with grant requirements. The Real Estate Manager also supports homebuyer outreach, affordability compliance, and all required grant reporting throughout the project term. This role is a 0.3 FTE, budgeted at 0.17 FTE charged to the grant, with an additional 0.13 FTE contributed by Richmond LAND as in-kind organizational support.

The Community Engagement Manager leads resident outreach, homebuyer education, bilingual community information sessions, and inclusive marketing efforts to ensure that Ecovillage households and the broader North Richmond community are active partners throughout implementation. Specific responsibilities include planning and facilitating at least six community information sessions with a minimum of two conducted in Spanish, coordinating individualized pre-occupancy orientations for all eight households on installed retrofit systems, administering a post-orientation survey to document household knowledge of retrofit measures, implementing and documenting an annual resident feedback mechanism, and conducting inclusive homebuyer outreach that prioritizes longtime North Richmond residents, households with respiratory conditions, and multigenerational families with ties to the Las Deltas neighborhood. This role is a 0.3 FTE, with budgeted at 0.14 FTE charged to the grant, with the remaining 0.16 FTE contributed by Richmond LAND as in-kind organizational support.

Richmond LAND's joint venture partner, Community Housing Development Corporation (CHDC), provides construction management, financial underwriting, contractor coordination, and permitting support throughout the grant term. Both Richmond LAND and CHDC will be compensated through the developer fee collected from the project, formally aligning both organizations' incentives with successful project completion.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The North Richmond Ecovillage is located within the PTCA (Portland/Tara Hills/Coronado) Community Emissions Reduction Plan boundary, covering Richmond, North Richmond, and San Pablo, which was formally designated under AB 617 as one of the most disproportionately burdened communities in the Bay Area region. The CERP, adopted by the BAAQMD Board in May 2024, identifies cumulative air quality impacts and health disparities from proximity to the Chevron refinery, Interstate 80, and regional freight corridors as the community's core environmental burden. By eliminating fossil fuel combustion appliances in eight homes at the former Las Deltas site and installing solar with battery backup, the Ecovillage directly reduces the indoor air pollution exposure and climate vulnerability that the CERP was designed to address, for households in the heart of the PTCA target area.

The project also aligns with Contra Costa County's Climate Action and Adaptation Plan, which names building electrification and the transition away from fossil fuel appliances as key strategies for reducing greenhouse gas emissions and improving public health. As the lead applicant on this application, the County's Climate Action and Adaptation Plan commitments are directly advanced by the Ecovillage's all-electric rehabilitation scope. At the regional level, BAAQMD's Clean Air Plan identifies residential combustion as a meaningful contributor to NOx and PM2.5 in disadvantaged communities, and prioritizes all-electric upgrades in high-burden areas as a co-benefit strategy.

The Envision Contra Costa 2045 General Plan identifies North Richmond as among the County's most vulnerable communities, facing compounding risks from air quality hazards, aging infrastructure, and health disparities driven by proximity to industrial and transportation emission sources. The General Plan's environmental health and climate resilience goals are directly addressed by the Ecovillage's combination of electrification, solar installation, and permanent affordability. The North Richmond Quality of Life Plan, developed by a resident leadership team under Healthy Richmond, centers "healthy homes" as a community-defined priority, explicitly linking safe indoor environments and reduced environmental stressors to long-term health equity. The Ecovillage translates that community vision into concrete infrastructure, delivering the health-protective homes North Richmond residents identified as a priority through their own planning process. It further reinforces this by selecting blighted sites that are among the most vulnerable due to decades of disinvestment and compounded environmental burdens.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Richmond LAND brings deep community trust, resident leadership, and place-based organizing experience that are essential to the successful delivery of the North Richmond Ecovillage. The organization has advanced community-controlled land ownership in North Richmond through

multiple initiatives, including the acquisition and rehabilitation of a South 24th Street triplex in February 2022, stabilizing two families facing eviction and protecting the property from speculative purchase by private equity. This acquisition also fueled advocacy for AB 1837 (Bonta), the Homes in Community Hands Act, demonstrating Richmond LAND's capacity to translate on-the-ground housing work into broader policy impact. Richmond LAND's Building Power Fellowship has supported North Richmond residents in designing community development concepts, including the early vision for the Ecovillage itself, and the organization maintains active relationships with the North Richmond Municipal Advisory Council, Verde K-8, Shields Reid Neighborhood Council, and the Corrine Senior Center, providing the community accountability infrastructure that funders and partners rely on throughout project implementation.

Richmond LAND has formalized a joint venture development partnership with Community Housing Development Corporation (CHDC), a co-applicant on this application. This is a formal business arrangement in which both organizations will be compensated through the developer fee collected from the project, aligning incentives and ensuring sustained organizational commitment through completion. CHDC brings an established track record in affordable housing acquisition, rehabilitation, and long-term stewardship in the Bay Area region. CHDC provides direct expertise in layered financing structures, contractor management, environmental compliance, permitting, and homeowner association establishment, the technical functions most critical to Phase 1 of the Ecovillage.

Richmond LAND is also supported by Preston Lam of Densify Lab as development consultant. Preston brings over 14 years of community development experience, including his tenure at Chinatown Community Development Center where he secured over $270 million to develop and rehabilitate 400 units of housing in San Francisco. Through Chinatown CDC's Small Sites Program, he stabilized four mixed-use properties totaling 74 units, including acquisitions at 462 Green Street, 1201 Powell/900 Jackson, two adjoining Inner Richmond properties rehabilitated with $8 million in combined public and private financing, and 1535 Jackson, where he added 11 units of permanently affordable housing while preserving 19 SRO units for extremely low-income senior tenants. These projects are directly comparable in scope and complexity to Phase 1 of the North Richmond Ecovillage.

Project implementation will be anchored by a dedicated Real Estate Manager who serves as lead project manager for the full development lifecycle, overseeing site acquisition, joint venture partnership management, design-build programming for the electrification and solar PV and battery storage scope, entitlement and permitting processes, gap financing, general contractor relationships through construction, and all retrofit documentation and grant reporting. A Community Engagement Manager will lead resident outreach, homebuyer education, and bilingual community information sessions throughout the grant term. Together these positions, supported by CHDC's development capacity and Preston Lam's advisory expertise, create a staffing and partnership structure that pairs technical real estate knowledge with community-rooted leadership, reducing delivery risk and ensuring the project remains accountable to the North Richmond residents it is designed to serve.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The Real Estate Manager serves as lead project manager for the full development lifecycle of the North Richmond Ecovillage, overseeing site acquisition, joint venture partnership management, and design-build programming to define the electrification and solar PV and battery storage scope across all eight units. This position advances entitlement and permitting processes, manages gap financing, oversees general contractor relationships through construction, and ensures all retrofit measures are completed and documented per unit in compliance with grant requirements. The Real Estate Manager also supports homebuyer outreach, affordability compliance, and all required grant reporting throughout the project term. This role is budgeted at 30% for 60 months and serves as the central point of accountability for grant deliverables and funder reporting.

A Community Engagement Manager at 20% for 36 months will lead resident outreach, homebuyer education, bilingual community information sessions, and inclusive marketing efforts to ensure that Ecovillage households and the broader North Richmond community are active partners throughout implementation. Specific responsibilities include planning and facilitating at least eight community information sessions with a minimum of two conducted in Spanish, coordinating individualized pre-occupancy orientations for all eight households on installed retrofit systems, implementing and documenting an annual resident feedback mechanism, and conducting inclusive homebuyer outreach that prioritizes longtime North Richmond residents, households with respiratory conditions, and multigenerational families with ties to the Las Deltas neighborhood.

Richmond LAND's joint venture partner, Community Housing Development Corporation (CHDC), will contribute in-kind technical support throughout the grant term covering construction management, financial underwriting, contractor coordination, and permitting support. This in-kind contribution brings critical development expertise to the project at no cost to the grant, reducing implementation risk and increasing confidence that the Ecovillage will be successfully delivered on time and within budget. Both Richmond LAND and CHDC will be compensated through the developer fee collected from the project, formally aligning both organizations' incentives with successful project completion.

The project leverages $395,000 in confirmed funding from four additional sources, bringing the total project investment to $1,407,141 and demonstrating broad multi-sector confidence in the Ecovillage's feasibility. A $250,000 Hidden Leaf Recoverable Grant has been received and is designated for advancing predevelopment on both NREV sites. A $60,000 Richmond Our Power Coalition Grant has been received and is designated for Landscape Architect & Design. A $50,000 Bay Area Housing Finance Authority Technical Assistance Grant is currently in reimbursement and supports Due Diligence Reports for Phase 1. An additional $35,000 in in-kind architectural services from MITHUN Architects is in progress, covering Permitting & Design.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

The North Richmond Ecovillage Phase 1 project will require several standard approvals from Contra Costa County, including building permits for rehabilitation work, approval of a Condominium Subdivision Map under the California Subdivision Map Act, and adoption of CC&Rs to establish the homeowners association. Because the project involves rehabilitation of existing structures, it is expected to follow a streamlined permitting pathway consistent with existing zoning. Richmond LAND has initiated early coordination with County staff and is advancing architectural plans and subdivision materials toward submission.

Richmond LAND has completed substantial predevelopment work that significantly de-risks the permitting pathway. Key due diligence is complete, including a Geotechnical Report, Foundation Assessment, Environmental Phase 1 Assessment, ALTA Survey, and Arborist Report. A pro-bono technical assistance team is actively engaged, including Community Engineering Corps for civil engineering, MITHUN Architects for architecture, and ARUP for mechanical, electrical, and plumbing engineering, advancing site design and planning in parallel with the permitting timeline. Richmond LAND was also selected for the San Francisco Community Land Trust's inaugural Capacity Collaborative, through which SFCLT has provided below-market brokerage services to the Ecovillage transaction, and hosted three summer internships through Densify Labs, funded by UC Berkeley's ARCUS Social Justice Corps Fellowship, producing a Market Analysis and a conceptual adaptive reuse design for the East parcel.

The project has secured early funding from multiple trusted sources, including philanthropic grants from the San Francisco Foundation, Hidden Leaf Foundation, Kresge Foundation, Richmond Our Power Coalition, and Full Spectrum Labs, as well as a $49,000 Technical Assistance Grant from the Bay Area Housing Finance Authority to cover predevelopment costs. Richmond LAND has raised approximately $400,000 in organizational equity committed to site acquisition, and has executed a California Residential Purchase Agreement for the Giaramita Street properties with escrow expected to close by end of 2026. The Right to Return and Local Preference Policy, developed in partnership with the Housing Authority of Contra Costa County

and secured with HUD approval, ensures that former Las Deltas residents have first priority to purchase Ecovillage homes, providing a qualified and committed buyer pool from the project's earliest stages.

All required permits and approvals are anticipated to be secured within the grant term based on the permitting timeline below.

Year 1 (2026): Complete site acquisition, secure joint venture development partnership, issue RFQ for General Contractor preconstruction services, and advance design-build programming, scope, and budget.

Year 2 (2027): Finalize design-build scope and permit strategy, submit Tentative Map Application, advance agency review, secure gap financing, and launch sales and marketing.

Year 3 (2028): Obtain final entitlements and map approvals, secure construction permits, begin rehabilitation, and advance homebuyer outreach and qualification.

Year 4 (2029): Complete rehabilitation, obtain final permit sign-offs, close homebuyer purchases, and implement the Long-Term Stewardship and Operations Plan.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

The project is expected to qualify for a California Environmental Quality Act (CEQA) Categorical Exemption, most likely under Class 1 (Existing Facilities) due to the rehabilitation of existing residential structures with minimal expansion of use. If necessary, portions of the project may also fall under Class 3 (Small Structures) for limited new improvements. Richmond LAND is currently conducting due diligence and environmental review to confirm the appropriate exemption pathway.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

Richmond LAND has demonstrated active site control progress through a fully executed California Residential Purchase Agreement for property in the North Richmond Ecovillage project area, signed September 22, 2021, with escrow held through Old Republic Title Company. The agreement was executed by Richmond LAND's Executive Director on behalf of the organization in its corporate capacity. The estimated total site acquisition cost is approximately $400,000, which Richmond LAND has raised and committed as organizational equity to the project. Escrow is expected to close by the end of 2026, prior to execution of the Grant Agreement, in full compliance with LCBF site control requirements.

Supporting documentation has been uploaded as NorthRichmond_26LCB14_North Richmond Ecovillage_Purchase Agreement.pdf.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Operations and maintenance (O&M) of the Ecovillage will be supported through a combination of homeowner responsibilities, HOA management, and Richmond LAND's long-term stewardship role. Individual homeowners will be responsible for interior maintenance, while the HOA will manage shared infrastructure, including landscaping, garden beds, parking areas, and common spaces. HOA dues will be structured to cover routine maintenance and build reserve funds for long-term capital repairs. Richmond LAND will provide ongoing oversight through the CLT ground lease, ensuring compliance, supporting homeowners, and maintaining affordability standards. Additional support may include small stewardship fees, philanthropic support, and technical assistance to ensure the long-term sustainability of the property.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The primary barriers associated with the project include financing gaps, construction cost escalation, and buyer access to mortgage financing. To address the funding gap between development costs and affordable sales prices, Richmond LAND is pursuing a layered capital strategy that includes public subsidy, philanthropic grants, and mission-aligned financing. Construction risks will be mitigated through detailed predevelopment planning, contingency budgeting, and engagement with experienced contractors. To address barriers to homeownership, particularly for low- to moderate-income residents, Richmond LAND is developing partnerships to provide flexible, non-extractive mortgage products, along with homebuyer education and financial readiness support. Additionally, strong community engagement and alignment with policies such as Local Preference and Just Right to Return help ensure a qualified and committed buyer pool. Together, these strategies reduce uncertainty and position the project for successful implementation within the grant term.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The Greener North Richmond project envisions a healthier, safer, and more connected North Richmond, where residents choose walking and bicycling along Wildcat Creek for short trips, achieved through strategic tree planting that reduces exposure to PM2.5 air pollution, paired with robust community outreach and education to encourage shifts away from motor vehicle use for trips of one mile or less.

Measurable Outcome	Indicator(s)
Outcome 1: Increase safe, walkable access to green space for 1,000 North Richmond residents and Verde K-8 School families by improving 1 mile of the Wildcat Creek Trail and revegetating riparian areas by the end of the grant term. This specific trail segment runs from the end of the trail at the railroad, adjacent to Verde K-8 School, and on to the Richmond Parkway, passing by the A's Baseball Field. In the future it will link to the North Richmond Shoreline Living Levee, which will be implemented by 2030, and the SF Bay Trail. (Strategy 1)	• Linear feet of Wildcat Creek Trail improved (target: 1 mile) • Acres of riparian area revegetated with native species (target: 400 native plants) • Change in trail use counts at two locations, measured by counts at baseline and project close (target: 30% increase)
Outcome 2: Reduce ambient surface temperatures and PM2.5 exposure along 2 miles of sidewalk in North Richmond (connecting to The Urban Loop and the Wildcat Creek Trail) by planting and establishing 120	• Number of trees planted and surviving at project close (target: 120 in trees; ≥90% survival rate by year 5) • Change in surface temperature at three corridor locations, measured at baseline and project close using handheld sensors (target 10% reduction)

large-canopy trees by the end of the grant term. TWP will plant 50 trees along the sidewalk and 70 trees along the Wildcat Creek Trail to achieve a critical mass of canopy cover. (Strategy 1)	• Modeled estimate of PM2.5 absorption calculated using Tree Tracker GIS and tree tracker protocols
Outcome 3: Improve outdoor health and heat resilience for 2,000 North Richmond residents and youth by activating shaded green spaces and trail corridors through community stewardship programming by the end of the grant term. (Strategy 1)	• Number of youth engaged in environmental education and greening events (target: 600 youth) • Number of community stewardship events held • Resident and youth-reported changes in outdoor activity and heat comfort (qualitative, collected at project close)
Outcome 4: Strengthen the long-term health and air quality benefits of North Richmond's urban forest by training at least 50 community members in tree stewardship, urban forestry monitoring, and green infrastructure maintenance through the innovative Green Collar Corps, Watershed Crew, and Canopy Rangers skill training and leadership development programs by the end of the grant term. (Strategy 1)	• Number of adults trained and certified as in Green Infrastructure (target 50) • Participant-reported increases in stewardship skills and environmental knowledge (qualitative, collected at program completion) • Number of paid crew events to support Urban Forest and Creek restoration during plant establishment (target: 50 over the grant term)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
Outcome 1: Increase safe, walkable access to green space for 1,000 North Richmond residents and Verde K-8 families by improving 1 mile of the Wildcat Creek Trail and revegetating riparian areas by the end of the grant term. (Strategy 1)	A. Site assessments completed and baseline trail use and temperature data established	1. Conduct site assessments along the Wildcat Creek Trail corridor and Urban Nature Loop; document current trail conditions, access barriers, signage gaps, and priority improvement locations	The Watershed Project	Contra Costa County Public Works	June 30, 2027
		2. Install automated trail use counters at two baseline monitoring locations along the Wildcat Creek Trail; collect initial counts to establish baseline for 30% increase target	The Watershed Project	Verde K-8 PTA	June 30, 2027
		3. Conduct pre-project community walk with Verde K-8 PTA caregivers and	The Watershed Project	Verde K-8 PTA	June 30, 2027

		WWILD alumni to identify safety concerns, missing connections, and maintenance priorities along the Trail and Loop			
	B. Wildcat Creek Trail improved and Urban Nature Loop refreshed	1. Improve 1 mile of the Wildcat Creek Trail including grading, access improvements, and lighting coordination with Contra Costa County Public Works; sequenced to follow County trail resurfacing in 2027	The Watershed Project	Contra Costa County Public Works	December 31, 2028
		2. Install 4 interpretive signs and 100 floor decals and directionals along the Urban Nature Loop; migrate audio tour from retiring PocketSights platform to a sustainable, community-maintaina ble app	The Watershed Project	Green Collar Corps Canopy Rangers	June 30, 2030

		3. Plant approximately 450 native riparian plants along Wildcat Creek banks to stabilize the corridor, support evapotranspiration cooling, and complement the creek's ecological function	The Watershed Project	Green Collar Corps, Canopy Rangers	June 30, 2030
	C. Trail use documented and riparian planting survival verified	1. Conduct follow-up trail use counts at both monitoring locations; compare to baseline to track progress toward 30% increase target	The Watershed Project	Green Collar Corps Canopy Rangers	October 31, 2030
		2. Conduct quarterly site walks with Verde K-8 PTA caregivers and WWILD alumni to identify maintenance gaps, signage wear, and emerging concerns; document and address findings	The Watershed Project	Verde K-8 PTA	Ongoing

		3. Document riparian plant survival rate and creek bank stabilization; submit Year 4 progress report to BAAQMD including photo documentation and community feedback	The Watershed Project	Contra Costa County Public Works	December 31, 2031

Outcome 2: Reduce ambient surface temperatures and PM2.5 exposure along 2 miles of sidewalk in North Richmond (connecting to The Urban Loop and the Wildcat Creek Trail) by planting and establishing 120 large-canopy trees by the end of the grant term.	A. Corridors identified, baseline temperatures and PM2.5 measured, and trees procured	1. Identify priority planting corridors along Giaramita Street, Chesley Avenue, and Fred Jackson Way using i-Tree Eco modeling; confirm species selection (Coast Live Oak, California Sycamore, Chinese Pistache, London Plane Tree) with Contra Costa County Public Works approved street-tree list	The Watershed Project	Contra Costa County Public Works	October 31, 2027

		2. Measure baseline surface temperatures at three corridor monitoring locations using handheld sensors; document pre-planting PM2.5 conditions using i-Tree Eco protocol to establish targets for 10% temperature reduction	The Watershed Project		March 31, 2027
		3. Submit right-of-way and encroachment permit applications to Contra Costa County Public Works; procure 120 trees at 15-gallon size or larger from Devil Mountain Wholesale Nursery	The Watershed Project	Devil Mountain Wholesale Nursery; Contra Costa County Public Works	September 30, 2028
	B. 120 large-canopy trees planted and establishment watering program launched	1. Plant 50 large-canopy trees along priority sidewalk corridors (Giaramita Street, Chesley Avenue, Fred Jackson Way); open undersized tree	The Watershed Project	Green Collar Corps Canopy Rangers	December 31, 2028

		wells and remove stumps using site-prep contractor prior to planting			
		2. Plant 70 large-canopy trees along the Wildcat Creek Trail corridor; sequenced to follow County trail resurfacing to protect new plantings from construction damage	The Watershed Project		June 30, 2029
		3. Launch establishment watering program using water-buffalo irrigation contractor and watering bags; assign Restoration Crew Lead to oversee daily field operations during the three highest-risk establishment years	The Watershed Project	Irrigation Contractor	June 30, 2029
	C. Tree survival, surface temperature reduction, and PM2.5	1. Conduct annual tree survival assessments using	The Watershed Project	Green Collar Corps, Canopy Rangers	Annually through June 30, 2031

	absorption documented and reported	Tree Tracker GIS; replace any trees lost during establishment within 60 days using contingency funds; target ≥90% 5-year survival rate			
		2. Measure surface temperatures at three corridor monitoring locations annually; compare to baseline to track progress toward 10% reduction target	The Watershed Project	Green Collar Corps, Canopy Rangers	Annually through December 31, 2031
		3. Run annual i-Tree Eco model to estimate PM2.5 absorption by established canopy; compile results into annual report submitted to BAAQMD	The Watershed Project	Green Collar Corps, Canopy Rangers	Annually through December 31, 2031

Outcome 3: Improve outdoor health and heat resilience for 2,000 North Richmond residents and youth by activating shaded green spaces and trail corridors through community stewardship programming by the end of the grant term. (Strategy 1)	A: Community outreach launched and first stewardship events delivered	1. Develop bilingual outreach plan and materials targeting Verde K-8 families, Shields-Reid Community Center youth, and North Richmond residents; launch recruitment campaign for stewardship events and public activation days	The Watershed Project	Verde K-8 PTA	June 30, 2027
		2. Host first two community stewardship events combining tree planting, trail maintenance, and environmental education; document participant counts and demographics	The Watershed Project	Green Collar Corps, Verde K-8 PTA, Verde K-8 PTA	December 31, 2027
		3. Host first public activation day on the Wildcat Creek Trail or Urban Nature Loop, including walking school bus activation,	The Watershed Project	Green Collar Corps, Verde K-8 PTA, Verde K-8 PTA	June 30, 2028

		wayfinding demonstration, and Block Ambassador outreach			
	B: 15 stewardship events and 5 public activation days delivered across the grant term	1. Deliver remaining stewardship events (target: 15 total across grant term) combining planting, watering, litter removal, and signage maintenance; track cumulative participant counts toward 600 youth engaged target	The Watershed Project	Green Collar Corps, Canopy Rangers	December 31, 2031
		2. Deliver remaining public activation days (target: 5 total across grant term) including climate resilience programming, safe route demonstrations, and community celebrations tied to key project milestones	The Watershed Project	Green Collar Corps, Canopy Rangers, Contra Costa Health	December 31, 2031

		3. Engage youth participants in hands-on monitoring activities including trail counts, temperature readings, and tree health observations; integrate findings into TWP's environmental education curriculum	The Watershed Project	Verde K-8 School, Green Collar Corps	December 31, 2031
	C: Outdoor health and activation outcomes evaluated and documented	1. Administer pre- and post-event surveys at stewardship events and activation days tracking resident-reported changes in outdoor activity frequency, heat comfort, and trail use	The Watershed Project		Annually through December 2031
		2. Conduct annual participant count review comparing cumulative engagement to 600 youth and 2,000 resident targets;	The Watershed Project		Annually through December 2031

		adjust outreach strategy if needed based on demographic data			
		3. Compile final activation and stewardship outcomes report including participant counts, event documentation, resident feedback, and photo record; submit to BAAQMD at project close	The Watershed Project		December 31, 2031

Outcome 4: Strengthen the long-term health and air quality benefits of North Richmond's urban forest by training and engaging at least 50 community members in tree stewardship, urban	A. Green Collar Corps, Watershed Crew, and Canopy Rangers cohorts trained and certified	1. Recruit and onboard first Green Collar Corps cohort (youth ages 17–24, paid at $21/hr); deliver foundational training in urban forestry, tree planting, green stormwater infrastructure, and community engagement	The Watershed Project		December 31, 2027

forestry monitoring, and green infrastructure maintenance through the innovative Green Collar Corps, Watershed Crew, and Canopy Rangers programs by the end of the grant term. (Strategy 1)		2. Deliver Canopy Rangers urban forestry pathway training including tree health assessment, pruning techniques, and arborist certification preparation; enroll first cohort of 5 Canopy Rangers	The Watershed Project		December 31, 2028
		3. Train Restoration Crew Lead and 5 Crew Members in site assessment, tree-well preparation, riparian planting, erosion control, and establishment watering protocols; confirm prevailing wage compliance for all covered work	The Watershed Project		December 31, 2028
	B. 50 paid community members deployed across 50 crew events during plant establishment	1. Deploy Green Collar Corps, Watershed Crew, and Canopy Rangers across all planting, watering, monitoring,	The Watershed Project	Green Collar Corps, Canopy Rangers	June 30, 2031

		and stewardship events; document paid hours, crew composition, and tasks completed at each event			
		2. Activate 15 Block Ambassadors (paid at $25/hr via 1099) for door-to-door outreach, routine signage and QR-code refresh, light litter pick-up, and dumping reporting along the Urban Nature Loop and Wildcat Creek Trail	The Watershed Project	Green Collar Corps, Canopy Rangers	June 30, 2031
		3. Connect Watershed Crew apprentices and Canopy Rangers completers to Contra Costa County Adopt-a-Tree contracting opportunities and TWP's ongoing workforce ladder for	The Watershed Project	Contra Costa County Public Works	June 30, 2031

		post-grant employment			
	C. Workforce outcomes tracked and just transition career pathways documented	1. Track and document certifications earned, paid hours worked, and participant-reported skill gains for all Green Collar Corps, Watershed Crew, Canopy Rangers, and Block Ambassador participants annually	The Watershed Project	Green Collar Corps, Canopy Rangers	Annually through December 31, 2031
		2. Conduct annual participant feedback sessions with workforce cohorts; use findings to adjust training topics, scheduling, and crew composition for the following year	The Watershed Project		Annually through December 31, 2031
		3. Compile final workforce outcomes report documenting 50 trained and certified community	The Watershed Project		Annually through December 31, 2031

		members, certifications earned, paid crew events completed, and post-program employment or contracting outcomes; submit to BAAQMD at project close

Project Narrative

Instructions:

- The “Project Narrative” is scored out of 100 points. 15-page maximum.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	North Richmond Community Resilience Initiative
Lead Applicant Name	County of Contra Costa
Project Location	North Richmond
Overall Funding Request	$14,902,316.02
Grant Term Request	5 Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Greener North Richmond
Project Lead	The Watershed Project
Project Location	North Richmond, California Neighborhood
Project Funding Request	$1,832,960.33

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The Greener North Richmond project, led by The Watershed Project (TWP), will catalyze a measurable mode shift away from short motor-vehicle trips in one of the Bay Area's most pollution-burdened neighborhoods. North Richmond sits in the shadow of the Chevron Richmond refinery—the single largest stationary source of PM2.5 and SO_2 in the Path to Clean Air (PTCA) AB 617 community-scale inventory—and is bisected by I-80, I-580, the Richmond Parkway truck route, and Union Pacific rail lines. Residents face among the highest cumulative pollution burdens in California, while having the fewest safe, shaded places to walk. This project answers a clear, community-defined call: make it both possible and pleasant to walk and bike for short trips of one mile or less, instead of starting up a car.

Over five years, the project will (1) plant and establish 120 large-canopy trees along 2 miles of priority sidewalks and the Wildcat Creek Trail; (2) revegetate riparian banks with 450 native plants and improve 1 mile of the Wildcat Creek Trail running alongside Verde K-8 School; (3) refresh and expand the Urban Nature Loop self-guided walking tour and Safe Routes to School wayfinding; and (4) operate a paid, locally-hired stewardship workforce through TWP's Green Collar Corps, Watershed Crew, Canopy Rangers, and Block Ambassadors. Together, these activities reduce ambient PM2.5 exposure, lower surface temperatures, expand safe pedestrian and bicycle access, and build a community-rooted workforce ready to maintain North Richmond's green infrastructure long after the grant term ends.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This project advances **Strategy 1 (Reduce air pollution and improve health outcomes)** through two direct, reinforcing mechanisms: removing PM2.5 from the air and reducing the vehicle trips that produce it.

North Richmond residents face among the heaviest cumulative pollution burdens in California, and they face it on foot. The neighborhood has virtually no shade, an unfinished trail network, and sidewalks that routinely reach 120°F in summer, which pushes residents into cars even for trips of a few blocks. Every car trip that starts because walking feels unsafe or unbearable is a source of PM2.5 emissions that did not have to happen. This project interrupts that local cycle: 120 large-canopy trees and one mile of completed Wildcat Creek Trail make it possible and pleasant to walk for short trips, reducing tailpipe emissions at their source while simultaneously removing particulate matter from the air that Verde K-8 School families breathe every day. A locally hired and trained workforce of 50 community members installs and maintains every element, keeping public dollars in North Richmond and building the green-infrastructure careers that the clean economy will need.

Strategy 1 alignment is direct and measurable. The project reduces PM2.5 exposure and improves health outcomes through three reinforcing mechanisms identified in the Air District's Round 1 Guidelines (Section 6.1) and Appendix C:

- Direct exposure reduction through tree canopy: 120 large-canopy trees, sited as a vegetative buffer along heavily trafficked roadways and the Wildcat Creek corridor, will absorb particulate matter, intercept dust, and shade pedestrian routes. TWP will model PM2.5 absorption annually using i-Tree Eco and Tree Tracker GIS protocols.
- Mode Shift away from short vehicle trips: National data show that 28% of all U.S. vehicle trips are one mile or less. By making short trips cooler, safer, and more walkable, the project reduces tailpipe emissions at their source. Re-activated Urban Nature Loop wayfinding, refreshed Safe Routes to School decals, and 1 mile of improved Wildcat Creek Trail give Verde K-8 School families and residents an alternative to driving a few blocks for groceries, school, the senior health center, or Urban Tilth's farm.
- Heat mitigation: Surface temperatures along North Richmond's tree-poor sidewalks routinely exceed 120°F in summer. This project targets a 10% reduction in mean surface temperature at three monitored corridor locations, reducing heat-related health risk and expanding the hours during which residents (particularly seniors, children, and outdoor workers) can safely walk.

Every implementation activity—tree planting, sidewalk preparation, riparian restoration, watering, monitoring, signage maintenance, outreach—will be carried out by paid local residents through TWP's existing workforce ladder: Green Collar Corps (youth ages 17–24, paid at $21/hr), Watershed Crew (adult apprenticeship in restoration and green infrastructure, paid at $21/hr), Canopy Rangers (urban forestry pathway toward arborist certification, paid at $21/hr), and Block Ambassadors (peer-to-peer outreach, $25/hr via 1099). TWP will train and certify at least 50 community members in green infrastructure skills, creating lasting just transition career pathways into the clean economy and ensuring that public dollars stay in North Richmond.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

All project activities take place in North Richmond, California, an unincorporated community of Contra Costa County of roughly 4,000 residents. They are predominantly Black and Latino, with median household income well below the County average. The project area is wholly within the Path to Clean Air (PTCA) AB 617 Community Emissions Reduction Plan boundary.

The project has two interconnected geographic focal points:

Location 1 — Wildcat Creek Trail (1 mile): This trail segment runs from the railroad terminus adjacent to Verde K-8 School (2000 Giaramita St. Richmond, 94801-1699) east to the Richmond Parkway, passing the Oakland A's Community Baseball Field. It is the missing final piece of a larger neighborhood pedestrian loop with offshoots to Urban

Tilth's urban farm, the North Richmond Senior Center, AC Transit bus stops, and the neighborhood's only full-service grocery. When complete, this segment will connect to the planned North Richmond Shoreline Living Levee (implementation by 2030) and ultimately to the San Francisco Bay Trail. It is, in short, the spine of a future walkable North Richmond, and right now it stops at a railroad track.

Location 2 — Urban Nature Loop and feeder sidewalks (2 miles): Two miles of priority sidewalk corridors along Giaramita Street, Chesley Avenue, and Fred Jackson Way that together form the existing Urban Nature Loop self-guided walking tour. TWP completed the Loop in 2023 as part of the award-winning North Richmond Watershed Connections Project, in partnership with Contra Costa County Public Works.

The Loop includes 19 Points of Interest:, artistic medallions, sidewalk decals, and a PocketSights mobile self-guided tour with audio interviews from community members. The infrastructure is in place, but the tree canopy is sparse, the decals have faded, and the PocketSights platform is being retired—creating both an urgent maintenance need and an opportunity to deepen the Loop's community impact.

Together, these two locations form a contiguous 3-mile walkable and bikeable network that links Verde K-8 School (Location 1) to Shields-Reid Park and Community Center, Urban Tilth's North Richmond Farm, and the senior health center (Location 2).

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

This project did not begin with this application. It began in 2014, when TWP joined a coalition of nonprofits and the City of Richmond to plant 1,000 trees and seed an urban forest in the adjacent neighborhood, and it has been continuously refined by North Richmond residents ever since. Community engagement within this project is therefore a decade of accumulated trust, part of the fiber of this proposal.

North Richmond Watershed Connections (2017–2023). In 2017, TWP partnered with Contra Costa County on a community-based design and installation process that culminated in creating the Urban Nature Loop in December 2023. The project received the Contra Costa County Watershed Forum Award for Outstanding Watershed Project. Hundreds of residents—including students, elders, parents, and Verde K-8 School's Parent–Teacher Association—participated in design charrettes, paint days, and Earth Day stenciling events. The 2023 Urban Greening Master Plan and Neighborhood Implementation Toolkit that TWP produced serves as the living blueprint guiding this current proposal.

Wildcat Creek Trail Community Benefits Plan (2024). The Watershed Project completed a Community Benefits Plan informed by a community-wide survey (over 200 responses) and a series of on-the-ground site walks with approximately 30 community members. Participants included parents and caregivers from the Verde K-8 School Parent-Teachers Association (PTA) who walk their children to school along this trail every day. Site-walk participants identified specific safety concerns (unlit segments,

broken signage, illegal dumping), missing tree canopy, poor air quality, and the precise corridor where the Wildcat Creek trail “stops” at the railroad before reaching the Richmond Parkway.

WWILD — Wildcat Watershed Leadership Development (2024–2025). Twenty-three North Richmond residents completed a year-long resident leadership cohort that trained them in environmental planning, watershed science, and community organizing. WWILD fellows independently identified four top neighborhood priorities: increased tree canopy for shade and better air quality, safer pedestrian corridors, improved trail connectivity, and reductions in litter and illegal dumping, which became the four pillars of this project.

“Nothing About Us Without Us” validation (2025–2026). Most recently, project priorities were validated through the broader “Nothing About Us Without Us” engagement process, led by Urban Tilth in partnership with The Watershed Project, the Community Housing Development Corporation, and Richmond LAND. This process reaffirmed walkability, tree canopy, and air quality as top community priorities.

Continuous communication. TWP's monthly **Ebb & Flow** newsletter (5,600+ subscribers), bilingual social channels, and quarterly presentations to the North Richmond Municipal Advisory Council, Verde K-8 PTA meetings, and the North Richmond Green initiative keep residents informed and create persistent two-way feedback loops.

Through every phase, residents and community-based organizations have been involved not only in identifying needs but in shaping the solutions. The project scope, the specific tree species, the corridor alignments, the local maintenance and operations workforce and skills training roles, and the activation strategy all emerged from this community-led process.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The project will primarily benefit North Richmond residents, with a focused reach of approximately 3,000 directly served and the entire community of roughly 4,000 indirectly served. Direct beneficiaries include:

- Verde K-8 School families (roughly 500 students and caregivers), who walk along the Wildcat Creek Trail and Giaramita Street daily.
- Youth participants in after-school and community programs at Shields-Reid Community Center and Urban Tilth's North Richmond Farm (target: 600 youth engaged across the grant term).
- Residents living within a quarter mile of the priority corridors: disproportionately seniors, renters, and households without reliable vehicle access.
- Fifty paid trainees, crew members, and Block Ambassadors from the immediate community.

Environmental justice and public health challenges this project addresses (rooted in CalEnviroScreen 4.0, Healthy Places Index, and the PTCA CERP):

Air pollution exposure. North Richmond census tracts score in the 90th–95th percentile statewide on CalEnviroScreen 4.0 for cumulative pollution burden. The neighborhood is hemmed in by the Chevron refinery to the south, the Richmond Parkway truck corridor to the west, I-580 and the Union Pacific rail line to the east, and the Port of Richmond to the north. Modeling in the PTCA CERP shows local PM2.5 concentrations are highest in the northwestern PTCA area—exactly where this project is sited—and asthma emergency-department visit rates significantly exceed Contra Costa County averages.

Urban heat. Tree canopy in North Richmond is below 7%, which is lower than the Bay Area average. Combined with extensive impervious surface, this produces summer surface temperatures that routinely top 120°F on tree-poor sidewalks, making walking dangerous for children, seniors, and outdoor workers.

Walkability and access. Residents have repeatedly reported that the absence of shade, fading wayfinding, and unfinished trail segments push them into cars even for trips that are objectively walkable.

Environmental degradation. Illegal dumping along Wildcat Creek and on neighborhood streets degrades both the ecological function of the watershed and residents' sense that public spaces belong to them and are desirable to be in.

Economic inequity. The clean-economy and green-infrastructure sectors are growing fast, but North Richmond residents have historically been excluded from training pipelines and contracting opportunities tied to environmental projects in their own neighborhood.

How measurable outcomes demonstrate progress toward community impact:

Each of the project's four measurable outcomes (detailed in the Measurable Outcomes Plan) is tied directly to one or more community-identified needs, and each carries quantitative and qualitative indicators that will let residents and the Air District see progress in real time:

- *Outcome 1 (safe, walkable access).* 1 mile of Wildcat Creek Trail improved and 450 native riparian plants installed. Indicator: 30% increase in trail use counts at two locations between baseline and project close. Demonstrates progress on walkability, ecological restoration, and the connection between Verde K-8 and broader community amenities.
- *Outcome 2 (heat and PM2.5 reduction).* 120 large-canopy trees planted and established along 2 miles, with ≥90% survival. Indicators: 10% reduction in surface temperature at three corridor monitoring locations and an i-Tree-modeled estimate of PM2.5 absorption. Demonstrates direct air-quality and heat co-benefits.
- *Outcome 3 (outdoor health and activation).* 600 youth engaged in environmental education and greening events; 15 community stewardship events, and 5 public activation days. Indicators: youth-engagement counts; resident-reported changes in outdoor activity and heat comfort. Demonstrates that the infrastructure is being used by the community for which it was built.

- *Outcome 4 (stewardship training).* 50 community members trained and certified in tree stewardship, urban forestry, and green infrastructure through Green Collar Corps, Watershed Crew, and Canopy Rangers. Indicators: certifications earned, participant-reported skill gains, and 50 paid crew events during plant establishment. Demonstrates a just-transition pathway into long-term local maintenance and operations jobs.

Taken together, these four outcomes map directly onto the five community-identified challenges above. The 120 large-canopy trees and riparian planting address air pollution exposure and urban heat. The completed Wildcat Creek Trail mile and refreshed Urban Nature Loop wayfinding address walkability and access. The stewardship events and Block Ambassador program address environmental degradation by embedding routine maintenance and dumping reporting into the neighborhood itself. And the Green Collar Corps, Watershed Crew, and Canopy Rangers programs address economic inequity by connecting North Richmond residents to paid green-infrastructure work and certifications in their own community. None of these mechanisms was chosen by TWP alone; each emerged directly from what residents said they needed.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Community engagement during implementation is structured around keeping residents informed about progress and benefits and keeping the project itself responsive to resident feedback. TWP will weave engagement directly into the training program, treating training and skills development as the primary engagement vehicle, so that the same people implementing the project also extend its reach into every block.

Methods to inform residents on progress and benefits:

- Community stewardship and activation events (15+ stewardship events, 5 public activation days) where residents plant trees, refresh decals, and walk the corridor with TWP staff and County Public Works partners.
- Block Ambassadors—15 paid neighborhood-based outreach leaders, recruited block-by-block—who deliver door-to-door updates, distribute multilingual flyers, and act as trusted peer messengers.
- Verde K-8 family engagement, including PTA meetings, school newsletters, walking-school-bus activations, and Safe Routes to School promotion.
- TWP's Monthly Ebb & Flow newsletter (English/Spanish), social media updates, and quarterly progress summaries shared at North Richmond Municipal Advisory Council meetings and the AB 617 Community Steering Committee.
- On-site signage and refreshed Urban Nature Loop wayfinding that visibly communicate canopy growth, air-quality benefits, and walking distances (e.g., "10-minute walk to Verde School").

- An updated PocketSights-replacement self-guided tour app, hosted on a sustainable platform, so the 19 Points of Interest stories—narrated by community members—remain accessible.

Methods to solicit and incorporate community feedback:

- Pre-project, mid-grant, and post-project resident surveys (paper and digital, English/Spanish) on walkability, safety, heat comfort, and trail use.
- Quarterly site walks with Verde PTA caregivers and WWILD alumni to identify maintenance gaps and emerging concerns in real time.
- Real-time feedback at every public event, in the form of short paper surveys, comment cards, and post-event debriefs, with the local workforce crew who staffed the event.
- Youth and workforce participant feedback sessions with Green Collar Corps interns, Watershed Crew apprentices, and Canopy Rangers; their recommendations directly shape planting locations, training topics, and outreach approaches.
- Standing partner check-ins with Urban Tilth, Verde PTA, Contra Costa County Public Works, and the AB 617 Community Steering Committee.

We will incorporate feedback through documented protocols: every quarterly progress report will include a "What we heard / What we changed" section, summarizing community input received and the specific implementation adjustments made (such as moving a planting site, prioritizing a maintenance task, adjusting training schedules, or revising signage). This iterative loop ensures the project remains accountable to residents (as well as the Air District) throughout the five-year term.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The project delivers four measurable outcomes, all advancing the LCBF Program Goals of reducing air pollution, improving public health outcomes, and strengthening community-led solutions. Outcomes 1 and 2 deliver direct air quality and heat co-benefits through physical infrastructure. Outcomes 3 and 4 expand community stewardship capacity and embed local residents as the long-term operators of that infrastructure, advancing the program goal of community-led solutions.

The project delivers four measurable outcomes. Outcome 1 increases safe, walkable access to green space for 1,000 residents and Verde K-8 families through 1 mile of trail improvements and 450 native riparian plants, targeting a 30% increase in trail use. Outcome 2 reduces surface temperature and PM2.5 exposure along 2 miles of sidewalk through 120 large-canopy trees, targeting a 10% reduction in surface temperature and ≥90% 5-year tree survival. Outcome 3 improves outdoor health and heat resilience for 2,000 residents and youth through 15 stewardship events and 5 public activation days, targeting 600 youth engaged. Outcome 4 strengthens the long-term health of North Richmond's urban forest by training and certifying 50 community members through 50 paid crew events during plant establishment.

The Watershed Project serves as project lead, managing all implementation, fiscal administration, permitting, community engagement, and monitoring and evaluation. Contra Costa County Public Works is a coordinating partner, contributing trail resurfacing on the County's 2027 work plan, signage pedestal installation, right-of-way permits, and approximately 50 supplementary trees. Contra Costa County Health Services coordinates Safe Routes to School programming for Verde K-8. Urban Tilth, the Verde K-8 PTA, Shields-Reid Community Center, and Richmond LAND serve as community partners supporting outreach, design validation, and stewardship.

8. Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.

9. Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.

The total BAAQMD funds requested for the Greener North Richmond project are $1,815,649 over five years, comprising $243,991 from the County of Contra Costa for grant management and signage coordination, and $1,571,658 from The Watershed Project for project implementation. The County's budget covers grant management staff ($162,166) to oversee subrecipient activity, expense documentation, and data collection, and $50,000 for collaborative development and installation of wayfinding signage along the Wildcat Creek Trail with TWP—work coordinated through Contra Costa County Public Works.

TWP's implementation budget is anchored by personnel costs (~61% of TWP's total), funding the full team responsible for delivering every project outcome: Executive Director (8.7% FTE, oversight and reporting), Project Senior Manager (16.3% FTE, partnerships and permitting), Project Associate Manager (20% FTE, site assessment and planting oversight), Restoration and Riparian Planting Coordinator (18.2% FTE, creek planting), Community Engagement Manager (20% FTE, stewardship workforce and outreach), Urban Forester (14.76% FTE, site assessments, permitting, pruning, and certification training), Restoration Crew Lead (50% FTE, daily field operations), and 25 paid crew and trainee positions comprising 5 Crew Members, 15 Stewardship and Maintenance Trainees, and 5 Canopy Rangers ($300,000 combined). All wages and fringe are fully loaded and meet or exceed prevailing-wage standards for covered work.

Professional Services total $84,000 (~5% of TWP's budget, well under the 25% cap): 15 Block Ambassadors at $25/hr via 1099 for 1,000 total hours ($25,000); an irrigation and water-buffalo contractor for the tree establishment period ($24,000); and a site-prep contractor for stump removal and undersized tree-well opening ($35,000). Materials, Supplies and Equipment total approximately $201,000 (~15%), including 120 large-canopy trees at $250/tree from Devil Mountain Wholesale Nursery ($30,000); 450 native riparian plants ($9,000); monitoring equipment including Mini Trec sensors and Tree Tracker GIS license ($10,000); planting tools, wooden stakes, and watering bags ($22,000); training and stewardship-day supplies for 24 events ($36,000); 4 interpretive signs and 100 floor decals and directionals ($20,000); and pedestrian and bicycle

wayfinding signage ($50,000). Indirect costs are $201,738 (12.8% of total, under the 15% cap). A $25,000 contingency (1.9% of direct costs, well under the 10% cap) is reserved for weather-related replanting and tree loss during the highest-risk establishment years.

ECOSYSTEM ALIGNMENT (10 points)

> *10. Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The Walkable and Greener North Richmond is purpose-built to advance nine overlapping community, local, regional, and state priorities. Each connection is direct and verifiable:

- Path to Clean Air (PTCA) Community Emissions Reduction Plan (AB 617). The entire project is sited inside the PTCA boundary, the AB 617 community formally designated by CARB and the Air District as bearing the most disproportionate cumulative pollution burden in the region. Tree-canopy expansion, mode shift, and PM2.5 exposure reduction are all explicit CERP measures.
- Bay Area Air District 2024–2029 Strategic Plan, Strategies 2.1 (Community Partnership) and 2.8 (Community-Directed Funds). The project is co-managed with North Richmond residents and directs Air District penalty-derived funds back into the affected community.
- Richmond Community Air Quality Fund (Chevron Rule 6-5 mitigation). Although the project is eligible to be funded by either the Local Community Benefits Fund or the Richmond Community Air Quality Fund, every proposed activity directly reduces particulate matter exposure for members of the community in the vicinity of the Richmond refinery—meeting the more restrictive use criteria of the Richmond Community Air Quality Fund.
- Contra Costa County General Plan 2045 and the County's Climate Action and Adaptation Plan, both of which prioritize urban greening, active transportation, and equity-centered investment in unincorporated communities such as North Richmond.
- Contra Costa County Public Works Wildcat Creek Trail resurfacing work plan (2027). This project's tree-planting and Urban Nature Loop refresh are explicitly sequenced to follow County trail resurfacing, leveraging public infrastructure investment and avoiding duplication.
- North Richmond Watershed Connections Project (2017–2023) and its 2023 Urban Greening Master Plan and Neighborhood Implementation Toolkit. The proposed project is the explicit "Phase 2" of that award-winning multi-partner initiative—picking up exactly where the County, Urban Tilth, and TWP left off in December 2023.
- Safe Routes to School (Contra Costa Health Services) and the Verde K-8 walking-school-bus program. The Urban Nature Loop was originally designed as a Safe Route to School; this project refreshes that infrastructure and re-activates it for the next generation of Verde students.
- California Urban Greening Program (CNRA) and the State's Extreme Heat Action Plan. Project co-benefits—shade equity, heat-vulnerable population protection, and

watershed restoration—track to State priorities and create future funding alignment for sustained operations and maintenance.

- North Richmond has historically been designated as a disadvantaged community under both the EPA's Environmental Justice screening criteria and the EPA Inflation Reduction Act disadvantaged community designation, reflecting its disproportionate burdens across climate, environmental, transportation, and health indicators. This designation affirms the community's priority status for environmental and public health investment.
- North Richmond Shoreline Living Levee (planned for 2030 implementation) and the SF Bay Trail. The completed 1-mile Wildcat Creek Trail segment is the missing connector between Verde K-8 and these regional shoreline assets, ensuring that future public investment lands in a neighborhood that can actually walk to it.

CAPACITY (10 points)

11. Describe the Project Lead's experience managing and implementing projects of similar scope and size.

The Watershed Project is a Bay Area-headquartered 501(c)(3) nonprofit founded in 1997 with offices in Richmond. For nearly three decades, TWP has protected and restored the unique ecosystems of the San Francisco Bay through community-rooted watershed education, habitat restoration, urban greening, and workforce development. TWP's Richmond-based programs specifically focus on the same neighborhoods this project serves.

Directly relevant prior projects include:

- North Richmond Watershed Connections Project (NRWC, 2017–2023, ~$2.5M four-year initiative). TWP led the nonprofit components of a four-partner collaboration with Contra Costa County Public Works/Watershed Programs and Urban Tilth. Outcomes included the 1.7-mile Urban Nature Loop, 19 interpretive Points of Interest, the PocketSights audio tour, the Earth Day 2022 "Paint Day" Safe Routes to School activation, and the 2023 Urban Greening Master Plan and Neighborhood Implementation Toolkit. The project received the Contra Costa County Watershed Forum Award for Outstanding Watershed Project.
- 10,000 Trees Initiative (2014–present). TWP was a founding partner in the City of Richmond's 10,000 Trees Initiative — planting, monitoring, and maintaining street and creek-corridor trees across Richmond and North Richmond.
- Wildcat Creek Trail Community Benefits Plan (2024). TWP designed and led the engagement (200+ survey responses, ~30 site-walk participants) and authored the resulting plan that underpins this proposal.
- WWILD — Wildcat Watershed Leadership Development (2024–2025). TWP designed and operated the year-long resident leadership cohort, training 23 fellows.
- Green Collar Corps (ongoing since 2020). TWP's flagship paid environmental internship for youth ages 17–24 from Richmond and surrounding communities ($20/hr), structured as the first rung of a ladder that includes Summer Field Crew, Greening Urban Watersheds Apprentices, and permanent crew positions. Multiple

cohorts have completed the program; alumni now hold permanent positions at TWP and other Bay Area environmental organizations.
- Verde K-8 Creek Champions Program. Long-running watershed education partnership with Verde K-8 School.

Key project staff include Kat Sawyer, Project Senior Manager, who will lead partnerships and permitting; an Urban Forester and Restoration & Riparian Planting Coordinator with combined decades of native-plant and tree-care expertise; a Restoration Crew Lead with extensive creekside-planting and erosion-control experience; and a Community Engagement Manager who has run TWP's stewardship workforce for multiple years. Two professional references from prior funders and County partners can speak directly to TWP's ability to deliver complex projects .

12. Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.

Project management structure and FTE allocation (5-year totals):
- Executive Director: 10% FTE — overall accountability, Air District reporting, partnership stewardship.
- Project Senior Manager (Kat Sawyer): 16.4% FTE — partner coordination, permitting, scope and schedule management, monthly budget tracking against milestones.
- Project Associate Manager: 20% FTE — site assessment, site preparation, tree-planting oversight.
- Restoration & Riparian Planting Coordinator: 20% FTE — creek-planting program lead.
- Community Engagement Manager: 20% FTE — workforce program operation, outreach, stewardship event lead.
- Urban Forester: 20% FTE — site assessments, permitting, pruning, certification training, public presentations.
- Restoration Crew Lead: 50% FTE — daily field operations, creekside plantings, erosion control, tree installation.
- 5 Crew Members + 15 Stewardship & Maintenance Trainees + 5 Canopy Rangers: 20% FTE each (50 paid roles in total over the term; combined $300,000 in wages).
- 15 Block Ambassadors: paid via 1099 at $25/hr (1,000 hours total).

TWP uses a project-management system that ties every quarterly deliverable to budget spend-down, with monthly internal reviews led by the Project Senior Manager and quarterly all-partner check-ins. Every reimbursement request will be supported by itemized invoices, payroll records, subcontractor invoices, and event documentation (sign-in sheets, surveys, site-visit photo logs).

Leveraged funding and in-kind contributions. While this proposal requests $1,578,660 from the Air District as the project's primary funding source, the project leverages

substantial complementary investment from partners: Contra Costa County Public Works' 2027 Wildcat Creek Trail resurfacing (separately funded County capital project), the County's 50 supplementary trees and acorn/buckeye plantings, an existing $60,000 County contract supporting TWP's broader tree program, in-kind community-engagement support from Urban Tilth, and Verde PTA volunteer hours. TWP will also pursue California Urban Greening Program funds for future Phase 3 expansion, ensuring continuity beyond the grant term.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance.
- Please upload readiness documentation separately, following the naming convention outlined in the “Application Instructions” document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate “N/A” if the question is not applicable to the project

13. Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.

This project is structured for rapid Year-1 mobilization, with planning and outreach tasks ready to begin on day one and tree planting timed to coincide with the County's 2027 trail resurfacing. Required permits and approvals, all obtainable within the grant term:

- Right-of-way / encroachment permits for street-tree planting and signage in the public right-of-way: issued by Contra Costa County Public Works, with whom TWP has a continuous working relationship from the 2017–2023 NRWC Project. Status: pre-application coordination underway; full applications will be submitted in the first 90 days of the grant term.
- Wildcat Creek Trail work permits (riparian planting, trail-segment improvement): Contra Costa County Public Works Watershed Program. Status: scope pre-aligned with County's 2027 resurfacing project. No third-party land acquisition required.
- Streambed alteration considerations: TWP has prior experience navigating CDFW notification requirements for native riparian planting and will engage as needed; the planting protocol uses 10-gallon native plants installed within existing riparian zones, not channel modification.
- School-grounds access for Verde K-8 walking activations: TWP has existing access authorization through its watershed education Creek Champions programming.
- Tree-species selection approval: coordinated with Contra Costa County Public Works' approved street-tree list and the Air District's i-Tree-based PM2.5 capture criteria. Devil Mountain Wholesale Nursery will be the supplier.

14. Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.

The project's activities (tree planting in existing tree wells, sidewalk decals and signage, trail-segment improvements within the existing trail footprint, riparian planting in existing riparian zones) are anticipated to qualify for CEQA categorical exemptions—typically Class 4 (Minor Alterations to Land), Class 33 (Small Habitat Restoration), and/or Class 1 (Existing Facilities). TWP and Contra Costa County will jointly file the appropriate Notice of Exemption(s) before any ground-disturbing work begins. Should any project component be determined to require additional environmental review, TWP has budgeted contingency and will coordinate with the County's lead-agency CEQA staff.

15. Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.

No private property acquisition is required. All project activities take place on:

- Public right-of-way under Contra Costa County jurisdiction (sidewalks and street tree wells along Giaramita Street, Chesley Avenue, Fred Jackson Way) — site control via County encroachment/right-of-way permits.
- Wildcat Creek Trail and adjacent riparian corridor under Contra Costa County Public Works ownership. Site control via County partnership and standing watershed-program agreements.
- Verde K-8 School grounds, by standing partnership with West Contra Costa Unified School District through watershed education programming.

Letters of site-control acknowledgement from Contra Costa County Public Works will be filed with the readiness documentation prior to Grant Agreement execution.

16. Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.

Long-term operations and maintenance (O&M) is a deliberate design feature of this project, not an afterthought. Three layers of O&M assurance are in place:

- During the grant term (Years 1–5). Critical establishment watering and maintenance is fully funded inside this budget — including 50% FTE Restoration Crew Lead, 25 paid trainee/crew positions, the irrigation/water-buffalo contract, watering bags, and replacement contingency. The first three establishment years are the highest-risk window for tree survival; this project resources them deliberately.
- Built-in workforce handoff. By project close, 50 trained and certified community members will be available to staff future Contra Costa County tree-care contracts, the County's Adopt-a-Tree program, Urban Tilth's stewardship operations, and TWP's ongoing Watershed Crew. This is the core just-transition mechanism: the people who installed the trees will be the people paid to maintain them.

- Post-grant O&M funding. Contra Costa County Public Works has indicated interest in continuing its Adopt-a-Tree and tree-maintenance contracting with TWP. TWP will additionally pursue California Urban Greening Program funds, additional Air District Regional Community Benefits Fund grants, and private foundation support to underwrite ongoing canopy maintenance and Urban Nature Loop refresh cycles.

The Block Ambassador program is intentionally designed to embed routine, low-cost wayfinding and signage maintenance into the neighborhood itself—refreshed decals, replaced QR-code stickers, light litter pick-up—as part of an ongoing peer-to-peer program. Together, these layers ensure that the Air District's investment compounds rather than depreciates.

17. Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.

TWP has identified the following barriers and risks, and has built specific mitigation strategies for each:

- Limited planting space and constrained tree wells. North Richmond's existing tree wells are frequently undersized or contain stumps from prior dead trees. Mitigation: a dedicated $35,000 site-prep contractor line removes stumps and opens cement in undersized wells; the project prioritizes quality over quantity by planting 120 larger-caliper trees from Devil Mountain instead of a higher number of smaller trees.
- Tree-survival risk during the first three establishment years. Mitigation: dedicated 50% FTE Restoration Crew Lead, water-buffalo irrigation contract, watering bags, ≥90% 5-year survival target tied to monitoring, and a $25,000 contingency line for replacement.
- Coordination dependency on County Public Works' 2027 trail resurfacing schedule. Mitigation: trees and riparian plantings are sequenced to follow County resurfacing—a deliberate scheduling choice that protects new plantings and avoids construction-related damage. TWP and the County have a continuous working relationship from 2017 to present, which de-risks the scheduling coordination.
- Outreach platform discontinuation (PocketSights). Mitigation: project budgets dedicated time and resources to migrate the Urban Nature Loop self-guided tour onto a sustainable, community-maintainable platform; Block Ambassadors are tasked with routine QR-code refresh as part of their paid scope.
- Workforce retention. Mitigation: TWP's existing four-rung workforce ladder (Green Collar Corps → Summer Field Crew → Watershed Apprentices → permanent crew) means trainees see a clear path forward; pay is competitive ($21–$25/hr) and fringe benefits are provided where applicable.
- Illegal dumping along Wildcat Creek. Mitigation: planting and stewardship events include routine clean-ups; Block Ambassadors flag dumping for County abatement. The visible community presence created by the project itself is, historically, the single most effective deterrent.
- Reimbursement-based grant cash-flow for a community-rooted nonprofit. Mitigation: TWP will request advance payment per Section 12.2 of the Guidelines (up to 25% of

the award), which will be deposited into a federally insured interest-bearing account. TWP's audited financial statements demonstrate adequate liquidity to manage cash flow during establishment.

Across every barrier, the project's deepest mitigation is the depth and length of TWP's relationship with North Richmond residents and City of Richmond and Contra Costa County partners. Plans drawn on paper can fail; decades of trust is tried and tested.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The Greener North Richmond project envisions a healthier, safer, and more connected North Richmond, where residents choose walking and bicycling along Wildcat Creek for short trips, achieved through strategic tree planting that reduces exposure to PM2.5 air pollution, paired with robust community outreach and education to encourage shifts away from motor vehicle use for trips of one mile or less.

Measurable Outcome	Indicator(s)
Outcome 1: Increase safe, walkable access to green space for 1,000 North Richmond residents and Verde K-8 School families by improving 1 mile of the Wildcat Creek Trail and revegetating riparian areas by the end of the grant term. This specific trail segment runs from the end of the trail at the railroad, adjacent to Verde K-8 School, and on to the Richmond Parkway, passing by the A's Baseball Field. In the future it will link to the North Richmond Shoreline Living Levee, which will be implemented by 2030, and the SF Bay Trail. (Strategy 1)	• Linear feet of Wildcat Creek Trail improved (target: 1 mile) • Acres of riparian area revegetated with native species (target: 400 native plants) • Change in trail use counts at two locations, measured by counts at baseline and project close (target: 30% increase)
Outcome 2: Reduce ambient surface temperatures and PM2.5 exposure along 2 miles of sidewalk in North Richmond (connecting to The Urban Loop and the Wildcat Creek Trail) by planting and establishing 120	• Number of trees planted and surviving at project close (target: 120 in trees; ≥90% survival rate by year 5) • Change in surface temperature at three corridor locations, measured at baseline and project close using handheld sensors (target 10% reduction)

large-canopy trees by the end of the grant term. TWP will plant 50 trees along the sidewalk and 70 trees along the Wildcat Creek Trail to achieve a critical mass of canopy cover. (Strategy 1)	• Modeled estimate of PM2.5 absorption calculated using Tree Tracker GIS and tree tracker protocols
Outcome 3: Improve outdoor health and heat resilience for 2,000 North Richmond residents and youth by activating shaded green spaces and trail corridors through community stewardship programming by the end of the grant term. (Strategy 1)	• Number of youth engaged in environmental education and greening events (target: 600 youth) • Number of community stewardship events held • Resident and youth-reported changes in outdoor activity and heat comfort (qualitative, collected at project close)
Outcome 4: Strengthen the long-term health and air quality benefits of North Richmond's urban forest by training at least 50 community members in tree stewardship, urban forestry monitoring, and green infrastructure maintenance through the innovative Green Collar Corps, Watershed Crew, and Canopy Rangers skill training and leadership development programs by the end of the grant term. (Strategy 1)	• Number of adults trained and certified as in Green Infrastructure (target 50) • Participant-reported increases in stewardship skills and environmental knowledge (qualitative, collected at program completion) • Number of paid crew events to support Urban Forest and Creek restoration during plant establishment (target: 50 over the grant term)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
Outcome 1: Increase safe, walkable access to green space for 1,000 North Richmond residents and Verde K-8 families by improving 1 mile of the Wildcat Creek Trail and revegetating riparian areas by the end of the grant term. (Strategy 1)	A. Site assessments completed and baseline trail use and temperature data established	1. Conduct site assessments along the Wildcat Creek Trail corridor and Urban Nature Loop; document current trail conditions, access barriers, signage gaps, and priority improvement locations	The Watershed Project	Contra Costa County Public Works	June 30, 2027
		2. Install automated trail use counters at two baseline monitoring locations along the Wildcat Creek Trail; collect initial counts to establish baseline for 30% increase target	The Watershed Project	Verde K-8 PTA	June 30, 2027
		3. Conduct pre-project community walk with Verde K-8 PTA caregivers and	The Watershed Project	Verde K-8 PTA	June 30, 2027

		WWILD alumni to identify safety concerns, missing connections, and maintenance priorities along the Trail and Loop			
	B. Wildcat Creek Trail improved and Urban Nature Loop refreshed	1. Improve 1 mile of the Wildcat Creek Trail including grading, access improvements, and lighting coordination with Contra Costa County Public Works; sequenced to follow County trail resurfacing in 2027	The Watershed Project	Contra Costa County Public Works	December 31, 2028
		2. Install 4 interpretive signs and 100 floor decals and directionals along the Urban Nature Loop; migrate audio tour from retiring PocketSights platform to a sustainable, community-maintaina ble app	The Watershed Project	Green Collar Corps Canopy Rangers	June 30, 2030

		3. Plant approximately 450 native riparian plants along Wildcat Creek banks to stabilize the corridor, support evapotranspiration cooling, and complement the creek's ecological function	The Watershed Project	Green Collar Corps, Canopy Rangers	June 30, 2030
	C. Trail use documented and riparian planting survival verified	1. Conduct follow-up trail use counts at both monitoring locations; compare to baseline to track progress toward 30% increase target	The Watershed Project	Green Collar Corps Canopy Rangers	October 31, 2030
		2. Conduct quarterly site walks with Verde K-8 PTA caregivers and WWILD alumni to identify maintenance gaps, signage wear, and emerging concerns; document and address findings	The Watershed Project	Verde K-8 PTA	Ongoing

		3. Document riparian plant survival rate and creek bank stabilization; submit Year 4 progress report to BAAQMD including photo documentation and community feedback	The Watershed Project	Contra Costa County Public Works	December 31, 2031

Outcome 2: Reduce ambient surface temperatures and PM2.5 exposure along 2 miles of sidewalk in North Richmond (connecting to The Urban Loop and the Wildcat Creek Trail) by planting and establishing 120 large-canopy trees by the end of the grant term.	A. Corridors identified, baseline temperatures and PM2.5 measured, and trees procured	1. Identify priority planting corridors along Giaramita Street, Chesley Avenue, and Fred Jackson Way using i-Tree Eco modeling; confirm species selection (Coast Live Oak, California Sycamore, Chinese Pistache, London Plane Tree) with Contra Costa County Public Works approved street-tree list	The Watershed Project	Contra Costa County Public Works	October 31, 2027

		2. Measure baseline surface temperatures at three corridor monitoring locations using handheld sensors; document pre-planting PM2.5 conditions using i-Tree Eco protocol to establish targets for 10% temperature reduction	The Watershed Project		March 31, 2027
		3. Submit right-of-way and encroachment permit applications to Contra Costa County Public Works; procure 120 trees at 15-gallon size or larger from Devil Mountain Wholesale Nursery	The Watershed Project	Devil Mountain Wholesale Nursery; Contra Costa County Public Works	September 30, 2028
	B. 120 large-canopy trees planted and establishment watering program launched	1. Plant 50 large-canopy trees along priority sidewalk corridors (Giaramita Street, Chesley Avenue, Fred Jackson Way); open undersized tree	The Watershed Project	Green Collar Corps Canopy Rangers	December 31, 2028

		wells and remove stumps using site-prep contractor prior to planting			
		2. Plant 70 large-canopy trees along the Wildcat Creek Trail corridor; sequenced to follow County trail resurfacing to protect new plantings from construction damage	The Watershed Project		June 30, 2029
		3. Launch establishment watering program using water-buffalo irrigation contractor and watering bags; assign Restoration Crew Lead to oversee daily field operations during the three highest-risk establishment years	The Watershed Project	Irrigation Contractor	June 30, 2029
	C. Tree survival, surface temperature reduction, and PM2.5	1. Conduct annual tree survival assessments using	The Watershed Project	Green Collar Corps, Canopy Rangers	Annually through June 30, 2031

	absorption documented and reported	Tree Tracker GIS; replace any trees lost during establishment within 60 days using contingency funds; target ≥90% 5-year survival rate			
		2. Measure surface temperatures at three corridor monitoring locations annually; compare to baseline to track progress toward 10% reduction target	The Watershed Project	Green Collar Corps, Canopy Rangers	Annually through December 31, 2031
		3. Run annual i-Tree Eco model to estimate PM2.5 absorption by established canopy; compile results into annual report submitted to BAAQMD	The Watershed Project	Green Collar Corps, Canopy Rangers	Annually through December 31, 2031

Outcome 3: Improve outdoor health and heat resilience for 2,000 North Richmond residents and youth by activating shaded green spaces and trail corridors through community stewardship programming by the end of the grant term. (Strategy 1)	A: Community outreach launched and first stewardship events delivered	1. Develop bilingual outreach plan and materials targeting Verde K-8 families, Shields-Reid Community Center youth, and North Richmond residents; launch recruitment campaign for stewardship events and public activation days	The Watershed Project	Verde K-8 PTA	June 30, 2027
		2. Host first two community stewardship events combining tree planting, trail maintenance, and environmental education; document participant counts and demographics	The Watershed Project	Green Collar Corps, Verde K-8 PTA, Verde K-8 PTA	December 31, 2027
		3. Host first public activation day on the Wildcat Creek Trail or Urban Nature Loop, including walking school bus activation,	The Watershed Project	Green Collar Corps, Verde K-8 PTA, Verde K-8 PTA	June 30, 2028

		wayfinding demonstration, and Block Ambassador outreach			
	B: 15 stewardship events and 5 public activation days delivered across the grant term	1. Deliver remaining stewardship events (target: 15 total across grant term) combining planting, watering, litter removal, and signage maintenance; track cumulative participant counts toward 600 youth engaged target	The Watershed Project	Green Collar Corps, Canopy Rangers	December 31, 2031
		2. Deliver remaining public activation days (target: 5 total across grant term) including climate resilience programming, safe route demonstrations, and community celebrations tied to key project milestones	The Watershed Project	Green Collar Corps, Canopy Rangers, Contra Costa Health	December 31, 2031

		3. Engage youth participants in hands-on monitoring activities including trail counts, temperature readings, and tree health observations; integrate findings into TWP's environmental education curriculum	The Watershed Project	Verde K-8 School, Green Collar Corps	December 31, 2031
	C: Outdoor health and activation outcomes evaluated and documented	1. Administer pre- and post-event surveys at stewardship events and activation days tracking resident-reported changes in outdoor activity frequency, heat comfort, and trail use	The Watershed Project		Annually through December 2031
		2. Conduct annual participant count review comparing cumulative engagement to 600 youth and 2,000 resident targets;	The Watershed Project		Annually through December 2031

		adjust outreach strategy if needed based on demographic data			
		3. Compile final activation and stewardship outcomes report including participant counts, event documentation, resident feedback, and photo record; submit to BAAQMD at project close	The Watershed Project		December 31, 2031

Outcome 4: Strengthen the long-term health and air quality benefits of North Richmond's urban forest by training and engaging at least 50 community members in tree stewardship, urban	A. Green Collar Corps, Watershed Crew, and Canopy Rangers cohorts trained and certified	1. Recruit and onboard first Green Collar Corps cohort (youth ages 17–24, paid at $21/hr); deliver foundational training in urban forestry, tree planting, green stormwater infrastructure, and community engagement	The Watershed Project		December 31, 2027

forestry monitoring, and green infrastructure maintenance through the innovative Green Collar Corps, Watershed Crew, and Canopy Rangers programs by the end of the grant term. (Strategy 1)		2. Deliver Canopy Rangers urban forestry pathway training including tree health assessment, pruning techniques, and arborist certification preparation; enroll first cohort of 5 Canopy Rangers	The Watershed Project		December 31, 2028
		3. Train Restoration Crew Lead and 5 Crew Members in site assessment, tree-well preparation, riparian planting, erosion control, and establishment watering protocols; confirm prevailing wage compliance for all covered work	The Watershed Project		December 31, 2028
	B. 50 paid community members deployed across 50 crew events during plant establishment	1. Deploy Green Collar Corps, Watershed Crew, and Canopy Rangers across all planting, watering, monitoring,	The Watershed Project	Green Collar Corps, Canopy Rangers	June 30, 2031

		and stewardship events; document paid hours, crew composition, and tasks completed at each event			
		2. Activate 15 Block Ambassadors (paid at $25/hr via 1099) for door-to-door outreach, routine signage and QR-code refresh, light litter pick-up, and dumping reporting along the Urban Nature Loop and Wildcat Creek Trail	The Watershed Project	Green Collar Corps, Canopy Rangers	June 30, 2031
		3. Connect Watershed Crew apprentices and Canopy Rangers completers to Contra Costa County Adopt-a-Tree contracting opportunities and TWP's ongoing workforce ladder for	The Watershed Project	Contra Costa County Public Works	June 30, 2031

		post-grant employment			
	C. Workforce outcomes tracked and just transition career pathways documented	1. Track and document certifications earned, paid hours worked, and participant-reported skill gains for all Green Collar Corps, Watershed Crew, Canopy Rangers, and Block Ambassador participants annually	The Watershed Project	Green Collar Corps, Canopy Rangers	Annually through December 31, 2031
		2. Conduct annual participant feedback sessions with workforce cohorts; use findings to adjust training topics, scheduling, and crew composition for the following year	The Watershed Project		Annually through December 31, 2031
		3. Compile final workforce outcomes report documenting 50 trained and certified community	The Watershed Project		Annually through December 31, 2031

		members, certifications earned, paid crew events completed, and post-program employment or contracting outcomes; submit to BAAQMD at project close			

Project Name:	**Greener North Richmond**
Lead Applicant Name:	**County of Contra Costa**
Term for this budget (in years):	5

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	County Staff	County staff to manage grant administration activities for project. Includes grant managment staff and accounting staff for grant reporting.	$159,405.83
Personnel/Staff Costs	Direct	Public Works Staff	Public Works will collaborate with TWP to create and install signage along the creek trail to support wayfinding and encourage trail use.	$50,000.00

Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The “Project Narrative” is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	North Richmond Community Resilience Initiative
Lead Applicant Name	County of Contra Costa
Project Location	North Richmond
Overall Funding Request	$14,902,316.02
Grant Term Request	5 Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Clean Home Retrofits
Project Lead	County of Contra Costa, Department of Conservation and Development
Project Location	North Richmond
Project Funding Request	$2,374,423.44

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Contra Costa County, Department of Conservation and Development (DCD), will partner with the Bay Area Regional Energy Network (BayREN), a coalition of the Bay Area's nine counties, led by the Association of Bay Area Governments, to leverage its existing Efficiency and Sustainable Energy (EASE) Home Program that provides up to $10,000 in energy efficiency improvements to single-family homeowners with a participant co-pay of no more than 20% ($2,000). Contra Costa County receives funding from BayREN through the California Public Utilities Commission (CPUC) to market the EASE Home Program and will coordinate on marketing efforts to expand the program to include additional energy efficiency retrofit upgrades at no additional cost to 35 homes located in the North Richmond area. The additional retrofit upgrades include installing heat pump heating, ventilation, and air conditioning (HVAC) systems and water heaters, induction cooktops, heat pump clothes dryers, solar panels, electric panel upgrades, and battery storage, as well as covering some home remediation costs. The project also includes clean home retrofits at no cost to the property owner to an additional five (5) single-family homes that are licensed residential daycare facilities. The residential daycare facility retrofits will be led directly by DCD and will be leveraged with what is already planned to be implemented through the County's Energy Efficiency Conservation Block Grant (EECBG), a Federal Department of Energy grant allocated to the County.

The core project design targets combustion-related indoor air pollution in a community with the highest asthma-related emergency room visit rates in California. Both the 35 home retrofits through BayREN's EASE Home Program and 5 residential daycare facility home retrofit projects will be designed to improve indoor air quality and maximize GHG emissions reductions based on the home improvement needs of each single-family home. At least 10 of the 35 EASE Home Program projects are planned to be fully electric and include both solar and battery storage. Retrofits conducted will focus on eliminating natural gas appliances in the homes to improve health outcomes, particularly for the residential daycare facilities where natural gas appliances can exacerbate asthma incidents in children.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

While this project generates economic benefits through energy cost savings for cost-burdened households, its primary alignment is with Strategy 1 to reduce air pollution and improve health outcomes. On November 4, 2025, Contra Costa County adopted a Clean Energy Roadmap for Existing Buildings (Clean Energy Roadmap). The Clean Energy Roadmap is an action item specified in Strategy BE-2 of the County's Climate Action and Adaptation Plan 2024 Update, adopted on November 5, 2024, by the County Board of Supervisors and includes information on health impacts, particularly as it relates to asthma when gas appliances are eliminated from existing buildings. Contra Costa County has approximately 300,000 residents living in census tracts that rank in the 95th percentile or higher statewide for asthma-related emergency department visits; these census tracts are located primarily along the County's northern waterfront. This is higher than any other county in California.

On average, Californians spend approximately 90 percent of their time indoors where the air quality can be more polluted than outdoors. Gas appliances emit harmful amounts of carbon dioxide (CO_2) and nitrogen dioxide (NO_2) which become trapped in the home, causing lasting health ramifications to occupants. For example, gas stoves in homes produce NO_2 concentrations that are 50-400 percent higher than homes with electric stoves. These spikes often cause indoor air quality to far exceed the standards for outdoor air pollution. Children living in homes with gas stoves are 42 percent more likely to suffer asthma symptoms than those living in homes with electric stoves. Particularly for those with moderate to severe asthma, eliminating the use of gas stoves and other appliances that use gas in the home are known to improve health outcomes.

The Clean Home Retrofits project directly advances Strategy 1 by eliminating gas appliances — the primary source of indoor combustion pollutants — in 40 homes in North Richmond, one of the most environmentally overburdened communities in the nation. By prioritizing income-qualified households and licensed residential daycare facilities where young children are present daily, the project concentrates health benefits where the asthma burden is highest and the barriers to voluntary electrification are greatest. The five daycare facility retrofits in particular represent a direct intervention for children, the population most vulnerable to indoor NO_2 exposure from gas appliances.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

North Richmond is a severely overburdened community by every environmental and socioeconomic measure. According to the EPA EJScreen Community Report, the total

population of the project area is 4,000. Of that, 96% are people of color — 68% Hispanic and 19% Black. Sixty-one percent of residents report speaking Spanish at home as their primary language, and 70% of residents speak a language other than English in their household. The median per capita income stands at $24,610, representing only 54% of the California per capita income and 60% of the national figure. Thirty-seven percent of residents are considered low-income, compared to 28% statewide and 31% nationally. Over 50% of renters are cost burdened, and the community has a history of housing insecurity.

The environmental burden concentrated in North Richmond is among the most severe in the nation. The community ranks in the top 4% of census tracts nationally for proximity to hazardous sites, top 5% for Superfund proximity, top 11% for proximity to Risk Management Plan (RMP) facilities, top 12% for toxic releases to air, top 13% for traffic proximity, top 16% for diesel particulate matter, and top 18% for air toxics cancer risk. Transportation access compounds these vulnerabilities, with inadequate roadway and sidewalk maintenance and a lack of connected walking and biking infrastructure limiting residents' ability to reach services or evacuate during emergencies.

The Clean Home retrofit program will be available to all eligible single-family property owners that have an area median income of up to 120% and live in North Richmond for both the unincorporated (County) and incorporated (City of Richmond) areas of North Richmond. The City of Richmond (incorporated) area of North Richmond will include all single-family homes located north of the railroad tracks.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The need for all-electric building upgrades in North Richmond has been identified and validated through multiple overlapping community-driven planning processes over several years, all of which centered resident voice and CBO participation.

The most direct driver is the AB 617 Community Emissions Reduction Plan (CERP) for the Richmond–North Richmond–San Pablo area, adopted by BAAD in April 2024. The AB 617 process is specifically designed to give heavily polluted communities — including North Richmond — a formal role in identifying their own pollution burdens and priority interventions. Through that process, community members identified all-electric building upgrades and indoor air quality improvement as priority actions, providing direct resident-informed validation for the Clean Home Retrofits project.

The Contra Costa Asthma Initiative (2019–2023), developed in partnership with Contra Costa Health Services, BayREN, the County Weatherization Program, the Association for Energy Affordability, and MCE, further grounded this project in community-identified health needs. That initiative referred North Richmond-area residents with high rates of asthma-related emergency room visits to weatherization and energy efficiency programs — demonstrating both the scale of the health burden and the community's established appetite for home-based interventions.

Most recently, the County's November 2025 Clean Energy Roadmap for Existing Buildings was developed using the Greenlining Framework, a structured approach to building trust with communities disproportionately impacted by the energy transition. The Greenlining Framework centers CBO engagement as the primary vehicle for understanding community barriers, co-creating outreach strategies, and ensuring that equity — not displacement — guides program design. The CAAP itself, adopted after several years and hundreds of community meetings including multiple convenings in North Richmond, established Building Efficiency Strategy BE-2 as a community-supported priority, requiring the County to prioritize equity and minimize disruption to existing tenants in any building electrification effort.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

North Richmond faces a compounding environmental justice crisis that this project directly targets. The community ranks in the top 4% of census tracts nationally for proximity to hazardous sites, top 16% for diesel particulate matter, and top 18% for air toxics cancer risk. Ninety-six percent of residents are people of color, 37% are low-income, and over 50% of renters are cost-burdened. Contra Costa County's northern waterfront — where North Richmond sits — contains census tracts ranking in the 95th percentile or higher statewide for asthma-related emergency room visits, a rate higher than any other county in California.

A core but underaddressed dimension of this pollution burden is indoor air quality. Gas stoves produce NO_2 concentrations 50–400% higher than homes with electric stoves, and children in homes with gas stoves are 42% more likely to experience asthma symptoms. In a community where the majority of residents speak a language other than English at home, have limited financial resources, and face mandatory appliance

transition deadlines — BAAQMD Rules 9-4 and 9-6 will ban new gas water heaters starting in 2027 and gas furnaces in 2029 — the barriers to voluntary electrification are substantial without direct program support.

The Clean Home Retrofits project addresses these challenges by delivering no-cost or low-cost retrofits to income-qualified single-family homeowners (up to 120% AMI) in both the unincorporated County and incorporated City of Richmond portions of North Richmond. The five residential daycare facility retrofits carry particular public health significance: by eliminating gas appliances from facilities that serve young children daily, the project reduces combustion-related asthma triggers for one of the community's most vulnerable populations.

Progress toward community impact will be demonstrated through the following measurable outcomes:

- **40 homes retrofitted** with clean energy improvements, including elimination of gas appliances, reducing indoor NO_2 and combustion pollutant exposure for participating households
- **10 homes converted to fully all-electric** with solar and battery storage, reducing energy costs and increasing resilience during power outages — directly addressing economic vulnerability among cost-burdened, low-income residents
- **25 homes** receiving heat pump water heater replacements, removing a primary indoor combustion source and positioning households ahead of the 2027 BAAQMD gas water heater ban at no cost to income-qualified participants
- **5 licensed residential daycare facilities** converted to fully all-electric, improving daily indoor air quality for the children in their care
- Pre- and post-retrofit utility data collected for all participating homes to calculate and report GHG reductions at project close using California grid emissions factors

These outcomes directly respond to the community priorities surfaced through the AB 617 Path to Clean Air CERP process, which identified all-electric building upgrades and indoor air quality improvement as priority interventions for North Richmond, and builds on the Contra Costa Asthma Initiative's established model of connecting high-asthma-burden households to home-based health interventions.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members.*

Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.

The County will use a multilayered approach to keep community members informed of implementation progress, ensure program benefits reach eligible residents, and incorporate feedback throughout the grant term.

The County will contract with a local nonprofit CBO to conduct marketing outreach to North Richmond homeowners about the Clean Home Retrofit program. Outreach activities may include attending existing community meetings, providing stipends to additional CBOs to spread program awareness, and preparing and disseminating bilingual marketing materials — an essential step given that 61% of North Richmond residents speak Spanish at home. The County will also send direct mailers to all North Richmond residents about program offerings, and will leverage its existing BayREN EASE Home Program marketing infrastructure to generate qualified leads among eligible property owners. The County will work closely with the selected CBO to tailor the outreach approach to community needs using the Greenlining Framework outlined in the Clean Energy Roadmap for Existing Buildings.

Second, the BayREN EASE Home Program has established post-retrofit survey protocols that will be used to gather participant feedback and inform program adjustments on an ongoing basis across the 35 single-family home retrofits. The County will conduct its own post-retrofit surveys with all property owners who participate in the residential daycare facility retrofit component. Where feasible, survey findings will be used to adjust program delivery — including outreach tactics, contractor performance standards, and participant support — to improve outcomes over the five-year grant term.

Finally, because this project is structured to deliver retrofits over five years, early implementation findings from both the BayREN and County-led components will inform later cohorts. If the up-to-$2,000 participant co-pay proves a barrier to participation in the EASE Home Program, the County has identified the option to lower or eliminate that cost for the lowest-income participants, reflecting a commitment to adjusting program design in response to community experience rather than holding rigidly to initial assumptions.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The Clean Home Retrofit project will retrofit a total of 40 homes located in the North Richmond Community. 10 homes will be retrofitted to be all-electric and include both solar and battery storage. 25 homes will have, at a minimum, gas water heaters replaced with electric heat pump water heaters. Additional all-electric retrofit measures may be included depending on the need or priority to cost-effectively improve indoor air pollution and health outcomes. 5 single-family residential daycare facilities will be retrofitted to focus on eliminating natural gas appliances inside the home (i.e., gas stoves, gas heaters, etc.).

This project will improve indoor air quality by converting homes with gas appliances to be all-electric and increase energy efficiency with home weatherization improvements. The homes that receive solar and battery storage will substantially reduce their energy costs and support community resilience when there are local power outages.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The total BAAD funds requested for the Clean Home Retrofits project are $2,374,423.44 over five years, comprising $585,254.44 allocated to Contra Costa County's Department of Conservation and Development for program administration, outreach, and direct retrofit delivery, and $1,789,169 allocated to BayREN (Association of Bay Area Governments) for retrofit delivery and program management.

BayREN's budget is anchored by $1,404,060 in subcontractor costs covering the delivery of expanded clean energy retrofit upgrades, including heat pump water heaters, HVAC systems, induction cooktops, heat pump clothes dryers, solar panels, battery storage, and electrical panel upgrades, for at least 35 single-family homes in the North Richmond area. At least 10 of those homes will become fully all-electric with electric appliances, rooftop solar, and battery storage. The remaining 25 homes will receive smaller retrofit improvements, prioritizing replacement of gas water heaters with heat pump water heaters, with additional measures included based on each home's needs and cost-effectiveness. BayREN staff costs of $130,000 cover ABAG/MTC personnel responsible for managing subcontractor agreements and overseeing program delivery across the five-year grant term. BayREN also includes a $25,000 contingency for unforeseen subcontractor costs. Indirect costs for BayREN total $230,109 at the 15% cap.

The County's budget of $585,254.44 covers two distinct scopes: program administration and outreach for the single-family retrofit program, and direct retrofit delivery to licensed residential daycare facilities. Personnel costs of $233,916.90 fund County staff for grant management, accounting, and program marketing and outreach. Community engagement costs of $20,000 cover printing and mailing to reach single-family property owners in the project area. Subcontractor costs of $255,000 are split between a nonprofit community engagement subcontractor ($55,000) conducting targeted outreach to North Richmond homeowners, and a licensed contractor ($200,000) responsible for implementing no-cost clean energy retrofits at up to five licensed residential in-home daycare facilities in the project area, extending the health and air quality benefits of electrification to the young children served in these settings each day. Indirect costs total $76,337.54 at the 15% cap.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The Clean Home Retrofits project is consistent with a layered set of community, local, regional, and statewide plans and initiatives — each of which independently identifies the need for the all-electric building upgrades and indoor air quality improvements this project delivers.

Contra Costa Asthma Initiative (2019–2023)
This project builds directly on work the County completed through the Contra Costa Asthma Initiative, developed through a technical assistance grant from the Green and Healthy Homes Initiative (GHHI) in coordination with Contra Costa Health Services, the County Weatherization Program, the Association for Energy Affordability, BayREN, and MCE. Following completion of a business plan in late 2019, CCHS was awarded funding from the Sierra Health Foundation and BAAD to implement a comprehensive home-based asthma remediation program covering home assessments, asthma trigger identification and remediation, and energy efficiency and weatherization services. The Clean Home Retrofits project extends this work by adding full electrification, solar, and battery storage to the retrofit toolkit — going beyond weatherization to eliminate combustion pollutants at their source.

Contra Costa County 2045 General Plan
Adopted by the Contra Costa County Board of Supervisors, the 2045 General Plan is built on four key themes: sustainability, community health, economic development, and

environmental justice. North Richmond is recognized in the General Plan as an Impacted Community — the term used to refer to communities the State identifies as disadvantaged under CalEnviroScreen 4.0 — that has been disproportionately impacted for generations by industrial activity and pollution. The General Plan establishes goals, policies, and actions specific to improving indoor and outdoor air quality, transitioning to clean energy, and supporting a net-zero emission economy. The Clean Home Retrofits project directly advances General Plan policies for North Richmond by replacing gas appliances with all-electric systems, reducing combustion-related indoor air pollution, and extending clean energy access to low-income homeowners and daycare operators in an Impacted Community.

Contra Costa County Climate Action and Adaptation Plan (CAAP) 2024 Update
The CAAP, also adopted in November 2024, includes Strategy BE-2: Retrofit existing buildings and facilities in the unincorporated county and County infrastructure to reduce energy use and convert to low-carbon or carbon-free fuels. The Clean Energy Roadmap for Existing Buildings is a direct action item under this CAAP strategy, providing an initial assessment of the landscape for transitioning buildings to all-electric and highlighting benefits including enhanced health and safety in homes and improved community resilience to the impacts of climate change, with a strategic community engagement strategy centering equity to inform impacted communities about the benefits of clean energy buildings. The Board of Supervisors has approved the Clean Energy Roadmap, and the Clean Home Retrofits project operationalizes its goals in North Richmond — one of the County's highest-priority Impacted Communities — through direct retrofit delivery to single-family homeowners and licensed in-home daycare facilities.

Bay Area Air Quality Management District
The BAAQMD's Clean Air Plan defines a regional strategy to protect public health and address climate change, including specific measures to accelerate low-carbon buildings, eliminate methane leaks, and convert space and water heating to all-electric. The Air District is also the lead agency for implementing AB 617 and adopted the Path to Clean Air community emissions reduction plan for the Richmond-North Richmond-San Pablo area in April 2024, which identifies all-electric buildings and indoor air quality improvement as priority interventions for the North Richmond community. The BAAD's appliance rules 9-4 and 9-6 further reinforce this project's approach: the rules ban the purchase of gas water heaters in BAAD territory for residential buildings starting in 2027 and gas furnaces starting in 2029, making the retrofit upgrades delivered by this project an anticipatory investment that prepares North Richmond homeowners for mandatory appliance transitions — at no cost to income-qualified participants.

State Policies

At the statewide level, Executive Order B-55-18 established California's goal of achieving carbon neutrality by 2045. The County's 2024 CAAP is designed to reduce 2045 GHG emissions to 85% below 1990 levels, equal to 87% below baseline 2005 levels, achieving the GHG reduction goals for 2030 and 2045. The Clean Home Retrofits project contributes to this trajectory by replacing gas appliances with electric equivalents in 35 North Richmond homes and at least five in-home daycare facilities, generating estimated GHG reductions to be calculated and reported at project close using pre- and post-installation utility data and California grid emissions factors.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The County's Sustainability Team will lead this project in close coordination with the Co-Applicant, BayREN, led by Sustainability Coordinator Jody London and managed by Principal Planner Demian Hardman-Saldana. The County will dedicate a planner full-time to manage this grant, with the assistance of a Climate Corps Fellow who will be recruited annually to assist with this project.

Ms. London has over 36 years of experience successfully implementing projects for local governments and non-profit organizations. Ms. London has significant experience working with coalitions and partnerships, having led a statewide advocacy group of local governments and served as an elected member of the Oakland School Board. At Contra Costa County she regularly manages multi-partner grants including the 2023 *Healthy Lands, Healthy People* carbon sequestration feasibility study and ongoing *Tree Plan*, both successfully completed or progressing on time and within budget.

Mr. Hardman-Saldana has worked for 19 years on a range of community planning and improvement programs for Contra Costa County. Mr. Hardman-Saldana is the County's lead on energy programs for the built environment. He successfully managed the County's 2009 federal American Recovery and Reinvestment Act grant to perform residential energy efficiency retrofits. He also helped design and implement the Contra Costa Asthma Initiative, a grant-funded partnership between the County's Health Department and Department of Conservation and Development that referred people with high rates of visits to the emergency room for asthma to weatherization and energy efficiency programs that improve indoor air quality. The County will draw on its financial management and other administrative staff to ensure this project is well-managed in compliance with Air District regulations, County policies, and financial best practices.

Energy Efficiency Conservation Block Grant (EECBG)

In 2009, through the American Recovery and Reinvestment Act (ARRA), the County was allocated $3.57 million in EECBG formula funding from the U.S. Department of Energy. This grant provided funding over a 3-year period for various energy efficiency activities that included, lighting and efficiency retrofits, a permit fee rebate program for residential projects for appliance retrofits, window upgrades, and solar photovoltaic system installations, increased funding for the County-operated Weatherization Program, drafting of the County's first Climate Action Plan, and amendments to various County ordinances that promote energy efficiency activities. Status: The project was completed on time, with all reports and compliance requirements met.

Community Development Block Grant (CDBG)
Contra Costa County is an annual "entitlement" recipient of (CDBG) funds from the U.S. Department of Housing and Urban Development and has been a formula recipient since the Program's inception in 1974. DCD administers and manages the CDBG program on behalf of the County and has been receiving an average of $4.5 million in CDBG funds over the last five years. Status: All reporting tasks have been completed on time and within budget, and all compliance requirements have been met.

Home Investment Partnerships (HOME)
Contra Costa County is a "participating jurisdiction" of the HOME Program funds from the U.S. Department of Housing and Urban Development and has been a "participating jurisdiction" receiving an annual allocation since the Program's inception in 1992. The primary goals of the HOME Program are to create and preserve affordable housing to low-income households. The County's Department of Conservation and Development administers and manages the HOME program on behalf of the County and has been receiving an average of $3 million in HOME funds over the last five years. Status: All reporting tasks have been completed on time and within budget, and all compliance requirements have been met.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

A majority of this project will be leveraging existing BayREN resources. The BayREN EASE Home Program already provides energy efficiency improvements of up to $10,000 per home for any property owner who can cover up to 20% of the energy efficiency improvement costs and meets the income criteria to participate in the program (up to 120% of area median income). BayREN will expand its current scope of work for subcontractor(s) to complete any of the additional retrofit work for this project for 35 of

the 40 homes that participate in the BayREN EASE Home Program. Contra Costa County already has an existing contract with the Association of Bay Area Governments, the entity responsible for implementing BayREN across the nine-county region. BayREN and the County will amend the existing agreement(s) already in place to expand the scope of work for this project.

The County will be responsible for implementing the marketing and outreach to the community about the program. The County will also leverage its existing BayREN EASE Home Program marketing and outreach funding with the specific additional marketing and outreach funding allocated for this project with Air District grant funds.

It is anticipated that it will require approximately a 0.9 FTE to implement and manage this project over the grant term. Because the County is leveraging existing staff already allocated through its existing funding through BayREN, it is not anticipated to take a significant amount of staff time to implement and manage this project.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

The home energy efficiency and all-electric appliances that will be installed for the 40 homes that participate in this program/project will require building permits. The County and BayREN staff will require in their agreements and contracts with any subcontractor(s) that any home upgrades will be required to obtain any local building permits.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

This project is anticipated to qualify for a categorical exemption under CEQA. Depending on the project scope, exemptions under Class 1 (existing facilities) and Class 4 (minor alterations to land), or similar applicable categorical exemptions are anticipated.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

Private property permission will be required before home improvement work can begin. The subcontractor assigned to complete the home retrofit work will be required to obtain private property permission before commencing any work on the property. The property owner will also have to sign and agree to the scope of work for the home improvements, including date(s) and time(s) work will commence.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Once home retrofits are completed, it will be the responsibility of the property owner to continue to maintain any of the equipment installed through the program.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The up to $2,000 cost for the property owner may be a barrier for participation into the program. If so, the project may be modified to lower this participation cost for low-income property owners or tenants. However, early findings through BayREN's EASE Home Program indicate that many low-income residents choose to participate in the program even if there are other no-cost programs available because the EASE Home Program includes home remediation repair costs that other low-income programs do not offer.

Marketing and outreach to inform the community about the program could also be a challenge at the start. However, there is sufficient time during the grant period to make adjustments in our marketing tactics to thoughtfully inform the public about the program offerings and its benefits to the community.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Contra Costa County Department of Conservation and Development & BayREN | Clean Home Retrofit: Improve indoor air quality and reduce combustion-related health burdens for low-income residents in North Richmond by delivering no-cost clean energy retrofits to at least 35 single-family homeowners and 5 licensed residential in-home daycare facilities. Retrofit upgrades — including heat pump water heaters, HVAC systems, induction cooktops, heat pump clothes dryers, solar panels, battery storage, and electrical panel upgrades — will eliminate gas appliances as sources of indoor pollution, with at least 10 homes achieving full electrification with solar and battery storage.

Measurable Outcome	Indicator(s)
1. By the end of Year 4, complete weatherization and all-electric retrofits for all 5 licensed residential daycare facilities in the project area, improving indoor air quality for children in licensed childcare settings.	• Number of licensed residential daycare facilities serving low-income families with retrofits completed (target: 5) • Estimated annual reduction in indoor combustion pollutant exposure at participating facilities
2. By the end of Year 5, complete weatherization and all-electric retrofits for at least 35 single-family homes in North Richmond, with at least 10 homes fully converted to all-electric with rooftop solar and battery storage	• Number of single-family homes with gas water heaters replaced with heat pump water heaters (target: 35) • Number of single-family homes fully upgraded with all-electric appliances, solar PV, and battery storage (target: 10) • Estimated annual reduction in greenhouse gas emissions from completed single-family retrofits
3. By the end of Year 5, complete all marketing and outreach activities for the Clean Home Retrofit program throughout the North Richmond project area.	• Number of direct mailers sent to single-family property owners in the project area (target: all eligible property owners in North Richmond) • Number of single-family homeowner applications received to participate in the BayREN EASE Home Program (target: at least 35)

	• Number of licensed residential in-home daycare facility applications received to participate in the retrofit program (target: at least 5)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. By the end of Year 4, complete weatherization and all-electric retrofits for all 5 licensed residential daycare facilities in the project area, improving indoor air quality for children in licensed childcare settings.	A. Subcontractor procurement and agreements	1. Issue RFP or sole-source justification and select licensed contractor for daycare facility retrofits	CCC	BayREN	Year 1 Q1
		2. Execute subcontract agreement with selected contractor covering scope, schedule, and prevailing wage requirements for up to 5 daycare facility retrofits	CCC	BayREN	Year 1 Q2
		3. Execute subcontract agreement with nonprofit CBO for community outreach and marketing in the project area	CCC	BayREN	Year 1 Q2
	B. Site identification and property owner enrollment	1. Identify eligible licensed residential in-home daycare facilities in North Richmond and conduct initial outreach to property owners	County DCD	CBO Subcontractor	Year 1 Q3
		2. Conduct home assessments at interested daycare facilities to determine retrofit scope and confirm eligibility	Licensed Contractor	County DCD	Year 1-2
		3. Obtain signed property owner agreements and required permits for each participating daycare facility prior to commencing work	Licensed Contractor	County DCD	Year 2
	C. Retrofit construction and closeout	1. Complete retrofit construction at first 2-3 daycare facilities, eliminating gas	Licensed Contractor	County DCD	Year 2-3

		appliances and installing all-electric replacements			
		2. Complete retrofit construction at remaining daycare facilities, targeting completion of all 5 by end of Year 4	Licensed Contractor	County DCD	Year 3-4
		3. Conduct post-retrofit inspections, collect contractor completion records and retrofit measure inventories, and submit Year 4 progress report	County DCD	Licensed Contractor	Year 4
2. By the end of Year 5, complete weatherization and all-electric retrofits for at least 35 single-family homes in North Richmond, with at least 10 homes fully converted to all-electric with rooftop solar and battery storage	A. BayREN program expansion and subcontractor setup	1. Amend existing County-ABAG/BayREN agreement to expand scope of work for the EASE Home Program to cover additional clean energy retrofit upgrades for at least 35 homes in North Richmond	County DCD	BayREN/ABAG	Year 1 Q1
		2. BayREN executes amended subcontractor agreement(s) covering delivery of heat pump water heaters, HVAC systems, induction cooktops, solar PV, battery storage, and electrical panel upgrades	BayREN/ABAG	County DCD	Year 1 Q2
		3. Confirm prevailing wage compliance requirements with subcontractor(s) and establish reporting protocols for retrofit progress	County DCD	BayREN/ABAG	Year 1 Q2
	B. Homeowner enrollment and retrofit delivery (Years 2-4)	1. Process homeowner applications; conduct home assessments to determine retrofit eligibility and scope for participating single-family homes	BayREN/ABAG	County DCD	Year 2
		2. Complete retrofit installations for initial cohort of homes, prioritizing gas water	BayREN Subcontractor	BayREN/ABAG	Year 2-4

		heater replacements with heat pump water heaters across at least 25 homes			
		3. Identify and prioritize homes among EASE Home Program participants as candidates for full electrification with rooftop solar and battery storage; target at least 10 homes for full all-electric conversion	BayREN/ABAG	County DCD	Year 2-4
	C. Full all-electric delivery and project closeout	1. Complete all-electric conversions including solar PV and battery storage installations for at least 10 qualifying homes	BayREN Subcontractor	BayREN/ABAG	Year 4-5
		2. Confirm all 35 single-family homes have completed retrofit work; collect final retrofit measure inventories and utility data for emissions calculations	BayREN/ABAG	County DCD	Year 5
		3. Submit final Year 5 summary report documenting all work completed per home, total heat pump water heaters and all-electric appliances installed, solar and battery capacity added, and estimated GHG reductions	County DCD	BayREN/ABAG	Year 5
3. By the end of Year 5, complete all marketing and outreach activities for the Clean Home Retrofit program	A. CBO contracting and campaign planning	1. Execute subcontract agreement with selected nonprofit CBO defining scope, deliverables, and schedule for community outreach and marketing activities in the project area	County DCD		Year 1 Q2
		2. Develop targeted outreach plan with CBO, including mailer content, meeting schedule, and strategy for reaching	County DCD	CBO Subcontractor	Year 1 Q3

throughout the North Richmond project area.		Spanish-speaking residents; finalize list of single-family property owners to receive direct mailers			
		3. Design and produce outreach materials including direct mail pieces and any supplemental materials for community meetings and CBO distribution	County DCD	CBO Subcontractor	Year 1 Q4
	B. Outreach campaign implementation (Years 2-4)	1. Send first round of direct mailers to all single-family property owners in the North Richmond project area about the Clean Home Retrofit program and BayREN EASE Home Program	County DCD		Year 2 Q1
		2. CBO attends existing community meetings and conducts targeted outreach to North Richmond residents and daycare facility operators; provides stipends to additional CBOs to expand program awareness	CBO Subcontractor	County DCD	Year 2-4
		3. Conduct follow-up mailer rounds and adjust outreach tactics as needed based on application volume and community feedback; document all outreach activities and contacts	County DCD	CBO Subcontractor	Year 2-4
	C. Tracking, reporting, and closeout	1. Track and report annually on number of mailers sent, applications received from single-family homeowners, and applications received from licensed residential daycare facilities	County DCD	CBO Subcontractor	Annual
		2. Collect and summarize CBO activity reports documenting community meetings	County DCD	CBO Subcontractor	Annual

		attended, materials distributed, and other outreach activities conducted each year			
		3. Submit final Year 5 outreach summary report documenting total mailers sent, total applications received (homeowners and daycare facilities), and all marketing and outreach activities conducted by County and subcontractor(s)	County DCD	CBO Subcontractor	Year 5

Bay Area Air District
CLEAN AIR FOR ALL

Richmond Opportunity
City of Pinole Application

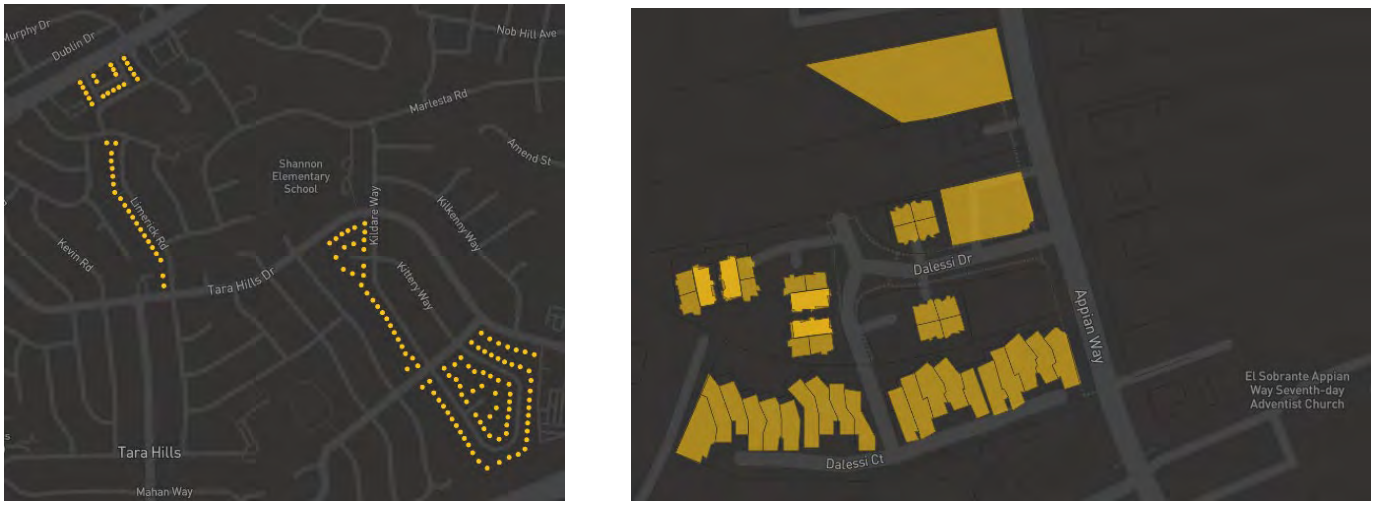
Bay REPAIR Local Community Benefits Fund – Round 1 Opportunity and Catalyst Grants
Overall Narrative

Application Information	
Application Title	Improving Air Quality and Health Through Whole Home Decarbonization in the Pinole REPAIR Corridor
Lead Applicant	City of Pinole
Application Location	Pinole, CA
Overall Funding Request	$4,999,682
Grant Term Request	3 years

PROPOSAL VISION (10 points)

1. ***Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:***
   - ***Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.***
   - ***Advance integrated projects to holistically meet community needs.***
   - ***Strengthen community-driven and collaborative solutions.***

The City of Pinole, together with Rebuilding Together East Bay Network and GRID Alternatives, will deliver a comprehensive, menu-style decarbonization program for 189 homes in a REPAIR-eligible corridor burdened by high diesel particulate (70–73rd percentile), traffic pollution (85–88th percentile), and elevated asthma rates (67–89th percentile), deploying up to 150 kW of solar, 450 kWh of battery storage, 30 EV chargers, 90 heat pump water heaters, 90 heat pump HVAC systems, 90 electric panel upgrades, and 30 reroofs, supported by 25 local workforce trainees. This integrated, equity-centered model—prioritizing low-income and pollution-impacted households—advances LCBF strategies by directly reducing air pollution and improving health outcomes while building economic resilience through no-cost participation pathways, streamlined permitting, and a replicable, neighborhood-scale decarbonization blueprint for small cities.



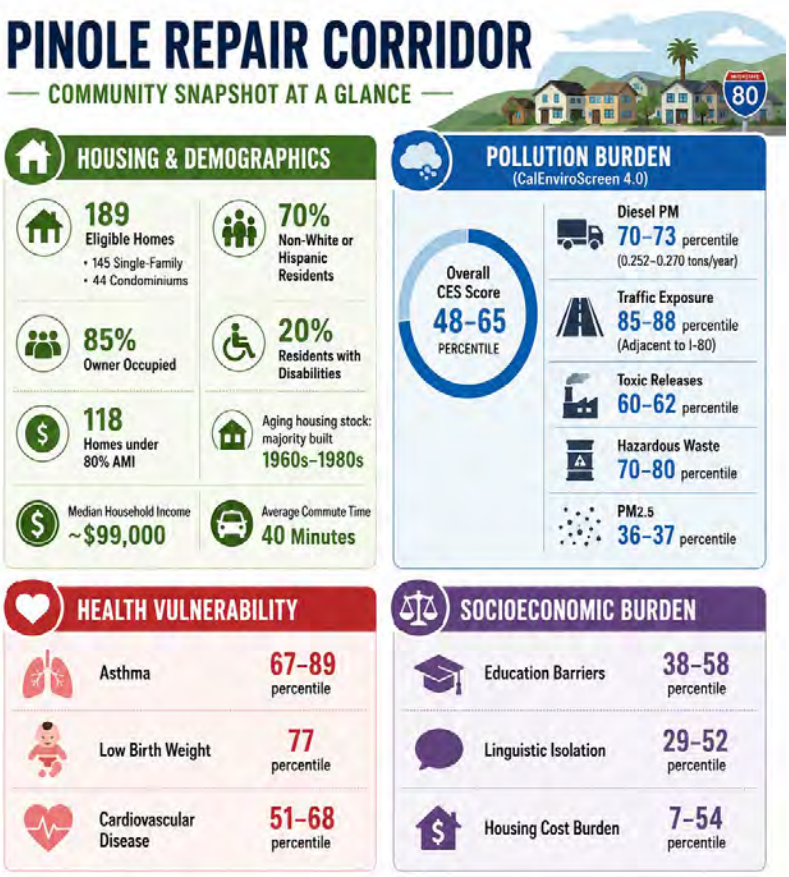


Figure 1: Eligible REPAIR residences

2. ***Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).***

The proposed project will serve 189 homes—145 single-family residences and 44 townhomes/condominiums—located within a uniquely configured REPAIR-eligible corridor in Pinole. These homes span multiple decades of construction, including 2 homes from the 1940s, 102 from the 1960s, 48 from the 1980s, 15 from the 1990s, and 23 from the 2000s, reflecting an aging housing stock with varying levels of energy efficiency and electrification readiness. Preliminary analysis indicates that approximately 85% of residences are owner-occupied, nearly 118 households fall under 80% AMI, the average median household income is ~$99,000, and the neighborhood is predominantly Non-White or Hispanic (70%), with 20% of residents reporting a disability and an average commute time of 40 minutes.

The REPAIR-eligible corridor experiences disproportionate environmental and public-health burdens documented through CalEnviroScreen 4.0. The neighborhood ranks between the 48th and 65th percentiles statewide for cumulative pollution burden, with several indicators demonstrating severe exposure risks. Diesel particulate matter exposure is among the most acute, with emissions of 0.252 to 0.270 tons per year placing the area in the 70th–73rd percentile statewide, and traffic pollution in the 85th–88th percentiles due to proximity to Interstate 80 and high truck volumes. These conditions contribute directly to elevated health risks: asthma prevalence ranks 67–89, low birth weight 77, and cardiovascular disease 51–68. Additional vulnerability indicators include linguistic isolation (29–52nd percentile), lower educational attainment (38–58th percentile), and housing cost burden (7–54th percentile).

Taken together, this data confirms that Pinole's REPAIR corridor is a pollution-burdened, health-vulnerable, and socioeconomically diverse community whose residents face multiple, intersecting challenges. The populations targeted for benefit through this project include low-income households, households adjacent to heavy-traffic corridors, seniors, individuals with disabilities, and families living in older homes with outdated or unsafe gas appliances. These households stand to benefit directly and immediately from electrification upgrades, clean-energy installations, ventilation and filtration improvements, home repairs, and workforce development opportunities, which together will meaningfully reduce exposure to harmful pollutants and improve long-term health, safety, and resilience.

PARTNERSHIP STRUCTURE (20 points)

3. ***Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.***

The City of Pinole, a small but highly community-embedded local government, has an established track record of advancing equitable building decarbonization and clean-energy access. Through its Climate Action and Adaptation Plan, Environmental Justice Element, and multiple clean-energy initiatives—including residential rebates, instant and no-cost permitting, and an all-electric virtual concierge—the City has consistently centered high-need households and demonstrated leadership in removing barriers to electrification and clean-energy upgrades. The City's sustained engagement with residents, contractors, and community partners in the REPAIR corridor, including collaboration with GRID Alternatives over the past year, reflects its deep connection to and understanding of local needs.

Rebuilding Together East Bay Network (RTEBN) is a trusted nonprofit with more than 30 years of experience serving vulnerable households in West Contra Costa communities. RTEBN preserves safe, affordable homeownership for low-income seniors, veterans, and residents with disabilities by delivering no-cost repairs, energy-efficiency upgrades, and hazard mitigation—making them uniquely positioned to implement electrification-ready upgrades and essential repairs in the project area.

GRID Alternatives (GRID) brings two decades of experience delivering solar, clean-energy technologies, and hands-on workforce training in Contra Costa County. GRID has installed clean-energy systems for more than 2,200 Bay Area homeowners and has extensive experience qualifying income-eligible households, managing multi-home deployments, and engaging job trainees from the communities they serve. GRID's long-standing presence and culturally competent engagement model make them a strong partner for delivering solar, storage, and workforce development opportunities in the REPAIR corridor.

Together, these organizations bring deep community relationships, proven implementation capacity, and aligned missions, ensuring the project is grounded in equity, resident trust, and community-led clean-energy transformation.

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

The City of Pinole, as Lead Applicant, will oversee overall program administration, community engagement, permitting, equity-based prioritization, and coordination with PG&E. The City will manage participant intake, maintain all program materials and multilingual communications, and ensure timely permitting and compliance with LCBF reporting requirements. The City will also develop the tiered prioritization scorecard, household intake forms, equity-based cost-share structure, program guidelines, and subcontractor requirements (including fixed pricing, QA/QC through QuitCarbon, and tenant-protection provisions). See Figure 2.

Rebuilding Together East Bay Network (RTEBN) will serve as Co-Applicant and lead contractor for electrification-ready upgrades and essential home repairs, including installation oversight for heat pump water heaters, heat pump HVAC systems, panel upgrades, and reroofs. RTEBN will also co-lead outreach, provide homeowner consultations, and manage and train 15 workforce trainees throughout the project.

GRID Alternatives (GRID) will deliver solar, battery storage, and EV charger installations, co-lead outreach and consultations, and recruit and train 10 workforce trainees. GRID will perform installations under

subcontract to the City and will coordinate closely with City staff and RTEBN to ensure equitable distribution of measures across participating homes.

The three partners bring established working relationships and complementary expertise in clean-energy installations, home repairs, community engagement, and workforce development. They will implement a shared governance model, meeting bi-weekly to align on outreach, scopes, contractor performance, and budget. While collaboration guides decision-making, the City of Pinole will serve as final arbiter on regulatory, permitting, fiscal, and reporting matters to ensure compliance with LCBF requirements.

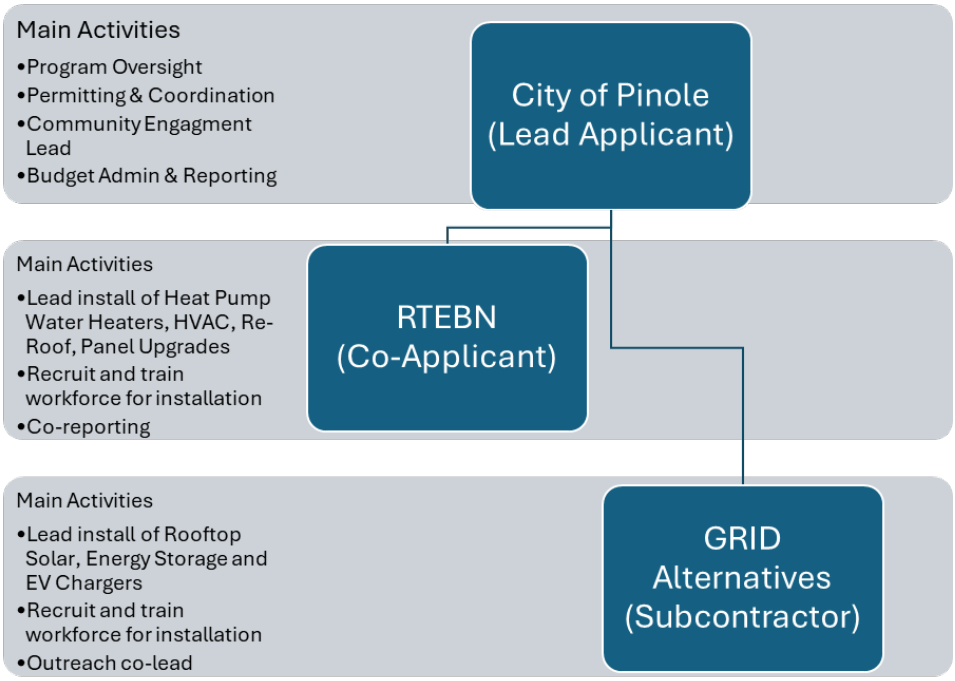

Figure 2: Summary of Partnership Structure

5. ***Describe how the Lead Applicant will work with Co-Applicant(s) to:***
    - ***Coordinate overall community engagement activities.***
    - ***Track and report on indicators to assess progress towards measurable outcomes.***
    - ***Collect and process reporting, reimbursement and invoicing requirements.***

The City of Pinole, RTEBN, and GRID Alternatives will coordinate implementation through a unified engagement, tracking, and reporting structure. The City will serve as the primary point of contact for residents, manage all co-branded communications, host the program website and interest forms, and lead multilingual outreach using its established channels (newsletters, social media, PCTV, community events, and partner networks). The City will track resident responses, conduct follow-up outreach, verify eligibility, score and tier participating homes, finalize scopes, and ensure equitable distribution of measures within per-home budget caps.

RTEBN and GRID will co-lead community engagement by reviewing all resident-facing materials, participating in informational sessions, and conducting door-to-door or direct follow-up with non-responding households. All partners will coordinate workforce recruitment using existing outreach pipelines and the

City's supplemental channels. RTEBN and GRID will provide consultation to interested households during scope development and will support fair subcontractor participation through established contractor networks. For measurable-outcomes tracking, the City will maintain centralized documentation—including outreach records, intake forms, final scopes, installation data, and trainee participation—while RTEBN and GRID provide installation-level and workforce metrics. The City will consolidate indicators and progress data for reporting.

For grant reporting, reimbursement, and invoicing, the City will manage all financial administration, process subcontractor invoices, and prepare required LCBF reports. RTEBN and GRID will submit installation documentation and cost records to the City for reimbursement and consolidated reporting. Regular coordination meetings will ensure alignment and timely submission of all reporting materials.

6. ***Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.***

Acceptance of the grant, if awarded, will require City Council approval. Given the City's consistent, unanimous support for clean-energy initiatives, the item authorizing the City to accept grant funds will be placed on the consent calendar. The proposed project aligns directly with the Council-adopted Climate Action and Adaptation Plan, further supporting anticipated approval. RTEBN (Co-Applicant) and GRID Alternatives (subcontractor) have already received their respective board approvals and are prepared to implement the project within the grant term.

CAPACITY (20 points)

7. ***Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.***

The City of Pinole has the staffing, interdepartmental capacity, and project management experience necessary to oversee this multi-component initiative. Kapil Amin, Sustainability Project Manager (≈0.25 FTE), will serve as project lead and primary contact. Mr. Amin has extensive experience managing complex, equity-focused climate and permitting initiatives—including the City's Climate Action and Adaptation Plan, Environmental Justice Element, clean-energy rebate programs, instant and no-cost permitting, and multiple community-driven policy efforts—demonstrating his ability to deliver high-visibility projects with substantial outreach, technical coordination, and cross-agency collaboration.

Project implementation will be supported by the Community Development Department, including Planning, Building, Code Enforcement, and Economic Development staff. The Building Division, already experienced with instant permitting through Symbium, has the capacity to process and inspect electrification, solar, storage, and EV charger permits at the scale proposed. Additional support will be provided by the Communications, Public Works, and Community Services Departments as needed for outreach, resident coordination, and implementation logistics.

The City's role will be complemented by RTEBN and GRID Alternatives, both of whom bring established operational workflows and a long track record of delivering home-upgrade and clean-energy programs across Contra Costa County. With dedicated staff, interdepartmental coordination, and experienced

implementation partners, the City is well-positioned to manage all components of this project from outreach through installation and reporting.

8. ***Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.***

The City of Pinole has strong financial management practices that align with Local Community Benefits Fund requirements, including internal controls, cost-allowability verification, use of interest-bearing accounts, and detailed tracking of sub-awards and reimbursable expenses. All funds for this project—including payments to RTEBN and GRID—will be assigned dedicated fund codes with itemized documentation to ensure transparency, audit readiness, and proper allocation to eligible activities. The City also has experience administering grants with advance-payment structures and is prepared to implement an LCBF-compliant process for managing, tracking, and reconciling advance funds.

The City regularly manages complex, multi-year clean-energy and climate grants, including the California Energy Commission's Local Government Building Decarbonization Challenge (~$700,000) and the MTC Climate Implementation Grant (~$1,000,000). Under these programs, the City prepares comprehensive quarterly expenditure reports, reconciles personnel and consultant costs down to the task level, and coordinates closely with funding-agency grant managers to ensure full compliance. All procurement is conducted with competitive cost review, documentation of cost-reasonableness, and agency approval for any scope or expenditure adjustments. This demonstrated track record shows the City's ability to administer public funds responsibly, maintain meticulous financial documentation, and ensure that grant funds are spent solely on eligible, mission-aligned project activities.

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The City of Pinole, in partnership with Rebuilding Together East Bay Network (RTEBN) and GRID Alternatives, proposes a comprehensive home-decarbonization initiative serving 189 homes in the Pinole REPAIR Corridor. This neighborhood—comprised of older housing stock and located adjacent to Interstate 80—faces elevated exposure to diesel particulates, traffic emissions, and associated health burdens. The project will deliver coordinated clean-energy and electrification improvements, including solar, battery storage, heat pump technologies, panel upgrades, energy-efficiency measures, essential repairs, and workforce training.

The initiative is designed to demonstrate a scalable model for small cities, prioritizing low-income and pollution-burdened households and tailoring services to homes with the greatest electrification need. By integrating community outreach, streamlined permitting, equitable prioritization, and multi-measure improvements, the project creates a seamless pathway for residents to transition to healthier, all-electric homes.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

Reduce air pollution and improve health outcomes

The project directly reduces indoor and outdoor air pollution by replacing gas-combustion appliances—which emit carbon monoxide, nitrogen oxides, PM2.5, and air toxics—with clean, all-electric technologies. These upgrades are especially critical in a corridor exposed to refinery-adjacent pollution and I-80 diesel traffic. Solar and battery storage further reduce reliance on peaker-plant electricity during high-pollution periods, while offering resilience benefits during outages. Collectively, these measures reduce household-level emissions, improve indoor air quality, and lower exposure for residents already experiencing elevated asthma and cardiovascular risks.

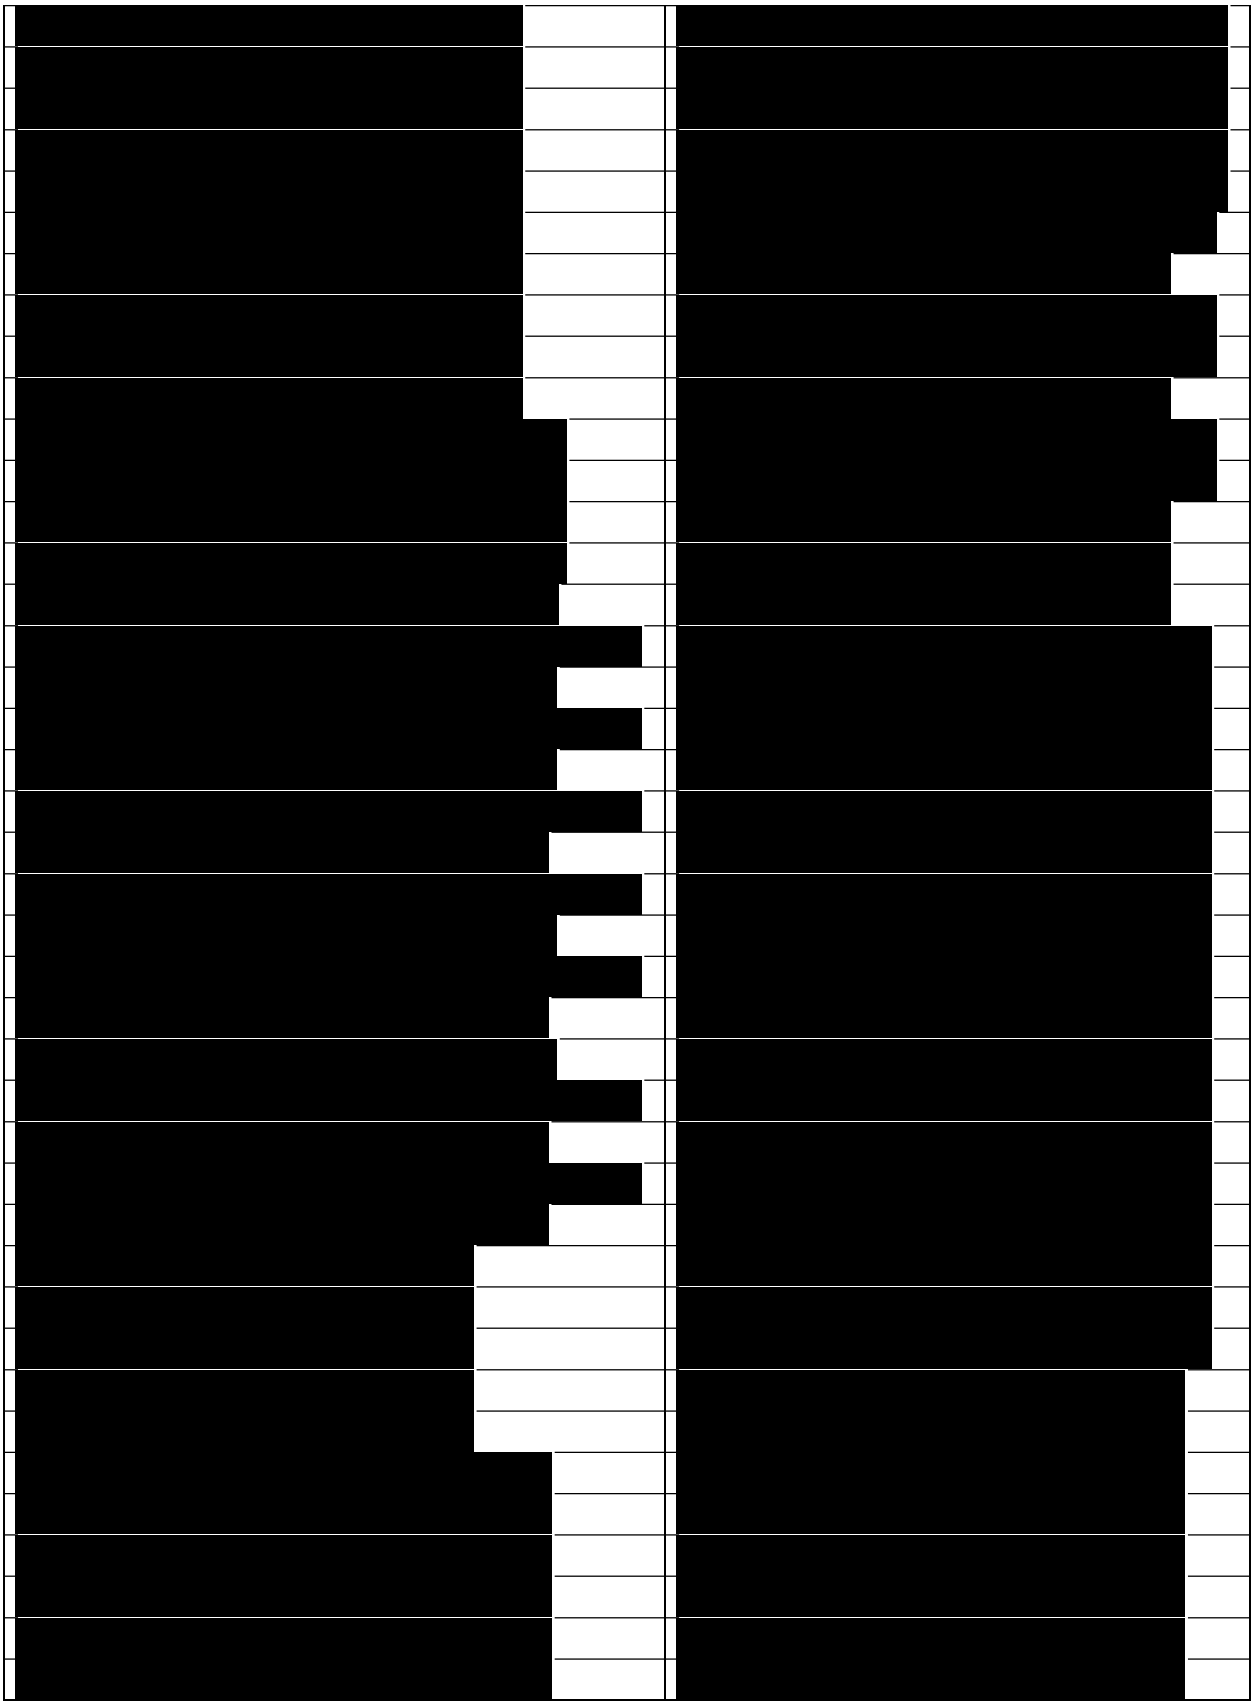
Build economic resilience for a just transition

The project strengthens economic resilience by reducing energy costs, creating access to distributed clean-energy technologies, and supporting a transition away from fossil fuels without financial burden to low-income households. Workforce development through RTEBN and GRID provides hands-on training and transitional career opportunities for residents within the REPAIR boundary, equipping them with skills for clean-energy jobs and contributing to a broader just transition in Contra Costa County.

Solar paired with storage and EV-ready infrastructure positions households to benefit not only from cleaner air but also from long-term economic stability through reduced utility bills and greater energy independence.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*



The project serves a narrow, linear residential corridor in Pinole encompassing 189 homes—145 single-family residences and 44 townhomes/condominiums—located directly adjacent to Interstate 80. This proximity exposes residents to elevated traffic-related air pollution, diesel particulates, and noise, contributing to documented health burdens in the neighborhood. All project activities will occur within this defined REPAIR corridor, ensuring that upgrades directly benefit households experiencing the highest pollution exposure and the greatest need for home electrification and air-quality improvements. See Figure 1 and Table 1 below for maps and listing of addresses of homes in the REPAIR area.

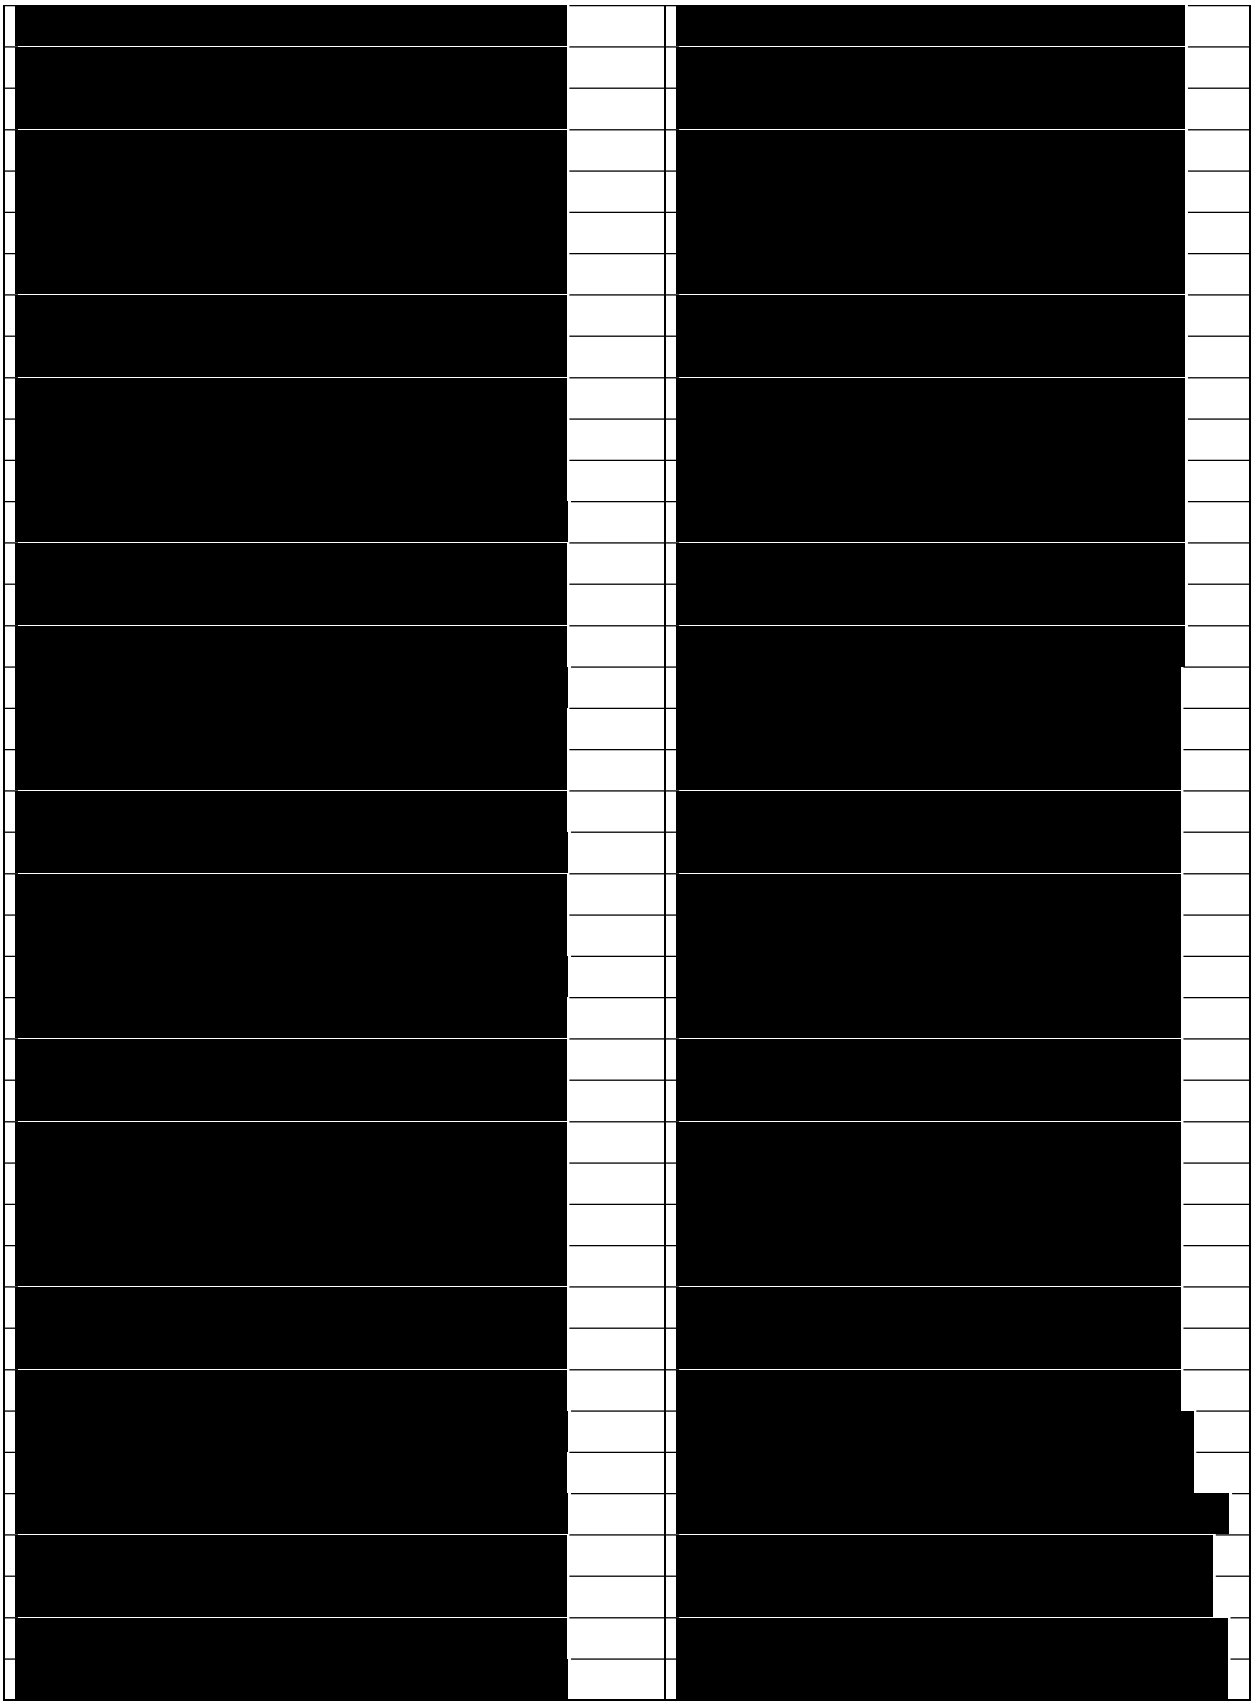


Figure 1: Eligible REPAIR residences

Table 1: Eligible REPAIR Residence Addresses

[redacted]	[redacted]
[redacted]	[redacted]
[redacted]	[redacted]
[redacted]	[redacted]

[redacted]		[redacted]
[redacted]		
[redacted]		
[redacted]		

The Air District redacted residential addresses to protect personally identifiable information of individual households.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The project serves all eligible homes within the overlapping Pinole and REPAIR boundaries—an area characterized by older housing stock, high exposure to I-80 emissions, and a majority of households below 80% AMI. Community needs and priorities were identified through 1.5 years of extensive engagement conducted during the development of Pinole's Climate Action and Adaptation Plan (CAAP). This process included workshops, surveys, multilingual outreach, and discussions with residents, local businesses, community-based organizations, and partner agencies. A consistent community priority that emerged was the desire for clean-energy upgrades, lower utility costs, healthier homes, and improved indoor air quality.

Community interest has also been demonstrated through strong participation in the City's clean-energy rebate program (PEER), which fully exhausted its first round of funds and showed particularly high uptake among low-income households. The City intentionally targeted outreach to high-need residents first, reinforcing an equity-centered approach that directly informs this project.

For this grant, residents in the project corridor will receive clear, accessible information on the benefits of electrification through hybrid workshops, multilingual materials, and direct outreach. Participation is voluntary and informed, ensuring that residents understand available measures before selecting upgrades that best meet their needs. This engagement model—rooted in trust-building, transparency, and accessibility—ensures the project reflects community-driven priorities established through both CAAP engagement and past clean-energy program participation.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the*

measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.

The homes within the project corridor are located directly adjacent to Interstate 80, where exposure to diesel particulates and traffic-related air pollution significantly elevates respiratory and cardiovascular risks. Many households fall below 80% AMI and live in older homes with outdated gas appliances, making it difficult to afford upgrades that improve indoor air quality or reduce energy burdens. These conditions create overlapping environmental-justice, public-health, and housing-quality challenges that the project directly addresses.

The project meets these community-identified needs by delivering no-cost or low-cost whole-home decarbonization upgrades, including heat pump technologies, panel upgrades, ventilation and filtration improvements, solar paired with battery storage, and EV-ready infrastructure. These measures directly reduce exposure to combustion emissions inside the home, lower outdoor pollution associated with gas use, and enhance energy resilience for households least able to afford such upgrades on their own.

This initiative also advances environmental justice by recruiting workforce trainees from within the REPAIR corridor, ensuring that project benefits extend beyond home upgrades to include economic opportunity and skills development for residents of historically burdened communities. Electrification-ready upgrades (e.g., panel improvements, solar with storage, EV chargers) place households on a long-term clean-energy pathway and empower residents to adopt future technologies such as EVs, further reducing local pollution.

Measurable outcomes—including the number of installations completed, reductions in combustion appliances, solar and storage deployed, and workforce participants trained—will be tracked through permits, invoices, photo documentation, enrollment forms, and surveys. These quantifiable results will demonstrate clear progress toward improving indoor air quality, reducing pollution exposure, lowering household energy costs, and building local capacity for a just transition.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members.*

Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.

Community engagement will be coordinated by the City of Pinole with RTEBN and GRID as active partners throughout implementation. All 189 eligible households will receive an initial multilingual mailer introducing the project, outlining available benefits, and directing residents to a project website with interest forms, update sign-ups, and the schedule for hybrid informational sessions. Responses will be tracked to identify participating and non-responding homes.

The City, RTEBN, and GRID will jointly host informational sessions to explain electrification benefits, answer questions, and support residents in selecting appropriate measures. For households that do not respond, the partners will conduct supplemental outreach, including follow-up calls, door-to-door engagement, and a second round of mailers, ensuring every household has an opportunity to participate or formally decline.

Throughout implementation, the City will provide regular updates via email, mailed notices, and community channels, while partners document resident feedback, concerns, and preferences. This feedback will be incorporated into final scope development, prioritization, and adjustments to outreach strategies. This comprehensive, multi-touch engagement approach ensures transparency, equitable access to program benefits, and meaningful participation by all households in the REPAIR corridor.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

This project delivers a coordinated suite of whole-home decarbonization measures—electrification upgrades, solar and battery storage, energy-efficiency improvements, essential repairs, and workforce training—to reduce air pollution, improve indoor and outdoor air quality, and strengthen long-term community resilience in the Pinole REPAIR Corridor. Major project components include: robust community engagement; equitable prioritization based on need; PG&E coordination for any required transformer upgrades; streamlined permitting; fair subcontractor participation; tenant-protection provisions; and integration of workforce trainees from within the corridor.

The project vision is to provide high-need households with upgrades that directly improve health, safety, and environmental conditions while building local economic opportunity. RTEBN and GRID Alternatives will serve as the primary implementers of all electrification and clean-energy measures, with workforce trainees supporting installation activities. The City will lead program design, household intake, equitable prioritization, scope development, permitting, financial administration, and grant reporting, in close coordination with both partners.

Measurable outcomes will demonstrate clear progress toward decarbonizing the neighborhood and advancing a just transition. These outcomes include installation of whole-home electrification measures, deployment of solar and storage, installation of EV-ready infrastructure, improvements to building safety and ventilation, and training of 25 local workforce participants. Collectively, these activities are expected to achieve approximately 50% decarbonization of the neighborhood, reduce exposure to combustion-related pollutants, and prepare households for future adoption of clean-energy technologies. Outcomes will be tracked through permits, invoices, photo documentation, trainee records, household surveys, and participation forms to ensure accuracy, transparency, and alignment with LCBF requirements.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The project budget is structured to maximize direct community benefits while ensuring fiscal responsibility and compliance with LCBF requirements. The City of Pinole's budget primarily supports staff capacity to launch and administer the program, conduct equitable prioritization and household intake, manage reporting, oversee financial reconciliation, coordinate with PG&E on potential transformer upgrades, and maintain complete documentation of all activities. City costs also include the subcontracted work performed by GRID Alternatives for installation of 30 solar-plus-battery systems and 30 EV chargers, as well as GRID's responsibilities for community engagement and workforce recruitment and training. EV charger costs reflect reductions achieved by leveraging PG&E rebate programs, decreasing the total amount of requested funds.

RTEBN's budget represents the largest portion of direct installation costs, reflecting its role as the lead implementer for whole-home electrification and safety-related upgrades. This includes procurement and installation of 90 heat pump water heaters, 90 heat

pump HVAC systems, 90 panel upgrades, and 30 reroofs, along with oversight of subcontracted installers and management of 15 local trainees participating in on-the-job workforce development. RTEBN's budget also includes administrative support for grant reporting and coordination with the City.

To ensure responsible public fund use, projected uptake of each measure was informed by a review of recent permitting data, identifying where upgrades were likely needed and avoiding overestimation. The budget also factors in the expected participation of households able to cost-share for certain measures, as well as anticipated rebates and incentives available at the time of installation. Together, these conservative assumptions ensure that the requested funding amount is realistic, equitable, and directly tied to the measurable outcomes outlined in the application.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project is firmly aligned with Pinole's Climate Action and Adaptation Plan (CAAP), adopted in 2024, which charts a path to carbon neutrality by 2045 and identifies residential natural-gas use and gas vehicles as the community's largest sources of greenhouse gas emissions. The CAAP's cornerstone strategy, CR-1, calls for leveraging building electrification and clean-energy infrastructure to position Pinole as a hub for green economic development and high-road jobs. The project directly advances BE-2, which commits the City to electrifying existing residential buildings to reduce natural-gas consumption by 26% by 2030 and achieve full electrification by 2045. It also fulfills BE-5e, which directs the City to expand partnerships with GRID Alternatives and promote renewable-energy adoption through multilingual, equity-centered education—both core components of this project.

The initiative aligns with broader state and regional frameworks, including AB 32, SB 32, and AB 1279, which set statewide emissions-reduction and climate-neutrality targets. By delivering whole-home decarbonization, this project accelerates compliance with these mandates while advancing environmental-justice principles embedded in California climate policy. It also reflects key practices from the Community Air Protection Program (AB 617) by prioritizing pollution-burdened neighborhoods, reducing local emissions, and centering community-driven solutions.

Altogether, the project reinforces and operationalizes Pinole's climate, environmental justice, and clean-energy commitments while contributing directly to regional and statewide decarbonization and air-quality goals.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The City of Pinole has extensive experience managing complex, equity-focused climate, permitting, and community programs for a population of 20,000. The Community Development Department—housing Planning, Sustainability, Building, Code Enforcement, Affordable Housing, and Economic Development—regularly implements multi-component initiatives requiring technical coordination, contractor oversight, and robust public engagement. Recent efforts include development of the Climate Action and Adaptation Plan, the Environmental Justice Element, reach-code advancement, the PEER clean-energy rebate program, instant/no-cost permitting, and multiple community-wide policy adoptions. This track record demonstrates the City's ability to execute programs that combine community outreach, technical review, and large-scale residential upgrades.

Rebuilding Together East Bay Network (RTEBN) brings deep experience delivering home upgrades at scale for low-income and vulnerable households. In the past five months alone, RTEBN has installed heat pump HVAC systems, heat pump water heaters, and panel upgrades for 38 Berkeley residents, and was selected to deploy more than $300,000 in CDBG-funded energy-efficiency upgrades in Contra Costa County. Their in-house construction staff and established subcontractor network enable them to manage high-volume installations and quality-assurance needs efficiently.

GRID Alternatives, a statewide leader in clean-energy deployment, has installed solar PV systems for more than 2,200 Bay Area homeowners and administers the CPUC's DAC-SASH program. GRID has extensive experience qualifying income-eligible households, coordinating multi-measure clean-energy installations, and integrating paid job-training opportunities. Their workforce development model pairs trainees with skilled installers, providing hands-on experience while delivering high-quality installations for income-qualified families across Contra Costa County.

Together, the City, RTEBN, and GRID bring proven operational capacity, technical expertise, strong community relationships, and established workflows—ensuring the project can be delivered effectively, on schedule, and at the scale proposed.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources*

that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.

The City of Pinole will manage this project through a coordinated, fiscally responsible implementation approach designed to maximize benefits for high-need households. Kapil Amin, Sustainability Project Manager (≈0.25 FTE), will lead program implementation, overseeing community engagement, equitable prioritization, scope development, contractor coordination, permitting, and full grant administration and reporting. Mr. Amin has extensive experience managing complex climate and clean-energy programs and will maintain regular coordination with RTEBN and GRID from initial outreach through final installation.

The City will apply cost-efficient strategies—including fixed pricing agreements, community-scale equipment bargaining, targeted cost-sharing for households with some ability to contribute, and optimization of available rebates—to ensure that grant funds stretch as far as possible. Historical permit data will inform expected uptake, ensuring realistic budgeting and preventing over-forecasting of measures.

RTEBN brings strong fiscal and administrative capacity to support implementation. Staff such as Bethany Kaufman have managed CDBG-funded programs across Contra Costa County, ensuring compliance and accurate reporting in complex, multi-jurisdictional contexts. Tracey Greenwell has delivered more than $1 million in CalHome-funded rehabilitation work in Contra Costa and Marin Counties over the past two years, demonstrating her ability to manage construction delivery and documentation requirements for publicly funded projects.

Together, the City, RTEBN, and GRID form a coordinated team with the staffing, administrative infrastructure, and demonstrated public-fund stewardship necessary to deliver this project effectively and in full compliance with LCBF requirements.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.

- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate “N/A” if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

The project is fully feasible within the 3-year grant term. The City of Pinole, Community Development Department, will oversee all required building permits and has the capacity to process them quickly through its recently launched instant permitting system, which allows same-day issuance for most residential electrification, solar, storage, and EV-charging installations. With this system in place, the City is confident that all permits can be obtained with sufficient lead time to complete installations on schedule.

Most project activities require only standard residential building permits. Solar PV and battery systems require submittal of a site plan and electrical specifications; GRID Alternatives will prepare and submit these permit applications on behalf of participating households and coordinate all required inspections. For heat pumps, panel upgrades, reroofs, and EV chargers, the City’s Building Division is already equipped to issue permits rapidly and conduct timely inspections through its Community Development Department.

No additional approvals or discretionary reviews are anticipated. Should PG&E determine that transformer upgrades are necessary, the City has already confirmed projected timelines and will submit its application immediately upon award, allowing outreach and household intake to proceed concurrently without affecting the project schedule.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

Not applicable

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

Site control for this project will be secured through direct homeowner authorization prior to the installation of any measures. Signed authorization forms from each participating household will be obtained before work is performed, ensuring full permission for all work conducted on private property

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Operations and maintenance for all installed solar systems and related measures are built directly into the structure of this program. The upfront project costs include comprehensive warranties that are provided to homeowners at no additional charge. GRID Alternatives offers a 10-year labor warranty along with no-cost system repair for issues directly related to the solar installation, effective from the date of project completion. While this warranty does not cover pre-existing conditions or issues unrelated to the solar system, it provides significant long-term reliability and peace of mind for participating households.

In addition, all installed equipment includes manufacturer warranties that will be transferred directly to the homeowners. The expected long-term maintenance associated with rooftop solar—primarily periodic cleaning and ensuring that new sources of shading do not develop—is clearly outlined in the homeowner agreement. Once the warranty period has concluded, homeowners assume responsibility for maintaining their systems; however, the low-maintenance nature of solar technology and the educational materials provided through the program support long-term system performance and homeowner confidence.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The most significant anticipated barrier relates to building trust and obtaining homeowner approval, particularly among residents who may not be familiar with the technology or who may be wary due to the number of organizations currently canvassing neighborhoods with similar-sounding services. RTEBN has a strong track record of working closely with GRID Alternatives on previous initiatives and has demonstrated the ability to build trust by providing free home safety modifications with no obligation or hidden requirements. This existing positive reputation and community

presence will be leveraged to help residents feel confident, respected, and informed when deciding whether to participate in this project.

Another area of uncertainty is the fluctuation of electricity rates across different utilities, which may influence how households perceive the value of solar over time. While GRID cannot influence rate-setting decisions, our team will collaborate with the City of Pinole and RTEBN to monitor changes, provide transparent information, and ensure residents have a clear understanding of both the financial and environmental benefits of their solar installations.

A secondary challenge is ensuring a steady and qualified pool of applicants who meet program criteria and feel comfortable engaging with the process. To address this, the City of Pinole GRID will implement a multi-layered, community-centered outreach strategy that includes the following components:

- Hosting recurring Solar Workshops that offer accessible information, opportunities to ask questions, and on-site support to begin the application process
- Deploying a comprehensive outreach plan that integrates digital campaigns, neighborhood canvassing, City-supported mailings, and participation in local events
- Partnering with trusted community organizations to amplify program awareness and strengthen credibility
- Soliciting feedback from previous clients to identify and address participation barriers, improve program design, and ensure the process remains equitable and user-friendly
- Expanding in-person engagement opportunities so residents can interact directly with staff, receive individualized guidance, and build familiarity with the program

Collectively, these strategies are designed to support broad community participation, strengthen trust, clarify program value, and ensure the project's successful implementation.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Improving Air Quality and Health Through Whole Home Decarbonization in the Pinole REPAIR Corridor will significantly improve indoor and outdoor air quality in pollution-burdened project scope areas via menu option(s) for interested homes to select from: solar with battery storage, heat pump water heating, heat pump space heating and cooling, EV charging, reroofs, and panel upgrades. Project execution will serve as a replicable model for other communities with creative, streamlined approaches such as instant permitting, fixed-pricing, and community bargaining.

Measurable Outcome	Indicator(s)
1. Decarbonize equivalent to 50% or more of eligible homes in the community	• Number of decarbonization measures installed (target is to install measures across 189 homes which would collectively equate to decarbonization of 50% of the targeted community)
2. Bolster the green workforce for electrification by training 25 trainees from within the REPAIR boundary	• Number of trainees recruited by GRID (target 10) • Number of project completed with support of GRID trainees • Number of trainees recruited by RTEBN (target 15) • Number of decarbonization measures installed with assistance by RTEBN trainees
3. Increase future adoption of EV vehicles/other electrification measures by participating homes by installing solar/battery	• Number of surveyed homes that respond solar/battery installation will increase their adoption of electrification measures • Number of homes educated on the cost benefit of solar with battery storage • Number of surveyed homes who would purchase an ev if solar/battery with EV charging was installed

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Decarbonize equivalent to 50% or more of eligible homes in the community	A. Complete community outreach to 189 eligible homes	Mailer, website development for interested homes	City of Pinole		Month 3
		Organize two workshops to educate homeowners about the program	City of Pinole	RTEBN/GRID	Month 6
		Follow up with unresponsive homes to confirm they are not interested in the program	City of Pinole		Month 7
	B. Complete program guidelines and workflow organization	Complete scorecards to form tiers/home prioritization	City of Pinole		Month 8
		Complete cost coverage guidelines for established tiers	City of Pinole		Month 8
		Complete tenant protection/subcontractor requirements	City of Pinole		Month 9
	C. Complete installations at interested homes	Complete 50% of GRID scope		GRID	Month 20
		Complete 100% of GRID scope		GRID	Month 36
		Complete 50% of RTEBN scope	RTEBN	subcontractors	Month 20
		Complete 100% of RTEBN scope	RTEBN	subcontractors	Month 36
2. Bolster the green workforce for electrification by training 25 trainees from within the REPAIR boundary	A. Complete outreach to prospective trainees	Mailers, social media, community events to recruit trainees	GRID	RTEBN	Month 12
	B. Enroll/train trainees	Onboard trainees/offer pre-installation training/curriculum	GRID	RTEBN	Month 12
	C. Complete projects with assistance of trainees	Track projects completed with assistance of trainees	GRID	RTEBN	Month 36
3. Increase future adoption of EV vehicles/other electrification measures by participating homes by installing solar/battery	A. Confirm interest by homeowners that solar with battery will increase their adoption of electrification measures	Educate residences on the environmental and economical benefits of solar with battery	City of Pinole	GRID/RTEBN	Month 9
		Survey homes before installation if solar with battery will increase further adoption of electrification measures	City of Pinole	GRID/RTEBN	Month 9

Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Improving Air Quality and Health Through Whole Home Decarbonization in the Pinole REPAIR Corridor
Lead Applicant Name	City of Pinole
Project Location	Pinole, CA
Overall Funding Request	$4,999,682
Grant Term Request	3 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Improving Air Quality and Health Through Whole Home Decarbonization in the Pinole REPAIR Corridor
Project Lead	City of Pinole with RTEBN and GRID
Project Location	Various residences
Project Funding Request	$4,999,682

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The City of Pinole, in partnership with Rebuilding Together East Bay Network (RTEBN) and GRID Alternatives, proposes a comprehensive home-decarbonization initiative serving 189 homes in the Pinole REPAIR Corridor. This neighborhood—comprised of older housing stock and located adjacent to Interstate 80—faces elevated exposure to diesel particulates, traffic emissions, and associated health burdens. The project will deliver coordinated clean-energy and electrification improvements, including solar, battery storage, heat pump technologies, panel upgrades, energy-efficiency measures, essential repairs, and workforce training.

The initiative is designed to demonstrate a scalable model for small cities, prioritizing low-income and pollution-burdened households and tailoring services to homes with the greatest electrification need. By integrating community outreach, streamlined permitting, equitable prioritization, and multi-measure improvements, the project creates a seamless pathway for residents to transition to healthier, all-electric homes.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

Reduce air pollution and improve health outcomes

The project directly reduces indoor and outdoor air pollution by replacing gas-combustion appliances—which emit carbon monoxide, nitrogen oxides, PM2.5, and air toxics—with clean, all-electric technologies. These upgrades are especially critical in a corridor exposed to refinery-adjacent pollution and I-80 diesel traffic. Solar and battery storage further reduce reliance on peaker-plant electricity during high-pollution periods, while offering resilience benefits during outages. Collectively, these measures reduce household-level emissions, improve indoor air quality, and lower exposure for residents already experiencing elevated asthma and cardiovascular risks.

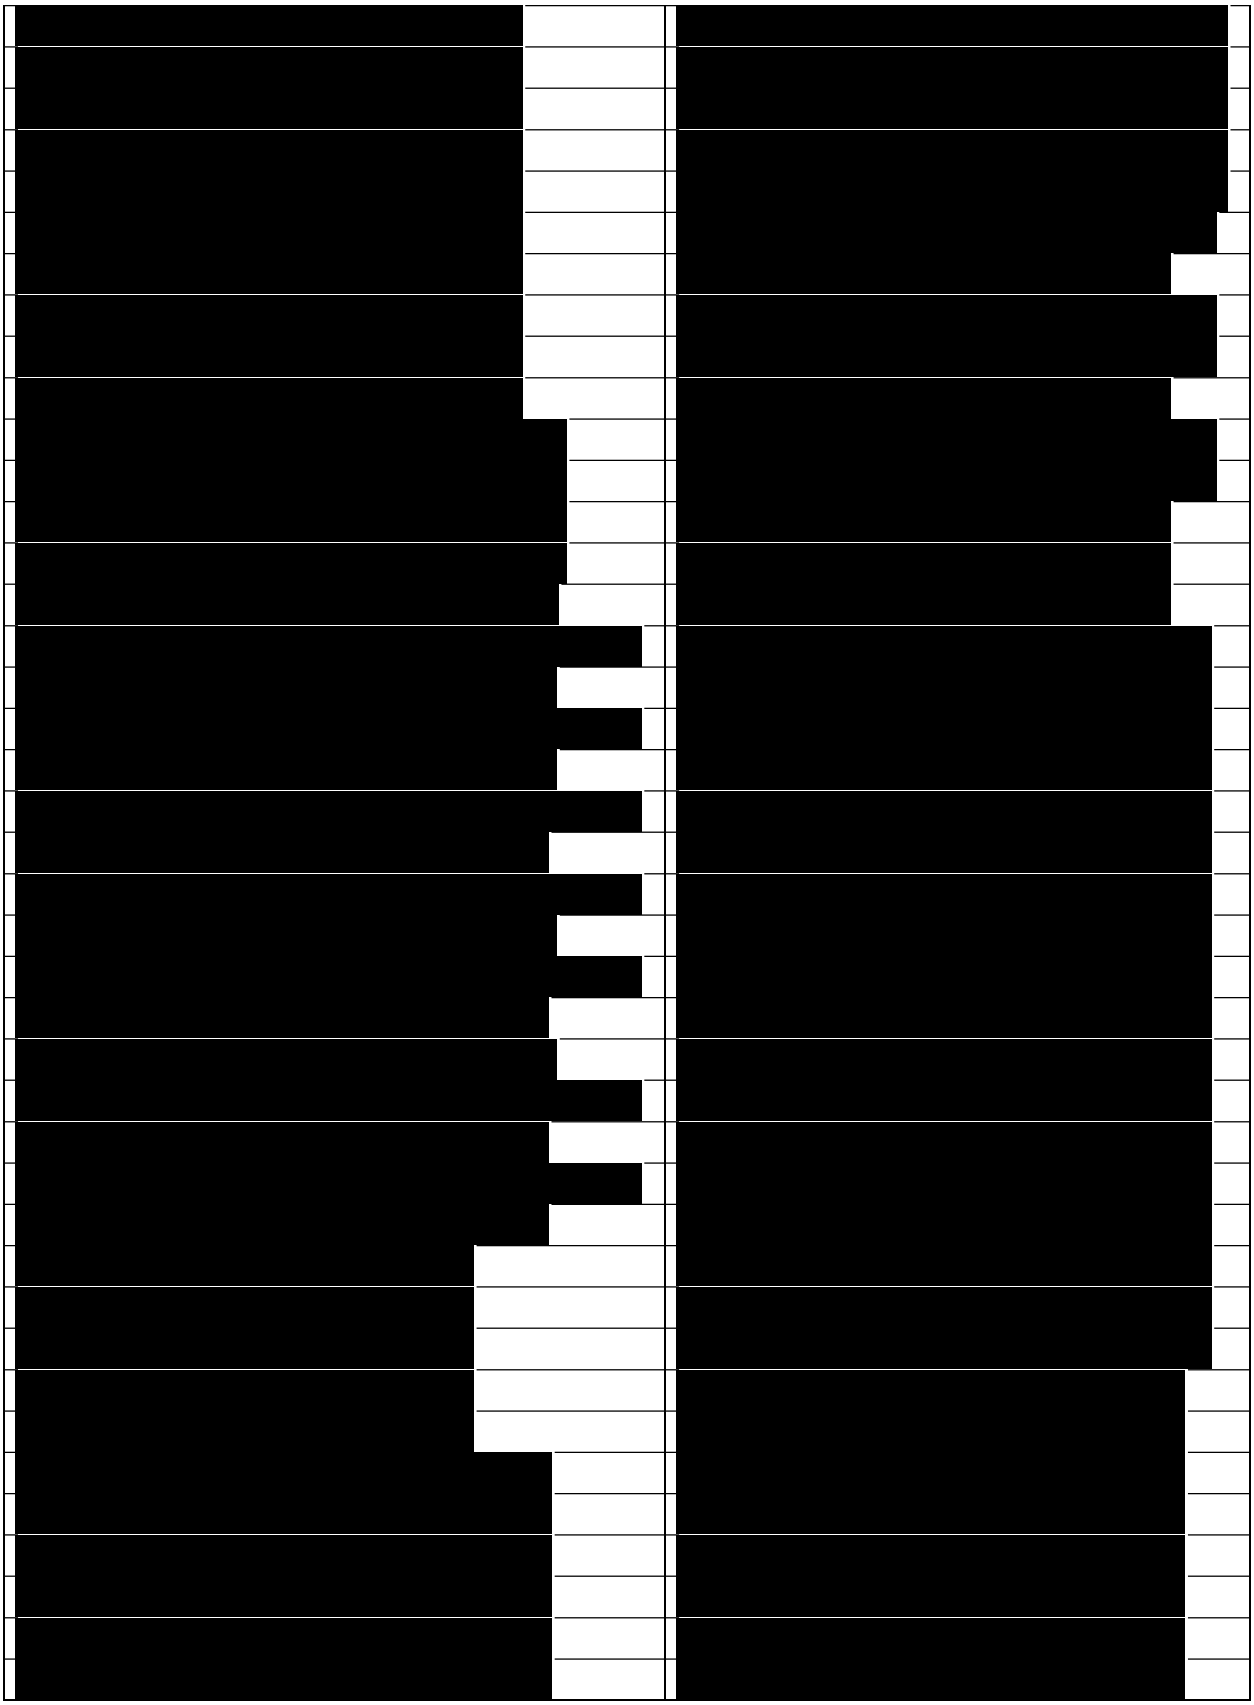
Build economic resilience for a just transition

The project strengthens economic resilience by reducing energy costs, creating access to distributed clean-energy technologies, and supporting a transition away from fossil fuels without financial burden to low-income households. Workforce development through RTEBN and GRID provides hands-on training and transitional career opportunities for residents within the REPAIR boundary, equipping them with skills for clean-energy jobs and contributing to a broader just transition in Contra Costa County.

Solar paired with storage and EV-ready infrastructure positions households to benefit not only from cleaner air but also from long-term economic stability through reduced utility bills and greater energy independence.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*



The project serves a narrow, linear residential corridor in Pinole encompassing 189 homes—145 single-family residences and 44 townhomes/condominiums—located directly adjacent to Interstate 80. This proximity exposes residents to elevated traffic-related air pollution, diesel particulates, and noise, contributing to documented health burdens in the neighborhood. All project activities will occur within this defined REPAIR corridor, ensuring that upgrades directly benefit households experiencing the highest pollution exposure and the greatest need for home electrification and air-quality improvements. See Figure 1 and Table 1 below for maps and listing of addresses of homes in the REPAIR area.

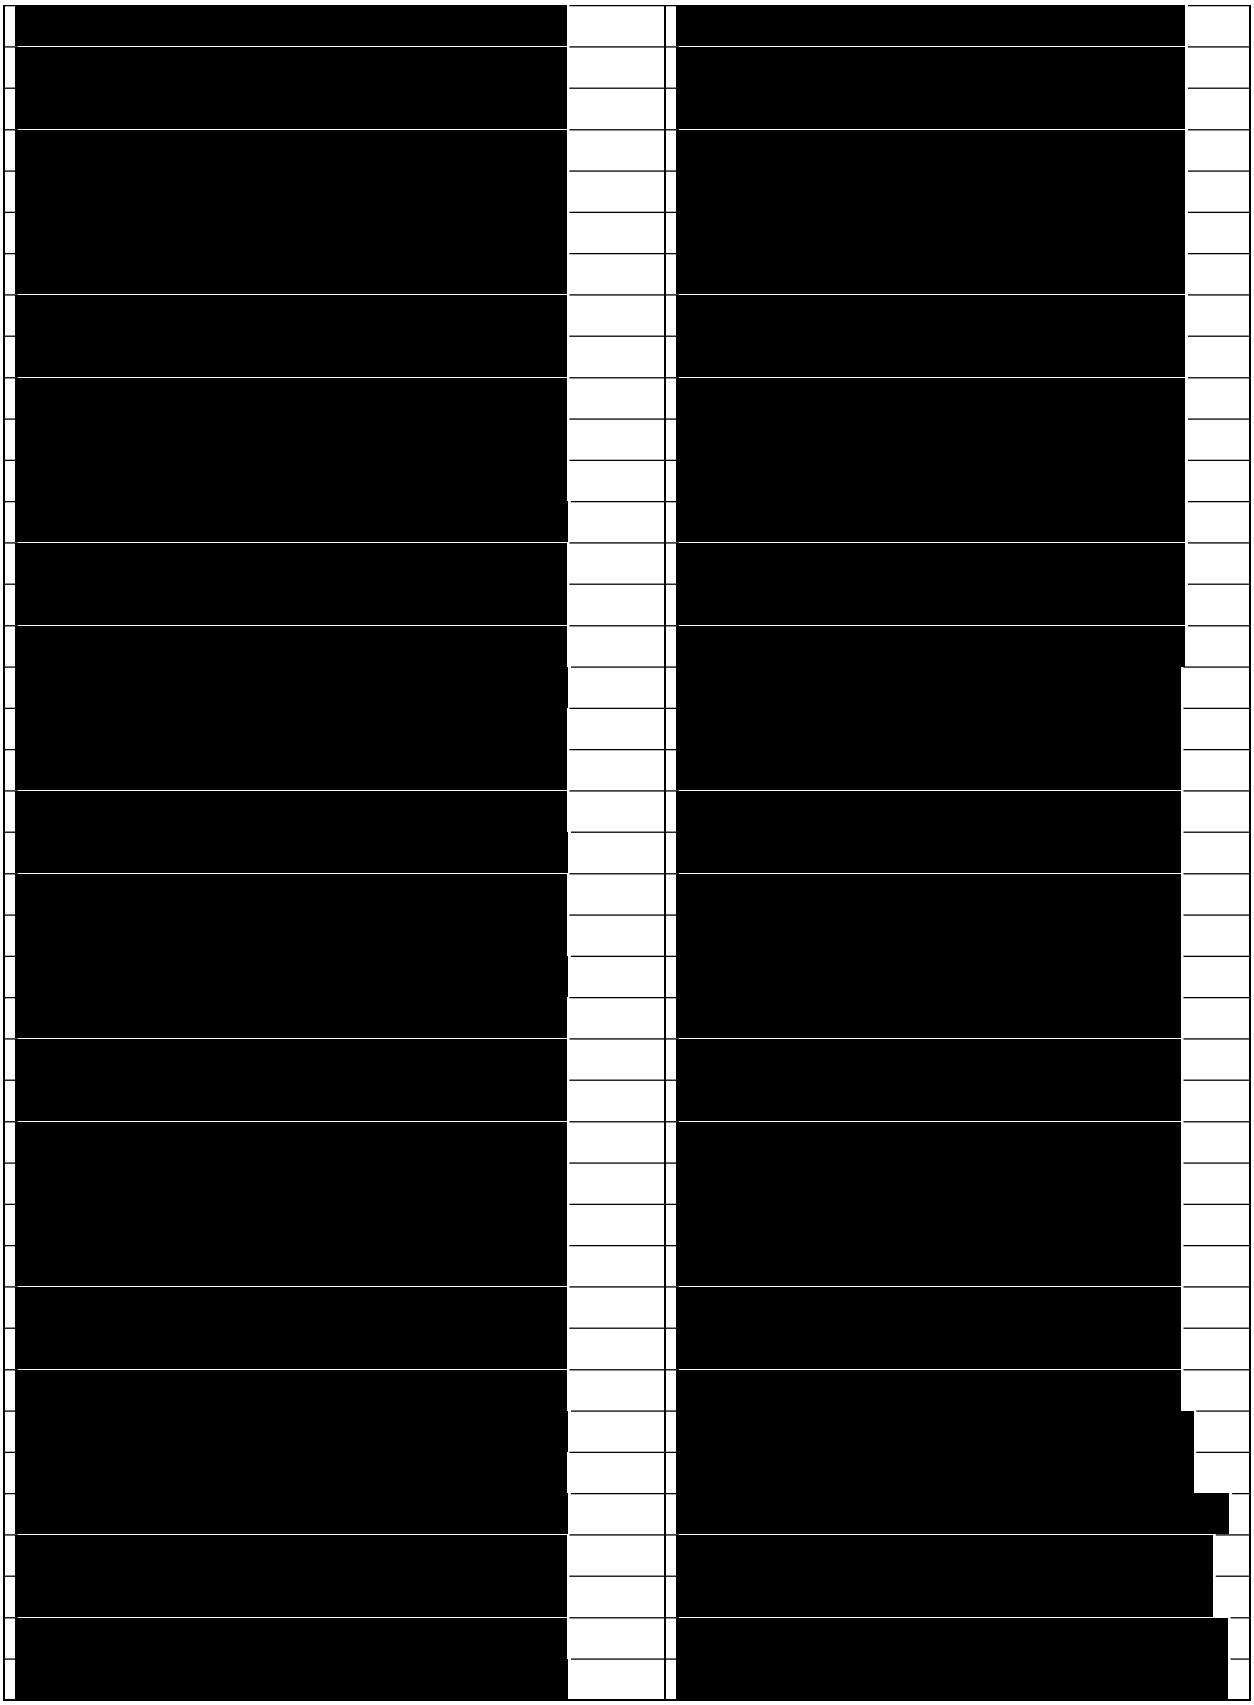


Figure 1: Eligible REPAIR residences

Table 1: Eligible REPAIR Residence Addresses

[redacted]	[redacted]
[redacted]	[redacted]
[redacted]	[redacted]
[redacted]	[redacted]

[redacted]		[redacted]4
[redacted]		
[redacted]		
[redacted]		

The Air District redacted residential addresses to protect personally identifiable information of individual households.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The project serves all eligible homes within the overlapping Pinole and REPAIR boundaries—an area characterized by older housing stock, high exposure to I-80 emissions, and a majority of households below 80% AMI. Community needs and priorities were identified through 1.5 years of extensive engagement conducted during the development of Pinole's Climate Action and Adaptation Plan (CAAP). This process included workshops, surveys, multilingual outreach, and discussions with residents, local businesses, community-based organizations, and partner agencies. A consistent community priority that emerged was the desire for clean-energy upgrades, lower utility costs, healthier homes, and improved indoor air quality.

Community interest has also been demonstrated through strong participation in the City's clean-energy rebate program (PEER), which fully exhausted its first round of funds and showed particularly high uptake among low-income households. The City intentionally targeted outreach to high-need residents first, reinforcing an equity-centered approach that directly informs this project.

For this grant, residents in the project corridor will receive clear, accessible information on the benefits of electrification through hybrid workshops, multilingual materials, and direct outreach. Participation is voluntary and informed, ensuring that residents understand available measures before selecting upgrades that best meet their needs. This engagement model—rooted in trust-building, transparency, and accessibility—ensures the project reflects community-driven priorities established through both CAAP engagement and past clean-energy program participation.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the*

measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.

The homes within the project corridor are located directly adjacent to Interstate 80, where exposure to diesel particulates and traffic-related air pollution significantly elevates respiratory and cardiovascular risks. Many households fall below 80% AMI and live in older homes with outdated gas appliances, making it difficult to afford upgrades that improve indoor air quality or reduce energy burdens. These conditions create overlapping environmental-justice, public-health, and housing-quality challenges that the project directly addresses.

The project meets these community-identified needs by delivering no-cost or low-cost whole-home decarbonization upgrades, including heat pump technologies, panel upgrades, ventilation and filtration improvements, solar paired with battery storage, and EV-ready infrastructure. These measures directly reduce exposure to combustion emissions inside the home, lower outdoor pollution associated with gas use, and enhance energy resilience for households least able to afford such upgrades on their own.

This initiative also advances environmental justice by recruiting workforce trainees from within the REPAIR corridor, ensuring that project benefits extend beyond home upgrades to include economic opportunity and skills development for residents of historically burdened communities. Electrification-ready upgrades (e.g., panel improvements, solar with storage, EV chargers) place households on a long-term clean-energy pathway and empower residents to adopt future technologies such as EVs, further reducing local pollution.

Measurable outcomes—including the number of installations completed, reductions in combustion appliances, solar and storage deployed, and workforce participants trained—will be tracked through permits, invoices, photo documentation, enrollment forms, and surveys. These quantifiable results will demonstrate clear progress toward improving indoor air quality, reducing pollution exposure, lowering household energy costs, and building local capacity for a just transition.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members.*

Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.

Community engagement will be coordinated by the City of Pinole with RTEBN and GRID as active partners throughout implementation. All 189 eligible households will receive an initial multilingual mailer introducing the project, outlining available benefits, and directing residents to a project website with interest forms, update sign-ups, and the schedule for hybrid informational sessions. Responses will be tracked to identify participating and non-responding homes.

The City, RTEBN, and GRID will jointly host informational sessions to explain electrification benefits, answer questions, and support residents in selecting appropriate measures. For households that do not respond, the partners will conduct supplemental outreach, including follow-up calls, door-to-door engagement, and a second round of mailers, ensuring every household has an opportunity to participate or formally decline.

Throughout implementation, the City will provide regular updates via email, mailed notices, and community channels, while partners document resident feedback, concerns, and preferences. This feedback will be incorporated into final scope development, prioritization, and adjustments to outreach strategies. This comprehensive, multi-touch engagement approach ensures transparency, equitable access to program benefits, and meaningful participation by all households in the REPAIR corridor.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

This project delivers a coordinated suite of whole-home decarbonization measures—electrification upgrades, solar and battery storage, energy-efficiency improvements, essential repairs, and workforce training—to reduce air pollution, improve indoor and outdoor air quality, and strengthen long-term community resilience in the Pinole REPAIR Corridor. Major project components include: robust community engagement; equitable prioritization based on need; PG&E coordination for any required transformer upgrades; streamlined permitting; fair subcontractor participation; tenant-protection provisions; and integration of workforce trainees from within the corridor.

The project vision is to provide high-need households with upgrades that directly improve health, safety, and environmental conditions while building local economic opportunity. RTEBN and GRID Alternatives will serve as the primary implementers of all electrification and clean-energy measures, with workforce trainees supporting installation activities. The City will lead program design, household intake, equitable prioritization, scope development, permitting, financial administration, and grant reporting, in close coordination with both partners.

Measurable outcomes will demonstrate clear progress toward decarbonizing the neighborhood and advancing a just transition. These outcomes include installation of whole-home electrification measures, deployment of solar and storage, installation of EV-ready infrastructure, improvements to building safety and ventilation, and training of 25 local workforce participants. Collectively, these activities are expected to achieve approximately 50% decarbonization of the neighborhood, reduce exposure to combustion-related pollutants, and prepare households for future adoption of clean-energy technologies. Outcomes will be tracked through permits, invoices, photo documentation, trainee records, household surveys, and participation forms to ensure accuracy, transparency, and alignment with LCBF requirements.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The project budget is structured to maximize direct community benefits while ensuring fiscal responsibility and compliance with LCBF requirements. The City of Pinole's budget primarily supports staff capacity to launch and administer the program, conduct equitable prioritization and household intake, manage reporting, oversee financial reconciliation, coordinate with PG&E on potential transformer upgrades, and maintain complete documentation of all activities. City costs also include the subcontracted work performed by GRID Alternatives for installation of 30 solar-plus-battery systems and 30 EV chargers, as well as GRID's responsibilities for community engagement and workforce recruitment and training. EV charger costs reflect reductions achieved by leveraging PG&E rebate programs, decreasing the total amount of requested funds.

RTEBN's budget represents the largest portion of direct installation costs, reflecting its role as the lead implementer for whole-home electrification and safety-related upgrades. This includes procurement and installation of 90 heat pump water heaters, 90 heat

pump HVAC systems, 90 panel upgrades, and 30 reroofs, along with oversight of subcontracted installers and management of 15 local trainees participating in on-the-job workforce development. RTEBN's budget also includes administrative support for grant reporting and coordination with the City.

To ensure responsible public fund use, projected uptake of each measure was informed by a review of recent permitting data, identifying where upgrades were likely needed and avoiding overestimation. The budget also factors in the expected participation of households able to cost-share for certain measures, as well as anticipated rebates and incentives available at the time of installation. Together, these conservative assumptions ensure that the requested funding amount is realistic, equitable, and directly tied to the measurable outcomes outlined in the application.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project is firmly aligned with Pinole's Climate Action and Adaptation Plan (CAAP), adopted in 2024, which charts a path to carbon neutrality by 2045 and identifies residential natural-gas use and gas vehicles as the community's largest sources of greenhouse gas emissions. The CAAP's cornerstone strategy, CR-1, calls for leveraging building electrification and clean-energy infrastructure to position Pinole as a hub for green economic development and high-road jobs. The project directly advances BE-2, which commits the City to electrifying existing residential buildings to reduce natural-gas consumption by 26% by 2030 and achieve full electrification by 2045. It also fulfills BE-5e, which directs the City to expand partnerships with GRID Alternatives and promote renewable-energy adoption through multilingual, equity-centered education—both core components of this project.

The initiative aligns with broader state and regional frameworks, including AB 32, SB 32, and AB 1279, which set statewide emissions-reduction and climate-neutrality targets. By delivering whole-home decarbonization, this project accelerates compliance with these mandates while advancing environmental-justice principles embedded in California climate policy. It also reflects key practices from the Community Air Protection Program (AB 617) by prioritizing pollution-burdened neighborhoods, reducing local emissions, and centering community-driven solutions.

Altogether, the project reinforces and operationalizes Pinole's climate, environmental justice, and clean-energy commitments while contributing directly to regional and statewide decarbonization and air-quality goals.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The City of Pinole has extensive experience managing complex, equity-focused climate, permitting, and community programs for a population of 20,000. The Community Development Department—housing Planning, Sustainability, Building, Code Enforcement, Affordable Housing, and Economic Development—regularly implements multi-component initiatives requiring technical coordination, contractor oversight, and robust public engagement. Recent efforts include development of the Climate Action and Adaptation Plan, the Environmental Justice Element, reach-code advancement, the PEER clean-energy rebate program, instant/no-cost permitting, and multiple community-wide policy adoptions. This track record demonstrates the City's ability to execute programs that combine community outreach, technical review, and large-scale residential upgrades.

Rebuilding Together East Bay Network (RTEBN) brings deep experience delivering home upgrades at scale for low-income and vulnerable households. In the past five months alone, RTEBN has installed heat pump HVAC systems, heat pump water heaters, and panel upgrades for 38 Berkeley residents, and was selected to deploy more than $300,000 in CDBG-funded energy-efficiency upgrades in Contra Costa County. Their in-house construction staff and established subcontractor network enable them to manage high-volume installations and quality-assurance needs efficiently.

GRID Alternatives, a statewide leader in clean-energy deployment, has installed solar PV systems for more than 2,200 Bay Area homeowners and administers the CPUC's DAC-SASH program. GRID has extensive experience qualifying income-eligible households, coordinating multi-measure clean-energy installations, and integrating paid job-training opportunities. Their workforce development model pairs trainees with skilled installers, providing hands-on experience while delivering high-quality installations for income-qualified families across Contra Costa County.

Together, the City, RTEBN, and GRID bring proven operational capacity, technical expertise, strong community relationships, and established workflows—ensuring the project can be delivered effectively, on schedule, and at the scale proposed.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources*

that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.

The City of Pinole will manage this project through a coordinated, fiscally responsible implementation approach designed to maximize benefits for high-need households. Kapil Amin, Sustainability Project Manager (≈0.25 FTE), will lead program implementation, overseeing community engagement, equitable prioritization, scope development, contractor coordination, permitting, and full grant administration and reporting. Mr. Amin has extensive experience managing complex climate and clean-energy programs and will maintain regular coordination with RTEBN and GRID from initial outreach through final installation.

The City will apply cost-efficient strategies—including fixed pricing agreements, community-scale equipment bargaining, targeted cost-sharing for households with some ability to contribute, and optimization of available rebates—to ensure that grant funds stretch as far as possible. Historical permit data will inform expected uptake, ensuring realistic budgeting and preventing over-forecasting of measures.

RTEBN brings strong fiscal and administrative capacity to support implementation. Staff such as Bethany Kaufman have managed CDBG-funded programs across Contra Costa County, ensuring compliance and accurate reporting in complex, multi-jurisdictional contexts. Tracey Greenwell has delivered more than $1 million in CalHome-funded rehabilitation work in Contra Costa and Marin Counties over the past two years, demonstrating her ability to manage construction delivery and documentation requirements for publicly funded projects.

Together, the City, RTEBN, and GRID form a coordinated team with the staffing, administrative infrastructure, and demonstrated public-fund stewardship necessary to deliver this project effectively and in full compliance with LCBF requirements.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.

- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate “N/A” if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

The project is fully feasible within the 3-year grant term. The City of Pinole, Community Development Department, will oversee all required building permits and has the capacity to process them quickly through its recently launched instant permitting system, which allows same-day issuance for most residential electrification, solar, storage, and EV-charging installations. With this system in place, the City is confident that all permits can be obtained with sufficient lead time to complete installations on schedule.

Most project activities require only standard residential building permits. Solar PV and battery systems require submittal of a site plan and electrical specifications; GRID Alternatives will prepare and submit these permit applications on behalf of participating households and coordinate all required inspections. For heat pumps, panel upgrades, reroofs, and EV chargers, the City’s Building Division is already equipped to issue permits rapidly and conduct timely inspections through its Community Development Department.

No additional approvals or discretionary reviews are anticipated. Should PG&E determine that transformer upgrades are necessary, the City has already confirmed projected timelines and will submit its application immediately upon award, allowing outreach and household intake to proceed concurrently without affecting the project schedule.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

Not applicable

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

Site control for this project will be secured through direct homeowner authorization prior to the installation of any measures. Signed authorization forms from each participating household will be obtained before work is performed, ensuring full permission for all work conducted on private property

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Operations and maintenance for all installed solar systems and related measures are built directly into the structure of this program. The upfront project costs include comprehensive warranties that are provided to homeowners at no additional charge. GRID Alternatives offers a 10-year labor warranty along with no-cost system repair for issues directly related to the solar installation, effective from the date of project completion. While this warranty does not cover pre-existing conditions or issues unrelated to the solar system, it provides significant long-term reliability and peace of mind for participating households.

In addition, all installed equipment includes manufacturer warranties that will be transferred directly to the homeowners. The expected long-term maintenance associated with rooftop solar—primarily periodic cleaning and ensuring that new sources of shading do not develop—is clearly outlined in the homeowner agreement. Once the warranty period has concluded, homeowners assume responsibility for maintaining their systems; however, the low-maintenance nature of solar technology and the educational materials provided through the program support long-term system performance and homeowner confidence.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The most significant anticipated barrier relates to building trust and obtaining homeowner approval, particularly among residents who may not be familiar with the technology or who may be wary due to the number of organizations currently canvassing neighborhoods with similar-sounding services. RTEBN has a strong track record of working closely with GRID Alternatives on previous initiatives and has demonstrated the ability to build trust by providing free home safety modifications with no obligation or hidden requirements. This existing positive reputation and community

presence will be leveraged to help residents feel confident, respected, and informed when deciding whether to participate in this project.

Another area of uncertainty is the fluctuation of electricity rates across different utilities, which may influence how households perceive the value of solar over time. While GRID cannot influence rate-setting decisions, our team will collaborate with the City of Pinole and RTEBN to monitor changes, provide transparent information, and ensure residents have a clear understanding of both the financial and environmental benefits of their solar installations.

A secondary challenge is ensuring a steady and qualified pool of applicants who meet program criteria and feel comfortable engaging with the process. To address this, the City of Pinole GRID will implement a multi-layered, community-centered outreach strategy that includes the following components:

- Hosting recurring Solar Workshops that offer accessible information, opportunities to ask questions, and on-site support to begin the application process
- Deploying a comprehensive outreach plan that integrates digital campaigns, neighborhood canvassing, City-supported mailings, and participation in local events
- Partnering with trusted community organizations to amplify program awareness and strengthen credibility
- Soliciting feedback from previous clients to identify and address participation barriers, improve program design, and ensure the process remains equitable and user-friendly
- Expanding in-person engagement opportunities so residents can interact directly with staff, receive individualized guidance, and build familiarity with the program

Collectively, these strategies are designed to support broad community participation, strengthen trust, clarify program value, and ensure the project's successful implementation.

Project Name: Improving Air Quality and Health Through Whole Home Decarbonization in the Pinole REPAIR Corridor
Lead Applicant Name: City of Pinole
Term for this budget (in years): 3 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Sustainability Project Manager ($54 including fringe)	Website development: 20 hours Mailer development and mailing: 10 hours Tracking participation of homes: 10 hours Direct follow-up with unresponsive homes: 50 hours PG&E coordination for transformer upgrades: 30 hours Scorecard development and scoring of homes: 50 hours Form for participating homes to complete for scorecards: 5 hours Workshop organization: 30 hours Tenant protection agreement development: 10 hours Program guideline development (fixed pricing agreements, QuitCarbon no-cost consultation, etc.): 50 hours Finalize locked-in measures for participating homes: 100 hours Recruitment for subcontractors to assist Rebuilding Together with work: 50 hours (this work will be completed months 0-6)	$22,410.00
Personnel/Staff Costs	Direct	Community Development Director ($236 including fringe)	Website development: 5 hours Mailer development: 5 hours Scorecard development and oversight: 5 hours Workshop oversight: 5 hours Program guideline oversight: 10 hours Project meetings: 12 hours (this work will be completed months 0-9)	$12,272.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	mailers	two rounds of mailers informing about program website, how to reserve, etc. includes postage (completed months 0-9)	$1,000.00
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	~3% of total direct costs for lead and co-applicant	grant adminstration and management which includes coordination with co-applicant reporting (completed months 0-36)	$132,000.00
Professional Services & Consultants (≤25% of Direct Costs at APPLICATION level)	Direct	translations for every document, agreement, website text ($160/document for 2 languages)	website translation, mailer translations, agreements translations, forms translations (completed months 0-9)	$2,000.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	GRID solar PV with installation ($6/watt)	provision and installation of ~5 kW solar PV systems for 30 homes. The budget allows flexibility to serve additional homes where feasible; lower-priority households may contribute a costshare if selected. System sizes may be adjusted based on site conditions and household energy needs. (completed months 7-36)	$900,000.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	GRID workforce trainee recruitment and wages ($15,000/trainee)	recruitment and training of 10 trainees(recruitment: months 0-12 and training months 13-36)	$150,000.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	GRID participation at 2 workshops	workshop preparation and participation(completed months 0-9)	$1,500.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	GRID battery storage with installation ($15,000/unit)	battery installation at 30 homes(completed months 10-36)	$450,000.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	GRID residential EV charger installation ($4,000/unit)	residential installation at 30 homes(costs were reduced by $20,000 for homes that are eligible for PG&E ev charger rebate)(completed months 10-36)	$100,000.00
		Only add lines above this line		
			TOTAL:	**$1,771,182.00**

Lead Applicant Budget Summary (auto-calculated)

Total Direct Costs	$1,639,182.00
Total Indirect Costs	$132,000.00
Total Prof. Services & Consultants	$2,000.00
Total Contingency	$0.00
Total Funds Requested	$1,771,182.00
Cross-check Total Budget	YES
Indirect as % of Direct	8.1%

Project Name: Improving Air Quality and Health Through Whole Home Decarbonization in the Pinole REPAIR Corridor
Co-Applicant 1 Name: Rebuilding Together
Term for this budget (in years): 2.5

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Materials, Supplies & Equipment (> $5K itemized)	Direct	fixed-price heat pump water heater ($2,000 for high priority homes (60 homes) and $1,000 for lower priority homes (35)	90 heat pump water heaters (assuming 50% uptake by total eligible homes. The City's permitting database was checked for recent projects completed by all eligible homes to further predict uptake by homes. Cost incorporates a deduction of 50% match required for lower priority homes which equates to 50% discount on 30 units. Once final projects are properly sized and tallied, the City will assist with community bargaining to get the best deal on unit price. Costs were also reduced by $30,000 in this line item for homes that may be eligible for the MCE rebate)	$120,000.00
Construction	Direct	heat pump water heater installations ($5,000 for high priority and $2,500 for lower priority)	90 heat pump water heater installations (assuming ~50% uptake by total eligible homes. The City's permitting database was checked for recent projects completed by all eligible homes to further predict uptake by homes. Cost incorporates a deduction of 50% match required for lower priority homes which equates to 50% discount on 30 units)	$375,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	fixed-price heat pump HVAC systems ($5,000 for high priority and $2,500 for lower priority)	90 heat pump HVACs (assuming ~50% uptake of eligible homes. The City's permitting database was checked for recent projects completed by all eligible homes to further predict uptake by homes.Once final projects are properly sized and tallied, the City will assist with community bargaining to get the best deal on unit priceCosts were also reduced by $28,000 in this line item for homes that may be eligible for the MCE rebate)	$347,000.00
Construction	Direct	heat pump HVAC installations ($6,000 for high priority and $3,000 for lower priority)	90 installations (assuming 50% uptake by total eligible homes and 60 high priority and 30 lower priority homes.The City's permitting database was checked for recent projects completed by all eligible homes to further predict uptake by homes.)	$750,000.00
Construction	Direct	panel upgrades ($4,000 with material for high priority and $2,000 for lower priority)	90 panel upgrades (60 high priority homes and 30 lower priority.The City's permitting database was checked for recent projects completed by all eligible homes to further predict uptake by homes.Once final projects are properly sized and tallied, the City will assist with community bargaining to get the best deal on unit price.)	$300,000.00
Construction	Direct	reroof including materials ($30,000 per home)	30 reroofs for solar/battery homes. Once final projects are tallied, the City will assist with community bargaining to get the best deal on materials cost.	$900,000.00
Community Engagement	Direct	participation at 2 workshops	workshop preparation and participation	$1,500.00
Other Direct Costs	Direct	subcontractor(s) recruitment and oversight	support lead applicant with recruitment of subcontractors that are agreeable to project scope requirements such as fixed priced installations, scope approval by QuitCarbon for QA/QC, eligibility to receive MCE for a homes that may be eligible for rebates; oversight that subcontractors are meeting these requirements before installations	$70,000.00
Capacity-Building and Training	Direct	worforce trainee recruitment/wages ($15,000/trainee)	recruitment and training of 15 trainees	$225,000.00
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	grant management (~5% of co-applicant direct costs)	coordination with lead applicant on grant management/reporting	$140,000.00

Bay Area Air District
CLEAN AIR FOR ALL

Richmond Opportunity

City of San Pablo Application

Bay REPAIR
Local Community Benefits Fund – Round 1
Opportunity Grant
Overall Narrative

Application Information	
Application Title	City of San Pablo's Wellness Initiative
Lead Applicant	City of San Pablo
Application Location	City of San Pablo (Citywide / 2600 Moraga Road)
Overall Funding Request	$1,355,044
Grant Term Request	2 years

PROPOSAL VISION (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
    - *Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.*
    - *Advance integrated projects to holistically meet community needs.*
    - *Strengthen community-driven and collaborative solutions.*

The City of San Pablo's application advances an integrated, community-centered approach to improving air quality, public health, environmental resilience, and economic opportunity in a historically underserved community. The proposal combines two complementary efforts: the McNeil Park Project, which will transform a long-vacant former school site into a 4.8-acre community park with urban greening and active transportation amenities, and an expanded partnership with SOS Richmond to provide continuous environmental cleanup, workforce development, and wellness services for unhoused residents along the I-80 and creek corridors. Together, these projects holistically address community needs by improving neighborhood environmental conditions, expanding access to recreation and clean air resources, reducing fire and pollution risks, and strengthening pathways to stable employment and community wellness.

The application directly supports the Local Community Benefits Fund goals by reducing air pollution and mitigating its impacts through creek and encampment cleanup operations, urban greening, tree planting, bioretention infrastructure, EV charging stations, air quality monitoring, and peer-led air quality and fire safety education. The project will improve public health outcomes by providing 4.8 acres of urban greening, expanding access to safe recreational space, cleaner indoor air through portable HELP air filters, wellness services, and environmental education while helping reduce exposure to smoke, illegal dumping, and urban heat impacts. Measurable outcomes include the planting of approximately 70 trees and over 800 climate-resilient plants,

installation of four EV charging ports, creation of approximately 80 temporary construction jobs, continuous paid transitional employment opportunities for unhoused residents, expanded cleanup and fire mitigation operations, and increased access to clean air respite services through the San Pablo Library Wellness Center and Safe Harbour shuttle program.

The proposal also strengthens community-driven and collaborative solutions through long-standing partnerships with SOS Richmond, the San Pablo Library, and local residents who helped shape the park design and program priorities. The City's partnership with SOS Richmond builds on an existing successful Clean California program and converts a fragmented 8-month service model into continuous year-round operations that provide sustained outreach, workforce training, environmental stewardship, and wellness support for vulnerable populations, including justice-impacted and undocumented residents. Together, the projects create lasting environmental, economic, and social benefits that support a more equitable and resilient transition away from the harmful impacts of a fossil-fuel-based economy.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

The proposed projects will benefit two highly impacted populations within the City of San Pablo: (1) the broader San Pablo community through the McNeil Park Project and (2) the City's unhoused population through the SOS Richmond outreach and workforce development program (Health Corridors Program). San Pablo is a predominantly low-to-moderate income community that faces significant economic, environmental, and public health challenges. Most of the City of San Pablo (five of the seven census tracts) is located within an SB 535-designated Disadvantaged Community. CalEnviroScreen 4.0 data further demonstrates the community's vulnerability, with approximately 37% of residents in the McNeil project location census tract living below twice the federal poverty level, higher than 65% of census tracts statewide.

The McNeil Park Project specifically targets low-income households, seniors, youth, families, residents with disabilities, and linguistically isolated populations in one of Contra Costa County's most park-deficient communities. San Pablo currently provides only 0.8 acres of parkland per 1,000 residents, well below the City's General Plan goal of three acres per 1,000 residents. The project will create a safe, accessible, and inclusive community park designed to support residents of all ages and abilities while improving physical activity, mental health, and community connectivity. The project also serves a highly diverse and multilingual population, as approximately 67% of San Pablo residents speak a language other than English at home, and nearly 3,700 residents in the project census tract identify as not speaking English well. To support equitable participation, all outreach materials and engagement efforts have been conducted in English and Spanish, and future educational signage and community programming will continue to prioritize bilingual accessibility.

The SOS Richmond component specifically benefits San Pablo's unhoused residents, including justice-impacted and undocumented individuals living along the I-80 and creek corridors who experience some of the highest levels of air pollution exposure in the Bay Area. According to the AB 617 Path to Clean Air Community Emissions Reduction Plan, the area experiences elevated diesel particulate matter and PM2.5 exposure from nearby freeways, rail activity, marine emissions, and refinery operations. Many unhoused residents live directly adjacent to these

pollution sources without access to clean indoor air, protective equipment, or emergency resources during wildfire smoke and poor air quality events. The project addresses these inequities by providing continuous outreach, paid transitional employment, air-quality education, fire mitigation resources, wellness services, and access to clean air respite spaces. Together, the projects provide integrated environmental, recreational, workforce, and public health benefits to some of San Pablo's most vulnerable and historically underserved populations.

PARTNERSHIP STRUCTURE (20 points)

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

The City of San Pablo is the lead applicant and is committed to improving the quality of life, environmental health, public infrastructure, and economic opportunity for its residents through equitable, community-driven investment. The City has a long history of serving disadvantaged and historically underserved populations and has prioritized projects that improve public health, expand recreational access, support environmental sustainability, and strengthen neighborhood resilience. The proposed McNeil Park Project directly reflects years of community advocacy and engagement, as residents repeatedly identified the need for additional urban greening, recreational amenities, environmental improvements, and culturally inclusive gathering spaces. Between 2019 and 2025, the City conducted extensive outreach through 19 separate community meetings, surveys, tabling events, and online engagement to ensure the project reflects the priorities of local residents, including youth, seniors, families, residents with disabilities, and multilingual households. The City also maintains strong relationships with local schools, nonprofit organizations, and community-serving institutions, including the San Pablo Library, to ensure projects are responsive to community needs and accessible to diverse populations.

The City's co-applicant and implementation partner, SOS Richmond, has deep and longstanding connections to the unhoused community in San Pablo and the broader Richmond-San Pablo corridor. SOS Richmond's mission is centered on "Peers Helping Peers," with approximately 85% of staff consisting of unhoused or formerly unhoused individuals who use their lived experience to build trust, provide outreach, and support community transformation. The organization works directly within encampments and underserved neighborhoods to improve safety, stability, and environmental conditions while connecting residents to critical resources and employment opportunities. SOS Richmond provides services including cleanup, mobile showers, laundry, food distribution, transportation, moving assistance, wellness support, and workforce development programs that help unhoused residents transition toward long-term stability.

The City and SOS Richmond already have a strong working partnership through the City's existing contract with SOS Richmond and through the CalTrans Clean California grant program, which provides creek cleanup, paid transitional employment, encampment outreach, and wellness services along the San Pablo I-80 corridor. This established collaboration has created trusted relationships within the unhoused community and demonstrated the effectiveness of combining environmental stewardship with peer-led outreach and workforce development. Together, the City and SOS Richmond bring complementary expertise, trusted community relationships, and a shared commitment to advancing environmental justice, public health, and economic resilience for San Pablo's most vulnerable residents.

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

The City of San Pablo will serve as the Lead Applicant and overall project administrator and will be responsible for grant management, financial oversight, compliance, reporting, invoicing, and coordination of project implementation activities. The City will oversee the McNeil Park Project and administer a formal contract with SOS Richmond for implementation of the outreach, cleanup, workforce development, air-quality education, and wellness-related services described in the application. The contract will clearly define the scope of work, performance measures, reporting requirements, reimbursement procedures, and deliverables to ensure accountability, transparency, and successful project outcomes.

SOS Richmond will serve as the primary community-based implementation partner for unhoused outreach and workforce development activities. SOS Richmond staff will conduct peer-led outreach, environmental cleanup operations, fire mitigation activities, workforce training, and distribution of air-quality and wellness resources for unhoused residents along the San Pablo I-80 and creek corridors. As part of the contractual partnership, SOS Richmond will provide regular progress reporting, participant data, and outcome tracking information to support grant compliance and performance monitoring by the City.

The partnership structure is built on an already strong and successful working relationship between the City and SOS Richmond through the existing Clean California program. Staff from both organizations maintain strong communication and coordination practices that support efficient implementation and rapid problem-solving. Amanda Booth, Environmental Program Manager for the City of San Pablo, will serve as the City's primary point of contact and oversee project coordination, compliance, and contract management. Daniel Barth, Executive Director for SOS Richmond, will serve as the lead contact for SOS Richmond and will oversee field implementation, staffing, and program delivery. Both organizations are committed to collaborative decision-making and maintaining regular coordination meetings to ensure the project remains responsive to community needs and successfully serves the San Pablo community.

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to:*
    - *Coordinate overall community engagement activities.*
    - *Track and report on indicators to assess progress towards measurable outcomes.*
    - *Collect and process reporting, reimbursement, and invoicing requirements.*

The City of San Pablo will work closely with SOS Richmond through an established partnership structure that emphasizes regular communication, coordinated outreach, and shared accountability for project implementation and reporting. The City and SOS Richmond already collaborate successfully through the existing Clean California program and have developed effective systems for coordinating field activities, tracking deliverables, and responding to community needs. Amanda Booth, Environmental Program Manager for the City, and Daniel Barth, Executive Director for SOS Richmond, will serve as the primary coordination leads and will maintain regular meetings throughout the project period to review progress, address challenges, coordinate outreach activities, and ensure compliance with grant requirements.

Community engagement activities will be coordinated collaboratively between the City and SOS Richmond to ensure outreach is inclusive, culturally responsive, and accessible to the populations most impacted by air pollution and environmental inequities. The City will support overall project coordination, bilingual outreach materials, public communications, and coordination with community partners, especially for the McNeil Park Project. SOS Richmond will lead direct peer-based engagement with unhoused residents and encampment communities. Because SOS Richmond staff includes unhoused and formerly unhoused individuals with strong community relationships, the organization is uniquely positioned to build trust and effectively engage vulnerable populations that are often difficult to reach through traditional outreach methods.

The City will also oversee all tracking, reporting, reimbursement, and invoicing requirements associated with the grant. Through its contract with SOS Richmond, the City will establish clear reporting deliverables, performance metrics, invoicing procedures, and communication expectations. SOS Richmond can send invoices monthly, or less frequently if desired. The contract will require annual reporting that includes full program metrics and measurable outcomes, as well as quarterly email updates summarizing project activities, implementation status, challenges, and progress toward deliverables. SOS Richmond will provide regular documentation related to outreach activities, cleanup operations, workforce participation, supply distribution, and program outcomes. The City will compile and review this information to track progress toward project goals, prepare required grant reports, process reimbursement requests, and ensure compliance with all funding requirements. Existing communication systems and reporting processes developed through prior collaborative programs will help ensure accurate data collection, timely invoicing, and efficient grant administration throughout the project term.

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.*

Yes. The Lead Applicant, the City of San Pablo, is subject to oversight and approval by the San Pablo City Council, the City's elected governing body. The City Council approval process requires City staff to prepare and present project recommendations, agreements, and funding authorizations at a publicly noticed City Council meeting for review and formal approval.

The McNeil Park Project has already received significant prior approvals from the City Council, including project approval in 2024, as well as Planning Commission approval in 2026. The City Council has also demonstrated strong support for the City's partnership with SOS Richmond through its ongoing participation in the existing Clean California program.

To ensure compliance with grant requirements, City staff are scheduled to present the proposed grant application and receive authorization to execute all necessary grant and partner agreements to the City Council on June 1, 2026, in preparation if awarded. The City anticipates receiving all necessary approvals prior to any potential grant award. Given the Council's prior support for both the McNeil Park Project and the SOS Richmond partnership, the City does not anticipate any challenges in obtaining final authorization.

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

The City of San Pablo has an experienced project management team and sufficient organizational resources to successfully oversee and implement the proposed project. Project implementation will be managed collaboratively through the City's Public Works Department, Environmental Programs staff, Finance Department, and supporting administration team. City staff assigned to the project have extensive experience administering complex, grant-funded capital improvement and environmental programs, and will dedicate the necessary time and resources to ensure the project is completed on schedule and within budget. In addition to overseeing construction and grant administration activities, City staff will dedicate ongoing time to coordinating with SOS Richmond on outreach implementation, workforce development activities, reporting requirements, and community engagement efforts throughout the project term.

The McNeil project will be led by Jimmie Zhou, Senior Civil Engineer, who will serve as Project Director. Mr. Zhou is a licensed professional engineer with extensive experience managing capital improvement, roadway rehabilitation, roadway realignment, parks, and infrastructure construction projects. He will oversee consultant procurement, design review, environmental coordination, contract administration, contractor oversight, budget management, and overall project delivery. Amanda Booth, Environmental Program Manager, will oversee coordination with SOS Richmond for the Healthy Corridors Program and all environmental compliance for the McNeil Park project. Ms. Booth has more than 10 years of experience delivering urban greening projects and has significant expertise in regulatory monitoring and reporting. Chiara Hanna, Management Analyst, will serve as Grant Administrator and oversee grant compliance, reimbursement requests, documentation, reporting, and grant closeout. Ms. Hanna has successfully administered federal, state, and local grants totaling tens of millions of dollars from agencies including FHWA, Caltrans, MTC, EPA, and the California Natural Resources Agency.

Collectively, City staff will dedicate approximately 1.0 Full Time Equivalent (FTE) throughout the duration of the project, supplemented by consultant support for specialized technical services, engineering design, environmental review, and construction management as needed. The City also has extensive experience managing multi-funded projects and coordinating multiple funding sources. In addition to this grant request, the project has secured significant complementary funding through the CNRA Urban Greening Grant, State Parks State Earmark funding, CNRA State Earmark funding, and City General Fund contributions. These financial and staffing resources position the City to successfully implement, administer, and maintain the project over the grant term.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities*

The City of San Pablo has extensive experience managing public funds from federal, state, regional, and local sources and maintains strong financial management systems and internal controls to ensure funds are used efficiently, transparently, and in full compliance with grant requirements. The City regularly administers complex, multi-funded capital improvement and environmental projects and has successfully managed grants from agencies including Caltrans, FHWA, MTC, EPA, the California Natural Resources Agency, and State Parks. The Finance Department works closely with project managers and grant staff to oversee budgeting, procurement, invoicing, reimbursement requests, and financial reporting.

Grant funds for this project will be tracked through the City's accounting system using dedicated project codes to ensure expenditures are clearly separated by funding source and eligible activity. The City will maintain detailed documentation for all costs, including contracts, invoices, staff time, and supporting records, to ensure proper allocation and audit readiness. Formal contract oversight will also be applied to all partners, including SOS Richmond, with clearly defined scopes of work, eligible expenses, reporting requirements, and invoicing procedures.

City staff, including Amanda Booth, Environmental Program Manager, and Chiara Hanna, Grant Administrator, will coordinate with the Finance Department to monitor budgets, review expenditures, and ensure funds are spent in accordance with grant requirements. SOS Richmond will submit regular invoices with supporting documentation for City review and approval prior to reimbursement. This structure ensures strong fiscal oversight, accountability, and efficient use of public funds throughout the project.

Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative:
McNeil Park

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	City of San Pablo's Wellness Initiative
Lead Applicant Name	City of San Pablo
Project Location	2600 Moraga Road, San Pablo, CA 94806
Overall Funding Request	$1,355,044
Grant Term Request	2 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	McNeil Park
Project Lead	City of San Pablo
Project Location	2600 Moraga Road, San Pablo, CA 94806
Project Funding Request	$1,000,000

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The proposed McNeil Park Project will transform the former elementary school site at 2600 Moraga Road into a vibrant 4.8-acre community park that provides critical urban greening, recreational, environmental, and public health benefits to San Pablo residents. The site, formerly operated by the West Contra Costa Unified School District until its closure in 1997, was purchased by the City of San Pablo in 2006 with the goal of creating a much-needed urban greening through a public park. However, due to funding limitations, the site remains undeveloped and has recently had multiple dilapidated buildings that burned down, and the area is considered unsafe for public use and fenced off from the community. The completed park will include resident-prioritized amenities such as an all-abilities playground, adult-sized soccer field, basketball court, small stage/amphitheater, senior fitness stations, a perimeter fitness trail, picnic areas, restrooms, bicycle racks, electric vehicle charging stations, water fountains, and parking. In addition to expanding access to recreation and active living opportunities for youth, families, and seniors, the project will provide significant air quality and environmental benefits through the planting of trees

and native landscaping, promotion of active transportation, and installation of zero-emission vehicle infrastructure.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

The McNeil Park Project strongly aligns with the Local Community Benefit Fund strategies to reduce air pollution and improve health outcomes, while also helping build economic resilience and supporting a just transition within the City of San Pablo. The project will transform an underutilized site into a 4.8-acre community park that expands access to urban greening, recreational opportunities, green infrastructure, and sustainable transportation amenities in a historically underserved community with limited park access and significant public health challenges.

The project will reduce air pollution and improve health outcomes through several integrated environmental and active living improvements. The project includes the planting of more than 800 trees, shrubs, and native drought-tolerant plants, including approximately 70 new trees that will help improve air quality, sequester carbon, reduce urban heat island impacts, and provide shade for park users. Green infrastructure elements such as bioretention facilities will improve stormwater quality and reduce localized flooding before runoff enters local creeks. These elements specifically support the Richmond and San Pablo "Path to Clean Air" Community Emissions Reduction Plan (2024) goals for urban greening through the strategies identified for tree planting, native landscaping, bioretention facilities, and expanded green space that will improve air quality, reduce urban heat impacts, and support mental and physical health.

The project will also install two EV charging stations with four charging ports to support clean transportation and reduce vehicle-related emissions. In addition, the installation of an air quality monitoring sensor will provide publicly accessible environmental data to help educate and inform the community about local air quality conditions.

The urban greening elements support healthier lifestyles and improved public health outcomes by increasing access to safe recreational space and opportunities for physical activity. The park will include a soccer field, basketball court, walking loop, playground, senior workout equipment, and other recreational amenities that encourage active living for residents of all ages and abilities. These improvements directly support local efforts to address childhood obesity and other health disparities identified in San Pablo's Community Action Plan, developed by the Childhood Obesity Prevention Task Force.

In addition, the project helps build economic resilience and supports a just transition by creating approximately 80 temporary construction jobs and supporting workforce development opportunities related to green infrastructure, landscaping, and park construction. The City's Local Economic Opportunity Policy prioritizes local hiring and contracting opportunities, helping ensure that economic benefits remain within the community. The project also supports long-term community resilience through environmental education, improved neighborhood infrastructure, and the creation of a safe and welcoming public space that strengthens community connections and quality of life.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

McNeil Park Location: The project is located at 2600 Moraga Road in San Pablo, California 94806. The site is situated within the City of San Pablo in Contra Costa County. Which is entirely located within the BAAQMD BayREPAIR project limits.

McNeil Park Project Location Map
2600 Moraga Rd., San Pablo, CA 94806

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The development of the McNeil Park proposal was driven by continuous and inclusive public engagement efforts spanning from 2019 to 2024. During this five-year period, the City of San Pablo conducted 19 unique community engagement activities, including in-person and virtual meetings, event tabling, design workshops, and bilingual online surveys. These efforts ensured

that the voices of historically underserved residents were central in shaping the project's vision, design, and priorities.

The City took a multifaceted, equity-centered approach to outreach. Outreach began with large community events, such as the Cinco de Mayo Festival, to raise broad awareness. Targeted meetings followed, focusing on specific populations including seniors, youth, and families. Public design workshops were hosted on evenings and weekends and included food, childcare, and Spanish interpretation to reduce participation barriers. Bilingual online surveys were distributed to expand reach, especially among residents unable to attend in person. In total, these outreach efforts directly engaged more than 800 individuals, including over 550 confirmed participants at in-person or virtual meetings and events and 255 survey responses, with approximately 74% of respondents residing in San Pablo.

At these outreach events/surveys, community members were invited to share their priorities for the park by selecting and ranking desired amenities from a comprehensive list of recreational features and basic amenities, while also being encouraged to suggest additional ideas not originally included. To ensure equitable prioritization, amenities were grouped into categories such as main facilities, secondary facilities, and basic amenities so that essential features like bathrooms and seating would not compete directly with larger recreational elements.

Engagement activities were designed to encourage active participation and detailed feedback. Participants at in-person meetings used scaled models to "build" their ideal park layout within the site's space constraints, while online survey participants ranked and prioritized their preferred amenities. Residents also provided detailed comments regarding the design and functionality of amenities, emphasizing priorities such as a large soccer field, inclusive playgrounds accessible to all ages and abilities, walking loops with senior-friendly features, improved lighting and safety measures, bathrooms, and security cameras.

Stakeholders contributed additional ideas beyond the provided options, including community gardens, bocce ball courts, meditation gardens, environmental education features, bicycle parking, and enhanced wheelchair accessibility. Public feedback directly shaped the final McNeil Park plan, which includes features most requested by the community such as a full-sized soccer field, basketball court, inclusive playground, walking loop with fitness equipment, picnic areas, bathrooms, public art, and educational kiosk space. Community input also influenced the preservation of mature oak trees on the site and the incorporation of accessibility improvements and educational elements reflecting local interests in emergency preparedness and cultural awareness.

This extensive community input informed every aspect of the park's development, ensuring that McNeil Park will reflect the needs, priorities, and cultural context of the surrounding community. By grounding this proposal in authentic, sustained public involvement, the City has built a project that enjoys strong community support and long-term relevance.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

In addition to outreach for the specific park elements and design the City also performed outreach and received feedback from the community about what was originally desired from this unused public space. The San Pablo community has consistently requested additional park space in the community

The McNeil Park Project directly addresses the community needs identified through extensive public outreach and engagement, which consistently demonstrated a strong desire for additional urban greening through park space, recreational opportunities, safer gathering areas, and inclusive community amenities in San Pablo. Residents expressed the need for a project that would promote health, recreation, social connection, environmental quality, and community pride within an underserved area that currently lacks adequate park infrastructure. The project specifically benefits families, youth, seniors, Spanish-speaking residents, and individuals with disabilities living in San Pablo, particularly those residing in the surrounding disadvantaged and linguistically isolated neighborhoods.

The project responds to significant public health and environmental justice challenges facing the community. San Pablo currently has only 0.8 acres of parkland per 1,000 residents, well below the City's General Plan recommendation of 3 acres per 1,000 residents. The shortage of accessible recreational space has contributed to limited opportunities for physical activity and active living, which were identified in the City's 2014 Community Action Plan addressing childhood obesity and related health disparities. In response, the McNeil Project will create 4.8 acres of new park space with amenities specifically selected by residents, including a full-sized soccer field, basketball court, fitness trail, senior-rated exercise stations, inclusive playground equipment, amphitheater space, picnic areas, and restrooms. These features will promote physical activity, improve mental and physical health outcomes, and provide safe and welcoming gathering spaces for all ages and abilities.

The project also addresses environmental justice concerns by improving equitable access to high-quality public amenities in a community with a large non-English-speaking population and historically limited recreational resources. Approximately 67% of San Pablo residents speak a language other than English, and the project area has a high rate of linguistic isolation. To ensure meaningful inclusion, all outreach, meetings, educational materials, and future park signage are provided in both English and Spanish, with simultaneous Spanish interpretation available at public meetings.

In addition to recreational and social benefits, the project addresses environmental and climate-related challenges. The park will improve air quality and reduce urban heat impacts through the planting of approximately 70 trees, installation of drought-tolerant landscaping, and creation of shaded community spaces. Bicycle racks and electric vehicle charging stations will encourage lower-emission transportation options, while bioretention facilities and water-efficient landscaping will improve stormwater management, reduce flooding risks, and conserve water resources.

Educational kiosks developed in partnership with community organizations, local emergency preparedness teams, and cultural groups will further strengthen community resilience and awareness related to natural disasters, local history, and cultural identity.

The measurable outcomes of the project will demonstrate meaningful community impact through both quantitative and qualitative indicators. Key outcomes include the creation of 4.8 acres of new park space, increasing the City's parkland ratio from 0.8 to 1.0 acres per 1,000 residents; expanded access to recreational amenities for underserved populations; increased opportunities for physical activity and active transportation; improved accessibility for seniors and individuals with disabilities; and enhanced environmental benefits through tree planting, stormwater improvements, and reduced vehicle emissions. Additional outcomes include increased community participation in cultural and recreational activities, creation of local jobs and youth internship opportunities, and strengthened social cohesion through inclusive gathering spaces and community programming. Together, these outcomes will demonstrate progress toward improving public health, environmental quality, climate resilience, and equitable access to recreational and community resources in San Pablo.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered*

The City of San Pablo is committed to maintaining meaningful and ongoing community engagement throughout project implementation to ensure that residents remain informed about project progress, understand the benefits available to the community, and continue to have opportunities to provide feedback. Community engagement has been an integral part of the project from the beginning, and the City will continue this collaborative approach through construction and project completion.

During the design process, the City conducted multiple rounds of outreach and solicited significant community input at both the 35% and 65% design stages. These engagement efforts allowed residents to review project plans, provide comments, and help shape the park's amenities and overall design. The City will continue to involve the community during implementation by seeking additional feedback related to key project elements, including the content and themes for the proposed educational and informational kiosks within the park. If funding allows for public art installations, the City will also engage residents in the selection and development of community art and mural concepts to ensure the artwork reflects the identity, culture, and priorities of the surrounding community.

To keep residents informed during construction, the City will distribute construction notices before work begins and provide regular updates throughout the construction process. These notices will inform the community about project timelines, anticipated construction activities, traffic or access impacts, and project milestones. The City will also use these communications as an opportunity to receive and respond to community feedback regarding construction-related concerns or issues that arise during implementation. Feedback received from residents will be reviewed by City staff

and project partners and, when feasible, incorporated into project coordination, construction management practices, and communication strategies to minimize community disruption and improve the overall project experience.

Following project completion, the City will host a community celebration and park opening event to welcome residents into the new space, recognize the community's contributions to the project, and encourage long-term community use and stewardship of the park. These ongoing engagement efforts will help ensure that the project remains responsive to community needs while fostering transparency, inclusivity, and community ownership throughout implementation and beyond.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The proposed McNeil Park Project is a community investment that will convert an underutilized site into approximately 4.8 acres of new recreational and environmental infrastructure for the City of San Pablo. The overall project vision is to create an inclusive, sustainable, and community-centered park that improves public health, expands access to recreation, supports climate resilience, and advances environmental justice goals in an underserved area with limited park access. The project was developed through extensive community engagement and reflects resident priorities for safe recreational opportunities, environmental improvements, and neighborhood gathering spaces.

Major project components include the construction of a full community park with recreational amenities, active transportation improvements, green infrastructure, and environmental education features. The completed park will include sports and recreation areas, walking paths, native landscaping, stormwater treatment features, EV charging infrastructure, and air quality monitoring equipment. The project will create measurable environmental and public health benefits by increasing access to active living opportunities while improving local air and water quality.

Key measurable outcomes include the creation of 4.8 acres of recreational park space and installation of numerous park amenities, with project completion verified through final inspections and filing of the Notice of Completion. The project will also install two EV charging stations with four charging ports to encourage the use of clean air vehicles. Construction activities are expected to support approximately 80 temporary jobs, which will be tracked through certified payroll and contractor reporting.

Environmental improvements are a major component of the project. Stormwater infrastructure, including grading improvements, storm drain lines, and bioretention facilities, will help clean and filter runoff before it enters local creeks, while reducing localized flooding impacts. The project is also expected to reduce approximately 80 metric tons of CO2e through the planting of 70 trees, installation of EV infrastructure, and implementation of urban greening improvements, with reductions modeled using the CNRA Urban Greening Calculator. In total, the project will install more than 800 trees, shrubs, and drought-tolerant native plants to improve air quality, provide shade, enhance biodiversity, and beautify the neighborhood.

The project will further support sustainable transportation and public health by increasing opportunities for walking and bicycling. Pre- and post-construction activity counts and observations will be used to measure increases in active transportation use. Additionally, the installation of an air quality sensor will provide publicly accessible environmental data for community education and outreach purposes.

The City of San Pablo will serve as the lead applicant and project manager and will oversee all aspects of project implementation, including design, contracting, environmental compliance, construction management, grant administration, reporting, and long-term maintenance coordination. The City will work closely with consultants, contractors, environmental specialists, utility providers, and community organizations throughout project implementation

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

No response required to this question, please see Measurable Outcome Table.

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The BayREPAIR grant-funded elements of the project budget are focused on constructing key recreational, environmental, and community-serving amenities that support the overall vision of creating a sustainable and inclusive public park. Major BayREPAIR grant-funded construction costs include:

- $400,000 for the playground, which will provide accessible recreational opportunities for children of all ages and abilities.
- $125,000 for the soccer field, which will support organized sports and active recreation.
- $120,000 for a basketball court.
- $200,000 for park furnishings such as benches, picnic tables, and other public amenities that enhance usability and comfort throughout the park.
- Approximately $50,000 is allocated for bioretention plantings that will support stormwater treatment, reduce flooding, and improve local water quality through green infrastructure.
- $35,000 for EV charging stations to support clean transportation options and reduce greenhouse gas emissions.
- $20,000 for an air quality monitoring system and required electrical equipment that will provide environmental data for community education and outreach.
- $50,000 for a trash enclosure to support ongoing park operations and maintenance.

Collectively, these budget items reflect the project's integrated approach to recreation, environmental sustainability, public health, and climate resilience while providing long-term community benefits for San Pablo residents.

In addition to the BayREPAIR grant-funded items, the project also includes the following elements funded through other grants and City sources:

- Design and Outreach — $780,000
- Construction Management — $700,000
- Mobilization — $1,700,000
- Site Clearing and Demolition — $185,750
- Earthwork — $371,000
- Storm Drain — $181,340
- Soccer Field — $775,000 (split line item)
- Parking Lot — $245,000
- Concrete Work — $725,465.50
- Basketball Court — $83,000 (split line item)
- Playground — $400,000 (split line item)
- Senior Workout Equipment — $20,000
- Amenities and Park Furnishings — $200,000 (split line item)
- Restroom — $410,000
- Trash Enclosure — $34,000 (split line item)
- Fencing — $500,000
- Utilities — $65,050
- Plantings – Trees — $292,500
- Plantings Groundcover — $559,000
- Irrigation — $135,000
- Bioretention Plantings — $35,000
- Electrical, Cameras and Lighting — $600,000

In total, the McNeil Park project budget is estimated at $10 million, with $8.79 secured from other grant sources. This grant application represents the final funding needed to fully implement the project and will allow the City to confidently advance into the construction phase and complete the project as planned.

ECOSYSTEM ALIGNMENT (10 points)

10. Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).

McNeil Park is strongly aligned with multiple community, local, regional, and statewide initiatives focused on public health, environmental justice, climate resilience, active living, and sustainable infrastructure. The project directly advances long-standing City priorities to increase park access, improve environmental quality, and address health disparities in San Pablo.

The project is identified as a priority in several City planning documents, including the City of San Pablo General Plan 2035 (2025), the Climate Action Plan (2012), and the Green Infrastructure Plan (2019), all of which identify the site as a future community park. The City purchased the property in 2006 specifically to develop a community-serving park, reflecting a long-term commitment to expanding recreational opportunities for residents. The project also supports the City's Municipal Code and General Plan goal of achieving three (3) acres of parkland per 1,000

residents. Currently, the City has only 0.8 acres of parkland per 1,000 residents; completion of the McNeil Project will increase this ratio to 1.0 acres per 1,000 residents.

The project is also consistent with the goals of the Community Action Plan (2014) developed by the San Pablo Childhood Obesity Prevention Task Force. Following a UCLA Center for Health Policy Research report identifying San Pablo as having one of the highest childhood obesity rates in California, the City established the Task Force to develop strategies that promote healthier lifestyles and improve public health outcomes. One of the Community Action Plan's key priorities is increasing opportunities for active living through expanded and improved park space. The McNeil Park Project directly advances this goal by creating 4.8 acres of recreational space with amenities that encourage physical activity for all ages and abilities.

The project is also consistent with regional environmental and climate initiatives, including the Richmond and San Pablo "Path to Clean Air" Community Emissions Reduction Plan (2024) developed through California's Community Air Protection Program (AB 617). The project supports the plan's urban greening strategies through tree planting, native landscaping, bioretention facilities, and expanded green space that will improve air quality, reduce urban heat impacts, and support mental and physical health. The project also incorporates educational opportunities through community kiosks and supports workforce development through construction jobs, landscaping maintenance, and green infrastructure implementation.

Additionally, the project advances goals identified in the Contra Costa EV Blueprint through the installation of electric vehicle charging stations and supports reduced vehicle miles traveled (VMT) by creating a centrally located neighborhood park within walking distance of surrounding residential areas. The project also aligns with the City's Storm Drain Master Plan (2018), which identified localized flooding issues at the project site and adjacent properties. To address these concerns, the project includes bioretention facilities designed to manage stormwater, reduce flooding, and improve groundwater infiltration.

Overall, the McNeil Park Project supports a broad range of adopted plans and initiatives aimed at improving environmental sustainability, climate resilience, public health, equitable park access, active transportation, and quality of life for San Pablo residents.

CAPACITY (10 points)

11. Describe the Project Lead's experience managing and implementing projects of similar scope and size.

The City of San Pablo has the organizational capacity, technical expertise, and financial management systems necessary to successfully manage and implement projects of similar scope and complexity. The City's Public Works Department includes experienced engineering, environmental, administrative, and finance professionals who collectively oversee multiple grant-funded capital improvement projects each year. Staff regularly coordinate through weekly project management meetings and interdepartmental collaboration to monitor schedules, regulatory compliance, reporting deadlines, budgets, and risk management activities. All identified staff have the capacity and experience necessary to fulfill their project responsibilities.

The City has established systems to ensure effective grant administration and compliance. For each project, staff develop detailed compliance checklists and milestone schedules to track deliverables, financial documentation, reporting requirements, and project closeout activities. Public Works Department works closely with the City's Finance Department to ensure all expenditures are accurately tracked, documented, and reimbursed in accordance with grant requirements. The City's Finance Department has received more than 20 consecutive Government Finance Officers Association awards for excellence in financial reporting, demonstrating strong fiscal oversight, internal controls, and transparent financial management practices.

The City also has extensive experience successfully delivering complex, multi-funded infrastructure, environmental, and recreational projects of comparable scale. Examples include:

- **Rumrill Sports Complex (2014):** A $4+ million project funded through the U.S. EPA Brownfields Program, Proposition 84, and Measure WW that remediated contaminated property and developed a new public sports complex.
- **23rd Street–Wildcat Creek Trail Project (2015):** Funded by the California Natural Resources Agency, this project included a new multi-use trail, pedestrian bridge, lighting, and habitat restoration and was completed on time and in full compliance with grant requirements.
- **El Portal Greening Project (2017):** A $562,000 green infrastructure and bicycle improvement project completed successfully under California Natural Resources Agency funding.
- **Wildcat Creek Restoration & Greenway Trail (2021):** A $6.2 million project funded by multiple state and regional sources that restored over 2,000 linear feet of creek corridor and constructed a greenway trail.
- **Rumrill Complete Streets Project (2024):** A more than $20 million transportation improvement project funded through nine separate funding sources and successfully completed with all grants closed out.
- **Sutter Avenue Green Street Project (2025):** A $5.2 million multi-funded green infrastructure project completed on schedule and in full compliance with grant requirements.

Through these projects, the City has demonstrated a proven ability to manage large-scale, multi-partner, and multi-funded projects while maintaining regulatory compliance, fiscal accountability, and successful project delivery. This experience positions the City of San Pablo to effectively administer and implement the proposed project on time and within budget.

12. Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.

The City of San Pablo has an experienced project management team and sufficient organizational resources to successfully implement and administer the proposed project. Project implementation will be managed through a collaborative effort between the City's Public Works Department, Environmental Programs staff, Finance Department, and supporting consultants and contractors. Staff assigned to the project have extensive experience managing complex, grant-funded capital

improvement and green infrastructure projects and will dedicate the necessary time and resources to ensure successful delivery of the project on schedule and within budget.

The project will be led by **Jimmie Zhou, Senior Civil Engineer**, who will serve as Project Director. Mr. Zhou is a licensed professional engineer with 10 years of experience managing capital improvement, roadway rehabilitation, roadway realignment, parks, and infrastructure construction projects. He will oversee all major aspects of project implementation, including consultant procurement and RFP development, design and plan review, environmental coordination, contract administration, budget oversight, contractor management, and overall project delivery.

Amanda Booth, Environmental Program Manager, will provide project oversight related to environmental compliance, green infrastructure implementation, and maintenance coordination. Ms. Booth has more than 10 years of experience delivering stormwater and green infrastructure projects and has extensive expertise in regulatory monitoring, reporting, and long-term maintenance planning.

Chiara Hanna, Management Analyst, will serve as Grant Administrator and will oversee grant compliance, documentation, reimbursement requests, reporting, and grant closeout activities. Ms. Hanna has more than four years of experience managing federal, state, and local grants totaling tens of millions of dollars and has successfully administered grants from agencies including FHWA, Caltrans, MTC, EPA, and the California Natural Resources Agency.

Collectively, City staff will dedicate the equivalent of approximately 1.0 Full Time Equivalent (FTE) throughout the duration of the project, supplemented by consultant support for specialized technical services, engineering design, environmental review, and construction activities as needed.

The City will also leverage additional funding sources and in-kind staff resources to support successful project completion. The project has secured the following additional grant funding for project implementation:

- CNRA Urban Greening Grant - $4,790,690
- State Parks State Earmark SG-07-006 - $3,000,000
- CNRA State Earmark GF2526 - $1,000,000
- City General Fund

The City has extensive experience managing multi-funded projects and will continue coordinating local, state, and regional funding opportunities to ensure the project is fully implemented and maintained over the long term.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.

The City Council and Planning Commission previously approved the project in 2024 and 2026, respectively. The project does not require permits from any agencies outside of the City. The only two permits required are the encroachment permit and a building permit for grading and the restroom, which will be applied for after the design is complete. The City typically reviews and approves encroachment permits within a 2-4 week timeframe. Estimated completion in December 2026.

14. Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.

The City filed the CEQA Notice of Exemption (NOE) in 2023. Proof of the filed CEQA NOE has been attached to this application. Note: At the time of the CEQA filing, the project name was San Pablo Area For Recreation and Community (SPARC) Project, because the City Council had not yet officially named the potential park. All required approvals have occurred to officially change the project name from SPARC to McNeil Park Project.

15. Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.

The City of San Pablo purchased the site in 2006 and has complete site control. Proof of ownership is attached to this application.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

The City will fund ongoing operations and maintenance of the site through the City's Lighting and Landscape District. The Maintenance Division has been involved in the design discussions to ensure that they have the internal ability, capacity, and funding to maintain the site. The Maintenance Division will continue to be involved in the park design to ensure that efficient maintenance access is built into the project. Maintenance will be ongoing a maintenance and operation plan will be developed and completed before the end of construction.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

There are no known barriers to project implementation. The project has received City Council approval, strong community support, and has successfully completed all required CEQA review and filing processes. In addition, the City has already secured approximately $8.79 million in funding toward the project. This grant application represents the final funding needed to fully implement the project and will allow the City to confidently advance into the construction phase and complete the project as planned.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan:
McNeil Park

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	**McNeil Park Project:** The proposed McNeil Park Project will transform the former elementary school site at 2600 Moraga Road into a vibrant 4.8-acre community park that provides critical urban greening, recreational, environmental, and public health benefits to San Pablo residents. The completed park will include resident-prioritized amenities such as an all-abilities playground, adult-sized soccer field, basketball court, small stage/amphitheater, senior fitness stations, a perimeter fitness trail, picnic areas, restrooms, bicycle racks, electric vehicle charging stations, water fountains, and parking. In addition to expanding access to recreation and active living opportunities for youth, families, and seniors, the project will provide significant air quality and environmental benefits through the planting of approximately 40 trees, promotion of active transportation, and installation of zero-emission vehicle infrastructure.

Measurable Outcome	Indicator(s)
1. Create 4.8 acres of community recreational space	• Completion of 4.8-acre park • Installation of recreational amenities • Final inspection and Notice of Completion
2. Install 2 EV Charging stations with 4 ports to promote the use of clean air vehicles.	• EV charging stations ordered, installed and operational • 2 EV stations with 4 ports open to the public
3. Hire 80 temporary workers to build McNeil Park	• Certified Payroll information or other contract mechanisms showing 80 temporary workers hired
4. Clean and filter 4.8 acres of stormwater prior to entering local creeks	• Completion of grading and drainage improvements • Bioretention facilities installed and operational • Stormwater infiltration performance visually monitored and photographed
5. Reduce flooding	• Bioswale installation completed • Visual inspections during storm events • Monitoring of stormwater flow and ponding reduction
6. Reduce 80 MT of CO2e	• Tree planting completed (70) • EV infrastructure operational • Urban Greening Calculator results showing the modeled 80MT reduced
7. Increase use of active transportation	• Pre- and post-construction site activity counts showing an increase in active transportation usage • Bicycle and pedestrian observations
8. Plant over 800 trees, shrubs, and other drought-tolerant/native landscaping and Urban Greening	• 70 trees planted • 750 shrubs planted • Irrigation and landscape establishment
9. Installation of air quality sensor to provide data for community use	• Sensor installed and operational • Data collection initiated • Public data sharing and outreach completed

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Create 4.8 acres of community recreational space	A. Finish project final design	1. Conduct a review of the 95% design plans	City of San Pablo	None	July 2026
		2. Develop the construction bid documents, including the engineering design plans, the specifications, and the engineers' estimates.	City of San Pablo	None	September 2026
		3. Get approval of 100% plan, specification, and estimate documents	City of San Pablo	None	October 2026
	B. Bid construction contract	1. Release the construction bid information on a public portal	City of San Pablo	None	November 2026
		2. Open bids and select the low-bid contractor	City of San Pablo	None	December 2026
		3. Review bids, award contract at City Council meeting	City of San Pablo	None	January 2027
	C. Install all recreation elements	1. Demolish existing site structures in accordance with plans	City of San Pablo	Construction Contractor	April 2027
		2. 30% construction completion- includes utility trenching, site preparation, and grading.	City of San Pablo	Construction Contractor	June 2027
		3. 60% construction completion- some park elements completed and most under construction	City of San Pablo	Construction Contractor	September 2027
		4. 100% or substantial construction completed- All major elements installed, working on final punch list for project completion.	City of San Pablo	Construction Contractor	December 2027
		5. Final Notice of Completion Filed	City of San Pablo	City of San Pablo	February 2028
2. Install 2 EV charging stations with 4 ports to promote the use of clean air vehicles	A. Finalize EV infrastructure design	1. Complete electrical and civil design plans	City of San Pablo	CSW Design Consultants	September 2026
		2. Approve final EV charging design plans	City of San Pablo	CSW Design Consultants	October 2026
	B. Procure and install EV charging stations	1. Purchase EV charging equipment	City of San Pablo	Construction Contractor	August 2027
		2. Install electrical conduit and utility connections	City of San Pablo	Construction Contractor	September 2027

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		3. Install charging stations and complete testing	City of San Pablo	Construction Contractor	November 2027
	C. Activate and monitor stations	1. Final inspection and utility energization	City of San Pablo	Construction Contractor	December 2027
		2. Open stations for public use	City of San Pablo	None	February 2028
3. Hire 80 temporary workers to build McNeil Park	A. Develop workforce and contracting strategy	1. Include existing local hiring preference policy in bid documents	City of San Pablo	None	September 2026
		2. Coordinate with workforce development partners (Local Economic Development Corporation (EDC) in San Pablo)	City of San Pablo	San Pablo EDC	September 2026
		3. Advertise construction employment opportunities	City of San Pablo	Construction Contractor	November 2026
	B. Hire and onboard workers	1. Recruit construction workforce	City of San Pablo	Construction Contractor	January 2027
		2. Hire temporary construction workers	City of San Pablo	Construction Contractor	December 2027
		3. Maintain certified payroll and labor tracking	City of San Pablo	Construction Contractor	December 2027
	C. Monitor workforce outcomes	1. Track local and disadvantaged worker participation	City of San Pablo	Construction Contractor	December 2027
		2. Prepare workforce summary reports	City of San Pablo	Construction Contractor	March 2028
		3. Document project employment outcomes	City of San Pablo	Construction Contractor	July 2028
4. Clean and filter 4.8 acres of stormwater prior to entering local creeks	A . Finalize stormwater treatment design	1. Finalize bioretention and stormwater control plans	City of San Pablo	None	September 2026
	B. Construct stormwater facilities	1. Complete grading and site drainage improvements	City of San Pablo	Construction Contractor	June 2027
		2. Install bioretention areas (pipes, overflows, drain rock, material, and plants)	City of San Pablo	Construction Contractor	September 2027
		3. Install native landscaping and irrigation systems	City of San Pablo	Construction Contractor	October 2027
	C. Verify performance	1. Conduct visual inspections during storm events	City of San Pablo	None	December 2027

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		2. Document stormwater treatment outcomes	City of San Pablo	None	February 2027
5. Reduce local flooding	A. Finalize stormwater bioretention design	1. Finalize design plans	City of San Pablo	None	September 2026
	B. Construct stormwater facilities	1. Excavate and prepare stormwater treatment areas	City of San Pablo	Construction Contractor	June 2027
		2. Install bioswales and drainage systems	City of San Pablo	Construction Contractor	September 2027
		3. Install plants, irrigation, and test the system	City of San Pablo	Construction Contractor	October 2027
	C. Monitor flood reduction effectiveness	1. Conduct visual assessments during rainfall events	City of San Pablo	None	December 2027
		2. Monitor drainage functionality	City of San Pablo	None	January 2028
		3. Document reduction in localized flooding impacts	City of San Pablo	None	February 2028
6. Reduce 80 MT of CO2e	A. Finalize landscaping and greening plans	1. Finalize landscape and tree planting plans	City of San Pablo	None	July 2026
		2. Identify tree species and planting locations	City of San Pablo	None	September 2026
		3. Complete final project design and specifications	City of San Pablo	None	October 2026
	B. Prepare and construct landscape improvements	1. Prepare the site for landscaping and tree installation	City of San Pablo	Construction Contractor	June 2027
		2. Plant trees and install native landscaping	City of San Pablo	Construction Contractor	September 2027
		3. Install irrigation and landscape establishment measures	City of San Pablo	Construction Contractor	October 2027
	C. Establish and monitor landscaping	1. Complete tree inventory and planting verification	City of San Pablo	None	November 2027
		2. Utilize the CNRA Urban Greening Calculator to estimate CO2e reductions	City of San Pablo	None	January 2028
		3. Document and report estimated greenhouse gas reductions	City of San Pablo	None	February 2028
		1. Conduct pre-construction pedestrian counts	City of San Pablo	None	August 2026

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
7. Increase use of active transportation	A. Collect baseline transportation activity data	2. Conduct pre-construction bicycle activity counts	City of San Pablo	None	August 2026
		3. Document existing site access and circulation patterns	City of San Pablo	None	September 2026
		1. Install bicycle racks and site access improvements	Construction Contractor	Construction Contractor	September 2027
		2. Complete park access and connectivity improvements	Construction Contractor	Construction Contractor	October 2027
	C. Evaluate post-construction active transportation use	1. Conduct post-construction pedestrian counts	City of San Pablo	None	January 2028
		2. Conduct post-construction bicycle activity counts	City of San Pablo	None	January 2028
		3. Compare pre- and post-construction data and document findings	City of San Pablo	None	February 2028
8. Plant over 800 trees, shrubs, and other drought-tolerant/native landscaping and Urban Greening	A. Finalize landscaping and greening plans	1. Finalize landscape and tree planting plans	City of San Pablo	None	July 2026
	B. Prepare and construct landscape improvements	1. Complete site preparation and grading	Construction Contractor	City of San Pablo	June 2027
		2. Install soil amendments and irrigation systems	Construction Contractor	Construction Contractor	August 2027
		3. Install native landscaping and urban greening improvements	Construction Contractor	Construction Contractor	October 2027
	C. Establish and monitor landscaping	1. Conduct landscape inspections and punch list review	City of San Pablo	None	November 2027
		2. Monitor plant establishment and irrigation performance	City of San Pablo	None	January 2028
		3. Document completed square footage of landscaping improvements	City of San Pablo	None	February 2028
9. Installation of air quality sensor(s) to provide data for community use	A. Plan and coordinate air quality monitoring installation	1. Identify sensor location and technical requirements	City of San Pablo	None	September 2026
		2. Coordinate with community organizations regarding data use and outreach	City of San Pablo	None	October 2026
		3. Finalize sensor specifications and installation plan	City of San Pablo	None	November 2026
		1. Prepare site and electrical connections	City of San Pablo	Construction Contractor	August 2027

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	B. Install and activate air quality sensor	2. Install air quality sensor equipment	City of San Pablo	Construction Contractor	October 2027
		3. Test and activate the sensor system	City of San Pablo	Construction Contractor	November 2027
	C. Collect and share community air quality data	1. Begin air quality data collection	City of San Pablo	None	December 2027
		2. Share monitoring data with community groups and residents	City of San Pablo	None	January 2028
		3. Prepare a summary report and outreach materials regarding air quality findings	City of San Pablo	None	February 2028

Project Name:	**McNeil Park Project**
Lead Applicant Name:	**City of San Pablo**
Term for this budget (in years):	2

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Construction	Direct	Playground		$400,000
Construction	Direct	Basketball Court		$120,000
Construction	Direct	Park Furnishings		$200,000

	TOTAL:	**$8,790,690.00**

Park Elements

1 ARTIFICIAL TURF SOCCER FIELD
An adult-sized synthetic turf field will be installed to meet the community's top-requested feature, supporting organized recreational play and team sports.

2 ALL-ABILITIES PLAYGROUND, AGES 2-5
A play area featuring all-abilities equipment designed for children ages 2-5 will offer inclusive and sensory-rich play experiences.

3 ALL-ABILITIES PLAYGROUND, AGES 5-12
A play area featuring all-abilities equipment designed for children ages 5-12 will support inclusive play and physical development through sensory features.

4 FITNESS EQUIPMENT
A fitness zone with senior-rated equipment will promote active living and provide opportunities for rehabilitation, strength-building, and wellness for all ages.

5 ADA-ACCESSIBLE WALKING TRAIL
An ADA-compliant walking trail along Rheem Creek will offer accessible pathways for recreation while fostering a connection to the local watershed.

6 BASKETBALL COURT
The basketball court provides additional spaces for organized recreational sports.

7 PARKING LOT
A parking lot with a dedicated drop-off area will ensure safe, convenient access for players and park visitors attending events and activities.

8 SMALL OUTDOOR AMPHITHEATER
An outdoor amphitheater with concrete seat walls will serve as a venue for meetings, performances, cultural events, and community programs.

9 PARK FURNISHINGS
A picnic and BBQ area, game tables, and benches will be installed to support intergenerational gatherings, outdoor dining, and community interaction.

10 DRINKING FOUNTAIN
Hydration stations with accessible drinking fountains will serve visitors of all ages and abilities.

11 BIORETENTION AREA AND STORMWATER FACILITIES
Bioretention and stormwater facilities to be installed to manage, capture and treat stormwater runoff from the project site.

12 LIGHTING
Pedestrian lighting will be installed throughout park and in parking lot to support safety of park visitors

Local Community Benefits Fund – Round 1
Project Narrative
Healthy Corridors Program

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	City of San Pablo's Wellness Initiative
Lead Applicant Name	City of San Pablo
Project Location	2600 Moraga Road, San Pablo, CA 94806
Overall Funding Request	$1,355,044
Grant Term Request	2 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Healthy Corridors Program
Project Lead	Safe Organized Spaces (SOS) Richmond
Project Location	City of San Pablo (Citywide)
Project Funding Request	$355,044

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The City is partnering with SOS Richmond to implement outreach services and workforce development for San Pablo's unhoused residents. Through this partnership, unhoused residents, including justice-impacted and undocumented individuals, will participate in paid transitional employment and workforce training programs that combine environmental restoration, job readiness instruction, and wellness services. Together, the McNeil Park Project and the SOS Richmond partnership create a comprehensive community investment that advances environmental health, workforce development, recreation access, and neighborhood revitalization.

The City of San Pablo and SOS Richmond currently operate an 8-month Clean California program delivering creek cleanup, paid transitional employment, and wellness services to unhoused residents along the San Pablo I-80 corridor. The program is proven and connected to community needs. It is also interrupted. Each 8-month cycle ends and restarts, and each gap breaks the relational continuity that unhoused residents depend on to move toward stable income, housing, and care. This BAAQMD Local Community Benefits Fund application uses 16 months of funding to cover the period not paid for by Clean California, converting a broken cycle into continuous operations. It does this through the following four program components:

- Air-quality-aligned creek and encampment cleanup with a fire mitigation focus, extending existing Clean California cleanup operations continuously across the full 16-month term.
- Peer-led air-quality education and mitigation supplies distribution, delivered through ongoing peer outreach to encampment communities along the I-80 and creek corridors.
- Peer-led fire-safety education and fire-mitigation supplies distribution, including a harm-reduction curriculum (Track 1) delivered within SOS Richmond's existing capacity.
- Warming Hands Wellness Center at the San Pablo Library and clean air respite shuttle to the center, sustained continuously across the 16-month term with HEPA-grade clean air during operating hours and one additional shuttle day per week, transporting participants to and from Safe Harbour Day Center, SOS Richmond's workforce, wellness and care hub.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

The project advances both Local Community Benefits Fund strategies. It reduces air pollution and improves health outcomes by removing burnable debris from creek corridors that produce trash fires, by building individual mitigation capacity in the population most exposed and least equipped to protect themselves, and by providing measurably cleaner indoor air through a HEPA air filter at the Wellness Center and at Safe Harbour during operating hours. It builds economic resilience for a just transition by extending the 6-week Job Readiness Program into continuous, year-round workforce pathways, with trash cleanup and fire-safety education as the primary on-ramps into paid roles. These workforce opportunities are off-ramps from homelessness and the continuous outdoor air exposure.

The project's core approach is continuous capacity-building rather than event-triggered response. For people living outside without access to indoor refuge, the most durable air-quality intervention is making sure residents already have masks, mitigation knowledge, fire extinguishers, and a known indoor wellness space before bad air arrives, rather than trying to reach them during peak exposure events.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Project location

The project will be delivered citywide in the City of San Pablo located in Contra Costa County. The geographic footprint is defined by two features: the I-80 freeway corridor, which runs the full length of the city and is a primary source of diesel particulate matter, and the creek corridors that host the largest concentrations of unhoused residents. SOS Richmond's engagement data shows that approximately 60% of San Pablo encounters logged through Warm Hand Wellness Center (located at the San Pablo Library) operations are in creek-adjacent locations. San Pablo census tracts fall within the BAAQMD Path to Clean Air (PTCA) community boundary and score at or

above the 90th percentile on CalEnviroScreen 4.0 for cumulative pollution burden.

The San Pablo Library Wellness Center, operated in partnership with the San Pablo Library, is the wellness anchor for the project. SOS Richmond also operates a shuttle that transports participants from Wellness Center sessions to Safe Harbour, SOS Richmond's day center in Richmond, for continued clean air respite. Field operations, including cleanup, peer outreach, air-quality and fire-safety education, and mitigation supplies distribution, extend across the citywide I-80 and creek-adjacent footprint where Clean California currently runs, in coordination with the City of San Pablo Public Works.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Data and evidence for the need

Unhoused residents of San Pablo face continuous, unmitigated exposure to some of the most polluted air in the Bay Area. The BAAQMD AB 617 Path to Clean Air Plan documents identify that diesel particulate matter in the PTCA community derives 40% from local sources, driving 36% of the average residential cancer risk of 232 in a million. This pattern comes from I-80 and I-580 freeway, marine, and rail emissions that map directly onto creek-adjacent encampment locations along the San Pablo I-80 corridor.

The Chevron Refinery accounts for approximately 61% of local PM2.5 emissions in the 2021 updated PTCA inventory. PM2.5 exposure in the PTCA community averages 7.1 micrograms per cubic meter annually. San Pablo sits within the modeled exposure plume and within the AB 617 Community Emissions Reduction Plan priority geography.

Standard mitigation strategies, such as staying indoors, using air filtration, or getting transportation away from pollution sources, are unavailable to people living outside. Unhoused residents are the most directly harmed by this pollution burden and the least able to do anything about it. They are also, in this regional context, largely without the basic protective equipment that would meaningfully reduce harm when exposure events occur.

Encampment fires are a measurable, community-generated air-quality hazard. While San Pablo-specific encampment fire data is not currently published, Richmond Fire Chief Aaron Osorio reported 736 encampment fires in 2025, and the City of Richmond Fire Department reports that 60% of fire service calls are responsive to encampment fires. This pattern is the same one operating in San Pablo creek corridors, where SOS Richmond cleanup crews currently remove the burnable debris that produces these fires.

SOS Richmond's Warm Hand Wellness Center engagement data confirms the population this project serves. From May 2024 through July 2025, the Warm Hand Wellness Center engaged 529 unduplicated participants in San Pablo. Since reopening in April 2026, an additional 40 participants have been engaged in the first month. SOS Richmond's broader data shows that 58% of unhoused residents served have reported no income, and an additional 12% rely solely on disability or social security benefits.

Community engagement informing the project
This project was developed by the City of San Pablo and SOS Richmond as a direct extension of the existing Clean California program, which was designed through engagement with unhoused residents, community members, and municipal partners. SOS Richmond's engagement model is peer-led and delivered through existing trusted relationships. Approximately 85% of SOS Richmond's outreach staff are currently or recently unhoused, maintaining ongoing connections with encampment residents along the San Pablo I-80 and creek corridors.

Current Clean California operations include a Community Pledge, 6 Neighborhood Champions, 25 student interns at 100 hours each, 18 community-led cleanups, 60 outreach events annually, and 100 volunteers. This engagement infrastructure is already in place and will extend directly into the BAAQMD project, with structured air-quality questions added to the existing peer outreach protocol. Those questions cover respiratory symptoms and frequency, awareness of air-quality alerts, current mitigation behaviors and supplies on hand, willingness to access wellness services and educational programming, and observed environmental conditions at encampment sites.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

How the project addresses community needs and environmental justice challenges
Unhoused residents of San Pablo are predominantly people of color who have been excluded from wealth-building, exposed to environmental harm from the I-80 corridor and the Chevron refinery, and bypassed by regional economic growth. Living outdoors along creek corridors, they carry the weight of these inequities while having the least access to mitigation.

Each of the four program components directly addresses a gap that the existing public health and air-quality system fails to close with this population:

- Air-quality-aligned creek and encampment cleanup removes burnable debris from creek corridors, reducing both water pollution and the source material for encampment trash fires. This is the primary on-ramp into the paid workforce pathway.
- Peer-led air-quality education and mitigation supplies distribution builds individual mitigation capacity through routine outreach: distributing masks and air-quality mitigation supplies, teaching mitigation practices, sharing information about how to read air-quality alerts, and tracking which residents have current supplies. Capacity is built before exposure events, not during them.
- Peer-led fire-safety education and fire-mitigation supplies distribution operate on the same delivery model. Track 1 is a harm-reduction curriculum fully within SOS Richmond's existing capacity. SOS Richmond will also pursue a fire-safety certification pathway with the Contra Costa County Fire Station 70, located in San Pablo, as an aspiration for the grant term, using the existing Richmond Fire Department partnership as a working model. Fire extinguishers and fire-mitigation supplies are distributed alongside education on fire safety and proper use and disposal of equipment. This is the secondary on-ramp into the paid workforce pathway.
- San Pablo Library Wellness Center with HEPA-grade clean air during operating hours provides a known, regularly accessed indoor space with measurably cleaner air. The

Wellness Center operates on Thursdays from 10 am to 2 pm and will be sustained continuously across the 16-month term. After Thursday sessions, participants can take a shuttle to Safe Harbour, SOS Richmond's day center, for continued clean air respite, wellness services, and peer support.

Workforce pathway continuity runs through all four components. The 6-week Job Readiness Program is converted from an interrupted cycle into continuous year-round operations, with trash cleanup and fire-safety education as the primary activities. Participants enter through cleanup or education roles, gain peer mentorship and role-specific training, and advance into outreach, supplies distribution, or team-leader roles over time. The same population that is most exposed to pollution and fire hazards delivers the interventions and earns income through them.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Community engagement is the project's delivery method, not something added on top of it. Peer-to-peer relationships are SOS Richmond's core operational strategy. They are the primary channel through which implementation progress is communicated, project benefits are made accessible, and community feedback is collected and incorporated.

Communicating implementation progress and available benefits
SOS Richmond's peer outreach staff are the trusted messengers who bring progress and available support directly to unhoused residents. As each program component comes online, peer staff communicate its availability at encampment visits, during Wellness Center intake on Thursdays, during shuttle rides, and through the Neighbor Care Line. Each encampment visit is a relationship touchpoint and a chance to deliver education, distribute supplies, surface workforce on-ramp opportunities, and connect residents to care navigation.

Employment with SOS Richmond is itself the most direct communication of project benefits. Peer staff who conduct cleanup, deliver fire-safety education, run air-quality outreach, or operate wellness services are both service beneficiaries and service delivery agents. Their lived understanding of what the project offers is the most credible outreach available to their peers.

Soliciting and incorporating community feedback
Peer outreach staff incorporate structured feedback questions into their existing engagement at encampment sites and during Wellness Center and shuttle visits, capturing residents' experiences, barriers to access, unmet needs, and self-identified priorities. The City of San Pablo receives quarterly feedback reports from SOS Richmond. SOS Richmond's Lived Experience Advisory Council, a body of staff and participants with direct lived experience of homelessness, reviews aggregated feedback and recommends program adjustments. Peer outreach and fire-safety education staff relay community observations through structured debriefs, creating a two-way communication loop between encampment communities and program leadership throughout the 2-year grant term.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Project Vision: Unhoused and vulnerably-housed residents of the City of San Pablo experience reduced exposure to PM2.5, diesel particulate matter, and acute air-quality events through continuous, year-round operations along the I-80 and creek corridors. Mitigation capacity, including masks, fire extinguishers, education, and a known indoor wellness space, is built into the population on a routine basis so that protective infrastructure is in residents' hands before bad air or fire events occur. The same population builds economic resilience through paid pathways into the workforce that delivers those interventions, as the 8-month Clean California cycle is converted into 16 months of integrated, uninterrupted service.

The four program components and five measurable outcomes are detailed in the accompanying Measurable Outcomes Plan. In summary:

- Air-quality-aligned creek and encampment cleanup, with a fire mitigation focus, extending Clean California program cleanup into continuous 16-month coverage, which acts as a primary workforce on-ramp.
- Peer-led air-quality education and mitigation supplies distribution, delivered through routine peer outreach to build individual mitigation capacity in the encampment population.
- Peer-led fire-safety education and fire-mitigation supplies distribution, including Track 1 harm-reduction curriculum. Aspiration to develop Track 2 certification pathway with Contra Costa Fire Station 70, located in San Pablo, during the grant term.
- San Pablo Library Wellness Center with HEPA-grade clean air during operating hours, plus clean air respite shuttle to Safe Harbour after Thursday sessions, sustained continuously across the 16-month program.

The City of San Pablo holds primary responsibility for BAAQMD reporting, fiscal pass-through, and municipal coordination. SOS Richmond holds primary responsibility for program delivery, peer workforce supervision, field operations, and direct community engagement. Detailed indicators, milestones, tasks, lead and supporting entities, and completion dates are in the accompanying Measurable Outcomes Plan.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

No response required to this question, please see Measurable Outcome Table.

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Budget summary
The project budget covers 16 months of SOS Richmond operations not funded by Clean California. The largest share supports peer workforce wages. The detailed line-item budget is on the BAAQMD Co-Applicant Budget Template.

Component	Approx. Amount	Key cost lines
Creek and encampment cleanup (fire mitigation focus, 16 months)	~$136,000	Outreach Team Leader (0.45 FTE), Team Leader (0.325 FTE), Team Member (0.75 FTE), debris transfer fees (Republic Services), trash removal supplies, vehicle gas
Peer-led air-quality education and mitigation supplies distribution	~$40,000	Outreach Services Coordinator (0.175 FTE), Resource Specialist - Peer (0.25 FTE), in-encampment outreach supplies, fire safety supplies (masks, fire extinguishers, mitigation supplies)
Wellness Center and shuttle to clean air respite at the Safe Harbour Center	~$82,000	Resource Specialist - Workforce (0.25 FTE), Hospitality and Safety Ambassador (0.125 FTE), Shuttle Driver (0.4 FTE), Wellness Center supplies, shuttle gas and vehicle insurance, HEPA Dyson air purifier and filter replacements
Program coordination	~$38,000	Director of Workforce Operations (0.175 FTE), vehicle maintenance and registration
Total direct costs	**~$296,000**	
Indirect costs (15% of direct)	**~$44,400**	
Total funds requested	**$355,044.10**	

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

Caltrans Clean California Program. The project directly extends the City of San Pablo's existing Clean California program. BAAQMD funding covers the 16-month period not funded by Clean California, converting a broken cycle into continuous 16-month service. The two programs are designed to operate as one coherent service architecture without duplication or supplantation.

City of San Pablo NPDES Permit Compliance. Creek cleanup operations support the City's compliance obligations under its National Pollutant Discharge Elimination System permit by removing illegal dumping and encampment debris from creek corridors that feed into Bay waterways. This grant deepens that compliance role with an air-quality framing: the same debris that pollutes waterways also fuels trash fires that generate localized PM2.5.

BAAQMD AB 617 Path to Clean Air Community Emissions Reduction Plan. San Pablo sits within the PTCA boundary and CERP priority geography. The project directly responds to

PTCA-identified emissions sources, including mobile sources along I-80, stationary sources at the Chevron refinery, and locally generated trash fires.

Contra Costa Council on Homelessness 2024 Work Plan. The project's workforce, wellness, and outreach components align with the Council's priorities for low-barrier service models, lived-experience leadership, and integrated wellness and economic-mobility pathways.

Just Cities BAAQMD LCBF collaborative. SOS Richmond is a co-applicant on the Just Cities-led BAAQMD application covering the broader PTCA geography. This San Pablo application is coordinated with that collaborative: the Just Cities application covers Richmond, North Richmond, and regional infrastructure, while this application covers the city-specific Clean California bridge, peer-led education and mitigation supplies distribution in San Pablo, and Wellness Center and shuttle continuity. The two applications are designed as complementary, non-overlapping investments.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The City of San Pablo has extensive experience managing grant-funded community and environmental programs and serving as a pass-through agency for nonprofit partners. The City has established contract administration, reimbursement, reporting, and performance monitoring processes that ensure accountability and successful project delivery. City staff have successfully administered grants from agencies including Caltrans, EPA, MTC, and the California Natural Resources Agency, and have experience coordinating multiple funding sources while maintaining compliance with grant requirements and reporting obligations.

The City already maintains a strong working relationship with SOS Richmond and has previously implemented similar programs focused on creek cleanups, encampment outreach, litter abatement, workforce development, and environmental stewardship. Through these partnerships, the City has developed effective agreements, communication protocols, invoicing procedures, and outcome tracking systems to ensure nonprofit-led activities are completed efficiently and documented appropriately. This existing framework significantly reduces implementation risk and allows the City to quickly scale the proposed program while ensuring measurable outcomes and timely reporting.

Key City staff assigned to the project bring significant experience managing grant-funded projects. Amanda Booth, Environmental Program Manager, will oversee compliance and contract coordination. Ms. Booth has more than 10 years of experience delivering grant-funded projects with non-profit project partners and possesses extensive expertise in regulatory monitoring, reporting, and long-term planning.

Chiara Hanna, Management Analyst, will serve as Grant Administrator and oversee grant compliance, reimbursement requests, reporting, documentation, and grant closeout activities. Ms. Hanna has more than four years of experience managing federal, state, and local grants totaling

tens of millions of dollars and has successfully administered grants from agencies including Caltrans, MTC, EPA, and the California Natural Resources Agency.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

Operating partner capacity - SOS Richmond
SOS Richmond has operated as a peer-led nonprofit serving unhoused residents of greater Richmond and San Pablo since 2020, growing into a multi-component organization managing simultaneous contracts with the cities of Richmond, San Pablo, and Pinole, and institutional funders including Chevron, Kaiser Permanente, the American Heart Association, and Contra Costa County.

SOS Richmond currently manages several programs of directly relevant scope. The Streets Team removed approximately 60 tons of encampment and illegally dumped debris in the first four months of 2026 and participated in 48 coordinated public agency abatement and housing-relocation events in the first three months of the year. The Warm Hand Wellness Center delivered 125 events serving 600 unduplicated participants with 1,472 visits, 1,500 or more in-encampment outreach contacts, 549 peer coaching sessions, 750 self-administered needs assessments, and 36 housing placements in its first program year, coordinated across 22 partner organizations. The Job Readiness Program has employed 72 previously unhoused individuals since inception, achieving a 55% rate of regular income attainment and reducing the unhoused rate among participants from 89% to 33%. This track record earned SOS Richmond the 2024 California Nonprofit of the Year.

In San Pablo specifically, SOS Richmond currently operates the Caltrans Clean California program in partnership with the City, delivering creek cleanup, paid 6-week job readiness cohorts for 80 participants over 8 months, and wellness services at the San Pablo Library Wellness Center. The Warm Hand Wellness Center component engaged 529 unduplicated participants between May 2024 and July 2025, with an additional 40 participants engaged in the first month since reopening in April 2026.

Project management, staffing, and leveraged funding
The City of San Pablo will hold the Lead Applicant role and coordinate fiscal pass-through, BAAQMD reporting, and municipal partner alignment.

SOS Richmond will manage day-to-day program delivery. Executive Director Daniel Barth provides overall strategic oversight. Director of Wellness and Programs O'Neill Fernandez oversees field operations, peer workforce supervision, and partner coordination. He will lead the outreach to the Contra Costa Fire Station 70 to explore a fire-safety certification pathway during the grant term. Director of Operations Zahra Syed manages operational logistics, compliance, and data systems. Director of Workforce Operations Janny Castillo leads on human resources, organizational culture, and Job Readiness Program curriculum. Finance Director Amanda Percy oversees budget management and fiscal compliance.

Dedicated project staffing from the SOS Richmond budget includes:

- Director of Workforce Operations (0.175 FTE, partial allocation) providing program coordination, BAAQMD reporting support, and City of San Pablo coordination.
- Outreach Services Coordinator (0.175 FTE, partial allocation) supporting peer outreach and community engagement across encampment locations.
- Hospitality and Safety Ambassador (0.125 FTE, partial allocation) supporting Wellness Center operations on Thursdays.
- Resource Specialist - Workforce (0.25 FTE, partial allocation) providing peer coaching, care navigation, and Job Readiness Program intake at the Wellness Center.
- Resource Specialist - Peer (0.25 FTE, partial allocation) delivering peer-led air-quality and fire-safety education and mitigation supplies distribution in the field.
- Shuttle Driver (0.4 FTE) transporting participants between the Wellness Center and Safe Harbour after Thursday sessions and on one additional shuttle day per week.
- Outreach Team Leader (0.45 FTE) supervising in-encampment outreach services delivery across the I-80 and creek corridors.
- Team Leader (0.325 FTE) leading the Job Readiness Program workforce and direct trash removal and fire mitigation services.
- Team Member (0.75 FTE) participating in the Job Readiness Program and delivering direct trash removal and fire mitigation services.

Staff health and safety. SOS Richmond does not deploy peer outreach staff into hazardous outdoor air conditions without protective infrastructure to support them. The project builds mitigation capacity into the population continuously during routine outreach rather than attempting to deploy staff into peak exposure events.

Leveraged resources include the existing Caltrans Clean California program, the San Pablo Library Wellness Center facility provided through City and library partnership, Safe Harbour as the clean air respite destination, and SOS Richmond's organizational infrastructure including the Job Readiness Program curriculum, peer workforce recruitment pipeline, data systems, and finance and operations administration. BAAQMD funding purchases the 16-month continuity bridge, air-quality programming layers, mitigation supplies distribution capacity, and Wellness Center and shuttle sustainment.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the “Application Instructions” document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate “N/A” if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

Permits. The project does not require new construction permits. HEPA-grade filtration installation at the San Pablo Library Wellness Center will be coordinated with the San Pablo Library, which hosts Wellness Center operations under existing partnership arrangements. The unit is a portable Dyson HEPA air purifier sized for a 10x20 room. Creek cleanup operations run under existing Clean California program protocols and the City's NPDES permit framework, with no new permits required.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

CEQA compliance. The project consists of operational service delivery, peer workforce employment, educational programming, distribution of personal protective and mitigation supplies, and the placement of a portable HEPA air purifier within an existing partner facility. It does not involve construction, ground disturbance, or other activities that trigger CEQA review.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

Site control. The San Pablo Library Wellness Center operates under existing partnership arrangements between SOS Richmond and the San Pablo Library. Creek and encampment cleanup operations occur in public rights-of-way and on creek corridors controlled by the City, coordinated with City of San Pablo Public Works under the existing Clean California program structure. Peer outreach and education occur in public spaces where SOS Richmond peer outreach already operates. Safe Harbour, the clean air respite destination for the shuttle, is owned and operated by SOS Richmond. No additional site control is required to begin grant performance.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

No physical infrastructure is planned to be installed as part of this project.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Barriers and mitigation

Reaching residents who avoid services. SOS Richmond's peer-led model is specifically designed to address this. Outreach staff with lived experience hold trust with residents who would not engage mainstream providers. Continuous routine outreach builds the relationships and supplies-handoff cadence that this population can rely on.

Establishing the Contra Costa Fire Station 70 partnership. The Track 2 fire-safety certification pathway requires a partnership with the San Pablo Fire Department that does not yet exist in operational form. SOS Richmond will initiate conversations with SPFD early in the grant term, led by O'Neill Fernandez and using the existing Richmond Fire Department partnership as a model. Track 1 proceeds at full scale regardless of Track 2 timing.

Wellness Center scheduling constraints. The Wellness Center operates within the San Pablo Library's scheduling framework, currently Thursdays 10am to 2pm. The project does not assume the Wellness Center is available during arbitrary air-quality events. Opportunities to expand hours will be pursued and documented as the partnership accommodates.

Supplies distribution sustainability. Routine distribution of masks, fire extinguishers, and air-quality mitigation supplies depends on consistent supply chain and inventory management across the 16-month term. SOS Richmond will establish a supplies inventory and distribution-tracking protocol in the first quarter and refresh inventory on a rolling basis.

Continuity of Program Deliverables. The project is structured so that BAAQMD funding directly bridges the cycle gap between the current Clean California funded program and the proposed project. Hiring, scheduling, and program operations are designed for continuous handoff rather than restart. The Lead Applicant's relationship with the City of San Pablo supports administrative continuity across both funding streams.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan:
Healthy Corridors Program

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	**Healthy Corridors Program:** The program provides coordinated creek and encampment cleanup, air quality mitigation, and fire prevention services within vulnerable communities along the I-80 and Wildcat Creek corridors. Through peer-led outreach, the program delivers air-quality and fire-safety education, distributes mitigation supplies, and operates a clean-air wellness and transportation network to improve public health, reduce wildfire risk, and support unsheltered residents during poor air quality events.

Measurable Outcome	Indicators
1. Air-quality-aligned creek and encampment cleanup operates continuously across the 16-month grant term in the City of San Pablo, with a fire mitigation focus.	- Tons of debris removed annually from San Pablo creek and encampment corridors. - Cleanup sites prioritized by NPDES and air-quality criteria; number completed. - Coordinated abatement events with City of San Pablo Public Works completed. - Continuity maintained across the Clean California cycle boundary, documented as a project outcome. - Cleanup workforce on-ramp: number of participants entering paid roles through cleanup.
2. Peer-led air-quality education and mitigation supplies distribution build individual mitigation capacity in the encampment population through routine peer outreach.	- Unhoused residents reached through peer-delivered air-quality education during routine outreach. - Masks and air-quality mitigation supplies distributed (counts and resupply cadence). - Residents with current supplies and mitigation knowledge tracked through peer outreach. - Air-quality survey responses collected from unhoused residents through peer outreach. - Supplies inventory and distribution-tracking protocol established and maintained.
3. Peer-led fire-safety education and fire-mitigation supplies distribution reach encampment communities and build local fire-mitigation capacity.	- Encampment residents reached through peer-delivered Track 1 fire-safety education. - Track 1 curriculum sessions delivered in encampment settings and at the San Pablo Library Wellness Center. - Fire extinguishers and fire-mitigation supplies distributed (counts and resupply cadence). - San Pablo Fire Department partnership conversations initiated during the grant term (aspirational; Track 1 proceeds at full scale regardless). - Fire-safety education workforce on-ramp: number of participants entering paid roles through fire-safety education.
4. The San Pablo Library Wellness Center and clean air respite shuttle operate continuously across the 16-month term with HEPA-grade clean air during operating hours.	- HEPA-grade portable air purifier placed and operational at the San Pablo Library Wellness Center (10x20 room, Thursdays 10am to 2pm). - Filter-change logs maintained per CDC and EPA guidance. - Indoor and outdoor PM2.5 readings recorded during operating hours on high-pollution days. - Variance between indoor and ambient PM2.5 reported quarterly. - Wellness Center operations sustained continuously across the 16-month term, including across the Clean California cycle boundary. - Shuttle transporting participants from Wellness Center sessions to Safe Harbour operational at least one day per week. - Unduplicated participants transported to Safe Harbour counted quarterly.
5. Community engagement and feedback are continuously	- Lived Experience Advisory Council reviews completed semi-annually. - Community engagement maintained at Clean California baseline levels across the full 16-month term, including the Community Pledge, 6 Neighborhood Champions, 25 student

Measurable Outcome	Indicators
incorporated into project implementation and reported to the Lead Applicant and BAAQMD.	interns, 18 community-led cleanups, 60 outreach events, and 100 volunteers annually, without interruption at the Clean California cycle boundary. - Quarterly feedback reports submitted to the City of San Pablo and BAAQMD. - Documented program adjustments made in response to community feedback. - Continuity of engagement maintained throughout the 16-month grant program

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Continuous creek and encampment cleanup (fire mitigation focus)	A. Cleanup operations bridged across the Clean California cycle boundary into continuous 16-month coverage	1. Hire and onboard additional peer cleanup crew capacity through the Job Readiness Program to maintain staffing across the cycle handoff.	SOS Richmond	City of San Pablo	Month 2
		2. Integrate schedule and logistics so cleanup routes, disposal arrangements, and equipment continue without a gap at the Clean California cycle boundary.	SOS Richmond	City of San Pablo	
		3. 3. Coordinate with City of San Pablo Public Works to align BAAQMD-funded cleanup with NPDES priorities and existing City scheduling.	SOS Richmond	City of San Pablo	
	B. Cleanup operations prioritized by air-quality and creek-corridor criteria, with fire mitigation focus.	1. Prioritize cleanup routes using engagement data (approximately 60% of San Pablo encounters are creek-adjacent) and City NPDES priorities.	SOS Richmond	City of San Pablo	Ongoing, Months 1 to 16
		2. Conduct cleanup operations on a rolling basis across the 16-month term with a focus on removing burnable debris from high-risk corridors	SOS Richmond	City of San Pablo	
		3. Participate in coordinated City abatement and housing-relocation events; maintain debris tonnage and site logs.	SOS Richmond	City of San Pablo	
	C. C. Cleanup as primary workforce on-ramp	1. Track participants entering paid roles through cleanup; report cleanup-to-advancement trajectories.	SOS Richmond	City of San Pablo	Semi-annual, Months 6 to 16

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	documented and reported.	2. Log tons of debris removed, sites cleaned, and households supported on a rolling basis.	SOS Richmond	City of San Pablo	
		3. Submit semi-annual reporting on cleanup outcomes, workforce on-ramp, and Clean California cycle continuity to City of San Pablo and BAAQMD.	SOS Richmond	City of San Pablo	
2. Peer-led air-quality education and mitigation supplies distribution	A. Air-quality education curriculum and routine supplies-distribution protocol established.	1. Adapt SOS Richmond peer outreach protocol to include air-quality education content and air-quality survey questions	SOS Richmond	City of San Pablo	Month 3 (Task 1) Ongoing, Months 1 to 16
		2. Establish supplies inventory and distribution-tracking protocol for masks and air-quality mitigation supplies; establish resupply cadence.	SOS Richmond	City of San Pablo	
		3. Train peer outreach staff on curriculum delivery and supplies-distribution tracking.	SOS Richmond	City of San Pablo	
	B. Routine outreach delivers education and supplies across the encampment population.	1. Deploy peer outreach staff to deliver air-quality education and distribute masks and mitigation supplies on a rolling basis, with creek-adjacent locations prioritized.	SOS Richmond	City of San Pablo	Ongoing, Months 1 to 16
		2. 2. Refresh supplies inventory on a rolling cycle so residents receive resupply as supplies are used or lost.	SOS Richmond	City of San Pablo	
		3. 3. Track residents with current supplies and mitigation knowledge through peer outreach engagement logs.	SOS Richmond	City of San Pablo	
	C. Education reach, supplies distribution, and survey findings	4. Log residents reached, education sessions delivered, supplies distributed by area, and survey responses on a rolling basis.	SOS Richmond	City of San Pablo	Month 3

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	documented and reported	5. Analyze and report air-quality survey findings to City of San Pablo and BAAQMD.	SOS Richmond	City of San Pablo	
		6. Submit semi-annual reporting on education reach, supplies distribution, and mitigation capacity built.	SOS Richmond	City of San Pablo	
3. Peer-led fire-safety education and fire-mitigation supplies distribution	A. Track 1 harm-reduction curriculum adapted for San Pablo and delivered to encampment residents.	1. Adapt existing SOS Richmond Track 1 fire-safety curriculum for San Pablo creek-corridor conditions.	SOS Richmond	City of San Pablo	Month 4 (Task 1) Months 1 to 8 (partnership outreach); ongoing if established
		2. Train peer educators to deliver Track 1 in San Pablo encampments using SOS Richmond's trust-first methodology.	SOS Richmond	City of San Pablo	
		3. Deliver Track 1 sessions in encampments and at the Wellness Center; distribute fire extinguishers and fire-mitigation supplies on a rolling cycle	SOS Richmond	City of San Pablo	
	B. San Pablo Fire Department partnership conversations initiated (aspirational).	1. Initiate outreach to the San Pablo Fire Department in the first quarter of the grant term, led by O'Neill Fernandez, using the existing Richmond Fire Department relationship as a working model.	SOS Richmond	City of San Pablo	Month 4 (Task 1) Months 1 to 8 (partnership outreach); ongoing if established
		2. Document partnership conversations and outcomes; report to City of San Pablo.	SOS Richmond	City of San Pablo	
		3. Track 1 proceeds at full scale regardless of Track 2 timing. Any Track 2 development will be reported as a grant outcome if achieved.	SOS Richmond	City of San Pablo	
	C. Fire-safety education as workforce on-ramp	1. Track participants entering paid roles through fire-safety education; report trajectories.	SOS Richmond	City of San Pablo	Month 4

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	documented and reported.	2. Log residents reached, sessions delivered, supplies distributed, and any certifications earned on a rolling basis.	SOS Richmond	City of San Pablo	
		3. Submit semi-annual reporting on fire-safety education reach and supplies distribution.	SOS Richmond	City of San Pablo	
4. Wellness Center and clean air respite shuttle program	A. HEPA-grade portable air purifier installed and operational at the Wellness Center.	1. Procure a Dyson HEPA portable air purifier sized to the 10x20 Wellness Center room per CDC and EPA guidance.	SOS Richmond	City of San Pablo	Month 2 (Task 1) Ongoing, Months 1 to 16
		2. Coordinate placement with the San Pablo Library; establish a continuous operating schedule during Wellness Center hours (Thursdays 10am to 2pm).	SOS Richmond	City of San Pablo	
		3. Train peer staff on filter inspection and replacement; assign peer staff maintenance hours.	SOS Richmond	City of San Pablo	
	B. Wellness Center operations and shuttle to Safe Harbour sustained continuously across the 16-month term.	1. Maintain Thursday Wellness Center operations across the Clean California cycle boundary without service interruption.	SOS Richmond	City of San Pablo	Month 2 Ongoing, Months 1 to 16
		2. Operate shuttle from the Wellness Center to Safe Harbour after Thursday sessions and on at least one additional day per week.	SOS Richmond	City of San Pablo	
		3. Pursue opportunities to expand Wellness Center hours through City of San Pablo and San Pablo Library partnership conversations; document any expansion negotiated within the grant term.	SOS Richmond	City of San Pablo	
	C. Filtration performance verified	1. Maintain filter-change logs per CDC and EPA guidance.	SOS Richmond	City of San Pablo	Month 2

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	and reported; shuttle reach tracked.	2. Record indoor and outdoor PM2.5 readings during Wellness Center operating hours on high-pollution days.	SOS Richmond	City of San Pablo	
		3. Report indoor-versus-ambient PM2.5 variance and unduplicated shuttle participants quarterly to City of San Pablo and BAAQMD.	SOS Richmond	City of San Pablo	
5. Community engagement and feedback	A. Existing Clean California engagement infrastructure maintained and extended into BAAQMD scope	1. Maintain Clean California Community Pledge, Neighborhood Champions, student interns, community-led cleanups, and outreach event baseline.	SOS Richmond	City of San Pablo	Ongoing, Months 1 to 16
		2. Track engagement metrics across both Clean California and BAAQMD scopes; report an integrated picture to the City.	SOS Richmond	City of San Pablo	
		3. Maintain and report volunteer engagement.	SOS Richmond	City of San Pablo	
	B. Feedback gathered continuously through peer outreach, Wellness Center, and Lived Experience Advisory Board.	1. Incorporate structured feedback questions into peer outreach engagement at encampment sites and Wellness Center visits.	SOS Richmond	City of San Pablo	Ongoing, Months 1 to 16
		2. Lived Experience Advisory Board reviews aggregated feedback semi-annually and recommends program adjustments.	SOS Richmond	City of San Pablo	
		3. Peer educators and outreach staff relay community observations through structured debriefs.	SOS Richmond	City of San Pablo	
	C. Feedback loop closed: community input incorporated into program adjustments and reported.	1. Document program adjustments made in response to community feedback.	SOS Richmond	City of San Pablo	Ongoing, Months 1 to 16
		2. Submit quarterly feedback reports to the City of San Pablo and BAAQMD.	SOS Richmond	City of San Pablo	

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		3. Submit an annual summary report on community input and program response at Months 8 and 16.	SOS Richmond	City of San Pablo

CLEAN AIR FOR ALL

Richmond Opportunity

East Bay Economic Development Alliance Application

Bay REPAIR - Local Community Benefits Fund - Round 1
Overall Narrative - Opportunity Grant

Application Title	Richmond Blue-Green Economic Resilience Initiative
Lead Applicant	East Bay Economic Development Alliance/County of Alameda
Application Location	Bay REPAIR – Richmond & Surrounding Communities
Overall Funding Request	$4,977,286
Grant Term Request	3 years

PROPOSAL VISION (10 points)

1. ***Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:***
    - ***Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.***
    - ***Advance integrated projects to holistically meet community needs.***
    - ***Strengthen community-driven and collaborative solutions.***

The Richmond Blue-Green Economic Resilience Initiative is a four-project, multi-partner initiative designed to deliver immediate and durable economic and environmental benefit to Path to Clean Air (PTCA) residents and businesses that concurrently positions Richmond as the anchor community node of the California Jobs First Bay Area Maritime Cluster, the regional platform that is advancing a resurgent maritime industrial economy across Solano, Contra Costa and Alameda counties. The initiative addresses three compounding, documented challenges that the PTCA faces simultaneously: chronic industrial air pollution from the Chevron refinery that has caused measurable generational harm to resident health; the economic disruption of the fossil fuel transition, which is stranding workers and small businesses dependent on refinery supply chains; and underutilized publicly held waterfront assets whose clean economy activation requires coordinated pre-development investment that no single organization can deliver alone. The initiative's four projects are integrated by design, not convenience.

- **Project 1** deploys a Blue-Green Business Concierge and Small Business Technical Assistance Hub that connects PTCA businesses and entrepreneurs to energy efficiency audits, manufacturing optimization, capital readiness support and clean economy sector networks through a coordinated partner network led by East Bay Economic Development Alliance (East Bay EDA), the East Bay Community Foundation (EBCF), the Corporation for Manufacturing Excellence (Manex) and the San Jose State University Research Foundation (SJSURF).

- **Project 2** funds an industrial site readiness and maritime business accelerator feasibility study that produces the pre-development analysis required to make PTCA industrial parcels investable and connected to the State of California Governor's Office of Business & Economic Development (GO-Biz) Business-Ready Sites program, a business attraction platform.
- **Project 3** establishes a Richmond-based workforce training site and Earn and Learn internship pilot operated by the Working Waterfront Coalition, an initiative of the Friends of the Port offering direct career pathways for PTCA residents into maritime and clean economy jobs, including training aligned to demand for marine trades workers around the California Air Resources Board zero-emission vessel mandates.
- **Project 4** activates the Craneway Pavilion at Ford Point, a 45,000-square-foot Albert Kahn-designed 1931 waterfront building within the Rosie the Riveter World War II Home Front National Historical Park. Recently gifted to Friends of the Port, this site will house a maritime innovation hub that will connect blue economy startups to the waterfront, the workforce and the regional investment ecosystem.

The Richmond Blue-Green Economic Resilience Initiative advances a collaborative set of implementation-focused projects aligned with major local, regional and statewide efforts, including the State of California's Jobs First Bay Area Maritime Cluster, East Bay EDA's Resilient East Bay manufacturing initiative, Contra Costa County's Green Empowerment Zone and the City of Richmond's Blue-Green New Deal. By coordinating with and leveraging these existing efforts, the initiative ensures that Local Community Benefits Fund resources are used efficiently and positions the PTCA as an active contributor to a growing clean-economy cluster.

2. ***Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).***

The project will serve the full Richmond area PTCA geography, which is among the most comprehensively documented environmental justice communities in California. CalEnviroScreen 4.0 places PTCA census tracts in the 75th to 95th percentile statewide for cumulative pollution burden, driven by Chevron refinery proximity, traffic corridor exposure from I-80 and I-580 and elevated population vulnerability including high poverty rates, linguistic isolation and housing burden. One of the original AB 617 community designees, the Richmond/West Contra Costa Path to Clean Air Community Emissions Reduction Plan (CERP) formally documented disproportionate cumulative air quality burdens and established community-driven emission reduction priorities, including near-port diesel reduction and refinery fence-line monitoring. Asthma emergency department visit rates in PTCA neighborhoods exceed Contra Costa County averages; life expectancy within PTCA census tracts is lower than surrounding areas.

While the contraction of Chevron refinery operations has been helpful to air quality and the overall environment in the region, reductions in refining output will continue to remove a historically significant source of high-wage blue-collar employment. Without offering

quality replacement jobs and career pathways, the economic context surrounding these dynamics only compounds the environmental burdens associated with them. The PTCA contains a substantial concentration of small and medium manufacturers that have historically served the refinery and its supply chain; as operations contract, these businesses face displacement without support to identify and access clean economy market opportunities. Entrepreneurs seeking to launch climate technology and blue economy ventures lack a coherent and networked access point to the technical assistance, financing and sector networks required to start and grow.

PARTNERSHIP STRUCTURE (20 points)

3. ***Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.***
4. ***Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.***
5. ***Describe how the Lead Applicant will work with Co-Applicant(s) to:***
    - ***Coordinate overall community engagement activities.***
    - ***Track and report on indicators to assess progress towards measurable outcomes.***
    - ***Collect and process reporting, reimbursement and invoicing requirements.***
6. ***Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.***

The East Bay Economic Development Alliance (East Bay EDA) began as a project of Alameda County in 1990 and continues to operate in such capacity today. The organization's roots emanated from a partnership between the county and its fourteen (14) cities to gain support for regional transportation investments that were also supported by regional business leaders. Following this successful effort to secure these funds, the President of the Alameda County Board of Supervisors subsequently asked high level leaders from business, research, education, government, labor, environmental organizations, special districts, the Port of Oakland, utilities, the communities and labor to come up with a recommendation for a sustainable body to address regional economic development concerns, using a cross-sector perspective, out of which East Bay EDA was born. Since its inception, East Bay EDA has organizationally resided in the County Administrator's Office of Alameda County, expanding its reach as a two-county organization in the mid-2000s to include Contra Costa County as a core partner while maintaining its administrative structure.

Organizationally, East Bay EDA has evolved a great deal over its 30-year history, and the organization currently has more than 160 cross-sector members, including both Alameda County and Contra Costa County, more than twenty-five (25) East Bay cities, and many other business, institutional, and nonprofit entities. East Bay EDA's leadership is comprised of local elected officials and high-level private sector leaders across leading

regional industries, as well as representatives from local government, national laboratories, small business, K-12 and post-secondary education, special districts, utilities, environmental organizations, labor, nonprofits and philanthropic organizations.

This initiative extends and formalizes existing collaborations: each of its projects are independently valuable, while together they constitute a place-based, just transition strategy whose whole is greater than the sum of its parts. The robust network of organizations that are behind it have distinct, non-overlapping domains of expertise, each rooted in the PTCA or in direct service to its businesses, workers and residents. The partnership was not assembled for this application; most of these organizations have been working with one another and with PTCA communities for years. Indeed, these four projects form a coherent economic development strategy: the Hub identifies and stabilizes PTCA businesses and supports workers; the feasibility study positions PTCA industrial sites to receive clean economy investment; the workforce program trains PTCA residents for the jobs these investments will create; and the Craneway Pavilion provides the shared physical space where those companies, workers and investors come together to incubate, collaborate, and connect and meet.

Organization	**Role**	**Project(s)**	**Type**
County of Alameda (East Bay Economic Development Alliance)	Lead Applicant; Project 1 Lead; overall grant administration	1, 2, 3, 4	Local Government
East Bay Community Foundation (EBCF)	Co-Applicant; Project 1 Co-Lead; Community Engagement Partner, Projects 1 and 2	1, 2	501(c)(3) community foundation
Manex	Co-Applicant; Project 1 manufacturing optimization delivery	1	501(c)(3) nonprofit MEP center (NIST Manufacturing Extension Partnership)
SJSU Research Foundation (SJSURF)	Co-Applicant; Project 1 energy audit and implementation delivery	1	501(c)(3) university research foundation
Friends of the Port/Working Waterfront Coalition	Co-Applicant; Project 3 Lead; Project 4 Lead	3, 4	501(c)(3) nonprofit (dba Working Waterfront Coalition)

Partners & Partnership Structure

East Bay EDA is a regional economic development organization that is administratively managed and operated by the County of Alameda, which is serving as the lead applicant and grant fiduciary. Alameda County has robust accounting systems, internal controls, procurement policies and single-audit infrastructure, supporting East Bay EDA's long track record managing multi-year grants and programs funded by various public and private funding sources. East Bay EDA has approval of the Alameda County Board of Supervisors to proceed with submitting this funding proposal. Following the notification of a successful grant award, East Bay EDA and County of Alameda staff will proceed with executing award agreement(s), subject to review and approval as to form by County Counsel.

The **East Bay Community Foundation (EBCF)** brings a decade of organizing relationships with PTCA just transition coalitions, cooperatives and small business networks in Richmond and West Contra Costa County. EBCF holds and manages the Richmond Just Transition Fund, regrants over $800,000 annually on behalf of the Richmond Our Power Coalition, and has delivered $2.2 million in small business support through its Oakland Small Business Resiliency Fund. EBCF's Community Advisor model in which BIPOC entrepreneurs co-design programs and make funding decisions has produced documented outcomes of equitable capital distribution. EBCF's role doing community engagement for Projects 1 and 2 is a structural commitment to community governance.

The **Corporation for Manufacturing Excellence (Manex)** has served Northern California manufacturers since 1995 as part of the (previously) federally funded Manufacturing Extension Partnership (MEP) ecosystem, which no longer supports these activities in California even while currently operating in other states. Manex's free initial diagnostics, lean manufacturing engagements and clean manufacturing transition support are precisely calibrated to the needs of the PTCA's small and medium manufacturers facing fossil fuel supply-chain disruption. Manex's participation as co-applicant ensures that manufacturing resilience is embedded as a core delivery component, rather than an afterthought.

San Jose State University Research Foundation (SJSURF) operates the SJSU Industrial Assessment Center, a United States Environmental Protection Agency (U.S. EPA)-designated program delivering energy and decarbonization audits to manufacturers and large energy users. SJSURF brings proven technical capacity, federal program management experience and current audit operations in the Bay Area region. SJSURF's participation as co-applicant ensures that energy efficiency and emissions reduction services are available to PTCA companies at the quality and scale the LCBF program requires.

Friends of the Port, operating as the Working Waterfront Coalition, is the organizational embodiment of Richmond's commitment to rebuilding maritime economic opportunity for the community whose generational employment was displaced when the Kaiser Shipyards closed. The Coalition’s 93% cohort completion rates and 75% placement outcomes are evidence that its model works. Friends of the Port was recently granted the gift of the leasehold at Craneway Pavilion/Ford Point, a waterfront asset at the heart of the Rosie the

Riveter National Historical Park, which is adjacent to the Richmond Ferry Terminal. This transfer of leasing rights represents a significant expression of community and institutional confidence in this application partner and positions Friends of the Port to deliver Project 4 from a position of site control that no other applicant in the PTCA could claim.

Governance Structure: The initiative's governance is designed for accountability, responsiveness and community voice at every decision-making level. It will establish a Steering Committee that holds overall governance authority and a community accountability layer through Community Advisory Panels and Communities for a Better Environment (CBE)'s community engagement infrastructure, including a representative from each co-applicant organization plus a rotating PTCA resident seat. The inclusion of a PTCA resident seat on the Steering Committee is not symbolic: they will participate in actual governance deliberations and will hold an equal position on Steering Committee actions. Community Advisory Panels convened through EBCF for Projects 1 and 2 will meet regularly, with stipends paid to all participants. CBE's community engagement processes for Projects 2, 3 and 4 are structured as two-way deliberative processes rather than information delivery exercises, with documented feedback loops that require written responses to community input incorporated into each project's interim deliverables.

At the project level, each co-applicant will designate a named project lead who will be accountable for day-to-day implementation, data tracking and cross-partner coordination within their project scope. The Project Coordinator position at East Bay EDA will serve as the single point of contact for cross-project integration and partner communication and community reporting. The Project Coordinator aggregates outcome data from all four projects, produces the quarterly cross-project progress report and coordinates with the Air District on accountability and reporting requirements. This centralized coordination function ensures that the four projects operate as a coherent initiative rather than four parallel programs sharing an application.

CAPACITY (20 points)

7. ***Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.***
8. ***Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.***

East Bay EDA has directly managed multi-stakeholder programs funded by the U.S. Economic Development Administration, the State of California and other funding sources for many years. Its established track record with federal grant compliance, multi-stakeholder program administration and public-private convening provides the institutional capacity to manage a four-project, multi-partner initiative such as this one. Primary management capacity for this initiative will be supported by a dedicated Project Coordinator (1.0 FTE), which will serve as the single point of contact for all partner

communication, community engagement and reporting, including communication and coordination with the Air District. Some functions for this project will be performed with the part-time support of East Bay EDA staff with related roles and responsibilities, accounting for a very conservative investment of $300,000 annually of in-kind match over the life of the grant period. Most of these revenues are membership dues and sponsorships that are intended to support East Bay EDA's strategic economic development priorities.

East Bay EDA will leverage this LCBF investment to attract and align additional resources. The California Jobs First Bay Area Maritime Cluster, for which East Bay EDA is a core coalition partner, is advancing multi-million-dollar regional investment through three projects the Maritime Innovation Campus, Ecosystem Backbone Organization and Maritime Workforce Integration Network that are directly complementary to and mutually reinforcing with this initiative. LCBF investment in this project strengthens the cluster's regional investment case and demonstrates to federal program offices, institutional investors and maritime industry partners. East Bay EDA is actively pursuing additional federal Economic Development Administration, philanthropic and state resources to sustain and scale the Hub model beyond the LCBF grant term, including through the countywide Contra Costa Business Collaborative membership model that the Hub is designed to formally join by month 24.

East Bay EDA administers large grants through Alameda County, which provides the accounting systems, internal controls, procurement policies and single-audit infrastructure required to administer a grant of this scale. Alameda County provides administrative, financial and other support to East Bay EDA for any of its larger and/or publicly funded grant programs and other services, including access to legal counsel, procurement expertise and risk management infrastructure as appropriate. Alameda County's administrative systems include project-level cost coding, purchase order tracking, vendor payment processing and quarterly financial reporting infrastructure that are activated for each new grant program without requiring new system setup. The organization has established procurement policies, internal controls and audit infrastructure appropriate to grants of this scale and does not require any new administrative systems or staffing to manage this grant from day one of grant execution.

Each co-applicant organization—East Bay Community Foundation (EBCF), Manex and SJSURF—independently meets nonprofit financial capacity requirements. All hold current 501(c)(3) status, maintain required federal and state filings, are in good standing with regulators and produce audited financial statements demonstrating stability and adequate liquidity. EBCF's budget reflects its role as a major community foundation. Manex's audits document its 30-year history as a federally supported MEP center operating under consistent compliance standards. SJSURF's filings reflect its function as a CSU sponsored-programs office with established federal grant management systems. Annual grant allocations fall within each organization's typical grant range and never exceed 50 percent of any operating budget. Financial oversight includes project-specific cost codes, deliverable-based payments and consolidated reporting.

Project Title (3 words maximum)	Project Summary (1-3 sentences)	Strategy Alignment	Project Lead	Total Project Budget (sum of columns to right)	Lead Applicant Budget	Co-Applicant 1 Budget	Co-Applicant 2 Budget	Co-Applicant 3 Budget	Co-Applicant 4 Budget
Business & TA Hub	The Blue-Green Business Concierge and Technical Assistance Hub (Hub) is a regional business-concierge program that seeks to expedite and strengthen economic resilience and revitalization in the Green Empowerment Zone (GEZ), an area encompassing the Northern Waterfront communities of Contra Costa County and the cities of Benicia and Vallejo in Solano County that fully aligns with the geography of Bay REPAIR communities.	Build Economic Resilience for a Just Transition	East Bay Economic Development Alliance	$2,586,816	$1,307,550	$250,000	$150,459	$878,807	$0

Bay REPAIR - Local Community Benefits Fund - Round 1 – Project Narrative

Application Information	
Application Title	Richmond Blue-Green Economic Resilience Initiative
Lead Applicant Name	East Bay Economic Development Alliance (East Bay EDA)
Project Location	Path to Clean Air Community (PTCA) – Richmond, San Pablo, North Richmond and surrounding unincorporated West Contra Costa County
Overall Funding Request	$4,977,286
Grant Term Request	3 years
Project Information	
Project Title	Blue-Green Business Concierge and Technical Assistance Hub ("The Hub")
Project Lead	East Bay Economic Development Alliance (East Bay EDA); Co-Leads: East Bay Community Foundation (EBCF), The Corporation for Manufacturing Excellence (Manex), San Jose State University Research Foundation (SJSURF)
Project Location	Richmond and West Contra Costa County PTCA communities
Project Funding Request	$2,586,816

STRATEGY ALIGNMENT (10 points)

1. ***Provide a short summary (1-2 paragraphs) that outlines this project.***
2. ***Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:***
    - ***Reduce air pollution and improve health outcomes***
    - ***Build economic resilience for a just transition***

The Blue-Green Business Concierge and Technical Assistance Hub is a regional business-concierge program that seeks to expedite and strengthen economic resilience and revitalization in the Green Empowerment Zone (GEZ), an area encompassing the Northern Waterfront communities of Contra Costa County and the cities of Benicia and Vallejo in Solano County that fully aligns with the geography of Bay REPAIR priority communities. The project creates a unified access point connecting Path to Clean Air (PTCA) small businesses and entrepreneurs to the technical assistance, financing tools, workforce training, energy efficiency audits and clean economy market opportunities they need to survive the fossil fuel transition and grow in the emerging blue-green economy. The

Blue-Green Business Concierge and Technical Assistance Hub (Hub) will triage and connect PTCA small businesses and entrepreneurs to trusted advising, capital readiness support, technical assistance, and warm referrals through a coordinated network of recognized and trusted business support organizations overseen by the East Bay Community Foundation (EBCF). Working together with the support of EBCF, this network of organizations will operate under shared intake protocols, cross-referral systems and standardized outcome reporting. These efforts will be bolstered with the convening of Community Advisory Panels composed of PTCA residents who will help to direct and shape Hub priorities and ensure programming reflects community-identified needs.

In addition to services provided through the hub, manufacturers and small businesses operating in PTCA communities will also gain access to a wide range of technical assistance, including a variety of services through the Corporation for Manufacturing Excellence (Manex) such as clean manufacturing operations, continuous improvement, quality management systems, process stabilization, production scaling, and a range of other core business operations services that will help businesses create and retain quality jobs, reduce expenses, and invest in their business. Manex will also provide operational transition support for businesses diversifying away from fossil fuel supply-chain dependence by connecting employers and workers to clean economy market opportunities, reducing their exposure to refinery contraction while supporting the region's shift toward maritime electrification, clean manufacturing and climate technology sectors.

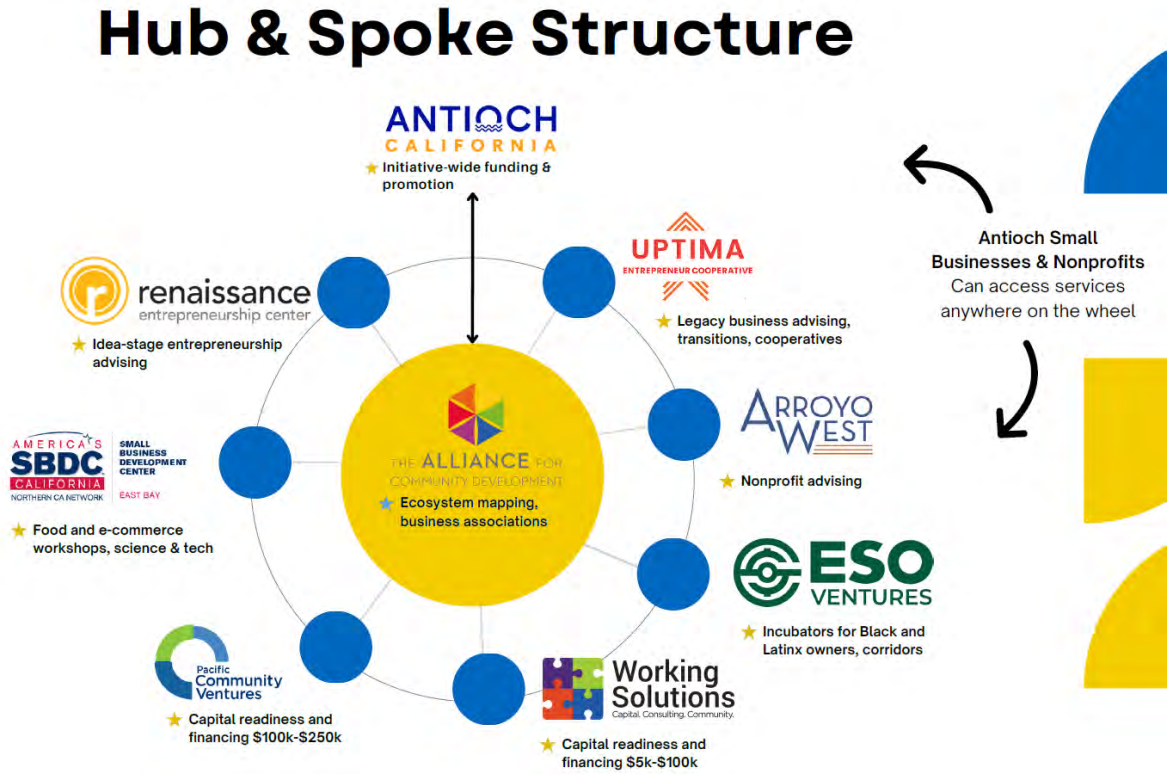
Lastly, while the core objectives of the proposed project are to support economic resilience, it will simultaneously advance efforts related to Bay REPAIR strategies for cleaner air by helping businesses implement cleaner practices. SJSU will help businesses in accessing incentives and rebates from Pacific Gas & Electric (PG&E), the Bay Area Air District, and other programs, offering direct navigation assistance to help them adopt cleaner practices to reduce environmental impacts on area residents.

COMMUNITY IMPACT (20 points)

3. ***Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.***

The project will serve the full Richmond area PTCA geography, which is among the most comprehensively documented environmental justice communities in California. CalEnviroScreen 4.0 places PTCA census tracts in the 75th to 95th percentile statewide for cumulative pollution burden, driven by Chevron refinery proximity, traffic corridor exposure from I-80 and I-580 and elevated population vulnerability including high poverty rates, linguistic isolation and housing burden. One of the original AB 617 community designees, the Richmond/West Contra Costa Path to Clean Air Community Emissions Reduction Plan (CERP) formally documented disproportionate cumulative air quality burdens and established community-driven emission reduction priorities, including near-port diesel reduction and refinery fence-line monitoring. Asthma emergency department visit rates in

PTCA neighborhoods exceed Contra Costa County averages; life expectancy within PTCA census tracts is lower than surrounding areas.



While the contraction of Chevron refinery operations has been helpful to air quality and the overall environment in the region, reductions in refining output will continue to remove a historically significant source of high-wage blue-collar employment. Without offering quality replacement jobs and career pathways, the economic context surrounding these dynamics only compounds the environmental burdens associated with them. The PTCA contains a substantial concentration of small and medium manufacturers that have historically served the refinery and its supply chain; as operations contract, these businesses face displacement without support to identify and access clean economy market opportunities. Entrepreneurs seeking to launch climate technology and blue economy ventures lack a coherent and networked access point to the technical assistance, financing and sector networks required to start and grow.

3. ***Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.***

The Business Concierge and Technical Assistance Hub (Hub) has been shaped through direct community engagement, with community-based organizations, municipal partners and business owners across the PTCA contributing to the identification of these needs. A convening and visioning session of the Contra Costa Business Collaborative in October 2025 brought together city economic development staff from across Contra Costa County (including East Bay EDA staff) and confirmed a documented countywide pattern: the existing support ecosystem for entrepreneurs and small businesses is fragmented and not realizing its full potential. The Hub model directly addresses identified gaps and needs by funding coordinating infrastructure that bridges the existing ecosystem rather than replacing it. We will accomplish this by building a coordinated business support system that helps local businesses grow, stabilize, and thrive, with special attention to West Contra Costa County. Instead of relying on disconnected programs, the Hub creates a shared infrastructure that makes it easier for communities to access the right support at the right time.

The East Bay Community Foundation's engagement with West Contra Costa cooperatives, just transition coalitions and community advisors will provide an additional element to community-grounded need validation that has shaped both the Hub model and the Resiliency Fund component. Programming will be delivered through partner organizations with established physical and programmatic presence in this geography. A previous pilot of this model in Antioch during calendar year 2024 has already shown what this approach can accomplish: this model served hundreds of businesses, supported new ventures, strengthened jobs, increased revenue for participating businesses, and improved access to contracts, capital, and trusted advising. That track record of a successful partnership gives

this project a strong foundation and demonstrates that the model is not theoretical — it already has been working in practice and is ready for replication and scaling to a wider geography where these entities already operate.

This project is modeled on the Antioch Business Collaborative, a hub-and-spoke business support network launched in early 2024 with American Rescue Plan Act funding.

EBCF's Resiliency Fund component for this project will employ a Community Advisor Committee model that has already been proven through its Oakland Small Business Resiliency Fund, where BIPOC entrepreneurs and community members co-designed the program, reviewed applications and made funding recommendations producing outcomes that directed 100 percent of awards to businesses most in need in under-resourced communities. The Oakland Small Business Resiliency Fund operated by EBCF provided $2.2M in grant funding to 170 small businesses in the most underserved neighborhoods in Oakland that were impacted by environmental injustice and face the poorest health outcomes directly related to poor air quality, lack of healthy food access, and lack of access to green space.

This model is proposed for replication in the PTCA, where Community Advisors will be selected for their lived experience as PTCA entrepreneurs or family members of business owners and their demonstrated engagement with West Contra Costa communities.

4. ***Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.***

This area has long faced the impacts of industrial decline, pollution exposure, and an over-reliance on large employers. This project directly responds to these environmental justice and just-transition challenges by helping businesses adopt clean technologies, connect with trusted resources, and strengthens linkages between neighborhood businesses and the broader Bay Area innovation ecosystem and emerging blue-green industries. In addition, the project supports economic diversification by directing investment toward local businesses that provide essential goods and services—such as healthy foods, fitness and wellness, local retail, and community gathering spaces. These investments reinforce community infrastructure and strengthen the social fabric that supports cohesion, public health, economic activity, cultural expression, and community building.

The Hub's measurable outcomes—including increased clean energy business retention and expansion, improved access to technical assistance and incentives, and supporting new business formation, will demonstrate tangible progress toward improved community health, economic resilience, and equitable opportunity. By strengthening local and circular economies, the project advances a just transition toward a regenerative economy that supports people, place, and planet. Keeping dollars circulating within neighborhoods builds community ownership and wealth, rather than allowing resources to be extracted by external corporations that are less invested in local economic success and well-being.

COMMUNITY ENGAGEMENT (10 points)

6. ***Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.***

The East Bay Community Foundation will serve as the community engagement partner for the hub project, drawing on its decade of organizing relationships with PTCA residents, cooperatives and just transition coalitions in Richmond and West Contra Costa County. EBCF brings multilingual capacity in Spanish, Vietnamese and Tagalog and a track record of co-designing programs with community advisors who reflect the lived experience of PTCA residents and entrepreneurs. For its Oakland Small Resiliency Fund, EBCF co-created and collaboratively implemented the pilot with a team of Community Advisors, who were thought and action partners to EBCF. They helped co-design the program and materials and advised on funding decisions to help ensure the funding was targeted where

there was highest community need. EBCF also holds and manages the Richmond Just Transition Fund, a fund of the Richmond Our Power Coalition (ROPC). Each year, EBCF receives and regrants over $800K on behalf of ROPC in support of Just Transition projects and campaigns in Richmond. EBCF believes that when you design an equitable process, you achieve more equitable outcomes, and the outcomes from these pilot funds proved this to be true.

Community Advisory Panels consisting of between eight (8) to twelve (12) residents and business owners will convene quarterly throughout the grant term. All panel participants will receive stipends. As was the case with the Oakland pilot deploying grant funds, committee members will be selected based upon their lived experience as BIPOC entrepreneurs or family members of business owners and their demonstrated dedication to working with and on behalf of the small business community. They will each serve different segments of the diverse community of entrepreneurs and small businesses in this geography. If EBCF's experience in Oakland is a guide, this will greatly expand the reach of this program and bring varying perspectives to the application review and grantee selection process. EBCF will facilitate the panels and produce meeting notes and feedback integration reports semi-annually, which will be shared with all partners and published in through East Bay EDA and EBCF channels. In addition to the Community Advisory Panels, feedback will also be solicited throughout the grant term via surveys, 1:1 interviews, focus groups, and direct conversations with service providers to maintain continuous improvement, ensuring program is responsive to business owner needs.

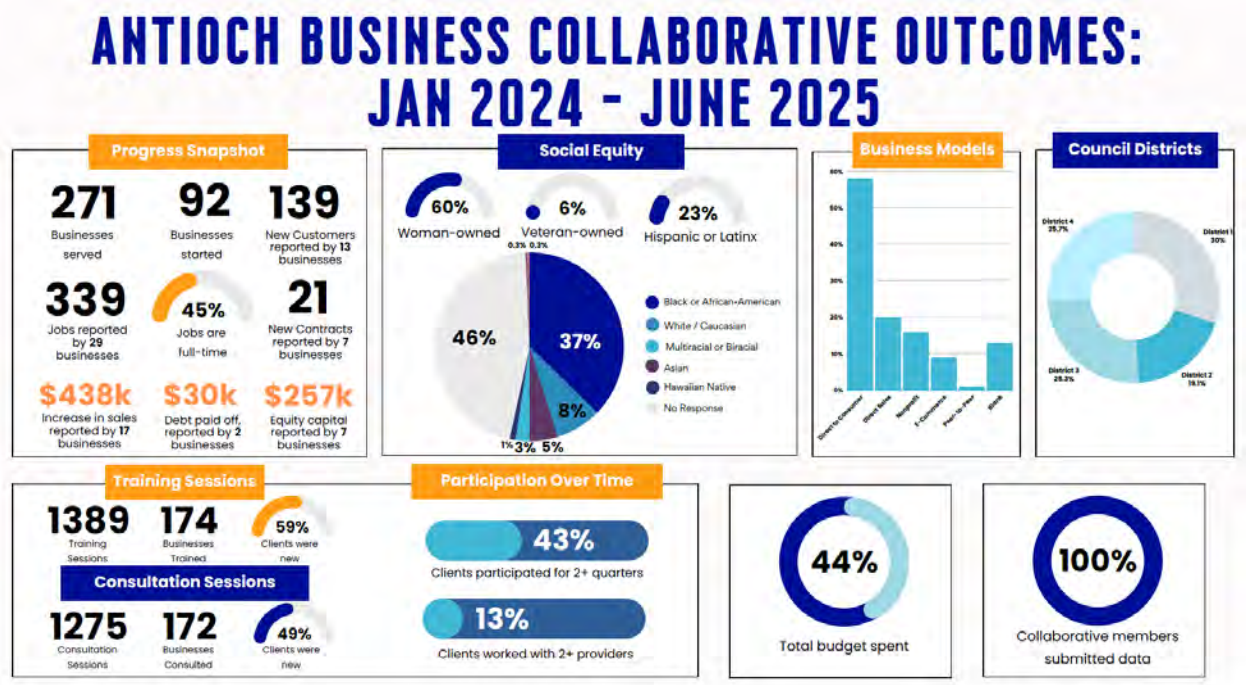
The Small Business Collaborative piloted in Antioch was shaped through extensive community engagement in Contra Costa County, including visioning sessions, stakeholder engagement meetings, and municipal surveys. These efforts brought together city staff, community-based organizations, business owners, and other stakeholders to identify the most urgent barriers facing local businesses and nonprofits. The engagement process made clear that many communities are facing the same problems: limited access to capital, inconsistent technical assistance, difficulty navigating local and regional resources, and a lack of coordinated support. Rather than designing a program from the top down, the collaborative was built from what community members and local leaders said they needed most. These lessons will be incorporated into the design of the Business Concierge and Technical Assistance Hub as it looks to be replicated and improved upon as it gets stood up to serve businesses and entrepreneurs.

MEASURABLE OUTCOMES PLAN (30 points)

7. ***Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.***
8. ***Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.***

9. ***Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.***

Through a shared coordinated partner referral network, the Blue-Green Business Concierge and Technical Assistance Hub will deploy a Small Business Collaborative, a Small Business Resiliency Fund operated by EBCF, a clean manufacturing optimization program run by Manex, and a building energy efficiency and decarbonization audit and implementation support program run by SJSU's Industrial Assessment Center. Major roles and responsibilities of this effort are summarized below:



- East Bay EDA will manage the overall project and employ a full-time Project Coordinator and a Business Navigator (0.5 FTE) to manage the project and coordinate service delivery, oversee project communications, manage consultants for business development and land use feasibility analyses, and provide overall project direction and ensure outcomes are attained or exceeded.
- East Bay Community Foundation (EBCF) will deploy and operate the Small Business Collaborative & Resiliency Fund while also serving as the lead community engagement partner working with trusted business support organizations, which will collectively provide advising and technical assistance, capital readiness support, and warm referrals through a coordinated network.
- The Corporation for Manufacturing Excellence (Manex) will deliver clean manufacturing operational optimization and technical assistance engagements to support small and medium size manufacturers.
- San Jose State University's Industrial Assessment Center (SJSURF) will conduct energy and decarbonization audits and support implementation and incentive navigation.

The Measurable Outcomes Plan document accompanying this narrative details outcomes, indicators, milestones, tasks, lead entities and completion dates. The project's measurable outcomes include the total number of businesses served, quantity of emissions reduced, number of jobs stabilized, amount of early-mover clean economy investments, and other indicators that demonstrate accelerated community impact through documented economic and environmental benefit to PTCA residents and employers. Some of the key measurable outcomes include the following:

- Between 500-600 businesses in the PTCA will be served through Small Business Collaborative intake over the grant term;
- A regional clean economy platform relaunched with measurable engagement metrics.
    - Community Advisory Panels will convene quarterly, and governance participation will be documented semi-annually.
    - The Hub model, outcome data and lessons will be shared with the countywide Contra Costa Business Collaborative design by the midpoint of

the project, with anticipation of a formal expansion/scaling agreement by the start of year three (3) of the project.

Many elements of this Hub project are modeled on the Antioch Business Collaborative, a hub-and-spoke business support network that EBCF and its partner organizations have operated since January 2024. In 18 months, the Antioch Collaborative served 271 businesses, supported 92 new business starts, delivered 1,389 training sessions and 1,275 consultation sessions and documented $438,000 in increased sales, $257,000 in equity capital raised and 60 percent woman-owned and 46 percent Black or African American clients served all with 100 percent of collaborative member organizations submitting standardized quarterly outcome data. The PTCA Hub replicates this proven architecture in the West Contra Costa geography, launching not as a new coordination structure but as the PTCA node of a countywide ecosystem that is already operational, with established protocols, data systems and partner relationships. An overview of outcomes from the Antioch pilot appears in the infographic below.

A high-level summary of budgeted activities, costs, and functions are listed below, refer to the budget template for additional details:

- **Lead Applicant: County of Alameda/East Bay EDA**
  - Proportionate personnel costs for Project Coordinator (1.0 FTE), Business Navigator (0.5 FTE), and proportional project management support at EBCF and SJSURF.
    - Project Coordinator (works across all projects)
    - Business Navigation Lead (supports projects 1,2 & 4)

- Communications – proportionate support for project (from $60,000 total)
- Materials, Subcontractors & Vendors –
- Indirect cost share for East Bay EDA (15% of direct costs, reflecting the Alameda County administrative relationship)

- **Co-Applicant: East Bay Community Foundation**
  - Director to oversee resiliency fund and small business collaborative - $71,680 (balance paid with other funds)
  - Small Business collaborative resource providers – $375,000
  - Small business grant fund – $240,000
  - Subcontractors & Vendors - $27,500 for community advisor stipends ($15,000), marketing ($15,000), and translation services ($2,500)
  - Indirect costs @ 15% of total direct costs

- **Co-Applicant: The Corporation for Manufacturing Excellence (Manex)**
  - Project Management - $45,000
  - Subcontractors & Vendors
    - Company Assessments - $72,000 (12 assessments @ $6,000 each)
    - Manufacturing process improvements & support (2 employee-led Kaizen events @ $14,500/event)
    - Technical Assistance – Services to manufacturing companies located within the PTCA, including 3 strategic plans, adjacent market analyses, and growth strategy recommendations - $24,000
  - Travel & Contingency - $2,000 local travel costs, $20,000 contingency
  - Indirect costs @ 15% of total direct costs

- **Co-Applicant: San Jose State University Research Foundation (SJSURF)**
  - Personnel Costs
    - Co-Applicant/Principal Lead – $36,308
    - Student employees for assessments - $78,026
  - Subcontractors & Vendors
    - Company Assessments - $72,000 (12 assessments @ $6,000 each)
  - Travel & Contingency - $2,000 local travel costs, $20,000 contingency
  - Indirect costs @ 15% of total direct costs

- Total project cost is $2,586,816 over 36 months.

ECOSYSTEM ALIGNMENT (10 points)

10. ***Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).***

This project brings full alignment of local, regional, and statewide priorities to the forefront. For example, there is significant state investment supporting blue-green economic development in the area. The first is the California Jobs First Bay Area Maritime Cluster, a strategic economic initiative aimed at revitalizing the region's maritime infrastructure and workforce strengths. The project will also position the Bay Area to capture multi-billion-dollar federal maritime investment through the Presidential Maritime Action Plan and the SHIPS for America Act. It does this by connecting PTCA manufacturers, suppliers, small businesses, and entrepreneurs to the cluster's clean-economy networks, technical assistance resources, and workforce pipelines.

The project also will leverage East Bay EDA's Resilient East Bay initiative, a 5 year-old effort that enhances connectivity between industry, academia, business support organizations, and civic leaders to support the region's advanced manufacturing and innovation ecosystem. The PTCA Hub's business intake and referral data will feed directly into the Resilient East Bay platform, making PTCA businesses visible and connected to regional clean economy networks. Additionally, The Green Empowerment Zone (GEZ), a clean energy manufacturing initiative spanning Contra Costa and Solano counties, encompasses the PTCA geography; this project's energy efficiency and clean manufacturing transition support is directly aligned with GEZ priorities.

The project also aligns directly with several community plans, including the City of Richmond's Green-Blue New Deal (2021), City of Richmond's Economic Development Action Plan (2020), and the Air District's Path to Clean Air Community Emissions Reduction Plan (CERP), which explicitly calls for economic resilience for workers displaced by refinery contraction as community-identified priorities. This project delivers measurable progress on each of these priorities within the PTCA boundary.

A PTCA manufacturer historically tied to Chevron's supply chain now needs market diversification, an operational efficiency assessment, and access to maritime electrification procurement networks to survive the refinery's contraction and pivot into the clean economy. The Hub delivers exactly that support through four coordinated LCBF projects: Manex's manufacturing optimization engagements, SJSURF's energy-efficiency audits and implementation support, the EBCF Resiliency Fund's small business grants, and the Business Navigator, who connects PTCA firms to the full ecosystem of resources. These four projects operate in direct alignment with the California Jobs First Bay Area Maritime Cluster, which extends the cluster's benefits across the full Northern California maritime geography. This alignment strengthens the region's ability to attract federal funding, private investment, and commercial contract opportunities—creating a real and growing clean-maritime market for PTCA businesses to scale into.

When an infrastructure investor, defense procurement officer, or commercial ferry operator assesses whether the region can absorb major maritime investments, the answer is unequivocal: Richmond has the workers, the space, the sites, and the businesses to make it work.

CAPACITY (10 points)

11. ***Describe the Project Lead's experience managing and implementing projects of similar scope and size.***
12. ***Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.***

East Bay EDA is a regional economic development organization that is administratively housed in the County Administrator's Office of the County of Alameda. The annual grant amount for this project is within the range of programs the organization has previously administered under this structure: East Bay EDA has directly managed and overseen multi-stakeholder programs funded by the U.S. Economic Development Administration, the State of California and regional philanthropic foundations. When the organization pursues and receives grants of this scale, they are administered directly by Alameda County, which provides accounting systems, internal controls, procurement policies and single-audit infrastructure appropriate to a grant of this scale. East Bay EDA's existing Resilient East Bay initiative, which started in 2021 with seed funding from the U.S. Economic Development Administration (U.S. EDA), coordinates the region's advanced manufacturing and clean economy ecosystem with a vast network of industry and civic leaders, academic institutions, community partners, and business and workforce support organizations.

The East Bay Community Foundation (EBCF) has awarded $2.2 million to 170 businesses through its Oakland Small Business Resiliency Fund, administers over $800,000 annually in regranting through the Richmond Just Transition Fund on behalf of the Richmond Our Power Coalition and is a critical partner in Contra Costa County's African American Holistic Wellness and Resource Hub. EBCF's Community Advisor model where BIPOC entrepreneurs co-design programs and make funding decisions has produced documented outcomes of equitable capital distribution and high community trust. EBCF holds current IRS 501(c)(3) status and is current with all federal and state filings.

The Corporation for Manufacturing Excellence (Manex) has worked exclusively with Northern California manufacturers since 1995 as part of the California Manufacturing Network and the NIST Manufacturing Extension Partnership ecosystem. Manex delivers operational optimization, lean manufacturing, workforce upskilling and clean manufacturing transition support to small and mid-sized manufacturers across Contra Costa and Solano Counties. Manex holds current IRS tax-exempt IRS 501(c)(3) status and maintains audited financial statements.

San Jose State University Research Foundation (SJSURF) operates the SJSU Industrial Assessment Center, an EPA-designated technical assistance program delivering energy and decarbonization audits to small and medium sized manufacturers and large energy

users save energy, improve productivity, and reduce waste. SJSURF has extensive experience managing federal and state grants, holds current IRS 501(c)(3) status and carries audited financials demonstrating the organizational capacity to manage a program of this scale. The SJSURF Industrial Assessment Center team brings direct prior experience delivering assessments in the Bay Area region.

Project implementation is managed by the Project Coordinator position (1.0 FTE at East Bay EDA), who serves as single point of contact for cross-partner coordination, community reporting and referral network management. Some of the work directly associated with this project will be supported by the Business Navigation Lead, who will work with the co-applicants on coordination, outreach, and other functions essential to successful project implementation. Additionally, each co-applicant has designated a named project lead responsible for their component's delivery, data reporting and participation in the monthly Steering Committee. Members of the Steering Committee, which will be chaired by the East Bay EDA Executive Director, hold decision-making authority over project modifications and scope changes.

READINESS (10 points)

13. ***Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.***
14. ***Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.***
15. ***Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.***
16. ***Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.***
17. ***Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.***

This project requires no permits, CEQA review, site acquisition or physical construction. The hub-and-spoke coordination model being deployed is not experimental it has been operating in Antioch since January 2024. The ARPA funding that capitalized the Antioch Collaborative sunsets in 2026; the Bay REPAIR investment bridges that gap at a critical moment and extends the proven model into a broader geography.

EBCF's Resiliency Fund grant program has been piloted in Oakland and Antioch and is ready to replicate for this project. The Community Advisor Committee model, application materials and grant management systems are all operational. SJSURF's Industrial Assessment Center is currently delivering audits and can begin scheduling assessments

immediately upon grant execution. Manex maintains a current roster of Bay Area manufacturer clients and can initiate outreach and diagnostic engagements within the first quarter.

The primary risk to implementation is ensuring business outreach and uptake, a risk mitigated by the Small Business Collaborative's embedded community presence, East Bay EDA and EBCF's existing organizing relationships in Western Contra Costa and the integration of the Hub within a network of trusted community-based organizations. The countywide ARPA funding transition creates a specific window of urgency that positions this project favorably: businesses and entrepreneurs who have been engaging with the Antioch Collaborative or with EBCF's prior work are already aware of the support model and primed to engage in Bay REPAIR communities.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The Blue-Green Business Concierge and Technical Assistance Hub (Business Hub) will serve as a unified access point that connects Path to Clean Air (PTCA) small businesses and entrepreneurs with the technical assistance, financing tools, operational and workplace support, and building energy-efficiency and decarbonization resources they need to transition away from fossil fuels and take advantage of emerging blue-green market opportunities. Through a coordinated intake and triage process, the Business Hub will match PTCA businesses and entrepreneurs with specialized services. These services will be delivered by a trusted network of partner organizations working together to provide comprehensive, high-quality support to grow and sustain businesses.

Measurable Outcome	Indicator(s)
A. Project Management and Coordination (Led by East Bay Economic Development Alliance)	
1. Project Timeliness and Successful Implementation of Activities	• All planned activities are executed as outlined in project scope documents and related plans • Project management of budget, contracting, fiscal coordination & oversight, reporting, and other key requirements comply with all requirements and moving as efficiently and effectively as possible • The project meets or exceeds planned deadlines and milestones and are operating within established funding levels
2. Effective and Coordinated Stakeholder Engagement	• Project stakeholders receive timely communication, updates, feedback, and progress reports • Robust attendance at coordination meetings held with partners (monthly and as-needed basis) • Strategic and ongoing communications about project activities, deliverables, and outputs are shared quickly and transparently with community members, project partners, and other stakeholders

Measurable Outcome	Indicator(s)
	• Support for project activities grows both locally and regionally, providing opportunities to attract additional public and private investment
3. Improved business access	• Increased interest and uptake of resources offered • Positive feedback from businesses and residents, as well as referrals • Continuous feedback loop to gather real-time issues ensuring program adjustments can be made promptly and responsive to business needs • Technical assistance and support provided to small businesses
B. Small Business Collaborative (Led by East Bay Community Foundation)	
1. At least 500 small businesses in West Contra Costa County are stronger and more resilient.	• Number of businesses and nonprofits served • Number of advising and consultation sessions • Number of new businesses and nonprofits started • Customer growth • New jobs created or sustained • Job quality - compensation, benefits, equity, ownership structure, promotions, distance from home • New contracts • Increased sales • Debts paid off • Credit applications • Loans received • Equity capital raised • Self-reported resilience metrics: Access to capital, improved business planning, increased revenue stability, stronger compliance, reduced risk of closure
2. Facilitate access to grant capital and coordinated services for BIPOC, women, transgender and nonbinary individuals, and veteran business owners as evidenced by >80%	• % of business owners served who identify as BIPOC • % of business owners served who identify as women, transgender, or non binary • % of business owners served who identify as veterans

Measurable Outcome	Indicator(s)
participants/grantees will be BIPOC, >50% will be women, transgender, or non-binary, and >5% will be veterans.	
3. Build durable, shared infrastructure for small businesses with coordinated support services	• Host organization with MOUs and contracts with at least 10 collaborative partners outlining roles, responsibilities, relationships, accountabilities. • Referrals made to collaborative members, between collaborative members, and from collaborative members to external resources • Events held to connect small businesses to resources • Hours of technical assistance support provided to small businesses • Hours logged in incubator
4. Lay the groundwork for creating a regional, scalable grant fund to deploy at least $3M in grant funds to at least 300 small businesses to support resiliency and racial and gender equity	• Amount of grant funding deployed to small businesses from Resiliency Fund 2.0
C. Building Energy Efficiency & Decarbonization Assessments (Led by San Jose State University Research Foundation)	
1. Provide energy and decarbonization audit services to local facilities/buildings	• Number of audits completed; (target = 4/year) • Number and type of facilities served; • Total building area or facility size served; • Number of energy conservation measures/decarbonization opportunities identified
2. Identify energy, cost, and greenhouse gas reduction opportunities	• Estimated annual electricity savings identified, kWh/year; • Estimated annual natural gas savings identified, therms/year; • estimated annual cost savings identified, $/year; • Annual GHG emissions reduction identified, $MTCO_2e$/year
3. Support implementation of energy efficiency and decarbonization projects	• Number of projects receiving implementation support; (target: 4/year)

Measurable Outcome	Indicator(s)
	• Number of projects advanced to contractor pricing, incentive application, financing review, or implementation; • Estimated savings from supported projects; • Incentive/financing dollars identified or applied for
D. Clean Manufacturing Operations & Workforce Resiliency (Led by Manex)	
1. New and Jobs Retained	• Jobs retained as a result of the project (.00891 per grant dollar. For example 1,070 jobs were created and retained last year against a grant budget of $1.2m)
2. Retained Sales	• Sales retained as a result of the project ($100 to $118 per grant dollar expended)
3. New Sales	• New sales obtained as a result of the project ($18 to $24 increase per grant dollar expended)
4. Investments Made (Software, etc.)	• Investments in plant, equipment, software and other ($27 per grant dollar expended)
5. Cost Savings	• Reduction in costs as a result of operational improvements ($11 per grant dollar expended)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
A. Project Management and Coordination (Led by East Bay Economic Development Alliance)					
1. Project Timeliness and Successful Implementation of Activities	A. Develop Project Development Infrastructure	1. Create a shared project management plan with scopes, leads, deliverables, and timelines for each project	East Bay EDA	Co-Applicants, Contractors, and Project Stakeholders	Month 3
	B. Establish Project Team	2. Conduct check-in meetings on a biweekly and as-needed basis to check in on tasks, issues, and progress	East Bay EDA	Co-Applicants, Contractors, and Project Stakeholders	Months 3-36
	C. Develop Outreach Strategy	3. Invest and deploy outreach, communication, and marketing tools to ensure program reaches Western Contra Costa businesses	East Bay EDA	Co-Applicants	Month 6
2. Effective and Coordinated Stakeholder Engagement	A. Establish Community Advisory Committee	1. Recruit and identify Community Advisory Committee, and identify roles and responsibilities	East Bay Community Foundation	East Bay EDA	Month 6
		2. Organize quarterly progress update meetings with Community Advisory panel	East Bay Community Foundation	East Bay EDA	Months 6-36
3. Improved business access	A. Facilitate continuous feedback loop to identify challenges and troubleshoot issues to ensure program remains responsive to business needs	1. Create business satisfaction surveys and listening sessions to hear challenges and successes; ease of use; outcomes of services	East Bay EDA	Co-Applicants, Contractors, and Project Stakeholders	Months 6-36
		2. Hold 1:1 and group conversations with Project Team to understand barriers, outreach	East Bay EDA	Co-Applicants, Contractors,	Months 6-36

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		gaps, service availability, referral issues, other issues		and Project Stakeholders	
B. Small Business Collaborative (Led by East Bay Community Foundation)					
1. **At least 500 small businesses in West Contra Costa County / Central Contra Costa County are stronger and more resilient**.	A. Conduct outreach to at least 700 small businesses and nonprofits. Use business visits, business events, and social media to reach entrepreneurs.	1. Compile and maintain an outreach list of small businesses and nonprofits in West Contra Costa County.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Month 6, maintained throughout grant period
		2. Conduct direct outreach through business visits, email, phone, community events, and social media.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Month 6, ongoing throughout grant period
		3. Track outreach activity and referrals, and document interest from businesses seeking support.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Month 6, ongoing throughout grant period
	B. Deliver capacity-building support to 600 businesses. Provide technical assistance, coaching,	1. Assess each business's needs and create a support plan or referral path.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business	Month 6, ongoing throughout grant period

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	training, or navigation services.			resource providers	
		2. Provide technical assistance, coaching, training, or navigation services tailored to business needs.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Month 6, ongoing throughout grant period
		3. Track service delivery and follow up with businesses to confirm completion and next steps.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Month 6, ongoing throughout grant period
	C. Show measurable resilience gains for 500 businesses. At least 500 businesses complete one or more support services and report an improvement in a resilience indicator.	1. Define resilience indicators and collect baseline information from participating businesses.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Month 3, ongoing throughout grant period
		2. Measure business progress after service delivery, such as improved planning, operations, access to capital, or compliance.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business	Month 6, ongoing throughout grant period

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
				resource providers	
		3. Document outcomes for at least 500 businesses and summarize reported gains in resilience.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Month 6, ongoing throughout grant period
2. Facilitate access to grant capital and coordinated services for BIPOC, and women, transgender and nonbinary individuals, and veteran business owners as evidenced by >80% participants/grantees will be BIPOC, and >50% will be	A. Prioritize equitable outreach and intake. Enroll a participant pool where at least 80% identify as BIPOC, at least 50% identify as women, transgender, or non-binary, and at least 5% identify as veterans using targeted outreach and culturally responsive intake processes.	1. Design and implement targeted outreach strategies to reach BIPOC, women, transgender, nonbinary, and veteran business owners.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Month 3
		2. Use culturally responsive intake forms and enrollment processes that capture demographic and business needs data.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Months 3-6
		3. Monitor participant demographics throughout outreach and adjust strategies to maintain the target mix.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business	Month 6, ongoing throughout grant period

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
women, transgender, or non-binary, and >5% will be veterans.				resource providers	
	B. Deliver capacity-building support. Provide technical assistance, coaching, training, and navigation to BIPOC, women, transgender, nonbinary, and veteran business owners.	1. Provide technical assistance, coaching, training, and navigation to enrolled business owners.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Month 6, ongoing throughout grant period
		2. Connect participants to coordinated services such as legal, financial, marketing, procurement, or permitting support.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Month 6, ongoing throughout grant period
		3. Track participation and completion of services to confirm equitable access and engagement.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Month 6, ongoing throughout grant period
	C. Award deploy grant capital. Distribute grant funding to eligible BIPOC, women,	1. Develop grant criteria, application materials, scoring tools, and award procedures.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business	Month 6, ongoing throughout grant period

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	transgender, nonbinary, and veteran business owners.			resource providers	
		2. Review applications and award grants to eligible BIPOC, women, transgender, nonbinary, and veteran business owners.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Ongoing, complete by end of grant period
		3. Disburse funds and monitor use of grant capital, reporting on award distribution and participant outcomes.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Ongoing, complete by end of grant period
3. Build durable, shared infrastructure for small businesses with coordinated support services	A. Launch shared support systems. Establish a coordinated business support model with shared intake, referral, and case-management processes across partner organizations serving small businesses.	1. Convene partner organizations to define roles, referrals, and service coordination processes.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Month 3
		2. Establish a shared intake and referral workflow for small business support.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business	Month 6

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
				resource providers	
		3. Train partner staff on how to use the coordinated support system consistently.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Month 6, ongoing throughout grant period
	B. Build and standardize core infrastructure. Create durable shared tools such as a common resource hub, service directory, data-sharing protocols, and standardized business navigation workflows used by multiple providers.	1. Create shared tools such as a resource hub, service directory, and intake or referral templates.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Months 3-6
		2. Develop data-sharing and tracking protocols that support coordinated service delivery.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Months 3-6
		3. Standardize key business navigation workflows so multiple providers can use the same system.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business	Months 3-6

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
				resource providers	
	C. Demonstrate sustained use and coordination. Multiple partners actively use the shared infrastructure to serve businesses, with increased referrals, faster access to services, and a formalized plan for ongoing governance, maintenance, and funding.	1. Track usage of shared tools, referrals, and partner participation across the network.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Ongoing throughout grant period
		2. Hold regular coordination meetings to review service flow, challenges, and improvements.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Ongoing throughout grant period
		3. Develop an ongoing governance, maintenance, and funding plan to sustain the infrastructure over time.	East Bay Community Foundation	Participating cities, Contra Costa County, contracted small business resource providers	Month 3, ongoing throughout grant period

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
C. Building Energy Assessments (Led by San Jose State University Research Foundation)					
1. Provide energy and decarbonization audit services	A. Develop audit scope, intake process, and facility screening criteria	1. Define eligible facility/building types and audit levels.	SJSURF		Month 2
		2. Develop intake questionnaire and data request list.	SJSURF		Month 3
		3. Prioritize sites based on energy use, decarbonization potential, community benefit, and readiness.	SJSURF		Month 3
	B. Conduct site audits and data analysis	1. Collect utility bills, equipment data, operating schedules, and facility information.	SJSURF		Months 3-33
		2. Conduct site visits or virtual assessments.	SJSURF		Months 3-33
		3. Analyze energy use and identify efficiency/decarbonization opportunities.	SJSURF		Months 3-33
	C. Deliver audit findings and recommendations	1. Prepare audit reports	SJSURF		Months 4-33
		2. Present findings to participating facilities.	SJSURF		Months 4-35
		3. Provide prioritized recommendations with savings, costs, payback, incentives, and next steps.	SJSURF		Months 4-35
2. Identify energy, cost, and GHG reduction opportunities	A. Establish savings calculation methodology	1. Define baseline energy use approach.	SJSURF		Month 1
		2. Select emissions factors and cost assumptions.	SJSURF		Month 2
		3. Create consistent savings calculation templates for electricity, gas, and GHG reductions.	SJSURF		Month 2

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	B. Quantify savings opportunities	1. Estimate kWh, therm, cost, and $MTCO_2e$ savings for each recommended measure.	SJSURF		Months 3-33
		2. Identify measures with high implementation potential.	SJSURF		Months 3-33
		3. Categorize measures by no-cost/low-cost, capital project, and decarbonization project.	SJSURF		Months 3-33
	C. Aggregate and report program-level savings potential	1. Summarize total identified savings across all participating sites.	SJSURF		Months 3-36
		2. Track measure types and recurring opportunities.	SJSURF		Months 3-36
		3. Prepare summary tables for final reporting.	SJSURF		Months 3-36
3. Support implementation of energy efficiency and decarbonization projects	A. Prioritize projects for implementation support	1. Review audit recommendations with each facility. and available incentives/financing.	SJSURF		Months 4-33
		2. Identify measures with strong savings, feasible implementation,	SJSURF		Months 4-33
		3. Develop a short list of candidate projects	SJSURF		Months 4-33
	B. Provide project development support	1. Help define project scope and performance requirements.	SJSURF		Months 4-33
		2. Support contractor/vendor coordination, as appropriate.	SJSURF		Months 4-33
		3. Identify applicable rebates, grants, tax incentives, or financing options.	SJSURF		Months 4-33

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	C. Provide project development support	1. Track projects that move to pricing, incentive application, financing review, approval, or installation.	SJSURF		Months 4-33
		2. Estimate savings for supported implementation projects.	SJSURF		Months 6-35
		3. Document barriers, lessons learned and recommended next steps.	SJSURF		Months 6-36
D. Clean Manufacturing Operations & Workforce Resiliency (Led by Manex)					
Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. **New and Retained Jobs**	A. Rapid Operational Assessments (12)	1. Review of company financials	Manex		Months 3-36
		2. Operational capabilities review / study	Manex		Months 3-36
		3. Adjacent markets for stability and growth	Manex		Months 3-36
	B. Employee led Kaizen Events (2) (Continuous improvement)	1. Teaching all employees about Kaizen Lean	Manex		Months 3-36
		2. Employee led improvement project	Manex		Months 3-36
		3. Read out by employee teams	Manex		Months 3-36
	C. Strategic Growth Plans (3)	1. Finding and using the business issues	Manex		Months 3-36
		2. Where can the company win?	Manex		Months 3-36
		3. Creating coherent actions to benefit all stakeholders	Manex		Months 3-36

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
2. Retained Sales	A. Rapid Operational Assessments (12)	1. Where are the stable sales in the client base	Manex		Months 3-36
		2. Growing the base of sales with the core competencies of the company and employee base.	Manex		Months 3-36
		3. New sales growth with or without investment. Identify and discuss both.	Manex		Months 3-36
	B. Employee led Kaizen Events (2)	1. Kaizen the sales process	Manex		Months 3-36
		2. Kaizen the sales team	Manex		Months 3-36
		3. Instill constant improvement in the sales cycle.	Manex		Months 3-36
	C. Strategic Growth Plans (3)	1.Diagnosing through reframing and analogy	Manex		Months 3-36
		2.Comparison and frameworks	Manex		Months 3-36
		3.Seeking and edge, Innovating	Manex		Months 3-36
3. New Sales	A. Rapid Operational Assessments (12)	1. Where are the stable sales in the client base	Manex		Months 3-36
		2. Growing the base of sales with the core competencies of the company and employee base.	Manex		Months 3-36
		3. New sales growth with or without investment. Identify and discuss both.	Manex		Months 3-36
	B. Employee led Kaizen Events (2)	1. Kaizen the sales process	Manex		Months 3-36

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		2. Kaizen the sales team	Manex		Months 3-36
		3.Instill constant improvement in the sales cycle.	Manex		Months 3-36
	C. Strategic Growth Plans (3)	1.Diagnosing through reframing and analogy	Manex		Months 3-36
		2.Comparison and frameworks	Manex		Months 3-36
		3.Seeking and edge, Innovating	Manex		Months 3-36
4. Investments Made	A. Rapid Operational Assessments (12)	1 Value Stream Mapping	Manex		Months 3-36
		2. Overall Equipment Effectiveness (OEE) issues	Manex		Months 3-36
		3. Software and or Hardware recommendations	Manex		Months 3-36
	B. Employee led Kaizen Events (2)	1. If applicable to the organization	Manex		Months 3-36
	C. Strategic Growth Plans (3)	1. What investments must be made to grow the organizations capabilities	Manex		Months 3-36
		2. What type of upskilling is necessary to operate any new investments (software, hardware)	Manex		Months 3-36
			Manex		Months 3-36
5. Cost Savings	A. Rapid Operational Assessments	1. The operational assessments will be recommendations on waste reduction	Manex		Months 3-36

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		that will be self-implemented by the company.			
	B. Employee Led Kaizen	1. Small-scale employee Kaizen reduces costs because the people doing the work every day are usually best positioned to identify: • inefficiencies, • wasted motion, • recurring problems, • unnecessary complexity, • and practical low-cost solutions.	Manex		Months 3-36
		2. Kaizen increases output using existing resources. Instead of: • Hiring additional employees • Buying new equipment • Adding overtime the organization improves process flow. Typical improvements • Faster setup times • Better workstation layout • Reduced rework • Clearer instructions • Improved visual management	Manex		Month 36
		3. Small improvements often become standardized work procedures. Standardization reduces:	Manex		Months 33-36

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		• Process variation • Training time • Human error • Dependency on tribal knowledge Consistent processes generally produce: • Lower operating costs • More predictable output • Better quality			

Bay REPAIR - Local Community Benefits Fund - Round 1 – Project Narrative

Application Information	
Application Title	Richmond Blue-Green Economic Resilience Initiative
Lead Applicant Name	East Bay Economic Development Alliance (East Bay EDA)
Project Location	Path to Clean Air Community - Richmond, San Pablo, North Richmond and surrounding unincorporated West Contra Costa County
Overall Funding Request	$4,977,286
Grant Term Request	3 years
Project Information	
Project Title	PTCA Industrial Site Readiness and Maritime Business Accelerator Feasibility Study
Project Lead	East Bay EDA in partnership with Sunstone Cities and Berkeley Blue
Project Location	PTCA industrial corridor and waterfront, including the former EPA Region 9 Western Ecology Division Laboratory site at 180 Kansas Avenue, Richmond
Project Funding Request	$653,774

STRATEGY ALIGNMENT (10 points)

1. ***Provide a short summary (1-2 paragraphs) that outlines this project.***
2. ***Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:***
    - ***Reduce air pollution and improve health outcomes***
    - ***Build economic resilience for a just transition***

Project 2 advances the economic resilience strategy through systematic site readiness work that positions underutilized PTCA industrial and publicly held waterfront properties to attract clean economy investment and through a feasibility study for the former U.S. Environmental Protection Agency (EPA) Region 9 Western Ecology Division Laboratory at 180 Kansas Avenue, Richmond, as a Maritime Business and Technology Accelerator. The EPA Region 9 site monitored and documented the air quality impacts of Chevron refinery emissions on the PTCA community for decades, accumulating decades of evidence of environmental harm. Its potential transformation into a clean economy accelerator is a

direct expression of the just transition that the Local Community Benefits Fund is designed to catalyze replacing the institution that documented the harm with one that catalyzes the recovery. The project also advances the region's air-pollution reduction strategy by systematically identifying and qualifying clean-technology development sites within the PTCA and linking them to statewide opportunities such as the California Jobs First Bay Area Maritime Cluster and the GO-Biz Business-Ready Sites Program. In addition, the project will produce the pre-development analysis needed to establish a maritime electrification accelerator at a PTCA waterfront site, transforming an area long used for environmental monitoring into a hub for clean-economy innovation and job creation.

This project is structured as a re-grant from East Bay EDA, which serves as the sole Lead Applicant with no Co-Applicant, to Sunstone Cities LLC as the primary implementation entity. East Bay EDA has overall management capacity sufficient to administer a re-granting process of this scale, as demonstrated through its administration of multiple multi-partner economic development initiatives including the federal Advanced Manufacturing Jobs Innovation Accelerator Challenge, its role as fiscal entity for Alameda County's economic development programs and its 35-year track record of managing regional multi-stakeholder projects of comparable complexity and budget.

East Bay EDA will submit criteria for re-granting to the Bay Area Air District prior to the issuance of a sub-award to Sunstone Cities LLC, ensuring that the Air District has full visibility into the selection process and sub-award terms. Sunstone Cities LLC is led by John Keisler, whose 20-plus years in local government economic development and direct management of over 140 city-owned leases and 160 parcel dispositions in the City of Long Beach provides precisely the skill set this project requires: the ability to assess publicly held industrial property, structure financially sustainable development models and build the public-sector relationships necessary to advance site control and permitting. Berkeley Blue, a data-driven market intelligence and blue economy sector strategy firm, will work with Sunstone Cities to provide the investment ecosystem analysis and sector expertise that frames the EPA Region 9 site within the national maritime innovation landscape.

COMMUNITY IMPACT (20 points)

3. ***Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.***
4. ***Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.***
5. ***Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.***

The project serves the PTCA industrial corridor and waterfront communities of Richmond, North Richmond and adjacent West Contra Costa neighborhoods. The EPA Region 9 Western Ecology Division Laboratory at 180 Kansas Avenue is located within the PTCA boundary, approximately one mile from the Chevron refinery fence line, in a neighborhood that has borne the cumulative burden of refinery emissions for more than a century. The laboratory, a federal facility operating under the General Services Administration's property management, has been the scientific instrument of documenting that burden: its research staff measured airborne particulate matter, volatile organic compounds and sulfur dioxide concentrations in the communities surrounding the refinery, producing the peer-reviewed science that underpins many of the PTCA's CalEnviroScreen designations. The site's symbolism for this project is therefore precise and intentional: the place where the harm was measured should become the place where the recovery is built.

The PTCA has a significant inventory of underutilized industrial parcels whose clean economy reactivation is impeded by fragmented ownership data, regulatory complexity, uncertain environmental status and the absence of coordinated site readiness support. The Northern Waterfront Economic Development Plan, completed in 2019 and updated in 2023, produced valuable corridor-level mapping of the broader Northern Waterfront but did not generate parcel-level clean technology compatibility assessments for the PTCA, particularly for the smaller industrial parcels in North Richmond and the inner Richmond industrial neighborhoods where brownfield status, utility constraints and zoning ambiguities create barriers to investment that corridor-level mapping cannot resolve. The Governor's Office of Business & Economic Development (GO-Biz) Business-Ready Sites program, which the State of California uses to attract business investment to communities across the state, includes few PTCA sites precisely because the pre-development documentation that GO-Biz requires information about environmental clearance, utility infrastructure assessments, zoning confirmation and site condition reports that has not been assembled for PTCA industrial parcels. This project fills that gap systematically, producing the documentation that makes PTCA sites investable within the state's business attraction ecosystem.

Community engagement for the feasibility study is led by Communities for a Better Environment (CBE), an environmental justice organization with more than 30 years of organizing relationships in the PTCA communities most directly affected by Chevron refinery emissions. CBE's Richmond office maintains active campaigns on refinery fence-line air monitoring, health impact assessment and just transition planning and its community health workers have direct personal relationships with residents in North Richmond, Central Richmond and San Pablo. CBE brings multilingual capacity in Spanish, Vietnamese and Tagalog and a methodology for community engagement that is structured as genuine two-way deliberation rather than informational outreach. CBE has participated actively in the PTCA's AB 617 Community Emissions Reduction Plan development process, including the community air monitoring design and the economic transition planning

components and understands the specific concerns, priorities and expectations of PTCA residents about industrial land use and economic development in their neighborhoods.

The direct community benefits of this project flow through two channels. First, the parcel-level industrial asset database and GO-Biz qualification work creates the conditions for clean economy businesses and maritime technology tenants to locate in the PTCA, generating jobs and economic opportunity for PTCA residents within their communities rather than requiring them to commute elsewhere for clean economy employment. Second, the EPA Region 9 feasibility study, if followed through to implementation in subsequent funding rounds, would convert a symbolically significant federal property into a community-anchored clean economy hub addressing decades of environmental harm through economic transformation at the same site. The community engagement process designed into the study, led by CBE through workshops and an advisory panel process, ensures that PTCA residents' vision for the EPA Region 9 site shapes the development analysis rather than being constrained by consultant assumptions.

COMMUNITY ENGAGEMENT (10 points)

6. ***Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.***

Communities for a Better Environment (CBE) leads community engagement for Project 2 as the designated Community Engagement Partner, operating through its existing PTCA organizing infrastructure. CBE's current PTCA campaigns including active refinery fence-line monitoring using community-placed sensors that generate real-time air quality data accessible to residents via CBE's community platforms, health impact documentation in collaboration with UC Berkeley School of Public Health researchers and just transition planning through the AB 617 CERP process mean that engagement for this project begins from a position of established trust and active relationship rather than cold outreach.

Three (3) community workshops will be conducted in the PTCA for the EPA Region 9 Laboratory feasibility study, with multilingual materials in Spanish, Vietnamese and Tagalog. Childcare and food are provided at all in-person workshops. Each workshop is scheduled in the evenings or weekends to accommodate working families and is held in PTCA community spaces neighborhood centers, school multipurpose rooms or faith institution halls that are familiar and accessible to residents. Workshops are structured around specific decision points in the feasibility study:

- Workshop #1 addresses site vision and use priorities, presenting the history of the EPA Region 9 site and inviting community input on what an appropriate replacement use should accomplish for the PTCA;

- Workshop #2 addresses preferred development model options and community benefit covenant priorities, presenting the range of public-private partnership structures analyzed in Work Package C and collecting community preferences;
- Workshop #3 reviews the draft implementation roadmap and funding calendar, giving community members an opportunity to affirm or redirect the recommendations before finalization.

A Community Advisory Panel for the feasibility study provides ongoing governance input throughout the study period. Panel members include PTCA residents nominated through CBE's community networks; representatives of North Richmond community-based organizations including the North Richmond Shoreline Working Group and Richmond LAND; and PTCA small business owners with interest in the Northern Waterfront corridor who have expressed interest in clean economy opportunities. Panel feedback is documented and incorporated into each interim deliverable, with written responses explaining how panel input shaped each successive work package. CBE produces a community-facing summary of each panel discussion in English and Spanish within two weeks of each meeting and distributes it through CBE's community communication channels.

Developer and broker tours of PTCA industrial sites are designed to include a community co-host role for CBE: a CBE community organizer accompanies each tour group, providing context on community expectations, benefit priorities and the community engagement process underway. This positions community benefit as a condition of engagement rather than an afterthought in developer conversations, establishing from the earliest investor contact that PTCA site development is expected to meet community standards.

MEASURABLE OUTCOMES PLAN (30 points)

7. ***Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.***
8. ***Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.***
9. ***Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.***

Project 2 delivers two integrated work streams over 36 months through a sub-award from East Bay EDA to Sunstone Cities LLC to deliver the necessary work: a PTCA parcel-level industrial asset mapping and site readiness program and a comprehensive feasibility study for the former EPA Region 9 Western Ecology Division Laboratory as a Maritime Business and Technology Accelerator. The roles of each entity are defined as follows:

- **East Bay EDA** administers the grant, manages reporting and compliance and coordinates cross-project integration through the initiative's Steering Committee.
- **Sunstone Cities LLC**, as the sub-awardee, leads day-to-day implementation of the feasibility study work packages and manages the site readiness work stream.
- **Communities for a Better Environment (CBE)** manages the community engagement work stream under a sub-contract from Sunstone Cities.

The East Bay EDA will submit its criteria and process for the re-grant to Sunstone Cities to the Air District prior to sub-award execution, as required.

Key activities and outcomes are described as follows:

- The asset mapping work builds directly on the Northern Waterfront Economic Development Plan and mapping work sponsored by the Metropolitan Transportation Commission's Priority Production Area Technical Assistance Program, producing a PTCA-specific industrial asset database with clean technology compatibility assessments for a minimum of twenty (20) parcels. Assessments include utility infrastructure capacity (electrical service, gas, water, telecommunications), brownfield status review drawing on existing Phase I reports and database searches, zoning constraints and use permit requirements and estimated cost ranges for site preparation for maritime technology tenant types. The completed database is formatted for integration with the Resilient East Bay and Green Empowerment Zone websites, making PTCA sites discoverable to regional clean economy developers and brokers who currently have no systematic way to identify PTCA industrial properties.
- GO-Biz Business-Ready Sites qualification work funds the systematic documentation, environmental review preparation and stakeholder coordination needed to qualify a minimum of three eligible PTCA industrial sites for state certification directly connecting Richmond to the California Jobs First ecosystem at the site-readiness level and positioning PTCA sites for state-facilitated business attraction outreach.
- Two structured developer and broker tours annually, each connecting at least five prospective clean economy tenants or developers with PTCA industrial sites, build awareness and interest in the PTCA as a viable location for maritime technology and clean energy businesses.
- A dedicated Business Navigation Lead position embedded with the East Bay EDA project team addresses the regulatory friction including zoning interpretation, permit application support and inter-agency coordination between the City of Richmond planning, building and port departments that has been identified by PTCA businesses and developers as a primary barrier to industrial reactivation.
- The EPA Region 9 Laboratory feasibility study is organized into five work packages delivered over 18 months.

- **Work Package A** delivers a physical and environmental assessment including structural review of the existing laboratory building, a Phase I Environmental Site Assessment with Phase II contingency provisions given the former laboratory's chemical storage and analytical laboratory history, utility infrastructure assessment for maritime technology tenant requirements including electrical service capacity, laboratory gas and water systems and telecommunications and an ADA and life-safety code gap analysis identifying the improvement scope required for public occupancy.

- **Work Package B** delivers a market analysis and tenant demand study through structured interviews with 20 to 30 blue economy companies from the East Bay EDA member network and the broader California Jobs First maritime cluster pipeline and through benchmarking against comparable maritime and cleantech incubators nationally including AltaSea at the Port of Los Angeles, Washington Maritime Blue, Newlab at the Brooklyn Navy Yard and SeaAhead in Boston, with specific analysis of anchor tenant feasibility for the UC Berkeley Richmond Field Station given its proximity of less than one mile and its established blue economy research programs.

- **Work Package C** delivers a public-private partnership development model analysis evaluating a minimum of four P3 structures: ground lease to a nonprofit operator similar to the Friends of the Port model being implemented at the Craneway Pavilion; CDFI-structured ownership through a Community Development Finance Institution with experience in community benefit real estate; a City of Richmond redevelopment joint venture structured under the successor agency framework; and a community land trust with affordability covenants protecting long-term PTCA small business access. Each structure is analyzed against 20-year operating pro formas, community benefit covenant enforceability, capital stack feasibility and GSA surplus property disposition pathway compatibility. Work Package C also assesses eligibility for Opportunity Zone investment (the EPA Region 9 site is located within a designated Opportunity Zone), New Markets Tax Credits, U.S. EDA Public Works grants, IBank financing and Public Benefit Conveyance under the Federal Property and Administrative Services Act.

- **Work Package D** delivers the community engagement process through CBE-led workshops and the Community Advisory Panel.

- **Work Package E** delivers the implementation roadmap, funding calendar and final feasibility study report.

Budget summary:

- **Lead Applicant: County of Alameda/East Bay EDA**
    - Proportionate personnel costs for Project Coordinator (1.0 FTE), Business Navigator (0.5 FTE)) and proportional project management support at EBCF and SJSURF.
        - Project Coordinator (works across all projects)
        - Business Navigation Lead (supports projects 1, 2 & 4)
    - Community Engagement – Communities for a Better Environment - (proportionate cost share for project from $64,000 total, includes costs of CBE-led workshop facilitation, translation and interpretation, participant stipends, childcare support and Community Advisory Panel operations, including stipends for panel members)
    - Communications – proportionate support for project (from $60,000 total)
    - Professional Services & Consultants – Sunstone Cities ($540,000)
        - Includes blue economy sector analysis, market intelligence, environmental consulting, capital stack analysis and municipal finance advising, asset mapping, and developer and broker tours)
    - Subcontractors & Vendors
        - Development and deployment of mapping tools and related technologies (proportionate cost share for project from $60,000 total)
        - Incentive & Resource Navigation supports (proportionate cost share from $210,000 total)
    - Indirect cost share for East Bay EDA (15% of direct costs, reflecting the Alameda County administrative relationship)
- Total project cost is $653,774 over 36 months

ECOSYSTEM ALIGNMENT (10 points)

10. Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).

This project is one of four interconnected investments in the Richmond Blue-Green Economic Resilience Initiative and it is the one whose value is most immediately dependent on being understood as part of a system rather than a standalone initiative. The PTCA Industrial Site Readiness and Maritime Business Accelerator Feasibility Study is the physical and policy infrastructure layer of a deliberately closed circuit: a complete, end-to-end support ecosystem for a PTCA-rooted maritime cluster that the four projects together constitute. Its role is to solve the site problem: the absence of parcel-level clean technology compatibility data, GO-Biz Business-Ready Sites certification and pre-development analysis on the region's most symbolically significant underutilized federal property the former EPA Region 9 Western Ecology Division Laboratory at 180 Kansas Avenue that currently prevents the PTCA from attracting the industrial investment that every other part of the system is ready to deploy. The companies incubating in the

Craneway Pavilion Maritime Innovation Hub (Project 4) need investable sites to anchor permanent operations as they graduate from incubation; this project produces those sites. The maritime tradespeople trained through the Working Waterfront Coalition Richmond Site and Earn and Learn Pilot (Project 3) need employers within the PTCA who can hire them at scale; the clean economy businesses that locate on qualified PTCA industrial parcels become those employers. The PTCA manufacturers that the Blue-Green Business Concierge and Technical Assistance Hub (Project 1) supports through operational optimization, energy efficiency audits and clean economy market access need those same employers in their procurement networks; the maritime technology businesses attracted to certified PTCA sites complete that supply chain. The feasibility study for the EPA Region 9 site is not simply a planning exercise it is the pre-development investment that positions a site of enormous symbolic and locational significance at the center of a maritime technology and clean economy accelerator, converting the institution that documented 80 years of refinery harm into the institution that catalyzes the recovery.

These four LCBF projects operate in direct alignment with East Bay EDA's role in supporting the California Jobs First Bay Area Maritime Cluster investments in the Ecosystem Backbone Organization, the Maritime Innovation Campus and the Maritime Workforce Integration Network which provide the regional coordination capacity, applied research infrastructure and workforce credentialing pathways that translate site-level investment into cluster-level competitive advantage. The demand signal that all four projects together send to federal agencies, defense contractors and institutional investors is this: the PTCA has the workforce, the innovation space, the business support infrastructure and now, with this project, the site-ready industrial land and pre-development analysis to host a maritime cluster investment at scale. This project is what closes the circuit.

Project 2 is the site readiness and investment infrastructure layer of the Bay Area Maritime Cluster strategy that East Bay EDA is advancing through California Jobs First. The Maritime Innovation Campus Exhibit B project identifies the Richmond waterfront as one of the anchor nodes of the regional cluster; this feasibility study produces the pre-development analysis that makes a Maritime Business and Technology Accelerator at the EPA Region 9 site bankable and investable within the cluster's investment timeline. The Ecosystem Backbone Organization Exhibit B project, led by Solano County Economic Development Corporation with Cal Poly Maritime Academy and Sunstone as partners, identifies site certification and investment attraction as regional coordination priorities; the GO-Biz Business-Ready Sites qualification work delivers exactly those outcomes for PTCA parcels, creating the investable site pipeline that the Backbone's regional marketing and investor convening infrastructure needs to function.

The project is directly in alignment with the Northern Waterfront Economic Development Initiative and Metropolitan Transportation Commission (MTC)'s Priority Production Area designation for the Northern Waterfront corridor, building on prior MTC-funded mapping work by adding the parcel-level clean technology compatibility layer that corridor-level mapping did not include. The Green Empowerment Zone geography encompasses the

PTCA; the project's industrial asset mapping and site qualification work serves GEZ's clean energy manufacturing siting priorities by making GEZ sites discoverable and investable. The Path to Clean Air CERP identifies economic transition, industrial land reactivation and community-centered development as priorities for the PTCA; this project delivers pre-development work that makes those priorities investable by providing the analytical foundation that public and private funders require before committing capital to site development.

The EPA Region 9 feasibility study is directly responsive to the Presidential Executive Order on Revitalizing Our Nation's Commitment to Environmental Justice for All, which directs federal agencies to prioritize the transformation of remediated or underutilized federal properties in environmental justice communities into economic development assets. The GSA surplus property disposition pathway through which the federal government can convey surplus property to state and local governments or qualified nonprofits at below-market or no-cost terms under Public Benefit Conveyance provisions is a mechanism that Work Package C is specifically designed to evaluate for the EPA Region 9 site, potentially enabling a community-benefit development at minimal land acquisition cost. The ARB zero-emission vessel mandate, the Presidential Maritime Action Plan, the SHIPS for America Act and the Department of Defense Maritime Industrial Base Program collectively create a federal investment environment in which a PTCA maritime accelerator at the EPA Region 9 site could attract federal program investment within the 36-month grant timeline if the pre-development work this project funds is completed on schedule.

CAPACITY (10 points)

11. ***Describe the Project Lead's experience managing and implementing projects of similar scope and size.***

12. ***Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.***

East Bay EDA, as the sole Lead Applicant and re-granting entity for this project, has overall management capacity sufficient to administer a re-granting process of this scale and complexity. Alameda County, as fiscal entity, administers procurement systems, financial management, auditing procedures and monitoring requirements for multiple federally funded programs annually; the County's compliance infrastructure is fully adequate for a re-grant of this scope. Founded in 1990 and operating as a public-private partnership administratively hosted by Alameda County, East Bay EDA has a 35-year track record of administering multi-partner economic and workforce development initiatives, including the federal Advanced Manufacturing Jobs Innovation Accelerator Challenge, which involved multiple federal funding streams coordinated across five project partners and required compliance with OMB Uniform Guidance. East Bay EDA will submit its re-granting criteria,

sub-award terms and selection rationale to the Bay Area Air District prior to the issuance of the sub-award to Sunstone Cities LLC, providing the Air District full transparency into the re-granting process.

Sunstone Cities LLC, the primary sub-awardee, is led by John Keisler, whose professional career spans more than 20 years in local government economic development. As Economic Development Director for the City of Long Beach, California's second-largest container port and the nation's largest ___, Keisler managed an economic development portfolio that included over 140 city-owned leases and 160 parcel dispositions, facilitated the repositioning of publicly owned assets including the historic Queen Mary ocean liner, the Fairmont Breakers Hotel and Boeing's former C-17 manufacturing facilities to new uses and built innovative public-private-education partnerships including the Long Beach Accelerator at Cal State Long Beach and the Long Beach Economic Partnership. Keisler's experience in maritime-adjacent economic development, publicly owned industrial asset management and innovation district strategy is directly matched to the work this project requires. Sunstone's role as Capital Strategy Partner in the Maritime Innovation Campus Exhibit B project, where it is responsible for accelerator design, commercialization support and capital strategy, provides an existing institutional relationship with Cal Poly Maritime Academy in Vallejo and with the Bay Area Maritime Cluster that creates direct coordination efficiencies between Project 2 and the broader cluster strategy.

The following two Sunstone Cities partners will bring additional, specialized capacity to the Sunstone Cities team:

- GrowthAxis Group brings direct operational experience in industry cluster strategy and workforce-aligned economic development. GrowthAxis's methodology is grounded in embedded on-the-ground business assessment and cross-sector partnership development a methodology directly applicable to the multi-stakeholder site readiness and market activation work this project requires, where the path from parcel assessment to GO-Biz certification to developer engagement requires sustained relationships with City of Richmond planning staff, Port of Richmond commissioners, Contra Costa County economic development officials and PTCA community organizations simultaneously.

- Berkeley Blue brings data-driven blue economy market intelligence, maritime investment ecosystem analysis and experience benchmarking maritime innovation infrastructure programs nationally. Berkeley Blue's sector expertise, grounded in active participation in Bay Area maritime innovation networks and direct relationships with maritime venture capital funds and corporate maritime innovation programs, frames the EPA Region 9 feasibility study within the competitive national landscape of maritime accelerators and helps position the Richmond site's specific advantages Bay access, proximity to UC Berkeley, waterfront industrial character and PTCA community benefit framework within the investment criteria that maritime and ocean economy funders actually use.

The dedicated Project Manager within East Bay EDA's staffing, funded under the overall initiative budget, provides the administrative coordination, compliance monitoring and funder reporting interface for this project. Project 2 is managed through the East Bay EDA Steering Committee structure, with East Bay EDA providing overall administrative oversight and Sunstone Cities managing day-to-day project implementation. Monthly reporting to the Steering Committee ensures cross-project integration with Projects 1, 3 and 4.

READINESS (10 points)

13. ***Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.***
14. ***Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.***
15. ***Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.***
16. ***Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.***
17. ***Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.***

No permits or CEQA review are required for the feasibility study itself. The feasibility study is a planning and analytical activity; its deliverables are reports, analyses and recommendations, not physical development. A Phase I and contingency Phase II Environmental Site Assessment is a deliverable of the study, not a prerequisite; any future physical development on the EPA Region 9 site would require regulatory coordination that is addressed in Work Package E's implementation roadmap. The asset mapping and GO-Biz integration work requires no permits or site control; it involves data collection, site visits for infrastructure assessment and documentation preparation that proceed based on publicly available information, voluntary owner participation and standard planning-level access arrangements.

The feasibility study is structured as a pre-development investment precisely because site control of the EPA Region 9 Laboratory has not yet been established. This is transparent and directly consistent with the LCBF requirement that site control be demonstrated by the time of grant agreement execution only for projects requiring site control to begin implementation. The feasibility study does not require site control to proceed; the study's analytical work physical assessment, market analysis, P3 model evaluation and community engagement is specifically designed to produce the evidence base that makes site control pursuit viable and fundable. The study's 18-month timeline fits comfortably

within the 36-month grant term, leaving 18 months for implementation roadmap execution, follow-on funding pursuit, GSA disposition process engagement and site control advancement.

The Sunstone Cities team is prepared to begin work immediately upon grant execution. Berkeley Blue has already conducted preliminary blue economy market research relevant to the Richmond waterfront through its engagement with the RII Maritime Cluster network and can mobilize structured data collection within the first month of the grant. GrowthAxis Group has conducted prior on-the-ground assessments in the Northern Waterfront area and has existing relationships with City of Richmond's economic development staff. CBE's community engagement infrastructure established through its ongoing PTCA organizing campaigns can be activated for the first community workshop within the first quarter. East Bay EDA's re-grant sub-award documentation to Sunstone Cities can be executed expeditiously following grant award, as the sub-award terms have been structured in advance and will require only final scope confirmation before execution.

The primary risk is federal property disposition timelines for the EPA Region 9 site. GSA surplus property dispositions involving community benefit conveyances can take 12 to 36 months depending on whether the property has been formally declared surplus, whether competing federal agency uses exist and the complexity of the environmental clearance process. This risk is addressed by treating the feasibility study as a parallel track that advances the analytical and community engagement work simultaneously with disposition progress, ensuring that the moment a disposition pathway becomes available, Richmond and PTCA partners have a community-validated, financially analyzed and partnership-ready development proposal to advance. The secondary risk is GO-Biz site certification timelines for the PTCA industrial parcels targeted in the asset mapping work; this risk is mitigated by engaging GO-Biz business development staff as a project partner in the site qualification process from the outset, leveraging the existing California Jobs First relationship to access GO-Biz technical assistance that is otherwise unavailable to individual communities.

No physical infrastructure is constructed or operated under this project; operations and maintenance requirements apply only to the analytical and engagement deliverables. The industrial asset database produced by the asset mapping work will be housed on the East Bay EDA website and integrated with the Resilient East Bay platform, both of which have existing hosting and maintenance commitments funded through East Bay EDA's operating budget. The feasibility study report will be publicly accessible through the East Bay EDA and CBE websites and the Richmond Public Library system, ensuring continued community access to the study's findings beyond the grant term.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The Path to Clean Air (PTCA) Industrial Site Readiness and Maritime Business Accelerator Feasibility Study positions underutilized PTCA industrial and publicly held waterfront properties to attract clean economy investment through industrial asset mapping and land use assessments, GO-Biz Business-Ready Sites qualification for priority business attraction, and a comprehensive 18-month feasibility study for the former EPA Region 9 Western Ecology Division Laboratory at 180 Kansas Avenue. The study will evaluate the site's potential as a Maritime Business and Technology Accelerator and deliver the pre-development analysis, as a Maritime Business and Technology Accelerator delivering the pre-development analysis, community-validated development vision and public-private partnership structure needed to make a maritime accelerator at this symbolically important location bankable and investable.

Measurable Outcome	Indicator(s)
1. Produce a PTCA-specific industrial asset database with clean technology compatibility assessments for a minimum of 20 PTCA industrial parcels, formatted for integration with the Resilient East Bay and Green Empowerment Zone platforms.	• Number of PTCA industrial parcels assessed for clean technology compatibility (target: 20+) • Database integration with Resilient East Bay and GEZ platforms completed (yes/no) • Number of developer or broker inquiries received regarding PTCA parcels following database publication
2. Qualify a minimum of 3 eligible PTCA industrial sites for GO-Biz Business-Ready Sites state certification, directly connecting the PTCA to California's business attraction infrastructure.	• Number of PTCA sites submitted for GO-Biz Business-Ready Sites certification (target: 3+) • Number of sites receiving GO-Biz certification within grant term • Number of GO-Biz-facilitated business attraction inquiries for certified PTCA sites during grant term
3. Conduct a minimum of 6 structured developer and broker tours of PTCA industrial sites (2 per year), with each tour reaching at least 5 prospective clean economy tenants or developers.	• Number of developer/broker tours conducted (target: 2/year, 6 total) • Number of prospective clean economy tenants or developers participating in tours (target: 5+ per tour)

Measurable Outcome	Indicator(s)
	• Number of documented site inquiries or expressions of interest resulting from tours • Communities for a Better Environment (CBE) co-host participation rate (target: 100% of tours)
4. Complete the EPA Region 9 Laboratory feasibility study (Work Packages A-E) producing a physical/environmental assessment, market analysis, minimum of 4 Public-Private Partnership (P3) model analyses, community engagement findings and a final implementation roadmap and funding calendar.	• Work Package A (physical/environmental assessment) delivered including Phase I ESA, utility assessment, code gap analysis • Work Package B (market analysis) delivered including 20-30 blue economy company interviews and national benchmarking • Work Package C (P3 model analysis) delivered including 4+ development model analyses with 20-year pro formas • Work Package D (community engagement) delivered including 3 CBE workshops and 6+ Advisory Panel meetings • Work Package E (final report and implementation roadmap) delivered and publicly distributed
5. The feasibility study findings generate at least 1 documented commitment from a public agency, community development financial institution (CDFI) or institutional investor to advance the EPA Region 9 site redevelopment and at least 1 follow-on funding application has been submitted for site development.	• Number of documented commitments from public agencies, CDFIs or institutional investors to advance EPA Region 9 site (target: 1+) • Number of follow-on funding applications submitted for EPA Region 9 site development (target: 1+) • GSA surplus property disposition process timeline confirmed and incorporated into implementation roadmap

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Produce PTCA industrial asset database with 20+ parcel assessments integrated with Resilient East Bay/Green Empowerment Zone websites	A. Asset mapping methodology and parcel list finalized; permitting navigator engaged	1. East Bay EDA executes re-grant sub-award to Sunstone Cities LLC following Air District review of re-granting criteria	East Bay EDA	Sunstone Cities LLC	Q1 2027
		2. Sunstone Cities and GrowthAxis develop asset mapping methodology; identify 20+ target PTCA parcels from MTC Priority Production Area database, County Assessor records and Port of Richmond inventory	Sunstone Cities / GrowthAxis	East Bay EDA	Q1 2027
		3. Engage contract permitting navigator (24-month contract) within East Bay EDA project team	East Bay EDA	City of Richmond planning staff	Q1 2027
	B. Field assessments complete; database built and integrated	1. Conduct parcel-level field assessments for 20+ target parcels: utility capacity, brownfield status, zoning, estimated site preparation costs	Sunstone Cities / GrowthAxis	Environmental consultant	Q3 2027
		2. Build PTCA industrial asset database; format for Resilient East Bay and GEZ platform integration	Sunstone Cities	East Bay EDA	Q4 2027
		3. Publish database on East Bay EDA and GEZ platforms; distribute to GO-Biz business development staff	East Bay EDA	Sunstone Cities	Q1 2028

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
2. Qualify 3+ PTCA sites for GO-Biz Business-Ready Sites certification by Month 24	A. GO-Biz qualification packages prepared for 3 target sites	1. Engage GO-Biz business development staff as project partner; confirm qualification requirements and documentation checklist for target PTCA sites	East Bay EDA	Sunstone Cities	Q2 2027
		2. Prepare site qualification documentation for 3 target parcels: environmental clearance, utility infrastructure, zoning confirmation, site condition reports	Sunstone Cities / GrowthAxis	Environmental consultant; permitting navigator	Q2 2028
		3. Submit 3 PTCA sites for GO-Biz Business-Ready Sites certification; track certification status	East Bay EDA	Sunstone Cities; GO-Biz	Q3 2028
3. Conduct 6 developer/broker tours reaching 5+ prospective clean economy tenants per tour	A. Year 1 tours conducted (2 tours); CBE community co-host role established	1. Develop tour format and developer/broker outreach list; establish CBE community co-host role and community benefit briefing materials for each tour	Sunstone Cities	CBE; East Bay EDA	Q2 2027
		2. Conduct 2 Year 1 PTCA industrial site tours with 5+ developer/broker participants each; CBE community co-host present at each tour	Sunstone Cities / GrowthAxis	CBE	Q4 2027
		3. Document tour participants, site inquiries and expressions of interest; follow up with interested developers within 30 days	Sunstone Cities	East Bay EDA; permitting navigator	Q4 2027

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	B. Years 2-3 tours conducted; developer pipeline maintained	1. Conduct 4 additional tours in Years 2-3 (2/year); maintain developer/broker outreach list and follow up on prior tour inquiries	Sunstone Cities / GrowthAxis	CBE; East Bay EDA	Q4 2029
		2. Report cumulative developer/broker tour outcomes in 36-month final report	East Bay EDA	Sunstone Cities	Q1 2030
4. Complete EPA Region 9 feasibility study (Work Packages A-E) by Month 18	A. Work Packages A and B complete (physical assessment and market analysis)	1. Engage environmental consultant for Phase I Environmental Site Assessment (ESA); complete structural review, utility assessment and ADA/life-safety code gap analysis of EPA Region 9 building (Work Package A)	Sunstone Cities	Environmental consultant; Berkeley Blue	Q3 2027
		2. Conduct 20-30 structured blue economy company interviews; complete national benchmarking of maritime incubators; assess UC Berkeley RFS anchor tenant feasibility (Work Package B)	Berkeley Blue	Sunstone Cities; East Bay EDA member network	Q4 2027
		3. Confirm GSA surplus property disposition process timeline; incorporate into project initiation documentation	Sunstone Cities	East Bay EDA	Q2 2027
4. Complete EPA Region 9 feasibility study (Work	B. Work Packages C and D complete (P3	1. Municipal finance advisor completes analysis of 4+ P3 development model structures	Municipal finance advisor	Sunstone Cities	Q1 2028

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
Packages A-E) by Month 18	analysis and community engagement)	with 20-year pro formas, OZ/NMTC/EDA/IBank eligibility and Public Benefit Conveyance assessment (Work Package C)			
		2. CBE conducts 3 community workshops and 6+ Advisory Panel meetings for EPA Region 9 feasibility study; document community input by workshop (Work Package D)	CBE	Sunstone Cities	Q1 2028
		3. Produce community-accessible summary of Work Package D findings in English and Spanish; distribute through CBE channels	CBE	Sunstone Cities	Q2 2028
	C. Work Package E complete; final report published and distributed	1. Produce implementation roadmap and funding calendar integrating Work Packages A-D findings; include GSA disposition pathway and recommended P3 structure (Work Package E)	Sunstone Cities	Berkeley Blue; municipal finance advisor	Q3 2028
		2. Produce final feasibility study report; present to East Bay EDA, CBE, City of Richmond and Air District; distribute publicly through East Bay EDA website and Richmond Public Library	East Bay EDA	Sunstone Cities; CBE	Q3 2028
5. Generate 1+ public/institutional	A. Follow-on partnerships and	1. Present feasibility study findings to prospective P3	Sunstone Cities	East Bay EDA	Q4 2028

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
commitment to advance EPA Region 9 site; submit 1+ follow-on funding application	funding applications advanced	partners (CDFIs, City of Richmond redevelopment staff, maritime industry investors) identified in Work Package C			
		2. Submit at least 1 follow-on funding application for EPA Region 9 site development (EDA Public Works, IBank, NMTC application or equivalent) based on recommended capital stack	East Bay EDA	Sunstone Cities; municipal finance advisor	Q2 2029
		3. Document any public agency, CDFI or investor commitments to advance site; include in 36-month final report to Air District	East Bay EDA	Sunstone Cities	Q1 2030

Bay REPAIR - Local Community Benefits Fund - Round 1 – Project Narrative

Application Information	
Application Title	Richmond Blue-Green Economic Resilience Initiative
Lead Applicant Name	East Bay Economic Development Alliance (East Bay EDA)
Project Location	Path to Clean Air Community - Richmond, San Pablo, North Richmond and surrounding unincorporated West Contra Costa County
Overall Funding Request	$4,977,286
Grant Term Request	3 years
Project Information	
Project Title	Working Waterfront Coalition Richmond Site and Earn and Learn Pilot
Project Lead	Working Waterfront Coalition (dba Friends of the Port)
Project Location	Richmond, CA - PTCA geography; West Contra Costa Unified School District service area
Project Funding Request	$878,963

STRATEGY ALIGNMENT (10 points)

1. ***Provide a short summary (1-2 paragraphs) that outlines this project.***
2. ***Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:***
    - ***Reduce air pollution and improve health outcomes***
    - ***Build economic resilience for a just transition***

The Working Waterfront Coalition Richmond Site and Earn and Learn Pilot establishes a Richmond-based maritime and clean economy workforce training operation, expands industry partnership and employer pipeline development, launches a paid internship pilot for PTCA residents in clean economy firms and builds a workforce-to-contractor feedback loop through the Maritime Contractor Development Program (MCDP) in partnership with San Francisco Bay Ferry. The project advances both LCBF strategies of reducing air pollution and improving health outcomes as well as building economic resilience for a just transition. Workforce training in marine welding, outside machining, pipefitting, marine electrical systems and hull coatings directly prepares PTCA residents for the zero-emission vessel retrofit market, which the California Air Resources Board's zero-emission vessel mandate is generating at scale $800 million to $1.2 billion in electrification contracts by

2035. The Earn and Learn internship pilot builds economic resilience by creating paid pathways from PTCA community membership into clean economy employment for residents who would otherwise remain outside the maritime labor market. Skills mapping of displaced and at-risk refinery-adjacent workers identifies transferable competencies and connects them to target clean economy occupations, directly addressing the economic disruption the refinery contraction is creating in the PTCA.

The Working Waterfront Coalition is a dba of Friends of the Port, a 501(c)(3) organization founded to rebuild maritime career pathways for Richmond and West Contra Costa residents who lost generational employment when the Kaiser Shipyard closed. Over more than a decade of operation, the Coalition has developed an employer-designed curriculum spanning marine welding, outside machining, pipefitting and marine electrical systems, delivered in partnership with Bay Ship and Yacht, the largest ship repair yard in the Bay Area and a direct employer of the tradespeople the Coalition trains and San Francisco Bay Ferry, the public ferry operator facing the most pressing ARB zero-emission vessel compliance timelines of any Bay Area operator. The Coalition's training model is grounded in the conviction that workforce training works only when barriers to completion are removed: its wraparound services package, which integrates tools stipends, childcare support and transportation reimbursement from day one of each cohort, is the operational reason behind its 93 percent cohort completion rate and 75 percent placement rate into maritime employment or registered apprenticeships. The Richmond site activates within an already-functioning regional training infrastructure through the Coalition's existing partnership with Cal Poly Maritime Academy (Vallejo), Bay Ship and Yacht and the Bay Area Community Colleges Consortium through the California Jobs First Maritime Workforce Integration Network no new employer relationships or curriculum development are required to begin the first cohort.

COMMUNITY IMPACT (20 points)

3. ***Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.***
4. ***Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.***
5. ***Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.***

The project serves PTCA residents across Richmond, North Richmond, San Pablo and surrounding West Contra Costa communities. The Richmond training site is located within the PTCA boundary, at a facility in the Point Potrero Marine Terminal complex that is in

active discussion with the Port of Richmond a location that would place the training facility on working waterfront property where graduates can observe, practice and engage with the marine trades industry environment they are training to enter. The Earn and Learn internship pilot specifically targets PTCA residents and is designed to lower barriers to entry for individuals who have not previously engaged with formal workforce training, incorporating multilingual outreach in Spanish, Vietnamese and Tagalog; tools stipends; childcare support; and transportation reimbursement as core program elements from program launch, not afterthoughts.

The PTCA faces a specific and documented workforce transition challenge that this project is designed to address with precision. The Chevron Richmond Refinery, which has operated continuously on the PTCA waterfront since 1902 and at its post-World War II peak employed thousands of Richmond residents in high-wage blue-collar occupations marine trades, pipe work, welding and electrical is in a multi-decade contraction driven by the state's accelerating clean energy transition. The refinery's employment base has shrunk from more than 2,500 direct employees at its peak to fewer than 1,000 today and the occupational categories most affected – industrial pipefitters, welders, maintenance mechanics and electrical technicians – are precisely the trades for which maritime clean economy employers are actively recruiting and cannot find sufficient qualified local labor. West Contra Costa County has historically carried among the highest unemployment rates in the Bay Area; PTCA residents face a labor market in which the industries that previously provided access to family-sustaining wages without advanced degrees are contracting, while the industries that are growing maritime electrification, clean marine energy, autonomous vessel systems have not previously recruited actively in the PTCA.

The Working Waterfront Coalition's model is directly responsive to this gap. Bay Ship and Yacht, which operates the largest ship repair dry dock on the Pacific Coast north of Long Beach and regularly employs more than 400 tradespeople during major vessel hauls, co-designed the Coalition's welding, machining and pipefitting curriculum and provides paid employment for graduates. SF Bay Ferry, which operates 12 vessels in daily commuter service and faces binding ARB compliance deadlines for zero-emission vessel conversion by 2033, co-designed the marine electrical and hull systems curriculum and hires directly from the Coalition's graduate pool. These employers are not advisory partners in name only they have curriculum stakes, compliance timelines and hiring needs that make the Coalition's training program operationally essential to their business models. The Coalition's wraparound services model addresses the specific economic barriers that prevent PTCA residents from completing training: without tools, workers cannot participate in hands-on training; without childcare, parents disproportionately single mothers in PTCA households cannot attend. The 93 percent completion rate is evidence that the model works when these barriers are addressed.

Community engagement for this project is led by Communities for a Better Environment (CBE), an environmental justice organization with over 30 years of organizing experience in the PTCA communities that bear the greatest cumulative burden from Chevron refinery

emissions. CBE's Richmond office maintains active campaigns on refinery fence-line monitoring, health impact assessment and just transition planning; its staff have trusted relationships with residents in North Richmond, Central Richmond, San Pablo and the Iron Triangle neighborhoods that are the primary recruitment targets for the workforce training program. CBE conducts outreach to PTCA residents for training cohort recruitment through its existing community networks door-to-door canvassing, community meetings, multilingual flyers and social media and relationships with faith institutions, community centers and local businesses. CBE administers community surveys that inform curriculum alignment with PTCA workforce priorities and produces multilingual recruitment and program materials in Spanish, Vietnamese and Tagalog. Its role as Community Engagement Partner for this project and for the Maritime Innovation Hub activation in Project 4 creates coordination efficiencies: CBE's field team builds awareness of both programs simultaneously, reinforcing the message that clean maritime employment opportunities exist for PTCA residents close to home.

Ridgeline Pathways and West Contra Costa Unified School District (WCCUSD), which serves approximately 27,000 students across Richmond, San Pablo, El Cerrito and adjacent communities, are co-design partners for the Earn and Learn internship pilot. WCCUSD operates Career Technical Education pathways in manufacturing, engineering and transportation that provide the academic pipeline and school-to-work coordination infrastructure for connecting PTCA students and young adults to internship placements. Ridgeline Pathways, an organization focused on workforce entry programming for young adults who have not yet connected to regular employment, contributes case management, navigation services and employer relationship development that complements the Coalition's more advanced trade training focus. Together, these three organizations – the Coalition, Ridgeline Pathways and WCCUSD – cover the full spectrum from secondary school career awareness through advanced apprenticeship-ready trade training, building a pipeline that can sustain the PTCA's maritime workforce development beyond the grant term.

COMMUNITY ENGAGEMENT (10 points)

6. ***Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.***

Communities for a Better Environment will lead community engagement for this project throughout the 36-month implementation period, conducting multilingual recruitment outreach in Spanish, Vietnamese and Tagalog across PTCA neighborhoods through CBE's existing community networks which include canvassing operations, community meetings at neighborhood centers and faith institutions and partnerships with Spanish- and Tagalog-language media outlets serving the Richmond community. CBE co-facilitates the quarterly participant input sessions that serve as the program's primary internal feedback

mechanism. These sessions are structured as facilitated conversations rather than surveys, allowing participants to speak in their primary language with CBE community health workers present as interpreters and covering wraparound services adequacy, curriculum relevance, employer quality and barriers to completion that the program has not yet addressed. The project Steering Committee reviews feedback quarterly and incorporates it into program adjustments within 60 days.

Ridgeline Pathways and WCCUSD engage students, families and community members in program design through school-based information sessions and WCCUSD's existing CTE Advisory Committee, which meets twice annually and includes employer and community input on career pathway programming. The Earn and Learn pilot design is submitted to this advisory committee for community validation before cohort launch in year two, ensuring that the pilot's design reflects community expectations rather than only organizational assumptions. WCCUSD's bilingual family engagement infrastructure including multilingual parent communications, community liaisons in North Richmond and San Pablo and family resource centers at high schools in the training program's recruitment geography provides an existing channel for reaching PTCA families about the Earn and Learn opportunity.

The skills mapping study, which assesses the transferable competencies of displaced and at-risk refinery-adjacent PTCA workers relative to target clean economy occupations, includes structured interviews conducted by CBE field staff with PTCA workers and community-based organizations representing refinery-adjacent trades including the United Steelworkers Local 5, which represents Chevron refinery workers and the Contra Costa Building Trades Council, which represents construction and maintenance tradespeople who have historically worked at the refinery. Study findings are shared publicly through CBE's community communication channels, the East Bay EDA website and a community-accessible summary report produced in English and Spanish. Four manufacturing site tours annually are promoted through CBE community networks and designed to expose PTCA students, adults in transition and displaced workers to maritime and clean economy employer environments, building awareness of career pathways before workers enter formal training. Each tour is planned to include a minimum of 20 PTCA participants and is followed by a structured debrief session at which CBE collects participant feedback on career interest, barriers to training entry and program awareness gaps.

MEASURABLE OUTCOMES PLAN (30 points)

7. ***Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.***
8. ***Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.***
9. ***Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.***

The Working Waterfront Coalition Richmond Site delivers three cohorts of 20 to 30 PTCA residents each in maritime and clean economy workforce training over 36 months, targeting a 75 percent or higher completion rate per cohort and a 75 percent or higher placement rate into maritime or clean economy employment or registered apprenticeship within 90 days of graduation. These targets reflect the Coalition's demonstrated historical performance and are set conservatively to account for the startup period required to establish a new geographic site and recruit a first cohort in a community where maritime career pathways have historically not been visible. The Richmond site activation begins in the first quarter with employer-designed curriculum localization in partnership with Bay Ship and Yacht, SF Bay Ferry and marine electrical employers facing ARB compliance timelines. Curriculum localization draws on the Coalition's existing validated curriculum modules and adapts delivery, site logistics and employer engagement to Richmond-specific conditions. The first cohort launches in the second quarter. Wraparound services tools stipends of up to $500 per participant, childcare support of up to $400 per month per participating parent and transportation reimbursement of up to $150 per month are integrated from day one.

Two Manufacturing Careers Specialists are employed for the grant term, each at 0.5 FTE. The first specialist focuses on maritime and shipbuilding employer engagement, placement pipelines and registered apprenticeship coordination with the International Brotherhood of Boilermakers Local 6, which covers Bay Area shipyard workers and the International Association of Machinists District 190, which covers Bay Area maintenance and manufacturing workers including Bay Ship and Yacht. This specialist builds and maintains the placement relationships that give graduates immediate employment options and manages the reporting infrastructure that tracks graduate outcomes at 30, 90 and 180 days. The second specialist focuses on clean energy and advanced manufacturing employer relationships, identifying and recruiting clean economy firms in marine electrification, autonomous vessel systems and harbor craft maintenance as placement sites for the Earn and Learn internship pilot and as long-term hiring partners for the Richmond site's training graduates. Both specialists coordinate industry sector convenings four annually across the two focus areas that bring together employers, workforce organizations and training providers within specific subsectors to surface curriculum gaps, address hiring barriers and build the employer relationships that sustain the program beyond the grant term.

A skills mapping study, completed by month nine, assesses the transferable competencies of 50 to 75 displaced and at-risk refinery-adjacent PTCA workers relative to target clean economy occupations, with findings incorporated into curriculum design for cohorts two and three and into employer outreach targeting for both Manufacturing Careers Specialists.

The Earn and Learn internship pilot funds 15 to 20 paid placements in year two and 15 to 20 paid placements in year three for PTCA residents in clean economy firms, using an intermediary employer-of-record model administered by Ridgeline Pathways that removes administrative barriers for small and medium employers who cannot manage direct

internship employment relationships. Internship placements are structured as 12-week, part-time positions at $18 to $22 per hour in maritime electrification, harbor services, clean energy construction and marine technology firms identified through the Manufacturing Careers Specialists' employer networks. Ridgeline Pathways provides navigation support, professional skills coaching and case management for each intern throughout the placement. WCCUSD's CTE infrastructure provides an academic framework for high school seniors participating in the pilot as dual-enrollment students. Two years of pilot data tracking placement completion rates, employer satisfaction, wage outcomes at 90 days post-placement and the rate at which interns advance to full-time employment or registered apprenticeship generate the evidence base to design and scale a larger internship program in a subsequent funding round. Four manufacturing site tours annually, each reaching a minimum of 20 PTCA participants, expose PTCA students, adults in transition and displaced workers to clean economy employers and career environments, building awareness of and demand for the training and internship programs.

The Maritime Contractor Development Program (MCDP) partnership with San Francisco Bay Ferry creates the final link in the workforce-to-contractor pipeline. The MCDP, which Friends of the Port is developing in coordination with SF Bay Ferry as the anchor prime contractor, establishes a structured mentor-protege model in which emerging Small Business Enterprise (SBE) certified maritime contractors are paired with Bay Ferry's procurement staff and prime shipyard vendors to execute defined work packages hull coatings, marine electrical, bilge systems maintenance and dock repairs on active vessel projects and terminal infrastructure. The MCDP provides American Bureau of Shipping (ABS) certification pathway support, United States Longshore and Harbor (USL&H) insurance navigation assistance and structured technical mentorship over 24 months, giving Working Waterfront Coalition graduates who have formed or are forming their own contracting firms the institutional infrastructure to grow from sole proprietors to competitive SBE maritime contractors. The MCDP connects workforce training outcomes at the individual level to maritime industrial base development at the regional level, creating a mechanism by which PTCA residents' investment in trade skills translates into business ownership, contracting revenue and job creation within the PTCA.

Budget summary:

- **Lead Applicant: County of Alameda/East Bay EDA**
  - **Proportionate personnel costs**
    - Project Coordinator (works across all projects)
  - **Indirect cost share** for East Bay EDA

- **Co-Applicant : Friends of the Port**
  - Personnel costs
    - Program Coordinator (0.25 FTE) to coordinate working waterfront coalition expansion and management ($97,500)

        - Career Specialists (2 positions @ 0.5 FTE each) for employer engagement with Bay Ship & Yacht, SF Bay Ferry, and Bay Area shipyards. Additional coordination with apprenticeship IBB Local 6 and IAM District 190, including graduate employment tracking and clean economy employer recruitment for Earn and Learn placements ($265,200)
    - Community Engagement
        - Communities for a Better Environment – multilingual outreach for cohort recruitment, quarterly participant input sessions, and related activities, including translation of materials ($114,000)
    - Professional Services & Consultants
        - Industry Sector convenings – total of twelve (12) convenings (includes all meeting materials, including A/V, facilitation, food, and other items) - $9,000
        - Professional services consultant to analyze structured interview data from 50-75 refinery-adjacent occupational profile pathway mapping report connecting refinery trades to clean economy occupations, includes preparation of community-accessible summary in multiple languages (Spanish) - $12,000
    - Subcontractors & Vendors – Ridgeline Pathways – $105,000 for employer of record administration covering payroll processing, worker's compensation, and program administration for 35-50 total internship placements (during year 2 and 3 of the project)
    - Travel – local travel for project personnel ($4,000)
    - Indirect costs @ 15% - proportionate to total direct project costs

- Total project cost is $878,963 over 36 months.

ECOSYSTEM ALIGNMENT (10 points)

10. Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).

This project is one of four interconnected investments in the Richmond Blue-Green Economic Resilience Initiative and it cannot be understood in isolation from the other three. Together the four projects are designed as a closed-circuit, end-to-end support system for a PTCA-rooted maritime cluster a deliberately complete answer to the question every serious infrastructure investor, defense procurement officer and commercial maritime operator asks before committing capital to a region: does this place have all the pieces? The Working Waterfront Coalition Richmond Site and Earn and Learn Pilot is the human capital engine of that system. It produces the trained tradespeople certified marine welders, pipefitters, outside machinists and marine electrical technicians that every other part of the cluster requires to function. The Craneway Pavilion Maritime Innovation Hub

(Project 4) incubates the fledgling blue economy companies that need that workforce to build prototypes, test systems and fulfill their first contracts.

The Working Waterfront Coalition Richmond Site is the PTCA community node of the California Jobs First Maritime Workforce Integration Network, the regional workforce development platform being advanced through the Exhibit B project co-led by Cal Poly Maritime Academy and the Working Waterfront Coalition. Cal Poly Maritime Academy, as the only Coast Guard license-granting maritime academy on the West Coast and the lead institution of the Maritime Innovation Campus Exhibit B, provides the curriculum standards, instructor credentialing pathways and articulation agreements that give the Richmond site's training graduates a recognized credential pathway into advanced engineering and officer-track maritime careers. The Network constructs a vertically integrated talent pipeline from middle school through advanced engineering, aligned with maritime manufacturing demands in welding, machining, marine electrical systems, composites fabrication, robotics operation and hybrid propulsion technologies. The Richmond site activates within this already-functioning regional infrastructure: no new curriculum, employer relationships or training systems are required to begin the first cohort. PTCA residents trained through Project 3 constitute the workforce pipeline serving both the Richmond waterfront facilities activated through Projects 2 and 4 and the Maritime Innovation Campus at regional scale.

The project aligns with the California Air Resources Board (CARB) zero-emission vessel mandate, which requires all Bay Area ferry operators to achieve zero-emission fleets by 2033 and creates an estimated $800 million to $1.2 billion in Bay Area electrification contracts by 2035. The San Francisco Bay Conservation and Development Commission's Bay Plan identifies clean maritime industry as a priority for Bay Area waterfront land use; the Richmond waterfront is among the geographic areas specifically identified for maritime industrial development under the BCDC framework. The Presidential Maritime Action Plan, announced in February 2025, commits $4.5 billion for shipyard modernization and workforce development, with explicit priority for communities with historic maritime industrial employment. The SHIPS for America Act, introduced in the 118th Congress and being reintroduced in the 119th, includes dedicated maritime workforce development funding for community-based training programs at or near working shipyards exactly the model this project represents. The Department of Defense Maritime Industrial Base Program allocates $15 million annually for industrial base strengthening; the Maritime Workforce Integration Network's architecture is designed to compete for and direct that funding to the Bay Area's PTCA communities. The PTCA Richmond site expands the Network's geographic reach and PTCA community benefit precisely when that federal investment is accelerating, positioning Richmond as a named beneficiary rather than an afterthought in the national maritime workforce development investment wave.

The project also aligns directly with several community plans, including the City of Richmond's Green-Blue New Deal (2021), City of Richmond's Economic Development Action Plan (2020), and Contra Costa County Workforce Development Board's investments

to accelerate marine trades training, which all identifies clean manufacturing and maritime as priority sectors for PTCA residents. Additionally, the Air District's Path to Clean Air Community Emissions Reduction Plan (CERP) identifies workforce transition, skills development for clean economy occupations and economic resilience for workers displaced by refinery contraction as community-identified priorities. This project delivers measurable progress on each of these priorities within the PTCA boundary.

CAPACITY (10 points)

11. ***Describe the Project Lead's experience managing and implementing projects of similar scope and size.***
12. ***Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.***

The Working Waterfront Coalition, a dba of Friends of the Port, has delivered maritime workforce training with documented outcomes for more than a decade. Friends of the Port holds current IRS 501(c)(3) status, is current with all federal and state filings and carries audited financial statements. The Coalition's documented 93 percent cohort completion rate and 75 percent placement rate are not aspirational targets they reflect actual performance across multiple cohorts delivered through the Coalition's established training operation. The organization has managed multi-year workforce development grants with compliance requirements like those of the LCBF, including structured outcome tracking, funder reporting and subcontractor management for wraparound services providers.

Friends of the Port's key personnel bring directly relevant experience. The organization's executive director has managed the Coalition's workforce training programs since inception, overseeing employer curriculum design, cohort delivery, wraparound services management and graduate outcome tracking. The executive director's professional background includes prior roles in maritime workforce policy and waterfront economic development in the Bay Area, providing both programmatic depth and institutional relationships with the employer partners on whom the program depends. The two Manufacturing Careers Specialists to be hired for this project will be recruited through the Coalition's existing networks of maritime workforce professionals and will be expected to have prior direct experience in maritime employer relations, apprenticeship coordination or workforce placement in industrial trades.

The Coalition's existing relationships with **Bay Ship and Yacht, SF Bay Ferry, Cal Poly Maritime Academy and the Bay Area Community Colleges Consortium including Contra Costa College**, which serves the PTCA, directly provide the employer and institutional infrastructure required to launch the Richmond site without a startup period for relationship development. Bay Ship and Yacht's yard manager and HR team are active

curriculum advisors and have committed to maintaining hiring pipelines from the Richmond cohorts. SF Bay Ferry's workforce development manager has participated in the Coalition's employer advisory process and has committed to the MCDP partnership structure. The San Francisco Bay Ferry Maritime Contractor Development Program partnership is documented and active, providing an additional institutional anchor for the workforce-to-contractor pipeline.

Communities for a Better Environment brings more than 30 years of community organizing experience in the PTCA, multilingual outreach capacity in Spanish, Vietnamese and Tagalog and an active field presence in North Richmond, Central Richmond and San Pablo maintained through current campaigns. CBE's Richmond office, staffed by full-time community health workers and organizers, can absorb the community engagement scope of this project within its existing operational infrastructure.

Ridgeline Pathways and WCCUSD contribute K-12 infrastructure, student pipeline development and school-to-work coordination that no other partner in the initiative replicates and both organizations have prior experience managing youth employment programs with the accountability and documentation requirements of public funders.

READINESS (10 points)

13. ***Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.***
14. ***Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.***
15. ***Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.***
16. ***Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.***
17. ***Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.***

No construction is required for the first training cohort; only a training facility occupancy permit for the Richmond site is needed, which can be obtained within the first quarter of the grant term. The Coalition's existing training operation at its primary facility provides the operational template curriculum, wraparound services protocols, employer engagement processes and placement tracking systems that is replicated at the Richmond site without systems development. No CEQA review is required for workforce training activities; the Richmond site is expected to be located within an existing industrial or commercial building with a compatible use designation.

Site selection for the Richmond training facility is in active progress. The Working Waterfront Coalition has identified candidate locations within the PTCA boundary and is in active discussion with the Port of Richmond regarding space within the Point Potrero Marine Terminal complex, which encompasses approximately 300 acres of active marine terminal, warehouse and industrial land at the Richmond Inner Harbor. The Port of Richmond is an independent special district with its own governing commission; the Executive Director of the Port, who has direct familiarity with the Coalition's mission through the General Warehouse proposal process, has expressed support for a training facility partnership. A facility lease can be executed within the first quarter. In parallel, the Coalition is evaluating alternative sites within the PTCA boundary if Port of Richmond lease negotiations require a longer timeline; backup site candidates are identified and available for lease on standard commercial terms.

The Earn and Learn internship pilot requires employer-of-record agreements with participating clean economy firms and a formal partnership agreement with Ridgeline Pathways as the employer-of-record administrator, both of which the Coalition and Ridgeline Pathways will execute in year one for placements beginning in year two. WCCUSD's CTE Advisory Committee review of the Earn and Learn pilot design will be completed in the first half of year one. The primary program risk is first-cohort recruitment in a community where maritime career pathways have historically not been visible to PTCA residents; this risk is directly mitigated by CBE's established community presence and multilingual outreach infrastructure and by the manufacturing site tours scheduled in year one, which are designed to build community awareness of maritime careers and the Coalition's training program ahead of year two Earn and Learn recruitment. The secondary risk is employer participation in the Earn and Learn pilot; this risk is mitigated by the two Manufacturing Careers Specialists, whose full first-year scope includes building the employer pipeline for the pilot.

Operations and maintenance of training equipment and facility infrastructure are sustained post-grant through employer contribution agreements Bay Ship and Yacht and SF Bay Ferry both contribute equipment, consumables and technical expertise to the training program as part of their curriculum partnership commitments and through the Coalition's diversified revenue model, which includes employer training contracts, fee-for-service cohort delivery for other public funders and registered apprenticeship coordination fees. The Maritime Workforce Integration Network's regional coordination structure, funded through the California Jobs First Ecosystem Backbone Exhibit B, provides a sustainable institutional home for the Richmond site's employer relationships and curriculum assets beyond the LCBF grant term.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The Working Waterfront Coalition's Richmond Site and Earn and Learn Pilot establishes a Richmond-based maritime and clean economy workforce training operation serving Path to Clean Air (PTCA) residents, launching three cohorts of 20-30 participants over 36 months in marine welding, pipefitting, outside machining and marine electrical systems; delivers a paid internship pilot placing 30-40 PTCA residents in clean economy firms; produces a skills mapping study of displaced refinery-adjacent workers; and builds a workforce-to-contractor pipeline through the Maritime Contractor Development Program (MCDP) with San Francisco Bay Ferry providing family-sustaining employment and registered apprenticeship pathways for PTCA residents.

Measurable Outcome	Indicator(s)
1. Train 75-105 PTCA residents in maritime and clean economy trades (marine welding, pipefitting, outside machining, marine electrical systems) across three cohorts at the Richmond training site, achieving a 75% or higher cohort completion rate per cohort.	• Number of PTCA residents enrolled per cohort (target: 20-30 per cohort, 60-90 total) • Cohort completion rate per cohort (target: 75% or higher) • Number of graduates placed in maritime or clean economy employment or registered apprenticeship within 90 days (target: 75% placement rate) • Participant reflections on trade skill readiness and employment confidence at graduation
2. Place 30-40 PTCA residents in paid Earn and Learn internships in clean economy firms in Years 2 and 3, with a minimum internship wage of $18/hour and 70% of interns advancing to full-time employment or further training within 6 months of placement.	• Number of PTCA residents placed in Earn and Learn internships (target: 15-20 in Year 2, 15-20 in Year 3) • Average internship wage (target: $18-22/hour) • Percentage of interns advancing to full-time employment or registered apprenticeship within 6 months (target: 70%) • Employer satisfaction ratings from participating clean economy firms

Measurable Outcome	Indicator(s)
3. Complete a skills mapping study of 50-75 displaced and at-risk refinery-adjacent PTCA workers documenting transferable competencies and mapping them to target clean economy occupations, with findings incorporated into cohort 2 and 3 curriculum design.	• Number of PTCA workers participating in skills mapping interviews (target: 50-75) • Number of transferable competency-to-occupation pathways documented • Evidence that skills mapping findings are incorporated in cohort 2/3 curriculum adjustments (curriculum revision memo) • Community-accessible summary report produced in English and Spanish
4. By the end of the grant term, expose a minimum of 80 PTCA residents (20 per tour x 4 tours annually) to maritime and clean economy employers through manufacturing site tours, building awareness of career pathways and increasing clean economy career confidence among PTCA residents not yet in formal training.	• Number of manufacturing site tours conducted (target: 4 per year, 12 total) • Number of PTCA participants per tour (target: minimum 20) • Percentage of tour participants reporting increased interest in maritime or clean economy careers (post-tour survey) • Number of tour participants who subsequently enroll in training or internship programs
5. Activate the Maritime Contractor Development Program (MCDP) with San Francisco Bay Ferry, connecting a minimum of 3 Working Waterfront Coalition graduate-founded firms to structured mentor-protege relationships with prime contractors and completing at least 2 defined work packages on active vessel projects.	• Number of Coalition graduate-founded SBE-certified firms enrolled in the Maritime Contractor Development Program (MCDP) (target: 3) • Number of defined work packages completed on active SF Bay Ferry or prime contractor vessel projects (target: 2) • Total contract revenue generated by MCDP participant firms during the grant term • Qualitative narratives from MCDP participants on business development outcomes

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Train 60-90 PTCA residents in maritime trades across 3 cohorts; 75%+ completion rate	A. Richmond site lease executed and employer curriculum localization complete	1. Identify and secure Richmond training facility within PTCA boundary; execute lease	Friends of the Port / Working Waterfront Coalition	Port of Richmond	Q1 2027
		2. Conduct employer curriculum localization sessions with Bay Ship and Yacht, SF Bay Ferry and marine electrical employers	Working Waterfront Coalition	Bay Ship and Yacht; SF Bay Ferry	Q1 2027
		3. Hire two Manufacturing Careers Specialists and Richmond site coordination staff	Friends of the Port	East Bay EDA	Q1 2027
	B. Cohort 1 launched with wraparound services; Cohort 2 launched	1. Conduct multilingual outreach for Cohort 1 recruitment; enroll 20-30 participants	Communities for a Better Environment (CBE)	Working Waterfront Coalition; Ridgeline Pathways	Q2 2027
		2. Deliver Cohort 1 training (marine welding, pipefitting, outside machining, marine electrical); administer tools stipends, childcare and transportation reimbursement	Working Waterfront Coalition	Bay Ship and Yacht; SF Bay Ferry	Q4 2027
		3. Track Cohort 1 completion and 90-day placement outcomes; incorporate feedback into Cohort 2 design; launch Cohort 2	Working Waterfront Coalition	CBE; East Bay EDA	Q1 2028

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	C. Cohort 3 complete; 36-month outcome data compiled and reported	1. Deliver Cohorts 2 and 3 with wraparound services; track completion and placement for each cohort	Working Waterfront Coalition	Bay Ship and Yacht; IBB Local 6; IAM District 190	Q4 2028
		2. Conduct 4 industry sector convenings annually across maritime and clean energy subsectors	Manufacturing Careers Specialists	East Bay EDA; Backbone Organization	Q4 2028
		3. Compile 36-month enrollment, completion and placement data; prepare funder report	Friends of the Port	East Bay EDA	Q1 2029
2. Place 30-40 PTCA residents in Earn and Learn internships at $18+/hour; 70%+ advance to employment	A. Earn and Learn pilot design validated and employer-of-record structure established	1. Co-design Earn and Learn pilot with Ridgeline Pathways and WCCUSD; submit design to WCCUSD CTE Advisory Committee for review	Working Waterfront Coalition	Ridgeline Pathways; WCCUSD	Q3 2027
		2. Execute employer-of-record agreement with Ridgeline Pathways; develop intern placement criteria and wage standards	Working Waterfront Coalition	Ridgeline Pathways	Q4 2027
		3. Manufacturing Careers Specialist recruits 8-12 Year 2 participating clean economy employers; execute employer agreements	Manufacturing Careers Specialist (Clean Energy)	East Bay EDA member network	Q4 2027

Bay REPAIR - Local Community Benefits Fund - Round 1

Project Narrative

Application Information	
Application Title	Richmond Blue-Green Economic Resilience Initiative
Lead Applicant Name	East Bay Economic Development Alliance (East Bay EDA)
Project Location	Path to Clean Air Community - Richmond, San Pablo, North Richmond and surrounding unincorporated West Contra Costa County
Overall Funding Request	$4,977,286
Grant Term Request	3 years
Project Information	
Project Title	Craneway Pavilion Maritime Innovation Hub Activation
Project Lead	Friends of the Port (Working Waterfront Coalition)
Project Location	Craneway Pavilion, Ford Point, 1414 Harbour Way South, Richmond, CA 94804
Project Funding Request	$857,733

STRATEGY ALIGNMENT (10 points)

1. ***Provide a short summary (1-2 paragraphs) that outlines this project.***
2. ***Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:***
    - ***Reduce air pollution and improve health outcomes***
    - ***Build economic resilience for a just transition***

Project 4 activates the Craneway Pavilion at Ford Point, a 45,000-square-foot waterfront facility adjacent to the Rosie the Riveter World War II Home Front National Historical Park, designed by legendary industrial architect Albert Kahn and built in 1930-1931 as part of the Ford Motor Company Assembly Plant at 1414 Harbour Way South, Richmond as a maritime innovation hub anchoring the Richmond node of the California Jobs First Bay Area Maritime Cluster. The Craneway Pavilion has been gifted to Friends of the Port, transferring the leasehold interest from the prior operator in recognition of the organization's mission to rebuild maritime economic opportunity in Richmond and West Contra Costa County. This extraordinary site consists of a 45,000-square-foot bay-facing waterfront facility adjacent to the Richmond Ferry Terminal and will be used to advance the nonprofit maritime

workforce and economic development efforts of the Working Waterfront Coalition, the dba for Friends of the Port.

The project advances the economic resilience strategy by transforming one of Richmond's most symbolically significant waterfront assets into a functioning blue economy incubator that generates lease revenue, creates jobs and attracts maritime technology investment directly within the PTCA. It advances the air pollution strategy by recruiting maritime electrification technology companies, clean marine energy developers, autonomous vessel systems firms and zero-emission propulsion companies whose operations directly reduce diesel emissions in the Bay and whose commercial success accelerates compliance with the California Air Resources Board zero-emission vessel mandate. The Craneway Pavilion has housed events, concerts and productions for two decades; this project converts it from passive event space into active economic infrastructure for the clean maritime economy honoring the building's history as a place where workers built the vehicles that supplied the Pacific War by making it the place where workers and entrepreneurs build the zero-emission maritime economy of the next generation. Importantly, the Richmond community will remain integral to the space and its operations.

The project delivers three integrated components over 36 months:

- First, maritime innovation hub programming and initial tenant activation will convert the Craneway Pavilion's open floor, waterfront access and 45,000 square feet of architecturally significant space into a working blue economy incubator with co-working areas, demonstration space and direct access to the Richmond Ferry Terminal and San Francisco Bay Trail.

- Second, a structured community engagement process conducted in partnership with Communities for a Better Environment will produce a long-term community activation plan that engages the Richmond population and environmental groups in cooperative harness with the working waterfront.

- Third, accelerator programming will link blue economy and startup pipeline tenants with the established working waterfront community and regional maritime and cleantech venture capital ecosystem through two investor convenings annually, establishing the Craneway Pavilion as a recognized anchor of the Bay Area maritime innovation landscape alongside comparable programs at AltaSea at the Port of Los Angeles, Washington Maritime Blue and the Port of San Francisco's own Strategic Plan commitment to a Blue Economy Incubator Program. A sister facility at the Port of Long Beach is also envisioned.

COMMUNITY IMPACT (20 points)

3. ***Describe the location of your project. If applicable, please include an address.***

If multiple locations or neighborhoods are served by your project, please list all.

4. ***Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.***
5. ***Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.***

The Craneway Pavilion is located at 1414 Harbour Way South within the PTCA boundary, on city-owned land that is part of the Ford Point campus adjacent to the Richmond Ferry Terminal. The building is also adjacent to the Rosie the Riveter World War II Home Front National Historical Park, a National Park Service site that commemorates the contribution of Richmond workers, including tens of thousands of Kaiser Shipyard workers, many of them women and workers of color, whose labor defined this community's industrial and cultural identity. The PTCA communities most proximate to the site North Richmond, Central Richmond and the Iron Triangle bear among the highest cumulative air quality burdens in the region as CalEnviroScreen 4.0 documents, while carrying the legacy of industrial employment that this project seeks to rebuild in clean economy form.

The Ford Point campus and Craneway Pavilion carry a specific and resonant history for this LCBF solicitation. The Ford Assembly Plant at this site, designed by Albert Kahn the same architect whose rationalized factory designs defined American industrial production from the Model T through World War II was converted in 1942 to produce jeeps, tanks and military vehicles for the Pacific theater. It operated adjacent to the Kaiser Shipyards, whose 90,000 workers at peak production were the largest single employer in the Bay Area's wartime industrial economy and included tens of thousands of Black workers, women and workers of color recruited from across the country who formed the demographic foundation of Richmond's modern community. The Kaiser Shipyards' closure in 1945, which left 90,000 workers without employment virtually overnight, created the economic displacement that Richmond has been recovering from for 80 years. The Chevron refinery which has generated the cumulative air quality burden this fund was created to address became the dominant economic anchor of the PTCA precisely because the Kaiser Shipyard economy vanished without a replacement industrial base. This project directly addresses that 80-year legacy by anchoring a new maritime industrial economy at the same waterfront where the old one was built.

The direct community benefits of hub activation flow through multiple channels. PTCA residents trained through the Working Waterfront Coalition's Richmond site in Project 3 constitute the primary workforce pipeline for Craneway Pavilion hub tenants, creating a direct pathway from PTCA community membership to clean maritime employment within the PTCA boundary. Hub tenants will foster next-generation marine robotics, clean marine

energy, autonomous vessel systems, ocean sensing and data companies, thereby generating employment opportunities that are accessible to PTCA residents without requiring them to leave their communities for clean economy work. The long-term activation and governance plan produced through the community engagement process will result in collaboration between environmental groups and blue-collar working waterfront companies emerging and established including every key aspect of the hub's operation. The Ford Point campus, which already includes the Rosie the Riveter Visitor Center, on-site dining, the Bay Trail and direct ferry access, provides a community-accessible destination infrastructure that makes the hub welcoming to PTCA residents as participants and visitors, not only as workers.

Community engagement for Project 4 will be shaped as an ongoing cooperative process between Friends of the Port and CBE's existing organizing presence in the PTCA and by the broader community mobilization around the Craneway Pavilion's future that preceded Friends of the Port's acquisition of the leasehold. Richmond residents organized prominently around the question of who would hold the Craneway Pavilion and for what purpose, including public demonstrations at the City Council in the spring of 2026. Friends of the Port's identity as a PTCA-rooted maritime nonprofit, whose mission directly connects to the Kaiser Shipyard legacy and whose Working Waterfront Coalition has served PTCA workforce needs for years, reflects that community engagement. The gift of the leasehold to Friends of the Port is itself an expression of community-aligned stewardship intent.

COMMUNITY ENGAGEMENT (10 points)

6. ***Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.***

Communities for a Better Environment leads community engagement for Project 4, drawing on its existing PTCA organizing infrastructure, multilingual capacity in Spanish, Vietnamese and Tagalog and years of active community relationships in North Richmond, Central Richmond and San Pablo. CBE's current campaigns in the PTCA including refinery fence-line monitoring, just-transition planning and community health advocacy provide the trusted institutional presence and two-way communication infrastructure that makes community engagement for this project credible rather than performative. An important innovation corollary to this plan is that for the first time such efforts will be in collaboration with the working waterfront. Conjoining the proven and respected community environmental work of CBE with the equally proven and respected blue-collar workforce development of the Working Waterfront Coalition will yield significant progress toward mutual understanding between communities that share this waterfront's future.

The community engagement process is structured as a 12-month deliberative process that produces a long-term activation plan and a coordinated outreach and education campaign

to promote maritime careers with a focus on sustainable practices and technologies at the Craneway Pavilion. The process is explicitly designed to not impose a predetermined programming model but instead aspires to engage in a community process along with the working waterfront that addresses long-term plans and priorities including but not limited to infrastructure requirements and public access. Multiple engagement modalities small group conversations with PTCA neighborhood organizations, public workshops, online surveys available in English and Spanish and working sessions with a Craneway Advisory Panel ensure that diverse PTCA voices are integral to the outcome. Engagement with the working waterfront will be organic to this process.

The Craneway Advisory Panel includes seats for PTCA resident representatives from North Richmond, Central Richmond and the Iron Triangle; representatives of community-based organizations active in PTCA just transition work including CBE, Richmond LAND and the Asian Pacific Environmental Network; PTCA small business owners and maritime industry business leaders, workers and their union representatives, including Working Waterfront Coalition graduates and PTCA-based maritime service firms; and youth representatives connected through the West Contra Costa Unified School District partnership with Ridgeline Pathways. Advisory Panel chairs hold a seat on the initiative's Steering Committee, creating direct community input into hub activation decisions. CBE produces written summaries of each panel meeting in English and Spanish within two weeks and distributes them through CBE's community networks and the East Bay EDA website.

A minimum of three community workshops are conducted in the PTCA during the engagement period, each focused on specific decision points in the activation plan: hub vision and priority use categories in workshop one; community benefit covenant design and tenant selection criteria in workshop two; and long-term governance model options and financial sustainability strategies in workshop three. Where possible, workshops will be designed to accommodate working families, including through accessible scheduling, interpretation services and, as resources allow, childcare and transportation support. The activation planning findings will be shared proactively with the Richmond City Council and Port of Richmond as a courtesy communication; no approval from either body is required or sought.

MEASURABLE OUTCOMES PLAN (30 points)

7. ***Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.***
8. ***Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.***
9. ***Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.***

Project 4 delivers hub activation, community-advised long-term planning, accelerator programming linkages and investor convenings over 36 months. The project vision is to establish the Craneway Pavilion at Ford Point as Richmond's anchor maritime innovation hub a working blue economy incubator that creates clean economy employment and careers for PTCA residents and positions Richmond as a recognized node in the national maritime innovation investment landscape, honoring the site's World War II industrial heritage by building the next generation of maritime economic opportunity at the same waterfront where the original was constructed.

Hub programming and initial tenant activation will begin immediately as a fiscal requirement. The Craneway Pavilion's 45,000 square feet of open floor, bay-facing windows, direct waterfront access and adjacency to the Richmond Ferry Terminal which provides direct connection to San Francisco in approximately 30 minutes, making the site accessible to Bay Area maritime technology talent, investors and corporate partners without requiring them to drive constitute a competitive advantage for maritime technology startups that no other Bay Area incubator location can replicate. Ford Point's existing electrical infrastructure approximately 10,500 amperes of available capacity and 3.3 megawatts of available power supports the hardware-intensive testing requirements of marine electrification hardware developers, autonomous vessel systems integrators and battery management system companies whose equipment draws more power than a typical office incubator can support. Grade-level and dock-high door access accommodates the movement of vessel components, propulsion hardware and marine robotics equipment that software-focused incubators cannot. Initial hub buildout converts a defined portion of the Craneway floor for co-working, demonstration and prototyping space while maintaining the facility's proven event capability as a revenue source during the activation period. A minimum of four initial blue economy tenants are secured in the hub by the end of year one, drawn from the pipeline of marine robotics, clean marine energy, autonomous vessel and ocean sensing companies that Friends of the Port and East Bay EDA have identified through California Jobs First Implementation Funding Round II Maritime Cluster network and through Berkeley Blue's sector intelligence work in Project 2.

The 12-month community engagement process, led by CBE in partnership with Friends of the Port, will produce a long-term activation plan and a coordinated outreach and education campaign to promote maritime careers with a focus on sustainable practices and technologies, presented to the Richmond City Council and Port of Richmond by month 15. The plan will make recommendations regarding hub programming, community benefit covenants, tenant selection priorities including preference for maritime technology companies that commit to PTCA resident and second-chance hiring, governance structure for the hub under Friends of the Port's leasehold, sustainability and capital maintenance financing strategy and phased programming expansion. It will also recommend best practices for proactive, continuing engagement between the community and the working waterfront with ideas including, but not limited to, collaborative summer internships for Richmond high school students that blend environmental stewardship and blue-collar

maritime activities. A minimum of three PTCA community workshops and twelve Advisory Panel meetings are conducted during the engagement period.

Accelerator programming linkages are developed beginning in year one. Two investor convenings annually bring Bay Area maritime and cleantech investors including maritime-focused venture capital funds, strategic corporate investors from ferry operators and port authorities and family offices with ocean economy investment theses to the Craneway Pavilion site. The convenings are designed to simultaneously build the financing relationships that hub tenants require and to establish Richmond's profile within the national maritime innovation investment ecosystem as a site of genuine activity, not aspirational planning. The Craneway Pavilion's location adjacent to the Rosie the Riveter National Historical Park a nationally recognized landmark that draws more than 100,000 visitors annually and whose historical significance resonates powerfully with the maritime industry provides a distinctive convening backdrop that no other Bay Area maritime incubator can offer. Formal partnership development with UC Berkeley's Richmond Field Station, located less than one mile from the Craneway at 1301 South 46th Street, explores co-location and joint programming for blue economy startups requiring both laboratory and waterfront access; a partnership MOU is executed by month 12.

The project activates alongside the Working Waterfront Coalition's Richmond Site in Project 3, creating a workforce-to-hub pipeline. PTCA residents trained as maritime tradespeople are the first-call workforce for Craneway hub tenants. As hub tenants grow and generate subcontracting demand, the Coalition's Maritime Contractor Development Program, which builds small SBE-certified maritime contractors through a structured mentor-protege model with prime contractors including SF Bay Ferry provides the supply chain that connects PTCA economic development at the workforce level to commercial maritime activity at the industry level.

Budget summary:

- **Lead Applicant: County of Alameda/East Bay EDA**
  - **Proportionate personnel costs**
    - Project Coordinator (works across all projects)
    - Business Navigation Lead (supports projects 1,2 & 4)
  - **Indirect cost share** for East Bay EDA

- **Co-Applicant : Friends of the Port**
  - **Personnel - $234,000**
    - Craneway Hub Director (0.5 FTE) for hub activation management, blue economy tenant recruitment and onboarding, investor convenings, production, and linkages to UC Berkeley Richmond Field Station
  - **Community Engagement - $50,000**
    - Communities for a Better Environment – community workshops, Advisory Panel facilitation, multilingual outreach and translation, participant stipends, governance plan production and ongoing multilingual community communications. ($114,000)

- **Construction - $280,000**
  - Construction and buildout costs for Craneway Pavilion hub interior buildout including co-working infrastructure, demonstration and prototyping space, security systems, wayfinding signage and ADA accessibility improvements, drawing on the facility's existing open floor plan, 10,500-amp electrical service and grade-level loading access rather than requiring structural changes.
- **Professional Services & Consultants - $100,000**
  - Hub activation strategy consulting, Berkeley Blue investor pipeline and blue economy sector intelligence and UC Berkeley Richmond Field Station MOU development
  - Subcontractor and vendor costs for investor convening production for six convenings over 36 months
- **Indirect costs @ 15% - proportionate to total direct project costs**

- Total project cost is $857,733 over 36 months.

ECOSYSTEM ALIGNMENT (10 points)

10. Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).

The Craneway Pavilion Maritime Innovation Hub is one of four interconnected investments in the Richmond Blue-Green Economic Resilience Initiative and its value as a blue economy incubator depends directly on the strength of the system surrounding it. The four projects together constitute a deliberately closed circuit a complete, end-to-end support ecosystem for a PTCA-rooted maritime cluster that is designed to send a decisive and credible demand signal to the federal agencies, defense contractors, commercial maritime operators and institutional investors whose capital commitments determine whether a regional maritime cluster reaches scale.

The Hub's role in that system is specific and irreplaceable: it is the space where fledgling blue economy companies acquire the physical infrastructure, investor relationships, peer networks and institutional anchoring to develop the operational capacity required to procure and fulfill real maritime contracts. But those companies need a trained workforce before they can build anything and that workforce is produced by the Working Waterfront Coalition Richmond Site and Earn and Learn Pilot (Project 3), which trains PTCA residents in the marine welding, pipefitting, outside machining and marine electrical skills that every Hub tenant hiring for fabrication, testing or vessel integration will draw on. The hub's tenant companies need investable sites and a pre-development infrastructure to anchor their long-term operations and that is what the PTCA Industrial Site Readiness and Maritime Business Accelerator Feasibility Study (Project 2) produces systematically qualifying PTCA industrial parcels for clean economy investment and conducting the full feasibility analysis that positions the former EPA Region 9 Laboratory as an accelerator for maritime

technology commercialization and tech transfer. And the broader PTCA manufacturing and small business base that the Hub tenants and graduates will eventually supply and subcontract with needs growth-oriented business support, manufacturer optimization and clean economy market access, all of which the Blue-Green Business Concierge and Technical Assistance Hub (Project 1) delivers through the East Bay EDA, EBCF, Manex and SJSURF partnership.

The above four LCBF projects operate in explicit alignment with East Bay EDA's California Jobs First Bay Area Maritime Cluster the Ecosystem Backbone Organization, Maritime Innovation Campus and Maritime Workforce Integration Network which provide the regional coordination platform, applied research infrastructure and statewide credentialing pathways that connect the Craneway's incubator tenants to the multi-billion-dollar federal maritime investment wave that the Presidential Maritime Action Plan, the SHIPS for America Act and the Department of Defense Maritime Industrial Base Program are generating. An investor who looks at the Craneway Pavilion in isolation sees an interesting waterfront building. An investor who looks at it as the commercialization node of a complete, four-project PTCA cluster with regional California Jobs First backing sees something far more compelling: a region that has assembled every piece of the system and is ready to scale.

The Craneway Pavilion Maritime Innovation Hub is the Richmond node of the California Jobs First Bay Area Maritime Cluster. While the Maritime Innovation Campus Exhibit B project anchors the cluster's deep-water shipyard modernization and applied research infrastructure at Cal Poly Maritime Academy's Bay Area facilities and the Ecosystem Backbone Organization coordinates the regional cluster investment and convening platform, the Craneway Pavilion provides the Richmond-based blue economy incubation space, community-accessible waterfront demonstration environment and early-stage company acceleration infrastructure that completes the cluster's three-tier architecture: industrial modernization, regional coordination and PTCA community-anchored commercialization.

Ford Point has already emerged as an organic node of the innovation economy this cluster is designed to develop. The Ford Point campus at 1414 Harbour Way South has attracted technology and advanced manufacturing tenants including marine technology firms, engineering services companies and clean energy developers who value its electrical infrastructure, waterfront location and direct ferry connections to San Francisco. The Craneway Pavilion's activation as a maritime innovation hub adds the structured incubator programming, community benefit governance and accelerator connectivity that converts individual tenants into a coherent innovation ecosystem with community benefit requirements. The Richmond Ferry Terminal's direct connection to San Francisco operating throughout the day with service every 60 to 90 minutes makes the site genuinely accessible to investors, corporate partners and talent from San Francisco and Silicon Valley without requiring car access, distinguishing Richmond from other Bay Area industrial waterfront locations.

The project is consistent with the Rosie the Riveter World War II Home Front National Historical Park's mission of connecting the site's wartime industrial heritage to Richmond's economic future. The National Park Service's active presence at Ford Point, its annual visitor programming and the Bay Trail connection along the waterfront provide a public-interest framework for the hub's development that positions community benefit as integral to the site's identity. The ARB zero-emission vessel mandate, the Presidential Maritime Action Plan's $4.5 billion shipyard and workforce commitment, the SHIPS for America Act and the Department of Defense Maritime Industrial Base Program collectively create a federal investment wave that this hub is positioned to attract toward Richmond and the PTCA. The City of Richmond's Blue-Green Strategy, the Northern Waterfront Economic Development Initiative and the MTC Northern Waterfront Priority Production Area designation all identify the PTCA waterfront as a strategic economic development geography; the Craneway Pavilion activation is the most site-controlled, publicly accessible and infrastructure-ready realization of those priorities in the PTCA.

CAPACITY (10 points)

11. ***Describe the Project Lead's experience managing and implementing projects of similar scope and size.***
12. ***Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.***

Friends of the Port is a 501(c)(3) organization with current IRS tax-exempt status, current federal and state filings and proper financial statements. The organization operates the Working Waterfront Coalition, a regional coalition of employers, unions and civic organizations, which has delivered maritime workforce training with documented outcomes across multiple cohorts including 93 percent completion rates and 75 percent placement into maritime employment or registered apprenticeships. Friends of the Port's principals bring direct experience in Richmond maritime affairs, waterfront economic development, historic preservation and regional maritime policy. The transfer of the Craneway Pavilion leasehold to Friends of the Port reflects both the prior operator's confidence in the organization's mission alignment and the expressed preference of the Richmond community voices who organized around the Craneway's future. The leasehold transfer resolves the site control question central to this project's readiness. As documented in the Richmond City Council proceedings of April 2026, the prior lease carried a $1-per-year rent structure and an evergreen renewal clause; the transfer of the leasehold to Friends of the Port as a marine-use nonprofit organization was the outcome the prior operator identified when the City Council declined to accept the facility donation. Friends of the Port holds the leasehold and is the responsible party for the site, providing the site control demonstration that the LCBF requires to be in place by grant agreement execution.

Friends of the Port will dedicate 1.0 FTE as Craneway Hub Director to manage the facility activation, tenant recruitment, programming development and community engagement coordination for this project. The Hub Director will be a newly hired position with a professional background in innovation hub management, maritime technology commercialization or public-interest real estate development; the organization's networks in the Bay Area maritime and innovation ecosystem provide a strong recruitment pipeline for this role. A 0.5 FTE Program Coordinator supports community engagement logistics, Advisory Panel coordination, investor convening logistics and grant reporting. East Bay EDA and the initiative's Steering Committee provide monthly project oversight, cross-project integration with Projects 2 and 3 and administrative infrastructure.

Communities for a Better Environment brings more than 30 years of community organizing experience in the PTCA, multilingual capacity and established field presence. CBE's Richmond office staff, community health workers and organizers are the community engagement infrastructure for this project; the CBE team is available to begin engagement work immediately upon grant execution. East Bay EDA's role as the initiative Lead Applicant provides the administrative oversight, fiscal management and cross-project coordination that ensures hub activation is integrated with the workforce development work of Project 3 and the site readiness work of Project 2.

Additional sources of funding being pursued to support hub operations beyond the LCBF grant include the Maritime Administration Small Shipyard Grant Program ($20 million annually), which can fund maritime workforce and training facility infrastructure; the U.S. Economic Development Administration Public Works program, for which the hub activation buildout may qualify; and the California Economic Development Incentive Program, which the GO-Biz team has identified as a potential source for innovation hub capital costs in Priority Production Areas. The hub's event revenue the Craneway's established reputation as a premier waterfront event venue generates demonstrated demand provides a near-term earned revenue stream that supports operational costs during the activation period.

READINESS (10 points)

13. ***Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.***
14. ***Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.***
15. ***Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.***
16. ***Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.***

17. ***Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.***

Friends of the Port holds the leasehold for the Craneway Pavilion at 1414 Harbour Way South as the result of the leasehold transfer from Orton Entertainment LLC following the Richmond City Council's April 2026 vote not to accept the facility donation from Orton. The site is located on city-owned land; the leasehold constitutes the site control required for this project. Documentation of the leasehold transfer will be provided as a readiness attachment. The leasehold's terms, which carried a $1-per-year rent structure under the prior operator under an evergreen renewal clause in the original redevelopment agreement, are subject to renegotiation between Friends of the Port and the City of Richmond; negotiations are actively underway and a lease appropriate to Friends of the Port's nonprofit maritime mission and this project's community benefit intent is expected to be executed prior to grant agreement execution. The Richmond City Council members who voted in April 2026 expressed strong support for a maritime and community-serving use of the facility; Friends of the Port's proposal directly addresses that expressed preference.

The Craneway Pavilion is a seismically upgraded, fully operational building. A comprehensive seismic retrofit and renovation was completed in the early 2000s under a redevelopment agreement with $20 million in public and grant funds invested, including work funded through the City's former Redevelopment Agency. The building holds its Certificate of Occupancy for event and commercial use; no new permits are required to begin hub programming, co-working activation and initial tenant occupancy. A building permit for interior tenant improvements for specific prototyping and demonstration space buildout will be obtained in the normal course of the first-quarter hub setup; interior commercial tenant improvements in a fully permitted building are a routine permitting matter expected to be resolved within 60 to 90 days.

No CEQA review is anticipated for the hub activation buildout, which is limited to interior commercial tenant improvements within an existing improved structure with a consistent commercial and industrial use designation. The Craneway Pavilion's location within the Rosie the Riveter National Historical Park means that any exterior changes require Section 106 coordination with the National Park Service under the National Historic Preservation Act; the hub activation plan is deliberately designed for interior programming and buildout that preserves the building's historic character and NPS relationship, avoiding Section 106 triggers.

A facility condition assessment commissioned by the City in 2025 identified approximately $12 million in long-term capital maintenance needs concentrated in structural reinforcement of the concrete piles supporting the pier on which the Craneway partially rests. This project budget does not address the full capital maintenance backlog; LCBF funding covers hub activation buildout, programming and community engagement while a capital maintenance and financing plan including options for federal maritime

infrastructure programs, state historic preservation grants, New Markets Tax Credits and philanthropic capital is developed as a required component of the long-term activation plan produced through the community engagement process. The annual operational costs of the hub, including utilities, security, property management and routine maintenance estimated at $95,000 to $120,000 annually based on the Craneway's prior event operation, are funded through a combination of tenant lease revenue targeted to reach $80,000 to $100,000 annually by the end of year two as the initial tenant cohort stabilizes and event revenue from the hub's continued operation as a premium event venue.

The primary implementation risk is the pace of lease renegotiation with the City of Richmond. This risk is addressed by initiating discussions immediately following grant execution and by engaging the City's economic development staff, the Port of Richmond and the National Park Service as project partners in the hub's development rather than as regulatory counterparts. The secondary risk is the pace of tenant recruitment in a hub that is transitioning from event space to innovation hub; this risk is mitigated by the strong existing pipeline of maritime technology companies in the East Bay EDA member network and by Berkeley Blue's sector intelligence work, which has already identified prospective tenants for whom the Craneway Pavilion's combination of Bay access, electrical capacity and waterfront identity is specifically compelling.

Bay REPAIR
Local Community Benefits Fund - Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The Craneway Pavilion Maritime Innovation Hub Activation establishes the 45,000-sq-ft Craneway Pavilion at Ford Point, Richmond, as the Path to Clean Air (PCTA) anchor blue economy incubator under Friends of the Port's nonprofit leasehold. The project will recruit an initial cohort of blue-economy tenants in marine electrification, autonomous vessel systems, clean marine energy and ocean sensing; conduct a 12-month community engagement process that produces a community-advised long-term activation plan; build an investor convening infrastructure; and establish the workforce-to-hub pipeline, connecting PCTA maritime training graduates to hub employers. Together, these activities position Richmond as a recognized node in the national maritime innovation ecosystem, with community-benefit governance embedded from the start.

Measurable Outcome	Indicator(s)
1. Secure a minimum of 4 initial blue economy tenants in the Craneway Pavilion hub (marine electrification, autonomous vessel systems, clean marine energy or ocean sensing companies), with at least 2 committed to PTCA resident hiring preferences in their lease agreements.	• Number of blue economy tenants signed (target: minimum 4 by Month 12) • Number of tenants with PTCA resident and second-chance hiring preference in lease agreement (target: 2+) • Total leased square footage by end of Year 1 • Number of hub tenant employees who are PTCA residents at Month 18
2. Complete a 12-month community engagement process producing a Long-Term Craneway Activation and Governance Plan, including community benefit covenants and a governance structure, presented publicly to the Richmond City Council and Port of Richmond.	• Number of PTCA community workshops conducted (target: minimum 3) • Number of Advisory Panel meetings held (target: minimum 12 over 12 months) • Number of unique PTCA residents participating in engagement process (target: 150+) • Activation planning findings shared proactively with Richmond City Council and Port of Richmond as courtesy communication (yes/no) • Community benefit aspirations documented in hub activation plan (yes/no)

Measurable Outcome	Indicator(s)
3. Conduct 6 investor convenings (2 per year) at the Craneway Pavilion connecting Bay Area maritime and cleantech investors to hub tenants, generating a minimum of 10 investor-tenant introductions and at least 1 documented investment or LOI in a hub tenant company.	• Number of investor convenings conducted (target: 2/year, 6 total) • Number of investors attending convenings (target: 8-15 per convening) • Number of documented investor-tenant introductions resulting from convenings (target: 10+) • Number of hub tenant companies receiving investment or signed LOI within grant term (target: 1+)
4. Execute a partnership MOU with UC Berkeley's Richmond Field Station establishing co-location and joint programming pathways for blue economy startups requiring both laboratory and waterfront access.	• MOU with UC Berkeley Richmond Field Station executed (yes/no; target: Month 12) • Number of startups utilizing joint Craneway/Richmond Field Station programming by Month 30 • Number of joint programming events hosted (workshops, cohort sessions, convenings) by end of grant term
5. Establish the Craneway Pavilion hub's operational sustainability path: hub lease revenue reaches $80,000-$100,000 annually by end of Year 2; a capital maintenance and financing roadmap is included in the Activation and Governance Plan; and at least 1 follow-on public funding application is submitted for hub capital needs.	• Annual hub lease revenue from blue economy tenants (target: $80,000-$100,000 by end of Year 2) • Capital maintenance and financing roadmap included in Activation and Governance Plan (yes/no) • Number of follow-on public funding applications submitted for hub capital needs (target: 1+) • Friends of the Port-City of Richmond lease agreement executed (yes/no; required before grant agreement)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Secure 4+ blue economy tenants by Month 12; 2+ with PTCA hiring preference in lease	A. Hub Director hired; interior buildout design complete; initial tenant pipeline identified	1. Hire Craneway Hub Director (1.0 FTE) with maritime tech commercialization or innovation hub management background	Friends of the Port	East Bay EDA	Q1 2027
		2. Complete interior hub buildout design for co-working, demonstration and prototyping space; obtain building permit for tenant improvements	Hub Director	Professional services consultant	Q2 2027
		3. Develop initial tenant pipeline from East Bay EDA maritime cluster network and Berkeley Blue sector intelligence; conduct 8-10 prospective tenant outreach conversations	Hub Director; Berkeley Blue	East Bay EDA	Q2 2027
	B. Hub buildout complete; initial tenant agreements executed	1. Complete Craneway hub interior buildout (co-working, demonstration space, prototyping area, security, signage)	Friends of the Port	Hub Director	Q3 2027
		2. Execute lease or license agreements with minimum 4 initial blue economy tenants; negotiate PTCA resident hiring preference clauses	Friends of the Port	Hub Director	Q4 2027
		3. Onboard initial tenants; establish tenant services (access systems, utilities, shared equipment protocols)	Hub Director	Friends of the Port	Q4 2027

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	C. PTCA hiring pipeline connected to hub tenants; employment outcomes tracked	1. Connect Working Waterfront Coalition Richmond Site graduates to hub tenant hiring needs; establish referral protocol with Manufacturing Careers Specialists	Hub Director	Working Waterfront Coalition	Q2 2028
		2. Track number of hub tenant employees who are PTCA residents at 6-month and 18-month marks	Hub Director	East Bay EDA	Q4 2028
2. Complete 12-month community engagement producing Activation and Governance Plan	A. Craneway Advisory Panel constituted; engagement calendar published	1. CBE recruits and convenes Craneway Advisory Panel (PTCA resident reps, CBOs, WCCUSD/Ridgeline youth reps, PTCA small business owners)	Communities for a Better Environment (CBE)	Friends of the Port	Q1 2027
		2. Establish 12-month Advisory Panel meeting schedule and community workshop calendar; publish in English and Spanish through CBE channels	Communities for a Better Environment (CBE)	Friends of the Port	Q1 2027
		3. Conduct Workshop 1 (hub vision and use priorities); provide accessible scheduling and interpretation services and, where resources allow, childcare and transportation support; document and distribute summary	Communities for a Better Environment (CBE)	Friends of the Port	Q2 2027
	B. Workshops 2-3 conducted; draft	1. Conduct Workshop 2 (community benefit covenant	Communities for a Better	Friends of the Port	Q3 2027

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	Activation and Governance Plan produced	design and tenant selection criteria); document input	Environment (CBE)		
		2. Conduct Workshop 3 (long-term governance model options and financial sustainability); document input	Communities for a Better Environment (CBE)	Friends of the Port	Q4 2027
2. Complete 12-month community engagement producing Activation and Governance Plan		3. Produce draft Activation and Governance Plan incorporating Advisory Panel and workshop input; circulate for community review	Friends of the Port	CBE; professional services consultant	Q1 2028
	C. Final plan presented to Richmond City Council and Port of Richmond	1. Finalize Activation and Governance Plan; produce accessible community summary in English and Spanish	Friends of the Port	Communities for a Better Environment (CBE)	Q2 2028
		2. Share activation planning findings proactively with Richmond City Council and Port of Richmond as courtesy communication; no approval from either body required	Friends of the Port	CBE; East Bay EDA	Q2 2028
		3. Present plan to Port of Richmond; distribute to CBE community networks, East Bay EDA website and Richmond Public Library	Friends of the Port	Communities for a Better Environment (CBE)	Q3 2028
3. Conduct 6 investor convenings;	A. Year 1 investor convenings (2) conducted	1. Develop investor convening format and outreach list (maritime VC, strategic corporates, family	Hub Director	Berkeley Blue; East Bay EDA	Q2 2027

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
generate 10+ investor-tenant introductions; 1+ investment or LOI		offices) with Berkeley Blue sector intelligence			
		2. Produce and host 2 Year 1 investor convenings at Craneway Pavilion; facilitate investor-tenant introductions	Hub Director	Friends of the Port; Professional services consultant	Q4 2027
		3. Document attendees, introductions made and follow-up commitments from each Year 1 convening	Hub Director	East Bay EDA	Q4 2027
	B. Years 2-3 convenings complete; investment outcomes tracked	1. Conduct 2 convenings in Year 2 and 2 in Year 3 (6 total); expand investor network based on Year 1 outcomes	Hub Director	Berkeley Blue	Q4 2029
		2. Track documented investor-tenant introductions and any investment or LOI commitments resulting from convenings	Hub Director	East Bay EDA	Q4 2029
4. Execute MOU with UC Berkeley Richmond Field Station	A. Partnership developed and MOU executed	1. Initiate partnership discussions with UC Berkeley Richmond Field Station director; identify joint programming opportunities for blue economy startups	Hub Director	Friends of the Port	Q2 2027
		2. Negotiate and execute partnership MOU addressing co-location protocols, joint programming and referral arrangements	Friends of the Port	Hub Director; UC Berkeley RFS	Q4 2027

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		3. Launch first joint programming event (workshop or cohort session) for hub tenants utilizing Richmond Field Station facilities	Hub Director	UC Berkeley Richmond Field Station	Q2 2028
5. Hub lease revenue $80-100K/year; capital maintenance roadmap complete; 1+ follow-on application	A. City lease executed; hub revenue model established	1. Execute Friends of the Port-City of Richmond lease agreement for Craneway Pavilion appropriate to nonprofit maritime mission	Friends of the Port	East Bay EDA; City of Richmond economic development staff	Q1 2027
		2. Establish hub lease rate structure and event revenue protocols; project annual revenue at target tenant occupancy	Friends of the Port	Hub Director; professional services consultant	Q2 2027
	B. Capital maintenance roadmap and follow-on funding application completed	1. Develop capital maintenance and financing roadmap as required component of Activation and Governance Plan (LCBF follow-on, MARAD, federal maritime infrastructure programs)	Friends of the Port	Professional services consultant; East Bay EDA	Q2 2028
		2. Submit at least 1 follow-on public funding application for hub capital needs (MARAD Small Shipyard, EDA Public Works or equivalent)	Friends of the Port	East Bay EDA	Q4 2028
		3. Report annual hub lease revenue at 12, 24 and 36 months; assess sustainability against projected operating costs	Friends of the Port	East Bay EDA	Q1 2030

Bay Area Air District
CLEAN AIR FOR ALL

Richmond Opportunity
Growing Together Application

Bay REPAIR
Local Community Benefits Fund – Round 1
Opportunity and Catalyst Grants
Overall Narrative

Application Information	
Application Title	Our Living Future
Lead Applicant	Growing Together
Application Location	West Contra Costa Unified School District
Overall Funding Request	$5,000,000
Grant Term Request	3 Years

PROPOSAL VISION (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
    - *Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.*
    - *Advance integrated projects to holistically meet community needs.*
    - *Strengthen community-driven and collaborative solutions.*

Our Living Future consists of four complementary projects that will deliver cleaner air, measurable health benefits, economic opportunities, and stronger resilience to climate change to communities that need them most. The four projects– Healthy Green Schools, Blue-Green Careers, Planting Our Future, and Spinning and Rising– will be carried out in partnership with West Contra Unified School District (WCCUSD) at schools located within the most impacted communities in the Path to Clean Air area. The foundational beliefs that tie these projects together are that schools serve as central hubs at the heart of communities and that educating young people is key to bringing about long-term change. The impact that education has on students is profound, and the reach the impact can have by extending throughout the school community and out beyond is immense. There is nowhere better than a school to initiate the ripple effect toward positive change and have it carry through multiple generations. The projects are also based on an understanding of the communities' needs and priorities developed through the robust experience that the seven partner organizations have working within them. Projects will deliver multiple measurable outcomes, which include (but are not limited to) providing environmental and health education to 8,200 students, implementing schoolyard greening projects at 14 campuses, building and advancing blue-green career pathways for 105 youth, planting 3,000 trees in school neighborhoods, providing 60 residents of impacted communities

with urban forestry training for skilled workforce jobs, and enabling 2,500 youth and adults to adopt cycling as a primary means of transportation.

Reduce air pollution or mitigate its impacts: By increasing tree canopy cover and vegetated space, tree planting efforts and urban greening installations will contribute to this program goal. Promoting and supporting biking as alternative transportation will decrease vehicle miles traveled and accompanying emissions, also supporting this goal. **Improve health outcomes:** Outdoor, hands-on environmental and health education will promote healthy habits in students and their families. Increased neighborhood tree canopy and added vegetation will improve air quality and contribute to lower rates of asthma and also increase shade, thus mitigating extreme temperatures that hinder essential physical activity and play and cause heat-related illness. Through biking more often, students will experience the health benefits of increased physical exercise. **Build economic resilience for a just transition:** Educating and training youth to implement green stormwater infrastructure and connecting them to clean economy networks will prepare them to embark on a blue-green career path. Providing workforce training in urban forestry will prepare residents affected by the transition from fossil fuels for jobs in this green sector. **Advance integrated projects to meet community needs:** The projects are integrated through their work at the same schools, and implemented together they can increase the positive impact on the school communities and deliver multiple complementary benefits to them that address their needs. **Strengthen community-driven, collaborative solutions:** This application creates a collaboration of seven local community based organizations whose work collectively impacts tens of thousands of students (and their families) and who bring the relationships developed through their work to this collaboration. Projects, such as schoolyard greening, include collaborative, community decision-making in the planning process.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

Our Living Future will benefit school communities and surrounding neighborhoods of 21 WCCUSD schools in Richmond and San Pablo, including approximately 9,000 students living in communities most impacted by air pollution. Historically, these neighborhoods were deeply affected by Richmond's history of unjust racial segregation and depletory land use practices, including the division of residential communities with freeways, legacy of heavy industry, and years of urban disinvestment. Today, the densely populated urban neighborhoods are burdened with disproportionate socioeconomic, health, and environmental challenges, making it harder for the students and families at these schools to develop healthy lifestyle habits and compromising both their economic and climate resilience.

In terms of socio-economic challenges, students come from an average of 84% low-income families, with seven of the schools having 90- 98% low-income students. At 11 of the schools 50% or more of the students are English language learners, suggesting their families may have language barriers that limit economic opportunities. Half the schools are identified as being

located within Disadvantaged Communities by the CA Department of Water Resources Disadvantaged Communities (DAC) mapping tool, with several more serving students in DACs. Financial constraints combined with limited access to fresh, healthy food nearby contribute to public health issues such as obesity. According to TPL's Climate Smart Richmond mapping tool, most of these communities have high obesity rates (just over ⅓ of the population, for 11 schools that had data available). Asthma is a serious health issue as well; scores for asthma on CalEnviroScreen average 93 across the schools, with 10 schools scoring above 95.

With respect to environmental disparities, the average overall CalEnviroScreen score for these communities is 75, and five schools are located in neighborhoods with scores above 90, with several more scoring in the 80s. Diesel particulate matter levels average 84 (with 11 schools at 90 or above), contributing to the high rates of asthma, as well as other respiratory illnesses and diseases. This situation is compounded by lack of tree canopy cover in these communities; on average there is just 11% tree canopy cover, with several neighborhoods having as low as 5-8%. (The urban forestry standard is 30%.) Lack of tree canopy cover, combined with urban hardscape surfaces, causes extreme heat conditions that also negatively impact health. The California Heat Assessment Tool gives many of the schools' census tracts heat vulnerability scores between 83 and 91 and identifies them as high priority for the County for heat mitigation. On average, these schools have 1.92 (with one having just .26) acres of park space per 1,000 residents within a half mile. (Three is the state-recommended minimum.) Limited access to green space nearby not only impacts students' and families' physical health by limiting their outdoor play and exercise options, but also their mental health and overall well-being.

PARTNERSHIP STRUCTURE (20 points)

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

Lead Applicant

Growing Together (GT): GT's mission is to improve the health and sustainability of our communities by greening schoolyards, providing hands-on environmental education, planting trees, and increasing fresh food access. GT has worked closely with WCCUSD for the past seven years (and was named their Partner of the Year for 2025), building relationships with school and District leadership, staff, students, and families at 33 schools. In 2025 they delivered programs to 7,620 students and hosted 32 community events.

Co-Applicants

Trust for Public Land (TPL): TPL's mission, rooted in the belief that everyone should have access to the outdoors, is to create parks and protect land for people, ensuring healthy, livable communities for generations to come. TPL has worked alongside communities in Richmond over the last decade to develop park and open space, including the recent Richmond Wellness Trail, projects of the Richmond Rising initiative, and the MLK Park and Community Center.

Planting Justice (PJ): PJ's mission is to empower people impacted by mass incarceration and social inequities with the skills and resources to cultivate food sovereignty, economic justice, and community healing. PJ has operated its El Sobrante Mother Farm for nearly a decade, building long-standing relationships with El Sobrante and San Pablo neighbors, families, and community organizations through open farm days, fruit harvests, workshops, and mutual aid.

West Contra Costa Unified School District (WCCUSD): WCCUSD's mission is to provide an equitable, rigorous, and supportive educational experience for all students, while fostering an inclusive environment that celebrates diversity and encourages lifelong learning. WCCUSD and the identified communities are interconnected, as the 21 school communities and surrounding neighborhoods this application serves are all located within WCCUSD.

The Watershed Project (TWP): TWP's mission is to inspire San Francisco Bay Area communities to understand, appreciate, and protect our local watersheds. TWP has worked in WCCUSD schools since 1997, delivering teacher training, watershed curriculum, and outdoor field trips to students across the district; this sustained presence has enabled them to develop relationships with the school communities this application serves.

Cycles of Change (COC): The mission of Cycles of Change is to promote cycling as a primary means of safe, enjoyable, accessible, healthy, and sustainable transportation for as many East Bay residents as possible. Over the years, Cycles of Change has regularly operated safe riding training courses at East Bay schools, including in Richmond and Contra Costa County.

Local Motion (LM): Local Motion's mission is to improve the way we move, teaching people to safely and effectively walk, bike, and take public transit in an effort to create healthier communities. Their BikeMobile program engages directly with youth and families in Richmond through its bike repair program, which has served over 800 Richmond residents through clinics operating at local public libraries and other community sites.

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

Lead Applicant GT will be responsible for overall management of the grant and its four projects, including all aspects of grant administration, disbursements, and reporting; tracking performance for all projects; coordination with and between Co-Applicants; contracts with subcontractors; coordination of community engagement activities; and facilitating the decision-making committee (described below). Each project will have a Project Lead who is responsible for overseeing the project's implementation, coordination with and between project partners, and tracking the project's indicators and progress toward measurable outcomes. GT will also serve as the Project Lead for the Planting Our Future and Spinning and Rising projects.

Co-Applicant responsibilities are as follows. TPL will serve as the Project Lead for the Healthy Green Schools project and be responsible for the implementation of schoolyard greening at

Nystrom Elementary School. PJ will supply trees for the Planting Our Future project, in addition to delivering technical assistance, workforce development, and tree care for the project. WCCUSD supports all the projects through its community schools infrastructure, as well as leveraged funding via fee for service contracts with schools and departments. In addition, their Facilities and Maintenance & Operations Departments will collaborate with GT and TPL on school greening for the Healthy Green Schools project. TWP will be the Project Lead for the Blue-Green Careers project and deliver the education, training, and internship programs. COC will partner on the Spinning and Rising Project, delivering bicycle safety training at schools and hosting a bicycle commuter incentive program and after school riding clubs. LM will provide its BikeMobile bike repair and education services at schools for the Spinning and Rising project. More details on Co-Applicant roles are provided in the individual project narratives.

Partners will collaboratively create a Partnership Agreement that outlines the roles and responsibilities of the Lead Applicant and all Co-Applicants and establishes a committee composed of the Lead Applicant and the Project Lead for each of the projects to serve as a decision-making body. This agreement will include norms for working together (including meetings outlined in Question 5), methods for evaluating progress toward outcomes, and a description of decision-making processes. All partner organizations will sign the partnership agreement, and it will be valid for the period of the grant term. The Partnership Agreement will be consistent with the grant program's requirements for this agreement. The Lead Applicant and all Co-Applicants and subcontractors will have a formal meeting once per quarter (described below in Question 5) to review and discuss project progress and to plan steps to ensure full and timely delivery of the projects, with additional meetings as needed.

All partner organizations will be represented in the decision-making process, through a smaller decision-making committee made up of the Lead Applicant and the Project Lead for each project. When a decision needs to be made, Project Leads will be responsible for gathering input from all partners participating in their respective projects and bringing it to the committee to be considered and included in the decision-making process. The decision-making committee will be responsible for reporting decisions back to the larger group in a timely manner.

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to:*
    - *Coordinate overall community engagement activities.*
    - *Track and report on indicators to assess progress towards measurable outcomes.*
    - *Collect and process reporting, reimbursement and invoicing requirements.*

Lead Applicant GT's Co-Director, who has 28 years' full-time experience in managing school-based projects, initiatives, and non-profit organizations, will serve as the lead manager for all grant-funded projects (with the title Our Living Future Coordinator, or OLFC). **Projects Management**: The OLFC will meet monthly with the Project Leads from each of the four projects to plan operations and expenditures, coordinate logistics, and ensure progress towards outcomes. Once every quarter, all Project Leads, other Co-Applicants, the ROC, and the OLFC

will have an all-projects meeting to debrief strategies and outcomes, share successes and challenges, discuss planned actions, and synergize efforts. **Community Engagement**: Once per month, the OLFC will also meet with engagement subcontractor ROC to plan engagement strategy and activities, with the goal of supporting the outreach efforts of school-based Site Coordinators, Project Leads, and other Co-Applicants for the tasks outlined in each project's Measurable Outcomes Plan and Narrative. **Evaluation -** In the beginning of each project year, the OLCF will meet with each Project Lead to plan evaluation strategy including outlining the metrics, tools, steps, timeline, and roles/responsibilities for the evaluation process. Throughout months 9-11 of each project year, the OLCF will work closely with each Project Lead to ensure that feedback surveys and other data gathering tools are being implemented effectively and reaching the stakeholders desired. In months 11-12 of each project year, the OLCF will gather all data, testimonials, and feedback from the evaluation processes and create an end of year summary, which will report comprehensively on the outcomes achieved by all projects. **Finance and Reporting** - Every two weeks, the OLFC and GT's Finance Manager will review projects' expenditures and backups and plan upcoming payments and invoicing. The Finance Manager will prepare invoices, and the OLCF will review and submit them to the Bay REPAIR program at the frequency requested, along with any requested backup information (timesheets, payroll records, contractor invoices, receipts, etc.). Finally, the OLCF will prepare and submit interim project progress reports to the Bay REPAIR program as requested, which describe the progress toward measurable outcomes by all projects for the given period of time.

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.*

Neither the Lead Applicant nor any of the Co-Applicants are subject to a board or council approval for the projects in this application.

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

Over the past 13 years, Growing Together (GT) has co-developed and co-led multiple school-based public health, schoolyard greening, environmental education, community engagement, and fresh food access initiatives, collaborating with 48 unique school communities as well as multiple departments in four local school districts. These initiatives, many of which were the first-of-their kind in the region, have brought together public agencies, CBOs, and school communities to support groundbreaking strategies that have achieved significant, measurable impacts on student and community health and sustainability. Toward these outcomes, GT has successfully managed grants and fee-for-service contracts involving 57

different public entities (local, county, regional, state governments and schools/districts), as well as grants and contracts from 15 other non-profit organizations and private foundations. Over the past 10 to 28 years, GT's Co-Director and other GT staff have collaborated with both lead agencies and all of the Co-Applicants in the proposed project on a regular basis, including in several of these initiatives. To manage the proposed projects, GT is requesting funding for a full-time Our Living Future Coordinator (the OLFC described above; included in the Healthy Green Schools budget) who will be dedicated to overseeing all of the partnerships that are integral to each project's implementation, as well as supervising all project staff. Other Lead Applicant positions related to project implementation are a .25 FTE Bicycle Programs Coordinator (in-kind match funded by GT through a WCCUSD contract); a .5 FTE Planting Our Future Lead and .25 FTE Program Assistant (both requested from BAAQMD); and partial funding (between .38 FTE and .63 FTE) for 20 Site Coordinators ($2,225,000 in-kind from GT via WCCUSD and $990,000 requested from BAAQMD), one at each school to lead health and environmental education, school greening, and green schoolyard stewardship efforts.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

Since 2020-2021, GT has managed over $14,400,000 in public funds for projects and initiatives advancing community health and sustainability, all of which achieved or exceeded their intended deliverables. These contracts and grants included local, county, state, and federal funds, awarded by various agencies in support of our health/nutrition, schoolyard greening, environmental education, tree planting, fresh food access, and science & career technical education training programs. Public funding includes the following grants and contracts: $3,518,444 from CAL FIRE (2023-2027), $2,235,000 from the County of Alameda (2020-2022), $1,162,375 from the CA Dept of Food and Agriculture (2021-2026), $1,390,000 from Oakland Unified School District (2020-2026), $650,000 from the Food Bank of Contra Costa/Solano (2024-2026), and $570,000 from the Richmond Fund for Children and Youth (2025-2027). GT's Finance Manager prepares invoices, and our Treasurer/Co-Director reviews them to ensure accuracy and alignment with program deliverables. Invoices detail out payroll/fringe, contractual, and supplies expenses, and we retain backups for all expenses using payroll records, expense card records (which include receipt photos), and contractor invoices. The Finance Manager records invoices sent and payments received in shared spreadsheets and in Quickbooks. GT's Finance Manager manages contractor payments, administers payroll and staff expenses, and reconciles the bank account monthly. She categorizes transactions by class code (organized by school district and program type), attributing income and expenses to specific funding sources in cases of grants or other restricted funding. GT Treasurer/Co-Director approves all payments, reviews all transaction records and categorizations monthly, and tracks expenditures to budget. At fiscal year end, GT Treasurer/Co-Director and outside CPA review transaction records, Quickbooks, and the Excel tracking sheets, and the CPA approves year end financial statements and files 990s. For the past three years, GT's accounting and oversight practices and financial statements have been successfully audited per CA requirements.

Local Community Benefits Fund – Round 1
Project Narrative

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Our Living Future
Lead Applicant Name	Growing Together
Project Location	West Contra Costa Unified School District
Overall Funding Request	$5,000,000
Grant Term Request	3 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Healthy Green Schools
Project Lead	Trust for Public Land
Project Location	Nystrom Elementary School and 19 other West Contra Costa Unified School District schools in Richmond and San Pablo
Project Funding Request	$2,589,064

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

   The Healthy Green Schools project will increase tree canopy cover; create greener, healthier environments; and increase student understanding of the relationship between health and the environment within West Contra Costa Unified School District (WCCUSD). The project aims to improve the health and wellness of students and school communities and contribute to climate and economic resilience in neighborhoods throughout the school district. Its approach pairs two components: green schoolyard improvements and educational programming. The project will create new outdoor green spaces at Nystrom Elementary School, plant trees at 11 other schools, and deliver educational programming related to health and the environment at 20 schools. Project partners are Growing Together (GT), WCCUSD, Trust for Public Land (TPL), and the Richmond Outdoors Coalition (ROC), all with complementary strengths and expertise. Together they have designed the project with an understanding of community needs developed through their direct experience working with the communities.

   Expected benefits of the project include improved air quality and reduced climate change impacts at schools and in surrounding neighborhoods, enhanced student health and

wellness outcomes, increased understanding by school community members of the relationship between health and air quality, exposure for students to green jobs, and expanded collaboration between organizations working to serve these communities that will continue to benefit communities beyond the grant term. A long-term vision held by the project partners is the expansion of schoolyard greening and environmental education programming throughout the entire school district, with this project as a foundation for realizing that vision for district-wide impact in the future.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

The project aligns primarily with the strategy to reduce air pollution and improve health outcomes. Project partners will plant approximately 25 new trees and 5,000- 7,000 sq ft of primarily native vegetation at Nystrom Elementary School, capturing and filtering pollutants from the air and reducing air pollution. Research demonstrates that green infrastructure can reduce urban carbon emissions and particulate matter concentrations in the surrounding area. To support these functions, trees will be selected to provide maximum tree canopy benefits, and sited strategically to create dense, finely-foliated tree canopies that allow trees to capture and filter pollutants more effectively. Tools that calculate the benefits of planting specific trees and estimate potential tree canopy created, such as i-Tree, will be utilized in planning and design. Other vegetation will also be selected and sited to deliver maximum air quality benefits. Some of the new trees will also be planted to shade and cool school buildings as well as the schoolyard, leading to decreased use of air conditioning, which contributes to reduced GHG emissions.

Over time, as trees and vegetation mature, these benefits will increase and contribute to cleaner air on and around the school campus and reduced exposure to near-road pollution and mobile source pollution, positively impacting health outcomes in school communities and neighborhoods. Cleaner air and reduced exposure to pollution have the potential to decrease the incidence and severity of asthma and respiratory illness in these communities. According to the City of Oakland's *Urban Forest Plan 2024*, research shows that by intercepting particulate matter trees save over 850 lives and prevent 670,000 incidents of acute respiratory symptoms in the U.S. each year, and its *2030 Equitable Climate Action Plan* asserts, "when green infrastructure is designed based on site conditions and with pollution mitigation in mind, it can become a powerful natural buffer to protect vulnerable people from nearby sources of air pollution."

GT will deliver educational programming at schools focused on environmental, health, and science education, with a majority of the instructional time spent outdoors engaged

in hands-on, experiential activities that connect students to the natural world. Topics will include understanding how air pollution and extreme heat affect health; how to monitor these conditions and select appropriate levels and timing of physical activity to protect health; ways to connect with nature and its positive impact on physical, mental, and emotional health and wellness; why physical activity and play are essential to health; exploring fundamentals of nutrition; and how to make healthy food choices. Exposing children to these topics and promoting healthy choices beginning in childhood improves health outcomes for them in both the short and long term as they develop healthy habits. This learning can also ripple out to students' families, potentially improving health outcomes throughout the school community. In addition, because the majority of the programming will take place outside in outdoor green spaces, students will receive immediate benefits to their physical, mental, and emotional health.

GT's programming has already demonstrated positive impacts on student health outcomes during the seven years it has been delivered in various WCCUSD schools. In its 2025 year-end stakeholder survey, 96% of teachers reported that students became more interested in eating healthy, and 100% of parents agreed (78% "strongly") that the program positively influenced their child's health and wellness. Teachers commented that "my students are eating healthier and making good choices in their environment," "it promotes student well-being," "it's therapeutic for my students with autism," and "when kids get excited about what they're learning about food, they go home and share it and that gets parents curious and involved." Parents shared comments such as "my child learned how plants and the environment affect her and how she affects them" and "the teacher has positively influenced the way she thinks about health in general."

Though not the focus of the project, in the long term it also supports the strategy to build economic resilience for a just transition. Both the educational programming and participation in the development of green spaces will expose students at an early age to green job possibilities in a variety of fields such as landscape architecture, sustainable agriculture, horticulture, and urban greening. Programming at the four middle schools served by the project will include exploration of these career paths. This exposure can lead to students pursuing green jobs education and training in the future, preparing them for careers in the clean economy sector. In GT's 2025 survey, teachers shared that GT's programming "teaches students about how food is grown," "allows for students to learn about other opportunities for careers and pathways," "promotes a deeper understanding of food systems and sustainability," and supports "industry awareness."

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

   The project is located at 20 West Contra Costa Unified School District (WCCUSD)

school campuses in Richmond and San Pablo. Along with educational programming, the primary green schoolyard improvements will take place at Nystrom Elementary School (230 Harbour Way S, Richmond, CA 94804). Educational programming will also take place at 19 WCCUSD schools (with tree planting at 11 of these): Bayview Elementary School (3001 16th St., San Pablo, CA 94806), Cesar Chavez Elementary School (960 17th St., Richmond, CA 94801), Dover Elementary School (1870 19th St., San Pablo, CA 94806), Downer Elementary School (1231 18th St., San Pablo, CA 94806), Ford Elementary School (2711 Maricopa Ave., Richmond, CA 94804), Grant Elementary School (2400 Downer Ave., Richmond, CA 94804), King Elementary School (4022 Florida Ave., Richmond, CA 94804), Lake Elementary School (2700 11th St., San Pablo, CA 94806), Lincoln Elementary School (29 6th St., Richmond, CA 94801), Mira Vista K-8 School (6397 Hazel Ave., Richmond, CA 94805), Montalvin K-8 School (300 Christine Dr., San Pablo, CA 94806), Michelle Obama School (629 42nd St., Richmond, CA 94805), Peres K-8 School (719 5th St., Richmond, CA 94801), Riverside Elementary School (1300 Amador St., San Pablo, CA 94806), Stege Elementary School (4949 Cypress Ave., Richmond, CA 94804), Tara Hills Elementary School (2300 Dolan Way, San Pablo, CA 94806), Washington Elementary School (565 Wine St., Richmond, CA 94801), DeJean Middle School (3400 MacDonald Ave., Richmond, CA 94805), and Helms Middle School (2500 Road 20, San Pablo, CA 94806).

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

   This project leverages the seven-year-long partnership Growing Together (GT) has had with WCCUSD, where they have created a dynamic environmental education program in collaboration with school leadership, staff, students, and families. (GT was just named “Partner of the Year” for 2025-26 by WCCUSD). In the 2025-6 school year, 7,650 students at 33 K-12 schools took part in their educational programming, 1-2 times each week throughout the year. With GT staff present at each of the schools, leading instruction and activities that are interwoven into during-school, after-school, and family engagement programs, they have had frequent and consistent opportunities to directly communicate with teachers, principals, and other staff and community stakeholders to get their input and feedback. The project also leverages the experience of Trust for Public Land (TPL) in community engagement, planning, and implementation of green schoolyards in the East Bay coupled with their park and open space development work in Richmond over the last decade, which includes the Richmond Wellness Trail, Richmond Rising initiative, and MLK Park and Community Center (adjacent to Nystrom Elementary). This experience has allowed both project partners to develop a deep understanding of the needs and priorities of the school communities.

Each year from 2022 to 2025 Growing Together (GT) has conducted a stakeholder survey to determine community needs, distributed to administration, teachers, and staff members at all of its 31 partner schools, and, in many schools, to students and parents. Both GT's educational programming and green school improvements have been deemed a priority for these schools, as they have gone through a stakeholder approval process at each school through the School Site Council (which includes parents) and have been integrated into the School Site Plan. One of the reasons the green schoolyard projects have gained traction and acceptance is that they are seen as part of high quality, standards-aligned experiential education and valued by education stakeholders.

Last year's stakeholder survey results support the need for green spaces and educational programming. Both "the value of the programming overall" and "garden and nutrition programming should be a priority for the school and the district" received an average rating of 4.8 (with 5 being the highest) from teachers, staff, and administrators. When asked whether they recommended continuing this program for the following year, 99% agreed, with 88% responding "strongly agree." Teachers repeatedly commented on the value of the green outdoor learning spaces for students, noting the "benefits to learning in the outdoors" and describing them as "a great space for students to study nature," "a calming space where they feel connected," and "a great environment that allows students to engage in hands-on learning." Many shared that the green spaces helped build a love and appreciation for nature, taught students the importance of plants and how to take care of them, and gave students a sense of ownership in the school campus. One commented, "It makes our school a better place!" Of parents surveyed, 98% said it was important to them that their child's school had a garden and nutrition education program, with comments like "I wish we had the program more frequently!"

Project partner the Richmond Outdoors Coalition (ROC), a collective impact initiative composed of ten community based organizations dedicated to expanding equitable access to nature for youth and families in WCCUSD, has cultivated lasting, consistent, and meaningful relationships with community members during a three-year pilot program (2023–2026) to implement a pathway of nature-based activities for students and families. Their community-led Steering Committee—currently expanding to include youth voices—and a network of ten local organizations have allowed them to create authentic spaces of ongoing two-way community engagement. The ROC Steering Committee advises the ROC administration team on priorities for decision-making while centering meaningful connection and tangible responsiveness to community input.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the*

measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.

This project addresses community needs and priorities identified through community engagement, as described above, and aims to address the environmental justice and public health issues facing the Richmond and San Pablo communities where the project takes place. Many public schoolyards in these communities are paved over with asphalt and lack tree canopy, leaving students directly exposed to air pollution, extreme heat, and play spaces prone to flooding. Asphalt surface temperatures can reach 120°F, enough to burn skin, while urban heat islands and related air pollution discourage active play and increase risks from heat strokes, asthma attacks, and other conditions. The lack of natural elements on campus affects students' mental health and well-being, too. Rather than offering sanctuary and providing much-needed access to green space, barren schoolyards aggravate existing challenges, which particularly impacts low-income students and those with disabilities and chronic diseases.

Nystrom Elementary is located in The Iron Triangle in Richmond, a neighborhood deeply affected by Richmond's history of unjust racial segregation and land use practices, including dividing residential communities with freeways and years of urban disinvestment. Today, the densely populated neighborhoods surrounding the school suffer disproportionate environmental burdens, receiving an overall score of 93 on CalEnviroScreen 4.0, with 98 for asthma and diesel particulate matter. According to the Tree Equity Score tool, the area is a high priority for more trees, with just 6% tree canopy cover. TPL's Climate Smart Richmond mapping tool shows surface temperature hot spots surrounding the school. The community is designated a disadvantaged community (DAC) by the Department of Water Resources (DWR) DAC mapping tool, and 81% of students are identified as low income (California Department of Education [CDE]).

All of the other schools served by the project experience similar environmental justice and health challenges. They are mostly located in dense urban neighborhoods in Richmond and San Pablo, where access to green space close to home is limited and air pollution and heat are an issue. Across all of the schools, the average CalEnviroScreen score is 75, with scores up to 93. Asthma scores average 93 (and up to 99) and diesel particulate matter 84 (and up to 98). There are an average of 1.92 park acres per 1,000 residents within a 10-minute radius, lower than the recommended 3 acres, and some schools are much lower, with the lowest at .33 acres. The average tree canopy cover is 10.95%, with several schools at 5-8%. Several neighborhoods are high priority for heat mitigation due to high heat vulnerability (CHAT). Students across the schools average 84% low income, with several schools having 90-98% low income students (CDE).

Green schoolyards are a low-cost, effective way to positively impact these communities by making schools and surrounding neighborhoods healthier and more climate resilient.

Designing and implementing green spaces filled with trees, plants, and porous surfaces helps to absorb air pollutants and stormwater, sequester greenhouse gases, and prevent flooding and excessive temperatures. Trees cool play spaces and surrounding areas directly by shade, and indirectly through evapotranspiration. A 2023 UCLA Luskin Center for Innovation report found that shade is the primary driver of reductions in the human heat burden, and, where changes to shade infrastructure are not possible, vegetated land cover can reduce heat, particularly surface temperature.

Green schoolyards also contribute to children's physical, mental, and social-emotional well-being. They provide access to nature and promote increased outdoor activity in these dense, urban neighborhoods, thus improving the physical and mental health of children, while boosting their academic performance. Research points to the relationship between access to green space and improved educational outcomes, as well as a reduction in truancy. Heat negatively impacts learning, particularly for low-income and minority students. Children seek shade during high temperatures instead of being active during recess. By creating stimulating living landscapes and shade, the project encourages students to play rather than rest at recess and enables them to spend more time outside. Increased physical activity leads to improved health and could positively impact the high rates of obesity and heart disease in these communities in the long term.

As described above, the project's educational programming delivers positive impacts to the communities as well, especially related to improved health outcomes. This project responds to identified needs by delivering the programming that's been requested by stakeholders and developed in collaboration with stakeholders, as detailed above. The programming is highly effective when paired with schoolyard greening, as students have green spaces where they can actually observe and experience the concepts hands-on, "making learning more tangible and memorable for students," in the words of a teacher.

Increased green space and outdoor environmental and health education will have a direct positive impact on 8,200 students total across the schools, and this impact has the potential to spread to 20,000+ residents that are part of the school communities (families, teachers, staff, and neighbors). In the long term, creating a scalable model for district-wide school greening has the potential to greatly multiply the project's impact.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

   The Richmond Outdoors Coalition (ROC) is a subcontractor that will support community engagement activities for the project, in collaboration with project partners Growing Together (GT) and Trust for Public Land (TPL), to help ensure it is rooted in the authentic

input of students and families. The ROC will also integrate its Steering Committee across all the projects in this application, facilitating monthly strategy sessions with community members to ensure the projects are aligned and form a cohesive movement for environmental justice in West Contra Costa Unified School District (WCCUSD). The ROC Steering Committee is made up of ten adult community members, and soon to add ten community youth members recruited from across the 20 schools this project serves, that will be utilized by this project (and all projects in the application) as match funding.

The ROC, TPL, and GT will collaborate on an inclusive community engagement process that ensures the resulting campus greening and educational programming reflect the unique needs, cultures, and aspirations of the community, maximizing benefits and fostering long-term success. For example, a robust engagement with Nystrom Elementary School community members will be conducted so they can actively participate in shaping their environment. The project partner team will draw on their prior experience of the schoolyard greening process, where interviews with students, teachers and staff; surveys; design workshops; and drawing exercises all informed the decision making that led to the implementation of improvements.

The ROC and GT will support TPL to facilitate a design process at Nystrom Elementary with students, teachers, staff, and families to envision their green schoolyard and identify priorities. This will include at least two sessions, where participants may sketch ideas, vote on amenities, and create art, making the process fun and educational. A survey will also be distributed to the school community to collect input, and the ROC will help ensure surveys reach the most impacted families. The ROC will utilize a closed-loop accountability framework, where community feedback is formally integrated; project partners must document how they adjusted the schoolyard design based on input and report changes back to the community before implementation begins. In this way, the project generates a community-driven, desired and viable vision for schoolyard greening before final plans are developed. A similar process will be conducted at the project's other schools to inform the tree planting, adjusted for the differing scope.

In coordination with GT program staff at the schools, the ROC will also support planning and selecting activities for the new green spaces during and after implementation. The aim is to ensure activities promote community pride and ownership of the green spaces, engage the community in stewardship of their green spaces, and expose them to the benefits. Activation will include GT-led community/parent work days during implementation and stewardship; as a teacher commented on GT's annual survey, "the program engaged the whole community when they planted trees at our school."

Since GT has staff at the schools, they have direct access to students, teachers, and school leadership and are in regular communication with them (e.g., staff meetings, individual meetings, yearly stakeholder surveys, class time with students, and schools' parent messaging and newsletters). Thus, they can provide continuous updates to the community about the progress of the project and solicit feedback. To design, update, and

deliver their educational programming, they will incorporate student and teacher feedback through these multiple methods, as is their typical practice.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Overall project vision: The overall vision is for 20 West Contra Costa Unified School District (WCCUSD) schools to be green schools where students have healthy, welcoming outdoor spaces for play and learning and where they are educated and empowered to make healthy living choices and participate in the improvement of their environment. The project also benefits the school communities and surrounding neighborhoods, aiming to make a positive contribution to cleaner air, increased tree canopy cover, environmental literacy, and improved health in the project area. The long-term vision is for the project elements to be woven into the basic program structures of the schools to ensure continued positive impact on the communities.

Measurable Outcomes: The following are the five measurable outcomes for the project:

- Complete greening installation at Nystrom Elementary, increasing access to nature-based outdoor learning and outdoor green spaces for 420 students.
- Plant trees in 11 additional schoolyards, contributing to increased tree canopy in West Contra Costa County neighborhoods.
- Ensure the use and sustainability of 20 campus green spaces with community-driven stewardship, engaging over 1,000 additional children and family members per year in developing and maintaining these spaces.
- Increase the health and well-being of 8,200 children by providing them with 40-60 hours per year of outdoor experiential education and connection to nature and promoting physical activity and healthy habits.
- Demonstrate a scalable model for district-wide green schoolyard modernization and advance district support for a policy for long-term integration of green schoolyards into planning, modernization, or facilities standards.

Partner Roles:

Co-Applicant Trust for Public Land (TPL) will be the Project Lead, responsible for overall project management and coordination of project partners. They will manage the design and implementation of the green schoolyard installation, including the creation of the concept plans, coordination with school leadership, and hiring and management of contractors needed for the Nystrom Elementary greening project. They will also collaborate with GT and The Richmond Outdoors Coalition on community engagement to ensure community input is integrated into all aspects of the project.

Lead Applicant Growing Together (GT) will be responsible for developing and delivering the educational programming at the 20 school sites, including coordination with school principals and teachers. They will collaborate with other project partners (as described below) on community engagement with the school communities and the design and implementation of schoolyard greening at Nystrom Elementary. They will also be responsible for implementation of tree planting and other improvements of outdoor learning areas at 11 schools, and will coordinate green space stewardship activities at all 20 schools, including school community workdays.

Co-Applicant West Contra Costa Unified School District (WCCUSD) will be key to the project's success. WCCUSD's Associate Superintendent of Operations and Facilities Department Director, along with school leaders, will collaborate with TPL and GT to coordinate project timelines and workplans for green schoolyard installations. As the property owner, WCCUSD will review and approve construction drawings and design specifications. It will support the education and engagement elements through district-level contracts and site-level agreements. It will utilize its communications systems to support community engagement. It will also support stewardship efforts and provide operations and maintenance of the improvements, if necessary.

Subcontractor Richmond Outdoors Coalition (ROC) will provide community engagement support to TPL and GT for the project. The ROC will support TPL in engaging the community in the green schoolyard design process at Nystrom Elementary and will also collaborate with GT to engage the school communities in the activation of new green spaces at all schools. The ROC's Steering Committee (as match funding) will provide a high-level advisory perspective on project activities.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Overall Budget: The total funds requested for the Healthy Green Schools Project is $2,589,064. The total funds requested by each project partner are the following: GT (Lead Applicant): $1,741,849; TPL (Co-Applicant 1): $834,715; and WCCUSD (Co-Applicant 3): $12,500.

Key Project Costs:
Staff/Personnel Costs

- GT: $1,284,000; Site Coordinators, one each for 20 schools, for planning and implementation of educational programming and stewardship, and one Program Coordinator to oversee educational programming at all schools.
- TPL: $120,800; Staff member to serve as Project Manager for the project.

Construction

- Green Schoolyard Improvements at Nystrom Elementary (TPL): $504,865
- Green Schoolyard Improvements (tree planting) at 11 schools (GT): $237,036

Professional Services

- Green Schoolyard Improvements at Nystrom Elementary (TPL): $104,750

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The project is consistent with several local and regional initiatives and plans. For example, it supports the goals of the *Contra Costa County Climate Action and Adaptation Plan (CAAP) 2022 Update*, namely the goal "Resilient Communities and Natural Infrastructure," advancing strategy 5.5: Minimize heat island effects through the use of green infrastructure. The project's green schoolyard improvements and tree planting at 11 schools will provide shade and cooling at the schools, decreasing both surface and ambient temperatures, thus minimizing heat island effects in these communities. These project components also align with Objective 6– Green Infrastructure, Urban Forestry and Agriculture– of the *City of Richmond Climate Action Plan*, specifically Strategy GA1, Support Urban Tree Planting Programs, and Strategy GA3, Support Green Infrastructure, which includes "retrofitting existing City facilities with green infrastructure." By increasing the school garden space at Nystrom Elementary, the project also supports Strategy GA2, which aims" to bring urban agriculture to schools."

The project is also consistent with the 2017 *City of Richmond Urban Greening Master Plan*, specifically Goal 2: Expand the Urban Forest and Goal 4: Educate and Promote Stewardship of the Urban Forest. The project includes Growing Together (GT) planting trees at 11 school campuses, thus advancing Program 2-B, which encourages supporting tree planting campaigns by community-based organizations. By funding GT's stewardship of school food gardens, the project advances Program 2-F, which encourages supporting urban agriculture within the City. Program 4-C is to "support the development of environmental curricula to foster environmental stewardship" and to "support the development of curricula that relies on hands-on experiences in natural settings to foster environmental stewardship among young people." The project develops educational programming that fits these descriptions exactly.

The project directly aligns with and advances several West Contra Costa Unified School District (WCCUSD) plans. The *WCCUSD Elementary School Educational Specifications* calls for outdoor learning environments and gardens on campus as part of Learning Support; the project's greening at Nystrom Elementary and tree planting at 11 schools provide these elements. Both GT and the Richmond Outdoors Coalition are named as the selected providers of health and wellness programming at project schools in the *WCCUSD Expanded Learning Opportunities Program (ELO-P) Plan.* The project's educational programming supports Goal 3.4 of the *WCCUSD 2024-29 Strategic Plan* to "provide opportunities for students to design learning experiences for themselves and effectively investigate real world problems that can positively impact their school and the wider community." This experiential programming does this and provides the context, spaces, and instructional support for all students to have "real-world learning encounters" and "opportunities for collaborative inquiry-based learning."

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

As part of their Community Schoolyards initiative, Trust for Public Land (TPL) has transformed nearly 300 schoolyards around the country in collaboration with school districts, educators, parents, children, and community members to ensure their needs are centered. In California alone, TPL has completed 91 park and schoolyard development projects, incorporating a range of urban greening solutions similar to those for this project such as tree planting, permeable surfaces, rain gardens and bioswales, native plants and pollinator gardens, and green play spaces that use natural materials.

One example of TPL's experience managing and implementing projects in the Bay Area of similar size and scope is the Bridges Academy Green Schoolyard project in Oakland, completed in 2024 with a total cost of $2.4 million. The project removed 10,366 square feet of asphalt paving at the school and planted 54 new trees, installed shade structures and outdoor seating and gathering areas, and created a natural play area with fruit trees. Another example is the Ashland Zócalo Park project in San Leandro, also completed in 2024 with a total cost of $7 million. This resident-led project transformed a blighted vacant lot into a vibrant community hub with a lawn, walking loop, shade trees, colorful landscaping, and recreational features.

In Oakland Unified School District (OUSD), TPL has implemented four pilot green schoolyards projects in East Oakland and the Fruitvale District in partnership with Growing Together (GT) and developed Living Schoolyards Design Guidelines that were adopted by the School Board and utilized in all schoolyard greening projects since that time. TPL was also instrumental in securing State funding for the implementation of two

green schoolyards and the planning of an additional ten green schoolyards in schools with the highest need for open space. These pilot projects and secured funding enabled OUSD to scale the schoolyard greening program throughout the District. In the last decade, OUSD and TPL are credited for collectively planting over 700 trees district-wide.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

    As the Project Lead, TPL will be responsible for overall management of this project and will dedicate a TPL staff member to fulfill this role, which is included in the budget. This will likely be Annie Youngerman, Bay Area Parks for People Associate Director, who is a Licensed Landscape Architect and has guided design and overseen implementation of a number of green schoolyards in Oakland.

    For Nystrom Elementary schoolyard greening, TPL will manage implementation phases, serving as the primary point of coordination among project partners GT, the Richmond Outdoors Coalition (ROC), and West Contra Costa Unified School District (WCCUSD) and the school principal and teachers. TPL will co-lead two community engagement sessions with GT, produce all engagement materials and surveys with partner input, and manage translation services to ensure inclusive participation, with broader outreach supported by GT, the ROC, and WCCUSD. TPL will produce the concept plan with input from GT and the ROC and present it to the school community alongside GT. For construction documentation, TPL will oversee the design team, manage District coordination and Division of State Architect (DSA) review and approval, and handle contractor selection and contract award in partnership with GT. A formal bid process is not required, allowing for direct contractor hiring. TPL will manage the contractor and coordinate all installers, while GT will lead installation of selected project elements.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the “Application Instructions” document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.

- Indicate “N/A” if the question is not applicable to the project.

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

    Nystrom Elementary schoolyard greening will require Division of State Architect (DSA) approval; we will utilize professional services from an architect to provide the drawings needed to apply for DSA approval. Both Trust for Public Land (TPL) and Growing Together (GT) have successfully received DSA approvals for prior green schoolyard projects and understand the requirements, costs, and timeline. We have allocated six months for DSA approval, and applicable fees are included in the project budget. West Contra Costa Unified School District (WCCUSD) will review and approve the proposed plans, which will be integrated into the project schedule and occur within the grant term. For educational programming, GT is already in a Master Services Agreement with WCCUSD to engage with students at all the school sites. The project has received initial approval from WCCUSD, from both the Associate Superintendent and the Nystrom Elementary School Principal, to proceed with school engagement around tree planting and schoolyard greening design. (See Richmond_26LCB9_Healthy Green Schools_Master Services Agreement and Richmond_26LCB9_Healthy Green Schools_WCCUSD Letter as supporting documentation.)

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

    N/A. CEQA will not be needed for this project.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

    Co-Applicant WCCUSD is the owner of Nystrom Elementary School and has full site control. Lead Applicant GT will enter into a contract agreement with WCCUSD in order to make site improvements. TPL, as Co-Applicant, will be in a partnership agreement with GT. We are confident this will occur by the time of the Grant Agreement execution, as we will start drafts of these documents at the time of application submission.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

    The project partners will work closely with WCCUSD Maintenance and Operations to ensure that the project will not trigger an unmanageable burden to the District and maintenance crews. All attempts will be made to ensure the green schoolyard improvements at Nystrom Elementary are sustainable and do not require intense maintenance. Tree and shrub species selected will either be low or very low water use except the educational fruit trees, due to their characteristic need for consistent irrigation. Trees selected will be site appropriate and inspected for elements that may impact their health after planting. Trees exhibiting these issues will not be planted on site. Trees will be planted in locations to best support their overall growth and longevity, with dedicated irrigation to ensure consistent and deep watering in their first years of life. Tree wells and planted areas will be mulched to support water retention. Maintenance of trees will ensure they are only pruned as needed and appropriate and are allowed to grow to their mature height and spread, maximizing air pollution mitigation and shade benefits. The majority of plant species will be selected from the CA native plant palette; those species typically do not require regular pruning or intense fertilization or watering.

    During the grant term, operations and maintenance needed will be conducted by GT staff, with support from students through hands-on learning activities in the green spaces as part of educational programming and community stewardship workdays. In GT's budget, we have included three years of additional maintenance of these spaces. WCCUSD staff will be brought in for maintenance support only on an as-needed basis.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

    The design and implementation of the new green spaces in the Nystrom Elementary schoolyard will need to take into consideration the maneuverability of emergency vehicles, accommodate an adequately sized safe dispersal zone, and allow for regular physical education activities. Additionally, construction will have to be timed for minimal disruption of regular instruction, with asphalt removal, and potentially dust-generating or loud operations limited to summer break or after-school hours. TPL and WCCUSD will address these constraints during the planning and design process. Another consideration is turnover in WCCUSD leadership and/or in school leadership, which GT has experienced and managed to overcome during their time working within WCCUSD. We will address this by leveraging the close working relationships GT has with multiple WCCUSD departments (Expanded Learning, Facilities, Maintenance, Career and

Technical Education, Science, and Food Services). Finally, once the project is complete, greener schoolyards may lead to higher enrollment and attendance. While this is a desired project outcome, it might also increase vehicular traffic associated with student drop off and pick up. However, this application's Spinning and Rising project, which encourages biking to school, and the Richmond Wellness Trail near Nystrom Elementary, a safe biking and walking path, will help mitigate these impacts by promoting alternative transportation methods.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

Project Vision:	Carry out a campus greening project at 20 West Contra Costa Unified School District (WCCUSD) schools, giving students regular access to outdoor green spaces while building lifelong healthy habits through outdoor, experiential educational programming, which results in improved student health outcomes and improved environmental conditions at the schools.

Measurable Outcome	Indicator(s)
1. **Nystrom Elementary Greening Installation**: Complete greening installation at Nystrom Elementary, increasing access to nature-based outdoor learning and climate resilient green space for students.	• Square footage of new or improved green space created • Number of students with regular access to the new green spaces (estimated annual reach) • Short reflections from teachers or students describing changes in outdoor learning or play experiences
2. **Schoolyard Tree Planting at 11 Additional Sites:** Plant trees in 11 additional schoolyards, expanding shade canopy, reducing heat exposure, and improving outdoor learning environments for students across the project area.	• Number of additional shade trees planted • Number of outdoor learning areas enhanced for students • Square feet of added tree canopy at tree maturity (average of 8 years, beyond the duration of this grant period)

3. **Community Stewardship of 20 Campus Green Spaces:** Ensure the use and sustainability of 20 campus green spaces with a community-driven stewardship model, engaging over 1,000 children and family members each year in developing and maintaining these spaces.	● Square footage of campus green spaces maintained each year through community stewardship events ● Number of stewardship events held annually ● Number of participating community members taking part in the stewardship of their campuses. ● Documented stewardship plan
4. **Children's Health and Outdoor Learning:** Increase the health and well-being of 8,200 children by providing them with 40-60 hours per year of outdoor experiential education and connection to nature and promoting physical activity and healthy habits.	● Number of students regularly participating in outdoor learning or nature based activities ● Average hours of outdoor learning or physical activity per student per year ● Number of parents that say their child is eating healthier on the annual stakeholder survey
5. **District Scalable Model**: Demonstrate a scalable model for district-wide green schoolyard modernization and advance district support for a policy for long-term integration of green schoolyards into planning, modernization, or facilities standards.	● Number of district departments engaged ● Number of district leaders participating in working sessions ● District interest in developing green schoolyards design guidelines or changes in policy toward green schoolyards

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Nystrom Elementary Greening Installation	A. Design Finalized	1.Conduct site assessment	Trust for Public Land (TPL)	Growing Together (GT)	Q2 2027
		2.Facilitate design workshops with, and distribute surveys to, students, teachers/staff, and families	TPL	GT, Richmond Outdoors Coalition (ROC)	Q2 2027
		3.Finalize conceptual design and construction documentation, and secure DSA permit / school district approval	TPL	GT	Q3 2027 - Q2 2028
	B. Installation Completed	1.Procure materials and contractors	TPL	GT	Q4 2028 - Q1 2029
		2.Coordinate construction schedule	TPL	GT	Q1 2029
		3.Oversee construction	TPL	GT	Q2-3 2029
	C. Post-installation Activation	1.Train teachers on outdoor learning use	GT	GT	Q3-4 2029
		2.Host opening celebration	TPL	GT	Q3 2029
		3.Document usage and student reach	TPL	GT	Q4 2029
2. Schoolyard Tree Planting at 11 Additional Sites	A. Site Assessment	1.Conduct site assessments at all 19 schoolyards, evaluating soil quality, sun exposure, drainage, utilities, and available space	GT	GT	Q1 2027

		2.Determine appropriate tree species per school	GT	GT	Q1 2027
		3.Create tree planting plan for each site	GT	GT	Q1 2027
	B. Trees planted at all sites	1.Plan & lead planting events at appropriate school sites, with students, teachers, families	GT	GT	Q2 2027, Q1-2 2028
		2.Confirm species, placement, and planting depth at each site, update tree inventory	GT	GT	Q2 2027, Q1-2 2028
	C.Monitoring and impact reporting	1.Conduct 30-,90-, and 180-day survival checks at schools, and replace as needed, and/or fix problem	GT	GT	Q4 2027 - Q2 2028
		2.Compile impact report, with total trees planted	GT	GT	Q3 2028
3. Community Stewardship of 20 Campus Green Spaces	A. Stewardship framework developed	1. At each site, create garden development & stewardship plan	GT	WCCUSD	Q1 2027
		2. At each site, plan community workday events - timeline, projects, outreach, coordination & roles	GT	ROC	Q1 2027
	B. Stewardship Pilots launched	1. Pre-event outreach & coordination	GT	ROC	Q2-4, 2027-9
		2. At each site, hold 1-4 community work days each year	GT	ROC	Q2-4, 2027-9
		3.Track participation and maintenance activities	GT	GT	Q2-4, 2027-9
	C. Evaluation and Refinement	1.Collect feedback from school staff	GT	GT	Q2-4, 2027-9

		2.Document successes, challenges, recommended improvements	GT	GT	Q2-4, 2027-9
		3.Create operations guide for community-driven stewardship at sites	GT	ROC	Q1-2, 2029
4. Children's Health and Outdoor Learning	A. Outdoor Learning Implementation	1. At each site, meet with school stakeholders to plan outdoor learning program schedule	GT	WCCUSD	Q2-3, 2027-9
		2. Implement regular schedule of during- and after-school outdoor lessons, either modular program (for newer schools) or year-long program (for established schools)	GT	WCCUSD	Q3-Q2, 2027-9
		3. Ensure continuous program development throughout 3-year period through regular meetings with school stakeholders	GT	WCCUSD	Q1-4, 2027-9
	C. Health and Well-Being Outcomes Documented	1. At each site, conduct school stakeholder feedback surveys	GT	GT	Q2, 2027-9
		2.Document anecdotes from school staff, and engage student participants in hands-on activities during programs that support two-way qualitative feedback on program activities (ie, photovoice, program observations).	GT	ROC	Q2, 2027-9
		3. Create end of year reports for each partner school	GT		Q2, 2027-9
5. District Scalable Model	A.Green schoolyard model developed	1. Demonstrate successes at Nystrom Elementary and other school sites with additional tree planting	TPL	GT	Q1-4 2029

		2. Document outcomes, lessons learned, and refinements needed for district-wide application	TPL	GT	Q1-4 2029
		3. Develop a framework that could include future design standards, cost ranges, and maintenance models that is based on Nystrom Elementary greening installation, tree planting at other schools, as well as previous greening efforts	TPL	GT	Q1-4 2029
	B.District-wide scalability and operational feasibility explored	1. Review with the District, a framework for scaling, including future design standards and maintenance models	TPL	GT	Q1-4 2029
		2. Meet with multiple District departments.	TPL	GT	Q1-4 2029
		3. Incorporate District feedback into the future framework	TPL	GT	Q1-4 2029
	C. District commitment to long-term green schoolyard integration secured	1. Present recommendations to district leadership	TPL	GT	Q1-4 2029
		2. Review district feedback	TPL	GT	Q1-4 2029
		3. Obtain support to advance a greening policy	TPL	GT	Q4 2029

Project Name:	Healthy Green Schools
Lead Applicant Name:	Growing Together
Term for this budget (in years):	3 Years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Site Coordinator	Leads planning and implementation of all education and community stewardship programming, and facilitates partnerships with CBO's, at each school - 15 to 25 hrs/wk each (depending on school site) @ $43/hr + 12% fringe - 20 positions	$990,000.00
Personnel/Staff Costs	Direct	Our Living Future Coordinator	Manages school site, district, and CBO partnerships, ensuring deliverables are achieved and outcomes evaluated- 1 FTE @ $98,000 x 3 yrs	$294,000.00
Construction	Direct	Utility connections	GT Contractor - backflow, water lines, valves, irrigatior	$137,280.00
Construction	Direct	Permanent fixtures	GT Contractor - student seating areas, raised beds	$28,496.00
Construction	Direct	Landscaping	GT Contractor - trees, plants, mulch, logs, boulders	$38,168.00
Construction	Direct	Maintenance	GT Contractor - tree establishment care	$2,500.00
Contingency	Contingency	Construction	15% construction contingency	$30,592.00
Indirect Costs (≤15% of Direct Costs	Indirect	Indirect	15% of direct costs	$182,000.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Inclusion Outdoors facilitators	Richmond Outdoors Coalition community engagement process	$32,063
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Inclusion Outdoors: Community Engagement stipends and supplies	Participant stipends/compensation for Richmond Outdoors Coalition community engagement process	$6,750

Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Our Living Future
Lead Applicant Name	Growing Together
Project Location	West Contra Costa Unified School District
Overall Funding Request	$5,000,000
Grant Term Request	3 Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Blue-Green Careers
Project Lead	The Watershed Project
Project Location	John F. Kennedy High School and three elementary/middle school campuses in West Contra Costa Unified School District
Project Funding Request	$764,050

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Blue-Green Careers (BGC) is a career pipeline developed by the Watershed Project (TWP) as part of their Greening Urban Watersheds and Youth Watershed Stewards Green Stormwater Infrastructure program. The pipeline's overarching goal is to prepare high school students and young adults in West Contra Costa County for green stormwater infrastructure (GSI) and related careers that align with the Bay Area's Just Transition to a clean, green economy. To this end, the BGC pipeline introduces local youth to environmental careers in urban stormwater management by providing meaningful environmental education about nature-based stormwater mitigation from experienced TWP educators, engineers, landscape architects and other partners. The Youth Watershed Stewards (YWS) curriculum is a year-long program providing a highly immersive experience that includes in-class lessons, technical GSI skill-building activities, hands-on experiential learning, mentoring, and connections to professionals in the field. As part of their training, program participants implement GSI at "client" schools in West Contra Costa Unified School District (WCCUSD); thus, the BCG pipeline has an urban greening component that delivers climate resilience and air quality benefits to school communities and surrounding neighborhoods, building Our Living Future one school campus at a time.

For this project, TWP will partner with the Career Technical Education (CTE) Carpentry Pathway at John F. Kennedy High School (Kennedy High) to train the next generation of environmental

workers, delivering TWP's award winning YWS program to high school students. Farther along in the pipeline, TWP will also train and pay a cohort of their Green Collar Corps (GCC) members (Richmond youth ages 18–25, paid) to work alongside TWP staff and 30 high school students per year—90 over the three-year grant term—to design, build, repair, and maintain GSI projects (i.e., rainwater harvesting systems and rain gardens) at the schools, transforming these schoolyards into healthier, greener outdoor learning environments. Overall, the GCC staff will receive over 500 hours of hands-on, practical experience per year. Incorporating the GCC, the project places young people from the same fossil fuel-impacted community on a continuous ladder from classroom to paid internship to entry-level green construction and environmental careers. Each year, the YWS program will run for the full school year at Kennedy High. In the fall, TWP educators deliver five in-class lessons on GSI, environmental careers, and urban ecology; invite professionals from the field to share their job experiences with students; and lead field trips to see GSI at work around Richmond. In the late fall/early winter, students receive hands-on training with TWP and the GCC to build a rainwater catchment system or rain garden at their client school. The year culminates in a Rainwater Action Day celebration in the spring where the school community is invited to participate in the implementation, joining the high schoolers in planting native plants and activating the systems they built on campus.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

Build Economic Resilience for a Just Transition: The project aligns primarily with this strategy. BGC is built specifically to be a career pipeline for Kennedy High CTE students and transitional aged youth in Richmond and West Contra Costa County who need real, paid alternatives to working in the polluting industries that have dominated the local economy they've grown up within. With this project, Kennedy High CTE Carpentry students learn GSI as a trade–-not as an abstract concept–-by building and repairing real systems on their own district's campuses. GCC interns, who are paid $22/hour by TWP, serve as near-peer trainers, gaining nine immersive months (the full length of the school year) of supervised, hands-on experience that makes them competitive for entry-level green infrastructure, green stormwater management, landscape, and environmental construction jobs. Industry guest instructors, site visits to working GSI projects, and direct introductions to the firms and agencies hiring in the region give both the students and the interns the skills, credentials, and connections needed for high-quality environmental and green construction careers. The BGC project creates a direct, supported bridge from the fossil fuel-era economy to the green workforce and is meant to lay a foundation to expand to other WCCUSD high schools and reach more youth, increasing the BCG pipeline's contribution to the economic resilience of local communities. BGC is, by design, a piece of the Just Transition infrastructure the Bay REPAIR program was created to fund.

Reduce Air Pollution and Improve Health Outcomes: The project also aligns with this strategy. As described above, the project also contains an urban greening component. Each

year, the high school cohort will install new GSI (i.e., rainwater harvesting system or rain garden), make repairs to GSI where needed, and plant 90-150 native plants at each of three WCCUSD campuses. These installations capture and infiltrate polluted runoff before it reaches the bay, make campuses more resilient to climate change impacts, and add much-needed vegetation to schoolyards in neighborhoods that CalEnviroScreen identifies as among the most pollution-burdened in the Bay Area. In addition to capturing rain and stormwater and providing a cooling effect, this vegetation captures and filters air pollutants from the air, contributing to cleaner air at the schools and in the surrounding neighborhoods. Healthier campuses for thousands of students and families are a direct, measurable co-benefit of the project.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

All project work takes place inside West Contra Costa Unified School District (WCCUSD) in Richmond, California.

We have identified four initial campuses for this proposal:

- John F. Kennedy High School (Kennedy High) — 4300 Cutting Blvd, Richmond CA 94804. Kennedy High's Career Technical Education (CTE) Carpentry Pathway will be the high school home of the Blue-Green Careers (BGC) project where the students can receive the training needed to be able to install and repair Green Stormwater Infrastructure (GSI) systems on other campuses.
- Lovonya DeJean Middle School (DeJean Middle) — 3400 MacDonald Ave, Richmond CA 94805. DeJean Middle will be the first "client" campus for GSI installation.
- Grant Elementary School (Grant Elementary) — 2400 Downer Ave, Richmond CA 94804. Grant Elementary will be the second "client" campus for GSI installation.
- Nystrom Elementary School (Nystrom Elementary) — 230 Harbour Way South, Richmond CA 94804. Nystrom Elementary will be the third "client" campus for GSI installation.

Client campuses are also served by the other projects in the application. Specific campuses will be confirmed annually through a Fall site assessment with WCCUSD Facilities Department.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The Watershed Project (TWP) has worked in WCCUSD schools since 1997, delivering teacher training, watershed curriculum, and outdoor field trips to students across the district. That sustained presence, more than any single planning meeting, is what allowed TWP to gather the input about community needs and priorities that shaped this proposal. Over many cycles of

teaching in WCCUSD classrooms and walking WCCUSD campuses, TWP staff heard the same things from the people who live with these schools every day: high school students wanted real, paying paths to careers; the WCCUSD Facilities Department was stretched too thin to design and maintain green infrastructure on its own; and elementary and middle school teachers wanted outdoor learning spaces but lacked the construction expertise to build them.

Project partners have also provided input from community stakeholders and supported community engagement efforts. Both the College and Career Department and Facilities Department at WCCUSD have expressed support for the BGC pipeline and YWS program, identifying them as something valuable for students and schools. Kennedy High CTE determined the need for students learning about the construction of GSI, and its carpentry instructors helped to scope the curriculum and the installation days so they fit the students' needs and the realities of a CTE classroom. WCCUSD Facilities staff have identified campus greening and GSI maintenance as needed by district schools. For example, at DeJean Elementary, a school tour with the collaborative partners in this grant proposal determined that the school garden had the ideal conditions for installing a rainwater harvesting system, and the idea was supported by the on site garden educator who works with students every week. Similarly, the key partners, teachers, and garden educators at Grant Elementary and Nystrom Elementary have expressed interest in having rainwater catchment systems, and they already have garden programming for their students that will provide the consistent use that is required for GSI to be well utilized and integrated into outdoor education on their campus.

The Richmond Outdoors Coalition (ROC), a collective impact initiative, composed of 10 partnering community based organizations and four pilot schools in WCCUSD, and the community engagement partner on this project. The ROC has been an invaluable source of community input for the project - over the past three years the ROC has nurtured relationships with its pilot schools and families in the district and so has been able to help identify the schools that would be a good fit as a "client" school, based on how the BGC project aligns with their needs and priorities. The ROC has helped connect TWP to teachers, families, and students at these schools.

Additionally, TWP has benefited from the input of a 2024-2025 Listening Campaign conducted by the RYSE Center in Richmond and Ceres Policy Research with 150 youth representing the diversity of Richmond neighborhoods, including youth from Kennedy High and other area high schools.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

BGC was designed to simultaneously address the needs and priorities expressed to TWP on school campuses, as noted above: real, paying paths to careers, support for maintaining campus green infrastructure, and outdoor learning spaces at schools. The need for the project also arose from feedback from community members that leaders in the community should be educating our students on the skills they will need for their future careers. The project's curriculum, components, and timeline were developed based on the input from WCCUSD's College and Career Development Department and in collaboration with the CTE program to ensure they respond to student needs they've identified. For example, workplace skills and networking were two needs identified for CTE programs based on community input, and the project incorporates both of these components.

The project has also been designed to address the challenges communities in the project area are facing. Richmond and West Contra Costa County—including neighborhoods the project serves—carry a documented double burden: decades of disproportionate air pollution exposure from refineries and heavy industry, and the economic uncertainty that comes with the contraction of those same industries. As an example, Kennedy High's neighborhoods face multiple environmental justice and health challenges, receiving the following CalEnviroScreen scores: overall score 93, diesel particulate matter 92, asthma 99, and impaired waters 95. They also score 82 for unemployment. In addition, the California Department of Education (CDE) school dashboard reports that 70.8% of students are socio-economically disadvantaged, and the community is identified as a disadvantaged community (DAC) on the Department of Water Resources (DWR) Disadvantaged Community Mapping Tool. Young people growing up in this landscape are asked to inherit both the health consequences and the uncertain economic transition. There is a clear need for a real on-ramp to work in the just transition economy here and for urban greening efforts that contribute to improved environmental conditions.

BGC delivers an economic resilience on-ramp with three reinforcing benefits. First, it gives 90 Kennedy High students (30 students per year) hands-on green construction skills tied to a Bay Area sector that is hiring—GSI design and installation, landscape and stormwater maintenance, and environmental construction—and connects them, through introductions and site visits, to the people doing that work. Second, it puts 15 paid Green Collar Corps (GCC) interns (local youth, five per year) through nine months of immersive, supervised training that bridges high school CTE and entry-level employment. Third, it leaves three other WCCUSD campuses with functioning GSI systems and 90–150 new native plants that reduce runoff, recharge groundwater, filter air pollution, and create healthier, more resilient outdoor environments for thousands of students and families.

The campuses where GSI will be installed were selected based on several factors. The schools have existing garden programs and have expressed an interest in more urban greening on their campus, and were determined to be a good fit for what the project offers. They are also schools located in neighborhoods that demonstrate vulnerability to harmful environmental conditions and health impacts. DeJean Middle has an overall CalEnviroScreen score of 88, with 91 for diesel particulate matter and 97 for asthma, and a tree canopy cover of just 8%. In addition, 86.6% of its students are identified as low-income (CDE). Nystrom Elementary scores 93 overall on

CalEnviroScreen, with 98 for both asthma and diesel particulate matter, and has only 6% tree canopy cover. It's identified as a DWR DAC, and 81% of its students are low-income (CDE). Both DeJean Middle and Nystrom Elementary neighborhoods are a priority for the County for high heat vulnerability (California Heat Assessment Tool). Grant Elementary scores 98 on CalEnviroScreen for asthma and diesel particulate matter and has just 9% tree canopy cover. These neighborhoods have a need for urban greening, and, through its GSI installations and improvements, the project aims to provide them with the multiple benefits listed above.

The project was also informed by the RYSE Center listening campaign described above, addressing two recommendations from youth that emerged from the campaign: transform schools into healing-centered, future-building institutions and create continuity for youth. Participants expressed the desire to gain independence through paid apprenticeships and the need for opportunities to help them succeed, asking for real resources like career pathways so they can progress with purpose rather than feeling stalled. This project provides an option for a career pathway through both its high school program and GCC internships and provides continuity with the opportunity to progress from one to the other supported by TWP. A key theme that emerged in the campaign was that young people's spaces are neglected and under-resourced, and the project also invests in urban greening installations that create more inspiring school campuses.

The Measurable Outcomes Plan tracks the following results of all of the efforts that have been described here: students completing the curriculum, GCC interns completing the internship, campuses greened, employer connections made, and tangible referrals into apprenticeships and entry-level green jobs. The pilot Youth Watershed Stewards program in San Francisco Unified was successful, and we expect this success to be replicated in WCCUSD. In the words of a Galileo High School participant, "I learned a lot about specific types of green infrastructure and how it helps, and I learned a lot about what kind of career you can get working with green infrastructure planning and testing." We anticipate the project's measurable outcomes will impact communities by preparing youth for career pathways and creating healthier, more resilient school campuses—starting small as the pipeline is established and then growing over the long term as the program continues and expands to other high schools.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Community engagement is built into the rhythm of the Blue-Green Careers (BGC) project. Each spring, the Rainwater Action Day (RAD) at the client schools will bring together the Kennedy High student cohort, the elementary or middle school students who will inherit the green stormwater infrastructure (GSI), their teachers, and their families at the campus to plant out the

new rain garden installation. The RAD is open to the school community and is the project's most public moment of the year, where the community can participate directly in its implementation and learn about the benefits it provides. At the same time, the event provides the opportunity for The Watershed Project (TWP) to collect structured feedback from teachers, students, and family members on what the program has meant to them and what can be improved or changed.

TWP will also keep year-round feedback loops with the people closest to the work. TWP educators will run dedicated training sessions for teachers at client schools on how the new GSI works and how to teach with it; those sessions will double as listening sessions for what teachers and students need. TWP will provide customized signage and maintenance manuals for every campus so that the school community has ongoing, plain-language access to information about the GSI system on their campus. TWP will also debrief West Contra Costa Unified School District (WCCUSD) Facilities staff at the end of each year. Partnering with the Career Technical Education (CTE) program allows TWP to receive feedback from the community on how we can provide job training to young people curious about their place in the blue-green job market. Kennedy High CTE instructors and students will complete pre- and post-program reflections that will inform the next year's curriculum. In addition, TWP will tap into our nonprofit partnerships for their feedback on the program and enlist their support to extend the program's reach with their networks. TWP will translate important outreach communications to ensure they are inclusive for non-English speaking members of the school community.

The Richmond Outdoors Coalition (ROC) will be a subcontractor for community engagement activities for all grant projects in this application to help ensure they are rooted in the authentic input of students and families. The ROC will also integrate its Steering Committee across all the projects, facilitating monthly strategy sessions with community members to ensure the projects are aligned and form a cohesive movement for environmental justice in WCCUSD. The ROC's Steering Committee is made up of ten adult community members, and soon to add ten community youth members recruited from across the 20 schools this project serves, that will be utilized by this project (and all projects in the application) as match funding. The ROC is the BGC project's primary bridge to families and high school youth in WCCUSD. The ROC will help TWP identify which client campuses are best matched to the program in a given year, support outreach to teachers and administrators, and, critically, funnel high school graduates into TWP's Green Collar Corps (GCC) internship after they leave Kennedy High. That continuity is key to the engagement strategy: the same young people can be engaged with the program at multiple stages of their lives, as high school students and as graduates.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Project Vision: The Watershed Project's innovative Blue-Green Careers (BGC) project advances economic resilience and environmental justice in West Contra Costa County by

building a blue-green workforce pipeline for local youth, training 90 Richmond high school students and 15 Green Collar Corps (GCC) interns (ages 18-25) to design, build, and maintain green stormwater infrastructure (GSI) on school campuses in the city where they grew up. Through BCG, youth from fossil fuel-impacted neighborhoods are equipped with the precise skills and connections to the green economy needed for a just transition into environmental careers. The BGC pipeline is the thread connecting Youth Watershed Stewards (YWS) high school students and transitional age GCC youth to paid blue-green work opportunities within West Contra Costa County and Richmond.

At the same time, this GSI workforce development programming creates greener, healthier school campuses for heavily impacted communities as students apply their training to design and install rain gardens, native vegetation, and rainwater harvesting systems at three West Contra Costa Unified School District (WCCUSD) schools. These urban greening installations directly reduce environmental burdens for these school communities and surrounding neighborhoods by capturing airborne particulates, filtering localized air pollution, mitigating toxic runoff, and reducing ambient and surface temperatures.

Major Project Components: The project, led by The Watershed Project (TWP) Greening Urban Watersheds and Environmental Education staff, consists of a combination of in-class and hands-on GSI learning through the YWS program; immersive GCC intern workforce development training; and client school campus greening. Specifically, it includes the following per year: (1) In-class GSI curriculum at Kennedy High (4–5 lessons) covering urban stormwater, rain garden and rainwater harvesting design, blue-green career pathways, and a rain catchment design challenge, (2) Field trips to active GSI projects led by environmental professionals, (3) Two hands-on green infrastructure build days (6 total build days) at client school campuses, with Kennedy High students leading construction supported by TWP staff and GCC interns, (4) Three preparatory training workdays with GCC interns to prepare them for supporting high school students in installation, (5) Teacher training at the client schools on GSI system function and care and TWP's K–8 watershed curriculum ("Me and My Watershed: Tap the Sky"), (6) Rainwater Action Day community celebration and planting event at each of the client schools, (7) Ongoing GSI maintenance and repair support for WCCUSD campuses, and (8) Customized signage and maintenance manuals for each client school.

Measurable Outcomes: The project's measurable outcomes result from these efforts and consist of the following:

- Build blue-green readiness and pathways for fossil fuel-impacted students and transitional age youth (Target 90 students and 15 local youth in Richmond).
- Improve Environmental Health Conditions on WCCUSD School Campuses Serving Chevron-Impacted Communities by enhancing green-blue spaces.
- Increase Environmental Career Awareness and Advancement among Richmond Youth (15 paid interns, 2 paid apprentices in Green-Blue Jobs).
- Strengthen Intergenerational and School-Community Connections to Environmental Stewardship in Richmond.

Role of Applicant: TWP serves as Co-Applicant on the application and Project Lead for this project. TWP's Greening Urban Watersheds and Environmental Education teams deliver curriculum, lead build/installation days, train teachers, supervise GCC interns, and run program evaluation and grant reporting. TWP will create a new Blue-Green Project Manager position to lead school greening implementation and the hands-on training days for the high school students.

Partners: Partners on this project are Kennedy High CTE Building and Construction Trades Pathway (curriculum and hands-on project partner); WCCUSD Facilities Department (site access, approvals, coordination); WCCUSD elementary and middle school teachers and principals at client schools (teacher training, ongoing stewardship); the Richmond Outdoors Coalition (ROC) (community outreach, client school identification, and high school-to-GCC pipeline). The ROC will be a vital bridge to WCCUSD and the client schools, ensuring that the school greening projects and BGC just transition workforce development programming are integrated and activated.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Overall Budget: The total cost for the BGC project is $764, 050, which is the amount requested from Bay REPAIR. TWP's three-year project budget for BGC totals $725,237. Direct costs make up $630,737 of that total; indirect costs are $94,500 (14.1%). Professional Services and Consultants are budgeted at $0, well below the 25% application cap.

Personnel ($582,737). The largest share of the budget covers TWP staff time across the four departments that run the program—Greening Urban Watersheds, Education, Urban Restoration, and GCC Youth Workforce Development. Specific roles and time allocations include the Senior Manager of Greening Urban Watersheds (30% FTE: design, permits, build oversight, training oversight); Senior Educator and Workforce Development Manager (27% FTE: workforce education pathway); Career and Skills Training Educators (22% FTE: per person for three people); GCC Workforce Development Manager (15% FTE: certification and career development); Construction Crew Lead (20% FTE: implementation and skill training); Executive Director (5% FTE: partnerships and permits); and five GCC team members at $3,333 per intern per year over three years ($50,000) for paid hands-on training and skill-building alongside Kennedy High students.

Materials, Supplies & Equipment ($45,600). Three demonstration GSI projects at $15,000 per year each ($45,000 total for three years), itemized as: 3 cisterns at $5,000 each, foundations at $2,500 each, plumbing at $2,500 each, and 30-50 native plants at $45 each per campus and

one campus will be retrofitted every year (3X). Curriculum printing and teaching materials add $200 per year ($600 total).

Subcontractors, Vendors & Engagement ($43,213). The total budget includes $38,813 for GT to contract Inclusion Outdoors for the ROC for the community engagement process. Other subcontractors, vendors & engagement costs, included in TWP's budget, are stipends for school landscaping and vocational training staff participating in trainings ($200 per training per person, target 10, $2,000) and Career Day, professional development, and case-study field trips covering speaker fees, transportation, and location rentals ($2,400).

Indirect. Indirect costs are $94,500 to cover the rent, accounting, IT, and shared administrative infrastructure that any TWP program relies on.

Other Sources of Project Funding. $56,466 from ROC/YES Nature to Neighborhoods is leveraged alongside the Bay REPAIR request to support GCC interns and the community engagement work that connects Richmond youth into TWP's blue-green career pipeline ($18,822 per year; funds received for Year 1 and expected to be renewed each year).

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

Blue-Green Careers (BGC) is built to plug into work the region is already doing, and because it is part of a collaboration of so many other community-based organizations working in the project area, it supports many community, local, and regional initiatives. The project is consistent with California's Community Air Protection Program, which designates Richmond and West Contra Costa as AB 617 communities and explicitly names workforce development and green infrastructure among the priorities the local Community Steering Committee has lifted up. The project addresses both of those priorities with its green construction training and on-campus green stormwater infrastructure (GSI) installations.

BGC supports the *WCCUSD Local Control Accountability Plan 2025-2026*, specifically its objectives to increase career preparedness and increase the percentage of students that completes the Career Technical Education (CTE) pathway under Goal 3, Attention to Achievement. BGC is designed to prepare students for green infrastructure jobs and to encourage students to complete their CTE studies by making the program robust, real-world applicable, and connected to future internship opportunities. Doing so, it also supports Strategy 1: College/Career Pathways under secondary school support– to expand high-quality work-based learning opportunities and rigorous instruction within career pathways.

The project is also consistent with several objectives and strategies of the *City of Richmond Climate Action Plan*. Specifically, with its Kennedy High CTE green infrastructure education and training, it supports Objective 7: Green Business and Industry, Strategy GB2 (Green Workforce

Development) to “Support and expand workforce development programs for the City’s residents and youth through actions such as working with WCCUSD to incorporate green technology education and job training into the curriculum of area high schools.” By installing green infrastructure systems at school campuses, it supports Objective 6: Green Infrastructure, Urban Forestry and Agriculture, Strategy GA3, which aims to “increase green infrastructure projects citywide” including “retrofitting existing City facilities with green infrastructure.”

The BGC green infrastructure education and training directly aligns with Goal 4 of the 2017 *City of Richmond Urban Greening Master Plan*, specifically Program 4-C is to “support the development of environmental curricula to foster environmental stewardship” and to “support the development of curricula that rely on hands-on experiences in natural settings to foster environmental stewardship among young people.”

The project also supports the goals of the *Contra Costa County Climate Action and Adaptation Plan (CAAP) 2022 Update*, namely the goal “Resilient Communities and Natural Infrastructure,” advancing strategy 5.5: Minimize heat island effects through the use of green infrastructure. The project installs green infrastructure at three school campuses, which will decrease both surface and ambient temperatures, thus helping to minimize heat island effects in these neighborhoods.

CAPACITY (10 points)

11. *Describe the Project Lead’s experience managing and implementing projects of similar scope and size.*

The Watershed Project (TWP) is a Richmond-based nonprofit with deep experience implementing green stormwater infrastructure (GSI) on schoolyards and delivering environmental education in urban school districts. TWP piloted Youth Watershed Stewards (YWS) in the San Francisco Unified School District (SFUSD) from 2021 to 2026, in partnership with SFUSD’s Career Technical Education (CTE) construction program and the San Francisco Public Utilities Commission (SFPUC). Across four program years, the YWS pilot program has reached nearly 700 students at 12 SFUSD schools, repaired 10 of SFUSD’s 30 rainwater harvesting systems, and improved rain garden conditions at multiple campuses. TWP’s Greening Urban Watersheds Senior Manager, Kat Sawyer, has direct expertise in school greening design and implementation, and installed the majority of SFUSD’s rainwater harvesting systems through SFPUC Urban Watershed Stewardship grants, giving TWP direct technical expertise in the systems this program will build. Also essential to the success of this project, TWP has a long-standing partnership with West Contra Costa Unified School District (WCCUSD), providing watershed education, hands-on curriculum, and outdoor field trips for students across the district since 1997. WCCUSD’s College and Career Department and Facilities Department both support bringing BGC into the district.

TWP’s Green Collar Corps (GCC) program began in 2009, in response to environmental challenges and youth unemployment in historically underserved East Bay neighborhoods; it has since become a vital extension of TWP’s mission to educate and empower communities to protect their watersheds. TWP's GCC green workforce development program blends hands-on

environmental work with professional development, mentorship, and career exploration for under-served, transitional-aged youth, with the GCC internship structured as a comprehensive, nine-month paid internship. The program provides a transformative experience for young people from BIPOC and low-income backgrounds in Richmond, equipping them with valuable skills and knowledge while fostering a profound connection with nature. Through hands-on activities like habitat restoration, water quality monitoring, and watershed exploration, they gain a deep understanding of environmental issues and a sense of ownership and stewardship for their local ecosystem.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

Implementation runs across four TWP departments: Environmental Education, Greening Urban Watersheds, Urban Restoration, and Youth Workforce Development (which houses the Green Collar Corps [GCC] internship program). TWP's Environmental Education team leads curriculum delivery, teacher training, field trip coordination and grant reporting; the Greening Urban Watersheds team leads design, planning, and implementation of the new rainwater harvesting systems and rain gardens, build days and hands-on GSI trainings for GCC interns and Kennedy High students, Rainwater Action Days (RAD) at the client schools, workshops for garden educators, and ongoing GSI maintenance; and the Urban Restoration team leads plant selection, planting events with the school community, and GSI rain garden maintenance workshops for WCCUSD staff. The Youth Workforce Development team will hire, schedule, and mentor TWP GCC interns (local youth ages 18-25). TWP will create a new Green-Blue Project Manager position to lead school greening implementation and the hands-on training days for the high school students.

Before each Kennedy High build day, TWP runs three preparatory training workdays with the GCC interns, so they are ready to co-train high school students on the day of construction. This sequencing is what makes the near-peer training model work: GCC interns train on building the system with TWP staff, then act as confident co-trainers with the high school cohort.

Estimated FTE allocations across the three-year grant term are: Senior Manager, Greening Urban Watersheds (30% FTE); Senior Educator and Workforce Development (27% FTE); Career and Skills Training Blue-Green Project Lead (21% FTE); GSI Education Manager (23% FTE); Greening Educator (30% FTE); GCC Workforce Development Manager (15% FTE); Crew Lead (20% FTE); Executive Director (9% FTE); and four paid GCC team members per year.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

All campus greening installations require written approval from WCCUSD Facilities, which The Watershed Project (TWP) will secure in advance of each installation. TWP has an established working relationship with WCCUSD Facilities, which will support a smooth approval process. TWP has begun the permitting process for the three school greening installations and has experience obtaining comparable approvals for school greening projects in the San Francisco Unified School District (SFUSD) and the Oakland Unified School District (OUSD). No additional permits from the City of Richmond or Contra Costa County will be necessary. WCCUSD's Work Based Learning Program has expressed its commitment to the partnership with TWP to bring Blue-Green Careers (BGC) to high school students. For supporting documentation, see Richmond_26LCB9_Blue-Green Careers_College and Career Letter.pdf.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

TWP does not anticipate the need for project-specific CEQA review for these green infrastructure projects, given the limited footprint of each schoolyard installation. WCCUSD is expected to provide CEQA categorical exemption for these projects, based on TWP's prior experience implementing similar projects in SFUSD and OUSD. TWP will first obtain a Categorical Notice of Exemption (NOE) from the WCCUSD Facilities Director, which will then be signed by the Board of Education and filed with the County Clerk.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

All project work will be conducted on WCCUSD-owned campuses. TWP has an established partnership with WCCUSD and works with the Facilities Department to confirm the site access and scheduling needed each year, which will continue with this project. Formal site control documentation (such as a Memorandum of Understanding or Site Access Agreement with WCCUSD) will be in place by the time of the Grant Agreement execution.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Operations and maintenance of green stormwater infrastructure (GSI) is a recognized challenge in school settings, and TWP has explicitly designed the BGC project to address this challenge. TWP will provide customized training, maintenance manuals, and signage for every client school with a GSI system, ensuring that knowledge of the system is preserved through any teacher or administration turnover. TWP will also deliver a dedicated teacher training at each client school on how the GSI system functions and how to care for it. Ongoing GSI maintenance and repair is itself a core project activity—Kennedy High students and Green Collar Corp (GCC) interns return to client campuses for maintenance workdays through the grant term. Each client campus also receives 30–50 new native plants per year, with TWP's consistent presence ensuring those plantings are well-established and maintained. TWP will deliver specialized workshops annually for WCCUSD Facilities, Buildings & Grounds, and Maintenance staff so that they fully understand the new GSI features being added to their property and receive best practices for stewardship.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

There are no known barriers to this project; however, three challenges are worth naming. The first is the school calendar: a Career Technical Education (CTE) carpentry course has a fixed cadence, and the build/installation days have to fit into it. To address this, TWP brings to WCCUSD its scheduling experience with the SFUSD CTE Construction program, where it ran this exact sequencing for four years. In addition, the curriculum has been timed to Kennedy High's fall/winter/spring rhythm. The second challenge is recruiting and retaining GCC interns from the Richmond community; the ROC's direct connection to Kennedy High graduates is the program's answer to that challenge. The third is long-term GSI maintenance after the grant term, addressed through the manuals, teacher training, WCCUSD staff workshops, and ongoing maintenance program described above.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

Project Vision:	The Blue-Green Careers project advances economic resilience and environmental justice in West Contra Costa County by building a blue-green workforce pipeline for local youth, training 90 Richmond high school students through its award-winning Youth Watershed Stewards program and 15 interns (ages 18-25) in its Green Collar Corps program to design, build, and maintain green stormwater infrastructure (GSI) on school campuses in the city where they grew up. Through these programs, youth from fossil fuel-impacted neighborhoods are equipped with the precise skills and connections to the green economy needed for a just transition into environmental careers. This GSI workforce development programming also creates greener, healthier school campuses for impacted communities as students apply their training to design and install rain gardens, native vegetation, and rainwater harvesting systems at three West Contra Costa Unified School District (WCCUSD) schools. These urban greening installations directly reduce environmental burdens for these school communities and surrounding neighborhoods by capturing airborne particulates, filtering localized air pollution, mitigating toxic runoff, and reducing ambient and surface temperatures.

Measurable Outcome	Indicator(s)
1. **Build blue-green job readiness and pathways for students and transitional youth impacted by fossil fuel industries (Target 90 students and 15 local youth in Richmond).**	• 90 Kennedy High School students from the CTE program complete the Youth Watershed Steward just-transition curriculum and hands-on GSI project work over the grant term (30 per year), demonstrating increased technical skills and awareness of green economy careers. All students participate in the hands-on green job training and one build day per year. • 15 transitional-aged adults complete the paid Green Collar Corps program over the grant term (5 per year), gaining employment experience and credentialed blue-green job skills that position them for entry-level environmental careers. • Number of training sessions

	• Over 100 Participants complete a minimum of 6 hands-on (two build days per year) student training days, providing them with applied, resume-building experience in GSI construction.
2. **Improve Environmental Health Conditions on WCCUSD School Campuses Serving Chevron Refinery-Impacted Communities by enhancing green-blue spaces.**	• Three WCCUSD campus green space enhancement projects completed and documented with before-and-after photos and native plant counts over the grant term (3 years), demonstrating measurable increases in urban green cover. • WCCUSD maintenance staff, garden educators, and community partners complete a minimum of 6 capacity-building workshops over the grant term (Target: 1 per year), ensuring installed GSI systems are properly maintained and integrated into campus life beyond the grant period. • All three installed GSI systems (rain gardens, rainwater harvesting, native vegetation) are functional and maintained at end of grant term, as verified by program staff site assessments.
3. **Increase Environmental Career Awareness and Advancement among Richmond Youth (15 paid interns, 2 paid apprentices in Green-Blue Jobs).**	• Number of Kennedy High School students introduced to the range of jobs that are possible in green stormwater infrastructure for nature-based solutions to climate change right here in the Bay Area. (Target: 90) • At least 15 environmental professionals are surveyed to identify priority skills for entry-level positions, directly shaping program curriculum to align with real employer needs. • At least 9 blue-green professionals engage students through classroom visits and field trips, resulting in a minimum of 9 documented student-professional career connections over the grant term. • 90 students are introduced to the full spectrum of blue-green career options available in the Bay Area through structured classroom presentations and field-based learning over the grant term. • At least 15 students are referred into The Watershed Project's Green Collar Corps paid internship pipeline over the grant term (5 per year), creating a direct bridge from high school to paid environmental employment. • At least 2 youth are employed as part of the permanent TWP staff as apprentices who will be promoted and trained as field crew. • Students from non-college-bound backgrounds are intentionally supported through programming that presents non-degree pathways into conservation and GSI careers, as documented in program records and partner activities with Richmond Outdoors Coalition.

4. **Strengthen Intergenerational and School-Community Connections to Environmental Stewardship in Richmond.**	• A minimum of 60 multigenerational connections made between Kennedy High School students and younger grade school students through Rainwater Action Day campus planting events over the grant term. • At least 9 school-community partner connections forged through Richmond Outdoors Coalition engagements and campus events over the grant term (3 per year), building lasting ties between schools and the broader Richmond community. • Students share results of their GSI builds directly with client school campus communities each year, fostering peer education and visible student leadership in environmental health improvements.

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Build blue-green readiness and pathways for fossil fuel-impacted students and transitional age youth (Target 90 students and 15 local youth in Richmond).	A. Hands-on training for Kennedy High School CTE Construction Pathway	1. TWP staff leads blue-green career technical training to Kennedy High School Students	The Watershed Project (TWP)	WCCUSD Work-Based Learning	Annually in Fall
		2. Kennedy High School Construction CTE students build rainwater harvesting systems and rain gardens on “client” school campuses	TWP	WCCUSD Work-Based Learning	Annually in late Fall/early Winter
		3. Blue-green GSI field trip for Kennedy High School Students	TWP	Lotus Water, Mithun, Restoration Design Group	Annually in Winter - Late Winter/ Early Spring

	B. Hands-on training and blue-green career mentoring for TWP Green Collars Corps interns	1. TWP staff leads hands-on, career technical training for TWP Green Collars Corps interns with blue-green activities at TWP urban restoration sites throughout the City of Richmond (Creeks, Bioswales, Rain Gardens)	TWP	Lotus Water, Mithun, Restoration Design Group	Annually in Winter - Spring
		2. TWP Green Collar Corps interns hand-on training intensive, building rain gardens and rainwater harvesting systems at WCCUSD schools	TWP	TWP Greening Urban Watersheds team	Annually in late Fall/early Winter
2. Improve Environmental Health Conditions on WCCUSD School Campuses by enhancing blue-green spaces.	A. Urban Green Space Enhancement	1. Rainwater harvesting system and/or rain garden added to existing green spaces built by Kennedy High School students	TWP	TWP Greening Urban Watersheds team	Annually in late Fall/early Winter
	B. Training workshop for WCCUSD Maintenance / Facilities / Buildings & Grounds staff	2. Specialized training for WCCUSD staff to share information about new GSI elements that have been built by the YWS program	TWP	WCCUSD	Annually in Fall
	C.Training workshop for school garden educators	1. GSI workshop for garden educators with an interest in rainwater harvesting and rain gardens at their school	TWP	Growing Together (GT)	Annually in Spring
3. Increase Environmental Career Awareness and Aspirations among Richmond Youth.	A. Introductions to blue-green career pathways	1. Presentation to students providing options and points of entry to blue-green careers; GSI construction, civil engineering with a water focus	TWP	TWP Education team	Annually in Fall

		2. Remove barriers for students who are not planning to receive a traditional 4 year degree, provide other routes to conservation work	TWP	Richmond Outdoors Coalition (ROC)	Annually in Spring
	B. Introduce students to professionals in the field	1. Professionals in the field will present to class on GSI projects as well as their own career path	TWP	Lotus Water, Mithun, Restoration Design Group	Annually in Fall
4. Strengthen Intergenerational and School-Community Connections to Environmental Stewardship in Richmond.	A. Rainwater Action Day	1. Multi-generational community day at client school campuses, high school students team up with younger students and plant plants in green spaces on campuses	TWP	ROC, GT	Annually in Spring
		2. Schools that receive a rainwater harvesting system water newly planted plants with rainwater captured during rainy season	TWP	GT	Annually in Spring
		3. High School students share results of their builds with “client” school campus students	TWP	GT	Annually in Spring

Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Our Living Future
Lead Applicant Name	Growing Together
Project Location	West Contra Costa Unified School District
Overall Funding Request	$5,000,000
Grant Term Request	3 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Planting Our Future
Project Lead	Growing Together
Project Location	20 West Contra Costa Unified School District schools, the Planting Justice Mother Farm in El Sobrante, and select neighborhoods in Richmond and San Pablo
Project Funding Request	$1,308,073

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Planting our Future builds on Lead Applicant Growing Together's proven model for community-driven neighborhood reforestation, expanding its scale and sustaining its growth. This reforestation program leverages schools as trusted community hubs, connecting networks of 300–600 families through a shared commitment to healthier, brighter futures for their children. By integrating education on the benefits of trees, tree planting and maintenance, tree distribution, and technical support into school-day instruction and family engagement programming, the program empowers families to plant and steward trees at and around their homes. Over the past eight years, Growing Together (GT) has refined this model from a single 4th-grade classroom pilot in East Oakland into a highly effective regional initiative that has engaged more than 1,500 households in environmental justice communities. Through ongoing follow-up support via a robust participant database, GT has achieved tree survival rates exceeding 90%, provided families with long-term tree-care guidance, and cultivated a growing network of residents actively invested in urban reforestation. During the 2025–26 school year, GT implemented this tree planting program in 25 classrooms across the West Contra Costa Unified School District (WCCUSD), resulting in 250 families planting trees. With funding from CAL FIRE (CA Dept. of Forestry and Fire Protection), GT also developed an operations manual and toolkit to support program expansion.

Through the Planting Our Future project, GT will scale this successful model districtwide over three years, permanently integrating it within the environmental education, school greening, and family engagement efforts across 20 school communities. Through a partnership with Co-Applicant Planting Justice (PJ), the project will connect urban forestry education and family/household tree plantings with well-established local urban forestry infrastructure, including tree production, workforce training, arborist services, and long-term technical assistance. PJ operates a 4-acre tree production center in El Sobrante, connected to its 10-acre wholesale nursery, mail-order business, retail center, and workforce training program. Together, GT and PJ will create an integrated community reforestation pipeline that combines environmental education, free tree distribution, local workforce development, and home-based support for participating families. Over three years, the project will enable 3,000 households to plant climate-appropriate trees and receive the support needed to ensure long-term survival and stewardship, while building a locally rooted urban forestry workforce of 60 youth and transition-age young adults to foster a lasting, resident-led movement for neighborhood reforestation.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

Reducing Air Pollution and Improving Health Outcomes

Increasing the urban tree canopy is an evidence-based, low-cost strategy to directly mitigate air pollution and reduce severe health disparities in the heavily industrialized Richmond-San Pablo corridor. According to the USDA Forest Service, a single mature urban tree sequesters approximately 48 pounds of CO_2 annually while filtering air pollutants, including fine particulate matter ($PM_{2.5}$), nitrogen dioxide (NO_2), and ozone (0_3), primary drivers of localized respiratory illness. Furthermore, expanded canopies lower microclimate temperatures to combat urban heat island effects. Residents in the project area will also benefit from views of green spaces, which are clinically proven to improve mental health by reducing stress and anxiety in adults.

This project is especially needed in the proposed project area, as the neighborhoods around partner schools generally suffer from environmental degradation and tree canopy inequity. According to Google Environmental Insights Explorer and regional forestry assessments, Richmond and San Pablo possess an average tree canopy cover of just 14%, which plummets to 5% to 10% in heavily paved commercial zones, flatland residential neighborhoods, and industrial corridors. This sits dangerously below healthy urban targets of 30%+. By comparison, more affluent urban areas in West Contra Costa County, such as El Cerrito, have an estimated 33% urban tree canopy cover.

Compounding this issue, traditional municipal planting strategies frequently fail, with studies showing that up to 40% of newly planted urban street trees die within two years due to hostile soil conditions, lack of irrigation infrastructure, and constrained city maintenance budgets. On private property, low-income residents are frequently discouraged from undertaking greening projects due to long-term maintenance demands, uncertainties about technical issues, and prohibitive costs of professional tree care. The Planting Our Future project systematically dismantles these barriers using a proven, community-centered stewardship framework:

- **Youth-Led Community Activation**: Through outdoor experiential lessons and school stewardship activities, local youth build a personal connection to urban forestry, inviting and encouraging their families to plant trees while also learning site preparation and planting practices. Over time, this strategy builds highly trusted, neighborhood-level networks that drive residential adoption.
- **Culturally Tailored Reforestation**: Offering families a curated selection of popular fruit trees with cultural significance increases household buy-in, which incentivizes long-term tree maintenance and boosts tree survival.
- **Arborists and Specialists Trained and Paid to Manage Maintenance**: In partnership with Co-Applicant PJ, the project minimizes risk of tree failure due to negligence or lack of knowledge by providing residents with ongoing, direct access to urban forestry professionals and certified arborists for at-home maintenance and technical support. This comprehensive care loop yields measurable results: over the past 10 years, GT's neighborhood tree planting programs have maintained a 90%+ survival rate based on direct family communications. Deploying 3,000 new trees through this project will significantly expand the tree canopy and improve health outcomes for generations.

Building Economic Resilience for a Just Transition

This project directly advances economic resilience and a just transition by building accessible, high-wage pathways into California's rapidly expanding green economy for historically marginalized West Contra Costa County residents. The BAAQMD *Path to Clean Air* Plan (2024) explicitly calls for localized green infrastructure and vegetative indicators to buffer neighborhoods from industrial emissions; however, local tree care entities report a critical shortage of skilled labor and certified arborists available to plant, manage, and protect these assets. Through a partnership between Lead Applicant GT and Co-Applicant PJ, this project addresses this localized workforce gap by providing paid workforce development, hands-on training, and comprehensive apprenticeship opportunities for up to 60 youth, transition-age young adults, and adults over a three-year period. Participants will receive specialized credentials and mentorship in advanced tree propagation and nursery management; tree management, care, and data collection; and community environmental education. This project will graduate highly trained cohorts of urban forestry technicians prepared to step immediately into entry-level positions, supporting the growth of the local tree-care ecosystem. By training

residents to become paid stewards of their own climate-resilient ecosystem, we can meet a public health need while helping to build the local green economy.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Tree education activities and distribution events will happen at 20 West Contra Costa Unified School District (WCCUSD) schools and their surrounding neighborhoods. School locations are as follows: Bayview Elementary School (3001 16th St., San Pablo, CA 94806), Cesar Chavez Elementary School (960 17th St., Richmond, CA 94801), Dover Elementary School (1870 19th St., San Pablo, CA 94806), Downer Elementary School (1231 18th St., San Pablo, CA 94806), Ford Elementary School (2711 Maricopa Ave., Richmond, CA 94804), Grant Elementary School (2400 Downer Ave., Richmond, CA 94804), King Elementary School (4022 Florida Ave., Richmond, CA 94804), Lake Elementary School (2700 11th St., San Pablo, CA 94806), Lincoln Elementary School (29 6th St., Richmond, CA 94801), Mira Vista K-8 School (6397 Hazel Ave., Richmond, CA 94805), Montalvin K-8 School (300 Christine Dr., San Pablo, CA 94806), Nystrom Elementary School (230 Harbour Way S., Richmond, CA 94804), Michelle Obama School (629 42nd St., Richmond, CA 94805), Peres K-8 School (719 5th St., Richmond, CA 94801), Riverside Elementary School (1300 Amador St., San Pablo, CA 94806), Stege Elementary School (4949 Cypress Ave., Richmond, CA 94804), Tara Hills Elementary School (2300 Dolan Way, San Pablo, CA 94806), Washington Elementary School (565 Wine St., Richmond, CA 94801), DeJean Middle School (3400 MacDonald Ave., Richmond, CA 94805), and Helms Middle School (2500 Road 20, San Pablo, CA 94806).

Tree plantings and ongoing technical assistance supporting resident-driven urban forestry will take place throughout every neighborhood in the project area. Trees will be planted and cared for at (or in the proximity of) 3,000 different residences within the project area. Some workforce development training and skills education workshops will take place at Co-Applicant Planting Justice's Mother Farm propagation orchard, located within the grant program boundaries on Marin Road in El Sobrante.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Lead Applicant Growing Together (GT) has operated bilingual urban forestry education and tree-planting programs in collaboration with local public schools for the last ten years, working with residents of all ages and backgrounds to plant over 2,000 trees in

low-income neighborhoods across the East Bay flatlands. GT's success with these programs centers on community engagement in partnership with the stakeholders of the schools where they have long-standing, trusting relationships. This neighborhood planting model originated from a collaborative project with one East Oakland classroom from 2019 to 2021, and GT has been refining and scaling the program in the years since. The pilot was an immediate success, providing tree education for hundreds of students and families, who planted 75 trees in and around their residences. In the process, GT found considerable demand across the WCCUSD school communities for both tree education and planting support. Over the past four years, GT has delivered the program at a limited scale in WCCUSD school communities, expanding only as funding allowed. In every participating school, family demand for trees has met or exceeded expectations, and in some cases has far outpaced available resources. In 2025–26, participation was limited to three classrooms at each of eight schools, and GT received more than 250 tree requests.

The proposed project will significantly expand the program's scope, engaging 15–20 classrooms across 20 schools with the intent to distribute and plant 3,000 trees. Based on previous program evaluations, and with strengthened post-distribution support and follow-up, we expect a long-term tree establishment rate of over 90%. From 2022–2025, GT conducted annual WCCUSD stakeholder surveys of administrators, teachers, staff, students, and parents across partner schools. Parents consistently identified the tree giveaways and plantings as program highlights.

Co-Applicant Planting Justice (PJ) also brings deep community roots in West Contra Costa County. Since 2009, PJ has operated the 4-acre El Sobrante Mother Farm within the PTCA boundary, building trusted relationships and conducting community outreach for program refinement through open farm days, workshops, harvests, mutual aid, and a weekly farmers market. As both a living classroom and urban agroecology hub, the farm demonstrates the benefits of food access, green space, and biodiversity. PJ's Free Fruit Tree Planting Program has already planted more than 1,000 organic fruit trees in under-canopied neighborhoods, responding directly to resident priorities for fresh fruit, shade, and beautification. PJ's community presence fosters strong communication, which allows them to gather direct input about the programs they offer and about how to continually improve direct services to the community.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The Planting Our Future project equips children and their families with the knowledge, network, materials, and support needed to become long-term stewards of their local ecosystems and to advance community-identified goals such as increased canopy cover, neighborhood beautification, green job development, and improved local food access. The project aligns with goals identified by teachers, students, and school administrators in end-of-year surveys at partner schools in WCCUSD, including expanded access to nature for their children and the development of practical skills and training opportunities for students. Lead Applicant GT collects annual feedback from WCCUSD participating teachers and schools at the end of each program year. In the 2025–26 survey, all eight participating schools in the tree planting program requested to continue the program and provided detailed feedback on what worked well and what they learned. GT uses this input each year to refine program design, improve implementation, and support teachers and schools in customizing curriculum and outreach activities to better meet the needs of their students and school communities.

The project's tree species will be selected based on years of program data, identifying the varieties most requested by residents and best suited to the local climate. The program provides bilingual (English and Spanish) educational resources, tools, supplies, planting assistance, and ongoing technical support to help ensure long-term tree survival. These strategies address two major barriers to urban reforestation in low-income neighborhoods: resident engagement and successful tree establishment. GT's approach is strengthened by its long-standing relationships with partner schools, where program directors have served as environmental educators for up to seven years, deeply connecting the program's design and implementation to community needs.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

The Planting Our Future project engages residents through neighborhood schools, where Growing Together (GT) Site Coordinators lead year-round outdoor learning, school greening projects, and family engagement activities during classes, after-school programs, and community events. As part of the environmental education curriculum, students participate in a 2-4-lesson Urban Forestry module that teaches the benefits of trees, demonstrates proper planting techniques, and encourages families to plant trees at home. After completing the lessons, Site Coordinators work with school staff to invite families to participate in the household planting program through multilingual school messaging systems, teacher outreach, and flyers. Families register via online form or QR code and select a tree to pick up at an after-school community distribution event on

campus. Once registered, families are added to GT's household database and receive multilingual text communications with reminders, planting guidance, and ongoing tree-care support. Families are asked to share a photo after planting and receive seasonal maintenance tips, such as watering and mulching guidance. Participants can contact the GT Trees Coordinator at any time for assistance.

Under the proposed project, Co-Applicant Planting Justice (PJ) offers a team of community arborists who will expand support by providing in-home consultations and technical assistance from trained tree-care specialists. While past programs have achieved strong survival rates, this added support will further improve long-term tree health while building community knowledge and capacity. In addition, the project's community engagement partner, the Richmond Outdoors Coalition (ROC), will expand outreach through its network of local organizations, listserv, social media, and media partnerships to reach more households.

The program's success is driven by several key benefits. Families can choose from a variety of trees, including popular fruit trees, creating stronger personal and cultural connections. Free, school-based distribution events reduce barriers related to cost and transportation, particularly for low-income households. Multilingual, text-based communication ensures participants receive clear planting and care instructions along with direct access to technical support. Participating households will have access to in-home consultations and tree-care assistance from PJ Community Arborists, answering any technical questions and giving families the confidence, capacity, and support that will ensure long-term maintenance.

GT's participant database, communications platform, staff coordinator, and arborist support team allow for efficient feedback collection and continuous program improvement through weekly operations meetings. Last year, the program achieved a participant response rate of more than 95%, reflecting strong community engagement, effective communication systems, and high-quality personalized support.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Project Vision: The project aims to create a steadily growing and enduring tree canopy by planting 3,000 new trees in the Richmond and San Pablo neighborhoods through community-driven education and outreach programs in 20 West Contra Costa Unified School District (WCCUSD) school communities. Using a set of coordinated strategies to expand outreach and increase long-term survival, this initiative will inspire and empower residents to steward their neighborhood forest, at and around their residences. Growing Together (GT) will sustain these strategies beyond the three-year project period by

integrating them into school-based education programs and by growing residents' capacity through skill-sharing and technical support. This project also creates career pathways in a growing industry by strengthening and diversifying the local tree care workforce, training and paying 60 individuals from affected communities in tree production, urban forestry, and arboriculture, helping to ensure the long-term health of our neighborhoods' urban forest.

Measurable Outcomes: In each year of the project, GT will lead tree planting education programs in every classroom at 20 WCCUSD schools in the project area (8,000+ students), inspiring students to plant at home and introducing them to the steps of the process through hands-on activities. GT will then work with teachers, school staff, and the Richmond Outdoors Coalition (ROC) advisors to conduct outreach to school families and register 1,000 households in the household planting and support program per year during the grant period. At 20 schools per project year, GT will lead one or more community distribution events, providing trees and supplies to 1,000 families for planting at their residences. Co-Applicant Planting Justice (PJ) will conduct follow-up outreach to all participants to confirm plantings and provide any needed support during the establishment period, including multilingual tree-care information, home consultations, and sharing of tree-maintenance strategies and techniques.

In each year of the project, PJ will recruit and train a team of ten residents in the project area who face barriers to workforce entry, preparing them for skilled arborist positions through training workshops, mentorship, and direct support for residents participating in the planting and care program. Also, in each year of the project, PJ will train an additional team of ten residents in the project area who face barriers to workforce entry, preparing them for skilled nursery/tree production positions through training workshops, mentorship, and direct involvement in growing the 3,000 trees needed for the project.

At the end of each year of the project, GT and PJ will send a stakeholder feedback survey to all participants in the household planting program, gathering data on tree health, skills and knowledge gained, levels of support for tree planting and care, and the benefits of increased canopy. At the end of each year of the project, PJ will conduct tests to measure the skill level of all team members and determine their readiness for industry employment, along with post-program interviews in which participants share feedback and discuss the impacts on their lives.

Partner Roles:
Lead Applicant | Project Lead Growing Together (GT) will be responsible for planning and implementing educational programming across the 20 school sites, including coordination with school principals and teachers. They will collaborate with teachers, school staff, and the ROC on outreach and engagement with school communities and on implementing the residential planting component of this project. GT will collaborate with PJ on the planning of the technical support program for residents,

as well as the usage and optimization of the participant database, customer communication platforms, and tree education materials. GT and PJ will collaborate on the design and implementation of feedback surveys for all participants, as well as overall program evaluation. In the project's final year, GT will refine its working operations manual, which incorporates all of the elements needed to widely share the program's successful practices.

Co-Applicant Planting Justice (PJ) will serve interconnected roles in the project, as the primary supplier of climate-resilient trees for the tree distribution program and as the lead provider of technical assistance, workforce training, and land-based education at their El Sobrante Mother Farm.

Tree Supply **-** PJ operates a biodiverse certified organic fruit tree nursery, with more than 1,500 varieties of fruit and nut trees, edible perennials, and medicinal plants. For this project, PJ will grow and supply approximately 1,000 trees per year to GT for the annual household distribution program. All trees will be selected for climate appropriateness and long-term survival in West County conditions (the same conditions of PJ's Mother Farm propagation orchard in El Sobrante).

Technical Assistance at the Mother Farm **-** Beginning in Year One, PJ's Mother Farm will host structured training sessions for program participants, school cohorts, and community members that cover orchard care, urban agroforestry, tree propagation, soil health, and the environmental health benefits of urban canopy, offering something no other project partner can: a working, mature urban orchard where participants can see, touch, and learn from trees at every stage of growth — from propagation bench to producing canopy — staffed by community members with decades of hands-on experience. Sessions will be open to youth, families, and workforce trainees, with bilingual facilitation available.

Workforce Development **-** PJ will recruit, interview, onboard, and train a cohort of up to 20 local youth workforce trainees per year in tree production, nursery operations, urban forestry support, and community education. Recruitment will prioritize residents of Richmond, North Richmond, San Pablo, and El Sobrante in , with particular attention to young adults and others facing employment barriers. Trainees will gain practical, transferable skills through supervised, paid work at the Mother Farm nursery and through participation in neighborhood distribution and technical assistance activities.

Home Visits and Ongoing Tree Care **-** After Year 1 plantings, PJ will deploy trained orchardists and program graduates to conduct in-person technical assistance visits to households that received trees. These visits will address tree-care questions, provide hands-on instruction in pruning and soil amendment, replace trees as needed, and reinforce the household's connection to the broader community

forestry stewardship network. GT's text-message follow-up system will help coordinate home visits by prioritizing households with flagged concerns or non-response to in-person support. PJ's will ensure that every household that planted a tree has direct access to an experienced, community-based orchardist — thereby achieving the 95% survival goal.

Co-Applicant West Contra Costa Unified School District will host the educational programming and tree distribution components of this project at 20 school campuses and will support outreach through text messages to families.

Subcontractor Richmond Outdoors Coalition (ROC) will leverage its community networks and capacity to strengthen outreach efforts, broadening participation beyond school communities and therefore increasing overall participation. The ROC Coordinator will work with the Project Coordinator and each school's GT Site Coordinator to plan the outreach strategy for promoting participation in the household tree planting program. The ROC will then implement outreach strategies (such as social media, neighborhood listservs, and organization mailing lists), enabling a wider audience in Richmond and San Pablo to access these valued services.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Overall Budget: Total funding requested for the Planting Our Future project is $1,308,073. Funds are distributed to project partners in the following manner:

- Growing Together (Lead Applicant): $428,073
  - The ROC (Subcontractor for GT): $38,813 (included in the GT total funds requested amount)
- Planting Justice (Co-Applicant 2): $880,000

Key Project Costs

<u>Personnel/Staff Costs</u>

- GT Trees Coordinator (1 FTE for 6 months each year) - $152,280
- GT Trees Program Assistant (10 hrs/wk for 6 months each year) - $32,400
- PJ Workforce Development Coordinator/Instructor- PJ Mother Farm Propagation Orchard Manager - $250,000
- PJ Orchardist #1 (.5 FTE) - $100,000

- PJ Workforce Development Coordinator -West Contra Costa Educator (1 FTE) - $250,000
- PJ Orchardist #2 (.5 FTE) - $100,000

Subcontrators & Vendors

- Community engagement facilitators for community engagement process (ROC): $32,063
- Participant stipends/compensation for Richmond Outdoors Coalition community engagement process (ROC) - $6,750

Materials, Supplies & Equipment (> $5K itemized)

- GT tree purchase - 3,000@$50 each - $150,000
- GT small planting supplies, tools, amendments, stakes, etc - $9,000
- PJ Orchard Management tools, amendments, irrigation, etc - $10,000

Other Direct Costs

- PJ $20/hour stipends for workforce development participants - $25,000

ECOSYSTEM ALIGNMENT - (10 points)

10. Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).

The proposed project advances the goals of multiple local and regional planning efforts. The County-adopted *2024 Contra Costa County Climate Action and Adaptation Plan* includes several strategies focused on Resilient Communities & Natural Infrastructure (NI). The project advances Strategy NI-5: Minimize heat island effect through the use of cool roofs, green infrastructure, tree canopy, cool paint and pavement, and other emerging strategies; it implements a key proposed action for this strategy- “increase tree planting in urbanized areas” - by supporting the planting of 3,000 new climate-appropriate trees across the highly urbanized neighborhoods that surround the 20 West Contra Costa County schools where the project is based.

The project is also consistent with the 2017 *City of Richmond Urban Greening Master Plan*, specifically Goal 2: Expand the Urban Forest and Goal 4: Educate and Promote Stewardship of the Urban Forest. The project includes the Growing Together (GT) urban forestry curriculum at 20 school campuses as the foundation for a neighborhood-driven reforestation effort that will provide 3,000 trees and ongoing tree maintenance support at no cost to school community families, thus advancing the Plan’s Program 2-B, which encourages tree-planting campaigns by community-based organizations. With fruit trees among the species offered to school families, this project also supports Program 2-F, which promotes urban agriculture within the City. Program 4-C is to “support the development of environmental curricula to foster environmental stewardship” and to “support the development of curricula that rely on hands-on

experiences in natural settings to foster environmental stewardship among young people." The project delivers that exact type of educational programming for 3,000 families at their residences, complementing the school-based programming in the Green Healthy Schools project.

The project directly aligns with and advances several WCCUSD plans. Both GT and the Richmond Outdoors Coalition are named as the selected providers of health and wellness programming at project schools in the *WCCUSD Expanded Learning Opportunities Program (ELO-P) Plan.* The project's educational programming also supports Goal 3.4 of the *WCCUSD 2024-29 Strategic Plan* to "provide opportunities for students to design learning experiences for themselves and effectively investigate real-world problems that can positively impact their school and the wider community." This experiential programming provides the context, spaces, and instructional support for all students to have "real-world learning encounters" and "opportunities for collaborative inquiry-based learning."

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Founded in Oakland in 2013, Growing Together's mission is to improve the health and sustainability of communities by greening schoolyards, providing hands-on youth environmental education, planting trees, and increasing access to fresh food. Growing Together (GT) cultivates long-term collaborative relationships with local schools and co-creates programming that aligns with the goals, needs, and values of each community's stakeholders. GT's 41 specialist instructor-coordinators and five assistant staff represent over 350 years of collective experience leading and establishing these programs at schools in the East Bay. Multi-year relationships with partner schools reflect the deep personal ties GT has with the communities it represents and serves. Eight of GT's Site Coordinators and five assistant staff began their careers as middle/high school interns. In 2025-26, GT operates school-year programs at 48 schools across four East Bay school districts– eight in Oakland Unified School District, 33 in West Contra Costa Unified School District (WCCUSD), six in San Lorenzo Unified, and one in San Leandro Unified– giving 10,800 K-12 students weekly or bi-weekly opportunities to grow, harvest, prepare, and enjoy fresh foods, green their schoolyard, plant trees, and learn leadership skills through apprenticeships and enterprise development.

The Planting Our Future program was initiated in 2019 through a collaboration between a classroom teacher at Koremastu Elementary in East Oakland, her 4th-grade students, and GT staff. After creating a basic hands-on curriculum of lessons and leading a hands-on campus planting demonstration, GT organized a community planting day where over 125 neighborhood residents planted trees in and around their homes. GT

has since introduced the program to 26 different East Bay schools (between two and 15 each year), educating 3,200 students and facilitating the at-home planting and care of over 1,000 trees, with a survival rate of over 90% and at a per-tree planting cost of approximately $100.

Over the last seven years of steady growth, GT has both expanded the program's reach and refined its operational systems. In 2023, they developed a text-based, multilingual messaging system that enables them to communicate post-planting care recommendations directly to families and provide on-demand advice from arborists, maximizing tree survival and tracking long-term impact. This year, with funding from CAL FIRE (CA Dept. of Forestry and Fire Protection) and a partnership with Green Schoolyards America, GT is documenting its practices in a comprehensive operations guide and launching a technical assistance program to help other schools and organizations initiate this program in their own communities.

GT has the capacity and experience to manage multiple grants, programs, and vital relationships with both public agencies and community-based organizations. In WCCUSD, they have successfully managed multi-year funding from CAL FIRE for schoolyard greening and several multi-year California Department of Food and Agriculture grants and a contract with the Contra Costa/Solano Food Bank to increase access to fresh foods. They have also supported various tree planting projects in the cities of Richmond and San Pablo through a CAL FIRE grant and WCCUSD contracts. While developing district-wide strategic initiatives at WCCUSD, GT collaborated with the District's Facilities, Career and Technical Education, Operations, and Food Services departments and partnered with leadership and PTAs at 29 schools.

In three other East Bay School Districts over the past five years, GT has managed several dozen contracts with school sites, district departments, local community-based organizations, and the Alameda County Public Health Department, as well as a multi-year grant from CA State Parks. In all, GT provides schoolyard greening, fresh food access, and health-focused education/workforce training programming for 48 school communities.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

Growing Together (GT) will ensure successful project implementation through a dedicated Trees Coordinator (1 FTE for 27 weeks annually) working closely with each school's Site Coordinator. Together, they will plan annual timelines, educational activities, outreach strategies, and evaluation metrics before each program cycle

begins. Site Coordinators will lead classroom-based urban forestry education and coordinate outreach to interested families, with support from teachers, school staff, community partners, and project partner the Richmond Outdoors Coalition (ROC).

The Trees Coordinator will manage participant registration, maintain the household database, coordinate multilingual text communications, and ensure families are prepared for successful tree planting. Families will receive reminders, planting guidance, technical support, and follow-up communications, including care instructions, surveys, and opportunities for additional assistance by text, phone, or home visit. This high-touch support model has proven highly effective in achieving strong participation and tree survival rates.

GT will also collaborate closely with the Co-Applicant Planting Justice's team of community arborists and their tree production facility to maximize program impact. Together, the teams will manage inventory, analyze community preferences, improve operations, strengthen household support systems, and tailor technical assistance and training based on participant feedback and identified tree-care needs.

This project is built on a strong foundation of existing investment and community partnerships. Significant leveraged funding—approximately $2.1 million over the three-year project period—has already been committed through school site budgets, the WCCUSD Expanded Learning Department, PTAs, and municipal and government grants, all supporting the 20 GT Site Coordinators. BAAQMD funding would significantly expand programming across all 20 school sites while supporting long-term sustainability. Based on the past seven years' work developing programs in 33 schools, participating schools are expected to continue increasing their financial contributions to sustain and grow this highly valued program, with funding leveraged across all partner schools projected to exceed $700,000 annually in future years.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

No specific permits are required for this project. For educational programming, Growing Together (GT) is already in a Master Services Agreement with West Contra Costa Unified School District (WCCUSD) to engage with students at all of their school sites. Since introducing this urban forestry and tree planting program in 2022, GT has received yearly approval from WCCUSD to proceed with implementation. For supporting documentation, see Richmond_26LCB9_Planting Our Future_Master Services Agreement and Richmond_26LCB9_Planting Our Future_WCCUSD Letter.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

Not applicable.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

The project's educational component does not require site control. Co-Applicant Planting Justice (PJ) owns the farm/nursery where propagation and training occurs. Neighborhood tree planting will occur on private property owned by program participants or by renters with permission from landlords. Planting may occur in public rights-of-way, which will require permits that PJ will help secure.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Co-Applicant PJ will provide education and technical support to families on tree maintenance throughout the establishment period, with support from this grant. After three growing seasons, newly planted trees are typically well established and require minimal watering, pruning, fertilization, or other regular care. At the end of the grant period, program participants will be sufficiently well-trained and experienced to provide the tree care needed for successful growth.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Planting Our Future's implementation strategies are specifically designed by and for urban communities to successfully overcome all challenges to tree canopy development, including lack of incentives and resources to plant trees, access to needed support, and concerns about maintenance costs, knowledge, and risks. Barriers to implementation are reduced or removed by regular support and communication in multiple languages.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

Project Vision:	Increasing the tree canopy across neighborhoods in the project area, through a community-driven urban forestry initiative with three interwoven strategies: 1) engagement of children and families throughout 20 school communities, 2) carrying out 3,000 household plantings, with locally produced trees, 3) training a workforce of arborists to provide ongoing technical assistance to households, ensuring long term tree survival, providing metrics tracking, and empowering residents to care for trees.

Measurable Outcome	Indicator(s)
1. **Urban Tree Planting**: By the end of the 3-year grant term, planting 3,000 trees in households in the project area, through outreach, education, and planting support programs in 20 school communities.	• Number of students who complete introductory tree education mini-course, including hands-on planting lessons, at 20 schools (target: 8,000 students) • Number of families enrolled in the household planting program via registration forms, tracked in database • Number of tree distribution events held (target: 20 events/year, one per school) • Number of trees planted annually in household yards or adjoining right of ways, tracked in a project database (target: 1,000 trees/year)

2. **Workforce Development:** Train local entry-level workforce of 60 individuals from affected communities in tree production, urban forestry, and arboriculture.	● Number of individuals enrolled in the urban forestry and arboriculture training program (target: 60) ● Number of individuals successfully completing training course measured by skills tests (target: 55 of 60) ● Number of trainees taking part in neighborhood “tree teams”, providing ongoing support to households in tree care (target: 30) ● Number of trainees participating in tree production activities at Planting Justice orchard, and successfully completing the training course as measured by skills tests (target: 30)
3. **Long-term Tree Survival and Community Stewardship:** By the end of the 3-year grant term, ensure 95% tree survival across all planted household trees and build an engaged network of community forest stewards and advocates with knowledge and skills to maintain the urban forest independently.	● Percentage of planted trees surviving at 12 months post-planting, documented via post-planting surveys and home visits (target: 95%) ● Percentage of households actively engaged in tree care and knowledgeable about tree care, documented through database records continuously updated through home visits and feedback surveys ● Number of community members self-identifying as forest stewards or advocates at grant close

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Plant 1,000 trees each year in households in the project area, through outreach and education programs in 20 school communities	A. Carry out tree education programs in 20 schools, each year	1. Plan, schedule education and distribution events with site program directors	Growing Together (GT)		Fall 2026
		2. Plan and teach tree lessons, with all classes in each school	GT	Teachers	Winter 2026
		3. Planting demo on campus to show the process to each class	GT	Teachers	Winter 26
	B. Prepare and carry out tree distribution events, once per year, at 20 schools	1. Outreach to families via school communication channels, register interested families; the ROC support with community outreach with connection to greater the ROC community - cultivating relationships across orgs, schools, and families, gathering feedback from 5-10 families at distribution events to incorporate into project implementation	GT	Teachers, Richmond Outdoors Coalition (ROC)	Right after demo
		2. Order and transport trees, tools	GT	Planting Justice (PJ)	2 weeks after demo
		3. Track tree pick-ups on the day of, provide tools/guidance	GT	PJ	2 weeks after demo
	C.Follow up to ensure planting; track tree plantings in database	1. Send out a follow-up text message	GT	PJ	Week after distribution day
		2. Call/text non-responders	GT	PJ	Week after initial text

		3. Provide follow-up in-person assistance as needed	PJ	GT	Throughout project
		4. Input all tree information into tree database, after ensuring data accuracy	GT	GT	Throughout project
2. Train local entry-level workforce of 60 individuals from affected communities in tree production, urban forestry, and arboriculture	A. Recruit, interview and onboard trainees	1. Recruit potential trainees	PJ	GT	Sept 26
		2. Interviews and selection	PJ	GT	Oct 26
		3. Onboarding, orientation	PJ	GT	Nov 26
	B. Carry out training program	1. Lead training workshops - arboriculture	PJ	GT	Nov-Jan 26
		2. Lead training workshops - production	PJ	GT	Nov-Jan 26
		3. Lead training workshops - engagement	PJ	GT	Nov-Jan 26
	C.Set up teams of graduating trainees, supervisor(s)	1. Organize supervision systems	PJ	GT	Dec 26
		2. Mentor new TA staff in field	PJ	GT	Dec 26
		3. Ongoing supervision and support	PJ	GT	Dec-Apr 27
3. Provide ongoing technical support to 3,000 households, ensuring 95% tree survival over a 3-year period and building a network of community forest stewards and advocates	A. Arborists respond to support requests and schedule home visits	1. Send messages to families, triage, and assign support requests	PJ	GT	Mar 27
		2. Set up tracking system	PJ	GT	Mar 27
		3. Receive and fulfill household support requests	PJ	GT	Mar-Nov 27
	B. Debrief home visits, share strategies, and professional development	1. Weekly team meetings	PJ	GT	Mar - Nov
		2. Send out survey to participating households, receive customer feedback and track increase in knowledge, engagement	PJ	GT, ROC	Mar - Nov

		3. Supplementary trainings, professional development re arboriculture, community engagement	PJ	GT	Mar - Nov
	C. Track results, analyze; continuous improvement	1. Continuously update tree database, customer message system, integrate data	PJ	GT	Mar - Nov
		2. Meet to reflect on results, discuss strategies	PJ	GT, ROC	Mar - Nov
		3. Compile year results and analyze, create year-end report	PJ	GT	Nov 27
		4. Document systems in operations manual	GT	PJ	Nov 27

Local Community Benefits Fund – Round 1
Project Narrative

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Our Living Future
Lead Applicant Name	Growing Together
Project Location	West Contra Costa Unified School District
Overall Funding Request	$5,000,000
Grant Term Request	3 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Spinning and Rising
Project Lead	Growing Together
Project Location	20 West Contra Costa County Unified School District schools in Richmond and San Pablo
Project Funding Request	$338,813

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The Spinning and Rising project will employ an interwoven set of strategies to increase bicycle use as primary transportation, significantly reducing air pollution across all neighborhoods in the project area. By changing residents' daily transportation choices, the project's impact will steadily increase over time, affecting pollution levels well beyond the grant period. The proposed project will build upon the working partnerships the Lead Applicant, Growing Together (GT), has developed across West Contra County Unified School District (WCCUSD), integrating four distinct and complementary programs in collaboration with Co-Applicants Local Motion (LM) and Cycles of Change (COC) into 20 elementary and middle school communities: 1) *BikeMobile* family- and youth-focused bike repair events taking place after school and on weekends, 2) *Drive Your Bike* on-road bicycle training courses taking place during the school day; 3) Bicycle Adventure Clubs for youth, offered as part of after school programs; 4) *UpCycle*, a cycling commuter support program that provides adults with bicycles, safety equipment, and a basic on-road riding training course.

Project Co-Applicants LM and COC initiated these innovative cycling programs as local community-based organizations and have led their steady growth over the past 28 years, supported by consistent funding from an array of regional agencies and municipalities, including BAAQMD, Metropolitan Transportation Commission (MTC), Alameda County Transportation Authority, and the City of Oakland. Each program that will be implemented in this project has an

extensive, long-term track record of increasing the use of bicycles as transportation in the Bay Area, including at multiple schools and neighborhoods across the project area. LM's BikeMobile family bike repair events have helped over 60,000 individuals restore their bicycles to safe working order. COC's after-school bicycle clubs and Drive Your Bike on-road training courses have taught over 50,000 youth how to ride bicycles to school and neighborhood destinations, while their UpCycle cycling program has enabled over 5,000 low-income adults to adopt bicycles as primary transportation, earning MTC's Excellence in Motion prize in 2011.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

Reducing Air Pollution and Improving Health Outcomes

By promoting and supporting cycling as a primary mode of transportation, this project aims to reduce vehicle miles traveled and carbon emissions, thereby reducing air pollution in the project area and improving health outcomes for students and families in these communities. Using bicycles as primary transportation is highly practical for East Bay flatlands residents - the Oakland Bicycle Plan notes that "85% of residents live within two miles...of at least one major transit station." In 2001, the National Household Travel Survey found that roughly 40% of all trips taken by car are less than 2 miles; while this distance is farther than most people will walk, it is easily covered in twelve minutes by bicycle. Local census data show that the dense neighborhoods around BART stations and major transit lines also have the highest percentage of households without motor vehicles, indicating strong potential for using bicycles with transit for daily transportation in these areas. Per the Urban Institute's 2022 report, *Making the Case for Improved Bicycling Infrastructure*, increasing bike accessibility directly reduces the number of short car trips in heavily trafficked, overburdened neighborhoods.

This project aims to train and support 2,500 youth and adults to use bicycles as their primary mode of transportation. If 2,500 individuals shift from personal vehicle use to bicycling as their primary mode of transportation, this project could eliminate an estimated 3.1 million vehicle miles traveled annually, based on calculations used by agencies like the U.S. Environmental Protection Agency (EPA), Federal Highway Administration, and California Air Resources Board to estimate transportation activity and associated emissions. Using EPA passenger vehicle emissions factors, this mode shift could reduce greenhouse gas emissions by approximately 1,260 metric tons of CO_2 each year, while also lowering emissions of nitrogen oxides (NOx), volatile organic compounds (VOCs), and fine particulate matter (PM2.5), which contribute to poor air quality and respiratory illness.

Regular cycling offers significant health benefits by improving cardiovascular health, boosting the immune system, strengthening muscles, preventing chronic diseases, and enhancing

mental health by reducing anxiety and depression. A 2023 study published in the academic journal *Frontiers in Sports and Active Living* found that the greatest potential health benefits from cycling would come from increasing participation among people who do not regularly bike, rather than encouraging current cyclists to ride more often. This project will increase ridership in Richmond, where the City Council has adopted plans to significantly expand biking infrastructure, focusing on neighborhoods in this project area based on health and equity data.

Building Economic Resilience for a Just Transition

In communities within the project area, the lack of bicycle retail and repair services is a major barrier to regular ridership. A survey conducted by Co-Applicant LM at three local middle schools found that 46% of 875 students with bicycles reported not riding because their bikes were broken, but that they would switch to cycling instead of driving if they had a working bike. With the recent closure of the only bicycle shop in Richmond, there are now no bicycle retail or repair services available in either Richmond or San Pablo. By repairing families' bikes at no cost, teaching hands-on maintenance, and providing safety education, LM's BikeMobile program events enable residents of all ages to overcome the most basic barriers to ridership, and their impact is especially felt in neighborhoods that lack retail services. A post-program study found an average 72% increase in ridership following a BikeMobile visit.

For low-income individuals (youth and adults) for whom lack of transportation is a barrier to employment, this project contributes to building economic resilience by providing no-cost bicycles and commuter equipment, teaching basic maintenance/repairs, and giving riders confidence through on-road skills training. Co-Applicant COC operates a bicycle access program, Upcycle, which has provided bikes, commuter equipment, training, and ongoing support services to over 5,000 low-income East Bay residents since 2009, 94% of whom report continuing to use their bikes as their primary daily transportation in post-program surveys. Over 90% of participants reported increased economic opportunities, while over 95% reported increased physical activity and/or improved health as a result of their lifestyle change. The Upcycle program won MTC's Excellence in Motion award in 2010.

These results demonstrate that LM's BikeMobile and COC's Upcycle are strategies of unparalleled effectiveness and cost-efficiency for shifting travel modes and reducing air pollution. By carrying out these events each year at each of the 20 schools across the project area, we will ensure that convenience, affordability, and access are no longer barriers to ridership, thereby offering a viable path to achieving cleaner air and health benefits, as well as economic resilience.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

All project work will take place at 20 West Contra Costa Unified School District (WCCUSD)

schools and in their surrounding neighborhoods. School locations are as follows: Bayview Elementary School (3001 16th St., San Pablo, CA 94806), Cesar Chavez Elementary School (960 17th St., Richmond, CA 94801), Dover Elementary School (1870 19th St., San Pablo, CA 94806), Downer Elementary School (1231 18th St., San Pablo, CA 94806), Ford Elementary School (2711 Maricopa Ave., Richmond, CA 94804), Grant Elementary School (2400 Downer Ave., Richmond, CA 94804), King Elementary School (4022 Florida Ave., Richmond, CA 94804), Lake Elementary School (2700 11th St., San Pablo, CA 94806), Lincoln Elementary School (29 6th St., Richmond, CA 94801), Mira Vista K-8 School (6397 Hazel Ave., Richmond, CA 94805), Montalvin K-8 School (300 Christine Dr., San Pablo, CA 94806), Nystrom Elementary School (230 Harbour Way S., Richmond, CA 94804), Michelle Obama School (629 42nd St., Richmond, CA 94805), Peres K-8 School (719 5th St., Richmond, CA 94801), Riverside Elementary School (1300 Amador St., San Pablo, CA 94806), Stege Elementary School (4949 Cypress Ave., Richmond, CA 94804), Tara Hills Elementary School (2300 Dolan Way, San Pablo, CA 94806), Washington Elementary School (565 Wine St., Richmond, CA 94801), DeJean Middle School (3400 MacDonald Ave., Richmond, CA 94805), and Helms Middle School (2500 Road 20, San Pablo, CA 94806).

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

This project leverages the seven years of Growing Together's steadily growing collaboration with WCCUSD schools that Growing Together (GT). Over this period they have developed and established an array of health- and sustainability-focused programs through close working partnerships with district leadership and 33 school communities, serving over 7,500 K-12 students and their families. GT's 31 Site Coordinators have each led the development of these programs at each of their partner schools over a multi-year period, interweaving experiential lessons and hands-on activities into during-school, after-school, and family engagement programming. The vision, planning, and implementation of each program occurs through an ongoing process of communication and collaboration between each Site Coordinator and their partner school's entire array of stakeholders. Through regular meetings with classroom teachers, community school managers, principals, parent leads, and after-school directors, GT staff continuously share successes and challenges, identify needs and opportunities, develop ideas, and plan innovative strategies. Through regular communications between GT staff and the leadership of key district departments (Expanded Learning, Science/Instruction, Facilities, Operations, Career Technical Education, and Food Services), they are able to cultivate increasing district buy-in while receiving essential guidance, support, and, in some situations, limited funding towards carrying out these strategies successfully at the school site level.

Spinning and Rising stemmed from a series of planning conversations between GT's Co-Director (who is the co-founder of Cycles of Change) and WCCUSD's Expanded Learning

Coordinator, who is responsible for soliciting program ideas and receiving feedback from after-school directors at every Title I school in the district. These after-school directors are community leaders who each have deep connections to several hundred neighborhood youth and families, and represent seven community-based organizations with long histories of serving children and families in WCCUSD schools. For these community leaders, creating opportunities to access bicycles and bicycle education has been a priority that they have expressed for years, in their efforts to provide valued resources for the children and families that they each serve.

Co-Applicant Local Motion's BikeMobile program hosts bicycle repair clinics across the San Francisco Bay Area, focusing on low-income communities with limited access to bicycle repair services. Over 800 Richmond residents have participated in the program, which helped repair nearly 550 bicycles through clinics operating at local public libraries and other community sites. Through its Richmond programming, Local Motion (LM) staff worked directly with youth and families to shape the program around the community's expressed interests and needs. Testimonials and survey feedback from Richmond residents, library staff, participating parents, and WCCUSD students demonstrate strong appreciation for the BikeMobile program and significant demand for its expansion.

Deborah Bonet, Library Associate at the Richmond Public Library, shared:

> "Yesterday's BikeMobile repair fest was such a blessing for Richmond, particularly the Bayview Crescent Park community. More than 25 bikes were repaired. The BikeMobile restores joy, freedom, and transportation to many low-income bike owners who cannot afford repairs or lack the knowledge to fix their bikes themselves. Thank you to your entire staff for your warm, positive, and practical interactions with community members and for your commitment to providing bike repair education. I hope we will be seeing you again soon."

Previous BAAQMD support for LM funded the BikeMobile program in Richmond and facilitated direct community engagement by LM, which informed the creation of this Spinning and Rising project.

Co-Applicant Cycles of Change (COC) has operated bicycle education programs in schools throughout the Bay Area since 1998, promoting cycling as a primary means of safe, enjoyable, accessible, inexpensive, healthy, and sustainable transportation. Each year, COC's in-school bike safety program trains 5,000+ students at 40+ K-12 schools in various Bay Area locations, including Richmond and Contra Costa County, to become bike commuters. COC has developed ongoing partnerships with 48 schools and over a dozen local school districts over the last three decades through extensive community engagement and collaboration. COC is ready to expand its programming to more WCCUSD schools in partnership with GT, leveraging GT's extensive network of Site Coordinators who operate aligned programming and carry out ongoing community engagement in 31 WCCUSD schools.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Residents of Richmond and San Pablo (and those living within the project area footprint) experience deeply rooted environmental and socioeconomic inequities that contribute to serious health disparities and persistent economic instability. Adjacent to heavy industrial uses, such as the Chevron Richmond Refinery and the Port of Richmond, and major highways, these communities face high cumulative air pollution, which severely impacts public health. The average CalEnviroscreen rating for the 20 schools in this project is 75, with nearly half scoring 85 or higher. The average CalEnviroscreen asthma score among the 20 schools is 93.2, and research from UC San Francisco, UC Berkeley, and a LifeLong Medical Richmond Environmental and Asthma Community Health Study indicates that 25% of Richmond residents have asthma, nearly double the state average of 13%. This project aims to reduce air pollution by lowering vehicle miles traveled, thereby supporting air quality improvements from the tree-planting and schoolyard greening projects included in the application. Nine out of the 20 schools fall into a Disadvantaged Community (DAC) per the CA Department of Water Resources mapping tool, and five of the schools lie less than one mile from a designated DAC. The average percentage of low-income households among all 20 schools is 83.6. A 2018 study published in the *Journal of Urban Health* found that low-income urban populations experience magnified health and financial benefits from cycling. Compared to higher-income groups, these populations suffer disproportionately from diseases linked to physical inactivity, meaning increased physical activity yields greater relative health gains.

The Spinning and Rising project combines existing programs to co-create an integrated, comprehensive bicycling education, safety, maintenance, and accessibility program through in-school ride-safety training, after-school riding clubs, bike-commuter support programs, and community repair/education events at 20 schools in WCCUSD. By educating students and families about these elements of bicycling and providing them with the equipment and services that support regular ridership, project partners encourage individuals to join the active transportation movement and foster a culture that prioritizes self-sufficiency, healthy transportation, and environmental values.

Measurable outcomes from this project over three years include training and supporting 2,500 youth and adults to use bicycles as their primary mode of transportation, convening 2,500 residents to participate in bike repair events, and restoring 1,800 unused bikes to working condition. Teaching students and their families how to ride safely and maintain their bikes while promoting cycling as alternative transportation helps create generations of cyclists who can

reduce greenhouse gas emissions and combat air pollution, improve their physical and mental health, and contribute to community resilience.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Schools serve as foundational community-building institutions, linking together diverse residents through the shared goal of a healthy, thriving future and the shared ground of a central place. Especially in low-income areas, schools serve as hubs where a variety of needed services can be conveniently provided to children and families through partnerships with community-based organizations. Referred to as Community Schools, this model's effectiveness is now widely recognized by policymakers, and its vision and practices are now being implemented across California through a state-wide funding initiative, the California Community Schools Partnership Program. Lead applicant Growing Together (GT) utilizes the full capacity of the Community Schools system through its organizational structure and engagement practices. West Contra Costa Unified School District (WCCUSD) has a highly developed Community Services department, which fluently manages partnerships with several dozen community-based organizations, enabling them to provide a range of critical services to families of Title I schools, including parent engagement, free after-school programs, health services, food access, sports clubs, family-friendly events, English classes, academic support, and career training.

To carry out ongoing engagement in school communities in WCCUSD, GT's Program Managers and Site Coordinators collaborate regularly with lead staff, both at the district level- the Expanded Learning Coordinator, in Community Services- and in each partner school - the Principal, Community School Manager, After-school Director, Parent Liaison, classroom teachers, and non-teaching staff (custodians, food service managers, and office administrators). The main channels and systems of communication include 1) meeting with district staff and each principal several times from February-June to plan the next school year's programming based on site needs and priorities and to ensure a smooth re-contracting process and 2) meeting with leadership staff, classroom teachers, service providers and community-based organization (CBO) leaders at each partner school in August to plan out collaboration logistics for programming, including outreach, timeline, schedule, and roles and responsibilities. The GT Site Coordinator meets regularly with project Co-Applicants Cycles of Change (COC) and Local Motion (LM) to coordinate program delivery and connect them with school representatives. To engage parents, GT Site Coordinators work with the Principal and office staff to use the school communication system ParentSquare, which reaches all families through multi-lingual messaging. In addition, GT plans and carries out parent-facing programs with both the Parent Liaison and After-school Director, who hold multi-year relationships with most of the families whose children attend the school.

The Richmond Outdoors Coalition (the ROC) will serve as a subcontractor on the project to support community engagement activities across all grant projects, in collaboration with the Lead Applicant and Co-Applicants, to help ensure the project is rooted in the authentic input of students and families. The ROC will integrate its Steering Committee across all projects in this application, facilitating monthly strategy sessions with community members to ensure alignment and a cohesive movement for environmental justice in WCCUSD. The ROC Steering Committee is made up of ten adult community members and will soon add ten community youth members recruited from across the 20 schools this project serves, who will be utilized by this project (and all projects in the application) as match funding.

The proposed project will provide several important health and economic benefits to community members: 1) access to no-cost, convenient transportation that improves personal health through regular outdoor physical activity; 2) reductions in air pollution that negatively impacts community health; and 3) improved ability to reach education and employment opportunities through no-cost, convenient transportation for individuals and households with limited access to motor vehicles. Through GT Site Coordinators' long-held, trusted relationships across the school community, we will integrate the proposed project into the school's program delivery structures and communication channels, ensuring that all families can readily access the opportunities and receive these benefits.

GT Site Coordinators use several methods to gather feedback on program delivery. Each year in April, they send out surveys to all school stakeholders (teachers, administrators, after-school directors, non-teaching staff, and parents), as well as students of grades 7-12, asking for data and testimonials about program impacts as well as feedback and suggestions for improvement. GT also meets regularly throughout the year with school and CBO staff involved in the program, 2-3 times per year with school leadership (Principal, PTA, teacher-leaders), and regularly with district leadership in relevant departments to assess the value and effectiveness of the program.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Overall Project Vision: To inspire and enable West Contra Costa Unified School District (WCCUSD) students, families, and nearby residents to adopt bicycles as their primary mode of transportation. We will accomplish this using the following strategies, implemented in coordination with selected schools across Richmond and San Pablo: 1) providing convenient access to no-cost bicycle repair services in every neighborhood; 2) providing no-cost opportunities for low-income adults to obtain commuter bicycles, equipment, and safety training; 3) operating on-road bicycle education and promotion programs that have an extensive local track record of increasing youth ridership. Over the 3-year period, our goal is for 2,500 additional residents to regularly use bicycles for transportation.

Studies show that as bicycle use increases in a community, others become less afraid to ride, leading to broad, tangible changes in transportation choices over time. A 2022 study published in *Transportation Research Record* found evidence of a “safety in numbers” effect, concluding that increased bicycle ridership was associated with improved cycling safety outcomes and greater public willingness to ride. Increasing the number of residents who regularly ride bicycles will have a steadily accelerating impact on reducing air pollution (which results primarily from personal motorized transportation) and on improving long-term health outcomes through the adoption of physically active lifestyles. Lead Applicant and Co-Applicant partners will make this vision a reality by achieving the measurable outcomes outlined below.

Measurable Outcomes:

Bicycle Distribution, Repair, and Education: Over the 3-year project period, 2,500 residents of all ages will participate in bike repair and education events, restoring 1,800 unused bikes to working condition. Increases in bicycle use for daily transportation resulting from these events will measurably reduce emissions, improve health by lowering pollution levels and increasing physical activity, lower household transportation costs, and increase educational and employment opportunities in the project area.

Youth Cycling Safety Training and Active Transportation: Over the 3-year project period, 2,500 youth and adults will be fully trained to use bicycles as primary transportation through on-road safety training courses during school and after-school bike-riding adventure clubs. Inspiring and enabling young people to choose bicycles as their primary mode of transportation will result in tangible, long-term improvements in both air quality and public health.

Partner Roles:

Lead Applicant | Project Lead Growing Together (GT) will leverage its working relationships and staff capacity across the 20 schools in the project area to manage the implementation of all programs in partnership with school stakeholders, Co-Applicants, community-based organizations, and subcontractors. GT will also manage strategies and activities related to community outreach, ensuring broad participation. Finally, GT will manage the evaluation process, gathering data and testimonials from both program participants and school stakeholders.

Co-Applicant Local Motion (LM) will lead community-facing BikeMobile events through which students, families, and residents can access no-cost bicycle repair and education services at a highly convenient location - their neighborhood school. By restoring unused bikes to working order, teaching the public how to maintain their bikes, and encouraging families to ride together, BikeMobile will help residents overcome the most common barriers to regular cycling.

Co-Applicant Cycles of Change (COC) will lead three program components that increase bicycle ridership: 1) During-school bicycle safety training courses, which increase ridership by

building skill and confidence; as part of physical education classes, expert bicycle instructors take groups of students out on the road using a fleet of bikes and teach them how to ride safely to/from their school and to neighborhood parks; 2) A bicycle commuter incentive program (*Upcycle*), in which low-income residents who lack transportation options can obtain a bicycle and commuting equipment for personal use, while also taking part in an Introduction to Cycling education module; and 3) After-school bicycle riding clubs, in which expert guides lead groups of young people in using bikes to access their favorite local outdoor destinations, cultivating a growing network of young bike riders and increasing the profile of bicycle transportation in the larger community.

Co-Applicant West Contra Costa Unified School District (WCCUSD) will host the educational programming components of this project at 20 school campuses, and also outreach to thousands of families via their school-based direct messaging system.

Subcontractor Richmond Outdoors Coalition (ROC) will leverage its community networks and capacity to strengthen outreach efforts, broadening participation beyond school communities and therefore increasing overall participation. The ROC Coordinator will work with the Project Coordinator and each school's GT Site Coordinator to plan the outreach strategy for promoting community-facing bike repair, distribution, and education programs. They will then implement strategies (such as social media, neighborhood listservs, and organization mailing lists) which enable a wider audience in Richmond and San Pablo to access these valued services.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Overall Budget: The total funds requested for the Rising and Spinning project are $338,813. Funds are distributed to project partners in the following manner:

- GT (Lead Applicant): $38,813 for subcontract to ROC
- COC (Co-Applicant 5): $150,000
- LM (Co-Applicant 6): $150,000

Key Project Costs:

<u>Subcontrators & Vendors</u>

- Community engagement facilitators for the community engagement process (ROC): $32,063
- Participant stipends/compensation for the ROC community engagement process: $6,750

- Education, Promotion, and Bike Access module at 20 schools over a 3-year period - Drive Your Bike program on-road safety courses, or Upcycle bicycle commuter incentive programs, at 20 schools over the 3-year period - cost of $7,500 per module (COC): $150,000
- 1 BikeMobile event each year for 3 years at each of 20 schools, with a cost of $2,500 for each event (LM): $150,000

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project aligns with the *Richmond Bicycle and Pedestrian Action Plan* adopted by the Richmond City Council in 2023, which serves as a 5-year blueprint for improving walking and bicycling conditions in the City of Richmond. The Plan consolidates recommendations from the Richmond Local Roadway Safety Plan and the 2011 Bicycle and Pedestrian Master Plan. Instead of goals and objectives, this plan offers specific recommendations/actions for designing and constructing new infrastructure in the near and medium term, based on a detailed needs analysis, safety analysis, and community engagement. Bicycle recommendations include 181 projects totaling over 86 miles of new or upgraded bicycle facilities - all within the West Contra Costa Unified School District boundary and offering direct benefits to the schools in this project and residents within the district - building upon an existing 114.5-mile network.The Plan's recommendations utilized a data-based health and equity index analysis to prioritize proposed actions. These improvements focus on providing key access to schools and other community destinations. The Spinning and Rising project prepares Richmond residents of all ages to safely and confidently use existing and future cycling infrastructure, an active transportation mode prioritized by the City of Richmond through the adoption of this plan, by providing access to bicycles (for those that don't already own them), offering no-cost bike repair, teaching basic maintenance, and leading on-road safety training courses which give residents of all ages the confidence to bike to any local destination - schools, jobs, parks, and services.

The project supports several goals identified in the *Richmond Parkway Transportation Plan* adopted by the West Contra Costa Transportation Commission in February 2025. The Richmond Parkway is a nine-mile major road that serves as a regional commuter corridor and a critical segment of the San Francisco Bay Trail. The parkway lies within 2.5 miles of nearly half the schools included in the project area. This project supports the Plan's Public Health Goal 3 (PH-3) - Minimize Vehicle Impacts to Air Quality and Walking and Biking Goal 1 (WB-1) - Upgrade bikeways and connect sidewalk gaps. Goal PH-3 prioritizes actions to improve air quality and reduce health risks. The Spinning and Rising project aligns with this goal by providing a combination of education, training, and experience that promotes cycling as a primary mode of transportation for Richmond residents to school, jobs, and community services

and offering complementary and additive air quality and public health benefits. Intended benefits for Goal WB-1 include increased access to more amenities, specifically schools, jobs, and parks. This project will equip 2,500 residents living in close proximity to the Richmond Parkway to safely and successfully take advantage of existing and future Parkway biking improvements that can broaden geographic access throughout the City, regional public transit terminals, and the San Francisco Bay Trail.

CAPACITY (10 points)

11. Describe the Project Lead's experience managing and implementing projects of similar scope and size.

Founded in Oakland in 2013, Growing Together's mission is to improve the health and sustainability of communities by greening schoolyards, providing hands-on youth environmental education, planting trees, and increasing access to fresh food. Growing Together (GT) cultivates long-term collaborative relationships with local schools and co-creates programming that aligns with the goals, needs, and values of each community's stakeholders. GT's 41 specialist instructor-coordinators and five assistant staff represent over 350 years of collective experience leading and establishing these programs at schools in the East Bay. Multi-year relationships with partner schools reflect the deep personal ties GT has with the communities it represents and serves. Eight of GT's site coordinators and five assistant staff began their careers as middle/high school interns. In 2025-26, GT operates school-year programs at 48 schools across four East Bay school districts– eight in Oakland Unified School District, 33 in West Contra Costa Unified School District (WCCUSD), six in San Lorenzo Unified, and one in San Leandro Unified– giving 10,800 K-12 students weekly or bi-weekly opportunities to grow, harvest, prepare, and enjoy fresh foods, green their schoolyard, plant trees, and learn leadership skills through apprenticeships and enterprise development.

Over the past 10 years, GT has led various district-wide initiatives that have brought about tangible, lasting impacts, making our communities healthier and more sustainable school by school. From 2013 to 2020, GT senior staff collaborated with district leadership, 31 schools, and twelve community-based organizations in the Oakland Unified School District to develop and implement a health and wellness initiative, leading to 2,250 Title I students taking part regularly in health-enhancing programming (growing and preparing fresh foods, greening school campuses, planting trees, and outdoor team-building physical activities). Through training, ongoing mentoring, and extensive technical support, our senior staff built the capacity of 31 site coordinators to fully take over leadership of these programs, over a 3-year period. GT's Project Coordinator and Bicycle Programs Coordinator also hold extensive bicycle education and access experience - they were the co-founders of Cycles of Change in 1998, and were co-developers/co-leaders of multiple Safe Routes to School, UpCycle, Community Bicycle Repair, and BIcycle Adventures programs over a 12-year period.

During the pandemic closures, GT pivoted to collaborate with district leaders, community school managers, unemployed parents, and community-based organizations/philanthropic partners on a district-wide initiative to enroll 12,500 low-income families in a food access program and provide them with farm-fresh produce and school lunches to their homes every week for an 18-month period. Starting in 2020, GT expanded its work significantly in WCCUSD, leading a district-wide garden programming initiative that developed programs across 33 schools (and is steadily growing), now involving 7,500 students. This initiative interweaves several interrelated programs into a holistic, place-based, school-by-school approach that has had a dramatic impact on student health and wellness through schoolyard greening, opportunities for outdoor activity, access to fresh food, increased parent engagement, campus and neighborhood tree planting, and workforce apprenticeships for youth. In 2025-56, WCCUSD gave GT its Partner of the Year award.

GT has the capacity and experience to manage multiple grants, programs, and vital relationships with both public agencies and community-based organizations. They have secured multi-year funding from CAL FIRE for schoolyard greening, successfully managed multi-year California Department of Food and Agriculture grants to increase access to fresh foods, and funded tree planting with grants from the Urban Forestry departments of the cities of Richmond and San Pablo. While developing district-wide strategic initiatives at WCCUSD and securing their funding, GT collaborated with the Facilities, Career and Technical Education, and Operations and Food Services departments, engaged with Contra Costa and Solano Food banks, and partnered with PTAs at 29 schools.

In three other East Bay School Districts over the past five years, GT managed several dozen contracts with school sites, district departments, and local community-based organizations, as well as a multi-year contract with the Alameda County Public Health Department and CA State Parks. As a result, GT provides schoolyard greening, fresh food access, and health-focused education/workforce training programming for 48 school communities.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

GT will ensure the successful implementation of the project and the achievement of deliverables through the efforts of a dedicated 1 FTE Our Living Future Coordinator (OLFC; included in the Healthy Green Schools project budget) and a .25 FTE Bicycle Program Coordinator (in-kind match-funded by GT through its WCCUSD contract). These two positions will provide ongoing management of Site Coordinators in planning and implementing programming at their respective school sites. With support from the OLFC and Bicycle Programs Coordinator, each GT Site Coordinator will manage all programming at their 1-2 dedicated school sites, including active transportation education and access programs within this project area. The Site

Coordinators range from .2 to .8 FTE, depending on the size of the school and the extent of programming there. When the project period begins, the OLFC and Bicycle Programs Coordinator will meet with each Site Coordinator and school stakeholders directly involved to lay out the timeline, program scope, logistics, outreach strategy, and evaluation plan for each program component. Then, the OLFC, Bicycle Programs Coordinator and Site Coordinators will meet with the partner agencies involved in the project - Co-Applicant Cycles of Change (COC), Co-Applicant Local Motion (LM), and Subcontractor the Richmond Outdoors Coalition (ROC) - to finalize a year-long plan for program implementation. Each Site Coordinator will lead the implementation of programming at schools by outside agencies, and the GT Bicycle Programs Coordinator will hold regular check-ins with both Site Coordinators and project partners. In the last two months of each school year, the OLFC, Bicycle Programs Coordinator, and Site Coordinators will work together to implement the evaluation strategy, using feedback surveys and other tools to collect data and testimonials, measure outcomes, and describe the program's impacts and benefits for participants.

Over seven years of partnership, WCCUSD schools, PTAs, and district departments have consistently invested in GT programming through fee-for-service contracts. Because school budgeting cycles often require 1–2 years to adopt new programs, government grants have played a critical catalytic role by funding initial implementation until schools can assume ongoing costs. Across all 33 WCCUSD partner schools, school sites and/or PTAs now cover 50–100% of annual program costs after the first year, demonstrating strong buy-in and long-term sustainability. At roughly half of the schools included in this proposal, schools and/or the district already fully fund Site Coordinator positions. If awarded, this grant funding will enable GT to expand existing programs to reach all students and families at participating schools by supporting new positions and new initiatives, including the proposed cycling programs.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the “Application Instructions” document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate “N/A” if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

For educational programming, GT is already in a Master Services Agreement with WCCUSD to engage with students at all the school sites. The project has received initial approval from WCCUSD to proceed with the implementation of the Spinning and Rising program. For supporting documentation, see Richmond_26LCB9_Rising and Spinning_Master Services Agreement and Richmond_26LCB9_Planting Our Future_WCCUSD Letter.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

Not applicable; CEQA is not required for this project.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

Not applicable; Co-Applicant WCCUSD is the owner of the relevant school sites.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Not applicable

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

There are no significant barriers associated with the programming outlined in this project. The Lead Applicant and the Co-Applicants have consistently provided all the programs to WCCUSD schools within this project area, except for after-school bicycle adventures, which were specifically requested by the WCCUSD Community Services department leadership. The requested funds would enable the partners to offer these programs consistently over a 3-year period and expand them to serve all students and families across the 20 schools within the project area.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

Project Vision:	2,500 additional residents are regularly using bicycles as transportation, reducing vehicle miles traveled, improving air quality and changing physical activity habits. Strategies to achieve this are 1) on-road cycling safety training, for upper grades during school; 2) bicycle riding clubs taking field trips to local parks after school; and 3) family focused mobile events where mechanics repair non-working bikes.

Measurable Outcome	Indicator(s)
1. **Bike Repair Education and Restoration:** By the end of the grant term, engage 2,500 residents in bike repair education events and restore 1,800 unused bikes to working condition, reducing transportation-related emissions and lowering household transportation costs in the project area.	• Number of residents attending bike repair education events (target: 2,500) • Number of unused bikes restored to working condition (target: 1,800) • Number of bike repair events • Estimated reduction in number of vehicle trips based on participant surveys

2. **Youth Cycling Safety Training and Active Transportation:** By the end of the grant term, enable 2,500 youth and adults to adopt safe cycling as a primary mode of transportation through on-road safety training, bike riding clubs, and commuter bike incentives programs - reducing car dependency, and improving air quality and public health outcomes in the project area.	• Number of youth and adults participating in on-road safety training • Number of adult participants using bicycles for commuting • Number of youth enrolled in bike riding clubs during the grant term • Percentage of post-training survey respondents demonstrating knowledge of safe cycling practices • Percentage of participating youth and adults reporting increased use of cycling as a primary mode of transportation via surveys • Participant stories or survey comments describing changes in transportation habits, confidence in cycling, and personal health

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1.2,500 residents participate in bike repair education events, restoring 1,800 unused bikes to working condition	A.Outreach to sites to plan BikeMobile events schedule	1. Outreach to and meet with 20 schools' after-school program directors, GT coordinator, and BikeMobile representative	Local Motion (BikeMobile)	Growing Together (GT)	Aug 2026
		2. Create yearly program schedule, send out confirmations	Local Motion	Growing Together	Sept 2026
		3. Send our pre-event prep list to sites, GT, and after school program staff	Local Motion	Growing Together	1 month before each event
	B.Implement 20 events per year, 1 at each project area school	1. Pre-event outreach to families, with connection to greater Richmond Outdoors Coalition (ROC) community - cultivating relationships across orgs, schools, and families	Growing Together, WCCUSD	Local Motion, ROC	1 month before event

		2. Hold bike repair/education event	Local Motion	WCCUSD, Growing Together	bi-monthly
		3. Track attendance, get sign-up list	Local Motion	WCCUSD, Growing Together	Day of (20 per year)
		4. Community feedback about program activities and barriers during multiple events during the year	Local Motion	ROC	Day of (5-10 per year)
	C.Send out post participation surveys, analyze results	1. Prepare post survey	Local Motion	Growing Together	Sept 2026
		2. Send out survey to families	Local Motion	Growing Together	3 months after each event
		3. Analyze results continuously	Local Motion	Growing Together	End date
2. Train 2,500 youth and adults to use cycles as primary transportation via on road safety training, bike riding clubs, and commuter incentive programs	A. Outreach to sites to plan events schedule with Cycles of Change	1. Outreach to and meet with 20 schools' principals and lead teachers, GT coordinator, and Cycles of Change representatives	Growing Together	Cycles of Change	Aug 2026
		2. Create yearly program schedule, send out confirmations	Cycles of Change	Growing Together	Sept 2026
		3. Send our pre-event prep list to sites, GT, teachers and principals	Cycles of Change	Growing Together	1 month before events
	B. Implement Drive Your Bike (DYB) course or Upcycle program for at 5-6 schools per year	1. Pre-event presentation for students	Cycles of Change	Growing Together, WCCUSD	Day of (5-6 schools/yr)

		2. Implement the DYB course with upper-grade classrooms, and/or Upcycle program for adults and youth	Cycles of Change	WCCUSD	5-6 schools/yr
		3. Check/repair, store fleet	Cycles of Change		5-6 schools/yr
	C. Implement after-school clubs at 5 schools per year, 4 weeks & 15 students per program	1. Outreach to and meet with 5 schools' after-school program directors, GT coordinator, and biking staff	Growing Together	WCCUSD	Aug 2026
		2. Create yearly program schedule, send out confirmations; prep fleet, storage, hauling logistics	Growing Together	Cycles of Change	Sept 2026
		3. Implement riding clubs	Growing Together	WCCUSD	5 sites/yr, 4 rides per site
		4. Post program interviews, surveys	Growing Together	WCCUSD	2 months after each event

Project Name:	Spinning and Rising
Lead Applicant Name:	Growing Together
Term for this budget (in years):	3 Years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Inclusion Outdoors: Facilitators	Richmond Outdoors Coalition community engagement process	$32,063
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Inclusion Outdoors: Community Engagement stipends and supplies	Participant stipends/compensation for Richmond Outdoors Coalition community engagement process	$6,750
Only add lines above this line				
			TOTAL:	**$38,813.00**

Lead Applicant Budget Summary (auto-calculated)

Total Direct Costs	$38,813.00
Total Indirect Costs	$0.00
Total Prof. Services & Consultants	$0.00
Total Contingency	$0.00
Total Funds Requested	$38,813.00
Cross-check Total Budget	YES
Indirect as % of Direct	0.0%
Prof. Services & Consultants as % of Direct	0.0%
Contingency as % of Direct	0.0%

Other Sources of Project Funding

Use this section only if your project has funding sources in addition to the Air District request.

Other Sources of Project Funding	Description and Status (application submitted, verbal commitment, award letter received, grant agreement signed, funds received, etc.)	Amount
GT in-kind match from funding received from WCCUSD Contract for Bicycle Programs Coordinator	verbal commitment	$80,000

Strategic Energy Innovations Application

Bay REPAIR
Local Community Benefits Fund – Round 1
Opportunity and Catalyst Grants
Overall Narrative

Application Information	
Application Title	**Clean Air Leaders**
Lead Applicant	Strategic Energy Innovations (SEI)
Application Location	Richmond and Surrounding Communities
Overall Funding Request	$1,084,475.91
Grant Term Request	3 years

PROPOSAL VISION

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
   - *Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.*
   - *Advance integrated projects to holistically meet community needs.*
   - *Strengthen community-driven and collaborative solutions.*

The Clean Air Leaders project is a collaborative initiative led by Strategic Energy Innovations (SEI) in partnership with Sustainable Contra Costa (SCOCO) and Groundwork Richmond to empower youth across Richmond and the broader West Contra Costa target zone to improve air quality, strengthen community health, and build pathways into the green economy. Through integrated school year and summer programming, youth will engage in hands-on environmental education, community air monitoring, leadership development, environmental stewardship, and career exploration opportunities that connect learning to action. SEI will lead educator support, classroom implementation, and the delivery of a youth conference; SCOCO will expand youth leadership and civic engagement by embedding a new air-quality track into its paid Sustainable Leaders in Action (SLIA) program; and Groundwork Richmond will provide air quality-focused paid summer experiences by expanding its Green Team program. Complementing these educational programs, the partners will also expand community access to air quality monitors and air purifiers, facilitate youth-led community initiatives, and offer a variety of green career exposure events for youth. Together, the partnership creates multiple pathways for participation that allow youth to engage at different levels while building environmental literacy, professional skills, and long-term community leadership capacity.

The project will advance all three Program Goals of the Local Community Benefits Fund. First, Clean Air Leaders will reduce air pollution impacts and improve public health outcomes by increasing community understanding of local air quality conditions, expanding community air monitoring capacity, supporting exposure reduction strategies, and increasing access to air quality resources. Second, the project advances integrated solutions that holistically address community needs by combining education, community engagement, public health action, environmental stewardship, and workforce development into a coordinated model that connects

schools, community organizations, and residents. Third, the project strengthens community-driven and collaborative solutions by positioning youth as trusted messengers and environmental leaders while leveraging established community partnerships to shape implementation and decision-making. Measurable outcomes include educator and youth literacy around air quality, expanded access to localized air quality information and exposure mitigation resources, and stronger awareness of and confidence pursuing green career pathways that support long-term economic resilience and a just transition.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

The Clean Air Leaders project will benefit youth, educators, and families across Richmond and surrounding West Contra Costa communities that experience disproportionate environmental and public health burdens associated with air pollution exposure. Recruitment will prioritize students attending Title I schools and communities with CalEnviroScreen scores between 70 and 100, with priority for low-income youth measured through free and reduced-price meal eligibility. While participation is open broadly within the project area, this targeted recruitment approach is intended to prioritize access for communities that have historically experienced reduced access to environmental education and leadership opportunities.

These communities are included within California's AB 617 Community Air Protection Program due to cumulative impacts from refinery operations, freight activity, port operations, industrial facilities, and transportation corridors. Richmond and surrounding communities have long experienced environmental justice challenges and elevated public health risks associated with poor air quality. These impacts disproportionately affect youth and have contributed to increased concern around respiratory health, environmental awareness, and access to decision making.

West Contra Costa Unified School District (WCCUSD), which encompasses many of the project's school implementation sites, serves more than 28,000 students across 56 schools in five cities and reflects the diversity of the surrounding community. Approximately 54% of students identify as Latino, 18% African American, 10% Asian, 10% White, and 6% Filipino, and families across the district speak more than 50 languages.

Youth are the primary beneficiaries of the project and will gain opportunities to participate in environmental monitoring, environmental justice education, community outreach, and leadership development that support meaningful action in their schools and neighborhoods. Participants will build skills including leadership, communication, collaboration, data analysis, critical thinking, and problem solving while increasing awareness of green career pathways. Educators and the broader community will benefit through reusable curriculum, improved access to localized air quality information, youth-led outreach campaigns, and expanded access to resources that support healthier environmental conditions and informed decision making.

PARTNERSHIP STRUCTURE

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

SEI is an environmental education and workforce development nonprofit whose mission is to empower students and professionals to accelerate climate solutions in order to create thriving, resilient communities. For more than 29 years, SEI has partnered with schools, communities, government agencies, and industry partners to deliver hands-on environmental education, sustainability leadership development, and green workforce programming. Through its Energize Schools program, SEI engages K–12 students in project based learning experiences that build environmental literacy, leadership skills, and awareness of sustainability and clean energy careers.

SEI has extensive experience working with school communities facing environmental and economic inequities, including communities with high CalEnviroScreen scores and schools serving primarily low-income students and students of color. SEI has previously supported air quality education initiatives in Contra Costa County through a California Air Resources Board (CARB) Supplemental Environmental Project focused on student-led air quality education and monitoring. Through this project, SEI supported educators and students with trainings, instructional planning, and implementation of air monitoring activities. These experiences established relationships with educators in the region and demonstrated the need for continued air quality education and youth leadership opportunities in West Contra Costa communities.

SCOCO is a community-based nonprofit organization dedicated to building a more sustainable, equitable, and resilient Contra Costa County through education, outreach, and community engagement. SCOCO's programs focus on empowering residents to take meaningful climate action while building stronger and healthier communities. Through its SLIA youth leadership program, SCOCO provides students with paid opportunities to participate in climate advocacy, community outreach, public education campaigns, and leadership development activities connected to environmental justice and sustainability issues impacting their local communities.

Groundwork Richmond is committed to the regeneration, improvement, and management of Richmond's physical environment through community-driven partnerships that promote environmental, economic, and social wellbeing. Groundwork Richmond has deep roots within Richmond and surrounding communities and works directly with residents to expand access to green spaces, environmental education, leadership development, and outdoor learning opportunities. Through its Green Team summer program, Groundwork Richmond provides paid environmental justice and workforce development experiences for Richmond youth, many of whom come from low-income households, non-English speaking families, and communities disproportionately impacted by pollution and inequitable access to outdoor spaces.

Together, the partnership combines SEI's experience in sustainability education and grant management with SCOCO and Groundwork Richmond's strong community relationships, local outreach capacity, and proven youth leadership programming. The partnership is designed to ensure that Richmond youth most impacted by air pollution are equipped with the knowledge, technical skills, leadership opportunities, and community support needed to improve environmental health outcomes within their own communities.

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

SEI will serve as the Lead Applicant and oversee overall project management, grant administration, coordination across project partners, and school-based activities. SCOCO and Groundwork Richmond will serve as Co-Applicants and lead complementary community-based youth engagement and leadership development activities that extend learning beyond the classroom and strengthen connections between environmental education, public health, and community action.

Each partner will play a distinct but collaborative role in project implementation. SEI will lead school-based project implementation, including educator professional development, youth air monitoring activities, the coordination of free air purifier distributions, and execution of a Green Careers Conference that will connect high school students with sustainability professionals and career pathways. SEI will also manage overall project-wide grant administration, including partner coordination, evaluation data collection, and compliance reporting.

SCOCO will lead youth leadership development and regional community engagement through its year-round paid SLIA cohort for high school students. SCOCO will also manage the design and operational rollout of the Mobile Sustainability Lab, facilitate youth-led public education campaigns at community events, support community air purifier distributions, and connect youth participants with sustainability professionals to accelerate green career pathways.

Groundwork Richmond will implement localized workforce development and environmental stewardship programming through its paid summer Green Team experience for high school students. Through the work of the Green Team cohort, Groundwork Richmond will manage residential and municipal air monitor installations, support community air purifier distributions, and execute urban forestry campaigns, including neighborhood canvassing and tree planting initiatives.

All three partners will collaborate on customizing SEI's air quality curriculum, cross-promoting opportunities for youth, and supporting the execution of the Green Careers Conference. The partnership structure provides multiple opportunities for youth participation through classroom learning, after-school leadership activities, community outreach, workforce development experiences, and summer programming. While some youth may participate across multiple project activities, each partner will also recruit participants independently through their existing programs and networks.

While SEI will maintain overall responsibility for project oversight and compliance, the partnership will operate through a collaborative decision-making structure as much as possible, facilitated through regular touchpoints and clear, frequent feedback channels. Groundwork Richmond and SCOCO will hold authority over their respective areas of implementation, while broader project adjustments will be discussed jointly. To support effective coordination, SEI will manage centralized systems for scheduling, data tracking, and resource sharing, and regular partnership meetings and shared planning documents will support communication and visibility throughout the project.

5. Describe how the Lead Applicant will work with Co-Applicant(s) to:

- *Coordinate overall community engagement activities.*
- *Track and report on indicators to assess progress towards measurable outcomes.*
- *Collect and process reporting, reimbursement and invoicing requirements.*

SEI, SCOCO, and Groundwork Richmond will maintain close coordination throughout implementation through regularly scheduled meetings, shared planning documents, and clear communication channels. These structures will support planning, monitoring of project progress, identification of emerging needs or barriers, and consistency across school-based and community-based settings. SEI will develop and maintain a project implementation schedule, establish deliverable and reporting timelines, and oversee shared systems that support coordination, communication, and accountability across the partnership.

Community engagement activities will be coordinated collaboratively across all partners to ensure outreach efforts are complementary and incorporate ongoing assessment of local priorities. SEI will primarily lead engagement connected to participating schools, educators, and classroom-based programming, while SCOCO and Groundwork Richmond will lead outreach and participation via existing community events and neighborhood engagement efforts. Partners will coordinate outreach calendars, recruitment strategies, messaging, and event participation to maximize reach and create connected pathways for youth and families to engage across project activities. Each partner will also establish feedback avenues with participants to inform adjustments and ensure activities remain responsive throughout the grant period.

To assess progress toward measurable outcomes, SEI will establish and manage a centralized project tracking and reporting process that all partners will utilize throughout the grant period. SEI will coordinate collection of participation data, outcome indicators, and participant feedback across project activities and aggregate findings into project-wide reporting. Partners will contribute regular updates related to implementation progress and measurable outcomes within their respective scopes of work. SEI will oversee analysis of project data, administer shared evaluation tools where appropriate, monitor progress toward established targets, and prepare required reports for the Bay Area Air District (BAAD).

Grant administration, financial reporting, reimbursement, and invoicing processes will be coordinated by SEI. Groundwork Richmond and SCOCO will submit invoices and supporting documentation according to an established reporting schedule and in alignment with approved budgets and grant requirements. SEI's finance and contracts staff will review submissions, process reimbursements, maintain financial records, and oversee compliance with grant requirements and documentation standards. SEI will maintain organized financial and programmatic records throughout the grant period and required retention period to support transparency, accountability, and readiness for any financial review or audit.

This collaborative structure will ensure strong communication, coordinated implementation, clear accountability, and integration of each partner's expertise while creating consistent experiences for youth and community participants across project activities.

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.*

SEI, SCOCO, and Groundwork Richmond are nonprofit organizations governed by Boards of Directors that provide fiscal and organizational oversight. No additional board or council approvals are required for the proposed project.

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

SEI brings a strong track record of managing complex, multi-partner initiatives and aligning community stakeholders around shared grant deliverables, and will assign approximately five core staff members to the project. Assigned staff bring prior experience successfully implementing BAAD and CARB air quality education initiatives.

The proposed staffing structure includes:

- Program Director (.03 FTE): Provides strategic oversight, supervises program staff, oversees project performance, and ensures milestones are achieved on schedule.
- Program Manager (.61 FTE): Serves as the primary point of contact for BAAD and project partners, leading day-to-day implementation, partner coordination, reporting, school recruitment, curriculum adaptation, and educator support.
- Project Lead (.24 FTE): Supports direct implementation activities, including educator trainings, student engagement and education, community outreach coordination, and facilitation of environmental leadership and career exposure opportunities.
- Accounting Associate Director (.02 FTE): Manages invoices with BAAD, co-applicants, and subcontractors, establishes and maintains budget tracking systems, and supports financial grant compliance.

SEI will leverage robust existing organizational infrastructure and resources to support successful implementation and compliance. This includes utilizing internal workload modeling to forecast staff capacity, allowing management to reallocate resources or initiate hiring if needed. Dedicated finance and operations staff will oversee budget tracking, invoicing, reimbursement processing, subcontract management, and financial reporting to ensure full compliance with BAAD requirements. Additionally, established project management and data systems, including Salesforce and Asana, will support tracking of deliverables, participation metrics, timelines, and partner coordination activities. Together, these systems will allow the team to proactively monitor progress, identify implementation challenges early, and ensure accountability across all project partners and activities.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

SEI has more than 29 years of experience managing large education and workforce development initiatives funded through public and private sources. The organization maintains the fiscal infrastructure, internal controls, grant administration systems, and project management practices necessary to efficiently administer large-scale grant programs. Currently, SEI's Business Services team oversees more than 200 annual contracts with a combined organizational budget exceeding $9 million, demonstrating the capacity to manage complex financial, compliance, and reporting requirements across multiple funding sources and partners.

The organization has a strong track record of successfully managing public funding from federal, state, and regional agencies, including CARB, AmeriCorps, the California Strategic Growth Council, the National Oceanic and Atmospheric Administration, and the National Science Foundation. As a primary example of this management capacity, SEI currently serves as project lead for the $5.5 million San Diego Regional Energy Network Workforce Training and Capacity Building Program. In this role, SEI coordinates implementation across partner organizations—including Resource Innovations and the Metropolitan Area Advisory Committee on Anti-Poverty—to support a regional decarbonization workforce network. Additionally, SEI has administered multiple BAAD-funded programs, including student-led air quality challenges through the James Cary Smith Community Grant program from 2022–2025, consistently meeting all technical deliverables, reporting requirements, and fiscal compliance standards.

To ensure rigorous fiscal oversight, SEI utilizes established accounting, grant management, and project tracking systems that follow Generally Accepted Accounting Principles (GAAP). Written financial management policies govern all organizational operations, which include annual independent financial audits, quarterly Board financial reviews, monthly internal finance reconciliations, separation of financial duties, and multi-level invoice approvals. Business Services staff will work with program management to ensure accurate financial reporting, compliance with grant requirements, and alignment between expenditures and approved activities.

To track grant funds and ensure they are spent only on eligible project activities, SEI will establish project-specific tracking codes for the Bay REPAIR grant. All expenses—including personnel time, materials, equipment, and subcontractor costs—will be assigned unique codes within SEI's accounting and timekeeping systems to prevent the commingling of funds. Staff will complete timesheets tied directly to approved grant activities and deliverables. Furthermore, SEI will oversee subcontractor reimbursements by auditing invoices and supporting documentation from SCOCO and Groundwork Richmond against approved budgets, scopes of work, and milestones prior to approving any payments.

Throughout the grant period, the Program Manager and the Business Services team will review monthly budget-to-actual expenditure reports to monitor spending trends, identify variances, and ensure expenditures remain aligned with the approved budget and implementation timeline. These established practices will ensure transparency, accountability, and effective stewardship of Bay REPAIR grant funds.

STRATEGY ALIGNMENT

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Strategic Energy Innovations (SEI), Sustainable Contra Costa (SCOCO), and Groundwork Richmond will partner to implement the Clean Air Leaders project, a youth-centered initiative designed to improve air quality, strengthen public health, and build youth knowledge and resilience across the West Contra Costa target zone. By offering a coordinated range of school-year and summer programs, the partnership presents a unified menu of engagement options that allow schools, community members, and local youth to choose the pathway that best fits their needs. This model connects classroom environmental justice education, paid youth leadership development, and hands-on workforce experiences into a pipeline for long-term environmental action and green career opportunities.

The project achieves these goals by integrating five core elements:

- Community Air Monitoring Network: Deploying a network of handheld, stationary, residential, and municipal air sensors to expand localized air quality data contribution and interpretation skills.
- Youth Education & Leadership: Providing educator training, customized curriculum, and teacher stipends for classroom learning through SEI's proven model, alongside the expansion of paid youth leadership cohorts through SCOCO's Sustainable Leaders in Action (SLIA) program and Groundwork Richmond's summer Green Team program.
- Community Engagement: Attending community events with youth ambassadors and launching a new Mobile Sustainability Lab to facilitate interactive public education and air quality awareness.
- Direct Exposure Mitigation & Stewardship: Distributing free indoor air purifiers to residents and executing urban forestry campaigns led by youth.

- Green Career Connections: Bridging all programs through hands-on workforce exposure, culminating in one regional youth Green Careers Conference led by SEI to connect students directly with environmental professionals.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

The Clean Air Leaders project aligns with both Local Community Benefit Fund strategies by transforming youth-focused education into exposure reduction and green career pathways.

Strategy 1: Reduce Air Pollution and Improve Health Outcomes
The following project elements will mitigate health risks and reduce exposure by equipping youth and residents with data, education, and infrastructure:

- Regional Monitoring Expansion: Partners will collaborate with school administrators and youth cohorts to install and maintain stationary air monitors at schools, residences, and public sites, expanding the regional data network and improving community access to localized air quality information needed to make informed exposure-reduction decisions.
- Youth Education and Action: Partners will equip youth with localized air quality knowledge and support hands-on data collection projects. Students will analyze local data to track pollution hotspots and trends, allowing schools and families to make informed decisions around exposure.
- Community Education: All partner organizations and their youth cohorts will participate in local events to help residents engage with air quality issues, interpret data, and access program resources such as air purifiers, increasing community capacity to reduce exposure during poor air quality events.
- Exposure Mitigation: To reduce exposure to harmful air pollutants and improve indoor air quality, the partners will distribute free indoor air purifiers while concurrently implementing urban forestry campaigns to expand urban canopy coverage, which can help improve neighborhood environmental conditions and reduce pollution impacts.

Strategy 2: Build Economic Resilience for a Just Transition
The project will also leverage the partners' expertise in green workforce development to support exposure to sustainability career pathways, preparing youth for high-quality careers that support a just transition:

- Green Career Connections and Skill Building: The partnership will provide direct exposure to the green economy through Climate Career Chats and professional guest speakers and panels. This will culminate in the Spring of 2029 with a Green Careers Conference, connecting local youth with professionals and career pathways in public health, clean energy, and environmental sustainability. Across programming, student participants will also develop transferable, resume-building skills in data interpretation, hardware maintenance, urban forestry, communication, and project management.

COMMUNITY IMPACT

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The Clean Air Leaders project will serve youth and residents across the West Contra Costa target zone within the Path to Clean Air (PTCA) Community Emissions Reduction Plan area. Programming is designed to meet youth and community members where they already live, learn, and gather, prioritizing neighborhoods experiencing disproportionate cumulative exposure to industrial and transportation air pollution.

Activities will be distributed across the target zone through the following core locations:

- School Sites: SEI's school-based education, educator trainings, and school-hosted community engagement will occur at eligible school campuses. Both virtual and in-person support is expected. Initial implementation will focus on the following sites, with additional schools added over the grant period based on ongoing outreach:
  - Richmond High School (1250 23rd Street, Richmond, CA 94804)
  - Richmond College Preparatory (1014 Florida Avenue, Richmond, CA 94804)
  - Summit Public Schools: Tamalpais (3020 Hilltop Mall Road, San Pablo, CA 94806)
  - Dover Elementary School (1870 19th Street, San Pablo, CA 94806)
- Groundwork Richmond's Green Team: Groundwork Richmond's Green Team summer program will conduct residential and municipal stationary monitor installations, door-to-door neighborhood urban forestry canvassing, tree plantings, and indoor air purifier distributions concentrated within heavily impacted Richmond neighborhoods, specifically the Iron Triangle, Coronado, and Santa Fe communities.
- Sustainable Leaders in Action Youth Leadership Cohort: SCOCO's SLIA cohort will support community air purifier distributions and conduct its regular youth leadership development meetings, project planning sessions, and Climate Career Chats primarily through virtual platforms to maximize accessibility for students across the entire target area.
- Community Outreach Sites: Regional community engagement, mobile outreach via the new Mobile Sustainability Lab, and youth leadership activities will take place at public venues, community gathering spaces, and partner locations throughout Richmond and surrounding neighborhoods.
- Green Careers Conference: The single, regional Green Careers Conference in the Spring of 2029 will be hosted at an accessible venue within the target zone selected in collaboration with schools and partners.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Community engagement was foundational to the development of the Clean Air Leaders project, shaping its implementation strategies, measurable outcomes, and participation pathways. To ensure the initiative reflects local priorities, the project partners intentionally engaged West

Contra Costa educators, school administrators, county education officials, past youth participants, and local residents to identify needs and determine the experiences that would create the most value for local youth.

To identify specific academic and school-based needs, SEI distributed an Air Quality Education Needs Assessment to regional school stakeholders and conducted direct interviews with local campus administrators. This qualitative and quantitative outreach identified gaps in hands-on environmental education and a strong desire to equip students with technical tools. For example, Toni Cuevas, Dean of Students at Richmond College Preparatory, emphasized that students need direct opportunities to engage with "air quality monitors, reading data, learning policy, and interpreting data," while building "college and career readiness."

SEI also established communication with Tracy McManus, STEAM Coordinator at the Contra Costa County Office of Education, to better understand educational priorities and opportunities. The Contra Costa County Office of Education expressed support for the proposed project, stating that “this type of collaborative program can support students in building scientific and technical skills through project-based learning, outdoor fieldwork, and civic engagement, while also offering educators resources to integrate air quality topics into classroom instruction.”

Community and resident priorities were further explored and integrated using the existing networks of the project partners:

- Youth Feedback: SCOCO held conversations with past SLIA participants. These youth emphasized a clear demand for more hands-on, community-based leadership opportunities, public speaking training, and direct exposure to sustainability career readiness.
- Resident Feedback: Groundwork Richmond leveraged years of ongoing resident engagement through Clean Air Day outreach, air sensor distribution, and tree adoption programs. Local residents have consistently shared concerns regarding local respiratory health impacts and barriers to accessing environmental resources. Groundwork Richmond also identified a sustained community demand for physical environmental interventions based on existing waitlists for household air sensors and tree adoptions.

Analysis of survey responses, interviews, youth feedback, community conversations, and partner planning sessions identified several consistent priorities that became the basis for project activities and measurable outcomes. Stakeholders expressed a clear desire to strengthen youth understanding of local air quality conditions and create direct opportunities for students to address environmental issues affecting their neighborhoods. Community members also emphasized the need for expanded youth civic participation and opportunities connecting students to future green careers, all while building transferable skills such as public speaking, advocacy, and hands-on data analysis.

As a result, the Clean Air Leaders project integrates education, community science, youth leadership, green career exposure, community engagement, and professional skill building to reflect community-identified priorities and create multiple entry points for participation. This

engagement process not only informed project design but also established relationships and structures that will support recruitment, implementation, and ongoing responsiveness to community needs throughout the grant term.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The Clean Air Leaders project will address community priorities through a coordinated approach centered in heavily burdened frontline communities – including Richmond (specifically the Iron Triangle, Coronado, and Santa Fe neighborhoods), North Richmond, and San Pablo. Stakeholder engagement conducted during project development identified a need for stronger air quality literacy, increased youth leadership and civic action, and expanded access to real-world learning experiences. Furthermore, community members and partners emphasized the need for immediate, localized solutions to reduce exposure and mitigate poor air quality in their households and neighborhoods.

To respond to these priorities, the project combines youth education, data access, exposure reduction, leadership development, and career exploration. Together, these activities address environmental justice, public health, and just transition challenges facing the communities served by the project:

Environmental Justice Challenges

- Identified Need: Frontline communities in the target zone have historically faced a disproportionate pollution burden without access to the localized data necessary to understand or address their immediate environmental conditions. Stakeholders expressed a desire to strengthen youth understanding of local air quality and provide exposure to hands-on technical tools.
- Project Response: SEI will provide localized environmental justice and air quality curricula to schools and supply classrooms with handheld and stationary air monitors. SCOCO will expand their SLIA internship program, specifically adding a dedicated air quality education and community action framework to their existing climate literacy curriculum. Concurrently, Groundwork Richmond will expand the scope of their summer Green Team cohort by explicitly integrating localized air health monitoring. This initiative will revive Groundwork Richmon's previous residential air sensor installation programming, which became inactive due to a lack of dedicated funding, and reestablish it as a core component of youth-led community stewardship. Through these complementary programs, youth and residents will gain direct access to neighborhood data, building the literacy required to participate in environmental decision-making and make positive community change.

Public Health Challenges

- Identified Need: Residents navigate public health vulnerabilities, particularly respiratory illnesses, linked to industrial and transportation emissions. Community members and partners emphasized a need for solutions to reduce exposure and mitigate poor air quality in their immediate surroundings.
- Project Response: All three partner organizations and their youth cohorts will participate in community outreach events, utilizing a new Mobile Sustainability Lab managed by SCOCO. The partners will distribute free indoor air purifiers while concurrently executing urban forestry campaigns to expand outdoor canopy shielding. This approach delivers a public health response by combining indoor particulate filtration with long-term outdoor ambient buffers, helping residents understand local air quality conditions, and adopt strategies that reduce exposure to harmful pollutants.

Just Transition Challenges

- Identified Need: As the region faces uncertainty around the future of the Richmond refinery, youth in heavily impacted neighborhoods need targeted career exposure and skill-building related to green job opportunities. Stakeholders prioritized the need for youth civic participation, leadership development, and educational opportunities that connect students to future green careers.
- Project Response: SEI's classroom programming, SCOCO's SLIA cohort, and Groundwork Richmond's Green Team will all incorporate green career-related offerings. Across these three tracks, participants will have opportunities to engage in professional skill-building, green career panels, Climate Career Chats, and technical training. This exposure will culminate with SEI's regional Green Careers Conference, an event bringing together students from all program tracks to connect with professional networks and local employers.Together, these opportunities will help prepare youth to participate in a more sustainable and resilient regional economy.

Progress toward addressing these challenges will be demonstrated through measurable outcomes that reflect the project's community impact. Achieving our targets in data access and environmental literacy will demonstrate that frontline youth are building the foundational skills to drive local environmental justice efforts. Our physical mitigation outcomes will represent progress towards reducing public health risks by directly improving indoor and outdoor environments for families. Finally, our career readiness and community engagement outcomes will demonstrate that youth are gaining the knowledge and agency to lead the emerging green economy and make progress towards a just transition.

COMMUNITY ENGAGEMENT

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Community engagement during implementation will focus on maintaining regular communication with residents, increasing awareness of project benefits and participation opportunities, and

creating accessible pathways for ongoing involvement. The Clean Air Leaders project is designed so that community members are not only informed about project activities but are also able to engage with resources, participate in events, and provide feedback on project offerings.

To keep community members informed about project progress and available resources, the partnership will leverage existing communication channels and community networks. SEI will coordinate with participating schools to share project updates, upcoming events, educational opportunities, surveys, and information about community resources through school newsletters, parent communications, and campus bulletin boards. The project team will also work with Parent Teacher Organizations and similar school community groups to present project updates and promote opportunities such as air purifier distribution, community events, youth participation pathways, and Green Career opportunities.

Project partners will intentionally cross-promote activities across implementation efforts to maximize awareness and participation. SEI, SCOCO, and Groundwork Richmond will present the project as a connected set of opportunities that allows youth and families to engage at different levels depending on their interests and availability. For example, students participating in SEI's classroom programming will be informed about opportunities to deepen their engagement through SCOCO's SLIA program or participate in Groundwork Richmond's Green Team summer programming. Likewise, youth participating through community programs will be connected back to school-based opportunities, technical learning experiences, and career exposure events. Community outreach infrastructure already embedded within partner organizations will also be leveraged to expand reach. Groundwork Richmond's door-to-door canvassing activities and SCOCO's established presence at local events will be used to share project updates, promote participation opportunities, and connect residents with project resources and benefits.

The project team will also implement multiple methods to collect and respond to community feedback throughout the grant period. Participating educators and students will complete feedback surveys related to classroom activities, curriculum, instructional support, and overall program experience. Educator agreements will incorporate feedback requirements and participation will be further supported through teacher stipends to encourage strong response rates and meaningful input. Survey findings will be used by SEI to refine educational content, improve training approaches, and adapt classroom implementation to better reflect participant needs and interests.

Outside of school programming, SCOCO and Groundwork Richmond will collect feedback through participant surveys, reflections, and direct conversations with youth engaged in SLIA and Green Team activities. These feedback mechanisms will assess participant experience, identify emerging needs, and gather recommendations for future activities and outreach approaches. To ensure community input meaningfully informs implementation, review of participant and community feedback will serve as a standing agenda item during regular partner coordination meetings. The project team will use findings from surveys, conversations, and participation trends to make adjustments to project activities, strengthen outreach approaches,

improve participant experiences, and ensure implementation remains responsive to community priorities throughout the grant period.

MEASURABLE OUTCOMES PLAN

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The Clean Air Leaders project will engage youth across the West Contra Costa target zone to increase understanding of local air quality challenges and solutions while empowering participants to take action through education, community science, leadership development, and public engagement. Through coordinated school-year, after-school, and summer programming, the project creates multiple pathways for youth to strengthen environmental literacy, improve public health outcomes, build professional skills, and expand awareness of green career opportunities.

The project is organized into five core components, each tied to a measurable outcome:

- **Environmental Literacy and Air Quality Education:** This component encompasses all education and literacy work across the project, spanning both school-based classrooms and community-based youth cohorts. SEI will lead school-based air quality education through comprehensive educator support, curriculum implementation, and technical training. Spheros Environmental will support implementation as a subcontractor through its Kids Making Sense program by providing handheld air quality monitoring kits and technical assistance to participating schools. Concurrently, this grant will support the expansion of SCOCO's SLIA and Groundwork Richmond's Green Team community cohorts by integrating specialized air quality education, technical training, and community action into their operations. Across all combined tracks, the project aims to directly reach over 500 youth under this outcome, with a target of 80% of participating youth reporting an improved understanding of local air quality challenges and solutions via post-program evaluations.
- **Regional Monitoring Expansion:** To expand data accessibility and transparency across frontline neighborhoods, the project will strengthen community access to localized air quality information. Youth will support the installation and data use of 66 PurpleAir sensors across school, residential, and public municipal settings in West Contra Costa. Progress in this category will be demonstrated by successfully deploying the full network of functional monitors, expansion of the regional data grid, and increased youth confidence in interpreting environmental data.
- **Community Outreach and Education:** Partners will build regional environmental literacy by training youth to serve as air quality ambassadors at community events—including Earth Day, Noche de Ciencias, library workshops, and neighborhood canvassing—to connect residents with data, resources, and health information. The proposed project will cover participation in 42 community events, with special mobile outreach elements driven by SCOCO's new Mobile Sustainability Lab, to secure the direct engagement of at least 420 community members.
- **Exposure Mitigation and Urban Forestry:** To deliver immediate, tangible public health interventions to pollution-burdened households and neighborhoods, the partnership will

integrate physical mitigation directly into schools and community-based activities. Partners will manage the distribution of 175 free indoor air purifiers, including both HEPA purifiers and Corsi-Rosenthal filter kits. Concurrently, Groundwork Richmond's Green Team will lead urban forestry campaigns to plant 60 community trees.

- **Youth Leadership and Workforce Development:** To prepare youth for a transitioning local economy, the project will provide a range of workforce readiness offerings that strengthen the green career pipeline. Partners will host at least 30 career exposure opportunities outside of the conference, including professional skill-building workshops, green career panels, and Climate Career Chats. These foundational experiences will culminate in SEI's regional Green Careers Conference in Spring of 2029, which is projected to engage at least 200 youth. The event will allow participants to network with environmental professionals and showcase their own campaigns, with a target of 80% of participating youth reporting an increased interest in green career pathways.

Implementation responsibilities are clearly defined to support coordinated project delivery. SEI, serving as the Lead Applicant, will function as the prime contractor and fiscal agent, overseeing overall grant administration, budget compliance, reporting, and partner coordination, while programmatically leading all school-based activities, guiding curriculum adaptation, and hosting the 2029 Green Careers Conference. SCOCO will lead advanced youth leadership development through its SLIA internship cohort, manage the design and use of the new Mobile Sustainability Lab, and lead the coordination of Climate Career Chats and community outreach events. Groundwork Richmond will direct the field-based Green Team summer cohort, utilizing its deep community roots to manage door-to-door neighborhood canvassing, lead the deployment of residential and public PurpleAir monitors, and execute all physical urban forestry activities.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*
9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

A total of $1,070,975.91 is requested over a three-year grant term to implement the Clean Air Leaders project across the West Contra Costa target zone. Funding will support coordinated school and community-based implementation that expands youth access to air quality education, environmental leadership experiences, exposure mitigation resources, and green career pathways.

Of the total request, $630,590.31 is allocated to SEI as the Lead Applicant to support comprehensive fiscal administration and program delivery. The largest investment covers staff time to manage K-12 curriculum development, direct school-site implementation, the execution of green career events, and overall project administration. SEI's budget also includes a $55,950 subcontract with Spheros Environmental to provide Kids Making Sense handheld sensor kits alongside specialized technical training for schools. To foster community participation and leadership, the budget incorporates significant funding for K-12 educator stipends as well as compensation for green career professionals who contribute their time. Finally, SEI's budget

covers direct material and logistical costs, including the procurement of stationary PurpleAir monitors, indoor air purifiers, and various expenses associated with the regional Green Careers Conference and broader community outreach events.

The remaining grant funds are allocated to the project's co-applicants. $223,422 has been allocated to SCOCO to lead advanced youth leadership and localized community outreach. A primary portion of this funding covers staff time to manage and facilitate the SLIA internship program – integrating a new air quality framework into the cohort's existing climate literacy curriculum, coordinating Climate Career Chats, and running public engagement events. The budget incorporates significant funding for paid youth stipends to compensate SLIA cohort members. Other key expenses include a specialized consultant fee to manage the design, fabrication, and application of the new Mobile Sustainability Lab, alongside direct material costs for community outreach supplies and mobile lab equipment.

$230,463.60 has been allocated to Groundwork Richmond to support summer youth workforce development and field-based implementation. Key costs include staff time to oversee the Green Team summer cohort and coordinate the integration of air quality education and action into the program. The budget heavily prioritizes direct participant support, allocating substantial funds toward paid stipends for Green Team youth members during their summer experiences. Crucially, this funding allows Groundwork to reinstate and scale its previously successful residential PurpleAir monitor installation programming. The remaining funds cover field materials and direct community resources, including stationary PurpleAir monitors, indoor HEPA air purifiers, urban forestry planting supplies, and localized door-to-door canvassing materials.

Overall, all budgets prioritize dedicated staff time for program management and implementation, alongside direct investments in sensors, purifiers, and community engagement supplies. Across the partnership, 42.4% of funding is allocated to co-applicants. The project has a collective indirect rate of 15% and a collective contingency rate of 5% to ensure resilient project delivery.

ECOSYSTEM ALIGNMENT

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The Clean Air Leaders project aligns with local, regional, and statewide initiatives that seek to reduce air pollution, improve public health outcomes, strengthen climate resilience, and increase community participation in environmental decision making. Specifically, the project advances priorities outlined in California's Community Air Protection Program (AB 617) and the Path to Clean Air Community Emissions Reduction Plan (CERP) for West Contra Costa, while also supporting goals established through the City of Richmond Climate Action Plan (October 2016), the West Contra Costa Unified School District Strategic Plan 2024–2029, and California Assembly Bill 285 (Climate Change Education).

The project directly supports implementation of AB 617 and the Path to Clean Air CERP by increasing community based air quality monitoring, strengthening understanding of local air quality conditions, and reducing exposure to pollution. Through installation of PurpleAir sensors across schools and community locations, youth will expand access to localized environmental information and participate in monitoring and outreach activities that increase environmental health literacy. Community education efforts and distribution of indoor air purifiers further support CERP goals related to exposure reduction and community awareness.

At the local level, the project advances multiple priorities within the City of Richmond Climate Action Plan. The project supports Richmond's vision of an engaged community and educated youth by creating opportunities for students to participate in environmental education, community science, leadership development, and climate action. Groundwork Richmond's urban forestry activities and community tree planting efforts also support the City's Healthy and Resilient Community goals by increasing environmental stewardship and contributing to neighborhood green space.

The project is also consistent with the West Contra Costa Unified School District Strategic Plan 2024–2029, which identifies a need for stronger real world learning and industry connected experiences. Through hands-on environmental monitoring, youth leadership opportunities, and the Green Careers Conference, students will gain applied learning experiences connected to sustainability and environmental careers. In addition, the project supports implementation of California Assembly Bill 285 (2024) by delivering Next Generation Science Standards (NGSS) aligned climate and air quality education that increases student understanding of climate impacts, mitigation, and adaptation strategies.

CAPACITY

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

SEI brings more than 29 years of experience designing and implementing environmental education, air quality initiatives, workforce development programs, and educator professional learning across California. During the 2024–2025 school-year alone, SEI supported 348 educators across 292 schools, including 41% serving Title I and frontline communities. SEI has extensive experience leading complex, multi-partner environmental education and community engagement initiatives that require coordination across schools, technical partners, community organizations, and public funding sources. Through implementation of statewide and regional programs, SEI has developed proven systems for educator recruitment, curriculum delivery, technical assistance, partner coordination, outcome measurement, and long-term participant engagement. This experience positions SEI to efficiently manage the scale, partnership structure, and community-centered implementation model proposed through Clean Air Leaders.

This project builds directly upon existing curriculum material, technical networks, and administrative frameworks that SEI has successfully executed under similar public grants. Most recently, SEI administered the California Air Resources Board (CARB) Air Quality Education and Community Monitoring initiative (Grant G21-CAGP-38) across Mendocino and Shasta Counties.

In that role, SEI coordinated public school districts and technical subcontractors to provide handheld sensors, establish indoor and outdoor PurpleAir monitoring networks, deliver educator professional development, and support student-led exposure reduction campaigns. Additionally, SEI has administered multiple Bay Area Air District (BAAD)funded initiatives, including student-led air quality challenges funded through the James Cary Smith grant from 2022–2025. This direct past performance ensures deep institutional familiarity with BAAD reporting expectations, invoicing structures, technical deliverables, and compliance processes, allowing the management team to transition efficiently into active implementation.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

SEI will manage implementation of the Clean Air Leaders project through a dedicated staffing structure, established project management software, and existing institutional resources that will support strong partner coordination and compliance with BAAD requirements. Because the proposed work builds upon existing educational models, technical infrastructure, and community partnerships, implementation can begin efficiently without extensive startup development.

SEI will assign a dedicated staff team to oversee project implementation and coordination across all partners. This team will include a Program Director (.03 FTE) responsible for strategic oversight, budget compliance, and alignment with grant requirements; a Program Manager (.61 FTE) serving as the primary point of contact with the BAAD and leading partner coordination, school recruitment, curriculum adaptation, reporting, and implementation management; a Project Lead (.24 FTE) responsible for direct educator support, community engagement coordination, training facilitation, and day-to-day project delivery; and an Accounting Associate Director (.02 FTE) who will manage invoices with BAAD, co-applicants, and subcontractors, maintain budget tracking systems, and support financial grant compliance.

Project implementation and data tracking will be operationalized through SEI's established internal software systems. Salesforce will serve as the primary database to track participant demographics, deliverables, outcome indicators, and reporting metrics, while Asana will support milestone tracking, implementation timelines, and cross-partner task coordination. Financial oversight will be managed through SEI's internal finance and contracts staff, who will utilize audited accounting systems to handle budget monitoring, reimbursement processing, subcontract administration, and timely disbursement of funds to co-applicants SCOCO and Groundwork Richmond.

Finally, the project benefits from existing organizational investments that will reduce startup costs and launch timelines. SEI will leverage its established Energize Schools program model and an existing library of NGSS-aligned air quality curriculum and educator resources rather than developing educational materials from the ground up. Similarly, field implementation builds directly upon SCOCO's established SLIA model and Groundwork Richmond's Green Team

infrastructure, allowing the partnership to immediately utilize existing youth engagement systems, trusted neighborhood relationships, and embedded outreach networks to accelerate implementation and strengthen long-term sustainability.

READINESS

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- *Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.*
- *If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.*
- *Indicate "N/A" if the question is not applicable to the project*

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

The Clean Air Leaders project is not anticipated to require traditional regulatory or construction permits. However, administrative approvals and site specific permissions will be obtained to support implementation, all of which are expected to be secured within or prior to the grant term.

SEI will coordinate with West Contra Costa Unified School District (WCCUSD) and participating school leadership to obtain approvals for classroom programming, educator participation, teacher professional development, and installation of air quality monitoring equipment on school campuses where applicable. Activities will align with district procedures and school protocols.

Groundwork Richmond will coordinate any necessary permissions for installation of air quality sensors at community-based locations, including public and residential sites where applicable. The organization has prior experience securing approvals and installing sensors in public buildings through existing local partnerships, which reduces implementation risk. Groundwork Richmond will also coordinate with key City of Richmond staff regarding tree planting activities. All proposed tree planting locations will be assessed and cleared by PG&E for underground utilities prior to installation, and both residential and non-residential planting sites will undergo the same approval and review process. Once a site has been approved for planting, Groundwork Richmond will ensure that an appropriate tree species is selected based on site conditions and long-term suitability.

Based on prior implementation experience, existing community partnerships, and school engagement completed during proposal development, the project team does not anticipate barriers to obtaining required approvals. Any necessary permissions will be secured during project startup and incorporated into implementation timelines to avoid delays.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

The project is not anticipated to require CEQA review because activities consist of educational programming, portable monitoring equipment, small scale monitoring installations, and distribution of air purification resources that do not result in significant physical environmental change. CEQA applicability will be confirmed during project startup if required.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

Traditional site control, such as property acquisition, leaseholds, or easements, is not required for this project. Activities will occur at participating schools and community locations with permission secured through partner coordination and existing relationships. Any required site permissions for sensor placement or project activities will be obtained prior to implementation and documented before execution of the Grant Agreement.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

The Clean Air Leaders project does not include construction of permanent infrastructure. However, project assets and environmental improvements supported through the project—including air quality sensors, indoor air purifiers, and newly planted trees—will be sustained through appropriate maintenance practices, user training, and integration into existing school, household, and community operations.

Groundwork Richmond will maintain newly planted trees for the first three years following installation. The organization conducts follow-up visits at three months, six months, one year, two years, and three years after planting. Tree health and maintenance data are tracked through the Forest Metrics platform, and participating community members are invited to complete feedback surveys during years one, two, and three to support ongoing stewardship and program evaluation.

For indoor air purifiers, the project will prioritize distribution of durable, low maintenance units, including HEPA models and materials for Corsi-Rosenthal boxes that utilize standard and affordable replacement filters. Recipients will receive clear guidance regarding recommended filter replacement schedules, proper use, and routine maintenance practices to support continued operation after the grant term.

For air quality monitoring equipment, PurpleAir stationary sensors require minimal ongoing maintenance, typically limited to maintaining WiFi connectivity and occasional clearing of debris from sensor inlets to support data quality. Kids Making Sense handheld monitoring kits require

standard charging and secure storage between uses. Annual educator technical training and project support will reinforce proper equipment use and storage practices to extend equipment lifespan.

During the grant term, project staff will oversee operations and maintenance as part of regular implementation activities. Following grant completion, equipment ownership and routine maintenance responsibility will transfer to participating schools and residents. Because selected equipment has minimal financial and technical requirements, ongoing maintenance costs are expected to be manageable within existing school sites and household budgets without additional dedicated funding sources.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The Clean Air Leaders project is designed to minimize implementation risk by leveraging existing school partnerships, established youth programming, and activities that do not rely on major construction or complex permitting. While no significant barriers are anticipated, the project team has identified several implementation considerations and corresponding mitigation strategies.

One implementation consideration involves ongoing coordination with the City of Richmond related to tree planting approvals. Groundwork Richmond has extensive experience navigating these processes through existing partnerships and prior urban forestry work within the community. These established relationships, combined with the organization's familiarity with local approval procedures, position the team to coordinate permitting efficiently and adjust implementation timelines as needed without affecting overall project delivery.

Another potential challenge is educator capacity and competing classroom demands within public school systems. To support participation, participating teachers will receive a $1,000 stipend formalized through participation agreements and will have direct access to one-on-one instructional support, professional training, and ready-to-implement curriculum resources. Flexible implementation options will also allow schools to engage at levels aligned with their capacity.

Sustaining long-term youth participation and community engagement can also present retention challenges. To mitigate this risk, the project will embed activities within existing engagement infrastructure, specifically SCOCO's SLIA program and Groundwork Richmond's Green Team. This approach will reduce recruitment burdens, create interconnected participation pathways across school-year and summer programming, and support strong retention through paid youth leadership and workforce development opportunities. SCOCO will also offer gift card incentives for survey participation during community events, workshops, and outreach activities to encourage continued community involvement and strengthen participation in project activities.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

Project Vision:	This project will engage youth in the West Contra Costa eligibility zone to increase their understanding of local air quality challenges and solutions so they are empowered to participate in youth-led advocacy opportunities and campaigns that will engage the broader community in air quality literacy and health.

Measurable Outcome	Indicator(s)
1. A strengthened community-led air quality monitoring network and increased youth skills associated with using and interpreting data from air quality sensors/monitors.	• Total number of air sensors (e.g. PurpleAir) installed and maintained through youth programming (Target: 66) • Total number of youth that participate in installing and/or using air quality monitors in the community (Target: 480) • Percentage of youth reporting increased confidence using air quality tools, alerts, or information (80%)
2. Youth will increase their knowledge of challenges and solutions related to air quality and their understanding of how to take action in their communities.	• Number of educators trained on air quality education (Target: 21) • Number of youth who participate in air quality education or action projects (Target: 504) • Percentage of youth who report improved understanding of air quality challenges and solutions in post-engagement surveys (Target: 80%) • Youth and educator reflections describing what they learned

3. Increase the literacy of West Contra Costa residents regarding air quality health by way of youth engagement with the broader West Contra Costa community.	● Number of community events (e.g., Earth Day events, Noche de Sciencias, library-based workshops) supported by youth (Target: 42) ● Collection of qualitative testimonials from residents regarding the accessibility and helpfulness of the mobile lab exhibit and other youth education efforts. ● Number of community members engaged through local events or interactions (e.g. canvassing) (Target: 420)
4. Increased indoor and outdoor air quality for community members through immediate public health interventions and targeted tree planting supported by youth efforts.	● Number of purifiers distributed to families and classrooms (Target: 175) ● Number of trees planted (Target: 60)
5. Youth will increase their understanding of and interest in green career pathways, driving a Just Transition and increasing community resilience.	● Total number of students attending 2029 Green Careers Conference (Target: 200) ● Total number of other green careers engagement offerings provided to students, such as guest speaker engagements, green career professional panels, or Climate Careers Chats (Target: 30) ● Percentage of youth participants reporting increased interest in green careers via surveys (80%)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
***The below timeline is made under the assumption that the grant timeline would begin approximately January 2027. Dates may need to be adjusted accordingly depending on the actual project start date.*					
1. A strengthened community led air quality monitoring network and increased youth skills associated with using and interpreting data from air quality sensors/ monitors.	A. Purple Air Monitors successfully procured and installed across participating schools.	1. Order PurpleAir Monitors for school installations.	SEI	x	March 2027 then annually in Sep 2027, 2028, 2029
		2. Provide installation, maintenance, and technical training support to participating schools.	SEI	x	April 2027 then annually in Oct-Nov 2027, 2028, 2029
		3. Deliver continuous technical assistance and instructional support to classrooms as students build data-driven action campaigns around their sensors.	SEI	x	April 2027-Nov 2029
	B. Purple Air Monitors successfully procured and installed at residential locations and public buildings.	1.Order PurpleAir Monitors for public and residential installations.	GWR	x	Annually in May 2027, 2028, 2029
		2. Coordinate youth cohort canvas campaigns to conduct outreach and sign up residents interested in hosting home air sensors.	GWR	x	Annually in June-Sept 2027, 2028, 2029
		3. Evaluate municipal locations, secure city permissions, and install sensors at public locations.	GWR	x	Annually in June-Sept 2027, 2028, 2029
	C. Participant feedback is collected around air sensors installation experience.	1. Develop and distribute feedback surveys to youth participants to evaluate programmatic success and skill progression.	SEI	GWR, SCOCO	Developed by April 2027, administered annually in May for school-based youth and Aug for GWR Green Team in 2027, 2028, 2029
2. Youth will increase their knowledge of challenges and	A. Air quality curriculum (High School, Middle School, and	1. Convene regular curriculum planning sessions between SEI, SCOCO, and GWR to incorporate local context and community feedback.	SEI	SCOCO GWR	Jan-June 2027

solutions related to air quality and their understanding of how to take action in their communities.	Elementary) adapted, updated, and finalized for the local context.	2. Draft and refine curriculum modules specifically targeted for different age brackets (K-12) and customized local context.	SEI	SCOCO GWR	May-Aug 2027
		3. Pilot adapted modules with educators, collecting initial feedback to finalize curriculum versions.	SEI	x	Sep-Dec 2027
		4. Curriculum updates are finalized.	SEI	x	Feb 2028
	B. Classroom educators trained and equipped to implement air quality lessons.	1. Develop school outreach materials and conduct targeted recruitment to secure participating K-12 educators.	SEI	x	Developed by March 2027; recruitment conducted April 2027 and annually in Aug-Oct 2027, 2028, 2029
		2. Design and deliver specialized Air Quality Curriculum training workshops for classroom educators (two per school year).	SEI	x	Designed Jan-April 2027; Delivered in April and Oct of 2027, 2028, 2029
		3. Procurement, delivery, and technical training of Kids Making Sense monitoring classroom kits in partnership with Spheros	SEI	Spheros	Procurement in March 2027 then annually in Sep; trainings in Oct 2027, 2028, 2029
		4. Students participate in air quality education in the classroom, facilitated by trained educators	SEI	x	April 2027 - Nov 2029
		5. Student feedback surveys are developed by SEI and administered by participating educators.	SEI	x	Developed by April 2027; administered end of May 2027, 2028, 2029
	C. SCOCO's Sustainable Leaders in Action youth cohort is established and trained on an annual basis.	1. Conduct outreach across target high schools and community networks to recruit and select the active SLIA student cohort.	SCOCO	x	Annually in April-May2027, 2028, 2029
		2. SLIA cohort group is established, including 8+ interns.	SCOCO	x	Annually in June-August 2027, 2028, 2029
		3. Implement the structured SLIA leadership development program, focusing on air quality	SCOCO	x	Annually in August-May 2027, 2028, 2029

		data literacy, civic engagement, and advocacy.			
		4. Administer SLIA pre- and post-surveys	SCOCO	SEI	Annually in August (pre-surveys) and May (post-surveys) 2027, 2028, 2029
	D. GWR's Green Team youth cohort is established and trained on an annual basis.	1. Develop GWR youth outreach assets, manage recruitment windows, and annually establish the GWR Green Team summer cohort.	GWR	x	Annually in March-Sept 2027, 2028, 2029
		2. Deliver localized, hands-on air quality training tailored to the GWR group.	GWR	SEI	Annually June-Sept 2027, 2028, 2029
		3. Administer GWR program pre- and post-surveys	GWR	SEI	Annually in June (pre-surveys) and Sept (post-surveys) 2027, 2028, 2029
3. Youth will access opportunities to engage with the broader West Contra Costa community, increasing the literacy of West Contra Costa residents regarding air quality health.	A. Youth serve as air quality ambassadors at community outreach events.	1. Interface with project partners, school leads, and municipal partners to build a master calendar of local public events (e.g., campus events, library events, Earth Day events).	SEI	GWR, SCOCO	Initially established by June 2027, updated ongoing
		2. Support youth cohorts in designing their own localized outreach materials, resources, and interactive demonstration activities to use when tabling or speaking at events.	SCOCO	x	Annually in August-September 2027, 2028, 2029
		3. Deliver "Community Engagement 101" training workshops to prepare youth cohorts for public-facing communication and canvassing.	GWR	x	Annually in June-July 2027, 2028, 2029
		4. Coordinate youth attendance and cross-promotional marketing across all Co-Applicants.	SEI	GWR, SCOCO	June 2027 - Nov 2029

	B. Creation and rollout of the "Mobile Sustainability Lab."	1. Facilitate collaborative brainstorming sessions with the SLIA cohort to establish physical and educational requirements for the lab.	SCOCO	GWR SEI	Jan - March 2027
		2. Source and contract a consultant for the development of the Mobile Sustainability Lab.	SCOCO	x	Jan - March 2027
		3. Manage the lab's fabrication and interactive content creation.	SCOCO	x	March-June 2027
		4. Operationalize the completed lab at targeted events, utilizing participant tracking tools to log resident engagement.	SCOCO	x	March - June 2027
4. Increased indoor and outdoor air quality for community members through immediate public health interventions and targeted tree planting supported by youth efforts.	A. Air purifiers and associated training resources purchased/finalized for distribution.	1. Educate youth staff on purifier functionalities and work alongside them to generate accessible, bilingual materials focusing on unit cleaning, maintenance, and filter intervals.	SEI	SCOCO, GWR	April - July 2027
		2. Purchase air purifiers and spare replacement filters for distribution.	SEI	SCOCO	July - Aug 2027
	B. Establish distribution strategies and distribute purifiers at schools and community events.	1. Plan and deploy distribution strategies at community and municipal events, ensuring all delivery metrics are accurately tracked.	SCOCO, GWR	SEI	Oct 2027 - Nov 2029
		2. Execute distribution events at schools, coordinating with school administrators and actively engaging youth to support distribution efforts.	SEI	x	Oct 2027 - Nov 2029
	C. Community tree planting campaign successfully executed to increase the tree canopy and help sequester carbon.	1. Deploy GWR youth cohorts and staff to conduct neighborhood canvassing to recruit local residents willing to host and help care for new trees.	GWR	x	Annually in June-August 2027, 2028, 2029
		2. Perform site assessments, secure required planting permissions, and procure	GWR	x	Annually in June-August 2027, 2028, 2029

		climate-resilient tree species through GWR's established pipelines.			
		3. Host community planting days to plant 60 trees; integrate all trees into GWR's three-year tracking and maintenance system.	GWR	x	Annually in June-August 2027, 2028, 2029
5. Youth will increase their understanding of and interest in green career pathways, driving a Just Transition and increasing community resilience.	A. Engagements with green career professionals via guest speakers, panels, and Green Career Chats are facilitated.	1. Perform outreach and professional recruiting to source diverse environmental and sustainability panel experts.	SEI, SCOCO	x	Jan - Aug 2027
		2. Host and moderate panels/chats	SEI, SCOCO	x	Sept 2027 - Nov 2029
		3. Track student attendance metrics.	SEI, SCOCO	x	Sept 2027 - Nov 2029
	B. Comprehensive execution of the Green Careers Conference (GCC).	1. Collect student, educator, and partner input on conference interests and engage in a collaborative planning process.	SEI	x	Jan 2028 - Sep 2028
		2. Develop promotional materials, establish a master agenda, secure the venue/catering, manage busing transportation logistics, and build student registration tracking systems.	SEI	x	Sep 2028 - March 2029
		3. Recruit and coordinate with professional presenters and youth student speakers.	SEI	GWR SCOCO	Sep 2028 - March 2029
		4. Execute day-long conference attended by at least 200 local high school students.	SEI	x	April 2029
		5. Develop and administer conference feedback survey for attendees and presenters.	SEI	x	Develop by Feb 2029; administer April 2029

Project Name:	Clean Air Leaders			
Lead Applicant Name:	Strategic Energy Innovations (SEI)			
Term for this budget (in years):	3			

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
			coordination, and facilitation of environmental leadership and career exposure opportunities.	
Personnel/Staff Costs	Direct	Accounting Associate Director (.02 FTE over 3 yearss)	Manage invoices with funder and co-applicants, maintain budget systems and tracking, support grant compliance.	$10,553.92
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Spheros Environmental Subcontract	Subcontract will cover 15 Kids Making Sense handheld air sensor kits at $3,230 per kit, and 3 virtual technical trainings (1 per year) to support kit utilization at $2,500 per training.	$55,950.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	PurpleAir monitors	18 indoor PurpleAir sensors at $260 per sensor; 18 outdoor PurpleAir sensors at $330 per sensor, including power supplies and shipping.	$10,620.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Air Purifiers	105 HEPA air purifiers at $300 per purifier (including shipping and filter replacements); 40 materials kits of Corsi-Rosenthal filters at $100 per kit.	$35,500.00
Community Engagement	Direct	Additional Supplies for Schools and Events	Supplies for school site visits and school-based community events, such as tabling supplies, snacks for events, printing costs, posterboard, and demonstration materials	$750.00
Capacity-Building and Training	Direct	Teacher Participant Stipends	$1000 stipend provided to 18 lead teachers implementing classroom instruction and projects; $500 stipend provided to 12 teachers bringing students to Green Careers Conference	$24,000.00
Capacity-Building and Training	Direct	Green Career Speaker Stipends	$100 stipend for 65 professionals supporting as presenters and guest speakers, including at the Green Careers Conference	$6,500.00
Capacity-Building and Training	Direct	Green Careers Conference Venue	Venue for Green Careers Conference	$3,000.00
Capacity-Building and Training	Direct	Green Careers Conference Catering	Cost of lunch, snacks, and refreshments for approximately 230 Green Careers Conference attendees	$9,890.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Misc Green Careers Conference Supplies	Miscellaneous Green Careers Conference materials including office supplies, nametags, printing, tech tools	$2,000.00
Travel	Direct	Green Careers Conference Bus Subsidies	$1500 bus subsidy for 10 teachers bringing students to Green Careers Conference	$15,000.00
Travel	Direct	SEI Travel	Assumes 36 round trips to school sites x 30 miles round trip x 72.5 cents per mile, plus parking/toll of $10 per trip	$1,143.00
Contingency (≤10% of Direct Costs at PROJECT level)	Contingency	Contingency	5% contingency to cover unforeseen variables, including material and cost fluctuations for air monitors, purifiers, and the conference, as well as potential labor and teacher stipend adjustments if educator support demands exceed projections	$25,712.10
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	Indirect Costs	SEI Organizational Indirect Costs: includes rent, IT consulting, insurance, office supplies, and general administrative staff.	$77,136.29

Bay Area Air District
CLEAN AIR FOR ALL

Richmond Opportunity

The Labor Institute Application

Bay REPAIR
Local Community Benefits Fund – Round 1
Opportunity and Catalyst Grants
Overall Narrative

Application Information	
Application Title	Getting Ready
Lead Applicant	The Labor Institute
Application Location	Richmond
Overall Funding Request	$3,547,762
Grant Term Request	Three Years

PROPOSAL VISION (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
    - *Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.*
    - *Advance integrated projects to holistically meet community needs.*
    - *Strengthen community-driven and collaborative solutions.*

Getting Ready aims to improve health and economic resilience in Richmond by engaging those directly impacted by the Chevron Refinery—including workers at risk of job loss, community members who face health disparities from pollution and toxics, and public sector workers who provide critical local services that depend on refinery tax revenue—in three complementary workplace and community programs to identify and implement forward-thinking solutions.

First, the *Getting Ready - Oil Workers (GROW)* project will reduce/mitigate air pollution from the Chevron Richmond Refinery by empowering members of United Steelworkers Local 5 who work at the Chevron Richmond oil refinery through a worker-led education and research program to identify potential pollution reduction and accidental release prevention activities inside the facility. Second, in collaboration with Jobs with Justice San Francisco, The Labor Institute, and an academic partner with expertise in local worker transition, the Getting Ready – Workforce Resilience & Futures Initiative (WRFI) will engage refinery workers in the design of a Richmond-based workforce resilience and transition support framework focused on workforce assessment, hiring pathways, training needs, and credentialing opportunities connected to high-quality local industries. The project will also coordinate with relevant statewide refinery transition efforts, including California's Displaced Oil and Gas Worker Pilot Program, to ensure local recommendations contribute to broader just transition planning and workforce

development strategies.Third, the *Getting Ready - Advancing a Diverse Economy (GRADE)* project will convene local labor unions, and community-based organizations to identify industries/areas for economic growth and diversification in Richmond that can create good jobs accessible to former oil and gas workers and historically excluded community members, support robust public services by replacing lost tax revenue from refineries, and are simultaneously safe and healthy for workers and community members. The GRADE partners will advance plans to grow these industries in Richmond, including by identifying promising companies and investors—including workers' own pension funds—while simultaneously empowering and building the capacity of workers and community members to engage in planning processes to catalyze a diverse, climate-resilient economy in Richmond.

Getting Ready will be designed and driven by oil workers concerned about workplace safety and air quality, about economic prospects for those who may be displaced, and about the future economy of Richmond. The GROW project will be led by a "Transition Safety Steward" – a local union member deputized to lead training, forge community partnerships, participate in coordinating the design of a local economic diversification development plan, and spearhead intensified efforts to protect workers and residents from toxic exposures. A just transition is one in which local workers and community members have a say in the future economy and economic resilience of their region; by bringing together a unique partnership of refinery workers, public sector workers and environmental justice community members, the GRADE project aims to become a model for how directly impacted communities can envision and kickstart climate-resilient economic diversification in oil and gas dependent communities. If successful, *Getting Ready* will position the city of Richmond to improve public health and worker safety outcomes and to build a local roadmap and infrastructure for a healthy, climate-resilient economic diversification in the face of the inevitable transition away from fossil fuels.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

The focus community for this project builds outward from inside the gates of the Chevron Oil Refinery work site to its fenceline neighbors and then to the broader city of Richmond. Our proposal's community focus is based on a simple concept: "What gets in gets out" – a phrase coined by Tony Mazzocchi, the late union labor lead who pioneered the nation's first labor-community alliances to prevent toxic exposures and advance worker and community right-to-know laws, to describe the nonexistent border between pollution inside and outside work sites like Chevron.

The target populations for our proposed project are 1) 540 members of Steelworkers Local 5 at Chevron, including 438 refinery operators, 62 mechanics, 32 laboratory technicians and eight other employees; 2) the Richmond-based community residents, including frontline environmental justice community members (including from ACCE's Richmond chapter) whose health is impacted by the refinery and who we will work with to envision future economic resilience for Richmond, and 3) public sector workers (including from SEIU1021) whose provision of critical social services relies on a strong local tax base.

The projects in the application will engage city workers who work and provide critical public services in all neighborhoods in the City Richmond, including SEIU 1021's 488 majority BIPOC members who work across nearly all city departments, including staff in maintenance and construction, code enforcement, library and recreation centers, administration, public works and sanitation. The project will also engage staff and the 800 mostly low-income, BIPOC members of the Richmond chapter of Alliance of Californians for Community Empowerment (ACCE), many who live near the Chevron Refinery in low-income, renter-majority neighborhoods such as Iron Triangle, Coronado, Santa Fe, and Belding Woods. ACCE's Richmond chapter members are 55% Latino, 40% Black, 2% Asian and 3% white; many of the members who lived in Richmond when the Chevron Refinery exploded in 2012 had to go to the hospital; all members are regularly impacted by air pollution from the refinery and express concern about flaring and air quality.

Our multi-stakeholder approach is also based on a simple concept: "We can't do it alone" – a phrase that embodies the mutual benefit to labor and community stakeholders in Richmond of working together to prevent toxic exposures and ensure that a future without oil refining is fair and just for workers and residents.

PARTNERSHIP STRUCTURE (20 points)

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

Lead Applicant. The mission of The Labor Institute (LI) is to advance economic justice, environmental progress, and safe jobs through worker and community education, research, and partnership-building. Founded in 1975, LI is a national nonprofit 501 (c) 3 organization that develops, tests, evaluates, and shares education and policy programs for unions, environmental organizations, community groups, and immigrant worker centers on workplace health and safety, the environment, working class politics, economics, and movement-building. The idea for creating this Institute came from Tony Mazzocchi (1926-2002), the visionary labor and environmental leader who was a longtime official with the Oil, Chemical and Atomic Workers (OCAW) union, now part of the United Steelworkers (USW). Mazzocchi is widely credited with founding the modern occupational health and safety movement and pioneering some of the first labor-environment alliances.

LI makes every effort to ensure that our work is cross-cutting and supports base-building, by first acknowledging the interdependence and interconnectedness of the problems and challenges we all face, and second, by focusing our strategies on shared solutions that, whenever and wherever possible, forge and fortify alliances and partnerships.

LI is a longtime collaborator with the United Steelworkers International, with USW District 12 (covering the 12 western states including California), with oil refinery locals in California through the California Economic Development Department-funded USW California Oil Workers'

Readiness Program (CORP), and with USW Local 5 in Contra Costa County, including members at the Chevron Richmond Refinery. Over the past 20 years, LI has conducted trainings hosted by Local 5 on state climate policy, on Process Safety Management and impacts on workers and communities, and on economic inequality and climate change for hybrid audiences of environmental, environmental justice and labor participants.

Co-Applicant 1: United Steelworkers Local 5 is the Richmond anchor for our proposed project and the programmatic lead. Local 5 is a 900-member local union, based in Martinez, CA and representing workers throughout Contra Costa County, including 540 refinery workers at Chevron in Richmond, and workers at Marathon and PBF in Martinez, as well as Chevron Marketing in Richmond, Linde Gas & Electric, Safety Kleen, and Shell Catalyst. Local 5 is part of the larger USW, described in the preceding paragraph. USW Local 5 is also part of the community – Chevron employees often work 12-hour shifts, spend money in the local economy, and include dozens of members who live within the Richmond city limits and many more in nearby communities.

Co-Applicant 2: Jobs with Justice San Francisco (JWJSF) is a long term, multi-racial coalition of more than 30 labor unions and community groups supporting workers rights. With a core mission of bridging between labor and community organizations to support worker and community needs, JWJSF is uniquely positioned to act as a critical liaison between environmental justice, and labor organizations. JWJSF established a labor/climate justice program in 2019; it founded and coordinates California Labor for Climate Jobs (CLCJ), a statewide coalition of 17 unions working to advance a worker- and community- led transition to a just and climate-safe economy. Over the past seven years, JWJSF has been coordinating deep dialogue between members of the CLCJ coalition—including USW Local 5 (co-applicant) and SEIU 1021 (partner in Project 3: GRADE)—and environmental justice partners statewide as well as in Contra Costa, including about how to diversify the economies of the top oil and gas dependent counties across the state. In 2022, JWJSF worked with USW to win funding for the country's first Displaced Oil and Gas Worker Fund pilot project (which Project 2, WRFI, seeks to expand), and in 2023 won funding for UC Merced Labor Center to study the tax revenue generated by the oil and gas industry (research which included Asian Pacific Environmental Network, USW and SEIU 1021 as advisors). JWJSF collaborates with ACCE (partner in project 3) statewide to create plans for pension funds to invest in climate-resilient diversification, especially in oil and gas dependent communities.

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

The Lead Applicant LI will manage and oversee all administration, financial and reporting requirements of our proposed program and related three projects, and convene Lead and Co-Applicants to coordinate across projects and establish infrastructure needed to effectively implement the projects.

Lead Applicant LI and both Co-Applicants (USW and JWJSF) have established relationships and long histories of collaboration that provide a strong foundation for successful program

implementation. LI will propose systems for administration, reporting and finances, and Lead and Co-Applicants will finalize and decide on those systems together to ensure they work for each organization.

Lead and Co-Applicants will meet to discuss collaboration across projects, though we anticipate the need for joint programmatic decision-making across the projects to be minimal. Lead organizations for each project will be responsible for ensuring successful project implementation, and will make programmatic decisions in collaboration with each project's participants.

Project 1 will be managed by Co-Applicant USW Local 5, with assistance from LI. Throughout the term of the grant, USW Local 5 will involve and/or represent its 540 members at the Chevron Richmond Refinery. As an activity within this project, LI will lead the Just Transition training for Chevron workers, with assistance from USW Local 5.

Projects 2 (WRFI) and 3 (GRADE) will be led by Co-Applicant JWJSF in partnership with USW Local 5 and other community, labor, and academic partners. A key feature of Project 3 (GRADE) is a labor/community table to identify specific industries for climate-resilient economic diversification in Richmond; participating organizations in the table — including SEIU 1021 representing city workers in Richmond and ACCE representing fenceline communities in Richmond — will collaboratively decide on priority industries and create a joint plan to identify investors. JWJSF will convene this table, where Richmond-based organizations will be decision-makers.

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to:*
    - *Coordinate overall community engagement activities.*
    - *Track and report on indicators to assess progress towards measurable outcomes.*
    - *Collect and process reporting, reimbursement and invoicing requirements.*

To coordinate and continuously assess overall programmatic activities across all three projects, LI, USW Local 5 and JWJSF will meet monthly.

To track and report on project progress toward measurable outcomes, we will
a) set up a shared grant tracking web portal; and
b) craft agreements between the Lead Applicant and the Co-Applicants that will require monthly invoices accompanied by summary program reports that explicitly address planned program outcomes, milestones and timelines. For meetings and training activities, sign in sheets and any written post-activity evaluations will also be uploaded into the TMC grant tracker prior to payment of invoices.

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.*

LI, the Lead Applicant, is a 501c3 with a Board of Directors made up of labor, community and environmental leaders. For this proposal, we have received preliminary indications of enthusiastic support. Should this application be approved, LI will convene a special board meeting to make a final decision that we anticipate will make support for the proposed program official.

Co-Applicant USW Local 5 is led by an Executive Board elected by the membership. The local also has a Chevron Unit leadership team which is also elected. Both bodies have approved this application.

Co-Applicant JWJSF, as a 501c3, has an Executive Board that meets monthly and is made up of labor unions and community-based organizations. At least one week in advance of a monthly meeting, staff or Executive Board members can add items to the agenda, and board members can vote to approve items during the meeting. Staff will add approval for this application to the agenda for a decision at an upcoming meeting. SEIU 1021, a partner in Project 3 (*Getting Ready, Advancing a Diverse Economy, or GRADE)* of this application, is a leader in the JWJSF coalition and serves on the JWJSF Executive Board.

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

For management of the administration and finances of this grant, including all reporting, LI proposes a 15 percent indirect amount based on the direct costs of each project, which will cover the costs of our financial manager's time, and the additional oversight of our Co-Executive Directors.

For LI's programmatic role, including leadership of Just Transition training for Chevron workers, participation in the overall grant leadership team meetings, and assistance in other aspects of Project No. 1 Getting Ready - Oil Workers (GROW), we anticipate .2 FTE ($98, 958 over three years) for LI Co-Executive Director [redacted] and 15 days ($11,652) for LI's Project Director [redacted], the organization's Small Group Activity Method curriculum and training lead.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

The Labor Institute (LI) has for more than four decades successfully planned, implemented and operated training, education, research and policy programs funded by state and federal government grants, by private foundation grants and by individual contributions. These programs have included:

- More than 30 grants of up to $900,000 annually from National Institute of Environmental Health Sciences (NIEHS), in partnership with the United Steelworkers Tony Mazzocchi Center for Health, Safety and Environmental Education, from 1987 to the current five-year grant awarded in 2025 (including program audits);
- More than 10 US Department of Labor Occupational Safety and Health (OSHA) Susan Harwood training grants for unions including Utility Workers Union of America, Graphic Communications Conference/International Brotherhood of Teamsters; and Oil Chemical and Atomic Workers Union (now part of the United Steelworkers);
- More than 30 New York State Department of Labor Hazard Abatement Board grants of up to $225,000 annually from 1986-2005 and from 2014-present – these grants involve managing multiple subcontracts to immigrant worker centers;
- A 2021-2022 grant from the New York State Department of Labor's Excluded Workers Fund, in partnership with NDLON;
- *Current and recent private foundation grants including Garfield Foundation, New York Community Trust, Energy Foundation, MertzGilmore Foundation, 11th Hour Fund of the Schmidt Family Foundation, Just Transition Fund and Rockefeller Family Fund.
- A 2025 contract with Northwell Health to train workers in the fabricated stone industry who are exposed to silica dust – and connect them to diagnostic and, if needed, treatment services through occupational health clinics.

LI also acted as an administrative, fiscal management and educational program partner for the national BlueGreen Alliance during its early years from 2005-2009, managing a budget of $1 million in private foundation revenue before BGA was ready to launch an independent nonprofit. (LI continued as a program partner through 2015.)

In addition, LI often assists larger base-building organizations with the development of grant programs and the writing of grant proposals. A recent example is LI's partnership with the Steelworkers Charitable and Educational Organization (SCEO) and its successful 2024 application that received $9.8 million from the CA Economic Development Department's Dislocated Oil and Gas Workers Fund (DOGWF).

Manuela Goitein, LI's Finance Manager, was hired onto the staff in January 2025 after consulting with the organization since in 2017. She will manage financial reports and vouchers, closing reports and audits. She has overseen administration of the 2019-2020, 2020-2021, 2021-2022, 2022-2023, 2023-2024, 2024-2025 and 2025-2026 NY Hazard Abatement Board grants and is currently overseeing administration of the 2025-2026 program. She also has administered the past seven years of grants from the NIEHS; as well as private foundation grants. In addition to day-to-day operations, Ms. Goitein oversees the independent annual audit of the organization's finances and is Benefits Administrator. She reports to the Board of Directors, to the independent accounting firm of Rogoff & Company, PC and to the Co-Executive Directors. Ms. Goitein was trained by former LI Finance Manager Sally Silvers, who now serves as the organization's board treasurer.

1	Getting Ready - GROWS	Getting Ready - Oil Workers for Safety (GROWS) will educe air pollution from the Chevron Richmond Refinery and prepare the workforce for transition by educating and activating oil workers to identify potential pollution-mitigation and accidental release-prevention opportunities, by training workers about Just Transition policies in the state, and by collaborating with community partners to identify hazard reduction opportunities, challenges and strategies.	The GROWS project aligns with both core strategies of the Local Community Benefit Fund: First, our project will conduct rank-and-file worker training and monitoring efforts inside the Chevron Richmond refinery to identify, mitigate and reduce air pollution – both ongoing emissions and acute releases. Second, our project will help drive a just transition by ensuring that during periods prior to a Chevron closure announcement and during the legally-mandated one-year period between an announced closure and a shut-down that operations run as safely as possible.	United Steelworkrs Local 5	56.2%	$ 948,873	$ 8,000.00	0.8%	$ 1,091,204	$ 477,661	$ 613,543	$ -
2	Getting Ready - WRFI	The Richmond-based Worker Resilience and Futures Initiative (WRFI) will develop a worker-informed framework to support refinery workers and impacted communities through the long-term transition away from fossil fuels. The project will engage refinery workers, labor unions, workforce development institutions, community colleges, environmental justice organizations, and policy partners to assess workforce transition needs, identify hiring pathways into family-sustaining industries, and design recommendations for worker supports, credentialing pathways, and economic resilience strategies. Through direct participation by refinery workers engaged in the Getting Ready: Oil Workers for Safety (GROWS) program, the project will strengthen labor-community collaboration while building locally grounded transition infrastructure aligned with broader regional and statewide worker-led transition efforts.	The Richmond-based Worker Resilience & Futures Initiative (WRFI) directly supports the Local Community Benefits Fund strategy to build economic resilience for a just transition by developing a worker-informed framework to support refinery workers and impacted communities through the long-term transition away from fossil fuels. The project recognizes that refinery workers and refinery-dependent communities face significant economic uncertainty as California advances climate goals and refinery operations evolve over time. Through workforce skills assessment, hiring pathway analysis, and training needs research, the project will identify practical pathways and concrete strategies to support worker transition into industries capable of providing family-sustaining wages, benefits, and long-term career stability comparable to refinery employment.	Jobs with Justice San Francisco	87.2%	$ 664,050	$ 500,000.00	75.3%	$ 778,657	$ 99,607		$ 679,050
3	Getting Ready - GRADE	The Getting Ready - Advancing a Diverse Economy (GRADE) project will convene local labor and community-based organizations to identify specific industries/sectors for climate-resilient economic growth and diversification in Richmond that can create good jobs accessible to former oil and gas workers and historically excluded community members, support robust public services by replacing lost tax revenue from refineries oer the long term, and are safe and healthy for workers and community members. While empowering and building the capacity of workers and community members to meaningfully participate in economic development planning, the GRADE partners will advance plans to grow priority industries in Richmond by engaging broader economic development planning processes and identifying promising companies and investors—including workers' own pension funds—to seed these new industries.	A just transition is one in which local workers and community members have a say in the future economy and economic resilience of their region. This project will equip and empower local workers and community members to engage in broader economic development planning processes, while creating and advancing their own plan that identifies future industries to provide a strong, stable, climate-resilient economy, support critical public services by contributing to the local tax base, and create good jobs in Richmond as the local economy transitions away from being dependent on oil and gas. By bringing together a unique partnership of refinery workers, public sector workers and environmental justice community members, the GRADE project aims to become a model for how directly impacted communities can envision and kickstart climate-resilient economic diversification in oil and gas dependent communities.	Jobs with Justice San Francisco	88.0%	$ 1,346,000	$ 225,000.00	16.7%	$ 1,677,900	$ 201,900		$ 1,476,000

Bay REPAIR, Local Community Benefits Fund – Round 1
Project Narrative

Project 1

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Getting Ready
Lead Applicant Name	The Labor Institute
Project Location	Richmond
Overall Funding Request	$3,547,672
Grant Term Request	Three Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Getting Ready - Oil Workers (GROW)
Project Lead	United Steelworkers Local 5
Project Location	Richmond
Project Funding Request	$1,091,204

STRATEGY ALIGNMENT (10 points)

1. Provide a short summary (1-2 paragraphs) that outlines this project.

Getting Ready - Oil Workers (GROW) will be developed by and for oil workers themselves and will identify and deploy one member of United Steelworkers Local 5 who works at the Chevron Richmond oil refinery to serve as a full-time "Transition Safety Steward" (TSS). Overall, the GROW project is based on two fundamental concepts: First, that workers inside refineries are uniquely situated to safeguard both themselves and neighboring communities; and second, that keeping refineries as safe as possible today is a critical component of a fair and just transition for tomorrow – when the Richmond economy is not dominated by fossil fuel production.

The Local 5 TSS will be deputized by the union to:

1. Coordinate development of a first-of-its-kind, California-specific Process Safety Management (PSM) training in collaboration with the Western Region Region Universities training consortium, led by the Labor Occupational Safety Program at UCLA and including the Labor Occupational Health Project at UC Berkeley (LOHP); USW Tony Mazzocchi Center (TMC) for Health, Safety and Environmental Education, and The Labor Institute (LI);
2. Set up and coordinate an intensified health, safety, and environmental training program for Local 5's 540 members at the Chevron Richmond Refinery, in partnership with the TMC and LI, that will include PSM training, a variety of other classes addressing hazard identification and prevention, and training on how to prepare for fair and just worker and community transitions;
3. Work closely with the Chevron health and safety committee and with union members inside the facility to spearhead shop-floor efforts to identify and mitigate toxic emissions and protect workers and residents from toxic exposures, including watchdogging

Chevron compliance with workplace (Cal/OSHA) and environmental (CAL/EPA, BAAQMD) regulations at Chevron; and
4. Forge and sustain community partnerships to facilitate continuous communication about air toxics and prevention strategies and potential joint training opportunities.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

The GROW project aligns with both core strategies of the Local Community Benefit Fund:

First, our project will hire a full time Transition Safety Steward to lead rank-and-file training and monitoring efforts inside the Chevron Richmond refinery to identify, mitigate and *reduce air pollution* – both ongoing emissions and acute releases from incidents such as fires and explosions. Safety activists inside the refinery will lead efforts to educate and activate their co-workers and act as guardians of both worker and community health.

Second, our project will help drive a *just transition* by ensuring that during periods prior to a Chevron closure announcement and during the legally-mandated one-year period between an announced closure and an actual shut-down that operations run as safely as possible and are not characterized by disinvesting in maintenance and repairs, unsafe staffing and other practices that endanger workers and nearby residents. Closure of the Chevron Richmond refinery is not an abstract possibility: Earlier this year, Chevron President Andy Walz explicitly said the company would close California refineries in Richmond and El Segundo if proposed changes to the state's cap-and-invest regulations are not approved and if the state maintains its tax on refineries. (Source: "Chevron Threatens to Leave California Due to Taxes, Emission Rules, Other Regulations — Warning the State is Playing a Dangerous Game," MSN Moneywise, April 26, 2026.)

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The GROW project will be based at the Chevron Richmond Refinery, which is situated on 2,900 acres in the City of Richmond on the San Francisco Bay. The refinery address is 841 Chevron Way, Richmond, CA 94801 and the geographic coordinates are 37°56′32″N 122°23′43″W. GROW will also address air quality in neighborhoods proximate to Chevron Richmond Refinery, including (but not limited to) North Richmond, Point Richmond and Atchison Village.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

We define “community” in this project as both a) Chevron workers inside the refinery and b) fenceline neighbors and other Richmond residents potentially exposed to facility air emissions.

Chevron workers represented by USW Local 5 are the primary community for the GROW project. They include 432 operators, 62 mechanics, 32 lab technicians and eight other employees. They were engaged in the design of this project through the elected leadership committee at the Chevron refinery – a group of XX rank and file members – including refinery operators, mechanics and lab technicians – who met with Local 5 leadership and with project partner Jobs with Justice San Francisco and The Labor Institute to discuss the project outline, objectives, deliverables and budget. Like other internal structures within USW Local 5, the committee makes decisions democratically – and in the case of this project expressed unanimous support. If the proposed project is funded, the committee – in collaboration with the Local 5 Executive Board – will continue to be part of the decision-making leadership to which the full-time Transition Safety Steward will report. The No. 1 need identified was improved hazard prevention to protect workers and residents, including ongoing air emissions and acute toxic events, such as fires, explosions and leaks. A second need was to educate fellow workers about the key components of a fair and just transition for dislocated oil workers.

Fenceline neighbors and other Richmond residents living near the refinery were involved in the preparation of this proposal through a series of meetings with community and Environmental Justice groups, including Asian Pacific Environmental Network, with offices and staff in Richmond; the Richmond chapter of Alliance of Californians for Community Empowerment (ACCE), many of whom live near the Chevron Refinery; as well as public sector unions that are part of the Contra Costa Labor Council, AFL-CIO, such as Service Employees International Union Local 1021, which represents most of the municipal employees of the City of Richmond.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The GROW project will address needs identified by Chevron workers and residents – our focus community as described above – by:

1. Intensifying inside-the-refinery health and safety training to better equip workers to identify, mitigate and communicate about hazards and potential hazards to protect both workers and community members. This effort will focus in year one on development, testing and refinement of California-specific Process Safety Management (PSM) training. The PSM regulation was designed to prevent catastrophic incidents—like toxic leaks, fires, or explosions—involving highly hazardous chemicals. It protects workers and communities by identifying, evaluating, and controlling process hazards through engineering, maintenance, and operational practices. Other training will cover Risk Management Plan regulations, hazard mapping of the workplace to identify hazards needing to be addressed; Just Transition history and current policy in California; Work

Area Inspections; Incident Investigation; Near-Miss Prevention; and other topics to be determined during the grant period.
2. Monitoring refinery operations through more "walk through" inspections and auditing regulatory compliance; and
3. Meeting twice per year – and more frequently if needed – with community partners to engage in a "Continuous Assessment" of needs and corrective actions to be taken.

The challenges of this work are immense. Profound anxiety about job dislocation (also known as "job fear") for oil workers cannot be overstated. Oil workers have witnessed the economic and human costs when the steel, coal, aluminum and auto industries contracted. This fear is exacerbated when they are told they will have work in a clean energy future and what they see are "low-road," low-paying jobs. It is further intensified for Local 5 members whose fear of job loss is now hitting home: Nearby Valero Energy, a nonunion oil company, has announced it will close refineries in Benecia (400 workers) and Wilmington (390 workers in Southern California) by the end of 2026.

At the same time, community members remain deeply concerned about the future of the Richmond economy as it contends with ongoing public health hazads from Chevron operations – and also as it prepares for Chevron to cease operating. That inevitability does not guarantee that employment prospects will improve for a city with 13.5 percent poverty rate compared to nine percent for the broader Bay Area.

Together, the concerns of workers and community members can sometimes create jobs-versus-environment tensions that the partners in this proposal will strive to overcome.

COMMUNITY ENGAGEMENT (10 points)

6. Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.

As stated in Question No. 4, above, we define "community" in this project as both a) Chevron workers inside the refinery and b) fenceline neighbors and other Richmond residents potentially exposed to facility air emissions.

For Chevron workers, project assessment and feedback will be provided in the following ways:

1. Through 12 monthly meetings in each of the three grant years (36 total). Meetings will include the Transition Safety Steward, Chevron Unit Leadership and safety committee members to review monitoring activities, discuss efficacy of hazard reduction interventions and plan mitigation strategies.
2. Through worker training, all of which will use the Small Group Activity Method (SGAM), a non-lecture pedagogy in which participants work together to solve real-life problems, building upon their own skills and experiences. A key feature of trainings is the "report back" from small group problem-solving discussion – which produces real-life, real-time

problems that either have been addressed or need to be addressed. For this project, we will collaborate with California worker training academic partners and with TMC to deliver and evaluate SGAM classes addressing PSM, RMP, Hazard Mapping, Work Area Inspections, Incident Investigation, Near-Miss Prevention, Just Transition and other topics to be determined by project leaders.

3. Through biannual labor-community meetings about hazard identification; efforts to prevent mitigate hazards; and any joint initiatives to address air quality, e.g. public meetings following hazardous releases per the Risk Management Plan (RMP) rule. Meetings will include key Local 5 leaders, community partners and other allies among public sector unions in Richmond, including SEIU Local 1021.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Overall Project Vision

Getting Ready - Oil Workers (GROW) will:

- Scale internal education of leaders and rank-and-file members of United Steelworkers Local 5 who work at the Chevron Richmond Refinery to:
    - Position and activate training participants to reduce toxic air emissions and exposures while the plant is still running and also during the minimum one-year period between a closure announcement and actual shutdown; and
    - Provide education about the history of worker Just Transition policies, from origins with the Oil, Chemical and Atomic Workers union (now merged into the United Steelworkers) to the current state of California's pilot Dislocated Oil and Gas Worker Fund.
- Forge, deepen and sustain community partnerships to facilitate continuous communication about actual and potential air toxics hazards and prevention strategies – and to explore and implement joint training opportunities.

Measurable Outcome No. 1

Increase USW Local 5 capacity to educate members working at Chevron Richmond Refinery about how to identify and reduce toxic air emissions.

1. We will identify, hire and train a Transition Safety Steward (TSS) out of USW Local 5 to lead internal and external education and safety monitoring activities. The TSS will be deputized by the union to:

A. Champion Health and Safety Improvement efforts throughout the facility;
B. Assist in making work processes safer;
C. Assist in bringing health and safety concerns of employees to management;
D. Audit and monitor for compliance with OSH requirements and regulations;

E. Assist inside-the-refinery workers in conducting site safety audits (“Walk-throughs”) to pinpoint hazards to workers and communities;
F. Promote safety awareness and coordinate/conduct safety training;
G. Monitor contractor safety compliance;
H. Be on call to provide technical assistance on safety concerns in the fiorm of research and investigation; and
I. Monitor impacts on workers and community of corrective actions.

In years two and three, we will conduct comprehensive evaluation of TSS performance.

2. Coordinate development, testing and evaluation of a first-of-its-kind, California-specific Process Safety Management (PSM) curriculum and training.

In year one, we will complete a full, one-week Process Safety Management Training curriculum specific to California. Key activities will include:

A. Formation of curriculum team including Labor Occupational Health Project at UC Berkeley (LOHP), USW Tony Mazzocchi Center (TMC) for Health, Safety and Environmental Education, and The Labor Institute (LI); as well as Industrial Safety advisor Rick Engler, a former Obama appointee to the US Chemical Safety Board.
B. Production of draft curriculum
C. Delivery of PSM training to 25 members in year one as a test to be evaluated and inform curriculum refinement;
D. Refined Curriculum completion.

In year two, we will deliver XX PSM classes to XXX members;

In year three, we will deliver XX PSM classes to XXX members.

3. Set up and coordinate an intensified health, safety, and environmental training program for Local 5’s 540 members at the Chevron Richmond Refinery, in partnership with the TMC and LI, that will include a variety of classes addressing hazard identification and prevention, and training on how to prepare for fair and just worker and community transitions;
A. Delivery of XX classes for XXX members per year in each of three years on Risk Management Plan program, including requirement for public meetings in the wake of serious toxic events;
B. Delivery of XX classes for XXX members per year in each of three years on Hazard Mapping, whereby members map their specific work areas to identify and target toxic air emissions for mitigation; and Delivery of six, one-day virtual Just Transition classes (two per year) for 300 members of USW Local 5 who work at Chevron Richmond Refinery.

We view safety education as necessary for workers to know what hazartds to look for, what questions to ask (of each other, of management, of refinery neighbors), and what steps might be taken to mitigate hazards.

Measurable Outcome No. 2

Activate local union members to monitor, track, prevent and reduce toxic air emissions at the Chevron Richmond Refinery.

1. Work with the Chevron health and safety committee and with union members inside the facility to spearhead shop-floor efforts to identify and mitigate toxic emissions and protect workers and residents from toxic exposures, including watchdogging Chevron compliance with workplace (Cal/OSHA) and environmental (CAL/EPA, BAAQMD) regulations at Chevron.

A. 12 monthly meetings in each of the three grant years (36 total) including the Transition Safety Steward, Chevron Unit Leadership and safety committee members to review monitoring activities, discuss efficacy of hazard reduction interventions and plan mitigation strategies.

We view shop-floor action and tracking regulatory compliance as among the most important ways that workers can help reduce toxic air emissions inside and outside the refinery.

Measurable Outcome No. 3

Raise awareness among Chevron Richmond Refinery workers about the state of the oil industry in California and about Just Transition Policy.

We will *prepare oil workers at the Chevron Richmond Refinery for economic transition with the launch and implementation of* a peer-to-peer training program. The eight-hour Just Transition Training Program will reach 200 Chevron Refinery workers over the three-year grant period – 50 workers in year one and 75 workers in both year two and three.

Training topics will include a) the history of labor and environmental collaboration, including partnerships on occupational safety and health; b) the science and economics of climate change; c) worker-friendly transition models and "unjust" transitions in the US and internationally; and d) California's current state-funded Dislocated Oil and Gas Worker Program. The training will use small group activities – described in more detail in our answer to the previous question.

Participants will also take part in research activities described in Project 2 of this proposal in two important ways: First, during small group training, workers will discuss and critique worker transition policies and report back their high-priority needs and observations to the larger group, which will be recorded and shared with researchers. Second, a group of 20 participants will be selected for longer-form interviews conducted by researchers. Using these two methods, trainings will support research by providing evidence of what is working, not working and needed by current refinery workers.

We view Just Transition training for Chevron workers as a necessary precursor activity to collaboration with community and environmental partners and for policy development activities described in Projects Two (WRFI) and Three (GRADE) of this proposal.

Measurable Outcome No. 4

Forge, deepen and sustain a Richmond labor-community collaboration to jointly assess air pollution hazards, reduction strategies and progress toward cleaner air.

We will hold two meetings per year for each of the three grant years (six total) to convene labor-community dialogue about hazard identification; efforts to prevent mitigate hazards; and any joint initiatives to address air quality, e.g. public meetings following hazardous releases per the Risk Management Plan (RMP) rule.

These meetings will strengthen alliances among labor, community, academic and training partners to a) reduce air pollution in Richmond and toxic exposures at Chevron to improve worker and public health outcomes; b) improve efforts to reduce emissions from fossil fuels and meet the state's carbon reduction goals; and c) co-design a collaborative strategy to make Richmond and surrounding communities safer and healthier while the refinery still operates and during the mandatory one-year period between announced closure and shutdown.

We believe any truly equitable transition must address ongoing toxic exposures faced by both vulnerable communities and at-risk workers.

Applicant Roles

- USW Local 5, the Getting Ready Co-Applicant, will lead the GROW project, identifying a full-time Chevron worker or retiree to be hired as the Transition Safety Steward and project coordinator and coordinating educational programming for members and community engagement activities;
- The Labor Institute, the Lead Applicant, will assist USW Local 5 in training development and coordination and in community outreach activities – and will lead development, conducting and evaluating Just Transition training.

Partner Roles

- Partners on the curriculum development and training team will be:

  ○ The USW Tony Mazzocchi Center for Health Safety and Environmental Education, supported by funding from the National Institute for Environmental Health Science (NIEHS) Worker Training Program (WTP);

  ○ the Western Univesity Consortium The NIEHS-funded Western Region University Consortium, led by the University of California, Los Angeles Labor Occupational Safety and Health Program (LOSH) and including the Labor Occupational Health Program (LOHP at UC Berkeley;

- National Industrial Safety Expert Rick Engler, former member of the US Chemical Safety Board;
- Oil worker union leader Norman Rogers, Second Vice-President of USW Local 675 in Los Angeles, which represents workers at the Chevron El Segundo Refinery, who will offer services pro bono.

- Community Partners will be finalized if grant funding is secured. The project budget includes money to pay for participation in biannual labor-community meeting for up to four partner organizations.

8. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

ECOSYSTEM ALIGNMENT (10 points)

10. Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).

The project is aligned with the goals of California's Community Air Protection Program (AB 617) and in Richmond, a selected CAP community engaged in a CARB-supported Community Air Monitoring Plan and a Community Emissions Reduction Program. Our project is unique in that it broadens the definition of community to include inside-the-Chevron-refinery workers who will be directly in discussions with community partners about air pollution reduction, refinery safety, and and transition planning. The project's hybrid residents-and-workers approach, emphasizing a shared goal of reducing harmful exposures, reflects aims encouraged under AB 617.

CAPACITY (10 points)

11. Describe the Project Lead's experience managing and implementing projects of similar scope and size.

12. Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.

The Project Lead for GROW is Co-Applicant United Steelworkers Local 5. The Transition Safety Steward (TSS) will be hired by USW Local 5 President, in consultation with the Chevron Unit leadership team and based on a job description they jointly develop. The TSS will report

directly to the President and will work remotely, attending meetings as needed at the union hall in Martinez. The TSS will be paid a FTE salary and benefits totalling $682,548 over 33 months.

Weekly calls will be hosted by the TSS with the Local 5 President, Chevron Unit leaders, project partners, and staff of The Labor Institute to report on activities, raise any challenges and opportunities, and continually assess progress toward project objectives.

The LI Co-Executive Director [redacted] will each receive 20 percent FTE annually for program assistance for a total of $32,335 and the Curriculum Director [redacted] will contribute 15 days for a total of $11,652. [redacted] is a national expert on the subject of "Just Transition" for workers and speaks frequently on this topic. He currently leads the LI's work with the United Steelworkers on member education about climate change and environmental policy, working closely with USW District 12, which covers 11 western states in the US. In 2006, [redacted] helped the USW and Sierra Club found the BlueGreen Alliance, a national labor-environment collaboration that now includes nine of the country's largest unions and five of the largest environmental organizations. From 2006-2014 [redacted] helped build the organization, serving as BGA's Vice President of Programs. [redacted] is a former educational program leader for the Communications Workers of America. She has developed or contributed to dozens of workshop curriculums for contract mobilization, internal organizing, legislative work, and deeper political education – and trained thousands of worker-trainers and community partners in the small group method.

Other training and curriculum development collaborators – USW TMC, LOHP – will donate their time with funds from NIEHS.

Norman Rogers will participate as a liaison and advisor from Local 675 in Los Angeles with separate funding.

Fiscal management will be the responsibility of LI, which will receive 15 percent of direct project expenses.

The LI will disburse training stipends of $500 per day to workers participating in training and will develop and execute a Memorandum of Agreement with project consultant [redacted] at a rate of $1,500 per day for five days.

The LI will also disburse meeting-participation stipends of $500 per day to community partners and will develop related Memoranda of Agreement.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

· Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
· If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
· Indicate "N/A" if the question is not applicable to the project

13. Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.

Not applicable.

14. Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.

Not applicable.

15. Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.

Not applicable.

16. Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.

Not applicable.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

There are two potential barriers to the success of this project: 1) Employer resistance to mitigating air pollution reduction steps identified by workers; and 2) the potential for labor-community cooperation to break down or stall.

To overcome employer resistance, we will first use open communication lines with Chevron via the labor-management safety committee to communicate hazards that have been identified and to propose reduction or mitigation strategies. If that fails, we will use

more formal processes, including but not limited to the filing of grievances per Local 5's existing contractual rights, and alerting regulatory enforcement agencies.

To avert labor-community tensions, we will have bi-annual information-exchange meetings co-facilitated by one labor and one community partner. They will develop the agendas together, will co-chair the meetings and will be responsible for follow up. We will also lean heavily on the positive relationships and increasing collaboration developed in recent years between labor and community leaders. An example of collaborative work appeared on January 14, 2026, when Marie Choi, strategy director at the Asian Pacific Environmental Network (APEN), and Nick Plurkowski, USW Local 5 President, co-authored "California shouldn't let oil companies rewrite refinery safety rules," commentary published in CalMatters. The co-authored piece called for defending the state's Process Safety Management (PSM) rules from attempted industry rollbacks. PSM provides crucial safeguards, they wrote, including "rigorous oversight of hazardous materials and processes, common-sense standards ensuring meaningful worker participation in safety processes and engineering reviews, and authority for workers to stop unsafe operations."

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Project Vision:	***Getting Ready – Oil Workers (GROW)***: Reduce air pollution from the Chevron Richmond Refinery and prepare the workforce for transition by educating and activating oil workers to identify potential pollution-mitigation and accidental release-prevention opportunities, by training workers about Just Transition policies in the state, and by collaborating with community partners to identify hazard reduction opportunities, challenges and strategies.

Measurable Outcome	Indicator(s)
1. Increase USW Local 5 capacity to educate members working at Chevron Richmond Refinery about how to identify and reduce toxic air emissions.	• Number of Chevron workers completing PSM training test in year one and finalized training in years two and three. (Target: 1 workshop reaching 20+ workers in year one and 12 workshops reaching workers in years two and three) • Number of workers completing additional safety courses addressing toxic air emissions. (Target: 10 workshops with 20 participants reaching 200 Chevron Workers)

	• Percentage of Chevron workers reporting increased understanding of the PSM regulations and other policies regulating air quality (Target: 80%)
2. Activate local union members to monitor, track, prevent and reduce toxic air emissions at the Chevron Richmond Refinery.	• Reduction in the number of accidental releases reported to regulatory agencies, e.g. California Accidental Release Prevention Program and the Contra Costa County Industrial Safety Ordinance. • Reduction in emissions of air pollutants as measured by the he Air District's Regulation 12, Rule 15, Refinery Emissions Tracking Rule. • Number of walk-through inspections conducted during project term.
3. Raise awareness among Chevron Richmond Refinery workers about the state of the oil industry in California and about Just Transition Policy.	• Number of workers completing Just Transition training program (Target: 200 over the grant term) • Participation by JT training participants in research activities described in Project Three of this proposal (Target: 20) • Feedback from small group workshop report-backs about how training changed participants' perceptions of Just Transition.
4. Forge, deepen and sustain a Richmond labor-community collaboration to jointly assess air pollution hazards, reduction strategies and progress toward cleaner air.	• Convening of two labor-community meetings per year (six total over the grant term) attended by at least four Chevron workers and four community members.

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Increase USW Local 5 capacity to educate members working at	A.Hire Project Director/Transition Safety Steward	1. Identify candidates and conduct interviews	USW Local 5		Q1, Yr 1
		2. Develop Employment Agreement	LI		Q 2, Yr 1
	B. Develop, Deliver and Evaluate Pilot RMP Training	1.Formation of RMP curriculum team and drafting of workbook that is	USW Local 5	SCEO, LOHP, LI. Safety	Q2-Q4, Yr 1

Chevron Richmond Refinery about how to identify and reduce toxic air emissions.		California specific, using Small Group Activity Method pedagogy		Expert Rick Engler	
		2.Recruit and enroll 25 workers and deliver pilot training	USW Local 5		Q3-Q4, Yr 1
		3. Provide stipends of $2,000 per participant for training completion to recognize time commitment.	LI	USW Local 5	Q30Q4, Yr 1
	C. Implement Intensified Safety Training Program	1. Deliver 40-hour RMP training and other safety courses including and Hazard Mapping, Walk Through Investigations.	USW Local 5	SCEO, LOHP	Q3, Yr 1 – end of grant term
		2.Conduct end-of-course evaluations to assess efficacy of training	USW Local 5	SCEO	Q3, Yr 1 – end of grant term
		3. Provide stipends of $2,000 per participant for RMP training completion and $500 per day for other training to recognize time commitment.	LI	USW Local 5	Q3, Yr 1 – end of grant term
2. Activate local union members to monitor, track, prevent and reduce toxic air emissions at the Chevron	A. Launch monthly meetings with USW Local 5 Chevron Unit Safety Committee	1.Schedule standing monthly meetings with USW Local 5 Chevron Unit Safety Committee	USW Local 5		Q2, Yr 1
		2. Identify experts to address group	USW Local 5	LI	Q2, Yr 1-End of Grant Term
		3. As needed, raise issues with management	USW Local 5		Q2, Yer 1 – End of Grant Term

Richmond Refinery.	B. Develop monitoring and tracking strategy plan	1.Draft ongoing plan for tracking Chevron's air quality performance and regulatory compliance	LI	USW Local 5	Q3, Yr 1
		2.Share plan for feedback at biannual labor-community meetings (see Measurable Outcome No. 4)	USW Local 5	Community partners	Q4, Yr 1, Q2 and 4, Yr 2, Q 2 and 3 Yr 3.
		3. As needed, raise issues with management	USW Local 5		Q2, Yer 1 – End of Grant Term

PROJECT 2

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Getting Ready
Lead Applicant Name	The Labor Institute
Project Location	Richmond
Overall Funding Request	$3,547,762
Grant Term Request	Three Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Getting Ready: Worker Resilience & Futures Initiative (WRFI)
Project Lead	JWJSF
Project Location	Richmond
Project Funding Request	$778,658

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Getting Ready is a worker- and community-led just transition initiative focused on improving public health, reducing pollution risks, and strengthening long-term economic resilience in Richmond and Contra Costa County. The project will engage members of United Steelworkers (USW) Local 5 who work at the Chevron Richmond refinery alongside labor, community, policy, and academic partners to develop practical strategies that address both the immediate and long-term impacts of refinery operations and industrial transition. By centering workers and frontline communities directly impacted by refinery pollution and economic uncertainty, the project advances collaborative solutions that improve refinery safety and pollution prevention while preparing workers and communities for the transition away from fossil fuels.

A major component of the project is the development of a Richmond-based Worker Resilience & Futures Initiative (WRFI) program framework informed directly by refinery workers through the GROW program which will be led by a Transition Safety Steward and additional project partners–including USW Local 5, Labor Institute, Jobs with Justice San Francisco, and academic partners. WRFI will conduct workforce skills assessment, support and training needs analysis, hiring pathway research, and credentialing research in partnership with local community colleges to identify pathways into high-quality industries capable of providing family-sustaining wages and benefits. The project will also convene labor unions, environmental justice organizations, and community stakeholders to support collaborative planning around economic diversification, workforce transition, and community resilience in refinery-impacted communities.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

The Richmond-based Worker Resilience & Futures Initiative (WRFI) directly supports the Local Community Benefits Fund strategy to build economic resilience for a just transition by developing a worker-informed framework to support refinery workers and impacted communities through the long-term transition away from fossil fuels. The project recognizes that refinery workers and refinery-dependent communities face significant economic uncertainty as California advances climate goals and refinery operations evolve over time. Through workforce skills assessment, hiring pathway analysis, and training needs research, the project will identify practical pathways and concrete strategies to support worker transition into industries capable of providing family-sustaining wages, benefits, and long-term career stability comparable to refinery employment.

The project will also research the development of refinery worker credentialing and skills certification pathways in partnership with local community colleges and workforce training institutions to help workers translate existing industrial skills into recognized qualifications for emerging industries. By combining worker participation, labor-market research, and regional workforce planning, WRFI will help establish locally grounded transition infrastructure that supports economic stability for workers, strengthens regional workforce resilience, and advances equitable economic transition planning in refinery-impacted communities.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Getting Ready is centered in Richmond, California and Contra Costa County, with a primary focus on communities directly impacted by operations at the Chevron Richmond refinery and the broader regional refinery industry. Core project activities will involve refinery workers employed at the Chevron Richmond refinery and community stakeholders located in Richmond and surrounding refinery-impacted communities.

Project activities will take place across multiple locations, including:

- Richmond, California, including neighborhoods adjacent to the Chevron refinery and other fence-line communities;
- United Steelworkers (USW) Local 5 meeting and training locations serving refinery workers in Richmond and Contra Costa County;
- community meeting and convening spaces operated by project partners and local organizations;
- local educational and workforce development institutions participating in workforce

transition and credentialing discussions.

The project's workforce transition and economic resilience components will primarily focus on refinery workers and communities connected to the Richmond refinery corridor and the broader Contra Costa refinery region, including Richmond, North Richmond, San Pablo, and surrounding communities impacted by refinery-related pollution, economic dependence on refinery employment, and public revenue vulnerability associated with industrial transition.

While the project is locally grounded in Richmond, project partners will also coordinate with relevant statewide refinery transition and workforce development initiatives, including California's Displaced Oil and Gas Worker Pilot Program (DOGWF) administered through the California Employment Development Department (EDD). This coordination will help ensure that locally developed workforce transition strategies, training recommendations, and worker support frameworks are informed by and contribute to broader statewide just transition planning efforts while remaining responsive to the specific needs of Richmond refinery workers and communities. Additionally, with the statewide DOGWF Pilot Program currently set to sunset in 2027, Get Ready will ensure that the Steelworkers' efforts to support impacted workers and plan for refinery worker transition in Richmond can continue at this most critical time when hundreds of Steelworkers across California are already experiencing job loss and more layoffs are anticipated in the coming years.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Getting Ready was developed through ongoing conversations among refinery workers, labor organizations, environmental justice advocates, workforce development partners, and policy organizations concerned about the long-term public health and economic impacts of refinery transition in Richmond. This project builds off of more than a decade of successful collaboration between the United Steelworkers and labor, environmental justice, community, academic and other partners, including the recent Contra Costa Refinery Transition Partnership, which completed detailed research and released a holistic set of just transition policy recommendations following the 2020 Marathon Martinez refinery layoffs, and prior to that, the successful multi-year effort to strengthen statewide refinery safety regulations following the 2012 Chevron Richmond fire. Getting Ready seeks to build off of these strong relationships and advance the concrete recommendations from this collaborative work, particularly as it relates to enabling successful refinery worker transition, and strengthening labor and community collaboration around refinery safety and just transition-focused economic development at the local level in Richmond and Contra Costa County.

A core principle of the project is that workers and frontline community members most directly impacted by refinery pollution and economic transition must play a central role in shaping

solutions. The project's Transition Steward model is specifically designed to create structured participation opportunities for refinery workers to contribute operational expertise, identify workplace and community concerns, and help guide project priorities, while the program's aim to collaborate with potential environmental justice and community partners such as ACCE and APEN is an essential component of refinery safety and economic development strategies. Project partners–including labor organizations, Jobs with Justice San Francisco, an academic research group with expertise in worker transition issues, such as the UC Berkeley Labor Center, and community stakeholders–will continue to engage residents, workers, and local organizations throughout implementation through:

- worker listening sessions and trainings;
- labor-community convenings;
- stakeholder meetings with environmental justice organizations and workforce partners;
- collaborative planning discussions related to workforce transition and economic resilience;
- ongoing outreach through participating community and labor organizations.

These engagement processes are intended to ensure that project activities remain responsive to evolving worker and community needs while strengthening long-term labor-community collaboration around refinery transition planning.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Getting Ready addresses interconnected environmental justice, public health, and economic transition challenges facing refinery workers and fence-line communities in Richmond and Contra Costa County. Residents in communities surrounding the Chevron Richmond refinery experience disproportionate exposure to industrial pollution and toxic emissions, while refinery workers face both occupational health risks and increasing economic uncertainty associated with long-term changes in the fossil fuel industry. At the same time, local governments and public sector workers face potential fiscal instability tied to dependence on refinery-related tax revenues.

The project addresses these challenges by developing worker- and community-informed strategies to improve refinery safety, reduce harmful pollution risks, strengthen workforce transition infrastructure, and support long-term economic resilience. Through the Transition Steward model, refinery workers will participate directly in identifying pollution reduction opportunities and accidental release prevention strategies while contributing to workforce transition planning and economic resilience discussions.

The Richmond-based Worker Resilience & Futures Initiative (WRFI) component will specifically address impacted worker needs related to workforce transition and economic insecurity by conducting workforce skills assessment, hiring pathway analysis, training needs research, and credentialing development in partnership with local workforce and educational institutions. This work will help identify practical pathways into industries capable of providing stable, family-sustaining employment opportunities for workers impacted by refinery transition. The project will produce a comprehensive and locally based workforce transition program framework and plan.

The project will benefit refinery workers, frontline environmental justice communities, labor organizations, and local stakeholders concerned with the long-term health and economic stability of Richmond and surrounding communities. Measurable outcomes–including a worker-informed workforce transition program framework, a workforce assessment, hiring pathway identification, credentialing research and program design, and labor-community convenings–will demonstrate progress toward building local capacity for equitable economic transition, improving collaboration between labor and community stakeholders, and advancing long-term public health and economic resilience goals in Richmond.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Community engagement during implementation will be coordinated through regular worker and stakeholder meetings, labor-community convenings, and ongoing outreach conducted by project partners and the Transition Safety Steward. The project will provide regular updates to participating workers, community organizations, and stakeholders regarding implementation progress, workforce research findings, training and credentialing opportunities, and emerging economic transition recommendations.

Community members and stakeholders will be engaged through:

- regularly scheduled project steering committee meetings which will include at a minimum USW Local 5, JWJSF, Labor Institute, and the academic research partner. We will also utilize the GRADE community-labor table as a means of broader stakeholder engagement which include organizations such as ACCE, and public sector unions such as IFPTE Local 21 and SEIU 1021, among others.
- worker-led trainings and educational sessions directly with refinery workers accessed through the GROW program infrastructure;
- community feedback discussions and listening sessions;
- collaborative workshops focused on workforce transition and economic resilience;

- direct outreach through labor unions and community-based partner organizations.

Feedback from workers, residents, and partner organizations will be documented and incorporated into project planning, workforce assessment activities, and development of recommendations related to workforce transition supports, credentialing pathways, and economic resilience strategies. The project's collaborative governance structure and regular coordination meetings will provide ongoing opportunities for partners and community stakeholders to review progress, identify emerging needs, and recommend adjustments to project activities.

By centering worker and community participation throughout implementation, the project seeks to build trust, strengthen accountability, and ensure that proposed workforce and economic transition strategies are grounded in the lived experiences of impacted communities.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

A major component of Getting Ready is the design of a **Richmond-based Worker Resilience & Futures Initiative (WRFI)** to support refinery workers facing job displacement, economic insecurity, and workforce transition challenges associated with refinery closures, downsizing, and California's broader transition away from fossil fuels. This project component will create a worker-informed, regionally tailored program model designed specifically to meet the transition needs of refinery workers and communities in Richmond while coordinating with broader statewide just transition and workforce development efforts.

The overall vision of this project component is to establish a locally grounded framework for worker transition support and workforce development infrastructure that can help displaced refinery workers access high-quality career pathways while maintaining economic stability. The program design process will be informed directly by worker participation through the Getting Ready - Oil Workers (GROW) program and the leadership of a Transition Safety Steward, who will contribute frontline expertise, operational knowledge, and worker perspectives to shape program priorities and recommendations.

Key project activities will include:

- **Worker-led training** as an educational and research tool to a) inform Chevron workers who are members of Local 5 about workforce transition policy options and b) generate worker feedback about needs upon dislocation, including financial assistance, skills training, job search assistance, credentialing needs and other resources.
- A **workforce skills assessment** to identify the occupations, skills, certifications, wage levels, for at-risk refinery workers in Richmond;
- An evaluation of worker retraining and workforce transition needs, including barriers to reemployment, training access, and credential transferability;

- Identification of hiring pathways and concrete strategies for transitioning impacted refinery workers into local and regional industries capable of providing comparable wages, benefits, and career stability, including sectors such as utilities, water and wastewater, remediation, public works, manufacturing, and other emerging industries;
- Research to inform the design of a refinery worker-focused **credentialing and skills certification program** in partnership with local community colleges and workforce training institutions, with the goal of translating refinery skills into recognized credentials that improve worker mobility across industries;
- Development of strategies for direct worker supports such as retraining assistance, career navigation, income stabilization supports, and workforce transition services to be incorporated into an ongoing WRFI program;
- Coordination of local program recommendations with relevant regional and statewide refinery transition, workforce development, and just transition initiatives.

This project component will produce the following measurable outcomes:

- completion of one Richmond-focused refinery worker workforce assessment;
- engagement of refinery workers in structured research and feedback activities through the GROW project infrastructure;
- identification of priority workforce pathways into at least 3–5 target industries offering family-sustaining wages and benefits;
- development of one proposed credentialing or certification framework for refinery workers in partnership with local educational institutions;
- completion of one Richmond-based WRFI design and implementation framework, including recommendations for worker supports, training pathways, and program administration.

Roles and Responsibilities

United Steelworkers (USW) Local 5 will lead worker engagement, recruit participating refinery workers and Transition Steward lead, and ensure that program recommendations reflect the needs and lived experiences of directly impacted workers. **Refinery workers** participating through the program will provide worker-centered input, participate in data collection and analysis activities, and help shape recommendations for training, certification, and workforce transition supports.

Jobs with Justice San Francisco (JWJSF) will coordinate overall project implementation and policy development, facilitate partner collaboration, and support design of the local WRFI framework and worker support recommendations.

An **academic research group** with an expertise in worker transition issues, such as the UC Berkeley Labor Center, will lead research activities, including workforce transition needs assessment, design of hiring workforce pathways and best practices for workers transition assistance and training programs.

Together, this project component will establish a practical, worker-centered framework for supporting refinery workers in Richmond through economic transition while building local capacity for a healthier, more resilient post-refinery economy.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are* required here on this "Project Narrative" document.

   See Doc

1. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

ECOSYSTEM ALIGNMENT (10 points)

2. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Plans, the Community Air Protection Program (AB 617) etc.).*

The Richmond-based Worker Resilience & Futures Initiative (WRFI) is closely aligned with a range of community, regional, and statewide initiatives focused on environmental justice, workforce transition, economic resilience, and public health in refinery-impacted communities.

At the statewide level, the project directly builds upon California's existing **Displaced Oil and Gas Worker Pilot Program** administered through the California Employment Development Department (EDD). While the current EDD pilot provides an important foundation for supporting workers impacted by changes in the oil and gas industry, the proposed WRFI effort is designed to develop a locally grounded and worker-informed framework tailored to the specific workforce, economic, and community conditions facing refinery-dependent communities in Richmond. Research and recommendations generated through this project–including workforce skills assessment, hiring pathway analysis, training needs identification, and worker support strategies–will complement and help inform broader statewide transition planning efforts.

The project is also consistent with the goals of the **Contra Costa Just Transition Economic Revitalization Plan** developed through the Contra Costa County Department of Conservation and Development. That initiative identified the need for proactive workforce transition planning, economic diversification, protection of public revenues, and coordinated regional responses to the long-term decline of fossil fuel industries. The WRFI project advances these priorities by developing concrete recommendations for worker retraining, transition supports, credentialing pathways, and access to family-sustaining employment opportunities capable of supporting long-term regional economic resilience.

In addition, the project aligns with the principles of the **Contra Costa Refinery Transition Partnership (CCRTP)** led by the BlueGreen Alliance, which focuses on equitable workforce

development strategies that connect workers to high-quality jobs while supporting industry transition. WRFI's proposed workforce assessment, credentialing research, and collaboration with local community colleges are intended to strengthen regional workforce infrastructure and support the development of industry-recognized training and certification pathways for refinery workers transitioning into related sectors.

The project is further aligned with the goals of California's **Community Air Protection Program (AB 617)** and broader environmental justice planning efforts in Richmond and Contra Costa County. By engaging refinery workers directly in discussions around pollution reduction, refinery safety, and transition planning, the project recognizes the interconnected nature of workplace health, community air quality, and long-term economic conditions in fence-line communities. The project's emphasis on reducing harmful exposures while simultaneously planning for equitable economic transition reflects the community-driven and health-centered approach encouraged under AB 617 and related local environmental justice initiatives.

More broadly, WRFI supports California's climate and economic transition goals by helping create practical, worker-centered systems capable of supporting refinery workers and impacted communities through industrial transition in a way that promotes economic stability, public health, and long-term regional resilience.

CAPACITY (10 points)

3. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Jobs with Justice San Francisco (JWJSF) will serve as the project lead. Founded in 2010, JWJSF is a long-term, multi-racial coalition of labor and community organizations supporting workers rights. Since 2019, JWJSF has convened statewide work at the labor/climate nexus, including coordinating a statewide coalition of 17 unions called California Labor for Climate Jobs (CLCJ). Together the California Labor for Climate Jobs coalition fights for climate hazard protections, good jobs in the low carbon economy, justice for displaced oil and gas workers, and a robust public sector for climate adaptation. CLCJ has been a driving force, in partnership with the United Steelworkers, to win and support implementation of the first statewide Displaced Oil and Gas Worker Fund (DOGWF).

JWJSF's overall organizational budget is approximately $1.4 million per year, and the budget for our climate justice program is approximately $600,000 per year. We have highly skilled program staff to implement programmatic work, and highly skilled administrations and operations staff to manage individual project finances as well as the financial health of the organization overall. The staff person who will be the overall WRFI project manager, JWJSF's Climate Policy Director [redacted], has 15 years of experience across applied research, coalition and project management, political advocacy and strategic campaigning. [redacted] currently leads CLCJ's

The Air District redacted the individual's name to protect personally identifiable compensation information.

legislative and policy advocacy portfolio which includes coordination and management of legislative and regional advocacy efforts across the coalition's 17 unions in CA.

[redacted] was the former Research Director at One Fair Wage where she managed a team of legislative and research staff to support face-paced legislative campaigns across 9 states. Previously she was the Manager of Research, Impact Planning and Evaluation at national racial justice organization, Race Forward. [redacted] received her Masters of Public Policy at the Goldman School of Public Policy at UC Berkeley and her Bachelor's degree from Stanford University.

4. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

As Project Lead, JWJSF will manage the WRFI project through engagement of the following staff people:

- The **Climate Policy Director** (0.25 FTE, 36 months) will be responsible for overall project management, ensuring timely and successful completion of the project. She will ensure management of all partner participation and research deliverables. She will coordinate proper participation from workers in the GROW program, ensure access to information and resources for research partners and ensure that all stakeholder feedback is received and incorporated. She will also be the primary point of coordination between the WRFI project and the GRADE project by participating in the labor/community table and attending worker and community meetings.
- The **Deputy Director** (.05 FTE, 36 months) will provide key consultation on research findings and program design, including ensuring coordination across regional and statewide stakeholders.

The JWJSF staff team will coordinate and implement many key project activities. Other critical roles will be filled by an academic research group with an expertise in worker transition issues, such as the UC Berkeley Labor Center, who will work to execute the research deliverables.

JWJSF's core funding for its workers rights and climate programs support the organizational infrastructure that is the foundation to making this project successful.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately,

following the naming convention outlined in the “Application Instructions” document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate “N/A” if the question is not applicable to the project

5. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

   N/A

6. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

   N/A

7. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

   N/A

8. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

   N/A

9. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The primary barriers associated with this project relate to the uncertainty surrounding refinery transition timelines, worker participation capacity, and the challenge of developing practical workforce pathways into industries that provide compensation and stability comparable to refinery employment. Because refinery workers often work demanding schedules, including long shifts and rotating hours, sustained participation in training, research, and planning activities may present logistical challenges if not implemented in the proper structure, which is addressed

below. In addition, workers may understandably have concerns about participating in transition-related discussions due to fears about job security, mistrust of transition processes, or skepticism regarding the availability of comparable employment opportunities.

Getting Ready addresses these barriers by centering the project within trusted worker-led structures through United Steelworkers Local 5 and the GROW program drawn directly from the refinery workforce. GROW will help build participation and trust by facilitating peer-to-peer engagement, conducting outreach among coworkers, and ensuring that project activities remain grounded in workers' real-world concerns and priorities. The project design also incorporates flexible participation structures, including scheduling accommodations and ongoing worker feedback processes, to support sustained engagement.

Another key challenge is the complexity of aligning workforce development systems, educational institutions, labor organizations, and community stakeholders around shared transition goals. To address this, the project includes a formal collaborative structure involving labor, policy, academic, and community partners with clearly defined roles and regular coordination meetings. Strong established relationships among project partners-including USW Local 5, Jobs with Justice San Francisco, and potential academic partners such as UC Berkeley and environmental justice organizations-provide a strong foundation for implementation and stakeholder coordination.

There is also uncertainty regarding the pace and scale of future refinery workforce reductions and broader economic transition trends. Rather than relying on a single projected transition scenario, the project is designed to build adaptable local capacity that can support workers under a range of future conditions. Workforce assessment and hiring pathway research will focus on transferable skills and industries with long-term regional demand and skills alignment, helping ensure that project recommendations remain useful even as economic conditions evolve.

Finally, developing effective credentialing and certification pathways may require coordination with community colleges, workforce boards, employers, and licensing bodies whose timelines and priorities may vary. The project will address this risk through building off of strong existing relationships with the Contra Costa Community College System, Contra Costa Workforce Development Board, and early engagement with training and educational partners and by grounding credentialing recommendations in documented workforce needs identified through direct worker participation and labor market research.

Because the project is primarily focused on planning, research, worker engagement, and partnership development rather than physical infrastructure development, barriers related to permitting, site control, and construction are not applicable. Overall, the collaborative and worker-centered structure of Getting Ready is specifically designed to reduce implementation risk while building durable local partnerships and transition planning capacity in Richmond.

Bay REPAIR Local Community Benefits Fund – Round 1
Measurable Outcomes Plan:
PROJECT: Getting Ready - Worker Resilience & Futures Initiative (WRFI)

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Project Vision:	The Richmond-based Worker Resilience and Futures Initiative (WRFI) will develop a worker-informed framework to support refinery workers and impacted communities through the long-term transition away from fossil fuels. The project will engage refinery workers, labor unions, workforce development institutions, community colleges, environmental justice organizations, and policy partners to assess workforce transition needs, identify hiring pathways into family-sustaining industries, and design recommendations for worker supports, credentialing pathways, and economic resilience strategies. Through direct participation by refinery workers engaged in the Getting Ready: Oil Workers for Safety (GROWS) program, the project will strengthen labor-community collaboration while building locally grounded transition infrastructure aligned with broader regional and statewide worker-led transition efforts.

Measurable Outcome	Indicator(s)
1. Conduct a Richmond refinery workforce skills and transition needs assessment	• Completion of workforce assessment report; number of workers engaged; number of occupations/skills assessed; estimates of potential closure impacts

2. Identify workforce hiring pathways into high-quality regional industries	• Number of industries analyzed; number of hiring pathways identified; completion of hiring pathway analysis; number of employers identified including job estimates, hiring requirements, and best practices for transfer process
3. Develop refinery worker credentialing and certification recommendations with local educational partners	• Number of community college/workforce institution meetings; completion of credentialing framework; number of transferable skills identified
4. Engage refinery workers and Transition Steward leadership in project planning and implementation	• Number of refinery workers participating; number of worker engagement sessions; attendance and participation metrics
5. Richmond-based WRFI design and implementation framework	• Completion of worker support program design; identification of direct support models; completion of implementation framework

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Conduct a Richmond refinery workforce skills and transition needs assessment	A. Develop workforce assessment framework	1. Develop worker data collection tools	Academic Partner	USW Local 5, JWJSF	Year 1 – Q1
		2. Identify target worker classifications and skills categories	Academic Partner	USW Local 5	Year 1 – Q1
		3. Finalize assessment methodology	Academic Partner	Project partners	Year 1 – Q2
	B. Conduct workforce assessment activities	1. Recruit participating refinery workers through the GROWS program	USW Local 5	Transition Stewards Program	Year 1 – Q2
		2. Conduct worker data collection sessions	Academic Partner	Transition Stewards Program	Year 1 – Q3

		3. Compile workforce data and findings	Academic Partner	JWJSF	Year 1 – Q4
	C. Complete workforce assessment report	1. Draft workforce assessment findings	Academic Partner	JWJSF	Year 2 – Q1
		2. Review findings with workers and partners	USW Local 5	Transition Stewards Program	Year 2 – Q1
		3. Finalize workforce assessment report	Academic Partner	All partners	Year 2 – Q2
2. Identify workforce hiring pathways into high-quality regional industries	A. Identify target industries	1. Conduct labor market analysis	Academic Partner	JWJSF	Year 1 – Q4
		2. Identify skills-aligned occupations and industries. Coordinate with the GRADE Program	Academic Partner & JWJSF	Workforce partners	Year 2 – Q1
		3. Prioritize target sectors for transition pathways	Project Steering Committee	All partners	Year 2 – Q1
	B. Analyze hiring pathways	1. Identify hiring requirements for target industries and engage target industry representatives to explore alignment and interest	Academic Partner	Workforce partners	Year 2 – Q2
		2. Assess transferability of refinery skills	Academic Partner	Transition Stewards Program	Year 2 – Q2

		3. Develop hiring pathway recommendations	Academic Partner	JWJSF	Year 2 – Q3
	C. Finalize workforce pathway recommendations	1. Review pathways with workers and partners	USW Local 5	Transition Stewards Program	Year 2 – Q3
		2. Incorporate stakeholder feedback	JWJSF	Academic Partner	Year 2 – Q4
		3. Publish pathway recommendations	JWJSF	All partners	Year 2 – Q4
3. Develop refinery worker credentialing and certification recommendations	A. Engage educational partners	1. Convene meetings with local community colleges	JWJSF	Community colleges	Year 1 – Q3
		2. Identify existing credentialing models	JWJSF	Workforce partners	Year 1 – Q4
		3. Assess transferable refinery skills	Academic Partner	USW Local 5	Year 2 – Q1
	B. Develop credentialing concepts	1. Identify certification gaps/opportunities	JWJSF	Community colleges	Year 2 – Q2
		2. Draft credentialing framework	JWJSF	All partners	Year 2 – Q3
		3. Review framework with stakeholders	JWJSF	USW Local 5	Year 2 – Q4
	C. Finalize credentialing recommendations	1. Incorporate stakeholder feedback	JWJSF	All partners	Year 3 – Q1
		2. Finalize credentialing recommendations	JWJSF	Community colleges	Year 3 – Q1
		3. Publish credentialing framework	JWJSF	All partners	Year 3 – Q2
4. Engage refinery workers and Transition Steward Program in project implementation	A. Conduct worker engagement activities	1. Conduct worker listening sessions	Transition Stewards Program	Academic Partner	Ongoing Years 1–3
		2. Facilitate worker feedback discussions	USW Local 5	Project partners	Ongoing Years 1–3
	B. Maintain ongoing worker participation	1. Hold regular Transition Steward meetings	USW Local 5	JWJSF	Ongoing Years 1–3
		2. Share project updates with participants	JWJSF	Transition Stewards Program	Ongoing Years 1–3
		3. Integrate worker feedback into recommendations	All partners	Transition Stewards Program	Ongoing Years 1–3
5. Develop recommendations for a Richmond WRFI worker	A. Research worker support models	1. Analyze existing worker transition programs, including statewide and other regional efforts	JWJSF	Academic Partner	Year 2 – Q1
		2. Identify direct support best practices	JWJSF	Policy partners	Year 2 – Q2

support framework		3. Review worker support gaps	Transition Stewards Program	USW Local 5	Year 2 – Q2
	B. Draft worker support framework	1. Develop support recommendations	JWJSF	Academic Partner	Year 2 – Q3
		2. Identify implementation considerations	JWJSF	Workforce partners	Year 2 – Q4
		3. Review recommendations with stakeholders	USW Local 5	Community partners	Year 3 – Q1
	C. Finalize implementation framework	1. Revise recommendations	JWJSF	All partners	Year 3 – Q2
		2. Finalize DOGWF framework	JWJSF	Academic Partner	Year 3 – Q2
		3. Present framework to stakeholders	Project Steering Committee	All partners	Year 3 – Q3
6. Strengthen coordination between labor, workforce, and community stakeholders	A. Establish collaborative governance structure	1. Form project steering committee	JWJSF	All partners	Year 1 – Q1
		2. Develop coordination protocols	JWJSF	USW Local 5	Year 1 – Q1
		3. Schedule recurring coordination meetings	JWJSF	Project partners	Year 1 – Q1
	B. Conduct stakeholder convenings	1. Organize labor-community meetings	JWJSF	Community partners	Ongoing Years 1–3
		2. Convene workforce development stakeholders	JWJSF	Community colleges	Year 2 – Q2
		3. Hold economic transition planning discussions	GRADE project table	All partners	Year 2 – Q4
	C. Produce coordinated recommendations	1. Synthesize stakeholder feedback	JWJSF	Academic Partner	Year 3 – Q1
		2. Draft coordinated transition recommendations	JWJSF	All partners	Year 3 – Q2
		3. Finalize and distribute recommendations	JWJSF	All partners	Year 3 – Q3

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Getting Ready
Lead Applicant Name	The Labor Institute
Project Location	Richmond
Overall Funding Request	$3,547,762
Grant Term Request	Three Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Getting Ready - Advancing a Diverse Economy (GRADE)
Project Lead	JWJSF
Project Location	R ichmond
Project Funding Request	$1,677,900

STRATEGY ALIGNMENT (10 points)

1. ***Provide a short summary (1-2 paragraphs) that outlines this project.***

The *Getting Ready - Advancing a Diverse Economy (GRADE)* project will convene local labor unions and community-based organizations to identify specific industries/sectors for climate-resilient economic growth and diversification in Richmond that can create good jobs accessible to former oil and gas workers and historically excluded community members, support robust public services by replacing lost tax revenue from refineries over the long term, and are simultaneously safe and healthy for workers and community members. The GRADE partners will advance plans to grow these industries in Richmond by engaging other economic development planning processes and identifying promising companies and investors—including workers' own pension funds—to seed these new industries. In addition to catalyzing climate-resilient economic diversification, a true just transition requires the participation and voice of those most directly affected by economic transition. This project will empower and build the capacity of local workers and community members themselves to engage with economic development planning processes and implementation in Richmond.

Jobs with Justice San Francisco (JWJSF) will convene a table of labor and community partners – including SEIU Local 1021 members (representing city workers in Richmond), members and staff of the Richmond chapter of Alliance of Californians for Community Empowerment (ACCE), many who live near the Chevron Refinery, and USW members who work at the Chevron Richmond Refinery – to identify options for climate-resilient economic development in Richmond. While "just transition" is a commonly-used phrase, there are few examples of what it looks like in practice. By bringing together this unique partnership of organizations and their members, the GRADE project aims to become a model for how the most directly impacted communities can envision and kickstart climate-resilient economic diversification in oil and gas dependent communities.

2. ***Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:***
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

A just transition is one in which local workers and community members have a say in the future economy and economic resilience of their region. This project will equip and empower local workers and community members to engage in broader economic development planning processes, while creating and advancing their own plan that identifies future industries to provide a strong, stable, climate-resilient economy, support critical public services by contributing to the local tax base, and create good jobs in Richmond as the local economy transitions away from being dependent on oil and gas. Building economic resilience in Richmond for a just, worker- and community-led transition is the goal of this project.

COMMUNITY IMPACT (20 points)

3. ***Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.***

As a project to plan for economic resilience city-wide, the geographic scope and impact of this project will be throughout the City of Richmond. The exact location and siting of future economic sectors within the City of Richmond is part of the planning that this project seeks to undertake. The project will engage city workers who work and provide critical public services throughout the City Richmond, including SEIU 1021 members (workers represented by SEIU 1021 in Richmond include municipal workers across nearly all city departments, including staff in maintenance and construction, code enforcement, library and recreation centers, administration, public works and sanitation). The project will also engage members and staff of the Richmond chapter of Alliance of Californians for Community Empowerment (ACCE), many who live near the Chevron Refinery in low-income, renter-majority neighborhoods such as Iron Triangle, Coronado, Santa Fe, and Belding Woods. The project will also engage USW members who work at the Chevron Refinery.

4. ***Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.***

The challenges of economic transition in refinery communities are well known: when the Marathon Martinez refinery shifted to biofuels, more than 700 workers lost their jobs and 26% remained unemployed a year after being laid off (as documented in a 2023 UC Berkeley Labor Center study). Meanwhile, public services are dependent on the roughly $130 million/year in direct taxes—and $830 million/year in indirect taxes—that refineries generate across Contra Costa County (figures from a UC Berkeley Labor Center study). The need to foster new industries in Richmond that can provide good jobs and a strong climate-resilient economy and tax base into the future is well known.

Over more than the past three years, JWJSF has convened and collaborated with labor and community partners statewide in oil and gas dependent communities to discuss and strategize solutions to these challenges. JWJSF has ensured inclusion of community and labor partners in the advisory committee for UC Merced's ongoing research on tax implications of oil and gas industry decline statewide (Asian Pacific Environmental Network, USW, and SEIU 1021 have participated in the advisory committee), and engaged these partners in discussions about how to generate new revenue through investment of workers' pension funds. In Richmond and other oil and gas dependent communities statewide, the community needs and priorities have been clear: simply put, workers and community members need family-sustaining and safe jobs, safe and healthy air and water, and robust public services.

When discussing the challenges with local unions and community-based organizations—and the need to develop community and worker-generated solutions—several groups agreed that they wanted to be part of a labor/community table in Richmond to discuss solutions. Specifically, SEIU 1021 (representing city workers in Richmond) had done significant member education and mobilizing around the recent Chevron settlement and future next steps to fill budget gaps — their members are interested in long term investments to move the local economy beyond dependence on refineries. The same is true of ACCE members, and in a meeting with the members of their Richmond chapter, ACCE members voted in support of participating in this GRADE project. ACCE members' priorities included ensuring that public services are maintained and expanded even as refinery tax revenue for the county declines, and making sure that new industries are safe for local communities. SEIU 1021 also affirmed their desire to take part in the GRADE project. SEIU 1021 and ACCE identified other potential GRADE project partners (including Asian Pacific Environmental Network), who have been invited to participate in the table and are consulting with their members about participating in this project.

Thus, the need for this project has been established over the past several years in dialogue and collaboration with community and labor partners – through meetings, strategy retreats to discuss labor/community alignment on just transition, participating in feedback on UC Merced research, one-on-one conversations, and meetings with members. This specific GRADE project was developed with and affirmed by Richmond's workers and communities, rooted in their desire to envision the economic future of Richmond together and take steps towards making it a reality.

5. ***Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.***

Detroit and Appalachia are cautionary tales about the perils of *unjust* transition: when industries shutter, workers get pink slips and lose their pensions. Many have difficulty finding new work,

and local jobs with similar pay can be elusive. Mortgages and rent go unpaid, families lose their homes. Cities lose tax revenue, critical public services get cut, schools and fire stations close. Communities dissolve as people move away to support their families.

The GRADE project seeks to avoid these challenges in Richmond by developing a worker- and community- generated plan to support local economic resilience over the long term by envisioning a diverse economy that can provide good jobs and support a strong, climate-resilient tax base. Specifically, a worker and community table in Richmond will identify at least three to five possible new industries that could grow in Richmond (Outcome 1). The table will create their own criteria and analysis to evaluate possible industries. Possible criteria that partners have already mentioned include the potential for job creation, how to ensure that displaced refinery workers and historically-excluded communities have access to these jobs, potential for tax revenue generation, and health and safety for workers and fenceline communities (including preventing air pollution). Once possible industries are identified, project partners will seek potential investment opportunities (Outcome 2). One opportunity that JWJSF, ACCE and SEIU 1021 have already identified is that CalPERS – one of the largest pension funds in the world that manages the pensions of many SEIU 1021 members – has already committed to invest $100 billion in climate solutions, and partners are keen to encourage CalPERS to invest in Richmond. In addition to direct efforts to secure investment for specific industries, this project will empower and build the capacity of staff and members of partner organizations to participate meaningfully in broader local economic development conversations and processes (Outcome 3)– conversations that community members and workers are often left out of or not equipped to participate in.

Just transition requires both an economic transition and shift to new industries, as well as the the participation of directly impacted workers and community members. With workers and community members in Richmond trained to participate in economic development planning, this project will provide a critical foundation for their voice to be heard in local decision-making. By creating a specific list of—and seeking investment for—preferred industries that are safe and healthy for workers and communities, have the potential to create good jobs, and generate tax revenue to support public services, this project will provide a foundation to catalyze a worker and community-led just transition towards a diverse, climate-resilient economy in Richmond.

COMMUNITY ENGAGEMENT (10 points)

6. ***Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.***

The GRADE project is inherently participatory: the project's foundation is a community labor table where stakeholders – with the support of coordinating organizations and researchers – identify key industries that they are interested in being the base of future economic

diversification and resilience in Richmond. JWJSF will convene regular meetings of the table (approximately monthly, or as deemed necessary by convenors and participants), with staff and leaders of the labor and community organizations participating regularly as table members. Researchers and other support organizations will be available to answer questions raised by the table participants. As member-based organizations, each organization already has established structures for convening conversations with and getting feedback from their members. Therefore, each table participant organization will determine the exact methods and frequency of consultation with their member bases, but their members will be consulted at least three times during the table's process of identifying specific economic opportunities and industries. JWJSF project staff will be available to support project partner organizations' staff to convene conversations with broader membership. Feedback from broader membership will be presented to all table participants. Table participants – informed by feedback from their members – will be the decision-makers and will jointly develop a short list of at least three to five industries that they can all agree that they would like to see grow in Richmond. Being member-based organizations with regular conversation and feedback loops with members, there are already long-term, ongoing mechanisms of accountability to community and worker input and needs.

MEASURABLE OUTCOMES PLAN (30 points)

7. ***Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.***

Since a just transition is one in which local workers and community members have a say in the future economy and economic resilience of their region, the vision for the GRADE project is to convene community and labor partners, build their capacity to engage in conversations about economic development in Richmond, and ultimately to generate their own plan for possible future industries in Richmond that can anchor a climate-resilient economy — one that meets core community needs of generating strong and stable tax revenue to support robust public services, and providing good, family-sustaining jobs accessible to displaced refinery workers and others historically excluded. Project partners will advance investment opportunities in their priority industries, including by engaging broader economic development processes and pension funds to support economic development plans for Richmond.

By the end of the grant period, the three measurable outcomes are:

- Labor and community partners will generate an economic development plan through a participatory table that identifies at least three to five specific industries and other opportunities to create good jobs, tax revenue, and climate-resilient economic development in Richmond;
- Labor and community partners will identify investment strategies for the priority industries they identified, including investment from workers' pension funds such as CalPERS (California Public Employees' Retirement System), and make progress to

secure investment for at least one project that can create jobs and generate tax revenue in Richmond;
- Increase knowledge, confidence and capacity to engage in discussions about climate-resilient economic development strategies among at least 75 workers and residents in Richmond through community meetings and workshops.

Jobs with Justice San Francisco (JWJSF) will act as the project manager and convenor of the labor/community table that will generate a list of three to five possible industries to advance economic development and diversification in Richmond. Committed table participants include SEIU 1021 (representing City of Richmond workers), ACCE (representing mostly low income, BIPOC residents of the City of Richmond), and USW Local 5 (representing Chevron Refinery workers). Other labor and community partners including Asian Pacific Environmental Network have been invited to join the table and are checking with their members. Project partner organizations will participate in the community/labor table and also engage their broader membership to get feedback about possible industries. JWJSF will manage research consultants to support the development of the plan. JWJSF will also facilitate engagement of project partners with CalPERS, local pension funds, and other potential investors about investing in the community- and worker-generated plan. JWJSF will collaborate with project partners to develop curricula to engage member leaders on just transition and economic development. Project partners will build the leadership of and mobilize their members to participate in economic development discussions with possible investors and engage other local conversations/processes, as opportunities arise.

8. ***Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.***

9. ***Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.***

The total budget for the GRADE project is #X,XXX,XXX. The key project costs are $850,000 for personnel costs for JWJSF staff (see question 12 for details of JWJ staffing) over 3 years to manage, coordinate and implement project activities, subcontractor funding for community organizations to participate in the project, funding for a research consultant (up to $75,000/year) to support research needs of the community/labor table over 3 years, and funding for community engagement (including materials production, translation and interpretation, childcare, food, and transportation assistance).

ECOSYSTEM ALIGNMENT (10 points)

10. ***Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).***

By modeling community- and worker-centered processes for just transition to climate-resilient economies with good jobs and strong tax bases in what is currently a refinery community, the GRADE project lays important groundwork for achieving local and statewide initiatives, including SB32, AB1279 and SB100 to reduce greenhouse gas emissions and adopt renewable energy statewide. It also supports Contra Costa's Climate Action and Adaptation Plan (CAAP) to advance a pathway to statewide net-zero emissions by 2045. By advancing a vision for an economic base that is less polluting, it also supports the CommunityAir Protection Program (AB617).

There are currently several tables in Contra Costa to address economic development (e.g. Green Empowerment Zones, Just Transition Economic Revitalization Plan, and California Jobs First). The GRADE project is complementary to these processes and unique in that it aims to empower community members and workers themselves to create and implement their own vision for climate-resilient economic development in Richmond, while building their capacity to engage, inform and influence these other planning processes.

Finally, CalPERS – the largest pension fund in the US – has committed to invest $100 billion towards climate solutions. The GRADE project aims to move California-based pension funds such as CalPERS to invest their climate solutions dollars in Richmond to catalyze climate-resilient economic development. In this way, the GRADE project aims to use this requested grant support from BAAQMD to leverage significant broader investment to advance just transition in Richmond.

In order to achieve local and state greenhouse gas reduction goals, we need to build the renewable energy infrastructure and supply chains. This project aims to support a worker- and community-led transition in a critical oil and gas dependent community, serving as a model for other communities statewide.

CAPACITY (10 points)

11. ***Describe the Project Lead's experience managing and implementing projects of similar scope and size.***

Jobs with Justice San Francisco (JWJSF) will serve as the project lead. Founded in 2010, JWJSF is a long-term, multi-racial coalition of labor and community organizations supporting workers rights. Since 2019, JWJSF has convened statewide work at the labor/climate nexus, including coordinating a statewide coalition of 17 unions called California Labor for Climate Jobs (CLCJ). Since SEIU 1021 and USW Local 5 are CLCJ members, JWJSF already has a strong relationship with these unions. As a formation with extensive coalition-building experience that exists to bridge between labor and community organizations, JWJSF's climate justice work issues follows this core model: we have a strong track record of bridging between labor unions and environmental justice (EJ) organizations to strategize – and collaborate where possible – on how to advance a worker- and community- led transition to a just and climate-safe economy. The statewide EJ/labor discussions convened by JWJSF prioritized questions about how to

diversify the economies of the top oil and gas dependent counties across the state, specifically in Kern and Contra Costa. As a result, JWJSF is anchoring a project with the same purpose as GRADE but located in Kern County with local EJ and labor unions as partners: our labor/EJ table in Kern just launched with our first in-person meeting in early May 2026. Coordinating both of these tables – in Kern and Richmond – at the same time will enable JWJSF and partners to share lessons learned across the two projects. JWJSF is also collaborating with ACCE and other members of the California Common Good alliance to create statewide strategies to push CalPERS and other pension funds to invest in climate solutions — including renewable energy and related supply chain manufacturing — in California as a whole, and specifically Kern and Contra Costa counties. The focus of the GRADE project is at the heart of the work that JWJSF has been doing with EJ and labor partners since 2019.

JWJSF's overall organizational budget is approximately $1.35 million per year, and the budget for our climate justice program is approximately $600,000 per year. We have highly skilled program staff to implement programmatic work, and highly skilled administrations and operations staff to manage individual project finances as well as the financial health of the organization overall. The staff person who will be the overall GRADE project manager, JWJSF's Deputy Director [redacted], has 23 years of experience coordinating environmental justice- and labor-based advocacy coalitions in California. She founded JWJSF's labor/climate program and has managed and grown it over the past seven years.

The Air District redacted the individual's name to protect personally identifiable compensation information.

12. Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.

As Project Lead, JWJSF will manage the GRADE project through engagement of six staff people:

- The **Deputy Director** (.25 FTE, 36 months) will be responsible for overall project management, ensuring timely and successful completion of the project. She will supervise the GRADE project coordinator (including supporting them to foster strong relationships between project partners, and troubleshoot any issues that arise), ensure strong collaboration across the JWJSF staff team, participate in the labor/community table, give feedback on research, and execute contracts with consultants and subcontractors. She will act as a liaison between GRADE and the labor/community table that JWJSF manages in Kern County, as well as a liaison with broader statewide CalPERS engagement work.
- The **GRADE Project Coordinator** (1.0 FTE, 36 months) will be a new hire dedicated entirely to day-to-day project coordination (including internal JWJSF staff meetings), partner management, coordinating the labor/community table, ensuring regular worker and community engagement, and reporting.
- The **Climate Policy Director** (0.2 FTE, 36 months) will be the primary point of coordination with the research consultant, directing and giving feedback on research drafts, participating in the labor/community table and attending worker and community

meetings.
- The **Climate Organizing Director** (0.2 FTE, 36 months) will provide the experience and expertise to ensure that the project is building the leadership and capacity of workers and community members to engage with broader economic development processes. They will support the GRADE project coordinator to design trainings and workshops with community and labor leaders, and design plans for leadership development.
- The **Communications Director** (0.05 FTE, 30 months) will review draft text and do graphic design of factsheets and presentation materials for project meetings.
- The **Senior Operations Coordinator** (0.05 FTE, 30 months) will support the GRADE Project Coordinator with logistics for community meetings, including buying food and coordinating interpretation.

The JWJSF staff team will coordinate and implement many key project activities. Other critical roles will be filled by a Research Consultant (to research possible industries, as well as their pros and cons, for the labor/community table to consider), and project partner organizations (such as SEIU 1021 and ACCE) who will participate in the table and coordinate feedback from their members.

One goal of the project is to lay the groundwork to leverage significant investment from CalPERS and other investors to support climate-resilient economic diversification.

JWJSF's core funding for its workers rights and climate programs support the organizational infrastructure that provides the scaffolding to make this project successful.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- **Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.**
- **If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.**
- **Indicate "N/A" if the question is not applicable to the project**

13. ***Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.***

    n/a

14. ***Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.***

n/a

15. ***Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.***

    n/a

16. ***Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.***

    n/a

17. ***Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.***

Effective and successful economic development planning and implementation are extraordinarily complex. The GRADE project can't and won't solve all of the needs of long-term economic development in Richmond; rather, it aims to be propositional and identify and act on a short list of possible opportunities. Even within that short list, there are no silver bullet solutions. Some specific barriers to implementing the GRADE project include the challenge of finding potential industries that meet all of the visionary criteria of labor and community partners. We may not be able to identify "perfect" industries that meet the high bars of all of our criteria as well as companies that want to locate these industries in Richmond.

Through skilled facilitation and honest conversation among project partners about options and tradeoffs between various possible industries, we will likely have to grapple with gaps between our best vision and the realities of economic development as we identify priority industries. The list that we generate of three to five priority industries will consist of industries that project partners can agree on — and there will likely be other industries that project partners will not agree on, so trust building and skilled facilitation will be critical to navigate different perspectives. One key reason that we envision just a small number of partner organizations at the community/labor table is so that we can effectively build trust as a foundation for having difficult conversations and finding alignment.

Other challenges include the difficulty and time horizon of securing investors for projects in priority industries, which is why we don't promise to have "broken ground" on any new economic development projects within the grant period. As a planning project to engage in participatory community and worker visioning and capacity-building about climate-resilient economic development in Richmond, we can manage our internal processes with project partners and therefore be successful in achieving the grant outcomes. We can also be successful in our outcome of advancing the vision by engaging with potential investors, but we cannot – and therefore do not – guarantee commitments from investors within this grant period.

Bay REPAIR Local Community Benefits Fund – Round 1
Measurable Outcomes Plan:
PROJECT: Getting Ready - Advancing a Diverse Economy (GRADE)

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Project Vision:	Since a just transition is one in which local workers and community members have a say in the future economy and economic resilience of their region, the vision for the GRADE project is to convene community and labor partners, build their capacity to engage in conversations about economic development in Richmond, and ultimately to generate their own plan for possible future industries in Richmond that can anchor a climate-resilient economy — one that meets core community needs of generating strong and stable tax revenue to support robust public services, and providing good, family-sustaining jobs accessible to displaced refinery workers and others historically excluded. Project partners will advance investment opportunities in their priority industries, including by engaging broader economic development processes and pension funds to support economic development plans for Richmond.

Measurable Outcome	Indicator(s)
1. By the end of the grant term, labor and community partners will generate an economic development plan through a participatory table that identifies at least three to five specific industries and other opportunities to create good jobs, tax	• Number of regular meetings convened of the labor/community economic development planning table, including regular attendance at these meetings. • Number of meetings with members of the worker and community organizations participating in the labor/community table.

revenue, and climate-resilient economic development in Richmond.	• Number of possible industries brainstormed by table participants and worker and community leaders, and analyzed by project researchers.
2. By the end of the grant term, labor and community partners will identify investment strategies for the priority industries they identified, including investment from workers' pension funds such as CalPERS (California Public Employees' Retirement System), and make progress to secure investment for at least one project that can create jobs and generate tax revenue in Richmond.	• Number of meetings that labor and community leaders have with staff and trustees of CalPERS pension fund and other potential investors. • Number of workers and community leaders who participate in meetings with CalPERS and other potential investors. • Number of meetings about economic development in Richmond convened by local government or other stakeholder processes that workers and community leaders participate in.
3. By the end of the grant term, increase knowledge, confidence and capacity to engage in discussions about climate-resilient economic development strategies among at least 75 workers and residents in Richmond through community meetings and workshops.	• Number of workers and community leaders who participate in community meetings and workshops convened by project partners. • Percentage of workers and community leaders who report improved understanding of why community and worker-centered economic development planning is critical in Richmond. • Percentage of workers and community leaders who report increased confidence in advocating for community and worker-centered economic development in Richmond.

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Labor and community partners generate an economic development plan through a participatory table	A. Convene labor/community table regularly for planning	1. Hire & onboard new staff person as coordinator for the GRADE project	JWJSF		Year 1, Q2
		2. Finalize all participant organizations of labor/community table	JWJSF	SEIU 1021, ACCE, United Steelworkers (USW) Local 5	Year 1, Q1

that identifies at least three to five specific industries and other opportunities to create good jobs, tax revenue, and climate-resilient economic development in Richmond.		3. Identify representatives to the table for each organization	JWJSF	SEIU 1021, ACCE, USW, others	Year 1, Q2
		4. Schedule launch meeting	JWJSF	SEIU 1021, ACCE, USW others	Year 1, Q3
		5. Regular table meetings	JWJSF	SEIU 1021, ACCE, USW, others	Year 1, Q3-Ongoing
	B. Identify long list of possible industries to research and analyze	1. Compile research on potential industries from partner labor and other organizations, scan products of existing economic development processes in Contra Costa/Richmond	JWJSF	United Auto Workers, USW, Research consultants	Year 1, Q2
		2. Develop draft criteria for evaluating industries' ability to meet community needs (e.g. job creation, tax revenue generation, health and safety/not contributing to pollution and poor air quality) and present to table for feedback	JWJSF	Research consultants, SEIU 1021, ACCE, USW, others	Year 1, Q3
		3. After initial table meetings, labor & community project partners show options to and get initial feedback from their members (prepare translation and interpretation, as necessary)	JWJSF	SEIU 1021, ACCE, USW, others, Interpreters/ translators	Year 1, Q4
	C. Identify short list of possible industries and opportunities	1. Create short list of potential industries based on member feedback and further research	JWJSF	Research consultant	Year 2, Q1
		2. Bring short list to table participants for discussion & feedback	JWJSF	SEIU 1021, ACCE, USW, others	Year 2, Q1
		3. Labor and community organizations bring updated short list (that integrates feedback from the table in step 2, above) to their members for feedback (prepare translation and interpretation, as necessary)	JWJSF	SEIU 1021, ACCE, USW, others, Interpreters/ translators	Year 2, Q2
	D. Finalize short list of possible industries and	1. Create draft final list of potential industries based on member feedback and further research	JWJSF	Research consultant	Year 2, Q2

	opportunities recommended by community and labor partners	2. Bring draft final list to table participants for discussion & feedback	JWJSF	SEIU 1021, ACCE, USW, others	Year 2, Q2
		3. Labor and community organizations bring draft final list (that integrates feedback from the table in step 2, above) to their members for feedback (prepare translation and interpretation, as necessary)	JWJSF	SEIU 1021, ACCE, USW, others, Interpreters/ translators	Year 2, Q3
		4. Finalize initial list of potential industries and opportunities *(if and as other potential industries are identified later in the project, the table can consider them and consult their members)*	JWJSF	Research consultant, SEIU 1021, ACCE, USW, others	Year 2, Q3
2. Labor & community partners will identify investment strategies for the priority industries they identified, including investment from workers' pension funds such as CalPERS, and make progress to secure investment for at least one project that can create jobs and generate tax revenue in Richmond.	A. Prepare labor and community leaders to talk with pension funds and other possible investors about community needs and investments that can support them	1. Create proposal for how CalPERS could invest in Richmond, based on final list of potential industries	JWJSF	Research consultant, SEIU 1021, ACCE	Year 2, Q4
		2. Create trainings for labor and community members of project partner organizations about how pension funds can support their vision for economic development in Richmond (including the opportunity of CalPERS' commitment to invest $100 billion in climate solutions) and how to advocate for investment in Richmond. Translate as necessary	JWJSF	SEIU 1021, ACCE, USW others, translators	Year 2, Q3
		3. Conduct trainings to prepare labor and community leaders to engage CalPERS	JWJSF	SEIU 1021, ACCE, USW others, Interpreters	Year 2, Q4
	B.CalPERS staff and trustees are aware of investment opportunities in Richmond	1. Project partner staff and members regularly meet with CalPERS staff and Trustees, and attend Board meetings to present proposal and open dialogue to catalyze investments in Richmond	JWJSF	SEIU 1021, ACCE, USW others	Year 3 Q1-4, ongoing
		2. Project partners integrate feedback from meetings with CalPERS representatives to refine proposal & identify solutions to any barriers	JWJSF	SEIU 1021, ACCE, USW others	Year 3 Q1-4, ongoing

		3. Identify one possible industry/project with the greatest possibility of getting investment from CalPERS and continue to engage	JWJSF	SEIU 1021, ACCE, USW others	Year 3 Q2-4, ongoing
	C. Community and Labor leaders engage other possible investors and processes regarding economic development in Richmond	1. Identify key other initiatives aiming to influence economic development in Richmond as well as possible investors	JWJSF	Research consultant, SEIU 1021, ACCE, USW others	Year 3 Q1
		2. Make and implement plan to engage entities/processes identified in Step 1	JWJSF	Research consultant, SEIU 1021, ACCE, USW others	Year 3 Q1-4, ongoing
3. Increase knowledge, confidence and capacity to engage in discussions about climate-resilient economic development strategies among at least 75 workers and residents in Richmond through community meetings and workshops.	A. Community member & worker workshops and consultations outlined in outcome #1, above	1. Draft before/after surveys for community members and workers to evaluate their increased knowledge and confidence in discussing and advocating for economic development strategies that meet community needs. Translate as necessary.	JWJSF	SEIU 1021, ACCE, USW others, translators	Year 1, Q2 ongoing through Year 2 Q3
		2. Give before/after surveys in community and worker meetings	JWJSF	SEIU 1021, ACCE, USW others	Year 1, Q2 ongoing through Year 2 Q3
	B. Community member & worker trainings outlined in outcome #2, above	1. Draft before/after surveys for community members and workers to evaluate their increased knowledge and confidence in discussing and advocating for economic development strategies that meet community needs. Translate as necessary.	JWJSF	SEIU 1021, ACCE, USW others, translators	Year 2, Q3
		2. Give before/after surveys in community and worker trainings	JWJSF	SEIU 1021, ACCE, USW, others	Year 2, Q4 and ongoing, as trainings continue

Richmond Seed

Asian Pacific Environmental Network Application

Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Richmond Asian Wellness and Resilience Center
Lead Applicant Name	Asian Pacific Environmental Network (APEN)
Project Location	Richmond
Overall Funding Request	$200,000
Grant Term Request	2 Years (24 months)
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	NA
Project Lead	NA
Project Location	NA
Project Funding Request	NA

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The Asian Pacific Environmental Network (APEN)'s SEED proposal represents the Community Visioning phase for the creation of an Asian Wellness and Resilience Center (Center) in Richmond. Our members are poor and working class Asian immigrants and refugees, most of whom live along the fencelines of some of the worst air and other toxic pollution census tracts in Richmond. Building upon three decades of facilitating community-led solutions with members – including the creation of Contra Costa County's first multilingual refinery fire warning system and other landmark wins – APEN will envision a Center designed to meet the holistic wellness and resilience needs and priorities of Greater Richmond's Asian frontline residents. This project builds upon APEN's prior strategic planning work done by our members, staff, board, and local allies, who collectively identified place-based needs and priorities for a thriving resilient community in Richmond. Two of their top four priorities were: **Clean Air**, Water, and Land for a Future Beyond Chevron; and **Spaces and Services that Promote Community Health and Community Connection.** This SEED project is a timely next step toward actualizing a Center that is culturally competent and responsive, that will improve health outcomes and strengthen resilience in the face of air pollution and other environmental injustices.

As with all of APEN's work, we model the Jemez Principles for Democratic Organizing, and **will center community expertise, leadership, and decision-making throughout the life cycle of this project**. While honoring the lived experiences and cultural wisdom of our members, APEN will build their knowledge and leadership toward making informed decisions around a range of holistic needs that the Center can meet, such as in-language health services and resource linkages; climate resilience infrastructure and supplies (e.g., air purifiers for wildfire smoke, cooling centers for extreme heat, renewable backup power for outages, etc.); and more. During PHASE ONE, members will also identify and engage other key frontline Asian communities for their input on the Center. APEN will then consolidate community recommendations into a preliminary Visioning and Scope of Work (V&SOW) and commission a Feasibility Report based on the V&SOW. PHASE ONE will also include evaluations during and at the end of the project, when we will also explore next steps for Phase Two and beyond. **With our deep roots in Richmond's Asian communities, our connections across a broad ecosystem of organizations, and our expertise in climate resilience, APEN is situated as a trusted initiator of this project.**

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*

This PHASE ONE of APEN's project directly aligns with the LBCF's strategy to **'improve health outcomes by reducing air pollution'** as well as other environmental emergencies. In response to the barriers Richmond's Asian frontline communities face within existing health and wellness systems (e.g., limited access to in-language care or understanding around histories of displacement and trauma), the project will increase our members' capacity to determine what – and who else – is needed to improve their health, wellness, and resilience outcomes. Members may explore a range of in-language and culturally responsive strategies, such as educating local frontline Asian communities about how to protect themselves against air pollution; distributing mitigation resources (e.g., air purifiers / monitors); connecting them to community healthcare providers and services; ensuring emergency preparedness and resources during extreme weather, poor air quality, and other climate disasters; providing urban greening spaces for cooling, healing, and sustenance; supporting cultural practices for social cohesion and meaning-making; and more. PHASE ONE also includes commissioning a Feasibility Report, which will engage technical partners with the expertise to help us explore a green and healthy building model for the Center, with clean energy, air quality monitoring and filtration, etc.

While not within the scope of PHASE ONE, APEN anticipates that the Center will later address the LCBF's second strategy, 'to build economic resilience for just transition

projects.' When exploring potential sites for the Center, we may re-envision land use and/or consider adding workforce development in clean, high-road economic pathways (APEN played a lead role in the Contra Costa Refinery Transition Partnership Report, which made policy recommendations that prioritize the needs of refinery workers and affected communities in the energy transition).

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

This SEED project will focus on serving the frontline Asian immigrant and refugee communities living in **Greater Richmond in West Contra Costa County**, including the cities and unincorporated areas of Richmond, North Richmond, El Sobrante, and San Pablo, which are located in the Path to Clean Air Community Emissions Reduction Plan area, a designated Assembly Bill (AB) 617 Community. These residents are exposed to toxins on many fronts – from the nearby oil refinery, seaport and rail activities, chemical plant, gypsum product manufacturing, landfills, and water treatment facility as well as two major interstate freeways, resulting in more asthma emergency room visits and higher rates of cardiovascular disease than in other parts of the region.

As part of our theory of change, APEN's primary commitment is to frontline Asian immigrants and refugees *as people,* over specific addresses. Our frontline members are poor and working class Lao, Mien, and Khmu refugees as well as youth from Yemeni, Uzbekistani, and Nepalese newcomer families. Their neighborhoods rank 75% or higher on the CalEnviroScreen. Most face a polycrisis of environmental injustice, structural racism, limited economic opportunity, linguistic isolation, and trauma. To protect this group from air pollution and other environmental health risks, APEN members will start by scoping the needs and priorities for this Center. Based on these priorities, they will later consider potential sites / locations for the Center toward the end of PHASE ONE.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

APEN's **community engagement methods** increase the capacity of our members to become *powerful and effective community leaders.* Our wide range of programs provide in-language issue education; hands-on policy advocacy skills; and in-depth opportunities to organize with other frontline communities. We provide leadership development through our annual APEN Academy (multi-day trainings on environmental

justice and Just Transition); Action Teams and Advisory Groups (for focused initiatives or campaigns); paid internships and fellowships (to lead specific projects and/or conduct research); and 1:1 coaching (e.g., to strengthen spokespersoning skills) with staff, some who are from the frontline communities we serve, who first joined as participants and now bring invaluable lived experience and cultural knowledge to our programs and activities. Another core 'method' is to build community capacity over the long-term. Many of our Richmond members have been organizing with us for over three decades, steadily growing their leadership to address challenges as they evolve, co-envision solutions, and guide APEN as a partner. Today, APEN organizes three generations of members in Richmond, who collaborate and learn from one another intergenerationally.

The community needs for this project were identified through several processes and resources, most significantly: 1) **Building Climate Resilience** at Richmond's RYSE Center; 2) **APEN's Resilient Communities Visioning**; and 3) the *Concept Paper for **The AAPI Resource and Wellness Center** in West Contra Costa County (Concept Paper)*, an extensive community health needs assessment documented by Sery Tatpaporn, an APEN member and ally. [note: while the Concept Paper uses 'AAPI' (Asian Americans and Pacific Islanders), APEN uses the descriptor 'Asian' to refer to those of Asian descent regardless of citizenship status or geographic origin.]

APEN and RYSE have a decades-long partnership of shared collaboration, commitment to community care, and power building for systems transformation. Beginning in 2020, APEN and RYSE partnered to embed youth-led climate resilience approaches at the emerging **RYSE Commons Climate Resilience and Liberation Hub** (RYSE Commons). We engaged youth members around the need for resilience hubs, emergency preparedness, energy democracy, and storytelling, and APEN youth created a climate resilience survey with which they captured the needs and priorities of young people across Richmond. With information from technical partners, youth gave RYSE feedback on the solar and clean energy battery design, determined 'critical loads' on site, and interviewed solar installers. The resulting solar power+storage upgrades supports 100% of the campus' annual electric usage and up to 25% of stored energy in the advent of an outage. RYSE Commons officially opened in 2022, and APEN and RYSE youth continue to collaborate on emergency preparedness advocacy and activities. This Climate Resilience-Building collaboration highlighted for us the *value and feasibility* of community-led resilience centers, strengthening our technical expertise and community engagement experience, and setting us up to help realize a wellness and resilience center designed by and for Richmond's frontline Asian communities.

In 2023-2024, **APEN conducted a four-part Resilient Communities Visioning** process across our bases in Richmond, Oakland, and Los Angeles county, during which

members identified what a thriving, resilient community would look like in each area. After articulating their core values and identifying priority needs, members in each of our bases discussed and visually mapped potential scenarios and strategies within the context of where they live, work, and play. In Richmond, they surfaced the need for robust public investment in infrastructure and services for community health, wellbeing, and economic stability, including community resilience centers. In fact, they identified four key priorities: 1) **Clean Air**, Water, and Land for a Future Beyond Chevron; 2) **Spaces and Services that Promote Community Health and Community Connection**; 3) Safe, Healthy, Affordable Housing; and 4) Building a Vibrant Local Economies that Meet Community Needs. This SEED project directly advances these priorities, especially #2.

More recently, a new resource, ***The Concept Paper for The AAPI Resource and Wellness Center in West Contra Costa County (Concept Paper),*** developed by community leader Sery Tatpapor – who also is an APEN member and ally – *further confirmed the need for this Center*. In 2025, County officials conducted a series of community health needs assessments of its AAPI residents, with a coalition of advisory partners, listening sessions and health forums, surveys, and town halls. The Concept Paper summarized what emerged from these conversations – the complexity of the County's AAPI demographics, their unique set of needs, and a list of mitigating strategies and recommendations. CCC is very diverse, racially as well as culturally. AAPI residents represent nearly 19% of CCC's population; in West Contra Costa County (WCCC), they make up almost 32%, highlighting their "crucial role in shaping the region's social and cultural landscape." Key findings revealed a complex interplay of socioeconomic instability, profound trauma (war and generational), linguistic exclusion, and a systemic lack of resources tailored to refugee and immigrant experiences. The Concept Paper notes, "the health landscape of WCCC's AAPI community is characterized by significant internal variance, often rendering the specific needs of smaller, linguistically distinct, and socioeconomically vulnerable subgroups invisible, especially as a region with a substantial yet often underserved refugee and immigrant population. Communities such as newly arrived Afghan refugees, and long-standing Tibetan, Laotian, and Nepalese populations, face amplified risks related to physical and mental health due to historical trauma, acculturation pressures, and systemic barriers in receiving care (e.g., lack of linguistic access and cultural relevance)." In response, one of the Concept Paper's recommendations was for the creation of a centralized '**Multilingual and Multicultural Wellness Center for WCCC's AAPIs**.'

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition*

challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.

In response to the priorities identified above by community members, APEN's SEED project **addresses the clear need** for a future Asian Wellness and Resilience Center (Center), designed by and for Richmond's frontline Asian immigrants and refugees. Through the **Community Visioning** process, our members will develop leadership and decision making skills, setting them up to be the primary contributors to the Center's V&SOW. This approach reflects the Jemez Principles for Democratic Organizing – *be inclusive; emphasize bottom-up organizing; let people speak for themselves; work together in solidarity and mutuality; build just relationships among ourselves; and commit to self-transformation* – which inform a foundational framework for environmental justice work. APEN has seen what happens when top-down initiatives exclude or tokenize frontline communities: not only do these efforts reinforce systemic inequities, but they also lead to false solutions that perpetuate harm.

In response, APEN's project takes the CCC's AAPI community health needs assessment work, which surfaced the need for a 'Multilingual and Multicultural Wellness Center for WCCC's AAPIs,' and explores a more holistic scope of work including climate resilience infrastructure, culturally-honored wellness practices, and ongoing leadership training so that Asian frontline communities retain the power to shape its evolution. By engaging the community in the Center's development, APEN will foster a sense of pride, buy-in, and ongoing commitment to the Center, thereby generating excitement to utilize it robustly in the future. With 30+ years of engaging members to win numerous systems changes – including the creation of CCC's first multilingual refinery fire warning system – APEN is uniquely positioned to advance this project, in order to **benefit** frontline Asian immigrants and refugees in Greater Richmond.

In PHASE ONE (Planning), the project will first engage APEN's Richmond members, who include poor and working class Lao, Mien, and Khmu refugees as well as youth from Yemeni, Uzbekistani, and Nepalese newcomer families. Many speak a range of non-English languages and dialects, especially the elders and newcomers, who are also *valued culture-keepers* – of gardening for food and medicine; social and artistic practices for healing and meaning-making; and strong lived histories that inspire solutions- and resilience-building in today's context. As part of Richmond's frontline and fenceline communities**,** though, they face disproportionate exposure to many **environmental injustices**, including health-harming toxins from nearby heavy industries (e.g., the Chevron refinery is responsible for 5-11 premature deaths each year and Richmond's asthma rates are 90% higher than for other Californians), as well

as from climate emergencies caused by the same industries (e.g., wildfires, extreme heat, drought, power outages, etc.). Most of APEN's Richmond community members are also trauma survivors from wars and political instability, displacement and forced migration, systemic racism and now federal threats to immigrant rights. This project's community-led process provides important opportunities for members to engage in civic participation, create greater social cohesion, build leadership and governance skills, and be part of a long-term process that advances their communities' well-being.

During PHASE ONE, members will also identify and engage several other Asian frontline communities to ensure that their perspectives are integrated in this initial effort. They will tap organizations serving and/or community representatives of other Asian ethnicities, neighborhoods, community centers, churches, schools, public health clinics, etc. Once we have consolidated a preliminary V&SOW, APEN will commission a Feasibility Study based on the V&SOW, with considerations around technical infrastructure, community health, urban greening, and cultural wellness programming.

While outside the scope of PHASE ONE, APEN imagines a Center that has the potential, when operational, to provide a cohesive in-language hub for navigating complex systems, accessing essential services, and reducing social isolation. It may host a culturally competent **public health** clinic to educate and heal those impacted by air pollution and other harms. To mitigate against environmental disasters and extreme weather events, it may offer emergency preparedness training as well as resources such as air purifiers and monitors for air pollution, hotspots and back-up power during outages, etc. The site itself also presents an opportunity for decarbonization and solar + storage systems that contribute towards our region's air quality and clean energy goals. In support of the community's needs for holistic wellness and resilience, the Center may also become an important space for environmental justice organizing, just transition workforce development, and / or culturally-honored practices for healing and meaning-making such as traditional dance or gardening.

The project's **measurable outcomes will demonstrate specific and feasible progress** as determined by feedback from the participating community as well as our consultants and other key stakeholders.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

APEN's community engagement '**methods**' will primarily take place in person, and will include 1) an **introductory meeting** outlining the Visioning Process for APEN members, contextualizing the SEED grant within their prior work, and the **benefits** they can help realize through this Wellness and Resilience Center (Center). 2) **Visioning workshops** that will engage APEN members as participants, while identifying a smaller group to be project advisors. 3) This **Advisory Group** will meet regularly (cadence tbd) with APEN staff to share updates, discuss implementation progress, offer pivots, and recommend and implement next steps. 4) To keep other members updated, APEN will use **existing member meetings**, which will be co-facilitated by Advisory Group members. 5) Advisory Group members will also help co-lead **discussions with other stakeholders** in the later stages of PHASE ONE (i.e., other frontline Asian residents, consultants and potential future partners, including local government, etc.).

Other methods include community-centered presentations, hand outs, and digital communication pieces (with translation in multiple languages) designed and delivered by APEN members; special workshops / trainings for deeper skills- and knowledge-building (e.g., with technical consultants around air quality, etc.); site visits and/or field trips to other community based organizations (to look at models and case studies). Each method will include opportunities for all members to raise questions and recommendations, and participate in decision making.

Community feedback will be solicited during each of these activities – for instance, feedback may be generated through collaborative small group activities with report-backs, large group discussions, and visual mapping. Other methods include a 1:1 coaching session with APEN staff or through a survey or written format. **This feedback is considered as the *primary* measure of the project's progress**, its need for modification, and confirmation of next steps. APEN staff will also document, integrate, and **track feedback against the key indicators** in our Measurable Outcomes Plan.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The **overall vision** of this project, **Richmond Asian Wellness and Resilience Center: PHASE ONE (Planning),** is to engage local frontline Asian immigrants and refugees to co-envision a new Asian Wellness and Resilience Center, designed to serve their unique set of needs. This SEED proposal focuses on a deep Community Visioning process, a subsequent Feasibility Report, and early considerations for Phase Two of the

project. The community will drive the vision and scope of the Center, which has the potential to become a culturally-honored safe space with services, resources, and educational workshops to mitigate the harm from air pollution and other environmental threats. In addition to in-language health services, members will visualize a component for climate resilience. With cooling/clean air spaces and mitigation supply distribution (PPEs, air purifiers, mobile hotspots for power outages, etc.), the climate resilience hub may also launch community education, awareness- raising, and emergency preparedness initiatives to increase the community's ability to withstand extreme heat, wildfire smoke, and other climate impacts.

APEN's five measurable outcomes are:

1. APEN will engage our Richmond members in a Community Visioning process to create a preliminary V&SOW for a future Asian Wellness and Resilience Center (the Center) in Richmond.
2. APEN will ensure that the needs and hopes of other local Asian immigrant and refugee communities are included in the preliminary V&SOW.
3. APEN will commission a Feasibility Report on what it would take to holistically manifest the V&SOW. The report will also consider technical, community health, urban greening, and cultural wellness programming factors while weighing costs, risks, and benefits across construction and operations criteria. Construction feasibility may include financing for facility renovation, site remediation, and resilience infrastructure. Operations feasibility may include criteria for ownership, governance, and financing for long term operations and maintenance.
4. APEN's members will increase their leadership capacity to develop, plan, and advocate for a Center designed by and for the frontline Asian communities.
5. APEN will explore next steps for the Project's Phase Two and beyond by disseminating the Feasibility Report findings first with members, and then with entities / partners who have the interest and capacity to potentially carry the Project over the long-term, including local government. By initiating these conversations now, APEN will help generate awareness and excitement about the Center, widening the pool of stakeholders and thought partners.

As the Lead Applicant, APEN's role in the LCBF project is to:

1. Manage the contract and meet all deliverables and compliance requirements.
2. Ensure that those we engage (our members, other Asian immigrant and refugee participants, informal partners) are valued and supported with cultural responsiveness (e.g., providing oral and written translation).
3. Design and implement the Project Plan, keeping our community centered, apprised in facilitating activities, monitoring progress, and making modifications.
4. Increase APEN members' leadership capacity to develop and advocate for a

Center designed by and for frontline Asian immigrant and refugee communities.

5. Commission and oversee the Feasibility Report, contracting values-aligned consultants, who will build upon the community's V&SOW and contribute a range of practical considerations, including a short list of potential sites for the Center.
6. Explore next steps by disseminating the Feasibility Report first with Members, and then with entities / partners who have interest and capacity to potentially carry the Project over the long-term, including local government. By initiating these conversations now, APEN will help generate awareness and excitement about the Center, widening the pool of stakeholders and thought partners.

Potential Consultants may include those with expertise in:

1. Mitigating Air Pollution / Technical Infrastructure: PSE Healthy Energy creates data sets on air quality / pollution impacts on communities with socioeconomic and demographic information about sensitive populations, including frontline Asian communities; PSE is interested in climate resilience hubs.
2. Community Health: The Community Health for Asian Americans and ABLE Community Development Foundation co-conducted the first AAPI Community Health Forum, out of which the idea for a AAPI Wellness Center was born. Their Asian Community Behavioral Health Program may be a resource for our project - embedded in Richmond's Southeast and South Asian communities, their community health workers identify physical, mental, and family health issues.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Personnel/Staff costs include direct staff time costs of the Project Lead (Resilience Projects Director) and APEN's team of Richmond Organizers and Operations support staff, who will work together to implement the Project. To honor APEN members' participation and leadership, we provide a community stipend, and all activities, meetings, etc. will be supported by oral translators in our members' languages and dialects. Guest speakers will also come to conduct trainings so that our members are positioned to make informed decisions. Other key costs include materials for activities; digital design, translation, and printing services for community surveys; and fees for several different consultants contributing to the Feasibility Report.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The project is consistent with several community, local, regional, and statewide initiatives/plans including:

1. Community Air Protection Program (AB 617): to reduce exposure in communities most impacted by air pollution, on bad air days our Center will provide access to in-language medical care; rooms with HVAC air filtration and cooling systems; supplies (e.g.,mobile air purifiers / monitors, PPEs, etc.
2. Richmond Climate Action Plan coincides with our project's goal to improve community preparedness for climate emergencies and to increase resilience of critical infrastructure (e.g., clean energy and green building codes).
3. Contra Costa County (CCC) Climate Action Plan similarly aligns in protecting communities against climate changes by establishing green infrastructure and maintaining community resilience hubs.
4. PSE Healthy Energy's Mapping Climate Vulnerability and Air Pollution in CCC study, which expanded the Richmond Air Monitoring Network, includes data on CCC's Asian population density with levels of pollution per council district.
5. Emergency Plan Cultural Competency Bill (SB 160), which APEN worked on, requires counties in California to integrate cultural competence into their updated emergency plans, communications, evacuation / sheltering, preparedness, etc.
6. Strategic Growth Council's Community Resilience Center (CRC) Program, which APEN helped actualize, invests in mitigating public health impacts of climate change through community engagement and shared decision-making models toward CRC planning, construction, and/or retrofit to increase frontline communities' capacity to plan for long-term resilience acute emergencies.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Highlights from our experience with projects of similar scope, size, and complexity include:

In **Richmond**, as previously detailed, one of APEN's many long-term partnerships has been with RYSE, most recently to engage our shared membership to co-envision the

climate resilience features of the RYSE Commons Climate Resilience and Liberation Hub (RYSE Commons). We helped lead its solar power project, working with vendors, utility companies, and securing and managing capital grants. In 2023, APEN also helped coordinate a site visit with the U.S. Department of Treasury; as a result, RYSE Commons was lifted up as a model for community-driven projects that link grassroots vision, foundation funding, and government tax credits to build a resilience hub. In 2025, APEN and RYSE co-produced the asset, *Building a Youth-Led Climate Resilience and Liberation Hub in Richmond.* Building upon our decades-long partnership, APEN and RYSE continue to collaborate on initiatives that center and uplift those most impacted by interrelated climate, health, economic, and political crises.

In **Oakland Chinatown**, where we have been organizing since the early 2000's, APEN and local advocacy partners worked with the City of Oakland's Sustainability and Resilience Division to ensure that the priorities of Chinatown's frontline residents were centered in its 2030 Equitable Climate Action Plan. As a result, the City prioritized the renovation of the aging but robustly utilized Lincoln Square Park and Recreation Center, "the heartbeat of Chinatown," to become its first community-informed Municipal Resilience Hub. As the lead applicant on multiple grants, including two California EPA EJ Action contracts (totalling nearly $300,000), and as one of five national awardees of the Partners for Places: Round 21($225,000), APEN has elevated the capacity of frontline community members to envision, plan, advocate for, and imminently to realize a culturally responsive wellness and resilience center in the heart of Chinatown. Groundbreaking is planned for Fall 2026.

Other related Project Lead experiences include multi-year initiatives including the Climate Change and Health Equity 2.0 program, funded by the Kresge Foundation, to organize frontline Asian communities for Just Transition commitments in both Richmond as well as Los Angeles County, in collaboration with health equity partners ($625,000 over three years); and two grants from the Hellman Foundation's Richmond Park Equity Program to support planning for a culturally-honored urban garden and green space for intergenerational and cross-racial power building (totalling $1,000,000 over three years).

Since March 2026, APEN has been in conversation with the Office of Contra Costa County (CCC) Supervisor John Gioia, District 1, which has been keen to address the need for more culturally-competent health services for CCC's AAPI residents, especially in West Contra Costa County (WCCC). For decades, APEN and Supervisor Gioia have collaboratively advocated for the fenceline Laotian communities impacted by the Chevron refinery. Building upon this long-term relationship, we will informally continue to support one another during the PLANNING PHASE for the grassroots visioning of the Asian Wellness and Resilience Center in Richmond.

APEN has also built strong partnerships with multi-racial ally organizations, labor unions, and Asian community organizations while also developing expertise in creating resilience centers that are community-centered and designed. **With our deep roots in Richmond's Asian communities, our connections across a broad ecosystem of organizations, and our expertise in climate resilience, APEN is situated as a trusted initiator of this project.**

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

Project implementation will be led by APEN's Resilience Projects Director, who will manage all aspects of the contract collaborating with a strong team of Richmond organizing and administrative staff, and administrative functions as well as coordinating with external consultants, informal partners, and BAAQMD. The Resilience Projects Director will also monitor the project's progress by helping to develop assessment tools and timelines, facilitating community feedback opportunities, and reporting on outcomes and milestones. Finally, the Resilience Projects Director will lead a process for PHASE ONE evaluation and the exploration of Phase Two and beyond. **FTE positions** include: Resilience Projects Director (0.10 FTE); Richmond Organizing Director (0.05 FTE); Richmond Lead Organizer (0.10 FTE); Richmond Community Organizer (0.10 FTE); Richmond Senior Youth Organizer (0.10 FTE); Richmond Operations Associate (0.10 FTE). **Additional sources of funding**: none, the BAAQMD LCBF Round 1 is the sole source of funding for this SEED proposal.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- *Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.*
- *If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.*
- *Indicate "N/A" if the question is not applicable to the project*

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.* **NA**

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.* **NA**

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.* **NA**

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.* **NA**

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Mitigating the uncertainty of the current political environment. Over the past two years, we have seen aggressive federal attacks on immigrant rights, the social safety net, as well as hard won policies for environmental justice and climate resilience, all things that make the development of this Center more challenging *and more crucial*. To keep our communities safe and resilient in these times, APEN conducted a members needs assessment in 2025, which informed our rapid response. We quickly established an Immigrant Defense Action Team (with intergenerational APEN members as well as leaders from the broader Richmond Laotian community). Together with key local partners, we quickly implemented Know Your Rights trainings; Richmond's first Laotian Immigration Community Forum (that provided free access to legal services, etc.); and a resource distribution drive to over 200 local Laotian businesses and community centers. APEN will continue to protect our community as threats evolve, so that *the community can continue to lead and be engaged with this project*. We also conduct annual and semi-annual workplanning, which enables us to recalibrate our goals and activities as needed, and create the capacity to implement our priorities. We also have two strategic pathways that serve as north stars over the next 10-15 years. With this long view, we are experienced in creating iterative stages for each program, including large scale projects such as this one.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	**Richmond Asian Wellness and Resilience Center: PHASE ONE (PLANNING)** - Establish a new wellness and resilience center designed by and for frontline Asian immigrants and refugees in Greater Richmond, who face ongoing and disproportionate barriers to health and other holistic wellness services due to language, cultural competency, and other access challenges. This SEED proposal focuses on a Community Visioning process to generate and document the frontline communities' Vision and Scope of Work, a related Feasibility Report, and early considerations for Phase Two of the project. (This PLANNING PHASE is the first step in a long-term project)

Measurable Outcome	Indicator(s)
1. APEN will engage our Richmond community members (Members) in a Community Visioning process to **co-create a preliminary Vision and Scope of Work** (V&SOW) for a future Asian Wellness and Resilience Center (the Center) in Richmond.	• At least 25-35 Members engage in and complete a series of community visioning workshops to develop aspects of their 'ideal Center' including its purpose, use, and niche; range and types of services and programming; preferred site / location / access criteria; and priority organizational partnerships. • A Member-driven preliminary V&SOW is created and documented. • At least five APEN Members commit to playing leadership roles in the design process, who will join an Advisory Group to help guide the remainder of this Planning Phase.
2. APEN will ensure that the needs and hopes of **other local Asian immigrant and refugee communities are included** in the preliminary Vision and Scope of Work (V&SOW).	• APEN Members will identify at least two other Asian immigrant and refugee communities – beyond APEN's current local networks – for intentional inclusion. These may include Asian communities of different ethnicities / languages; a variety of community and cultural groups (e.g., schools, social clubs, faith-based gatherings, senior centers, dance groups, sports clubs, and/or local businesses), and / or extended family, neighbors, and peers. • APEN Members will shape, distribute, and collect surveys of people from these additional communities; at least 50 surveys will be completed.

	● With input from the Advisory Group, APEN staff aggregate and interpret surveys, drawing at least five priorities, questions and/or unexpected discoveries, to be included in the V&SOW.
3. APEN will commission **a Feasibility Report** on what it would take to holistically manifest the V&SOW. The report will also consider technical, community health, urban greening, and cultural wellness programming factors. The Report will weigh costs, risks, and benefits across construction and operations criteria. Construction feasibility may include financing for facility renovation, site remediation, and resilience infrastructure. Operations feasibility may include criteria for ownership, governance, and financing for long term operations and maintenance.	● APEN and the Advisory Group identify at least five consultant selection criteria (e.g., expertise in technical, community health, urban greening, and cultural wellness programming; knowledge of priority neighborhoods, etc.), which leads to the first outreach. The Advisory Group contributes to the consultant selection process (e.g., reviewing their profiles; participating in interviews; etc.) ● APEN engages at least 2-4 Consultants, who meet the following holistic range of expertise needs: o Technical Infrastructure partner(s) to provide guidance on Resilience Infrastructure such as an HVAC system for air filtration and heating / cooling with adaptive capacity to mitigate harm from a range of poor air quality situations (e.g., from refinery fire and wildfires to virus outbreaks and other public health crises); a PV solar power system with battery storage, weatherization and energy efficiency. o Community Health partner(s) to recommend a list of culturally competent emergency preparedness trainers for workshops and trainings with supplies on hand; public health practitioners with language and cultural

	competencies; and clinical grade investments for physical and mental health services. o Urban Greening partner(s) to recommend green building designs to improve local air quality, with passive cooling capacity; water wise / water recycling methods for climate resilience; bioremediation and land clean up needs; and urban gardening practices for traditional medicine and food justice. o Cultural Wellness Programming partner(s) to recommend 'essential wellness' services (e.g., traditional arts and practices, meditation, etc.); and who would want to use the space and what their needs would be to do so. ● The Feasibility Report will be compiled by a partner equipped to synthesize the inputs from the various consultants above, with input from APEN staff, Members, and Advisory Group Members. The report will include a list of at least two potential sites for future consideration.
4. APEN's **Members will increase their leadership capacity to develop, plan, and later advocate for an Asian Wellness and Resilience Center** in Richmond that is designed by and for its key frontline Asian immigrant and refugee communities.	● Using a pre- and post-assessment tool, at least 50% of Members will show increased knowledge, skills, and / or confidence in envisioning and developing a V&SOW for the Center. ● The Advisory Group Members demonstrate increased skills and confidence in advocating for the Project at one APEN

	and/or one external forum (e.g., meeting with potential consultants or partners). ● Members learn to produce content for at least two digital communication pieces, disseminated on APEN's social media channels, to inform the greater public and generate excitement about a future Center.
5. **APEN will explore our next steps for the Project's Phase Two and beyond** by disseminating the Feasibility Report findings first with Members, and then with entities / partners who have the interest and capacity to potentially carry the Project over the **long-term, including local government.** By initiating these conversations now, APEN will help generate awareness and excitement about the Center, widening the pool of stakeholders and thought partners.	● APEN will hold at least 8 meetings with Advisory Group Members and APEN Members to review the Feasibility Report findings and identify next steps in the planning process. ● Building upon existing relationships, APEN will meet with at least two potential long-term partners, including at least one local government agency, with the capacity to provide infrastructure, administrative, and / or culturally competent service support for the Center. ● In these exploratory meetings, APEN and potential partners discuss their respective potential roles regarding, for example, long-term management, operations and maintenance, and other requirements. ● Clarifying these roles will aid in determining next steps.

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. APEN will engage our Richmond community Members (Members) in a Community Visioning process to **co-create a preliminary Vision and Scope of Work** (V&SOW) for a future Asian Wellness and Resilience Center (the Center) in Richmond.	A. Members' Community Visioning Workshop series and Workplan developed	1. APEN designs the Community Visioning workshop process, and develops an integrated Workplan, including an Evaluation approach.	APEN		Months 1-3
		2. APEN confirms Guest Speakers to present relevant considerations for air quality, climate resilience, public health, land use, and cultural wellness work during the Community Visioning process.	APEN	TBD	Months 3-4
		3. APEN conducts outreach to Richmond Members and informs them of the upcoming Community Visioning process to ensure maximum participation.	APEN		Months 3-4
	B. Workshop series conducted and completed, resulting in a Workshop Synthesis shared with Members for feedback and recommendations.	1. APEN leads Community Visioning workshops, which include pre- and post-evaluations to assess changes in Members' knowledge, skills, and confidence in co-creating a V&SOW for the Center.	APEN		Months 5-9
		2. Members Evaluation and Synthesis of workshop findings completed.	APEN		Months 10-12
		3. Synthesis shared with Members for two-way communication (to discuss feedback, modifications, and recommendations)	APEN		Months 10-12
		4. Advisory Group formed with at least five Members who wish to take on more leadership roles in the Project.	APEN		Months 10-12
	C. Preliminary V&SOW drafted and shared with larger APEN community	1. Incorporating Member input, draft a preliminary V&SOW, identifying questions around: other Asian communities beyond APEN's membership APEN should include during this Planning Phase; and the types of consultants APEN should engage to further	APEN		Months 13-14

		understand how to create the Center (e.g., technical, public health, cultural, etc.)			
		2. Advisory Group informally shares the preliminary V&SOW with APEN's members from our other bases [Oakland, Los Angeles, and across the state], such as at our annual All Members Meetings (which commonly include family, friends, allies, funders, and other guests), to exchange ideas, project design and vision.	APEN		Months 13-14
2. APEN will ensure that the needs and hopes of **other local Asian immigrant and refugee communities are included** in the preliminary Vision and Scope of Work (V&SOW).	A. Other key local Asian immigrant and refugee communities identified	1. Guided by recommendations above, APEN supports Members to identify <u>at least two</u> other Asian immigrant and refugee communities in Richmond – beyond APEN's current membership – whose inputs will be essential to this preliminary V&SOW; as well as what is needed to meaningfully survey those communities (e.g., translation, in-person interactions, warm introductions, etc.)	APEN		Months 15-16
	B. Community Surveys created	1. Train Advisory Group to design Survey approach and draft questions	APEN		Months 15-19
		2. Survey drafts reviewed by APEN, then finalized and translated, as needed.	APEN	Translators	Months 15-19
	C. Survey distribution plan completed	1. Staff and Advisory Group create an Outreach Map (e.g., at culturally-specific CBOs, community hubs, social spaces, clinics, as well as tabling opportunities) and Plan (e.g., number of surveys, timeline, contingencies).	APEN		Months 15-19
	D. Surveys conducted	1. Members conduct surveys with the target communities; <u>at least 50</u> community surveys are completed.	APEN	TBD	Months 15-19
		2. APEN supports the Advisory Group in interpreting surveys, drawing <u>at least five</u> priorities, questions and/or unexpected discoveries, which will be			Months 15-19

		informally shared with Members for their feedback.			
	D. Integrate key Survey Results into the V&SOW	1. Guided by Members' feedback, APEN incorporates and integrates at least 2-3 broader community survey results into the V&SOW, which will inform the Feasibility Report.	APEN		Months 15-19
3. APEN will commission a **Feasibility Report** on what it would take to holistically manifest the V&SOW. The report will also consider technical, community health, urban greening, and cultural wellness programming factors. The Report will weigh costs, risks, and benefits across construction and operations criteria. Construction feasibility may	A. Outreach to potential Consultants	1. With the Advisory Group, APEN identifies consultant selection criteria (e.g., with expertise in technical, community health, urban greening, and cultural wellness programming factors as well as knowledge of priority neighborhoods, etc.)	APEN		Months 15-19
		2. APEN and Advisory Group outreach to candidates, identifying at least 2-4 for follow-up meetings.			Months 15-19
		3. Schedule follow-up meetings to explore contributions to the Feasibility Report.			Months 15-19
	B. Meet with potential candidates, and finalize selections of and terms for at least 2-4 Consultants, including identifying one Consultant as the Lead who will also produce the Feasibility Report	1. Exploration meetings held with at least two potential Consultants.			Months 15-19
		2. The Advisory Group Members participate in the consultant outreach and selection process (e.g., profile reviews; participating in interviews; etc.)	APEN		Months 15-19
		3. APEN and Advisory Group finalize at least two Consultants and confirm Consultant roles and deliverables, including which Consultant will act as the Feasibility Report Lead; execute MOUs with each.	APEN		Months 15-19

include financing for facility renovation, site remediation, and resilience infrastructure. Operations feasibility may include criteria for ownership, governance, and financing for long term operations and maintenance.	C. Consultants provide a range of recommendations and resources, trainings, and content for the Feasibility Report	1. All Consultants execute their SOW, which may include: a. Technical Infrastructure guidance on Resilience Infrastructure such as an HVAC system for air filtration and heating / cooling with adaptive capacity to mitigate harm from a range of poor air quality situations (e.g., from refinery fire and wildfires to virus outbreaks and other public health crises); a PV solar power system with battery storage, weatherization and energy efficiency. b. Community Health recommendations for public health practitioners with language and cultural competencies; emergency preparedness workshops with supplies on hand; and clinical grade investments for physical and mental health needs. c. Urban Greening building design suggestions to improve air quality, with passive cooling capacity; water wise / water recycling methods for climate resilience; bioremediation and land clean up needs; and urban gardening practices for traditional medicine and food justice. d. Cultural Wellness Programming suggestions (e.g., traditional arts and practices, meditation, etc.) and requirements therein (e.g., culturally responsive practitioners, quiet space, etc.).	APEN	TBD	Months 19-22
		2. Guided by the V&SOW and APEN, the Feasibility Report will be compiled by one of the partners above, with the aim to include a list of at <u>least 2-3</u> potential sites for future consideration.	APEN	TBD	Months 19-22

4. APEN's **Members will increase their leadership capacity to develop, plan, and later advocate for an Asian Wellness and Resilience Center** in Richmond that is designed by and for its key frontline Asian immigrant and refugee communities.	A. Through periodic quantitative and qualitative evaluations during the Planning Phase, Members demonstrate increased leadership capacity.	1. Members take a pre-Community Visioning survey to establish a baseline of knowledge, leadership skills, and confidence in helping to develop the V&SOW for the Center. This is followed up with a post-Community Visioning survey to quantitatively gauge changes in knowledge, leadership skills, and confidence.	APEN		Months 5-10
		2. Qualitative progress is assessed through periodic group check in's, staff observations of Members' participation in larger activities (e.g., conducting community Surveys, responding to Feasibility Report), and outputs generated by Members (e.g., social media content, writing, etc.).	APEN		Months 5-24
	B. Through ongoing evaluations during the Planning Phase, the Advisory Group Members demonstrate increased leadership capacity.	1. Through discussions with staff and peers, Advisory Group Members qualitatively demonstrate increased leadership by: a. sharing Project updates and soliciting feedback at a minimum of one APEN forum (e.g., annual Leaders Assembly, a board meeting, a leader meeting, etc.) and b. contributing to and participating in at least one external forum (e.g., with Feasibility Report Consultants, potential long-term partners, other public forums, etc.).	APEN		Months 5-24
		2. Members learn to produce content for at least two digital communication pieces, disseminated on APEN's social media channels, to inform the greater public and generate excitement about a future Center.	APEN		Months 5-24
5. **APEN explores our next steps for**	A. Members provide responses to	1. APEN and the Advisory Group share the Feasibility Report with Members, and facilitate discussion on the Report's recommendations and	APEN		Months 23-24

the Project's Phase Two and beyond by sharing the Feasibility Report first with Members, and then with entities / partners who have the interest and capacity to potentially carry the Project over the **long-term, including local government.** By initiating these conversations now, APEN will help generate awareness and excitement about the Center, widening the pool of stakeholders and thought partners.	the Feasibility Report and next steps for the Project	a. Members offer guidance on the Project's next steps, including whether to bring 'other community voices' into the Advisory Group for Phase Two (e.g., other Asian ethnic representatives, other cross-sectoral experts, etc.). b. Members express where and with whom they would like to see the Center located and operate; Members provide a list of <u>at least two</u> viable long-term partners, including a local government agency.			
	B. APEN confirms next steps, and conducts Phase Two outreach as informed by Members.	1. APEN and the Advisory Group confirm next steps, and conduct outreach to '<u>other community voices</u>' for potential involvement in Phase Two; <u>at least one new 'voice</u>' expresses interest in joining the Advisory Group in Phase Two.	APEN	TBD	Months 23-24
		2. APEN conducts outreach to <u>at least two</u> viable <u>long-term partners</u>, one of which will be a local government agency; APEN schedules exploratory meetings with them.	APEN	TBD	Months 23-24
	C. APEN meets with potential long-term partners, and evaluates what role APEN should play in Phase Two and beyond.	1. APEN and the Advisory Group meet with <u>at least two</u> potential long-term partners to explore respective roles in Phase Two and beyond.	APEN	TBD	Months 23-24
		2. Guided by all of the above, APEN conducts an internal evaluation of Phase One and, with input from the Advisory Group, determines what role APEN should play in Phase Two and beyond.	APEN		Months 23-24
		3. APEN documents key findings from Phase One, including activities, lessons learned, and recommendations for Phase Two.			Months 23-24

Project Name:	**Richmond Asian Wellness and Resilience Center (Planning Phase)**			
Lead Applicant Name:	**Asian Pacific Environmental Network (APEN)**			
Term for this budget (in years):	**2 Years (24 Months)**			
				Total Cost
Personnel/Staff Costs	Direct	Resilience Projects Director	416 total hours as Project lead. Creates overall project design, scope, and evaluation. Coordinates with APEN Organizing staff and external consultants and other entities (Each year: 208 hours, .10 FTE/year + 30% benefits)	$24,261
Personnel/Staff Costs	Direct	Richmond Lead Organizer	400 total hours. Provides supervision for Richmond Organizing Staff team, collaborating with Project Lead (Each year, 0.10 FTE+ 30% benefits)	$20,938
Personnel/Staff Costs	Direct	Richmond Senior Youth Organizer	400 total hours. Organizes APEN's youth members in Community Visioning process and other project activities. (Each year, 0.10 FTE+ 30% benefits)	$22,024
Personnel/Staff Costs	Direct	Richmond Community Organizer	400 total hours. Organizes APEN's working age adult members in Community Visioning process and other project activities. (Each year, 0.10 FTE+ 30% benefits)	$18,807
Personnel/Staff Costs	Direct	Richmond Organizing Director	200 total hours. Provides supervision and direction for all Richmond staff, supporting Richmond Lead Organizer and Project Lead.(Each year, 0.05 FTE, + 30% benefits)	$13,044
Personnel/Staff Costs	Direct	Richmond Operations Associate	200 total hours. Provides operations and logistic support at APEN's Richmond office and project activities. (Each year: 0.10 FTE + 30% benefits)	$21,155
Community Engagement	Direct	Community stipends	Stipends for APEN members' participation and leadership during project, including members of the Advisory Group	$5,000
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Interpretation Fees	For language interpretation for Lao, Khmu, Mien language speakers during Community Visioning and other project activities.	$5,000
Capacity-Building and Training	Direct	Technical partner fee	50 hours. For guest speakers/technical presentations at Community Visioning and other project activities to build APEN members' and staff's capacity and knowledge	$5,000
Materials, Supplies & Equipment (> $5K itemized)	Direct	Community Visioning Workshops and other Project Activities	Materials / Supplies during Community Visioning workshops and other meetings for project updates and discussion(e.g., paper, markers, craft supplies for interactive mapping; visualizing collaboration / decision making). Also includes food/beverage.	$8,000
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Digital design and translation	Designing and translating community surveys and other outreach materials, building interactive QR codes for surveys, website landing page, and digital platforms for survey intake and outreach tracking	$2,000
Community Engagement	Direct	Printing Costs for hard copy surveys	Printing in-language hard copy surveys for community input	$1,371
Professional Services & Consultants (≤25% of Direct Costs at APPLICATION level)	Direct	Consultant Fees	130 hours of consulting for Feasibility Report with contributions from several consultant experts (e.g., on technical infrastructure, community health, cultural wellness practices, urban greening, etc.)	$13,400
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect		15% of Direct Costs	$24,000
Contingency (≤10% of Direct Costs at PROJECT level)	Contingency		10% of Direct Costs	$16,000
Only add lines above this line				
			TOTAL:	**$200,000**

Other Sources of Project Funding

Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The “Project Narrative” is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Roots to Resilience
Lead Applicant Name	Bay Area Community Resources
Project Location	Richmond, California
Overall Funding Request	$200,000
Grant Term Request	2 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	N/A
Project Lead	N/A
Project Location	N/A
Project Funding Request	N/A

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

   Roots to Resilience equips young adults in Richmond, CA with hands-on community engagement and public health skills through a 24-month urban greening initiative. Meeting weekly, youth leaders receive training and develop practical expertise in community data collection, analysis, and outreach as they review tree canopy equity data and engage residents through interviews and focus groups to pinpoint priority sites for trees and green corridors in historically under-greened neighborhoods. They will also help deploy additional Purple Air, air quality monitors to add to the air quality data in Richmond.

   By centering youth leadership in both the research and implementation phases, the project directly addresses inequities in green space distribution while building a generation of community health advocates. Participants lead planting events, track environmental and health outcomes, and contribute to Richmond's long-term climate resilience — producing measurable, visible change that integrates public health, workforce preparedness, and environmental justice goals.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
   - *Reduce air pollution and improve health outcomes*
   - *Build economic resilience for a just transition*

   Roots to Resilience directly aligns with the strategy to reduce air pollution and improve health outcomes. Urban greening interventions — including tree planting and green corridors — are evidence-based approaches to reducing urban heat islands and improving local air quality, both of which disproportionately burden Richmond's frontline communities living near fossil fuel infrastructure. By prioritizing sites identified through a community-driven equity analysis, the project ensures that health-protective green infrastructure reaches the neighborhoods that need it most. Tracking environmental and health outcomes over 24 months will generate community-owned data to demonstrate impact and inform future programs and policy.

   Additionally, by recruiting and compensating Youth Research Fellows (YRFs) from the communities most burdened by fossil fuel pollution, Roots to Resilience

directly builds economic resilience through workforce development — equipping Richmond young adults with transferable skills in data collection, environmental health analysis, community engagement, and public advocacy that strengthen their long-term employability in the growing green economy and the public health field more broadly. Stipended participation ensures that the economic barriers that most often exclude low-income youth of color from professional development opportunities do not prevent engagement, while the Community-Based Participatory Action Research (CBPR) model builds the kind of civic leadership capacity — knowing how to identify a community problem, build evidence, and move decision-makers — that has lasting value well beyond any single project. In this way, Roots to Resilience invests in people and community knowledge as the foundation of a just transition, not just in physical infrastructure.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

   Roots to Resilience will operate across multiple neighborhoods within the Path to Clean Air (PTCA) Community Emissions Reduction Plan boundary in Richmond, CA, with specific planting and monitoring sites to be determined by YRFs through primary community assessments and analysis of secondary data sources including the Tree Equity Score dataset and CalEnviroScreen. While final site selection will be driven by YRF findings, project activities are anticipated to be concentrated in the neighborhoods documented as carrying the highest combined burden of low tree canopy coverage, elevated PM2.5 exposure, and socioeconomic vulnerability — including North Richmond, Easter Hill Village, and the Iron Triangle, within the PTCA boundary. This community-led, data-driven site selection process ensures that green infrastructure investments are directed to the specific streets, schools, and residential areas where the equity gap is greatest, rather than predetermined by BACR before community input.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

BACR will identify community needs and priority sites for Roots to Resilience through a structured community-based participatory action research process led by Youth Research Fellows (YRFs). YRFs are stipended young adults ages 16–24 recruited from Richmond. Using the Tree Equity Score dataset and CalEnviroScreen cumulative burden data as a foundation, YRFs will design and conduct neighborhood-level community assessments — including resident surveys and interviews with community members, Richmond-based organizations, and local health advocates. This community needs assessment will ground-truth environmental data with lived experience and identify where trees and green infrastructure are most urgently needed. YRFs will also partner directly with residents to support the installation of PurpleAir air quality monitors at community-identified locations, helping build out a hyperlocal PM2.5 monitoring network that is owned and understood by the people most affected by pollution. Throughout this entire process, YRFs are the lead researchers, analysts, and community partners who will synthesize assessment findings, present results to residents and stakeholders, lead planting events, and track outcomes.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

This project directly addresses the overlapping environmental, physical, and mental health needs facing Richmond's low-income communities and communities of color — particularly residents of neighborhoods like the Iron Triangle, Belding Woods, and Shields-Reid. Richmond's 2017 Urban Greening Master Plan documented stark tree canopy disparities, with Black and brown, low-income neighborhoods recording the lowest tree canopy coverage (5.8%) compared to wealthier areas (Richmond Confidential, 2023: richmondconfidential.org). Richmond residents, almost 80% of whom are people of color, already face compounded health burdens from industrial pollution, with 25% experiencing asthma compared to only 13% across California statewide (Daily Californian, 2025: dailycal.org). By training youth and young adults to lead community tree-planting efforts, this project delivers the full spectrum of benefits that research has shown urban greening provides: trees reduce air pollution and

encourage residents to get outside and be more physically and socially active, with research showing a positive impact on heart health (NIEHS, 2021: niehs.nih.gov). Green spaces show associations with reduced psychological distress, lower risk of depression, and improved wellbeing (Frontiers in Public Health, 2026: frontiersin.org) which are critical benefits for a community under sustained environmental and economic stress. By centering community members in the planting and stewardship process, the project also builds social cohesion, civic pride, and collective ownership, which in turn protect community health.

Environmental Justice, Public Health & Just Transition Challenge—Richmond, California sits at the intersection of some of the most urgent environmental justice, public health, and just transition challenges in the nation. Richmond is a post-industrial, largely immigrant and African American city that was the former industrial home of the Bay Area, with a large port and petrochemical refinery among other industries, leaving a legacy of pollution that falls disproportionately on its most vulnerable residents (NIH/PMC, 2024: pmc.ncbi.nlm.nih.gov). Nationally, in 92% of surveyed urbanized areas, low-income blocks have 15.2% less tree cover. Formerly redlined neighborhoods in cities like Richmond are up to twelve degrees warmer in the summer, and these tracts are now more likely to be lower-income and to have Black or Latine residents who also suffer from related health inequities (Progressive.org, 2021: progressive.org). This project is also a just transition initiative: urban forestry programs funded through federal green infrastructure investments have demonstrated the ability to restore green spaces while providing jobs for residents, including those who previously faced socioeconomic or racial barriers to employment (EESI, 2025: eesi.org). By training local youth and young adults — who are disproportionately unemployed or underemployed in Richmond — to perform green infrastructure work, this project begins to transition the community away from dependence on a polluting industrial economy toward a workforce and environment rooted in ecological health and sustainability.

Measurable Outcomes & Community Impact—The measurable outcomes of this project will demonstrate meaningful, trackable progress toward health equity in Richmond. Workforce outputs and outcomes — including skills developed, hours worked, and job placements in green and/or public health industries — will demonstrate the just transition impact of the project. Together, these metrics will tell a story of Richmond moving from one of California's most environmentally burdened cities toward a model of community-led ecological restoration and health equity. Quantitative environmental outcomes will include the number of

trees planted by neighborhood and zone (prioritizing the lowest-canopy areas identified in the city's Urban Greening Master Plan and Tree Equity Score), the number of youth and young adults trained and stipended, and the estimated increase in canopy coverage in priority areas. Beyond environmental metrics, community outcomes will be measured through resident surveys that track perceived neighborhood safety, social cohesion, and access to green space — outcomes that greening programs have been shown to improve alongside increases in social capital, neighborhood satisfaction, and intergenerational relationships (NIH/PMC: pmc.ncbi.nlm.nih.gov). These outcomes connect directly to documented public health impacts.

Areas with increased tree cover, which can be 5 to 8 degrees Fahrenheit cooler, directly reduce heat-related illness risk for vulnerable residents (Parks & People, 2025: parksandpeople.org). Increased urban tree canopy is also associated with measurable reductions in asthma rates and respiratory illness — a critical benefit for Richmond, where pediatric asthma hospitalization rates are among the highest in California; Richmond children are hospitalized for asthma at roughly 2–3 times the state average, driven in part by proximity to the Chevron refinery and Interstates 80, and 580 (California Department of Public Health, CalEnviroScreen 4.0; Richmond Health Status Report). Research shows that urban greening reduces ambient particulate matter and ground-level ozone, two of the primary environmental triggers for asthma exacerbations. A10% increase in tree canopy has been associated with meaningful reductions in respiratory emergency department visits in comparable urban communities (Eisenman et al., 2019, Environmental Health Perspectives). In addition to the physical health impacts, research indicates that spending as little as 30 minutes per week in green spaces can reduce depressive symptoms (ADAA: adaa.org).

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

   BACR will engage community members throughout the full arc of Roots to Resilience using the same Community-Based Participatory Action Research (CBPR) and advocacy framework that has driven our community health

campaigns since 1996. Authentic community engagement is an ongoing, reciprocal process embedded in every phase of the project.

Soliciting Feedback—Structured community feedback will be gathered through three channels during grant implementation: (1) Pre-implementation survey of 100+ Richmond residents; (2) 8+ interviews led by YRFs with residents in priority neighborhoods; and (3) short surveys distributed at planting events and community outreach events. BACR's existing relationships with the West Contra Costa Unified School District and over 25 Richmond-area community organizations will extend our reach into households that are often missed by formal outreach.

Using Feedback—Feedback data will be analyzed by YRFs with support from the project director. Site prioritization, planting species selection, and cool roof target buildings will be adjusted based on findings. YRFs will present a mid-project community report summarizing what they heard and what changes were made in response, modeling the kind of accountable, community-responsive practice that builds lasting trust.

Progress and Benefits Communication—Youth Research Fellows (YRFs) will serve as the primary conduit between the project and the community. They will present findings and implementation updates to inform residents of all project activities including air monitoring implementation and planting timelines at community meetings, neighborhood events, and in digital formats (social media and multilingual one-pagers). Given that over 50% of Richmond residents speak a language other than English at home (https://data.census.gov), all outreach and progress materials will be available in English and Spanish, with additional languages as needed.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Roots to Resilience is a 24-month, youth-led urban greening initiative grounded in a Community-Based Participatory Action Research (CBPR) framework. The project addresses the environmental justice imperative to reduce PM2.5 exposure and urban heat island effects in Richmond's most underserved neighborhoods by

training young adults as researchers, planners, and implementers of green infrastructure. The project unfolds in two sequential phases:

Phase 1—Research and Site Planning (Months 1–12): Six to eight Youth Research Fellows (YRFs), ages 16–24, are recruited from Richmond and North Richmond and compensated through stipends. YRFs participate in 20 hours of foundational training covering environmental justice, air quality science, CBPR methodology, community assessment tools, and data analysis. Using the Tree Equity Score dataset, CalEnviroScreen data, and direct community assessment — including resident surveys (100+), interviews (8+), neighborhood mapping — YRFs identify and rank priority sites for tree planting. Findings are compiled into a community-owned data report that is shared publicly and used to finalize the implementation plan.

Phase 2—Implementation and Monitoring (Months 10–24): YRFs lead community planting events, coordinate with schools, community partners, and Richmond residents for site access, and recruit and train resident volunteers. A minimum of 150 trees are planted in identified priority locations. YRFs will connect residents to Richmond's air quality sensors and assist 15 or more resident volunteers in deploying sensors. YRFs will collect data via surveys (100+) and interviews (8+) from Richmond residents in greened areas to ascertain related outputs.

Phase 3—With additional funding for the project, YFRs will participate in ongoing environmental monitoring to track PM2.5 levels, heat index, and tree canopy change over time. Data is analyzed by YRFs and the project director, and used to document measurable environmental and health outcomes.

Measurable Outcomes—The project has four main, measurable outcomes, listed here, and detailed in Measurable Outcomes Plan

1. 6–8 Youth Research Fellows (YRFs) recruited, trained, and retained throughout the 24-month grant term, trained in community-based participatory action research (CBPR) methodology, environmental justice, urban greening, air quality science, and community assessment tools.
2. Community needs assessment completed, producing a community-owned environmental health data report that identifies and ranks priority planting sites using Tree Equity Score, CalEnviroScreen, and primary community data.

3. Minimum 150 trees planted in low Tree Equity Score census tracts within the PTCA CERP boundary in Richmond.
4. 350+ Richmond residents meaningfully engaged through research activities, air quality monitoring deployment, and community planting events, with culturally accessible outreach in English and Spanish.

Role of Applicant and Partners—BACR's Engaging Communities in Advocacy and Policy (ECAP) team will serve as the primary implementer. BACR is responsible for YRF recruitment and training, community engagement, data collection and analysis, project reporting, and fiscal management. BACR will leverage existing partnerships with the West Contra Costa Unified School District, Richmond-area coalitions and community organizations and neighborhood councils to recruit YRFs and facilitate community access.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

The project has four main, measurable outcomes, listed above, and detailed in Measurable Outcomes Plan

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The total project budget is $200,000 over 24 months. Key costs are summarized below. A complete itemized budget is provided in the accompanying Budget Template.

Key Costs	**Amount**
Personnel (Project Coordinator 0.5 FTE, Program Director 0.1 FTE, 25% fridge)	$108,750
Youth Stipends	$28,800
Trees and Planting Materials	$24,000
Air Quality Monitoring Equipment	$4,500
Community Engagement and Outreach	$4,924

Program Supplies	$1,000
Professional Development	$500
Local Milage	$1,440
Indirect Costs (15%)	$26,086
TOTAL	**$200,000**

The total budget for Roots to Resilience is $200,000 over a 24-month period, reflecting a deliberate investment in both the people and the physical environment at the heart of this project. The largest portion of the budget — $108,750 — is dedicated to personnel, including a 0.5 FTE Project Coordinator ($81,250 with fringe) and 0.1 FTE Program Director ($27,500 with fringe). Experienced, consistent staff build the trust necessary to engage historically underinvested communities in Richmond, manage complex multi-site data collection, and ensure that every grant deliverable is rooted in community accountability rather than top-down imposition.

Equally central to BACR's equity values is the $28,800 allocated for Youth Research Fellow (YRF) stipends — compensating 8 young people ages 16–24 at $1,800/year for two years of hands-on environmental health work, including training, community engagement, tree canopy assessments and air quality monitoring. Stipends recognize that youth expertise has real value and that economic barriers must not exclude frontline community members from shaping the solutions to problems they experience most acutely. Alongside the YRF stipends, $4,924 in community engagement costs — covering gift cards for community participants, interpretation services, childcare, and refreshments at events — ensures that participation is genuinely accessible regardless of language, income, or family obligations. Additionally, $500 is allocated to ensure the program coordinator can participate in training to bolster their professional skills. The $24,000 investment in 125+ climate-resilient trees and planting materials and $4,500 in 15 portable air quality monitoring units represent the project's direct, tangible impact on the physical environment: putting locally-grown trees in the ground and real-time pollution data in the hands of the young people and community members most affected by air quality disparities. Finally, $26,086 in indirect costs (14.99%) supports BACR's operational backbone — the administrative, financial, and technological infrastructure that ensures responsible stewardship of public funds across the life of the grant.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

    Roots to Resilience is directly aligned with multiple community, local, regional, and statewide frameworks, reinforcing the project's feasibility and amplifying its impact.

    AB 617 / Path to Clean Air Community Emissions Reduction Plan (CERP)—The project operates entirely within the PTCA CERP boundary, the AB 617 community formally designated by the California Air Resources Board as bearing the most significant cumulative pollution burden in the region. The CERP identifies the reduction of localized PM2.5 exposure as a top community priority. Roots to Resilience directly implements this priority through youth-led urban greening and particulate matter monitoring in the neighborhoods — including the Iron Triangle, Easter Hill Village, Pullman, and surrounding areas — where tree canopy is minimal, PM2.5 concentrations and socioeconomic vulnerability are highest.

    Richmond Climate Action Plan—The City of Richmond's Climate Action Plan identifies urban tree canopy expansion, heat island mitigation, and community resilience as core strategies for climate adaptation. Roots to Resilience advances all three, providing implementation capacity at the neighborhood level through trained youth ambassadors who are themselves members of the communities targeted by the plan.

    CalEnviroScreen and Environmental Justice Priorities—CalEnviroScreen ranks the PTCA census tracts among the highest cumulative-burden communities in California. By directing investments to these specific tracts — using Tree Equity Score and CalEnviroScreen data as the basis for site selection — the project directly operationalizes the state's environmental justice framework.

    Bay Area Air District's Community Air Protection Program—The project's deployment of free/low-cost air quality sensors aligns with the Air District's Community Air Monitoring Initiative, which supports hyperlocal data collection in AB 617 communities. Additional community-owned monitoring data generated

by YRFs will contribute to the regional air quality evidence base and strengthen community advocacy for ongoing environmental protections.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Bay Area Community Resources (BACR) has implemented community-based participatory action research (CBPR) programs in Richmond and the surrounding West Contra Costa County area continuously since 1996. Founded in 1976, BACR is a 501(c)(3) nonprofit with an annual operating budget of over $100 million, managing more than 300 active grants and contracts across 6 Bay Area counties and serving over 30,000 individuals annually.

BACR's Engaging Communities in Advocacy and Policy (ECAP) team has a specialized 29-year track record of using the community-based participatory action model with marginalized young adults in Richmond to produce tangible environmental health and policy outcomes. Successful CBPR initiatives of similar scope and size in Richmond and the surrounding PTCA area include:

- Nation's first healthy checkout ordinance in Berkeley (2020) and Contra Costa County (2025), driven by youth advocacy from West Contra Costa County,
- Tobacco Retail License ordinances in Richmond (2018) and San Pablo (2018),
- Smokefree multi-unit housing policies in San Pablo (2020), and
- Advocacy and support of salad bar implementation in two Richmond elementary schools (2014).

Each of these outcomes was achieved through the same CBPR methodology proposed for Roots to Resilience — youth as trained researchers and community advocates, building evidence, engaging residents, and taking action to increase health equity in West Contra Costa County.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The Air District redacted the name of an individual associated with identifiable personnel compensation information

[redacted], MPH, M.Ed., Director / Project Lead (0.10 FTE): Ms. [redacted] has over 20 years of public health and youth leadership experience, including 16 years at BACR directing CBPR programs across the Bay Area and five years as an agriculture teacher. She has overseen the campaigns that produced the nation's first healthy checkout ordinances in Berkeley and Contra Costa County, multiple tobacco retail licensing victories, and smokefree housing policies in San Pablo and Vallejo. Ms. [redacted] will provide strategic direction, funder liaison, and evaluation coordination.

Project Coordinator (0.50 FTE, to be hired): A bilingual (English/Spanish) project coordinator with experience in youth-led environmental or public health programs will be recruited prior to grant execution. This position will manage day-to-day operations including YRF recruitment and training, community engagement, site coordination with City of Richmond Public Works, and data collection logistics.

BACR Finance Department: BACR's finance department manages an annual budget of over $100 million and oversees more than 300 active grants. A dedicated Project Accountant will be assigned to this grant at execution.

BACR will seek to leverage this LCBF award with the following in-kind resources:

- BACR's existing CBPR infrastructure, including assessment tools, training curricula, data management systems, and a 12-person ECAP program team
- BACR will pursue additional tree planting funding through state and regional urban forestry grants to expand tree canopy installations in Richmond beyond the scope of this award, using the site prioritization data and community relationships.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary

approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.

- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

    For school sites, BACR has existing relationships with West Contra Costa Unified School District and, if identified as an area of need, BACR will pursue Memoranda of Understanding (MOUs) with individual school principals. Any tree planting on private residential property will be subject to written property owner consent, which YRFs will obtain as part of the community engagement process. All required permits and approvals are expected to be obtained within the first 6 months of the grant term, well before the implementation phase begins in Month 10.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

    N/A

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

    Roots to Resilience will work with the community to ascertain the best sites for this project. For any private property sites identified by YRFs and community members during the assessment phase, written property owner permission will be obtained before any work begins

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

The long-term viability of planted trees depends on post-grant maintenance. Roots to Resilience will prioritize fast growing, drought-tolerant trees that require few inputs beyond the first couple years. For any school-site trees, MOUs with the West Contra Costa Unified School District will include maintenance provisions. YRFs will develop and distribute a Tree Care Guide for community members and resident volunteers who participated in planting events, building distributed stewardship. Community members receiving trees for private property will be asked to commit to regular watering for the first 2-3 years after the tree(s) are planted.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

BACR has identified the following potential barriers and mitigation strategies:

YRF Recruitment and Retention—Engaging and retaining transition-age youth from Richmond's most marginalized communities requires intentional, relationship-based outreach. BACR mitigates this risk through stipend-based compensation, wrap-around support (academic and job-readiness coaching), and a culturally grounded program model. BACR's ECAP team has successfully recruited and retained YRF cohorts in Richmond and across the Bay Area for over two decades, achieving strong completion rates.

Site Access Delays—Permitting or MOU timelines could delay planting activities. This risk is mitigated by sequencing the grant with a full year of research and planning before the planting phase begins, providing buffer time for approvals to be obtained. BACR's existing relationships further reduce this risk.

Environmental Conditions—Drought, heat, or pest pressure could affect tree survival rates. BACR will work to select species appropriate for Richmond's climate, prioritize drought-resistant native species, and establish a two-year watering and monitoring protocol led by YRFs.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Roots to Resilience is a 24-month, youth-led urban greening initiative grounded in a Community-Based Participatory Action Research (CBPR) framework. By training and compensating 6–8 Youth Research Fellows (YRFs) from Richmond's most environmentally burdened neighborhoods, the project delivers measurable, community-led environmental health outcomes — including 150+ trees planted in low-canopy, high-pollution census tracts and an expanded PurpleAir monitoring network — while building a generation of young community health advocates equipped for careers in the green economy and public health.

Measurable Outcome	Indicator(s)
1. 6–8 Youth Research Fellows (YRFs) recruited, trained, and retained throughout the 24-month grant term, trained in community-based participatory action research (CBPR) methodology, environmental justice, urban greening, air quality science, and community assessment tools.	• Number of YRFs recruited and enrolled • % completing 20-hour training curriculum • % retained through grant end • # of YRFs completing job portfolio • # of YRFs placed in green economy or public health employment/education within 6 months of program completion
2. Community needs assessment completed, producing a community-owned environmental health data report that identifies and ranks priority planting sites using Tree Equity Score, CalEnviroScreen, and primary community data.	• # of resident surveys collected (target: 100+) • # of community interviews conducted (target: 8+) • # of priority sites identified and ranked • Data report produced and publicly disseminated

3. Minimum 150 trees planted in low Tree Equity Score census tracts within the PTCA CERP boundary in Richmond.	● # of trees planted by neighborhood/census tract ● # of planting events held ● # of community volunteers mobilized ● % of planted trees surviving at 6 months post-planting
4. 350+ Richmond residents meaningfully engaged through research activities, air quality monitoring deployment, and community planting events, with culturally accessible outreach in English and Spanish.	● # of residents completing surveys or interviews ● # of participants at planting events ● # of residents assisted with PurpleAir sensor deployment (target: 15+) ● # and % of outreach materials available in Spanish

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Youth Research Fellows	A. YRF Recruitment & Onboarding Complete	1. Develop YRF recruitment materials, outreach plan, and application process	Bay Area Community Resources (BACR): Program Coordinator (PC)	N/A	Month 1
		2. Conduct outreach, review applications, and select 6–8 YRF cohort from Richmond communities	BACR: PC	WCCUSD; Richmond CBOs	Month 2
		3. Finalize stipend agreements, onboarding materials, and MOU/consent documentation	BACR: PC	N/A	Month 3
	B. 20-Hour Foundational Training Delivered	1. Develop and finalize YRF training curriculum (environmental justice, air quality science, CBPR methodology, data analysis, and community assessment tools)	BACR: PC with Program Director (PD) support	N/A	Month 2
		2. Deliver 20-hour foundational training to full YRF cohort	BACR: PC	Guest Experts	Month 4
		3. Administer pre/post training assessment to document knowledge gains and adapt curriculum	BACR: PC with PD support	N/A	Month 4

	C.Job Portfolio Development & Workforce Outcomes	1. Integrate job-readiness coaching and portfolio-building into weekly YRF activities throughout grant	BACR: PC with PD support	N/A	Ongoing through Month 24
		2. Support YRFs in documenting skills, projects, and community contributions in individualized portfolios	BACR: PC	N/A	Ongoing through Month 22
		3. Conduct exit interviews and track post-program employment/education placement in green or public health sectors	BACR:, PC with PD support	N/A	Month 24
2. Community Needs Assessment	A. Community Assessment Design & Secondary Data Analysis Complete (Month 5)	1. YRFs analyze Tree Equity Score dataset and CalEnviroScreen data to identify highest-burden census tracts within PTCA CERP boundary	BACR: YRFs / Project Coordinator	N/A	Month 4
		2. Design resident survey and interview instruments with YRF input, pilot-test with 5 community members, and finalize tools	BACR: YRFs with PD support	N/A	Month 5
		3. Map initial priority neighborhoods using secondary data layers	BACR: YRFs with PC support	N/A	Month 5
	B.Primary Community Data Collection Complete (Month 10)	1. YRFs administer 100+ resident surveys in target neighborhoods, documenting lived experience of tree canopy gaps and air quality concerns	BACR: YRFs, with PC support	Richmond CBOs	Month 9
		2. YRFs conduct 8+ qualitative interviews with residents, community	BACR: YRFs, with PC support	Richmond CBOs,	Month 10

		organizations, and local health advocates		Neighborhood Councils	
		3. YRFs analyze combined primary and secondary data to produce final ranked priority site list	BACR: YRFs with PD support	N/A	Month 10
	C. Community-Owned Environmental Health Data Report Published (Month 12)	1. YRFs synthesize assessment findings into accessible community report (English/Spanish) with site prioritization maps and resident narratives	BACR: YRFs with PC and PD support	N/A	Month 11
		2. Host community presentation event to share findings with Richmond residents and stakeholders; gather feedback	BACR: YRFs, with PC support	Richmond CBOs, Neighborhood Councils	Month 12
		3. Finalize and disseminate report digitally and in print to residents, community partners, and the City of Richmond	BACR: YRFs, with PC and PD support	N/A	Month 12
3. Project Implementation	A. Implementation Plan, Permits/Permission Secured	1. Finalize planting site list based on community data report; confirm site access and property owner consent for private parcels	BACR: YRFs, with PC and PD support	Residents, CBOs,	Month 13
		2. Execute MOUs with WCCUSD for school-site planting locations [if identified as need]	BACR: PC with PD support	WCCUSD	Month 13
		3. Procure drought-tolerant, climate-appropriate tree species appropriate for Richmond's urban environment (minimum 150 trees)	BACR: PC with PD support	N/A	Month 20

	B. Air Quality Monitoring Network Expanded	1. Identify 15+ community members interested in hosting PurpleAir sensors in target neighborhoods through YRF-led outreach	BACR: YRFs, with PC support	N/A	Month 12
		2. Procure and distribute 15+ PurpleAir air quality monitors; YRFs provide installation support and resident training on sensor data access	BACR: YRFs, with PC support	City of Richmond	Month 14
		3. Document monitoring network coverage, track sensor uptime, and incorporate community air quality data into project reporting	BACR:, PC and PD	N/A	Month 23
	C. Community Planting Events Completed (Month 22)	1. YRFs recruit and train 50+ resident volunteers for planting events via community outreach, social media, and partner networks	BACR: YRFs, with PC support	Richmond CBOs; WCCUSD	Ongoing, Months 13–22
		2. YRFs lead a minimum 6 community planting events across priority neighborhoods, planting 150+ trees in identified sites	BACR: YRFs, with PC support	Resident Volunteers	Month 22
		3. Document planting data (species, location, date, GPS coordinates) and distribute Tree Care Guides to community stewards	BACR: YRFs, with PC and PD support	N/A	Month 23

	D. Post-Planting Monitoring & Tree Survival Assessment	1. Implement 2-year watering and monitoring protocol with community stewards	YRFs / Project Coordinator	Resident Volunteers/Stewards	Ongoing post-planting ; Months 15-22
		2. YRFs conduct quarterly visits to assess tree health/survival assessment across all planting sites and document findings	BACR: YRFs, with PC and PD support	N/A	Months 18-24
		3. Report tree survival rates, canopy coverage change estimates, and lessons learned to Bay REPAIR and community stakeholders	BACR: YRFs, with PC and PD support	N/A	Month 24
4. Resident Engagement	A.Multilingual Community Engagement Strategy Implemented	1. Develop bilingual (English/Spanish) outreach materials including flyers, one-pagers, and social media content for all project phases	BACR: YRFs, with PC support	N/A	Month 4
		2. YRFs present project progress updates at community meetings, neighborhood events, and with partner organizations across all phases to reach 150+ residents	BACR: YRFs, with PC support	Richmond CBOs; WCCUSD PTAs	Ongoing
		3. Track total resident engagement numbers across all activities (surveys, interviews, events, sensor deployment) for final reporting	BACR: PC and PD	N/A	Month 24
	B.Mid-Project Community Feedback & Adaptation	1. Administer post-Phase 1 community feedback surveys at events and through partner channels	BACR: YRFs, with PC and PD support	Project Coordinator	Month 14

		2. YRFs analyze feedback data and present mid-project community accountability report to residents and stakeholders	BACR: YRFs, with PC and PD support		Month 15
		3. Adjust engagement tactics, activities, site selection, species choices, and outreach strategies based on community feedback; document adaptations in project records	BACR: YRFs, with PC and PD support		Month 16

Project Name:	Roots to Resilience
Lead Applicant Name:	Bay Area Community Resources (BACR)
Term for this budget (in years):	2 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Project Coordinator (0.5 FTE, 24 months)	The Program Coordinator leads day-to-day implementation, supervises Youth Research Fellows, manages data collection, coordinates community partnerships, and prepares grant reports. Project Coordinator at $65,000/yr × 0.5 FTE × 2 years = $65,000 base + $16,250 fringe (25%: health insurance, retirement, payroll taxes).	$81,250
Personnel/Staff Costs	Direct	Program Director (0.1 FTE, 24 months)	The Program Director provides executive oversight and strategic direction for the project including: fidelity to the project's goals and grant requirements, reviewing major deliverables and reports, budget management, and maintaining high-level relationships with funder and partner organizations. Program Director at $110,000/yr × 0.1 FTE × 2 years = $22,000 base + $5,500 fringe (25%: health insurance, retirement, payroll taxes). Provides strategic oversight, ensures grant compliance, manages external partnerships, and reviews all deliverables.	$27,500
Community Engagement	Direct	Youth Research Fellow (YRF) Stipends	8 Youth Research Fellows × $1,800/year × 2 years = $28,800. YRFs (ages 14-24) recruited from the project community conduct tree canopy assessments, operate air quality monitors, and deliver education at community events. Stipends paid semi-annually; supports youth workforce development outcomes.	$28,800
Materials, Supplies & Equipment (> $5K itemized)	Direct	Trees and Planting Materials (125+ trees)	125+ climate-resilient tree species planted at community-identified sites . Average $192/tree includes bare-root/container stock, soil amendments, mulch, tree stakes, drip irrigation supplies, and protective guards. Procurement via local certified nurseries.	$24,000
Materials, Supplies & Equipment (> $5K itemized)	Direct	Air Quality Monitoring Equipment (15 units)	15 portable low-cost air quality sensor units at $300/unit ($4,500 total) for community-based PM2.5 monitoring at tree planting and residential sites. Includes carrying cases and calibration accessories. Units deployed and operated by trained YRFs throughout the 24-month period.	$4,500
Community Engagement	Direct	Community Engagement and Outreach	$25-50 X 75 gift cards for participation in community assessments, tree-planting events, tree stewardship, etc. ($2,500); translation and interpretation services for multilingual outreach ($750); printed outreach materials and flyers (in kind); refreshments, childcare services, and event supplies for 4-6 community presentations ($1,674). Total: $5,424.	$4,924
Other Direct Costs	Direct	Program Supplies	General program supplies for project implementation: office supplies, printing of data collection and survey forms, binders, and consumables used by project staff and YRFs throughout the grant period. Estimated at $500/year x 2 years = $1,000.	$1,000
Capacity-Building and Training	Direct	Professional Development	Professional development fees for Program Coordinator: Estimated at $500/training x 1 training =$500	$500
Travel	Direct	Local Mileage Reimbursement	Mileage reimbursement for staff travel to conduct assessments, community tree planting sites, partner meetings, and air quality monitoring locations. Approx. 1,986 miles over 24 months (~83 miles/month) at IRS standard rate of $0.725/mile = $1,440.	$1,440
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	Indirect Costs (15% Rate)	Organizational overhead at 14.99% of total direct costs ($173,914 x 0.1499 = $26,086). Covers proportionate share of rent, utilities, IT infrastructure, bookkeeping, and general administrative staff time.	$26,086
		Only add lines above this line		
			TOTAL:	**$200,000**

Lead Applicant Budget Summary (auto-calculated)

Total Direct Costs	$173,914
Total Indirect Costs	$26,086
Total Prof. Services & Consultants	$0
Total Contingency	$0
Total Funds Requested	$200,000
Cross-check Total Budget	YES
Indirect as % of Direct	15.0%
Prof. Services & Consultants as % of Direct	0.0%
Contingency as % of Direct	0.0%

Project Narrative

Instructions:

- The “Project Narrative” is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Decarbonizing Tenant Housing
Lead Applicant Name	California Center for Movement Legal Services
Project Location	Richmond and San Pablo
Overall Funding Request	$199,930
Grant Term Request	2 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	
Project Lead	
Project Location	
Project Funding Request	

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

California Center for Movement Legal Services ("Movement Legal") seeks to launch a decarbonization education and advocacy project serving low-income families in Richmond and San Pablo. Our primary project goal is to help tenants achieve safer indoor air quality, especially for children aged 0 to 5, who are at greater risk of severe asthma. With energy-efficient electric appliances tenants can also reduce their utility costs and achieve more climate resilient housing.

Our project team will share decarbonization program information with community health centers, school medical staff, and parent groups. We will inform landlords of multifamily properties about electrification support programs. Through *promotores/as* (community leaders) working with our organizational partners, we will facilitate outreach to tenants in multifamily properties. We will provide attorney-led information sessions that empower tenants with information about the health benefits of switching from gas to electric appliances in rental units, tenant protections, and how to obtain energy-efficient electric appliances. We will also provide legal clinics and individual legal representation to tenants. We will follow up with tenants to ensure their success in obtaining electric appliances.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

Safe, climate resilient rental housing is a key aspect of housing security. Movement Legal has been advocating for policies that decrease indoor air pollution in Richmond and San Pablo through decarbonization of rental housing. Our proposed project represents an important phase in this mission.

Replacing gas appliances with electric improves air quality inside and outside of homes and addresses a major public health concern: gas stove use as a significant factor in higher childhood asthma rates, especially among Black and Latino renters.* Gas stoves release harmful pollutants that make indoor air quality in apartments unsafe; they trigger and worsen asthma, especially in young children. Our project will increase awareness about this serious problem which disproportionately affects Richmond's and San Pablo's renting families, inform tenants about rebates that are available to help them replace

outdated appliances, help them understand their rights to safe and habitable housing, and provide them with legal representation as needed.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Information sessions and legal clinics will occur in high-concentration gathering places that are accessible to community members from low-income neighborhoods of Richmond and San Pablo. We will especially target locations in priority zones where low-cost health services are offered.

We will hold some events at the offices of Alliance of Californians for Community Empowerment (ACCE) at 322 Harbour Way, Suite 5, Richmond, where we have already held legal clinics.

We will also reach out to these community health centers to offer onsite information sessions for staff and patients:

- LifeLong William Jenkins Health Center
- North Richmond Center for Health
- Lifelong Brookside Community Health Center
- West County Health Center
- Brighter Beginnings Family Health Clinic
- Native American Health Center – Richmond Native Wellness Center

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Movement Legal staff have been working closely with community based organizations in Richmond and San Pablo on housing quality issues for over a decade. Year after year, community members have identified the importance of improving rental housing quality, indoor air quality, and utility costs. In some cases, tenants are forced to move to protect their families' health, which can cause increased cost of living and disruption of schooling, family, and community.

Through monthly legal clinics we have worked with tenants who need to address deficiencies in their housing that impact their families' health. During trainings provided

to member-led groups such as ACCE and Rising Juntos, we have heard from the community that they need help working with their landlords to make repairs and safety upgrades.

These connections led to a collaboration with ACCE member leaders, funded by San Francisco Foundation's Partnership for the Bay's Future, to improve Richmond's routine Residential Rental Inspection Program. Now that the City has transitioned the program, inspections are uncovering even more issues with appliances and the need to decarbonize. Conversations with landlords who were not complying with Richmond Code Enforcement, indicated that landlords, like tenants, do not have the knowledge of how to electrify their buildings, available support programs, or how to apply for incentives.

The Bay Area Regional Energy Network (BayREN) reports that only two of the more than 700 projects that have been completed with funding from its Bay Area Multifamily Building Enhancements (BAMBE) program were located in Richmond, though it is a high priority area, with around 7,000 multifamily units in hundreds of older properties of 5–50 units.

We regularly provide informational presentations to physicians in residency at community health centers. We heard from providers that health issues related to air quality increasingly impact their patients and they want to learn how they can help solve this issue.

Clearly, there is a need and opportunity for transformative change toward decarbonization in Richmond and surrounding areas.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Movement Legal's project will provide solutions that address these challenges:

- Tenants have identified a systemic problem with rental housing conditions.
- Community healthcare workers see how air quality affects families' health but don't know how to help their patients decarbonize their homes.

- Routine inspections show a widespread need for repairs and updates that landlords don't know how to do.
- Tenants need help to take advantage of incentive programs.

In Richmond

- The rate of asthma cases is almost 25%.
- Rates are higher in Black and Latino communities.
- Emergency room visit rates for severe asthma are much higher for children.

**Richmond Environment and Asthma Community Health (REACH) Study (clear.ucsf.edu/reach accessed 23 May 2026)*

Gas stoves release harmful pollutants like nitrogen dioxide, carbon monoxide, formaldehyde, and particulate matter directly into indoor air. A widely publicized study** found that 12.7% of current childhood asthma in the U.S. is attributable to gas stove use, and in California, the proportion of childhood asthma that could be theoretically prevented if gas stove use was not present is 20.1%.

***Population Attributable Fraction of Gas Stoves and Childhood Asthma in the United States (Talor Gruenwald, Brady A Seals, Luke D Knibbs, and H Dean Hosgood III, 2022)*

To achieve broad decarbonization in low-income communities of Richmond and San Pablo, the proposed project will

1. significantly increase knowledge among community healthcare workers, social workers, and school medical staff who serve children with asthma about how to support families around indoor air quality;
2. facilitate tenant-led community outreach and spread awareness of tenants' right to safe housing, incentives that are available to replace appliances with energy efficient alternatives to achieve better health outcomes and save on utility costs, and the legal help that is available through Movement Legal;
3. target and refine legal services for tenants who need support to address unhealthy indoor air quality and climate resilient appliances;
4. inform landlords about available incentives for electrification of multifamily properties;
5. track increased knowledge about these topics through feedback forms and regular meetings with promotores/as; and ultimately,
6. produce measurable health equity, housing security, and quality of life outcomes for their families.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Our legal staff will conduct outreach to community health center staff and social workers, as well as school medical staff and parent groups. This will include sending letters and printed materials and making followup calls in which we will offer to hold in-person information sessions for staff and the low-income populations they serve. We will also offer to hold pop-up and tenant legal clinics in community health centers and other high-concentration locations throughout the community.

Outreach to low-income tenants will be community led. Because rental properties are centers of community life and electrification affects entire buildings, tenant promotores/as from our partner organizations ACCE and Rising Juntos who live in the community will expand the reach of the project through

- door knocking and flyering,
- leading or making announcements at tenant meetings,
- sharing printed and online educational materials with their neighbors and tenants in other buildings, and
- inviting tenants to onsite information sessions.

Our staff will present information sessions on the health consequences of gas appliance use. We will also educate tenants about their rights under state and local laws, and will provide a Know Your Rights toolkit and encourage tenants to take advantage of incentives to replace their outdated or gas appliances with zero-emission energy-efficient electric alternatives. Tenants who have concerns about their housing will be welcomed to attend legal clinics, where they will receive brief legal advice. In some cases tenants will receive individual legal representation to facilitate landlord cooperation in making improvements.

We will also offer information on electrification advantages to landlords, including rebates offered by programs such as Bay Area Multifamily Building Enhancements (BAMBE). California Assembly Bill 628 now requires landlords to provide stoves and refrigerators in good working order in all residential rental units. We want to help ensure those appliances are electric and energy efficient.

We will provide printed and online assessment forms to gauge knowledge increases among healthcare staff and tenants served by the program.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Community Outreach and Education

Within the first 3 months of the grant term, our attorney-led project team will develop a decarbonization Know Your Rights Toolkit. We will provide information to healthcare workers at community health centers, school medical staff, and parent groups about the decarbonization project, electrification support programs available, and the ability of our attorneys to assist tenants with asthma in obtaining updated appliances. We'll offer to hold information sessions at their facilities. We'll also reach out to landlords with information about electrification incentive programs.

Tenant Outreach, Education, and Use of Decarbonization Incentives

Promotores/as will share decarbonization and legal services information in their buildings and communities. Information sessions will offer Richmond and San Pablo community members, especially tenants who have children with asthma, education about the environmental health impact of gas stove use, how to obtain energy-efficient electric appliances, tenants' right to safe indoor air quality, and our free legal services.

Legal Services

Through regular and pop-up tenant legal clinics, we'll briefly advise tenants about their rights. In some cases, we'll offer individual representation.

We'll follow up with tenants who ask for more information about how to obtain energy-efficient electric appliances and other improvements to achieve healthier air quality. We'll offer these tenants additional support, such as if they need permission from their landlord, or legal representation where needed.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The project budget will primarily cover personnel/staff costs. The Project Lead will oversee and coordinate the major components of the project. Legal staff will oversee

creation of bilingual educational materials and outreach and will run information sessions and legal clinics. Stipends will be used to compensate partner organizations to conduct outreach to tenants. We will maximize printing costs for the Know Your Rights Toolkit and outreach. We've budgeted for local transportation costs for personnel as well.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The proposed project is consistent with Richmond's Climate Action Plan (CAP) to reduce greenhouse gas emissions and create climate resilience, especially Strategy RE3: Promote Switching From Natural Gas to Clean Electricity. The CAP also forwards health equity and climate justice, which pertain to housing rights for low-income families, who are a disproportionately high percentage of the population in Richmond and San Pablo.

The Air District redacted the name of an individual associated with identifiable personnel compensation information.

Richmond's newly implemented proactive Residential Rental Inspection Program includes decarbonization guidelines as part of code inspection reports for landlord education. Movement Legal Executive Director [redacted] worked closely with the City of Richmond to create and include the guidelines.

Richmond and San Pablo are in a designated community of the Community Air Protection (CAP) Program (AB 617). Our project is also aligned with the Path to Clean Air (PTCA) Community Emissions Reduction Plan (CERP) which calls for air districts and the California Air Resources Board (CARB) to reduce exposure in communities most impacted by air pollution, in part through community-based strategies to reduce health impact.

In the Bay Area there are several new and upcoming initiatives and plans that are consistent with our rental housing decarbonization goals, including the Richmond 6th Cycle Housing Element, the Bay Area Regional Climate Action Plan (BARCAP) and Plan Bay Area 2050+.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Executive Director [redacted] has decades of experience in leading projects that improve tenants' quality of life and respond to needs articulated by the community.

This year, as part of a project with Peninsula Clean Energy, [redacted] is leading the provision of legal support for Peninsula jurisdictions needing to implement policies that ensure racial equity and shield tenants from housing security while encouraging climate resilient housing upgrades such as electrification of appliances.

[redacted] has been working with the City of Richmond advising on implementation of its expanded Residential Rental Inspection Program, including a process for review of Tenant Safety Plans to preserve tenancies during major construction or repair work and the creation of Climate Resilient Housing checklists that include information within inspection reports on how to decarbonize multifamily rental properties.

[redacted] was the inaugural administrator for Alameda County Housing Secure. This is a homelessness prevention program funded by Alameda County which provides eviction defense and rental assistance for tenants at risk of homelessness to help them remain in their homes. The collaboration includes five different legal service agencies and continues today.

In the shadow of the foreclosure crisis and rising exploitation by payday lenders, East Palo Alto found itself without a bank. [redacted] quickly recruited a credit union to replace the last remaining bank with the commitment to increase the number of community members that would become banked. With the support of the Silicon Valley Community Foundation [redacted] recruited and cross-trained promotores/as in health education and financial education. Promotores were able to increase vaccination and banked rates going door to door sharing important health and financial education to their neighbors. This credit union continues to thrive in East Palo Alto and no payday lender has been able to enter the market.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

Project Lead [redacted] (.1 FTE) will provide overall coordination and oversight of legal clinics, representation of individual tenants, information sessions, the Know Your Rights Toolkit and other resources, and outreach, especially to community health center staff and other key contacts.

The Senior Attorney (.15 FTE) will oversee creation of educational materials and assist with planning information sessions and outreach as well as provide individual representation as needed. A Staff Attorney (.25 FTE) will lead legal clinics and information sessions and provide individual representation. A Legal Assistant (.15 FTE) will translate materials and interpret at information sessions and legal clinics, as needed, as well as offering administrative support to the project.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

N/A

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

N/A

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of*

obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.

N/A

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

We will offer information sessions primarily at community health centers, which have space available for this purpose. For example, the LifeLong William Jenkins Health Center, across the street from the ACCE office which we have used for tenant legal clinics, has a community room that is used for such purposes. We may also hold legal clinics at public schools where our organizational partner ACCE has a presence. We can adapt by finding other high-concentration community locations or holding virtual meetings as needed. We don't expect to have any physical infrastructure costs within the project's geographic area.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Some tenants may be hesitant to gather in person due to fears around immigration enforcement. Scheduling, childcare and transportation may also present barriers. We will invite tenants affected by such barriers to attend our online legal clinics.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Decarbonizing Tenant Housing Through broad community engagement and in cooperation with established partner organizations, community health centers, schools, parents, and landlords, California Center for Movement Legal Services seeks to decarbonize rental housing and reduce asthma cases among Richmond and San Pablo renting families.

Measurable Outcome	Indicator(s)
1. Within the first 3 months of the grant term, develop a decarbonization Know Your Rights toolkit.	• Toolkit components written, designed, and reviewed by attorneys • At least 500 copies of materials in English and Spanish printed • Website content and social media posting schedule completed
2. By the end of the grant term, increase knowledge among community healthcare workers, etc. about programs available to support decarbonization and availability of Movement Legal attorneys to provide information sessions and legal services	• Letters, flyers, and followup calls provided to community health centers • Toolkit materials and information sessions offered to 6 area community health centers, Richmond and San Pablo public elementary schools, and associated parent groups; information sessions attended by community members listed above • Information on electrification offered to local landlord groups
3. By the end of the grant term, increase knowledge among Richmond and San Pablo tenants about the health impact of gas stove use, how to obtain energy-efficient electric stoves, tenants'	• Outreach conducted by *promotores/as* (community leaders) through community organization partnerships • 10–20 information sessions attended by at least 350 tenants; Toolkit materials distributed and information about

right to healthy indoor air quality, and free legal clinics offered by Movement Legal	decarbonization and legal clinics offered by Movement Legal shared ● At least 200 participants plus promotores/as reporting an improved understanding of the topics, with at least 50 tenants asking to receive more information on how to obtain an electric stove
4. By the end of the grant term, provide legal clinics and direct legal services to tenants	● Approximately 18 regular/semi-monthly and 4 pop-up legal clinics completed ● Legal representation provided to at least 10 individual tenants
5. By the end of the grant term, ensure electric appliances are obtained by tenants who qualify for them	● Details of incentive programs and additional support provided to tenants who request it ● Followup communications with tenants completed

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Develop a decarbonization Know Your Rights toolkit	A. Materials and online content created	1. Plan and draft materials, including outreach letters, flyers, posters, tenant resource list, pamphlet or other handout, and sample letters, and social media campaign	Movement Legal		Month 1
		2. Complete graphic design	Movement Legal		Month 2
		3. Review, translate, and finalize all content	Movement Legal		Month 3
		4. Post content on website and launch social media campaign	Movement Legal		Month 3
	B. Handouts and other paper materials printed	1. Select printing service	Movement Legal		Month 3
		2. Order first print run of 500 copies of toolkit	Movement Legal	Printing service	Month 3
2. Increase knowledge among community healthcare workers, etc. about programs available to support decarbonization and availability of Movement Legal attorneys to	A. Conduct outreach to community healthcare workers, etc.	1. Gather contacts at Richmond and San Pablo community health centers and elementary schools and make an outreach plan	Movement Legal	ACCE, Rising Juntos; Schools' and health centers' administrative staff	Month 3
		2. Send letters and flyers introducing the project to community health centers, social workers, school staff, and parent groups	Movement Legal		Month 4

provide information sessions and legal services		3. Make followup calls and offer to schedule information sessions at community health centers and other locations	Movement Legal		Month 4
		4. Conduct outreach to landlord groups and offer information on electrification support programs	Movement Legal		Month 4
	B. Present information to community healthcare workers, etc.	1. Present decarbonization, tenants' rights, and legal services information at embedded meetings; register tenants for decarbonization information sessions	Movement Legal	ACCE, Rising Juntos	Ongoing through Month 18
		2. Provide participants with forms to assess increase in understanding of decarbonization	Movement Legal		Ongoing through Month 18
		1. Meet with promotores/as to assess tenant understanding any need for support			Monhtly through Month 24
3. Increase knowledge among Richmond and San Pablo tenants about the health impact of gas stove use, how to obtain energy efficient-electric stoves, tenants' right to healthy indoor air quality, and free legal	A. Conduct outreach to tenants and invite them to decarbonization information sessions	1. Work with ACCE Contra Costa and Rising Juntos to do tenant outreach for the project and register tenants for information sessions through tenant promotores/as	Movement Legal	ACCE, Rising Juntos	Ongoing through Month 24
		2. Schedule information sessions at high-concentration locations	Movement Legal		Ongoing Months 3 to 18
		3. Publicize information sessions	Movement Legal		Ongoing Months 4 to 18

clinics offered by Movement Legal	B. Hold decarbonization information sessions for tenants and supportive community	1. Hold information sessions in geographically diverse health-burdened neighborhoods and share Know Your Rights Toolkit	Movement Legal	ACCE	Semi-quarterly through Month 24
		2. Share information about tenant legal clinics and individual representation through Movement Legal	Movement Legal		Semi-quarterly through Month 24
		3. Allow tenants to request additional information about rebate programs; refer to individual representation if landlord permission is required	Movement Legal		Semi-quarterly through Month 24
		4. Provide participants with forms to assess increase in understanding of decarbonization and their rights	Movement Legal		Semi-quarterly through Month 24
4. Provide legal clinics and individual legal representation to tenants	A. Schedule legal clinics	1. Reach out to community locations to establish locations for pop-up legal clinics.	Movement Legal	ACCE	Biannually through Month 24
		2. Schedule regular semi-monthly legal clinics at a consistent location	Movement Legal	ACCE	Month 3
		3. Schedule pop-up legal clinics	Movement Legal		Ongoing
	B. Hold tenant legal clinics	1. Hold regular semi-monthly legal clinics offering brief legal advice and decarbonization information	Movement Legal	ACCE	Semi-monthly through Month 24
		2. Hold pop-up legal clinics in the community.	Movement Legal	ACCE	Semi-quarterly through Month 24
	C. Provide individual tenant legal representation	1. Assess unit and record decarbonization recommendations	Movement Legal		Ongoing through Month 24

		2. Communicate with landlord	Movement Legal		Ongoing through Month 24
		3. Use legal tools to engender support from landlord	Movement Legal		Ongoing through Month 24
5. Ensure energy-efficient electric appliances are obtained by tenants who qualify for them	A. Provide details on rebate programs	1. Reach out to tenants who requested additional information on rebates and connect them with programs	Movement Legal		Ongoing through Month 24
		2. Provide details of incentive programs and answer questions	Movement Legal		Ongoing through Month 24
	B. Track successful appliance replacement	1. Establish tracking method	Movement Legal		Ongoing through Month 24
		2. Follow up with tenants	Movement Legal		Ongoing through Month 24
		3. Offer additional support or legal representation where needed	Movement Legal		Ongoing through Month 24

Project Name: Decarbonizing Tenant Housing
Lead Applicant Name: California Center for Movement Legal Services
Term for this budget (in years): 2

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	.15 FTE at $153,338 x 2 years	Project Lead - overall project coordination and oversight	$46,001.40
Personnel/Staff Costs	Direct	.15 FTE at $100000 x 2 years	Senior Attorney - oversee creation of educational materials, assist with planning information sessions and outreach; provide individual representation	$30,000.00
Personnel/Staff Costs	Direct	.25 FTE at $84,897 x 2 years	Staff Attorney - lead legal clinics and information sessions provide individual represenation	$42,448.50
Personnel/Staff Costs	Direct	.15 FTE at $54,060 x 2	Legal assistant - translation and interpretation, administrative support	$16,208.00
Professional Services & Consultants (≤25% of Direct Costs at APPLICATION level)	Direct	Stipend per project term at $10,000 per organization	Community promotores/as outreach x 2 organizations	$20,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Community engagement and educational materials	Printing of Know Your Rights toolkit materials, letters, envelopes, flyers, posters, resource list, and handouts	$4,950.00
Community Engagement	Direct	Community engagement cost	Transportation within project boundaries	$350.00
Contingency	Contingency	Contingency	Contingency	$15,990.00

Project Narrative

Instructions:

- The “Project Narrative” is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Air Quality Bootcamp
Lead Applicant Name	Coalition for Clean Air
Project Location	Richmond, CA
Overall Funding Request	$116,264.18
Grant Term Request	1 year
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	NA
Project Lead	NA
Project Location	NA
Project Funding Request	NA

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The Coalition for Clean Air (CCA) requests $116,265.23 in Seed Funding to launch the *All About Air Quality Bootcamp* in Richmond, California. Air quality data, regulatory frameworks, emissions monitoring, and environmental law are notoriously complex. This complexity creates an unjust playing field where grassroots community-based organizations (CBOs) and local residents must advocate for their health without the deep technical resources, legal teams, or paid consultants available to industrial polluters. The Bootcamp program directly disrupts this inequity. Developed and refined during the past three years and six events hosted to date across multiple California communities, this proven model translates dense atmospheric science and regulatory policy into an accessible, actionable curriculum for everyday advocates.

This grant will support the customization and execution of a single, highly localized, 2½-day intensive classroom and hands-on training program in Richmond for up to 30 local CBO staff members and residents (targeting 24 to 30 complete participants). To ensure complete equity, language justice, and accessibility, the project will translate all training binders and digital resource drives into Spanish, provide live simultaneous interpretation throughout the course, and offer direct participation stipends ($200 per day; $500 total) to compensate participants for their time and engagement. The project will also establish ongoing community networking via two virtual All About Air Quality Community Forums following the main event.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This project aligns directly with the strategy to **reduce air pollution and improve health outcomes**. After more than 55 years of advocating for public health, CCA maintains that an educated, technically literate, and actively engaged public is the most vital foundation for reducing air pollution. The Bootcamp curriculum equips frontline residents with the exact tools needed to achieve this, dedicating extensive modules to foundational air concepts, pollutants, emissions, public health impacts, air monitoring technology, and data interpretation.

Crucially, the project features hands-on interactive technological training, bringing functional air monitoring devices to the Richmond classroom. Participants will learn how to define monitoring objectives, use existing monitoring data networks, select

equipment, track local air dispersion, and interpret data trends. This directly expands the capacity of Richmond neighborhoods to track localized pollution spikes from prominent stationary and mobile sources, interface constructively with Air District staff, protect vulnerable family members from acute health risks, and participate effectively in future regional policy decisions.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The project will be located entirely within and directly benefit the disadvantaged, low-income, and environmentally overburdened city of Richmond, California (Contra Costa County). The final training venue will be selected during the initial task phase in close collaboration with local CBO partners. Selection criteria will prioritize accessible, neighborhood-rooted spaces (such as community centers or local non-profit headquarters) situated directly within Richmond census tracts scoring in the top 25th percentile of CalEnviroScreen 4.0.

Participants will be recruited systematically across high-burden Richmond neighborhoods—including the Iron Triangle, Point Richmond, North Richmond, and Santa Fe—ensuring that the individuals receiving the technical training live, work, learn, or play in areas directly adjacent to the city's dense industrial, marine, and refining corridors.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The foundational design of the Bootcamp program relies on shared governance and direct community consultation. To determine the core technical gaps facing community advocates, CCA and partner TD Environmental Services (TDE) spent the past three years analyzing extensive anonymous feedback surveys, post-training reviews, and focus group responses from prior training cohorts across California. This continuous feedback mechanism revealed that while communities desperately want to participate in air quality planning, they are consistently shut out by two distinct barriers: the overwhelming density of scientific and technical regulatory language and a lack of access to local language interpretation.

Furthermore, community feedback from our prior Oakland Bootcamp (November 2023) cohort explicitly requested that we build additional structured networking and

partnership-building blocks directly into the course schedule. In response to these community-identified priorities, this Richmond project permanently embeds two major adjustments into the scope: (1) full language justice via professional translation of all slides, resource drives, and simultaneous live Spanish interpretation, and (2) dedicated community storytelling modules and post-Bootcamp virtual forums designed specifically to allow local groups to co-mingle, collaborate, and share local advocacy goals.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Richmond faces acute, compounding environmental justice and public health challenges. Frontline residents live in immediate proximity to a large petroleum refinery, major marine port operations, heavy commercial rail lines, and high-volume freight corridors. These concentrated stationary and mobile sources expose the population to high levels of toxic air contaminants, leading to disproportionate regional rates of asthma, cardiovascular strain, and impaired childhood lung development.

This project directly addresses these challenges by transforming 24 to 30 local residents and CBO staff members into expert community advocates. By providing up to $4,000 in direct organizational subcontracts and $500 individual participation stipends, the project removes financial barriers, allowing marginalized community members to dedicate 2½ days to intensive technical capacity building.
Progress toward long-term community impact will be explicitly demonstrated through our measurable outcomes:

- **Curriculum Customization:** We will integrate localized refinery and other emissions data and BAAQMD monitoring frameworks directly into the classroom.
- **Technical Data Literacy:** Delivering hands-on air sensor training ensures that local groups are no longer dependent on third-party consultants to interpret neighborhood air quality.
- **Bilingual Resource Distribution:** Providing complete, open-source presentation materials and resource drives in Spanish ensures that the technical knowledge scales horizontally across Richmond’s grassroots networks long after the grant term ends.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Community engagement and transparent feedback loops are embedded into every operational phase of this project. During the initial planning phase, CCA and TDE will partner closely with local Richmond environmental justice CBOs, utilizing their existing community channels, newsletters, and neighborhood meetings to broadcast the availability of the training and its direct financial stipends.

To collect rigorous feedback during implementation, the project utilizes three primary mechanisms:

1. **Intake Customization Queries:** The digital and physical registration forms will include explicit prompts asking applicants to identify specific local polluters, local land-use conflicts, or distinct air quality topics they want the curriculum to demystify. The instruction team will review these inputs to adapt presentation modules dynamically before day one.
2. **Direct Evaluation Surveys:** At the conclusion of the 2½-day training, all participants will be asked to complete detailed, anonymous evaluation forms mapping specific knowledge gains and structural critiques.
3. **Virtual Community Forums:** The two follow-up virtual forums will serve as open, interactive dialogue spaces where past participants can voice ongoing technical or educational needs.

On behalf of our community members, thank you. They are truly thrilled with the bootcamp and everything they learned. They're very excited to continue growing their skills and doing the work. Several participants shared how inspirational you are and how fortunate they feel to have been connected with you and given the opportunity to learn from you.

I appreciate you and your team for hosting such an impactful event, and I look forward to future opportunities to collaborate.

Veronica Padilla-Campos, Executive Director, Pacoima Beautiful

---

> *I would like to express my most sincere gratitude for the opportunity to participate in the Air Quality Bootcamp, hosted by the Coalition for Clean Air.*
>
> *It was an immensely enriching experience. During the training, I gained fundamental knowledge regarding the impact of air quality on our communities and the importance of promoting actions to protect the environment and public health.*
>
> *Rosa De La Paz, Bootcamp Participant*

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

   The overarching vision of the Richmond Bootcamp is to equalize the regulatory playing field by embedding deep technical air data literacy and advocacy skills directly within frontline communities.

   The project consists of three major components:

- **Planning and Preparation:** Recruiting 1-3 local Richmond CBO partners, formalizing bilingual curriculum materials, and integrating localized industrial and maritime data sets.
- **Implementation:** Executing one 2½-day intensive classroom training for up to 30 participants and hosting two subsequent online technical community forums.
- **Reporting and Sustainability:** Delivering comprehensive data reports to BAAQMD and publishing all non-copyrighted bilingual materials online for public regional access.

Roles of Project Partners:

- **Lead Applicant (Coalition for Clean Air):** CCA maintains fiscal and administrative responsibility for the grant. CCA staff will lead project

management, coordinate CBO recruitment contracts, manage participant stipend payouts, oversee the translation of educational assets, and manage public health and policy modules.

- **Technical Subcontractor (TD Environmental Services):** TDE will serve as the technical and scientific instructional lead. TDE will drive the customization of localized air data, manage the physical air monitor demonstrations in the classroom, and provide technical follow-up assistance during virtual forums.

- **Community-Based Partners (To Be Finalized):** Local Richmond CBOs will act as regional co-hosts, leading localized participant recruitment, identifying accessible neighborhood venues, and guiding the integration of neighborhood-specific environmental priorities. CCAl has strong connection in the Richmond community and the Bay Area, having previously staged a highly successful All About Air Quality Bootcamp in Oakland. CCA partners annually with the office of Contra Costa County Supervisor John Gioia for California Clean Air Day activities which include numerous Richmond area CBOs.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

As detailed in the attached budget spreadsheet, the overall funding request for this single-city Seed Funding initiative has a **Grand Total of $116,264.18**. The budget is structured to ensure comprehensive capacity building, language justice, and fair community compensation. A breakdown of the key project costs includes:

Direct Community Benefits ($21,000.00): This category directly compensates our local experts and community members to eliminate barriers to engagement. It allocates **$15,000.00** for Participant Stipends (valuing the time of up to 30 residents at $500 each upon completion of the training) and **$6,000.00** for CBO Stipends to support our Richmond-area non-profit partner organizations for their recruitment and co-hosting workflows.

Language Justice and Materials ($6,800.00): To guarantee deep inclusion for Spanish-speaking residents, this includes **$900.00** for document translation (covering localized technical slide decks, handouts, and acronym reference guides) and **$5,000.00** for on-site simultaneous interpretation services and specialized audio

equipment rentals during the 2½ days. In addition, **$400.00** is allocated for printing physical, bilingual training binders and **$500.00** is set aside for instructional supplies (e.g., interactive air sensor workshop kits).

Technical Subcontractor Fees ($14,250.00): This covers professional consultant fees for TD Environmental Services (TDE) to deliver specialized technical monitoring modules, provide hands-on diagnostic sensor equipment demonstrations in the classroom, and facilitate follow-up virtual community forums.

Personnel and Project Management Staffing ($37,060.18): Direct wages, salaries, and benefits for the core project implementation and leadership team at CCA are broken down precisely as follows:

Deputy Program Director: $15,929.10

CEO: $12,227.40

Communications Manager: $6,532.80

Development Director: $560.80

Policy Director: $1,682.40

Web Manager Total: $81.00

Events Manager: $48.68

Travel, Venue, and Workshop Operations ($13,900.00): This supports the logistical requirements of launching an intensive, multi-day, in-person training program in Richmond:

> **Meals:** $5,000.00 (catering for the opening welcome dinner and breakfast/lunch during the intensive daytime sessions).
>
> **Staff Travel:** $4,500.00 (covering regional transit, lodging, and mileage for instructors traveling to Richmond).
>
> **Participant Travel:** $2,400.00 (direct mileage and local travel constraint reimbursements for attendees).
>
> **Meeting Venue:** $2,000.00 (rental fees for a centrally located, accessible community space within a high-burden Richmond census tract).

Summary of Totals

Direct Costs Subtotal: $91,750.38

Admin/Overhead (15%): $13,762.56 (covering organizational overhead, non-profit bookkeeping, tracking, and operational insurance).

Contingency (10%): $9,175.04 (allocated defensively to absorb unexpected local logistical changes or acute service cost shifts).

Grand Total: $116,264.18

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The Richmond Bootcamp is intentionally designed to align with and amplify major regional and statewide environmental justice initiatives. First and foremost, the project aligns directly with **CARB's AB 617 Community Air Protection Program** and its updated Blueprint 2.0 guidelines, which call for localized, community-driven capacity building and collaborative partnerships to reduce toxic exposures in disproportionately burdened neighborhoods. CCA and TDE have extensive history in this ecosystem; CCA staff have previously served on regional AB 617 Steering Committees, and members of neighboring air steering committees have directly participated in our previous training cohorts to strengthen their regulatory oversight.

Crucially, the project creates a powerful regional synergy with **BAAQMD's own local initiatives**. Because technical subcontractor TDE directly operates the **Bay Air Center for the Bay Area Air District**, the technical training provided in this Bootcamp will be perfectly harmonized with BAAQMD's regional air monitoring frameworks, data guidelines, and multi-language resource networks.

Furthermore, by training Richmond residents to interpret emissions inventories and map localized public health trends, the project builds the precise grassroots civic capacity required to support the implementation of Richmond's local Climate Action Plan and regional stationary source emission reduction strategies.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The Lead Applicant, the Coalition for Clean Air (CCA), possesses more than 55 years of robust experience leading statewide environmental advocacy, public health education, and grant-funded community initiatives across California. CCA has a proven history of managing complex public funds with absolute fiscal precision, including the successful execution of one federal and multiple stategrants. CCA's educational portfolio includes massive, high-leverage programs such as California Clean Air Day, which engages hundreds of corporate partners and drives thousands of individual environmental pledges annually under strict operational deadlines.

Furthermore, CCA has successfully managed and executed the *All About Air Quality Bootcamp* model for three years, demonstrating impeccable capacity by launching successful sessions across the Los Angeles metropolitan region, Oakland, Fresno, and the Inland Empire. Technical subcontractor TD Environmental Services (TDE) complements this with world-class capability, bringing extensive experience designing technical guidebooks, managing complex ambient data streams, and running specialized training programs for the U.S. EPA and regional air districts.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The Air District redacted the names of individuals associated with identifiable personnel compensation information.

This project will be executed using a highly structured, collaborative project management framework. Administrative and programmatic oversight will be led by CCA President and CEO Dr. [redacted] (0.05 FTE), who brings more than three decades of direct environmental justice collaboration and prior air district board experience to ensure strategic success. Day-to-day grant operations, contract execution, and reporting will be managed by CCA Deputy Director of Programs Dr. [redacted] (0.15 FTE), who has more than 10 years of experience managing complex climate resilience and environmental education grants. CCA Communications and Education Manager [redacted] (0.15 FTE) will oversee bilingual outreach, CBO recruitment tracking, and material production.

Technical operations and scientific instruction will be managed by TDE President Tim Dye and TDE Project Manager Story Schwantes, who will collectively dedicate approximately 0.15 FTE to customizing data indices and executing classroom equipment demonstrations.

Leveraged Resources: CCA will leverage its extensive, pre-existing digital infrastructure—including our dedicated program website and established cloud-

based resource repositories—to host and distribute the new Richmond training assets at zero additional cost to this grant. In addition, CCA will leverage its deep statewide network of policymakers, environmental scientists, university researchers, and public health advocates to secure high-level, volunteer guest speakers to deliver in-kind expert presentations during the training session.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*
    N/A

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*
    N/A

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*
    N/A

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*
    N/A

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Barrier 1: Language and Accessibility Constraints. Frontline communities in Richmond are highly diverse, and a failure to provide robust multi-lingual access acts as an immediate barrier to participation for those most affected by industrial pollution.

- *Mitigation:* We have explicitly built comprehensive language justice directly into the budget. Rather than treating translation as an afterthought, the majority of training presentations, reference sheets, and thumb drive resource packets will be professionally translated into Spanish prior to the event, and professional simultaneous interpretation teams will manage the live classroom environment.

Barrier 2: Historical Community Burnout and Economic Barriers. Staff members at grassroots Richmond CBOs and local working families are frequently overextended and cannot afford to donate 2½ days of uncompensated time to attend technical workshops, regardless of the program's value.

- *Mitigation:* We respect and honor community expertise by removing the economic friction of attendance. The project budget guarantees a direct $500 participation stipend to every resident who completes the training and provides up to $4,000 in organizational stipends to our local CBO partners to fully cover their staff time and recruitment overhead.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Air Quality Bootcamp
Lead Applicant Name	Coalition for Clean Air
Project Location	Richmond, CA
Overall Funding Request	$116,264.18
Grant Term Request	1 year

Project Vision:	Establish a level playing field for environmental advocacy in Richmond by equipping local residents and community-based organizations with the critical technical data literacy, regulatory knowledge, and bilingual resources necessary to engage effectively in regional air quality decisions.

Measurable Outcome	Indicator(s)
1. Enhanced Local Technical Capacity	• *Quantitative Indicators:* Number of Bootcamp training sessions hosted (1); number of local participants trained (24 to 30); percentage of participants completing the full 2½-day course (>80%). • *Qualitative Indicators:* Participant post-Bootcamp survey responses indicating self-reported knowledge gains regarding local stationary polluters, emissions data, and regulatory pathways.
2. Language Justice and Broadened Accessibility	• *Quantitative Indicators:* Percentage of primary instructional materials translated into Spanish (100%); number of days of live simultaneous interpretation provided (2½). • *Qualitative Indicators:* Survey metrics evaluating the clarity, quality, and community utility of the translated digital and physical training resources.
3. Sustained Regional Collaborative Networks	• *Quantitative Indicators:* Number of local CBO partnerships formalized (1 to 3); number of follow-up virtual All About Air Quality Community Forums hosted (2 or more); total number of unique forum participants >4. • *Qualitative Indicators:* Tracking the types of community projects, local air-monitoring inquiries, or shared advocacy strategies highlighted by participants during the virtual follow-up forums.

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Enhanced Local Technical Capacity	A. Finalized Project Work Plan	1. Develop comprehensive individual task scopes and internal team timeline deadlines.	CCA	TDE	Month 1
		2. Assign specific internal team responsibilities and establish the coordination strategy with BAAQMD regulators.	CCA	TDE	Month 2
	B. Formalized Local CBO Partnerships	1. Identify and vet grassroots environmental justice organizations operating directly within high-burden Richmond neighborhoods.	CCA	TDE	Month 3
		2. Recruit and execute formal subcontracts with 1 to 3 local CBO partners to co-govern recruitment and regional planning.	CCA	TDE	Month 4
	C. Localized Content Customization	1. Collect initial community feedback and enrollment queries regarding localized air quality concerns and land-use conflicts.	CCA	TDE, CBOs	Month 4
		2. Adapt existing syllabus modules to directly feature Richmond-specific stationary sources (e.g., refineries, marine port logistics).	CCA	TDE	Month 5
	D. Instructor Team Solidification	1. Review core instructor team composition and finalize internal teaching assignments between CCA and TDE staff.	CCA	TDE	Month 4
		2. Recruit qualified regional volunteers, public health researchers, and BAAQMD specialists for in-kind guest speaker roles.	CCA	TDE	Month 5

	E. Venue and Participant Registration	1. Evaluate local facility costs, capacity, and amenities to select an accessible venue within a high-percentile CalEnviroScreen Richmond tract.	CCA	TDE	Month 5
		2. Coordinate with CBO partners to promote the event, process applications, and enroll 24 to 30 local residents and staff members.	CCA	TDE, CBOs	Month 6
2. Language Justice and Broadened Accessibility	A. Bilingual Curriculum Assets	1. Translate all core presentation slides, local worksheets, and data sheets into Spanish.	CCA		Month 4
		2. Compile, translate, and load comprehensive reference materials onto digital resource flash drives for distribution.	CCA		Month 5
	B. Execution of Richmond Bootcamp	1. Host the opening introductory welcome dinner to facilitate initial cohort networking and community storytelling.	CCA	TDE, CBOs	Month 6
		2. Deliver 2 full days of intensive classroom instruction featuring live simultaneous Spanish interpretation and dual-screen presentation slides.	CCA	TDE, CBOs	Month 6
		3. Facilitate hands-on technical demonstrations utilizing portable diagnostic air sensors managed by TDE.	CCA	TDE	Month 6
		4. Collect completed anonymous post-Bootcamp participant evaluation surveys to measure direct knowledge baseline changes.	CCA	TDE, CBOs	Month 6

3. Sustained Regional Collaborative Networks	A. Virtual Community Forums	1. Gather, clean, and organize contact rosters for all training participants and local CBO allies to establish the networking database.	CCA	TDE	Month 7
		2. Organize and host the first virtual All About Air Quality Community Forum focused on localized follow-up technical assistance.	CCA	TDE	Month 8
		3. Organize and host the second virtual community forum focused on collaborative peer campaign updates and regional networking.	CCA	TDE	Month 10
	B. Progress and Final Grant Reporting	1. Compile operational milestones, financial receipts, and initial outreach metrics to submit an interim progress report to the Air District.	CCA	TDE	Month 6
		2. Synthesize complete quantitative indicators, qualitative survey feedback, and project outcomes into a comprehensive Final Project Report.	CCA	TDE	Month 12
	C. Open-Source Resource Digital Repository	1. Update and populate the program website with the specialized, bilingual Richmond data guides and training decks.	CCA		Month 11
		2. Finalize long-term digital asset maintenance workflows to ensure all resources remain evergreen and free for public regional access.	CCA		Month 12

Project Name: Air Quality Bootcamp
Lead Applicant Name: Coalition for Clean Air
Term for this budget (in years): 1

CLEAN AIR FOR ALL

Richmond Seed
FIERCE Advocates Application

Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Clean Air Sanctuary
Lead Applicant Name	FIERCE Advocates
Project Location	Richmond, North Richmond, San Pablo, and surrounding Contra Costa County communities
Overall Funding Request	$200,000
Grant Term Request	1 Year
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	
Project Lead	
Project Location	
Project Funding Request	

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Clean Air Sanctuary is a community-led respiratory health and healthy homes initiative designed to reduce indoor air pollution and improve health outcomes, particularly for Black and Latinx families in Richmond, North Richmond, and San Pablo. Families in these neighborhoods experience disproportionate exposure to wildfire smoke, mold, pests, moisture, poor ventilation, and substandard housing conditions.

The project provides air purifiers and filters, smoke-day kits, non-clinical healthy homes screenings, and respiratory health education integrated into *Sanctuary and doula* sessions. It also includes education on pregnancy and infant lung development, climate-smart nutrition workshops, and advocacy tools to help families navigate issues related to mold, pests, and landlord responsibilities.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

The project aligns with the Local Community Benefits Fund strategy to reduce air pollution and improve health outcomes. *Clean Air Sanctuary* reduces indoor particulate exposure, strengthens knowledge of respiratory health, supports pregnant individuals and infants, and provides practical tools that families can use immediately. It advances integrated, community-driven solutions by leveraging trusted Sanctuary spaces and culturally grounded programming.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The project serves families living in Richmond, North Richmond, San Pablo, and unincorporated Contra Costa County neighborhoods. These communities are located near major roadways, industrial sites, and areas with high wildfire smoke exposure. Programming will take place in existing Sanctuary spaces, partner sites, and community locations that FIERCE Advocates use.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

   Community needs were identified through West Contra Costa program activities, including Sanctuary circles, doula sessions, life-coaching, and ongoing participant feedback. Sanctuary circles are culturally grounded peer-support spaces where Black and Latina women, men, and caregivers gather regularly in facilitated, healing-centered environments to share experiences, strengthen community connections, and discuss challenges affecting their health and well-being. These circles create a trusted setting where participants speak openly about the conditions in their homes, the stressors they face, and the supports they need. Doula sessions provide individualized support during pregnancy, birth, and the postpartum period, offering one-on-one time for pregnant people and their doula to discuss physical and emotional health, stress, housing conditions, and environmental factors that influence maternal and infant outcomes. Life-coaching sessions and informal check-ins further deepen our understanding of day-to-day challenges.

   Across these programs, participants consistently identified concerns related to asthma, allergies, infant respiratory issues, mold, pests, moisture, poor ventilation, wildfire-smoke exposure, sleep disruption, and unsafe housing conditions. Participants also emphasized the need for practical, tangible support to address both existing and emerging harms, rather than information alone. These community-identified concerns align closely with regional AB 617 priorities and broader local environmental-justice assessments.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

   Clean Air Sanctuary responds directly to needs identified by families. The project:

   - Distributes air purifiers, filters, and smoke-day kits.
   - Provides healthy homes screenings.
   - Integrates respiratory health modules into Sanctuary and doula sessions.
   - Offers climate-smart nutrition workshops.

The project serves Black and Latinx families, pregnant individuals, infants, and caregivers who are disproportionately impacted by indoor air pollution. Measurable outcomes will track improvements in indoor air quality, increased knowledge of respiratory health, and increased use of air quality tools.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

FIERCE will use Sanctuary circles, doula sessions, community workshops, and its communication channels, including newsletters and social media, to share updates and gather feedback. Staff will collect participant surveys, reflections, and focus group input to assess what is working and where adjustments are needed. Feedback will be reviewed quarterly and used to refine curriculum, materials and distribution strategies. Community members will be informed about available benefits through trusted staff during program activities, peer networks, and program partners.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Summary of Major Components:

Clean Air Sanctuary includes the following components:

- Air purifiers and filters for families
- Smoke day kits and indoor air quality tools
- Non-clinical healthy homes screenings
- Respiratory health modules inside Sanctuary and Doula sessions
- Pregnancy and infant lung development education for community-based doula trainees, apprentices, and clients
- Climate-smart nutrition workshops with community-based organization Urban Tilth
- Advocacy tools for navigating mold, pests, and landlord issues

Project Vision:

To improve respiratory health education and access to air pollution mitigation resources for Black and Latinx families in Richmond, North Richmond, and San Pablo by providing practical tools, healthy homes supports, and culturally grounded education delivered through trusted Sanctuary spaces.

Measurable Outcomes:

- Improved indoor air quality for 150 families
- Increased respiratory health and healthy homes knowledge for 150 participants
- Increased pregnancy and infant respiratory health knowledge for 150 parents and caregivers
- Increased access to climate-smart nutrition for 75 families

Role of Applicant and Partners:

FIERCE Advocates will lead all implementation, community engagement, distribution, education, and evaluation. An environmental health educator will provide technical guidance and support healthy homes screenings. Urban Tilth will support climate smart nutrition workshops.

Budget Summary:

The $200,000 budget includes staff time, environmental health educator support, air purifiers, filters, smoke day kits, healthy homes materials, workshops, evaluation, indirect costs and contingency.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

    Clean Air Sanctuary is fully consistent with Richmond's General Plan 2030, Climate Action Plan, and long-standing environmental justice priorities that call for reducing pollution burdens and strengthening community health and resilience. Regionally, it supports implementation of the AB 617 and the Bay Area Clean Air Plan, both of which prioritize community-driven strategies to reduce exposure in highly impacted neighborhoods. At the statewide level, our project advances the goals of the California Climate Change Scoping Plan, SB 535/AB 1550 equity mandates, and statewide commitments to reduce toxic stress and improve health outcomes in communities facing cumulative environmental burdens.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

    FIERCE Advocates based in Richmond has over 20 years of experience managing community-based health, wellness, and family support initiatives in Richmond and across Contra Costa County. Our community-rooted staff team have strong relationships with families and deep experience delivering culturally grounded programming. Together, FIERCE's program, fiscal, and community engagement infrastructure ensures the capacity to successfully manage and implement a project of this scope.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

    Project implementation will be supported by approximately 1.5 FTE staff for *project coordination*, ensuring consistent day-to-day management and community engagement. A part-time *environmental health educator* will provide technical expertise related to air quality and environmental health. As the project scales, FIERCE will add a full-time *community organizer* to deepen outreach, partnership coordination and resident participation across this and related

initiatives. All required staffing and resources for successful project completion are included in the proposed budget, and no additional funding sources are needed.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

    No permits or approvals are required. All activities occur in existing community spaces.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

    Not applicable. The project does not involve construction, site disturbance or physical infrastructure requiring CEQA review.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

    FIERCE has full site control over spaces and partner locations where program events and activities are held. No additional site control is required.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

    Air purifiers and materials distributed to families do not require organizational maintenance. Program operations will be sustained through existing staff and infrastructure.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

    The primary anticipated barrier is securing adequate storage space for air purifiers, filters, and related supplies. FIERCE will address this by using existing program storage, coordinating staggered deliveries with vendors, and securing short-term overflow space through community partners if needed. Supply chain delays for purifiers or filters are also possible; to mitigate this, the project will pre-identify multiple vendors and maintain a small reserve of units. With strong staff capacity and established training systems, no additional operational barriers are expected.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	**To improve respiratory health education and access to air pollution mitigation resources for Black and Latinx families in Richmond, North Richmond, and San Pablo by providing practical tools, healthy homes supports, and culturally grounded education delivered through trusted Sanctuary spaces.**

Measurable Outcome	Indicator(s)
1. Improve indoor air quality for 150 families by distributing air purifiers, filters, and smoke day kits.	• Number of air purifiers distributed • Number of replacement filters distributed • Number of smoke day kits distributed • Participant reports of improved indoor air quality
2. Increase respiratory health and healthy homes knowledge among 150 participants.	• Pre- and post-survey scores • Percentage of participants reporting increased knowledge • Participant reflections describing what they learned
3. Increase pregnancy and infant respiratory health knowledge for 150 pregnant people and caregivers.	• Number of Doula sessions including respiratory health content • Participant confidence in managing indoor air quality • Participant reflections
4. Increase access to climate smart nutrition for 75 families.	• Attendance at nutrition workshops • Participant reports of increased knowledge • Reflections on changes in food choices
5. Increase family capacity to identify and address mold, pests, and moisture issues.	• Number of healthy homes screenings completed • Number of families receiving advocacy tools • Participant reports of improved ability to navigate landlord issues
6. Increase use of air quality tools and alerts among 150 participants.	• Percentage of participants reporting increased use of AQI tools • Participant reflections on behavior changes (closing windows, avoiding outdoor exposure, etc.)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1.	A. Air purifier and smoke day kit procurement completed	1. Identify vendors and secure quotes	FIERCE	—	Q2 2027
		2. Purchase air purifiers, filters, and smoke day kit materials	FIERCE	—	Q2 2027
		3. Assemble smoke day kits	FIERCE	Volunteers	Q2 2027
	B. Distribution system established	1. Create distribution schedule	FIERCE	Doula staff	Q2 2027
		2. Integrate distribution into Doula & Sanctuary sessions	FIERCE	CoCo Doulas	Q2 2027
		3. Track distribution in database	FIERCE	—	Q2 2027
	C. Families receive indoor air quality supports	1. Distribute purifiers, filters, and kits	FIERCE	—	Q2 2027
		2. Provide instructions for use	FIERCE	—	Q2 2027
		3. Collect participant feedback	FIERCE	—	Q2 2027
2.	A. Curriculum finalized	1. Draft respiratory health modules	FIERCE	Environmental Health Educator	Q2 2027
		2. Review with Doula and Sanctuary teams	FIERCE	CoCo Doulas	Q2 2027
		3. Translate materials	FIERCE	—	Q2 2027
	B. Workshops and sessions delivered	1. Integrate modules into Doula & Sanctuary circles	FIERCE	Doula staff	Q2 2027
		2. Deliver workshops	FIERCE	—	Q2 2027
		3. Collect surveys and reflections	FIERCE	—	Q2 2027
		1. Analyze survey data	FIERCE	—	Q2 2027

	C. Knowledge gains assessed	2. Summarize findings	FIERCE	—	Q2 2027
		3. Adjust curriculum as needed	FIERCE	—	Q2 2027
3.	**A. Doula curriculum updated**	1. Draft pregnancy and infant lung development content	FIERCE	CoCo Doulas	Q2 2027
		2. Review with Doula team	FIERCE	CoCo Doulas	Q2 2027
		3. Translate materials	FIERCE	—	Q2 2027
	B. Sessions delivered	1. Integrate content into Pregnancy Journey	FIERCE	CoCo Doulas	Q2 2027
		2. Deliver sessions	FIERCE	CoCo Doulas	Q2 2027
		3. Track participation	FIERCE	CoCo Doulas	Q2 2027
	C. Knowledge gains assessed	1. Collect participant reflections	FIERCE	CoCo Doulas	Q2 2027
		2. Analyze findings	FIERCE	—	Q2 2027
		3. Adjust content as needed	FIERCE	CoCo Doulas	Q2 2027
4.	**A. Workshop curriculum finalized**	1. Draft nutrition modules	FIERCE	Urban Tilth	Q2 2027
		2. Review with partners	FIERCE	Urban Tilth	Q2 2027
		3. Translate materials	FIERCE	—	Q2 2027
	B. Workshops delivered	1. Schedule workshops	FIERCE	Urban Tilth	Q2 2027
		2. Deliver workshops	Urban Tilth	FIERCE	Q2 2027
		3. Track attendance	FIERCE	—	Q2 2027
	C. Knowledge gains assessed	1. Collect surveys	FIERCE	—	Q2 2027
		2. Analyze findings	FIERCE	—	Q2 2027
		3. Adjust curriculum	FIERCE	Urban Tilth	Q2 2027
5.	**A. Healthy homes screening tools finalized**	1. Draft screening checklist	FIERCE	Environmental Health Educator	Q2 2027
		2. Review with staff	FIERCE	—	Q2 2027

		3. Translate materials	FIERCE	—	Q2 2027
	B. Screenings delivered	1. Train staff	FIERCE	Environmental Health Educator	Q2 2027
		2. Conduct screenings	FIERCE	—	Q2 2027
		3. Provide follow up supports	FIERCE	—	Q2 2027

Project Name: Clean Air Sanctuary
Lead Applicant Name: FIERCE Advocates
Term for this budget (in years): 1

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Project Manager	This person (.75 FTE) is responsible for workplan execution, - partner coordination, contractor oversight, data and reporting, community engagement oversight, and budget tracking. (New position) [$71,250 salary and $12,112.50]	$83,362.50
Personnel/Staff Costs	Direct	Community Organizer	This position (.50 FTE) will lead community engagement for the Clean Air Sanctuary project, including outreach to FIERCE Advocate program participants and coordination with Richmond and West Contra Costa community sites. The organizer will build relationships with families, support distribution of air purifiers and smoke -day kits, coordinate healthy-homes screenings, and strengthen partnerships with local schools and community organizations. [Wage: $33.65 hr. Fringe Benefits: $5950]	$40,950.00
Personnel/Staff Costs	Direct	Health & Wellness Coordinator	This position (.10 FTE) will work alongside the Community Organizer and the Environmental Health Educator to coordinate environmental health education conversations and resource distribution among Health and Wellness Programs including peer support groups (sanctuaries) and other monthly wellness activities. [Wage $30hr; Fringe Benefits $1060.80]	$7,300.80
Personnel/Staff Costs	Direct	Health & Wellness Assistant	This position (.10 FTE) works alongside the Community Organizer and the Environmental Health Educator to support with outreach. [Wage:$28.75; Fringe Benefits: $1,424.60] Receives additional stipend for Spanish language support	$9,805.00
Personnel/Staff Costs	Direct	Community Based Doula Manager	This position (.5 FTE) will partner with the Community Organizer and the Environmental Health Educator about how to engage doulas, doula trainees, doula clients and their families and any of the public health sytems we	$3,543.93
Personnel/Staff Costs	Direct	Community Based Doula Assistant	This position (.05 FTE) will partner with the Community Organizer and the Environmental Health Educator about direct outreach to doula clients and families.[Wage:$28.75; Fringe Benefits: $1,424.60]	$2,797.27
Personnel/Staff Costs	Direct	Community Based Doulas	The Doulas (6 doulas at .05 FTE) will be the direct interface with birthing families and sharing information about this project. ($1404 per doula times 6 doulas)	$8,424.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Environmental Health Educator	This position (.25 FTE) will be the lead on implementation of our education program including conducts healthy-homes screenings, provides training and technical assistance, supports curriculum development and advises on environmental health best practices (Wage: $70 hr)	$36,400.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Sanctuary Facilitators	This position (3 facilitators) collaborate with the Enviromental Health Educator and the Project Manager to host them at Sanctuary meetings and engage sanctuary participants.	$7,500.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Environmental Health Intern	The intern will work in partnership with Project Manager and the Environmental Health Educator to training, healthy home screening and community education workshops for FIERCE Advocate programs	$28,600.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Mid-range HEPA air purifier	Provides each participating household with a mid-range HEPA air purifier capable of removing fine particulate matter (PM2.5), allergens, mold spores, and other indoor pollutants (150 households)	
Materials, Supplies & Equipment (> $5K itemized)	Direct	Replacement HEPA filter	Covers one annual replacement filter per household to maintain purifier performance and ensure consistent removal of particulate matter. (estimate of $200 for 150 households)	$30,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Healthy home kits	Each household receives a Healthy Home Kit containing non-toxic cleaning supplies, mold and moisture control tools, pest-prevention materials, microfiber cloths, and basic weatherization items. (estimate of $50 for 150 households)	$7,500.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Wildfire smoke kits	Provides each household with a wildfire smoke preparedness kit that includes N95/KN95 masks, wipes, eye drops, and instructions for creating a "clean air room" during smoke events. (estimate of $35 for 150 households)	$5,250.00
Community Engagement	Direct	Printed Outreach materials	Outreach materials -- flyers to distribute to FIERCE participants and community residents about the Clean Air Sanctuary project	$500.00
Community Engagement	Direct	Refreshments	Food and refreshments for participants attending workshops and info sessions	$3,500.00
Community Engagement	Direct	Translation	Written and verbal translation for Spanish speakers participating in Clean Air Sanctuary events and activities.	$1,500.00
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	Office and community room space, utilities, phones.	Cover overhead for this project.	$1,254.00
Contingency (≤10% of Direct Costs at PROJECT level)	Contingency	Price fluctuation for equipment	A modest contingency to account for price fluctuations, shipping, taxes, and supply chain variability while ensuring the program can deliver complete kits to all 150 households without compromising quality or scope.	$5,175.00
Only add lines above this line				
			TOTAL:	$200,000.00

Bay Area Air District
CLEAN AIR FOR ALL

Richmond Seed

Nepali Association of Northern California Application

Bay REPAIR Local Community Benefits Fund - Project Narrative

Safe Air at Home

A bilingual environmental justice initiative helping Nepali-speaking families understand outdoor air quality, reduce indoor exposure, and protect health in Richmond, Pinole, and El Sobrante

Application Title	Safe Air at Home
Lead Applicant Name	Nepali Association of Northern California (NANC)
Project Location	NANC Richmond community center and participating households in eligible areas of Richmond, Pinole, and El Sobrante
Overall Funding Request	$198,000
Grant Term Request	12 months
Grant Type	Seed Grant

STRATEGY ALIGNMENT (10 points)

1. Provide a short summary (1-2 paragraphs) that outlines this project.

Safe Air at Home is a 12-month, $198,000 Seed Grant project led by the Nepali Association of Northern California (NANC) to help Nepali-speaking families in Richmond, Pinole, and El Sobrante understand outdoor air conditions, reduce indoor exposure to harmful air pollutants, and adopt lasting household protection practices. The project combines a focused Nepali-English mobile app, bilingual trainings, an Air Filter Library, and a 40-household pilot. Pilot households will receive room-level PM2.5 and total VOC monitoring in the kitchen, living room, bedroom or primary sleeping area, and one household outdoor location; targeted HEPA filtration and replacement filters for qualifying rooms; and WHOOP (a wearable performance and health-tracking device)-supported, non-diagnostic wellness tracking for one consenting adult per household to connect air-quality patterns with sleep, recovery, and heart-health indicators.

The project is more than an equipment distribution effort. It is a community-led environmental justice model that turns public air-quality data and household monitoring into practical decisions families can make each day, such as when to close windows, run a purifier, replace filters, reduce indoor fine particle and VOC sources, or respond to odor or poor-air events. De-identified findings will be shared through Nepali-English bilingual community summaries, seminars, videos, and a public project page so that residents, advocates, and public agencies can learn from the pilot and adapt the approach for similar immigrant and refugee communities.

2. Briefly describe how the project aligns with at least one of the Local Community Benefit Fund strategies: Reduce air pollution and improve health outcomes; Build economic resilience for a just transition.

The project directly aligns with the strategy to reduce air pollution and improve health outcomes. It does not claim to reduce refinery, roadway, or regional emissions directly; instead, it reduces human exposure to harmful air pollution, which is an eligible and practical mitigation pathway for households living in high-burden airsheds. The project does this through indoor air-quality improvement, air pollution monitoring, exposure-reduction intervention, education, and health-supportive community programming. PM2.5 reduction in qualifying rooms is the primary quantitative indoor-air outcome, while total VOC readings are used as screening-level information for education and source-control related to community concerns about petroleum-related VOCs and BTEX, not as species-specific chemical measurements.

Safe Air at Home also advances information equity, a core environmental justice needs. Many public air quality information tools are available only in English or in formats that do not tell families what to do inside the home. The project closes that gap by translating AirNow AQI and forecast data, selected EPA EnviroMapper/Envirofacts context, and Air District public information into simple Nepali-English prompts and household coaching. WHOOP-supported wellness summaries make the health relevance of air quality more tangible to families by helping them explore whether poor-air periods and protective routines are associated with sleep, recovery, resting heart rate, heart-rate variability, respiratory rate, and, where supported and calibrated, blood-pressure-insight trends. These indicators are educational and non-diagnostic, but they strengthen behavior change by connecting pollution exposure to daily experience.

COMMUNITY IMPACT (20 points)

3. Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.

Project activities will be anchored at NANC's Richmond community center and implemented in participating households across eligible areas of Richmond, Pinole, and El Sobrante. Trainings, community seminars, Resident Advisory Circle meetings, equipment storage, filter distribution, and Air Filter Library activities will be based at the community center. Household monitoring, purifier placement, coaching, and WHOOP-supported onboarding will occur in participating homes after consent and household permission are obtained.

Recruitment will be data-informed and community-informed. NANC will use the most recent three years of EPA outdoor air quality/AQI data, selected Air District community monitoring context, and resident input to identify priority recruitment zones within the target communities. Within those zones, NANC will prioritize multigenerational households, families with children or older adults, and residents who face language-access barriers to mainstream environmental health information. The project location is intentionally household-based because the project addresses the exposure pathway where families spend most of their time: indoor air inside the home.

4. Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.

NANC identified this project through continuous community contact rather than a one-time needs assessment. NANC runs year-round cultural, educational, wellness, language, senior, youth, and community programs and regularly hears residents describe concerns about poor air days, refinery or odor events, children and older adults in multigenerational homes, and lack of clear Nepali-language guidance on what to do when air quality is poor. Families also raise practical questions that reveal a gap between environmental data and household action: when to close windows, when to ventilate, whether an air purifier helps, how often filters need replacement, how to reduce cooking and cleaning-related indoor pollution, and how to protect sleep, comfort, and daily wellbeing during poor-air periods.

The engagement methods used to shape the project include resident conversations during NANC events, direct conversations with community leaders and families, bilingual outreach through trusted community channels, review of Richmond-area environmental justice and community air monitoring context, and technical input from NANC advisors. These methods show that the proposed solution reflects community-identified needs: language access, practical household guidance, affordable filtration support, attention to children and older adults, and information that responds to both outdoor pollution and indoor sources. The project also recognizes community concern about VOCs and BTEX in the Richmond-area refinery and

transportation airshed while keeping the monitoring claims scientifically defensible: the household devices will measure PM2.5 and total VOC trends, not speciated BTEX concentrations.

During implementation, residents will continue to shape the project. NANC will convene an 8-10 member Resident Advisory Circle, collect feedback after every training, conduct household check-ins, and adjust app prompts, training materials, coaching strategies, and public summaries based on what participants say is useful, confusing, or missing. This keeps engagement two-way and ongoing rather than symbolic.

5. Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.

The project benefits Nepali-speaking households in Richmond, Pinole, and El Sobrante, with priority for households in high-burden areas and multigenerational homes with children or older adults. The environmental justice challenge is two-fold. First, the Richmond-area airshed is affected by multiple pollution sources, including refining, transportation corridors, industrial facilities, rail, freight movement, marine activity, and regional smoke events. Richmond also carries a documented public health burden, including high asthma prevalence. Second, Nepali-speaking immigrant households face language and access barriers that can prevent them from receiving, understanding, and using mainstream air-quality information and public health messaging. This creates a double burden: exposure risk plus limited access to practical protection tools.

Safe Air at Home addresses this challenge by linking information, monitoring, intervention, and behavior change. The app will turn AirNow and selected official context data into simple household prompts. The pilot will show families what is happening in rooms where exposure occurs, including the kitchen, living space, bedroom or sleeping area, and a household outdoor location. The Air Filter Library will make targeted HEPA filtration and replacement filters available to qualifying rooms, reducing the financial barrier that often prevents consistent purifier use. Trainings and coaching will help households reduce both outdoor pollution that enters the home and indoor pollution generated by daily behaviors such as cooking, cleaning, product use, and ventilation decisions.

The measurable outcomes demonstrate community impact in concrete ways: 40 households enrolled and monitored; 160 monitors deployed; 40 consenting adults offered WHOOP-supported wellness tracking; 8 trainings, at least 2 seminars, and at least 3 short bilingual videos delivered; the app launched with at least 150 registered users; 100% of qualifying rooms receiving purifier support within the project design limit; at least 70% of households adopting two or more protective practices; at least 75% of qualifying rooms showing measurable PM2.5 improvement during comparable periods; and public de-identified findings shared for broader community learning. These outcomes show progress not only through outputs, but through changes in knowledge, behavior, exposure reduction, and access to usable evidence.

The broader impact is regional and policy-relevant. By comparing indoor and outdoor PM2.5 patterns and pairing them with household characteristics, cooking and ventilation practices, VOC trends, and aggregate WHOOP-supported wellness summaries, NANC can identify practical predictors of elevated indoor exposure in Nepali-speaking households. The findings can inform more targeted and culturally responsive clean-air interventions for similar immigrant and refugee communities across the Bay Area and California. Public health departments, air districts, local governments, and clean-air advocates may use the de-identified findings to improve outreach, prioritize interventions, and allocate resources more equitably to linguistically isolated populations.

COMMUNITY ENGAGEMENT (10 points)

6. Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.

NANC will use multiple engagement methods so that residents understand project benefits, can participate in ways that fit their schedules, and can influence implementation. Methods include bilingual outreach at NANC events, direct phone follow-up, WhatsApp/text updates, social media posts, in-person and virtual trainings, community seminars, short bilingual videos, app reminders, household check-ins, Resident Advisory Circle meetings, and public-facing project summaries. These channels are already familiar to the community and reduce reliance on English-only public websites or formal notices that many households may not use.

Feedback will be collected through several structured and informal channels. Every training will include a short feedback tool. Pilot households will receive monthly check-ins to discuss device use, purifier operation, filter replacement, app prompts, sleep/recovery tracking, household barriers, and questions about PM2.5, TVOC, odors, and source-control. The Resident Advisory Circle will meet quarterly to review outreach language, app prompts, training topics, public summaries, participation barriers, and whether project findings are being explained in a way residents understand.

NANC will document and use feedback actively. If residents report that app prompts are confusing, NANC will revise language. If trainings reveal common misunderstandings about ventilation, filters, or TVOC readings, NANC will adjust coaching and videos. If households identify barriers such as transportation, childcare, technology setup, or fear about data privacy, NANC will adapt participation supports and consent explanations. If Resident Advisory Circle members identify culturally specific practices, concerns, or examples that should be included, those recommendations will be incorporated into outreach and training materials. This process ensures that community knowledge improves the project as implementation unfolds.

MEASURABLE OUTCOMES PLAN (30 points)

7. Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.

The project vision is to build a bilingual environmental justice model that helps Nepali-speaking households understand Richmond-area outdoor air quality, reduce indoor PM2.5 exposure and TVOC-related concerns, connect protective actions to daily wellbeing, and sustain cleaner-air practices after the grant term. The model has three integrated components: (1) a focused Nepali-English app and public project page; (2) a bilingual training, seminar, video, and Air Filter Library program; and (3) a 40-household monitoring and intervention pilot using four-location PM2.5/TVOC monitoring, targeted HEPA filtration, source-control coaching, WHOOP-supported non-diagnostic wellness tracking, and public de-identified findings.

Major measurable outcomes include: enrolling and onboarding 40 households from priority zones; improving Nepali-language access to current outdoor air information through an app and alerts; delivering bilingual education and engagement; providing HEPA purifier and replacement-filter support for qualifying rooms; increasing protective behaviors and improving PM2.5 levels in qualifying rooms; completing WHOOP-supported baseline/endline wellness tracking for most pilot households; and publishing de-identified air-quality and aggregate wellness findings for broader community learning. The separate Measurable Outcomes Plan provides detailed indicators, milestones, tasks, roles, completion dates, and budget links.

NANC is the sole applicant and implementing organization. NANC will manage recruitment, consent, bilingual communication, household onboarding, training, check-ins, Air Filter Library operations,

procurement, cost documentation, reporting, and public dissemination. Amod Pokhrel, PhD, MS, will provide technical advisory support on EPA data screening, PM2.5/TVOC monitoring, interpretation of screening-level VOC trends, purifier-placement logic, and aggregate wellness/air-quality analysis. Phil Hagan, JD, MBA, MPH, CIH, will serve as Legal Advisor, supporting participant consent, household permission, withdrawal/replacement procedures, privacy and data-sharing protocols, and legal/risk review of forms and public-facing materials. Advisors support quality and compliance; NANC remains responsible for implementation and grant administration.

8. Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this Project Narrative document.

Please see the attached Measurable Outcomes Plan. It includes the required outcomes, indicators, milestones, tasks, lead/support roles, completion dates, budget links, WHOOP-supported wellness tracking, attrition/replacement tracking, and public reporting tasks. The plan is structured so that each requested cost supports a measurable change: household enrollment and monitoring, app access, education, filtration, behavior change, PM2.5 improvement, wellness tracking, and public dissemination.

9. Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.

The detailed Excel budget is submitted separately. The total request is $198,000 for a 12-month Seed Grant. Costs are weighted toward direct household benefit, language access, monitoring, filtration, training, and evaluation. Personnel are itemized by hours and rates to demonstrate implementation capacity and reasonableness. Indirect, contingency, and professional services/consultant costs are calculated against total direct costs and remain below applicable caps.

Budget category	Amount	Purpose / key items
Personnel and fringe	$49,000	Project Director 240 hrs; Outreach Coordinator 520 hrs; Monitoring Assistant 260 hrs; Accounting Support 70 hrs, including payroll/fringe.
Professional services / app vendor	$25,000	Focused bilingual app minimum viable product (MVP) with AirNow AQI/forecast, selected EPA/Air District context, action prompts, reminders, testing, launch, and public summary page.
Materials, supplies, and equipment	$61,000	120 indoor monitors, 40 outdoor monitors, WHOOP-supported devices/memberships, monitor accessories, HEPA purifiers, and filters.
Community engagement	$22,500	Translation/interpretation, printed bilingual materials, seminar supports, Resident Advisory Circle, and pilot completion stipends.
Capacity building and training	$11,500	Short bilingual videos and household training kits for purifier use, app use, source control, and WHOOP-supported wellness tracking.
Other direct costs	$5,000	Survey tools, secure data management, dashboard/export software, public data hosting, repository preparation, and final reporting.
Contingency	$4,000	Unforeseen allowable costs; approximately 2.33% of direct costs, below the 10% project-level cap.
Indirect costs	$20,000	Shared administrative costs; approximately 11.63% of direct costs, below the 15% project-level cap.
Total request	**$198,000**	**Complete 12-month project budget.**

The budget excludes lobbying, fundraising, out-of-state travel, ineligible food or luxury costs, and operations outside the grant term. NANC will maintain separate project cost tracking, equipment logs, reimbursement documentation, and budget-to-actual review to support reimbursement-based grant administration.

ECOSYSTEM ALIGNMENT (10 points)

10. Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).

The project is consistent with the Air District's community air protection and environmental justice priorities, including Richmond-North Richmond-San Pablo Path to Clean Air and broader AB 617-aligned goals. Those efforts identify the need to address cumulative air-quality burdens in communities affected by industrial, transportation, rail, marine, and other sources. Safe Air at Home complements those efforts by translating community-scale outdoor air information into household-level exposure-reduction actions for a population that may not be reached effectively by English-dominant or technical messaging.

The project also aligns with state and regional public health goals because it integrates indoor air quality improvements, air pollution monitoring, direct exposure-reduction strategies, community education, and data transparency. The app will use AirNow AQI and forecast information as the primary real-time public feed, along with selected EPA EnviroMapper/Envirofacts and Air District context layers. The pilot will generate de-identified indoor/outdoor PM2.5 and TVOC summaries that can help residents and clean-air stakeholders understand how outdoor conditions, household behaviors, and filtration relate to indoor exposure. By making findings public in plain language, the project supports community-driven data use and helps strengthen future policy, outreach, and investment decisions for linguistically underserved communities.

The project is intentionally complementary rather than duplicative. It does not create a regulatory monitoring program or claim to measure speciated BTEX in homes. Instead, it uses accessible public data, screening-level household monitoring, and culturally tailored education to help residents act on existing regional air-quality information. This is the missing bridge between public monitoring infrastructure and household protection.

CAPACITY (10 points)

11. Describe the Project Lead’s experience managing and implementing projects of similar scope and size.

NANC, a California 501(c)(3) nonprofit, was founded in 1994 with continuous operations and a long history of serving Nepali residents across the Bay Area. NANC operates a Richmond community center with program space for trainings, meetings, cultural programming, equipment storage, and community distribution activities. The organization regularly delivers community programs for different age groups, including language education, cultural events, youth and senior activities, health and wellness programs, and community support services. A recent large cultural event organized by NANC drew thousands of Nepali participants, demonstrating the organization's recruitment reach, communication capacity, and ability to mobilize volunteers and residents.

NANC's most important implementation asset is trust. Many technically strong environmental programs struggle to recruit and retain immigrant households because participants may not understand the purpose of monitoring, may worry about data privacy, or may not see how data will benefit them. NANC already has the relationships, language fluency, cultural context, and communication channels needed to explain the

project, support families over a full year, and respond to concerns quickly. This trust infrastructure is essential for a household-based pilot involving monitors, wearable wellness summaries, in-home permission, and monthly follow-up.

NANC also has management systems relevant to the grant. It maintains an in-house accountant, established financial records, annual operating budgets, equipment and program management experience, and a board with professional expertise including environmental health, engineering, legal/compliance, and community leadership. The project is scoped for a Seed Grant: one focused app MVP, one 40-household pilot, one training and Air Filter Library program, and public summary deliverables that NANC can manage within 12 months.

12. Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.

NANC will manage implementation through a defined project team and monthly budget-to-actual and workplan review. Estimated project personnel include a Project Director (approximately 240 hours), Bilingual Outreach and Training Coordinator (approximately 520 hours), Monitoring and Household Support Assistant (approximately 260 hours), and Accounting/Grants Administration Support (approximately 70 hours), with technical and legal advisors supporting specialized review. This staffing structure is sufficient for a 12-month pilot because the project uses NANC's existing facilities, outreach channels, and volunteer/community relationships while budgeting direct staff time for the tasks that require consistent follow-through.

The Project Director will oversee schedule, procurement, vendor coordination, risk management, legal/technical review integration, public deliverables, and funder reporting. The Outreach/Training Coordinator will lead recruitment, household onboarding, training, app and WHOOP-supported wellness onboarding, monthly check-ins, Resident Advisory Circle support, and feedback documentation. The Monitoring and Household Support Assistant will support monitor placement, equipment logs, connectivity checks, purifier placement logistics, filter reminders, and troubleshooting. Accounting support will track reimbursement documentation, vendor invoices, payroll records, equipment inventory, and budget compliance. The technical advisor will review data-screening, monitoring, purifier-placement logic, TVOC interpretation, and aggregate analysis. The legal advisor will review consent, privacy, household permission, withdrawal/replacement, and public data-sharing safeguards.

NANC does not rely on a co-applicant or strategic implementation partner for completion. It will leverage in-kind organizational resources including community center space, existing communication channels, volunteer support, board oversight, and community relationships. Future funding and community contributions may support continuation of the Air Filter Library, app content updates, and expanded household education after the Seed Grant period, but the requested grant funds are sufficient to complete the proposed 12-month scope.

READINESS (10 points)

13. Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.

No construction permits, regulatory operating permits, or land-use approvals are currently anticipated. The project uses portable indoor/outdoor monitors, portable air purifiers, replacement filters, WHOOP-supported wearable devices or memberships for consenting adults, software, trainings, seminars, videos, and public

summaries. Household-level activities will proceed only after written informed consent and household permission for monitor placement, purifier placement, and optional adult wearable participation. NANC will finalize consent forms, household permission forms, withdrawal/replacement procedures, and data-sharing protocols before enrollment, with legal advisory review.

14. Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.

N/A anticipated. The project does not involve construction, land acquisition, permanent physical infrastructure, ground disturbance, or activity expected to trigger CEQA review. If the Air District identifies any CEQA-related requirement during grant agreement development, NANC will work with the Air District to complete the required documentation before implementing any affected activity.

15. Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.

NANC owns and manages the Richmond community center space used for training, meetings, equipment storage, and Air Filter Library operations. No property acquisition, right-of-way, easement, or permanent site control is required. For household activities, NANC will obtain written permission from each participating household before placing monitors, installing or placing portable air purifiers, or setting up optional WHOOP-supported wearable participation. Outdoor monitors will be placed only in household-approved exterior locations such as a porch, patio, balcony, or other safe location where the household permits placement. If a household withdraws, NANC will retrieve or deactivate equipment as appropriate and follow the consent and replacement protocol.

16. Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.

No permanent physical infrastructure will be constructed. During the grant term, NANC will maintain equipment logs, spare devices and accessories, purifier and filter inventory, replacement-filter reminders, monitor connectivity checks, WHOOP-supported device/membership logs, and household troubleshooting records. The budget includes staff time, equipment, replacement filters, training materials, and data-management support needed to operate and maintain the project for 12 months.

After the grant term, sustainability will come from durable assets and community capacity. NANC will retain bilingual training materials, short videos, app content, public summary materials, monitoring lessons, the Air Filter Library model, and any remaining filter stock. Households will retain the practices learned through the project, including how to interpret air alerts, run purifiers, replace filters, manage ventilation, reduce indoor sources, and understand air-quality effects on daily wellbeing. NANC may continue the Air Filter Library at a smaller scale through remaining inventory, community contributions, future clean-air funding, and partnerships with public health or community air programs. The public summary page and de-identified findings will remain useful for future grant applications, community education, and regional policy conversations.

17. Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing this project, or how you would address risks that cause uncertainty in implementing the project.

NANC has identified the main barriers and mitigation strategies. Recruitment and attrition risk will be managed through trusted NANC channels, transparent eligibility screening, community referrals, bilingual phone follow-up, convenient trainings, and a target alternate list of at least 10 households if demand allows.

If a household withdraws before baseline/onboarding and the initial screening period are complete, NANC will invite the next eligible household from the same or comparable priority zone and complete onboarding within approximately two weeks when feasible. Later withdrawals will be documented as partial participation, with de-identified data retained only as allowed by consent and aggregate attrition/replacement counts included in reporting.

Language and trust barriers will be addressed through Nepali-English materials, culturally appropriate facilitation, resident-friendly consent explanations, practical training, community seminars, and regular check-ins. Technology risk will be addressed by keeping the app MVP focused on core features: AirNow AQI/forecast, selected EPA/Air District context, simple bilingual action prompts, reminders, and a linked public summary page. The app will be beta-tested with residents before launch. Equipment risk will be addressed through device onboarding, spare equipment, power/mounting accessories, connectivity checks, and clear household instructions.

Data and interpretation risks will be managed carefully. Low-cost TVOC sensors are non-specific, so NANC will use TVOC data only as screening-level information for education and source-control, not as a measure of specific BTEX compounds. WHOOP-supported wellness summaries will be explained as non-diagnostic indicators for education and aggregate evaluation, not medical diagnosis, treatment, or individualized clinical advice. Privacy risk will be addressed through informed consent, coded participant IDs, separate storage of identifying information, limited-access files, legal review of data-sharing protocols, and public reporting only in de-identified and aggregated form. Reimbursement/cash-flow risk will be managed through monthly budget-to-actual review, invoice tracking, equipment logs, and reimbursement documentation maintained by NANC's accounting support.

The project scope is intentionally feasible for a Seed Grant: one focused app MVP, one 40-household cohort, one monitoring and filtration protocol, one training and Air Filter Library program, and one public summary/data dissemination pathway. By pairing technical simplicity with strong community trust, the project is ready to begin once the grant agreement is executed and can be completed within the 12-month term.

Safe Air at Home - Measurable Outcomes Plan

Bilingual environmental justice model for indoor exposure reduction and community learning

Project vision: build a bilingual environmental justice model that helps Nepali-speaking households understand Richmond-area outdoor air quality, reduce indoor exposure to PM2.5 and TVOC-related concerns, and sustain protective household practices. The plan links outdoor-air data, room-level PM2.5/TVOC monitoring, targeted HEPA filtration, source-control education, public data summaries, and WHOOP(a wearable performance and health-tracking device)-supported sleep/recovery/heart-health wellness tracking so households can see how air quality and protective actions relate to daily wellbeing. WHOOP-supported data are non-diagnostic wellness indicators and will be used only with consent and in aggregate public reporting.

Outcome Summary

Measurable outcome	Core indicators	12-month target
1. Pilot enrollment and baseline setup	Households screened/enrolled; baseline surveys; monitors and WHOOP-supported devices/memberships deployed; attrition/replacement process active.	40 households enrolled; 160 monitors and 40 WHOOP-supported devices/memberships deployed; 100% baseline onboarding; alternate list maintained where demand allows.
2. Nepali-language access to outdoor air information improves	App launched; registered users; alerts/reminders; public summary page.	App launched by Month 4; at least 150 registered users; 100% of pilot households enrolled in AirNow-based alerts and reminders.
3. Bilingual education and engagement delivered	Trainings, seminars, videos, feedback rounds, and usefulness ratings.	8 trainings, at least 2 seminars, at least 3 short bilingual videos, 160 participant visits, and 85% useful/very useful rating.
4. Qualifying rooms receive filtration support	Room screening; purifier placements; replacement filters; resident training.	100% of qualifying rooms, up to one prioritized room per household, receive purifier within 2 weeks; replacement filters and hands-on training provided.
5. Protective behaviors, PM2.5 improvement, and wellness tracking	Practice adoption; PM2.5 change; TVOC source-control coaching; WHOOP-supported wellness completion.	70% adopt 2+ practices; 75% of qualifying rooms show PM2.5 improvement; 80% complete baseline/endline WHOOP-supported wellness tracking.
6. De-identified findings shared for learning	Public summaries, bilingual final summary, aggregate PM2.5/TVOC and wellness trends, sustainability steps.	Public summary products available by end of grant term and used to support broader community learning.

Outcome 1 - 40 high-burden households are enrolled and fully onboarded into the pilot.

Baseline	12-month target	Indicators	Data source / budget link
0 households enrolled; 0 baseline surveys completed; 0 monitors or WHOOP-supported wearables/memberships deployed; no alternate list or replacement log in place.	40 households enrolled from priority zones; 100% complete consent, baseline survey, wellness questionnaire, and device onboarding; 160 monitors deployed; 40 WHOOP-supported devices/memberships distributed to consenting adult participants; alternate list and replacement/attrition log maintained if demand allows.	Number screened; number enrolled; number with complete baseline documentation; number of monitors deployed; number of WHOOP-supported wearables/memberships distributed; number with active dashboard connection; attrition/replacement counts.	Recruitment logs, consent records, survey files, equipment logs, WHOOP-supported distribution logs, dashboard checks, attrition/replacement log. Budget link: Personnel, Equipment, Participant Supports.

Milestone	Tasks	Lead entity	Supporting entity(ies)	Completion	Budget link
A. Priority zones and recruitment tools finalized (Months 1-2)	Review three years of EPA AQI/outdoor air data and Richmond-area monitoring context to identify priority recruitment zones.	NANC Project Director	Technical advisor	Month 2	Personnel
A. Priority zones and recruitment tools finalized (Months 1-2)	Finalize eligibility rules, screening criteria, waitlist/replacement protocol, consent/privacy materials, and bilingual recruitment materials.	Project Director	Outreach Coordinator + Legal Advisor	Month 2	Personnel + Translation
B. Households recruited and enrolled (Months 2-3)	Conduct outreach, interest screening, address verification, household prioritization, consent, baseline survey, wellness questionnaire, and WHOOP consent.	Outreach Coordinator	Resident leaders + Monitoring Support Assistant	Month 3	Personnel + Participant Supports

Milestone	Tasks	Lead entity	Supporting entity(ies)	Completion	Budget link
C. Monitoring and WHOOP onboarding completed (Months 2-4)	Deploy three indoor monitors and one outdoor monitor per household; distribute WHOOP-supported devices/memberships; verify placement, connectivity, dashboard access, and data privacy understanding.	Monitoring Support Assistant	Technical advisor + Outreach Coordinator	Month 4	Equipment + Personnel

Outcome 2 - Nepali-language access to current outdoor air information improves through the app and related public resources.

Baseline	12-month target	Indicators	Data source / budget link
No NANC app, no project-specific public data page, and no bilingual AirNow-based alert system in place.	App launched by Month 4; at least 150 registered users; 100% of pilot households enrolled in alerts/reminders; public-facing de-identified summary page available during the grant term.	App launch date; number of registered users; number of pilot households enrolled in alerts/reminders; page views/access logs for public summary materials.	App analytics, onboarding records, reminder logs, website statistics. Budget link: Professional Services/Consultants, Personnel, Other Direct Costs.

Milestone	Tasks	Lead entity	Supporting entity(ies)	Completion	Budget link
A. Requirements and public data plan finalized (Months 1-2)	Define minimum viable product (MVP) features: AirNow AQI/forecast, selected EPA EnviroMapper/Envirofacts and Air District context layers, bilingual action prompts, simple alerts, and public summary page.	Project Director	App vendor + Technical advisor	Month 2	App Vendor
A. Requirements and public data plan finalized (Months 1-2)	Finalize plain-language PM2.5/TVOC/BTEX educational content, household action prompts, and data-sharing rules in Nepali and English.	Outreach Coordinator	Technical advisor + Legal Advisor	Month 2	Translation + Personnel
B. App build and beta testing completed (Months 2-4)	Configure bilingual interface, AirNow current AQI/forecast display, EPA context layers, public summary page, and beta testing with resident users.	App vendor	Project Director + Resident Advisory Circle	Month 4	App Vendor + Personnel
C. Launch, onboarding, and adoption (Months 4-12)	Launch app; enroll all pilot households in alerts/reminders; promote through trainings, seminars, community networks, and NANC channels; monitor use and update content as needed.	Outreach Coordinator	App vendor + Resident Advisory Circle	Months 4-12	Personnel + App Vendor

Outcome 3 - Residents receive practical bilingual education and meaningful community engagement throughout the project.

Baseline	12-month target	Indicators	Data source / budget link
No project-specific training series, seminars, or short educational videos are in place at baseline.	8 bilingual trainings, at least 2 community seminars, at least 3 short bilingual videos, and at least 160 participant visits; 85% of attendees rate sessions useful or very useful; quarterly Resident Advisory Circle input documented.	Training count; participant visits; feedback ratings; seminars; videos; Advisory Circle feedback rounds.	Attendance sheets, feedback tools, video links/analytics, Advisory Circle notes. Budget link: Community Engagement, Training, Personnel.

Milestone	Tasks	Lead entity	Supporting entity(ies)	Completion	Budget link
A. Curriculum and engagement tools developed (Months 1-3)	Develop bilingual curriculum for indoor/outdoor air quality, purifier use, filter replacement, TVOC source control, WHOOP-supported wellness tracking, and app use.	Outreach Coordinator	Technical advisor	Month 3	Training + Personnel
A. Curriculum and engagement tools developed (Months 1-3)	Prepare slides, handouts, video scripts, WHOOP/purifier demonstrations, feedback tools, and Resident Advisory Circle schedule.	Outreach Coordinator	Project Director + Resident Advisory Circle	Month 3	Translation + Materials

Milestone	Tasks	Lead entity	Supporting entity(ies)	Completion	Budget link
B. Trainings, seminars, and videos delivered (Months 3-12)	Deliver four in-person and four virtual trainings; hold at least two seminars; produce and disseminate at least three short bilingual videos.	Outreach Coordinator	Project Director + Video support	Months 3-12	Training + Outreach
C. Feedback loops maintained (Months 3-12)	Collect feedback after trainings and quarterly Advisory Circle meetings; provide childcare, transportation assistance, refreshments, reminders; revise materials based on feedback.	Outreach Coordinator	Resident Advisory Circle	Months 3-12	Community Engagement + Personnel

Outcome 4 - Qualifying rooms receive targeted HEPA filtration, replacement filters, and resident support.

Baseline	12-month target	Indicators	Data source / budget link
No project-specific filtration inventory, room-qualification review process, or replacement-filter support are in place at baseline.	All qualifying rooms, up to one prioritized room per household, receive a purifier within 2 weeks of confirmation; replacement filters are provided and tracked through the Air Filter Library.	Rooms reviewed; rooms qualifying in action range (PM2.5 at or above 9 $\mu g/m^3$); days from confirmation to placement; replacement filters issued; households trained on purifier use and filter replacement.	Monitoring review logs, placement records, Air Filter Library inventory, household coaching notes. Budget link: Equipment, Personnel, Training.

Milestone	Tasks	Lead entity	Supporting entity(ies)	Completion	Budget link
A. Filtration SOP and inventory readiness (Months 1-3)	Procure purifier reserve inventory and filter stock; finalize room-prioritization and replacement-filter tracking procedures.	Project Director	Accounting support + Technical advisor	Month 3	Equipment + Personnel
A. Filtration SOP and inventory readiness (Months 1-3)	Prepare bilingual training materials on purifier placement, operation, cleaning, and filter replacement.	Outreach Coordinator	Technical advisor	Month 3	Training
B. Monitoring review and room qualification (Months 3-6)	Review early room-level PM2.5 data, identify qualifying rooms, apply prioritization rules, notify households, and schedule placement/training.	Technical advisor	Monitoring Support Assistant + Outreach Coordinator	Months 3-6	Personnel
C. Placement and maintenance support (Months 3-12)	Place purifiers within 2 weeks, provide replacement filters and reminders, track household questions, and resolve maintenance issues.	Monitoring Support Assistant	Outreach Coordinator	Months 3-12	Equipment + Personnel

Outcome 5 - Protective behaviors strengthen, indoor PM2.5 improves in qualifying rooms, and WHOOP-supported wellness tracking is completed for most pilot households.

Baseline	12-month target	Indicators	Data source / budget link
Baseline surveys and early monitoring document current practices, room-specific PM2.5/TVOC conditions, and baseline WHOOP-supported sleep/recovery/heart-health wellness measures.	At least 70% of households adopt 2+ recommended practices; at least 75% of qualifying rooms show measurable PM2.5 improvement during comparable periods; at least 80% complete baseline and endline WHOOP-supported wellness tracking; households with elevated TVOC patterns receive documented source-control coaching.	Practice adoption rate; qualifying-room PM2.5 improvement; average PM2.5 change; number receiving TVOC source-control coaching; percentage completing baseline/endline WHOOP-supported summaries.	Household surveys, monthly logs, room-level monitoring data, WHOOP-supported wellness summaries, technical review. Budget link: Personnel, Equipment, Community Engagement, Evaluation.

Milestone	Tasks	Lead entity	Supporting entity(ies)	Completion	Budget link
A. Monthly behavior-change coaching (Months 4-12)	Conduct monthly check-ins using app prompts, monitoring data, household feedback, and WHOOP-supported wellness summaries to reinforce protective actions.	Outreach Coordinator	Monitoring Support Assistant	Months 4-12	Personnel
A. Monthly behavior-change coaching (Months 4-12)	Coach residents on windows, ventilation timing, purifier operation, filter replacement, source control, safer products, and interpretation of non-diagnostic WHOOP-supported summaries.	Outreach Coordinator	Technical advisor	Months 4-12	Training + Personnel
B. Air-quality and wellness review (Months 5-12)	Review PM2.5/TVOC trends alongside resident observations, odor/poor-air events, and aggregate WHOOP-supported sleep/recovery/heart-health patterns.	Technical advisor	Monitoring Support Assistant	Months 5-12	Evaluation + Personnel

Milestone	Tasks	Lead entity	Supporting entity(ies)	Completion	Budget link
C. Endline assessment (Months 11-12)	Administer endline survey, collect WHOOP-supported summaries, assess changes in knowledge/practices/wellness indicators, and prepare internal evaluation memo.	Project Director	Technical advisor + Outreach Coordinator	Month 12	Personnel + Evaluation

Outcome 6 - De-identified pilot findings are shared publicly to support broader community learning and sustainability.

Baseline	12-month target	Indicators	Data source / budget link
No public PM2.5/TVOC project summary page, aggregate WHOOP-supported wellness summary, bilingual community summary, or project-specific dissemination products exist at baseline.	A public summary page/dashboard, bilingual community summary, seminar presentations, and short videos communicate de-identified PM2.5/TVOC trends, BTEX context, protective actions, and aggregate sleep/recovery/heart-health wellness findings where feasible.	Public products posted; seminars/videos used; bilingual final summary available; aggregate air-quality and wellness findings included; sustainability actions documented.	Website posts, dashboard uploads, seminar agendas, video links, final summary materials, sustainability notes. Budget link: App Vendor, Other Direct Costs, Community Engagement, Personnel.

Milestone	Tasks	Lead entity	Supporting entity(ies)	Completion	Budget link
A. Privacy and public reporting protocol (Months 2-4)	Finalize coded data management, access limits, household-result sharing rules, aggregation standards, and public glossary for PM2.5/TVOC and WHOOP-supported wellness findings.	Project Director	Technical advisor + Legal Advisor	Month 4	Evaluation + Personnel
A. Privacy and public reporting protocol (Months 2-4)	Set up templates for bilingual charts, downloads, and plain-language community summary pages.	App vendor	Project Director	Month 4	App Vendor

Milestone	Tasks	Lead entity	Supporting entity(ies)	Completion	Budget link
B. Mid-project updates (Months 6-10)	Share interim bilingual updates and indicator tracking through NANC channels; explain TVOC screening and wellness interpretation without implying medical diagnosis or speciated measurements.	Outreach Coordinator	Technical advisor + Resident Advisory Circle	Months 6-10	Community Engagement
C. Final deliverables and sustainability (Months 11-12)	Publish final de-identified summaries, hold final learning seminar(s), circulate videos/materials, and document next-step sustainability actions for the app, Air Filter Library, and bilingual education.	Project Director	App vendor + Technical advisor + Outreach Coordinator	Month 12	Other Direct Costs + App Vendor

Project Name:	Safe Air at Home			
Lead Applicant Name:	Nepali Association of Northern California (NANC)			
Term for this budget (in y	1 year (12 months)			

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Project Director (0.12 FTE, 12 months)	Project leadership, schedule management, procurement oversight, reporting, and coordination of implementation, community engagement, and data-sharing activities; includes salary and fringe.	$18,000
Personnel/Staff Costs	Direct	Bilingual Outreach and Training Coordinator (0.25 FTE, 12 months)	Bilingual household recruitment, trainings, app onboarding, resident follow-up, Air Filter Library coordination, and feedback collection; includes salary and fringe.	$20,000
Personnel/Staff Costs	Direct	Monitoring and Household Support Assistant (0.13 FTE, 12 months)	Device preparation, deployment support, data dashboard checks, room-level follow-up scheduling, and household coaching support; includes salary and fringe.	$8,000
Personnel/Staff Costs	Direct	Accounting and Grants Administration Support (0.03 FTE, 12 months)	Budget-to-actual tracking, reimbursement documentation, equipment logs, and internal grant administration; includes salary and fringe.	$3,000
Professional Services & Consultants (≤25% of Direct Costs at APPLICATION level)	Direct	Bilingual app development and data integration vendor	Build and launch Nepali-English mobile-friendly app; integrate AirNow current AQI/forecast feeds and EPA EnviroMapper/Envirofacts context layers; create alerts, reminders, plain-language PM2.5/VOC/BTEX educational content, beta testing, and launch support.	$25,000
Materials, Supplies & Equipment (> $5K itemized)	Direct	120 indoor PM2.5/TVOC monitors	Approx. 120 indoor multi-pollutant monitors (3 per household) for kitchen, living room, and bedroom/sleeping-area placement; estimated all-in cost about $200 per unit.	$24,000
Materials, Supplies & Equipment (> $5K itemized)	Direct	40 outdoor PM2.5/TVOC monitors	Approx. 40 outdoor monitors (1 per household) for porch/patio/exterior placement, with weather-appropriate setup; estimated all-in cost about $200 per unit.	$8,000
Materials, Supplies & Equipment (> $5K itemized)	Direct	40 WHOOP wearable devices/memberships for adult wellness tracking	WHOOP devices or comparable WHOOP-supported memberships for consenting adult household representatives to track sleep duration/regularity, recovery, resting heart rate, heart-rate variability, respiratory rate, and, where supported and calibrated, blood-pressure-insight wellness indicators; not for medical diagnosis or treatment @250 per unit.	$10,000
Materials, Supplies & Equipment (> $5K itemized)	Direct	Monitor accessories, spares, power, and mounting supplies	Power adapters, extension cords, outdoor mounting/weather protection, replacement parts, and limited spare devices to reduce data interruption.	$3,000
Materials, Supplies & Equipment (> $5K itemized)	Direct	Portable HEPA air purifiers inventory (up to 40 units)	Reserve inventory for targeted room placement in qualifying households; prioritize units with carbon prefilters where feasible; estimated all-in cost about $300 per unit.	$12,000
Materials, Supplies & Equipment (> $5K itemized)	Direct	Replacement filters and carbon-prefilter stock (40 units)	Initial and replacement HEPA/carbon-prefilter stock for qualifying rooms during the grant year and startup inventory for the Air Filter Library @100 per unit	$4,000.00
Community Engagement	Direct	Translation and interpretation services	Written translation and live Nepali-English interpretation for outreach, trainings, informed consent, surveys, app/WHOOP onboarding, and public-facing project summaries.	$7,000.00

Lead Applicant Budget Summary (auto-calculated)

Total Direct Costs	$174,000
Total Indirect Costs	$20,000
Total Prof. Services & Consultants	$25,000
Total Contingency	$4,000
Total Funds Requested	$198,000
Cross-check Total Budget	YES
Indirect as % of Direct	11.5%
Prof. Services & Consultants as % of Direct	14.4%
Contingency as % of Direct	2.3%

Community Engagement	Direct	Printed bilingual outreach and training materials	Flyers, household guides, consent packets, signage, reminder cards, and printed materials that explain PM2.5, VOCs, BTEX context, filtration, source-control actions, and WHOOP-supported wellness tracking.	$4,000.00
Community Engagement	Direct	Community seminars and training session supports	Venue support, refreshments, childcare, transportation assistance, and meeting supplies for in-person trainings, feedback sessions, and broader community seminars.	$7,500.00
Capacity-Building and Training	Direct	Short bilingual educational video production and dissemination	Production, captioning, editing, and dissemination of short bilingual videos that extend project lessons to community members beyond pilot households, including how air quality relates to sleep, recovery, and daily wellbeing.	$6,500.00
Capacity-Building and Training	Direct	Household training kits, purifier demonstrations, and app/WHOOP onboarding support	Hands-on training supplies, purifier/filter replacement demonstrations, safer low-VOC product examples, WHOOP-supported wellness tracking guidance, and household app onboarding materials.	$5,000.00
Community Engagement	Direct	Resident Advisory Circle and pilot completion stipends (40 households $100 each)	Participant support for Resident Advisory Circle meetings and modest completion support for pilot survey/endline activities to reduce participation barriers.	$4,000.00
Other Direct Costs	Direct	Survey, secure data management, and dashboard software	Survey tools, secure data storage, dashboard/export software, and routine data management needed for project monitoring and evaluation.	$3,000.00
Other Direct Costs	Direct	Public data hosting and translated final community summary	Website/dashboard publishing support, repository preparation, and production of translated public-facing summary materials and funder-ready reporting products.	$2,000.00
Contingency (≤10% of Direct Costs at PROJECT level)	Contingency	Contingency	Limited reserve for unforeseen but allowable implementation costs during the grant term.	$4,000.00
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	Shared administrative and indirect costs	Shared organizational costs such as rent, utilities, insurance, IT, general office operations, and in-house administrative support allocated to this project.	$20,000.00
