Bay REPAIR
Local Community Benefits Fund – Round 1
Opportunity and Catalyst Grants
Overall Narrative

General Instructions:

- The "Overall Narrative" is scored out of 50 points.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 7 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Catalyst Grant Applications in Benicia:

- Due to the ongoing strain on the Benicia community's civic and organizational capacity resulting from the impending refinery closure, Co-Applicants are not required for Catalyst Grant applications in Benicia.
- Therefore, Catalyst Grant applications in Benicia should **not** answer questions related to "Partnership Structure" (Qs #3-6). Applicants should leave these questions blank, and will not receive a score for these questions.
- The "Overall Narrative" for Catalyst Grant applications in Benicia will be scored out of 30 points.

Application Information	
Application Title	Benicia Forward: A Catalyst for a Clean and Resilient Future
Lead Applicant	City of Benicia
Application Location	City of Benicia, CA
Overall Funding Request	$40,000,000
Grant Term Request	5 years

PROPOSAL VISION (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
    - *Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.*
    - *Advance integrated projects to holistically meet community needs.*
    - *Strengthen community-driven and collaborative solutions.*

Benicia has played a key role in the Bay Area's history compared to most cities its size: a state capital, then an Army arsenal, then a working waterfront that helped supply a growing West. That same waterfront attracted the Valero Refinery in 1968, and the community has lived with its consequences ever

since — 4,000 pounds of hydrocarbons released daily, cancer-causing air contaminants at concentrations hundreds of times over legal limits, in neighborhoods that had no practical recourse. But the refinery was also an economic anchor for Benicia, providing well-paying jobs and contributing to municipal revenues. The refinery's closure in 2026 marks the end of that era. Benicia Forward is the City's game plan to make what comes next worthy of what this community has already endured.

The City is requesting **$40,000,000** over five years, organized into four mutually reinforcing projects that together form a strategy that is forward-looking. These projects respond directly to the Air District's grant objectives while delivering environmental, public health, climate resilience, just economic transition, and long-term fiscal stability for Benicia.

The **Clean Energy Initiative (Project 1)** starts with the City's own operations: electrifying and modernizing the public facilities that Benicia's residents use every day, reducing the City's direct fossil fuel combustion while improving indoor air quality and energy resilience. The **Clean Mobility Project (Project 2)** extends that logic to the streets: expanding EV infrastructure, improving bikeways, sidewalks, curb ramps, and crossings to shift trips away from fossil-fuel vehicles and make the City safer for the people who walk and cycle through it. The **Just Economic Transition (Project 3)** project addresses the harder question of what replaces the refinery economy: fully updating the General Plan including new Decarbonization and Environmental Justice elements, coordinating the industrial site transition, strengthening the Industrial Safety Ordinance, and actively recruiting clean industries and jobs. The **Promoting Community Health Project (Project 4)** runs in parallel throughout the grant period — reducing wildfire fuel loads, deploying portable air monitors, expanding fire prevention and emergency response, and building a community alert system that will give residents real-time information during hazardous events.

The four projects reinforce each other in ways that matter for implementation. Project 1's investment in the Civic Center campus — reliable HVAC, backup power, and solar — creates the physical infrastructure to support community health in Project 4 for example by investing in community resilience centers for emergency shelter. Project 2's EV infrastructure and active transportation improvements make it safer to reach those facilities without a car, and coordinate directly with Project 1's EV charging capacity upgrades at the Police Station. Project 3's General Plan update provides the land use and zoning framework that makes clean industry attraction viable and ensures the investments in the other three projects are protected from incompatible future development. Each project is designed to deliver on its own; together, they form a strategy.

Across the five-year grant term, Benicia Forward will: replace 38 HVAC units across four civic buildings and eliminate on-site gas combustion at the Civic Center campus; complete $480,000 in solar repairs across 10 installations and consolidate two aging generators into one 200KW unit; install 2 EV charging stations with 2 charging ports each, and 2 EV admin vehicles; improve 0.8 miles of First Street bikeway and install a pedestrian scramble crossing serving 1,405 Benicia High School students; update the Capital Improvement Plan and complete a formal Bikeway Plan; update the General Plan with new Decarbonization and Environmental Justice elements by Q1 2031; attract, retain, or expand at least 15 clean-sector businesses and create or retain at least 200 jobs; inventory and maintain 4,500+ trees and plant a minimum of 200 new native trees in priority neighborhoods; maintain 211 acres of developed parks, 577 acres at Lake Herman Regional Park, and 68 open space areas; and deploy a multi-channel emergency notification system reaching all 27,000 Benicia residents.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

Who Lives in Benicia

Benicia is a small city of approximately 27,100 residents and 11,050 households located on the Carquinez Strait in southern Solano County, at the convergence of San Pablo and Suisun Bays. More than one in eight residents is foreign-born; 17% speak a language other than English at home. Hispanic and Latino residents make up 15.5% of the population, Asian residents 11%, Black residents 4.3%, and residents identifying as two or more races an additional 4%. Benicia's households include long-time homeowners and renters, families with school-age children, retirees, immigrant families, refinery and industrial workers, public employees, small-business owners, and artists.

Taken together, Benicia's demographics describe a community with both the workforce assets and the vulnerabilities that make this grant necessary. The working-age population is racially and economically diverse, multilingual, and — given the city's deep roots in manufacturing, military logistics, and industrial trades — carries practical skills directly relevant to the clean industries and technology sectors the Just Economic Transition project is working to attract. The 1,342 veterans living in Benicia are part of that picture: military service, particularly in an Arsenal community with a century of technical and industrial operations, produces exactly the mechanical, electrical, and logistics expertise that clean manufacturing employers need. These are workers the transition should be reaching directly.

At the same time, children and youth (20.5%) and older adults (23.7%) together make up nearly half the city's population — the two groups most vulnerable to the air quality failures the refinery has produced for decades, and the groups most dependent on the public facilities, parks, and emergency services that Projects 1 and 4 are investing in. The 7.8% of residents under 65 living with a disability adds to that picture. Benicia Forward is designed to move on both fronts simultaneously: building the workforce and economic conditions that give working-age residents a path forward, while protecting the health and safety of the community members least able to absorb the consequences when the City's infrastructure falls short.

The Public Health Burden of the Refinery

Benicia's geography — a deep-water waterfront served by direct highway and rail infrastructure — made it attractive to heavy industry since the 19th century, and especially the Valero Benicia Refinery (est. 1968). That presence has come at a significant and well-documented public health cost. Air District enforcement actions and community air monitoring have confirmed chronic releases of benzene, toluene, ethylbenzene, xylene, hydrogen sulfide, sulfur dioxide, nitrogen oxides, and precursor organic compounds. City reports documented hydrocarbon releases of approximately 4,000 pounds per day, and an Air District abatement order confirmed that cumulative toxic releases at concentrations of cancer-causing compounds exceeded legal limits by hundreds of times. As recently as March 2026, visible black smoke was emitted from the South Flare Stack at Valero, blanketing surrounding neighborhoods, due to refinery operations and idling.

CalEnviroScreen data makes the cumulative public health burden concrete. Census tract 6095252102, which contains 3,900 residents and sits adjacent to the refinery, ranks worse than 83% of all California census tracts for toxic releases and worse than 95% for cleanup site contamination. The adjacent tract 6095252107, with 3,739 residents, ranks worse than 82% of tracts for toxic releases and worse than 93% for hazardous waste. Tract 6095252000, home to 4,739 people, ranks at the 75th percentile for toxic releases and at the 77th percentile for cleanup sites. Groundwater threats in tract 6095252102 rank 72%

higher than other census tracts statewide, directly affecting those same 3,900 residents. Prolonged exposure to this mix of pollutants is associated with elevated rates of cardiovascular disease, respiratory illness, and cancer — health outcomes that accumulate over years and that disproportionately harm seniors, children, and residents with existing health vulnerabilities.

How Benicia Became What It Is Today

Benicia was founded in 1847 on the ancestral homelands of Patwin-speaking peoples and was incorporated in 1851. It served briefly as California's third state capital in 1853 — the historic Capitol building on West G Street remains standing today — before the Legislature moved to Sacramento in 1854. The Benicia Arsenal, established in 1851 and operational for more than a century, made the City a center of military logistics and manufacturing, attracting waves of workers whose descendants remain in the community. When the Arsenal closed in 1964, some of its industrial buildings were repurposed as artist studios, anchoring the arts identity that now defines First Street and the Arsenal Historic District. The same deep-water waterfront that served shipbuilding, canneries, and military supply eventually attracted the Valero refinery, which brought economic stability and toxic environmental exposure in equal measure. The refinery's closure marks the end of that industrial era and the beginning of a transition that Benicia Forward is designed to manage.

Who Benicia Forward Is Built to Serve

Benicia Forward is designed to benefit the whole city while prioritizing the people most exposed to pollution and most dependent on public systems. Residents in the census tracts surrounding the refinery — approximately 16,000 people across four tracts — bear the greatest cumulative environmental burden and stand to gain the most from reduced emissions, improved air monitoring, and hazardous site remediation. Refinery and industrial workers and their families face the most immediate economic disruption and need the clearest pathways into the clean economy. Seniors and children biologically most vulnerable to particulate matter and toxic air contaminants. will see the greatest public health benefit from cleaner facilities, reduced wildfire smoke, and expanded emergency response. Residents with disabilities — approximately 2,100 people under 65 — depend on safe, accessible sidewalks, curb ramps, and public facilities. Small businesses facing economic uncertainty from the refinery closure need the economic development and business attraction investment in Project 3: Just Economic Transition and Project 4: Promoting Public Health, which will provide Benicia's emergency responders with the updated equipment, air monitoring, and fleet capacity necessary to best serve people who live, work, and visit Benicia.

Why Benicia, and Why Now

The Bay REPAIR program was designed for communities that have absorbed more than their share of the Bay Area's industrial pollution and now face the disruption of economic transition. Benicia fits that description about as completely as any city in the region. The refinery is set for closure, which is already creating opportunity to reshape the future of the industrial waterfront in tangible ways including potential significant economic and environmental changes. The decisions made in the next two to five years about land use, zoning, and what businesses replace the refinery will have staying power. Benicia Forward is positioned to act in that window: the projects are scoped, the staff is in place, the City Council and the community have been engaged, and the community is galvanized and has been demanding action. The Air District's investment in Benicia and with the City of Benicia will land in an organization that is ready to move with full community support.

PARTNERSHIP STRUCTURE (20 points) – **Not Required**

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to:*
    - *Coordinate overall community engagement activities.*
    - *Track and report on indicators to assess progress towards measurable outcomes.*
    - *Collect and process reporting, reimbursement and invoicing requirements.*

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.*

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

Benicia's capacity to implement Benicia Forward rests on the City as an established full-service public agency. The City is organized under a council-manager form of government and provides public safety, library, recreation, parks, public works, planning, building and code enforcement, water and wastewater utilities, economic development, finance, and information technology services. This breadth of municipal operations provides the organizational infrastructure needed to deliver a sizable multi-project Catalyst grant proposal: public works project delivery, engineering and construction management, building and energy-code enforcement, fleet and facilities management, fiscal controls, procurement, contract administration, emergency response, economic development, and community-facing communications.

The City has the financial scale and management foundation to oversee a $40 million, five-year grant. In FY 2023–24, the City's General Fund recorded revenues of approximately $60.5 million and expenditures of $57.6 million. The City's governmental capital assets net of accumulated depreciation were approximately $121.9 million as of June 30, 2024, with an additional $76.7 million in net business-type capital assets — reflecting an organization that routinely plans, finances, constructs, and maintains significant public infrastructure. The City publishes an Annual Comprehensive Financial Report and received an unmodified audit opinion for FY 2023–24, demonstrating the financial reporting standards expected of a public agency managing grant funds.

Benicia Forward will be managed through a cross-department implementation structure coordinated by the City Manager's Office. Each of the four projects will be assigned a designated Project Lead from the department with primary operational responsibility for that work. The Deputy City Manager will serve as Grant Administrator — the City's primary point of contact with the Air District — responsible for compliance monitoring, reporting schedules, reimbursement processing, and cross-project coordination. The Director of Public Works and City Engineer will oversee capital infrastructure delivery across Projects1 and 2. The Assistant City Manager / Development Services Director will lead planning, land use, and economic transition work in Project 3. The Fire Chief and Fire Department Senior Management Analyst will oversee Project 4 programs. The City Attorney will provide legal review of grant agreements, contracts, and regulatory compliance matters throughout the grant term. The Finance Director will manage grant fund accounting and fiscal reporting.

The City anticipates dedicating 3.0 FTE, in addition to support from over a dozen staff members, across multiple departments for grant implementation over the five-year term, supplemented by consultant and contractor support procured through competitive RFP processes. Consultant services may include engineering, architecture, environmental review, air quality, economic transition, workforce development, planning and policy writing, public engagement, and grant compliance support.

To ensure efficiency, accountability, and creativity, the City will establish an **Internal Cross-Departmental Implementation Team**. This group will meet monthly and be chaired by the Grant Manager and/or Deputy City Manger and include the four project leads and any other staff critical to implementation. This group will coordinate and collaborate on engagement activities, procurement, public communications, grant reporting, and identify synergistic collaboration opportunities across the various streams of work.

The City will leverage the expertise of multiple commissions, comprised of subject matter experts who serve in advisory role to the City Council.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

The City of Benicia will manage Bay REPAIR funds through the same formal public-agency framework it applies to every public dollar it receives: City Council-approved budgets and appropriations, fund-level accounting controls, annual independent audit, competitive public procurement, invoice review, contract administration, and public meeting transparency. These are not new procedures the City will create for this grant — they are already in place and core to how the City operates.

City Council Oversight
The City Council provides the first and most visible layer of accountability. The Council adopts the biennial budget, approves appropriations and amendments, authorizes major contracts consistent with Benicia Municipal Code, and receives public staff reports on significant projects and programs. Any appropriation of Bay REPAIR funds, approval of contracts above the City Manager's signing authority, and material changes to project scope must come before the Council at a publicly noticed meeting — ensuring that this investment remains transparent and accountable to the community it serves throughout the grant term.

Commissions and Task Force Oversight
Planning Commission: The Planning Commission leads the public hearing process for the General Plan and Industrial Zoning update, CEQA review, and any discretionary land use actions from the transition planning work. It will conduct formal public hearings on General Plan elements, zoning amendments, and the EIR. Refinery-adjacent residents will receive specific advance notice of hearings affecting their neighborhoods.

Community Services Commission: The Commission provides community oversight for Project 4's park and open space investments, receives quarterly updates, advises on equity-based maintenance prioritization, and serves as the standing forum for senior and family input on park programming and capital improvements.

Industrial Safety Citizen Oversight Commission: The Commission provides community oversight of industrial safety inspections and compliance actions during decommissioning. It is the primary forum for Project 3's industrial safety work and the vehicle through which refinery-adjacent residents receive structured updates on site conditions, cleanup timelines, and air quality events.
Economic Development Board: The Board oversees Project 3's clean industry recruitment work and receives the Annual Economic Development Report. It provides a standing forum for business community input on the industrial park transition and coordinates with the Chamber and BIPA on site readiness and business attraction.

Community Sustainability Commission: The commission will provide oversight for Project 1 investments, receive quarterly updates, and help the City develop an equity-based transition from diesel generators.
Existing Task Forces: The City Council's councilmember-led task forces — covering economic impact, community funding, Industrial Park collaboration, and land redevelopment will continue throughout the grant term as needed for specific streams of work.

Internal Financial Controls
The Finance Department uses an existing project coding structure to track grant expenditures in coordination with a grant policy issued by the City Manager in the form of an administrative instruction. The City will establish a unique grant project code(s) for Benicia Forward so that expenditures can be tracked by project, budget category, eligible activity, vendor, invoice, and reimbursement request. This structure provides end-to-end traceability and makes it straightforward to demonstrate that funds were spent on approved, eligible activities. Existing internal controls, as validated by annual independent audits, include separation of duties between staff who authorize expenditures and staff who process payments; Finance review and approval of all reimbursement requests before submission to the Air District; and City Attorney review of contracts and agreements for compliance with grant terms.

Project Delivery Controls
Capital and infrastructure components will be managed through the City's established Capital Improvement Program practices: competitive procurement, contract award, construction management, inspection, change-order controls requiring management authorization and Council approval above defined thresholds, payment review, retention, and project closeout. Programmatic components will be managed through written scopes of work, performance milestones, deliverable documentation, and quarterly budget-to-actual review. The Grant Administrator will maintain a master implementation schedule and budget tracker across all four projects and will report progress to the Air District on the required schedule.

Track Record of Fiscal Discipline
The City's recent financial performance reflects budget discipline at the scale this grant requires. In FY 2023–24, actual General Fund revenues of $60.5 million exceeded the final adopted budget of $57.0 million, while actual expenditures of $57.6 million remained well within the final budget authority. The City has consistently delivered capital projects — pavement rehabilitation, pedestrian infrastructure, bridge replacement, water and wastewater improvements, and marine construction — through its established CIP controls. It has also successfully administered federal grant programs, including $6.75 million in ARPA funds, meeting federal compliance, reporting, and audit requirements. That same discipline and those same systems will govern Benicia Forward.

Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Benicia Forward: A Catalyst for a Clean and Resilient Future
Lead Applicant Name	City of Benicia
Project Location	Benicia, CA
Overall Funding Request	40,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Clean Energy Initiative
Project Lead	City of Benicia
Project Location	City of Benicia, CA
Project Funding Request	$7,182,512.50

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Project 1, Benicia's Clean Energy Initiative, modernizes city-owned facilities through three investments that reinforce one another: upgrading the City's civic core as a community resilience hub, bringing structure and a long-term transition plan to aging energy-generation equipment across 36 city sites, and strengthening green building code enforcement citywide. The centerpiece is the Benicia Civic Center Clean Energy District — a designation that formally recognizes the cluster of City Hall, the Police Department, the Public Library, and the nearby Community Center as a unified zone of energy modernization and resilience investment. All four buildings sit along East L Street and are open to the public. They already serve, or are positioned to serve, as cooling centers and emergency shelters during heat events, power outages, and air quality emergencies driven by the region's existing industrial footprint. The City Center Community Resilience Campus (Phase 1) brings HVAC electrification, solar system modernization, and consolidated backup power to this district. It is the first phase of a deliberate, longer-term strategy to build the Community Center and Library into fully equipped resilience centers for Benicia residents.

Citywide, the Legacy Energy Generation Equipment Repair, Maintenance, and Transition Plan addresses the City's 36 other generator-equipped facilities with the same long-term thinking: immediate maintenance reduces emissions from degraded equipment now, while a parallel planning effort maps a phased path to renewable backup power across all sites. The Green Building Codes and Energy Efficiency Code Compliance program closes the loop by updating and enforcing CALGreen and efficiency standards for new construction and significant renovations, so that future buildings don't undo the progress made here.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

The project aligns with both REPAIR strategies. On air quality and public health: electrifying HVAC systems, maximizing solar output at water and emergency facilities, and tightening maintenance on aging generators all reduce PM2.5, NOx, and CO from city operations — protecting residents who already bear an outsized pollution burden from the Valero refinery. Improved climate control in publicly accessible buildings matters especially for seniors, young children, and people with respiratory conditions, who rely on these facilities for daily services and emergency refuge. On just transition:

the Legacy Equipment program replaces the current pattern of reactive, crisis-driven repairs with a planned transition strategy. That shift reduces long-term costs, stabilizes facility operations, and gives the City a credible, grant-supportable roadmap toward renewable backup power rather than continued fossil-fuel dependence.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

<u>Sub-Project 1: Benicia City Center Community Resilience Campus Phase 1</u>

- City Hall / Police Department — Backup Generator, HVAC, Smart Controllers, Solar: 250 East L Street, Benicia, CA 94510
- Public Library — HVAC, Smart Controllers: 150 E L Street, Benicia, CA 94510
- Community Center — HVAC, Solar: 370 E L Street, Benicia, CA 94510
- Solar Repairs and Maintenance — additional sites:
- City Hall – 250 East L Street
- Community Center- 370 East L St
  - Community Park: 540 Rose Drive, Benicia, CA 94510
  - Corporation Yard: 2400 East 2nd Street, Benicia, CA 94510
  - Fire Station #12: 601 Hastings Drive, Benicia, CA 94510
  - James Lemon Swim Center: 181 East J Street, Benicia, CA 94510
  - Water Treatment Plant: 100 Water Way, Benicia, CA 94510
  - Water Pump Station P-1: 2600 East 2nd Street, Benicia, CA 94510
  - Water Pump Station P-2: 2401 East 2nd Street, Benicia, CA 94510
  - Water Pump Station P-3: 3769 East 2nd Street, Benicia, CA 94510

<u>Sub-Project 2: Legacy Energy Generation Equipment Repair, Maintenance, and Transition Plan</u>

- 36 city-owned facilities citywide (various addresses)
- Community Center (leased from Benicia Unified School District): 370 E L Street, Benicia, CA 94510

<u>Sub-Project 3: Green Building Codes and Energy Efficiency Code Compliance</u>

- All City facilities and new construction / significant renovation projects citywide

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The selection of the Civic Center cluster as the Sub-Project 1, Phase 1 focus reflects what residents have consistently said: these are the buildings they depend on most, and the buildings they expect to be there when conditions get difficult. Facility-by-facility risk assessments, conducted jointly by Public Works, the Fire Department, and the Building Division, drove the scope of both the solar repair program and the Legacy Equipment maintenance priorities.

Maintaining continuity of essential public services during extreme heat events and grid disruptions is of the utmost importance to residents. Through regular interaction with the community at public meetings, City Council meetings, and community programming, the City has consistently heard the importance of maintaining access to core services, safe gathering spaces, and reliable public safety operations.

The selected facilities reflect these identified priorities. City Hall serves as a central access point for residents to pay utility bills, access the Mayor's Office, attend City Council meetings, and engage with essential City staff. The Police Department facility supports critical public safety and dispatch operations, which are vital during emergency events. The Library and Community Center are heavily utilized community hubs that provide year-round programming and serve as designated cooling centers during extreme heat, offering safe and accessible refuge for vulnerable populations.

Additional project sites, including the Corporation Yard, Fire Department, and utility-related facilities, were identified through coordination with internal operational stakeholders to ensure continuity of essential services and emergency response capabilities. While some solar locations were initially selected based on site feasibility factors such as available space and infrastructure compatibility, these locations also align with community priorities by supporting high-impact services and critical energy demands. For example, the community pool is a key site for recreation, youth programming, and public health (physical activity, social interaction, and cooling during extreme heat days), serving a broad cross-section of residents.

Together, these engagement efforts ensured that the project reflects both community-identified priorities and operational realities, resulting in a targeted investment that maximizes public benefit, supports vulnerable populations, and strengthens community resilience.

Three specific partnerships shaped what ended up in this proposal. Benicia Community Air Monitoring Program (BCAMP) shared community air quality monitoring data identifying the Civic Center campus as the location where indoor air quality improvements would most directly benefit pollution-burdened residents, given its role as

a public refuge during emergencies. Senior services organizations confirmed through the former Parks, Recreation and Cemetery Commission testimony and public comment that unreliable HVAC had deterred seniors from using the Community Center as a cooling refuge during recent heat events — directly informing the requirement that smart thermostat upgrades enable remote pre-cooling for emergency use. The community provided operational feedback on backup power requirements, specifically the need for the shared generator to sustain 100% of dispatch operations for at least 24 hours, which is the basis for the 200KW capacity specification.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

<u>Sub-Project 1: Benicia City Center Community Resilience Campus Phase 1 — Civic Center Clean Energy District</u>

City Hall, the Police Department (including emergency dispatch), the Public Library, and the Community Center occupy a stretch of East L Street that functions as Benicia's civic center. The Library draws approximately 161,000 visits a year; the Community Center hosts over 10,000. All four buildings are publicly accessible, which matters enormously when a heat event or air quality emergency displaces people from their homes. Seniors, young children, people with disabilities, and residents with asthma or cardiovascular conditions are the most frequent users of these facilities during emergencies, and they are the same populations most affected by the refinery's chronic pollution. Making these buildings reliable, well-ventilated, and resilient is not just a facilities upgrade; it is a public health investment.

The City is designating this cluster as the Benicia Civic Center Clean Energy District, creating a framework for phased, campus-level investment. Phase 1 addresses three interdependent systems. Once complete, subsequent phases will focus on building out the Community Center and the Library as formal community resilience centers, with expanded emergency capacity, programming, and backup systems to support residents through extended climate events or other natural disasters

Backup Power Consolidation: Two generators currently serve the City Hall campus: a 30KW gas-powered Gillette (installed September 2013) at City Hall, and a 50KW diesel Kohler (manufactured 1994) at the Police Department. Running them separately is less efficient, more costly, and produces more combined emissions than a single modern

unit. Both will be replaced by one shared 200KW diesel generator with the capacity to carry 100% of both facilities' loads for 24 hours, including dispatch, with no impact to the existing building electrical systems. A City Hall main switchgear upgrade is included to resolve current capacity constraints and enable future EV charger installations. The City views this as a first step, not a destination: the generator transition roadmap developed through Project 2 will chart the path from this consolidation toward renewable backup power across all city sites.

HVAC Electrification and Smart Controls: Equipment ages vary across the campus, but none of function adequately. The Library is operating systems that date to 1992 — 33 years old. The Police Department's HVAC is approximately 26 years old. The Community Center's is 20 years. City Hall has a mix: some equipment installed as recently as 2010, and other units over 30 years old. All will be replaced with electric heat pumps, eliminating on-site gas combustion across the campus and improving air quality inside buildings that serve as emergency shelters. California requires replacement of gas water heaters below 75 MBH with electric models beginning in 2027, and gas furnaces and packaged HVAC units with electric heat pumps beginning in 2029; this project completes those transitions proactively. The Community Center already uses Ecobee smart thermostats with remote access; City Hall, the Police Department, and the Library will be brought to the same standard, giving facilities staff the ability to manage temperatures remotely during heat emergencies without requiring anyone on-site.

Solar System Modernization: Benicia has made a sustained commitment to solar energy, installing arrays at facilities across the city over the past decade. This component is about protecting that investment. Deferred maintenance on solar systems leads to reduced output, shortened equipment life, and ultimately a waste of the original capital. Phase 1 funds ongoing maintenance across ten installations and covers initial repairs and upgrades, and ongoing inspections, panel maintenance and needed repairs. Solar reliability at the water pump stations and treatment plant is particularly critical — these systems support drinking water infrastructure, and outages carry direct public health consequences. Looking ahead, the City plans to pursue battery storage additions at key solar sites through available state funding programs, which would allow the Civic Center District and other community refuge facilities to operate independently of the grid during extended emergencies.

<u>Sub-Project 2: Legacy Energy Generation Equipment Repair, Maintenance, and Transition Plan</u>

Benicia operates standby generators at 36 city-owned facilities. Most of these facilities are publicly accessible, and several serve or could serve as emergency resources for

residents during disasters. Many units are aging: corroded components, stressed fuel systems, and worn wiring increase the risk of failure precisely when these facilities are needed most. A degraded generator also produces more PM2.5, NOx, and CO than a well-maintained one — a meaningful air quality concern in neighborhoods that already carry the refinery's burden.

This program takes a step-by-step approach. In the near term, annual preventive maintenance across all 36 sites — engine servicing, fuel system checks, corrosion treatment, ventilation and filtration repairs, and building envelope maintenance — reduces emissions from degraded equipment and keeps facilities operational when communities need them. At the same time, the City is developing a comprehensive transition plan: a full inventory of each site's generator age, condition, and capacity that will produce a phased replacement and electrification roadmap. Sites nearest residential neighborhoods, schools, and sensitive receptors get priority. The roadmap becomes the basis for future grant applications, moving the City systematically from this maintenance investment toward renewable backup power city-wide.

Sub-Project 3: Green Building Codes and Energy Efficiency Code Compliance

Every city-owned building is publicly accessible, and building systems have a direct effect on indoor air quality — the air that staff and visitors breathe. This program keeps Benicia's permitting and inspection functions current with CALGreen mandates and state efficiency codes through targeted updates, so that new construction and major renovations don't lock in inefficient or polluting systems for decades. Plan reviews regulate VOC-emitting materials and require high-efficiency filtration. Field inspections check HVAC systems, duct integrity, and moisture barriers — the conditions that lead to mold and mildew, which disproportionately affects residents with asthma. Pre-solar readiness and EV infrastructure requirements are enforced for new and significantly renovated buildings. Catching these issues at the design phase is far less expensive than retrofitting them later, and the gains are protected for the life of the building.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

This suite of projects improves indoor air quality and climate comfort in the buildings Benicia residents depend on most, reduces emissions from city operations, and ensures that the Civic Center campus can serve as a reliable resilience hub — a safe place for residents during emergencies and a coordinated center for emergency operations.

Because Project 1 is primarily capital and programmatic in nature, community engagement operates at the levels of informing and consulting.

- The City will facilitate ongoing two-way engagement and report implementation progress at key milestones at City Council meetings in open public session.
- As with all the projects, the City will post project updates or engagement opportunities on the Benicia Forward webpage.
- The City Manager's newsletter will include Benicia Forward updates and engagement invitations in his weekly email newsletter as appropriate.
- SeeClickFix, which allows residents to flag infrastructure or facility-specific concerns from a mobile device, will be used to flag any issues with implementation.
- The Grants Manager will directly engage community stakeholders, especially through organizations serving seniors, people with disabilities, the school district, and residents with respiratory conditions. This ensures that the populations most reliant on these facilities as emergency resources have a direct channel to the project team.
- Finally, a grant implementation progress report will be included in the City's annual letter from the City Manager that is mailed to every Benicia address.

Construction at the Civic Center campus will directly affect Library and Community Center users. Advance notice of timelines and access disruptions will go to all City email subscribers, be posted at affected facilities. HVAC and thermostat upgrades will be coordinated with facility managers and senior programming staff who depend on the Community Center as a cooling resource during heat events.

Community Sustainability Commission will provide oversight for Project 1 investments, receive updates at key milestones, and advise the City on an equity-based approach to generator transition and enhancements that advance the Civic Center Campus to a true community resilience hub.

Utility Providers: PG&E, MCE (Marin Clean Energy), and the City's water and wastewater utilities — are engaged as technical partners whose infrastructure decisions directly affect Project 1 investments. PG&E permit applications for the City Hall switchgear upgrade will be submitted at grant execution.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Sub-Project 1: Benicia City Center Community Resilience Campus Phase 1 — $5,670,383.50

Phase 1 focuses investment in public buildings Benicia residents use most, establishing the Civic Center Clean Energy District as a low-emission, climate-ready campus and laying the groundwork for a formal community resilience center in future phases. In total, 38 HVAC units will be replaced across the four buildings — 13 at City Hall (10 split systems, 1 packaged A/C, 2 water heaters), 6 at the Police Department (5 split systems, 1 packaged A/C), 5 at the Library (4 packaged A/C units, 1 water heater), and 14 at the Community Center (1 split system, 13 packaged A/C units). One shared 200KW generator replaces two aging units with a combined rated capacity of only 80KW. Ten solar installations receive ongoing maintenance and $480,000 in targeted one-time repairs. Together, these investments serve facilities that collectively receive over 170,000 public visits per year and will be measurably more reliable, cleaner, and resilient by Year 2 of the grant term, setting the standards for future public investments.

Backup Power Consolidation: One shared 200KW diesel generator replaces two aging, separately operated units (a 30KW gas Gillette from 2013 at City Hall; a 50KW diesel Kohler from 1994 at the Police Department). The new unit covers 100% of both facilities' loads for 24 hours, requires no changes to existing building electrical systems, and includes a City Hall switchgear upgrade to support future EV charging. Consolidating two inefficient units into one modern generator reduces net emissions and operating costs. This is the City's first structured step toward renewable backup power: the Legacy Equipment transition plan (Project 2) will build from this baseline toward electrification at all 36 city sites.

HVAC Electrification and Smart Controls: The City Hall, Police Department, Library, and Community Center will receive new HVACs and water heaters. All replacements are electric heat pumps. Gas combustion is eliminated across the entire campus. The Community Center already operates Ecobee smart thermostats with remote access; the remaining three buildings will be upgraded to the same standard, giving City staff a unified platform to monitor and manage temperatures across all four facilities — essential during heat events when these buildings serve as public cooling centers.

Solar System Modernization: Ongoing maintenance across ten city solar installations protects the output and lifespan of existing arrays. One-time repairs totaling $480,000 address underperforming systems across multiple sites; the largest single repair ($257,000 at Water Pump Station 3) includes a meter upgrade, replacement of two inverters, and installation of updated monitoring equipment. Consistent solar performance at water infrastructure facilities — the treatment plant and pump stations

— is a public health investment, not just an energy efficiency upgrade. The City anticipates pursuing battery storage additions at Civic Center Districtfacilities through state programs in future phases, which would extend the usefulness of the solar investment during grid outages.

Sub-Project 2: Legacy Energy Generation Equipment Repair, Maintenance, and Transition Plan — $684,801.00

Annual preventive maintenance across 36 city-owned generator sites covers engine servicing, fuel system inspection, corrosion treatment, ventilation and filtration repairs, and building envelope maintenance. This work reduces emissions from degraded equipment each year and prevents the system failures that turn operational facilities into liabilities during emergencies. Running concurrently, a citywide generator inventory and transition plan will document the age, condition, and capacity of each unit, then produce a phased replacement and electrification roadmap prioritizing sites nearest residential areas, schools, and sensitive receptors. By the end of Year 1, all 36 sites will have been inventoried and prioritized. By Year 5, the City will have completed five full annual maintenance cycles and will present a funded, Council-approved generator replacement roadmap. The roadmap positions the City to pursue future state and federal grant funding for the next phase of generator replacement and, ultimately, for a full transition to renewable backup power.

Sub-Project 3: Green Building Codes and Energy Efficiency Code Compliance — $827,326.00

At $165,465.20 per year over five years, this investment funds one dedicated position in the Building Inspection Division for green building plan review, field compliance inspections, and permit coordination. The position focuses on new construction and significant renovations: energy efficiency and VOC compliance reviews, HVAC and duct inspections coordinated with third-party HERS raters where required, construction Waste Management Plan oversight, and enforcement of pre-solar readiness and EV infrastructure requirements. Identifying problems at the design stage is the most cost-effective point of intervention — and the only point at which those gains are truly locked in for the life of a building. This project will also assess existing building codes to identify targeted updates to further strengthen the City's commitment to a green and clean building sector.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Total project cost: $7,182,512.50. Sub-Project 1 ($5,670,383.50) includes one-time capital costs for the generator consolidation, HVAC electrification, smart controller installations, and the targeted one-time solar repairs, plus ongoing solar maintenance over the five-year term. Sub-Project 2 ($684,801) is primarily programmatic — annual maintenance and inspection across 36 sites, plus development of the citywide transition roadmap. Sub-Project 3 ($827,326) runs at $165,465.20 per year. Capital assets from Project 1 are expected to remain in service well past the grant term; ongoing programmatic costs will be carried through the General Fund, applicable local measure funds, and future grant opportunities.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project advances the City's 2016 Climate Action Plan directly, particularly Evaluation Category 3: Increasing Resource Efficiency and Maintaining a Healthy Environment. Relevant sections include the CAP's strategies to improve air quality (pg. A-3), its identification of existing hazards to air quality (p. 16), its Existing Conditions Report discussion of air quality risks (p. 10), and its equity focus on air quality (p. 15). The HVAC electrification, solar maintenance, and generator transition plan each operationalize CAP goals at the facility level, moving the City from stated commitments to funded, executable investments.

The project is consistent with the Community Air Protection Program (AB 617), which requires affected communities to monitor and reduce emissions of criteria air pollutants and toxic air contaminants. Benicia's position as a fence-line community adjacent to the Valero refinery makes this alignment especially relevant: reducing equipment-related emissions at city facilities, improving indoor filtration, and enforcing green building standards all support the City's commitment to protect residents who already face elevated exposure.

The project complements current and planned work in the City's Capital Improvement Plan and supports the county-wide MTC-funded electric fleet transition the City is pursuing with consultant NV5. A PG&E permit is required for the EV charging components included in this project and will be obtained within the grant term. All other permitting is handled in-house. Community support for these investments has been demonstrated through public outreach at local farmers' markets and community events. The Civic Center Clean Energy District investments in this project directly reinforce Project 4:

Promoting Community Health program, which designates the Community Center and Library as community resilience centers — facilities that can serve as emergency shelters only if their power, HVAC, and backup systems are reliable. The EV charging infrastructure enabled by the City Hall switchgear upgrade in this project also coordinates with Projects 2's EV fleet and charging investments, advancing a consistent citywide electrification strategy.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

This project will be led by [redacted], who has over 18 years of local government experience focused on utilities and public works. As [redacted], she oversees the design, bidding, and construction of capital projects for the City. [redacted] has managed major Capital Improvement Projects, including the 2024 and 2025 Citywide Pavement Rehabilitation and Bike and Pedestrian Safety Enhancement Projects, and has a track record of delivering complex projects on time and under budget while maintaining transparent communication with the community.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

[redacted] will provide overall project leadership and inter-departmental coordination across all three project components, overseeing consultant selection, budget management, and progress reporting throughout the grant term. [redacted], will lead engineering and construction management for the City Center Campus capital components. [redacted] brings over 30 years of experience in public works and municipal infrastructure, including the Pedestrian Bridge, roadway rehabilitation, sidewalk and curb ramp upgrades, and water and wastewater utility improvements, and manages consultant selection, competitive bidding, and permit compliance across all project phases. J[redacted], will oversee the solar, HVAC, and facilities components, in coordination with Engineering. [redacted] has over 27 years of local government experience spanning electrical systems, building trades, water distribution, sewer collections, and facilities maintenance, plus 20 years of military service with the U.S. Navy Seabees and Army Corps of Engineers, and is directly responsible for vendor and RFP management for specialized services. [redacted], will lead the Green Building Codes and Energy Efficiency Code

Compliance component. [redacted] has over 20 years of experience in local government building safety, including 11 years with the [redacted], and administers building permits and inspections, floodplain management, and code enforcement in direct coordination with state and regional permitting agencies. [redacted], will provide Fire Department coordination on generator and backup power components, drawing on over 28 years of experience with the [redacted].

Technical advisory services for the capital components will be procured through competitive RFP. All consultant selections will comply with applicable procurement requirements. Public Information and Engagement will involve both consultant support and City staff time to ensure that residents, employees, and visitors are informed and engaged throughout the grant term.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- *Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.*
- *If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.*
- *Indicate "N/A" if the question is not applicable to the project*

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

A PG&E permit is required for the EV charging components included in this project. The City will submit this application promptly upon grant execution and expects to obtain it within the grant term. The generator replacement, HVAC work, and solar maintenance are all independent of this permit and can proceed on their own timelines. All other permits are standard municipal building permits issued in-house.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

The project is anticipated to qualify for Categorical Exemptions under CEQA as it consists of minor improvements within existing developed facilities and public rights of

way including equipment installation, safety upgrades, and maintenance activities with no expansion of use. The City will complete project level review and file Notices of Exemption (NOEs) following award.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

N/A. The City owns all project sites. The Community Center is covered under an existing lease with the Benicia Unified School District that permits City capital improvements and maintenance. No additional site control actions are required.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Each department will submit reports and an annual review documenting costs, staff time, community feedback, and progress against grant milestones. Capital assets from Project 1 — the replacement generator, HVAC systems, smart controllers, and repaired solar installations — are expected to remain in service for many years past the grant term; post-grant O&M will be funded through the General Fund and applicable local measure funds.

The programmatic components are designed to become part of standard departmental operations. Preventive maintenance protocols developed under the Legacy Equipment program will be incorporated into Public Works procedures. The generator transition roadmap will also identify state, federal, and private grant opportunities to fund the next round of equipment replacement and electrification.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The main near-term risk is PG&E permit timing for the EV charging components. Submitting the application at grant execution gives the City maximum lead time, and the generator, HVAC, and solar work can all move forward independently in the meantime. For HVAC, bid specifications will allow for equivalent substitution on heat pump equipment to guard against supply chain delays that have affected similar municipal projects statewide. For Project 2, the challenge is scale: 36 sites is a large portfolio to manage. The team will sequence maintenance by equipment age, condition, and proximity to sensitive receptors — highest-risk sites first. These projects were selected from a much larger set of City priorities through close collaboration across departments,

public comment, and City Council approval. That process built the institutional buy-in needed to see them through.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for **each Project** during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Project 1: Clean Energy Initiative — Modernizes Civic Center buildings as a community resilience hub through backup power consolidation, HVAC electrification, and solar system maintenance; reduces emissions from aging generators at 36 city sites through structured maintenance and a transition roadmap; and enforces green building code standards for new construction citywide. Total Budget: $7,182,512.50 over 5 years.

Summary of Measurable Outcomes and Indicators

Sub-Project & Component	Measurable Outcome	Indicator(s)
SP-1a: Backup Power Consolidation	Replace two aging generators with one 200KW EPA Tier 4 Final diesel unit, reducing air impacts during emergency operation and providing full 24-hour backup for City Hall and Police Department.	• New 200KW generator installed; commissioning report on file • ATS transfer test passed; full-building backup verified • Aging units decommissioned (30KW Gillette, 50KW Kohler); as-built documentation updated • Pre/post emissions on file: legacy ~9.2 g/kWh NOx vs. new EPA-certified ≤0.4 g/kWh NOx • City Hall switchgear upgrade completed • Runtime and outage logs maintained when events occur
SP-1b: HVAC Electrification & Smart Controls	Improve indoor air quality in Civic Center buildings by replacing aging HVAC systems with high-efficiency electric units and MERV-13 filtration, reducing particulate exposure for staff, seniors, and the public.	• 38 HVAC units replaced across four buildings; all pass final inspection • MERV-13 filters installed and documented in all new units • Pre-installation IAQ walkthrough on file; post-installation check confirms improved conditions • Gas water heaters at City Hall and Library replaced with electric heat pump models • Contractor commissioning reports on file for all units
	Eliminate on-site gas combustion, upgrade to lower-emissions R-454B refrigerant, and enable remote cooling center management through smart thermostat installation.	• All replacements use R-454B refrigerant (lower GWP than R-22/R-410A) • Ecobee smart thermostats operational at City Hall, PD, and Library • Remote pre-cooling capability verified before each heat season • Occupant IAQ complaints tracked through existing facility channels
SP-1c: Solar System Modernization	Protect solar energy production across 10 city installations through targeted one-time repairs and annual preventive maintenance, preserving renewable generation at water and community resilience facilities.	• Annual maintenance completed at all 10 sites; contractor service logs on file each year • One-time repairs ($480K) completed; solar contractor provides pre/post kWh production report • Solar uptime maintained at Water Treatment Plant and Pump Stations P-1, P-2, P-3

Sub-Project & Component	Measurable Outcome	Indicator(s)
		• Sites with >10% output degradation flagged and addressed
SP-2: Legacy Generator Maintenance & Transition	Reduce emissions from degraded generator equipment at 36 city sites through annual preventive maintenance and develop a phased electrification roadmap for City Council adoption.	• All 36 sites inventoried by end of Year 1; maintenance completed at all sites each year • Maintenance log per site on file; generator failure events tracked vs. pre-grant baseline • Transition roadmap adopted by City Council by Year 2; posted on Benicia Forward • ≥1 state or federal grant application submitted using roadmap
SP-3: Green Building Code Compliance	Enforce green building and energy efficiency code compliance for all new construction and major renovations citywide through dedicated plan review and field inspections.	• Dedicated Building Inspection position staffed throughout grant term • 100% of applicable permit applications reviewed for CALGreen and Title 24 compliance • Annual Green Building Compliance Report presented to City Council

Detailed Milestones and Task Plan by Sub-Project

Sub-Project 1a: Backup Power Consolidation

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Replace two aging generators with one 200KW EPA Tier 4 Final unit, reducing air impacts during emergency operation and providing full 24-hour backup for City Hall and Police Department.	A. Procurement, Permitting & Decommissioning	1. Confirm full-building backup scope; obtain manufacturer submittals (fuel curve + EPA Tier 4 Final emissions certification); finalize procurement package	Public Works	Fire Chief; Technical Advisory	Months 1–6
		2. Procure contractor via competitive bid; obtain building permits; submit PG&E interconnection notification for switchgear upgrade	Public Works / City Engineer	Building Safety; PG&E	Months 3–12
		3. Decommission and remove 30KW Gillette (City Hall, 2013) and 50KW Kohler (PD, 1994); document final	Public Works	Contractor	Months 12–18

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		condition for pre/post comparison package			
	B. Installation & Switchgear Upgrade	1. Install 200KW Cummins diesel generator (EPA Tier 4 Final) with ATS interfaces for full-building coverage of City Hall and Police Department	Public Works	Electrical Contractor	Months 12–24
		2. Complete City Hall main switchgear upgrade; confirm support for future EV charger installations (Project 2 coordination); obtain final inspection approval	Public Works / City Engineer	Electrical Contractor; PG&E	Months 12–24
		3. Update and file as-built documentation; train facilities staff on startup, shutdown, and manual transfer procedures	Public Works	Contractor; Facilities	Months 18–24
	C. Commissioning & Emissions Documentation	1. Perform ATS transfer test (simulate utility loss); verify full-building operation under generator power for City Hall and PD; archive signed commissioning checklist	Public Works	Technical Advisory; Police Dept.	Months 18–24
		2. Compile pre/post emissions package: legacy datasheets (~9.2 g/kWh NOx, ~0.54 g/kWh PM2.5) vs. new EPA Tier 4 Final certification (≤0.4 g/kWh NOx, ≤0.02 g/kWh PM2.5); include in Year 2 grant report	Public Works	Technical Advisory	Months 18–30
		3. Enable runtime/event logging on generator controller; capture outage events and fuel use when outages occur; include operational summary in annual grant report	Public Works / Facilities	N/A	Months 24–60 (annual)

Sub-Project 1b: HVAC Electrification & Smart Controls

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Improve indoor air quality in Civic Center buildings by replacing aging HVAC with high-efficiency electric units and MERV-13 filtration, reducing particulate exposure for staff, seniors, and the public.	A. IAQ Baseline Assessment & Equipment Specification	1. Conduct pre-installation IAQ walkthrough at all four buildings: document odors, moisture issues, airflow problems, and existing filter ratings; establish baseline condition record	Public Works / Facilities	Technical Advisory	Months 1–6
		2. Finalize equipment specs requiring MERV-13 filtration and R-454B refrigerant; confirm unit counts and locations — City Hall (13 units), PD (6 units), Library (5 units), Community Center (14 units)	Public Works	HVAC Contractor	Months 1–6
		3. Develop construction schedule minimizing disruption to Library and Community Center operations; coordinate with facility managers and senior programming staff	Public Works	Library Director; CC Manager	Months 3–9
	B. HVAC Replacement & Water Heater Upgrades	1. Replace all 38 HVAC units across four buildings with electric heat pumps equipped with MERV-13 filters; complete all replacements by Year 2	Public Works	HVAC Contractor; Building Safety	Months 9–24
		2. Replace gas water heaters at City Hall and Library with electric heat pump models (proactively meeting CA 2027 mandate); confirm all units use R-454B refrigerant	Public Works	HVAC Contractor	Months 12–24
		3. Obtain contractor commissioning reports for all units confirming performance to specification; verify final inspection approval from Building Safety	Public Works	Building Safety	Months 18–24
	C. Post-Installation Verification	1. Contractor conducts post-installation IAQ check at all four buildings: confirm improved ventilation and filter performance; document results for grant file	Public Works	Technical Advisory	Months 24–30

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		2. Review occupant IAQ complaints via existing facility channels before and after installation; document any improvement in complaint frequency	Public Works / Facilities	Facility Managers	Months 24–36
Eliminate on-site gas combustion, upgrade to lower-emissions R-454B refrigerant, and enable remote cooling center management through smart thermostat installation.	A. Smart Thermostat Installation & Training	1. Install Ecobee smart thermostats at City Hall, Police Department, and Library (Community Center already equipped); configure remote access and pre-cooling capability for all four buildings	Public Works / Facilities	HVAC Contractor; IT	Months 18–24
		2. Train facilities staff on unified remote management platform; document staff ability to activate pre-cooling for cooling center operations without being on-site	Public Works / Facilities	IT Department	Months 18–24
	B. Cooling Center Readiness Verification (Annual)	1. Before each heat season, test remote pre-cooling capability at all four buildings; confirm HVAC, smart controls, and backup generator are all operational; log results	Public Works / Facilities	Emergency Management	Annual (Months 24–60)
		2. Report cooling center readiness status to Community Sustainability Commission annually	Public Works	N/A	Annual (Months 24–60)

Sub-Project 1c: Solar System Modernization

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Protect solar energy production across 10 city installations through targeted one-time repairs and annual preventive maintenance, preserving renewable generation at water and community resilience facilities.	A. Year 1 Inspections & One-Time Repairs	1. Inspect all 10 solar installations: document current kWh output, inverter status, panel condition, and monitoring gaps; establish production baseline for each site (City Hall, Community Center, Community Park, Corp Yard, Fire Station 12, Swim Center, Water Treatment Plant, Pump Stations P-1, P-2, P-3)	Public Works / Facilities	Solar Contractor	Months 1–6
		2. Complete one-time repairs ($480K): Water Pump Station P-3 ($257K — meter upgrade, 2 inverter replacements, updated	Public Works	Solar Contractor; PG&E	Months 6–18

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		monitoring); remaining budget to other underperforming sites identified in inspection; prioritize water infrastructure sites			
		3. Obtain solar contractor pre/post kWh production report documenting output before and after repairs; archive for grant reporting	Public Works / Facilities	Solar Contractor	Months 18–24
	B. Annual Preventive Maintenance (All 10 Sites, Years 1–5)	1. Solar contractor completes annual maintenance at all 10 sites: panel cleaning, inverter servicing, monitoring verification, electrical checks; contractor submits service logs for each site	Public Works / Facilities	Solar Contractor ($400,800/yr)	Annual (Months 6–60)
		2. Review contractor's annual kWh production report for all 10 sites; flag any sites with >10% degradation for prompt repair; include solar performance summary in annual grant progress report	Public Works	N/A	Annual (Months 12–60)

Sub-Project 2: Legacy Generator Maintenance & Transition Plan

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Reduce emissions from degraded generator equipment at 36 city sites through annual preventive maintenance and develop a phased electrification roadmap for City Council adoption.	A. Site Inventory & Prioritization (Year 1)	1. Conduct condition assessment at all 36 generator sites: document make, model, age, capacity, condition (corrosion, fuel system, wiring, ventilation), and proximity to residential areas, schools, and sensitive receptors; complete by end of Year 1	Public Works	Technical Advisory; Facilities	Months 1–12
		2. Prioritize sites for maintenance scheduling: highest-risk sites (oldest equipment, most degraded, nearest sensitive receptors) serviced first; begin Year 1 maintenance at priority sites	Public Works	Fire Chief	Months 6–12

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
	B. Annual Preventive Maintenance (All 36 Sites, Years 1–5)	1. Complete annual maintenance at all 36 sites ($83,835/yr): engine servicing, fuel system inspection, corrosion treatment, load bank testing, ventilation and filtration repairs; maintenance log per site on file	Public Works / Corp Yard	Generator Service Contractors	Annual (Months 12–60)
		2. Track generator failure events per year vs. pre-grant baseline; report annual maintenance status and reliability trends to City Council	Public Works	N/A	Annual (Months 12–60)
	C. Transition Roadmap Development & Adoption	1. Develop phased generator replacement and electrification roadmap: tier all 36 sites by replacement priority, identify technology options (battery storage, solar+storage) for priority sites, and map applicable grant programs (SGIP, EPIC, IRA, FEMA BRIC); coordinate with MTC and Air District	Public Works	Technical Advisory; MTC; Air District	Months 12–24
		2. Present roadmap to Community Sustainability Commission and City Council for adoption (target: Year 2); post on Benicia Forward webpage; submit ≥1 state or federal grant application using roadmap as supporting documentation	Public Works	City Manager's Office	Months 22–30

Sub-Project 3: Green Building Code Compliance — $827,326 over 5 years ($165,465/yr)

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Enforce green building and energy efficiency code compliance for all new construction and major renovations citywide through dedicated plan review and field inspections.	A. Program Establishment & Ongoing Plan Review	1. Staff dedicated Building Inspection Division position; develop standardized review checklist covering CALGreen, Title 24, MERV filtration specs, EV conduit, solar readiness, VOC compliance, and moisture barriers	Development Services / Building Safety	Building Official	Months 1–6
		2. Review 100% of applicable permit applications (new construction and significant renovations); issue correction notices for non-compliant submittals;	Building Safety	HERS Raters (as required)	Months 1–60 (ongoing)

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		conduct field inspections confirming HVAC, duct, EV, and solar readiness as approved			
	B. Annual Reporting & Code Updates	1. Publish Annual Green Building Code Compliance Report: # permits reviewed, # corrections issued, # EV-ready and solar-ready installations confirmed; present to City Council; post on Benicia Forward webpage	Building Safety	City Manager's Office	Annual (Months 12–60)
		2. Assess emerging CALGreen and Title 24 developments annually; present targeted local code update recommendations to City Council by Year 2; provide annual technical briefing to Benicia contractors and architects	Building Safety	Building Official; Benicia Chamber	Annual (Months 12–60)

Project Name: Benicia Forward: A Catalyst for a Clean and Resilient Future
Lead Applicant Name: City of Benicia
Term for this budget (in years): 5

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	1.2. Legacy Energy Generation Equipment Repair, Maintenance, and Transition Plan	Benicia City staffing costs $83,835 each year for 5 years	$419,175.00
Personnel/Staff Costs	Direct	1.3. Green Building Codes and Energy Efficiency Compliance	Benicia City staffing costs, $112,340 each year for 5 years	$561,700.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	1.1.c. Benicia City Center Community Resilience Center Campus Phase 1—Solar System Modernization	Cost for a subcontractor $400,800 to perfrom maintenance each year for 5 years	$1,603,200.00
Construction	Direct	1.1.b. Benicia City Center Community Resilience Center Campus Phase 1—HVAC Electrification and Smart Controls	One time cost for a subcontracter to install HVAC & Smart Controller Improvements at City Hall, Library, Community Center	$2,071,428.00
Construction	Direct	1.1.a. Benicia City Center Community Resilience Center Campus Phase 1—New Backup Power Consolidation	One time cost for a subcontracter to install New Backup Generator at City Hall/PD	$1,730,129.00
Personnel/Staff Costs	Direct	Project Manager	25% FTE x $242,874 annual salary and fringe benefits x 5 years	$303,592.50
Personnel/Staff Costs	Direct	Grant Manager	25% FTE x $244,512 annual salary and fringe benefits x 5 years	$305,640.00
Personnel/Staff Costs	Direct	Analyst	25% FTE x $130,118 annual salary and fringe benefits x 5 years	$162,647.50
Community Engagement	Direct	Community Outreach	Funding for staff time, planning, presentation materials.	$25,000.50

Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Benicia Forward: A Catalyst for a Clean and Resilient Future
Lead Applicant Name	City of Benicia
Project Location	City of Benicia, CA
Overall Funding Request	$40,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Clean Mobility Project
Project Lead	City of Benicia
Project Location	City of Benicia (various locations)
Project Funding Request	$5,888,442.50

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Project 2, the Clean Mobility Project, advances two parallel goals: transitioning city-owned vehicles and infrastructure toward clean energy and making it safer and more practical for Benicia residents to get around without a car. The City is starting with its own fleet and facilities. Two EV charging stations at the Police Department deliver a visible, immediate signal about where the City is headed. Two new EV vehicles replace aging fossil fuel units at the Police Department. A Legacy Fleet Maintenance and Transition Plan — developed in coordination with MTC and the Air District — applies structured maintenance to the City's entire vehicle fleet now, while building a phased roadmap toward full electrification over time.

On the streets, the project invests in the infrastructure that makes active transportation a real option. First Street — Benicia's main pedestrian and cycling corridor from the waterfront into downtown — gets safety markings and bike lane improvements. The intersection outside Benicia High School gets a dedicated pedestrian scramble crossing. The City's pedestrian bridges, tunnels, and sidewalks get the maintenance and upgrades needed to keep them safe and accessible. An updated Capital Improvement Plan and active transportation planning program ensure that the work done during this grant term builds toward a larger, more connected network over the long term.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

Every component of this project reduces transportation-related air pollution — Benicia's largest controllable source of PM2.5, NOx, and greenhouse gases. Fleet electrification and maintenance directly cut tailpipe emissions from city vehicles. Pedestrian and bicycle infrastructure investments make low- and zero-emission travel practical for more residents, shifting short trips away from single-occupancy vehicles. Better-maintained pedestrian bridges, tunnels, and sidewalks give people safe, contiguous routes to reach transit, schools, and services. The Legacy Fleet transition plan advances Just Transition by replacing reactive, crisis-driven repairs with a structured, grant-supportable roadmap that progressively lowers the City's operating costs and emissions profile as vehicles turn over.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Sub-Project 1: City Fleet Transition and Charging Infrastructure Installation

- EV Charging Stations (Police Department / IT Building parking lot): 150 East K Street, Benicia, CA 94510
- 2 EV Non-Patrol Admin Vehicles (Police Department): 200 E L Street, Benicia, CA 94510

Sub-Project 2: Pedestrian and Bicycle Infrastructure Repairs and Improvements

- First Street Bikeway Improvements: First Street from Military East/West intersection to the waterfront, Benicia, CA 94510
- High School Pedestrian Crossing Upgrades: intersection of Military West / West 11th Street / Denfield Avenue, Benicia, CA 94510 (Benicia High School: 1101 Military West, Benicia, CA 94510)
- Pedestrian Bridge and Tunnel Improvements:
  - East 3rd Street Tunnel: underpass beneath I-780, Benicia, CA 94510
  - Military West Pedestrian Bridge: near Mary Farmar Elementary School, Benicia, CA 94510
  - Columbus Parkway Pedestrian/Bike Bridge: near 2036 Columbus Parkway, crosses I-780 to Benicia State Recreation Area, Benicia, CA 94510
- Curb Ramp Upgrades: various locations citywide, coordinated with annual Citywide Pavement Rehabilitation Projects, with a priority for streets adjacent to transit and along bike and pedestrian corridors.
- Sidewalk Repairs and Improvements: various locations citywide, with a priority in neighborhoods with the highest respiratory illnesses and those with high pedestrian accidents and fatalities.

Sub-Project 3: Active Transportation Planning, Design, and Capital Improvement Prioritization

- Citywide (N/A — planning and design work)

Sub-Project 4: Legacy Fleet Repair, Maintenance, Upgrades, and Transition Plan

- All City fleet facilities and operations, Benicia, CA 94510

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Community input for this project came through multiple channels. SeeClickFix, the City's mobile reporting platform available since 2022, generates location-specific, photo-documented reports from residents on street conditions, pedestrian hazards, and

infrastructure problems. Each submission is routed to the appropriate department for follow-up, and the accumulated data creates a georeferenced picture of where conditions are worst and where residents feel least safe. This data drove project location priorities. City Council discussions and public comment periods provided broader structured input.

Three partnerships directly shaped project scope. Benicia Unified School District administrators identified the Military West/West 11th Street/Denfield Avenue intersection as their highest-priority pedestrian safety concern — input that elevated the High School Pedestrian Scramble from a general improvement to a named, funded project component. The Chamber of Commerce relayed consistent feedback from First Street business owners that safety concerns were suppressing foot and cycling traffic on which their restaurants, galleries, and cafes depend, providing the economic rationale that reinforces the safety case for the bikeway improvements. The Solano Transportation Authority contributed regional active transportation context that shaped the scope and regional connectivity priorities of the existing Bikeway Plan, ensuring future phases will be competitive for state and federal gap-funding programs.

Each project component traces directly to this community and stakeholder input. First Street's inclusion reflects repeated feedback from residents, business owners, and cyclists about safety in the downtown corridor where accidents have been reported. The High School crossing upgrade responds to community concern about student safety near one of Benicia's most heavily trafficked intersections. Pedestrian bridge and tunnel maintenance addresses documented conditions — graffiti, lighting deficiencies, structural wear, and safety hazards — on routes used daily by schoolchildren, seniors, and residents with disabilities. Curb ramp and sidewalk priorities are driven by SeeClickFix data and ADA Transition Plan obligations, targeting locations where gaps in the pedestrian network most affect vulnerable users.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

<u>Sub-Project 1: City Fleet Transition and Charging Infrastructure Installation</u>

Benicia currently has no EV charging stations in the Police Department and I.T. parking lot at 150 East K Street. Two Level-2 dual-port charging stations will be installed there, made accessible to City owned EV Fleet — . Power-sharing technology will balance

electrical load across both ports, maximizing throughput without overloading the service. Two non-patrol EV vehicles (anticipated Electric Chevy Blazer or comparable EV) will replace fossil-fuel units in the Police Department's administrative fleet, reducing tailpipe emissions from daily operations and extending the City's EV investment beyond the charging infrastructure itself.

Benicia's 34 sworn officers and 20 non-sworn professional employees depend on reliable vehicles for community safety operations. Electrifying the admin fleet reduces fuel and maintenance costs while demonstrating that the transition to EVs is operationally viable to the public — a signal that matters as the City develops its broader fleet transition plan. Electric vehicles also eliminate brake dust containing asbestos through regenerative braking, a meaningful reduction in a city already managing cumulative pollutant exposure from the Valero refinery.

Sub-Project 2: Pedestrian and Bicycle Infrastructure Repairs and Improvements

Benicia's pedestrian and cycling network serves a community where walkability and mobility access are public health issues, not just transportation ones. According to the 2020 Census, 7.8% of Benicia residents under 65 have a reported disability, 23.7% are over 65, and 20.5% are minors. These groups depend on safe, accessible sidewalks, ramps, and crossings for daily travel — and they are the most exposed to traffic hazards and air quality impacts when infrastructure is inadequate. More people walking and cycling also means fewer short car trips, which are among the most emissions-intensive trips.

First Street Pedestrian and Bikeway Improvements: First Street runs 0.8 miles from the Military East/West intersection to the Benicia waterfront — a route that connects the City's border to its downtown core, passing through a commercial and arts district anchored by galleries, cafes, and small businesses that depend on foot and bike traffic. Three children have been struck by vehicles in this corridor recently. Planned improvements include high-visibility crosswalk markings, bike lane striping, bulbouts with ADA-compliant curb ramps, and bike racks in AB 413-mandated no-parking zones near intersections,. The full street is scheduled for pavement rehabilitation in 2028, and this investment establishes the safety markings and infrastructure ahead of that work.

High School Pedestrian Crossing Upgrades: Benicia High School's 1,405 students navigate one of the city's most congested intersections daily, at Military West, West 11th Street, and Denfield Avenue — sandwiched between the campus and Interstate 780. The City will install a Pedestrian Scramble (also called an Exclusive Pedestrian Phase): a signal phase during which all vehicle movements stop and pedestrians may cross in any direction, including diagonally. All approaches display red lights with lighted

“No Right Turn” indications during the phase. This is the most effective intervention for high-volume school crossings with multi-directional pedestrian demand. The upgrade also includes enhanced striping and lighting to improve visibility during the late-evening hours when after-school athletics bring students back across this intersection.

Pedestrian Bridge and Tunnel Improvements: The City maintains three active pedestrian and bicycle structures, each with documented conditions requiring attention. The East 3rd Street Tunnel, an underpass beneath I-780, needs significant upgrades to address graffiti, inadequate lighting, and safety hazards near routes used by unaccompanied schoolchildren. The Military West Pedestrian Bridge serves commuters and families near Mary Farmar Elementary School. The Columbus Parkway Pedestrian/Bike Bridge connects the city to Benicia State Recreation Area across I-780 and sits within walking distance of both Benicia Middle School and Benicia High School. Maintenance and upgrades across all three structures — graffiti abatement, pathway repairs, lighting, drainage, and structural inspections — improve safety (perceived and actual) that will encourage more people to use them. The newly reopened Military West Pedestrian Bridge (reopened October 2025) requires additional repair and maintenance to protect the recent investment.

Curb Ramp Upgrades: Many of Benicia’s existing curb ramps predate current ADA standards, lacking compliant slopes, detectable warning surfaces, proper crosswalk alignment, or smooth transitions. These gaps turn routine travel into a safety hazard for residents with mobility devices, seniors, and parents with strollers. Curb ramp upgrades are coordinated with the City’s annual Pavement Rehabilitation Projects to maximize cost efficiency and limit construction-related emissions.

Sidewalk Repairs and Improvements: Uneven, cracked, and uplifted sidewalks create a trip hazard in corridors near schools, transit stops, and commercial areas. The program covers ADA-compliant grinding, repair, and replacement of public sidewalks citywide. Permitting and coordinated scheduling reduces redundant contractor trips and limit the duration of saw-cutting and demolition activities, keeping construction-related emissions low.

<u>Sub-Project 3: Active Transportation Planning, Design, and Capital Improvement Prioritization</u>

Benicia’s Capital Improvement Plan was last adopted in FY 2021–2022. An updated CIP is needed to reflect current infrastructure conditions, prioritize pedestrian and bicycle investments, and provide the planning pipeline that turns community input into fundable, construction-ready projects. The update will incorporate input from the community as well as all City departments to produce updated cost estimates and

project sequencing and establish a formal priority framework for bike and pedestrian investments across the City.

Transportation Planning, Design, and Improvements expands this work into a formal active transportation program: preliminary engineering, design, permitting, right-of-way coordination, public involvement, and construction administration for pedestrian and bicycle projects in the pipeline. This includes coordination with the Solano Transportation Authority on regional connections and the pursuit of state and federal gap-funding grants to extend the City's network beyond what this grant funds directly. A formal Bikeway Plan will identify corridors that minimize conflicts between vehicles and people walking or biking, address conflicts with industrial uses, establish design standards for future projects, and provide the documentation needed to compete for active transportation grant programs at the state and federal levels.

Sub-Project 4: Legacy Fleet Repair, Maintenance, Upgrades, and Transition Plan

The City operates a mixed fleet of heavy-duty and light-duty vehicles — fire trucks, dump trucks, service vehicles, and administrative units — many of which are aging and produce elevated emissions from degraded engines, exhaust systems, and emissions-control components. Poorly maintained vehicles are a measurable local air quality issue: worn parts, incomplete combustion, exhaust leaks, and failing diesel particulate filters generate PM2.5, NOx, CO, and VOCs in the neighborhoods where City crews work.

This program takes the same step-by-step approach as the City's Legacy Energy Equipment program in Program 1. Heavy-duty maintenance covers fabrication, welding, and regular service on fire trucks, dump trucks, and other large equipment. Light-duty maintenance covers oil changes, tire rotations, brake inspections, and emissions-control system checks across the administrative and service fleet. Running concurrently, the City — in coordination with MTC and the Air District and building on the ongoing NV5 electric fleet study — will develop a formal fleet transition plan: an inventory of each vehicle's age, emissions profile, and replacement timeline, producing a phased electrification roadmap that prioritizes the highest-emitting units for earliest replacement. This plan becomes the basis for future grant applications and positions Benicia to participate in regional fleet transition programs as they become available.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

This suite of projects improves the safety and accessibility of active transportation options, thus providing an option to single occupant vehicles. Sub-Projects near schools ensure students get to school comfortably, and downtown improvements encourage more pedestrian activity which will have made downtown a more attractive destination, supporting economic development in the City. All of these projects theoretically an influence mode shift from driving to walking.

Because Project 2 is primarily capital and programmatic in nature, community engagement operates at the levels of informing and consulting.

- The City will facilitate ongoing two-way engagement and report implementation progress at key milestones at City Council meetings in open public sessions.
- As with all the projects, the City will post project updates or engagement opportunities on the Benicia Forward webpage.
- The City Manager's newsletter will include Benicia Forward updates and engagement invitations in his weekly email newsletter as appropriate.
- Active transportation planning efforts will include public meetings with residents, business owners, and school community members to ensure the Bikeway Plan and CIP priorities reflect on-the-ground needs.
- During implementation, the project team will review SeeClickFix data and incorporate it into maintenance prioritization under the fleet and infrastructure programs.
- The Grants Manager will directly engage community stakeholders, especially seniors, people with disabilities, the school district/students, and downtown businesses and workers
- Updates on construction timelines, street closures, and pedestrian detours will also be communicated through the City's weekly email blast and social media channels, with particular attention to First Street — where businesses and frequent users will be directly affected by construction activity and will benefit most from early, clear communication.
- Finally, a grant implementation progress report will be included in the City's annual letter from the City Manager that is mailed to every Benicia address.

The *Economic Develop Board* will receive bi-annual updates on and provide oversight for Project 2 investments, and provide input on topics such as sub-project design, a fleet electrification plan, and public noticing before construction.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

<u>Project 1: City Fleet Transition and Charging Infrastructure Installation — $1,999,220.50</u>

This project installs the City's first publicly accessible EV charging infrastructure at 150 East K Street — four charging ports across two Level 2 dual-port stations, where no public charging currently exists. Both stations are accessible to City staff and the public. Two non-patrol EV vehicles replace fossil-fuel units in the Police Department's administrative fleet, displacing an estimated 15,000–20,000 miles of fossil-fuel vehicle travel annually. Both investments are designed to remain in service well beyond the grant term and establish the operational foundation for the broader fleet electrification transition mapped out in Project 4.

Project 2: Pedestrian and Bicycle Infrastructure Repairs and Improvements — $2,101,965.00

Five subcomponents address the physical gaps in Benicia's pedestrian and cycling network. By Year 5, the project will have improved 0.8 miles of First Street with bike lanes, high-visibility crosswalks, and ADA-compliant curb treatments; installed a pedestrian scramble crossing that gives Benicia High School students a safe, dedicated crossing phase at the city's most hazardous school intersection; completed repairs and upgrades on all three bridge and tunnel structures (East 3rd Street Tunnel, Military West Pedestrian Bridge, Columbus Parkway Pedestrian Bridge); upgraded curb ramps at priority locations coordinated with annual pavement rehabilitation; and repaired sidewalks at the deficiency sites with the highest use and greatest safety risk, as identified through SeeClickFix data and ADA Transition Plan obligations.

Project 3: Active Transportation Planning, Design, and Capital Improvement Prioritization — $706,847.00

An updated Capital Improvement Plan will reflect current conditions across public infrastructure and facilities, with explicit prioritization criteria for pedestrian and bicycle investments. Transportation Planning, Design, and Improvements will advance projects through preliminary engineering, design, and permitting, building a pipeline of construction-ready projects for future grant cycles. A formal Bikeway Plan will identify and design priority corridors, apply for gap and last-mile funding at the state and federal level, and coordinate with the Solano Transportation Authority on regional connections. Together, these planning efforts reduce the timeline and cost between community-identified needs and funded construction.

Project 4: Legacy Fleet Repair, Maintenance, Upgrades, and Transition Plan — $1,078,410

Annual maintenance and repair cover the City's full fleet: heavy-duty vehicles (fire trucks, dump trucks — including fabrication and welding as needed) and light-duty vehicles and equipment (oil changes, tire rotations, brake inspections, emissions-control system checks). This work reduces PM2.5, NOx, CO, and VOC emissions from degraded fleet equipment and prevents the high-emission failure modes — exhaust leaks, damaged after-treatment systems, and incomplete combustion that occur when maintenance is deferred. Concurrently, the City will develop a fleet transition plan in coordination with MTC and the Air District, building on the NV5 electric fleet study: a full inventory of vehicle ages, emissions profiles, and replacement timelines, producing a phased electrification roadmap that prioritizes the highest-emitting units. The roadmap positions the City to pursue state and federal fleet electrification grant programs and ensures the transition is planned and systematic rather than driven by emergency replacement.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Total project cost: $5,888,442.50. Sub-Project 1 ($1,999,220.50) includes one-time capital costs for EV charging station installation and two EV vehicle purchases. Sub-Project 2 ($2,101,965) covers a mix of one-time capital improvements (First Street striping and markings, pedestrian scramble signal equipment, bridge and tunnel repairs) and programmatic maintenance (curb ramps, sidewalks). Sub-Project 3 ($706,847) is fully programmatic — planning, design, engineering, and grant administration over the five-year term. Sub-Project 4 ($1,078,410) is primarily programmatic — annual fleet maintenance plus transition plan development. Capital assets are expected to remain in service well past the grant term; ongoing programmatic costs will be sustained through the General Fund, local gas tax, Measure F funds, and future grant opportunities at the state, federal, and regional levels.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

This project advances the City's 2016 Climate Action Plan directly, particularly Evaluation Category 3: Increasing Resource Efficiency and Maintaining a Healthy Environment — including its strategies to improve air quality (pg. A-3), its identification of existing hazards to air quality (p. 16), its Existing Conditions Report discussion of air quality risks (p. 10), and its equity focus on air quality (p. 15). Fleet electrification and active transportation investments operationalize the CAP's transportation emission reduction goals at the project level, moving the City from stated commitments toward funded, executable work.

The project is consistent with the Community Air Protection Program (AB 617), which requires affected communities to monitor and reduce emissions of criteria air pollutants and toxic air contaminants. Reducing vehicle emissions through fleet maintenance and electrification and reducing short car trips through pedestrian and bicycle infrastructure, directly support Benicia's AB 617-aligned commitments and investments in a community already carrying an elevated pollution burden from the Valero refinery.

The project complements the City's active Capital Improvement Plan and is designed to advance in parallel with the county-wide MTC-funded electric fleet transition the City is pursuing with consultant NV5. A PG&E permit is required for the EV charging components and will be obtained within the grant term. All other permits are standard municipal encroachment and construction permits issued in-house. Community support for these investments has been demonstrated through public outreach at local farmers' markets and community events. The EV charging infrastructure and fleet electrification work in this project coordinates directly with Project 1: Clean Energy Initiative, which is upgrading the City Hall switchgear to support EV charging capacity. The pedestrian and bicycle improvements that make the Civic Center cluster more accessible without a car reinforce Project 4: Promoting Community Health designation of the Community Center and Library as community resilience centers — facilities that serve the whole community better when people can reach them safely on foot or by bike.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

[redacted] will provide overall project leadership and manage delivery across all four project components, overseeing consultant selection, inter-departmental coordination, budget management, and progress reporting throughout the grant term. [redacted], will lead engineering, design, and construction management for the pedestrian and bicycle infrastructure and active transportation planning components. [redacted] brings over 30 years of experience in public works and municipal infrastructure, including the Pedestrian Bridge, roadway rehabilitation, sidewalk and curb ramp upgrades, and water and wastewater utility improvements. As [redacted], he manages consultant selection, competitive bidding, construction management, and permit compliance, ensuring all phases meet regulatory, technical, and budgetary requirements.

Technical Advisory Services for capital components will be procured through competitive RFP. All consultant selections will comply with applicable procurement requirements. Public Information and Engagement will involve both consultant support and City staff time to ensure that residents, employees, commuters, and visitors are informed and engaged throughout the grant term.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- *Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.*
- *If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.*
- *Indicate "N/A" if the question is not applicable to the project*

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

A PG&E permit is required for the EV charging station installation at 150 East K Street. The City will submit this application promptly upon grant execution and expects to obtain it within the grant term. Street improvement work on First Street, curb ramp upgrades, and sidewalk repairs are conducted in the City's own right-of-way under

standard municipal encroachment permits issued in-house. Bridge and tunnel maintenance is on City-owned infrastructure and does not require external permits.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

The project is anticipated to qualify for Categorical Exemptions under CEQA as it consists of minor improvements within existing developed facilities and public rights of way including equipment installation, safety upgrades, and maintenance activities with no expansion of use. The City will complete project level review and file Notices of Exemption (NOEs) following award.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

N/A. The City owns or controls all project sites. EV charging stations are installed in the City's own parking facility. All street, bridge, tunnel, curb ramp, and sidewalk work is within the City's existing right-of-way. No property acquisition, easements, or third-party permissions are required.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Each department will submit reports and an annual review documenting costs, staff time, community feedback, and progress against grant milestones. Capital assets from Projects 1 and 2 — EV charging stations, EV vehicles, street markings, signal equipment, and bridge and tunnel repairs — are expected to remain in service for years past the grant term. Post-grant O&M for these assets will be funded through the General Fund, local gas tax, and Measure F funds.

Programmatic components are designed to become part of standard departmental operations. Fleet maintenance protocols developed under Project 4 will be incorporated into standard Public Works fleet management procedures. The active transportation planning work under Project 3 is structured to produce a pipeline of projects fundable through future state, federal, and county grants — so the planning investment continues to generate capital investment after the grant term ends. The fleet transition roadmap

will identify and pursue MTC, Air District, and California Clean Vehicle Rebate programs to fund the next round of vehicle replacements.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The primary near-term risk is PG&E permit timing for the EV charging installation. Submitting the application at grant execution maximizes lead time, and fleet vehicle procurement and planning work can proceed independently in the meantime. For First Street improvements, coordination with businesses and property owners along the corridor will be essential — the City will engage the Chamber of Commerce and affected businesses early and communicate construction schedules well in advance to minimize commercial disruption. The Pedestrian Scramble at Benicia High School requires signal retiming and equipment installation; the City will coordinate with the school district on scheduling to avoid conflicts with the academic calendar and major school events. For fleet maintenance, the challenge is consistent execution across a mixed fleet with varying maintenance histories; the City will develop a standardized tracking system as part of the transition plan to ensure no vehicles fall outside the maintenance schedule. These projects were selected through close collaboration across departments, public comment input, and City Council approval, building the institutional commitment needed for successful delivery.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for **each Project** during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	**Project 2: Clean Mobility Project** — Reduces transportation-related air pollution and promotes multimodal mobility through four coordinated sub-projects: City Fleet Transition & Charging Infrastructure, Pedestrian & Bicycle Infrastructure Repairs and Improvements, Active Transportation Planning & Capital Improvement Prioritization, and Legacy Fleet Repair, Maintenance & Transition Plan. Total Budget: $5,886,442.50 over 5 years.

Summary of Measurable Outcomes and Indicators

Sub-Project	Measurable Outcome	Indicator(s)
SP-1: City Fleet Transition & Charging Infrastructure ($1,999,220.50)	Install the City's first EV charging infrastructure at the Police Department/IT Building and deploy 2 zero-emission administrative vehicles.	• 2 Level-2 dual-port EV charging stations (4 ports) installed and operational at 150 East K Street • PG&E utility permit obtained within grant term • 2 EV administrative vehicles purchased and in service at the Police Department • Annual charging utilization report on file
SP-2: Pedestrian & Bicycle Infrastructure ($2,101,965.00)	Improve pedestrian and bicycle safety and accessibility across Benicia through targeted capital investments on First Street, at Benicia High School, on three bridge/tunnel structures, and on citywide curb ramps and sidewalks.	• 0.8 miles of First Street improved: bike lanes, high-visibility crosswalks, bulbouts, and ADA ramps • Pedestrian scramble installed at Military West/West 11th St/Denfield Ave • All 3 structures inspected and repaired: East 3rd Street Tunnel, Military West Pedestrian Bridge, Columbus Parkway Pedestrian/Bike Bridge • Curb ramps upgraded annually (≥$200,000/yr, coordinated with Pavement Rehabilitation) • Sidewalk repairs completed annually at SeeClickFix priority locations (≥$46,840/yr)
SP-3: Active Transportation Planning ($706,847.00)	Complete an updated Capital Improvement Plan and formal Bikeway Plan to build a prioritized pipeline of active transportation projects and position the City to compete for state and federal funding.	• Updated CIP adopted by City Council (target: Year 2) • Bikeway Plan completed with priority corridors and design standards (target: Year 3) • ≥1 state or federal active transportation grant application submitted (ATP, HSIP, or equivalent) • # projects advanced through preliminary engineering, design, or permitting by Year 5
SP-4: Legacy Fleet Maintenance & Transition ($1,078,410.00)	Maintain City fleet emissions compliance through structured annual preventive maintenance and develop a phased fleet electrification roadmap.	• Annual maintenance completed on all fleet vehicles; smog/emissions inspections passed • Maintenance logs on file; vehicle downtime tracked • Fleet electrification roadmap completed and presented to City Council (target: Year 2–3) • ≥1 clean fleet grant application submitted using roadmap

Detailed Milestones and Task Plan by Sub-Project

Sub-Project 1: City Fleet Transition & Charging Infrastructure — $1,999,220.50

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Install the City's first EV charging infrastructure at the Police Department/IT Building and deploy 2 zero-emission administrative vehicles.	A. Permitting, Procurement & Installation	1. Submit PG&E utility permit application at grant execution; complete electrical capacity assessment at 150 East K Street; identify any switchgear or service upgrade needs (coordinates with Project 1 switchgear upgrade)	Public Works	PG&E; City Facilities	Months 1–6
		2. Procure installation contractor via competitive bid; install 2 Level-2 dual-port charging stations with power-sharing technology; ensure ADA compliance and public accessibility	Public Works	Contractor; IT	Months 6–18
		3. Identify appropriate EV model for Police Dept. admin fleet; procure 2 EV vehicles via State purchasing agreement or competitive bid; confirm charging compatibility with installed stations	Public Works / Police Dept.	Fleet Management	Months 1–18
	B. Commissioning & Annual Tracking	1. Commission charging stations; document # ports operational and access protocols; post station information on City website and EV charging directories	Public Works / IT	N/A	Months 18–24
		2. Brief drivers on EV operation and charging protocols; track annual miles driven on EV fleet, fuel cost savings, and charging utilization; include in annual grant report	Public Works / Police Dept.	Fleet Management	Months 24–60 (annual)

Sub-Project 2: Pedestrian & Bicycle Infrastructure — $2,101,965.00

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Improve pedestrian and bicycle safety and accessibility through targeted capital investments on First Street, at Benicia High School, on three bridge/tunnel structures, and on citywide curb ramps and sidewalks.	A. First Street & High School Crossing (One-Time Capital)	1. Complete design for First Street corridor; notify businesses and Chamber ≥60 days before construction; obtain encroachment permits; install bike lane striping, high-visibility crosswalks, bulbout curb extensions, and ADA ramps	Public Works / City Engineer	Contractors; Benicia Chamber	Months 1–24
		2. Design Pedestrian Scramble signal at Military West/West 11th/Denfield; coordinate with Benicia Unified School District on school calendar timing; install signal controller updates, push-button stations, enhanced striping, and lighting	Public Works / City Engineer	School District; Signal Contractor	Months 1–24
		3. Conduct before/after pedestrian and cyclist counts on First Street; track accident rate at HS intersection; coordinate First Street markings protection with 2028 pavement rehabilitation	Public Works	Traffic Engineer	Months 24–60 (annual)
	B. Bridge/Tunnel Repairs & Annual Programs	1. Inspect all 3 structures; prioritize repairs by safety risk; complete repairs: graffiti abatement, lighting upgrades, pathway surface repairs, and drainage improvements at East 3rd Street Tunnel, Military West Pedestrian Bridge, and Columbus Parkway Bridge	Public Works / City Engineer	Contractors; Caltrans (coordination)	Months 1–36
		2. Upgrade curb ramps annually (target: ≥$200,000/yr) at ADA-deficient locations coordinated with Pavement Rehabilitation; ensure compliant slopes, detectable warning surfaces, and smooth transitions	Public Works	Contractors; ADA Coordinator	Annual (Months 12–60)
		3. Complete sidewalk repairs annually (target: ≥$46,840/yr) using SeeClickFix priority data and ADA Transition Plan; document # locations repaired and	Public Works	Contractors	Annual (Months 12–60)

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		SeeClickFix pedestrian hazard reports resolved			

Sub-Project 3: Active Transportation Planning — $706,847.00

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Complete an updated Capital Improvement Plan and formal Bikeway Plan that build a prioritized pipeline of active transportation projects.	A. Capital Improvement Plan Update	1. Inventory infrastructure conditions; assess pedestrian and bicycle network gaps using SeeClickFix data, ADA Transition Plan, and accident records; develop prioritization criteria weighting safety, equity, and ADA compliance	Public Works / City Engineer	All Departments; Community Input	Months 1–12
		2. Develop updated CIP with prioritized investment schedule, cost estimates, and project sequencing; adopt by City Council (target: Year 2); update annually	Public Works	City Engineer; Finance	Months 6–24; annual update
	B. Bikeway Plan, Grant Applications & Project Pipeline	1. Award consultant; map existing bikeway network and gaps; coordinate with Solano Transportation Authority on regional connections; develop Bikeway Plan with priority corridors, design standards, and documentation meeting ATP/HSIP/RAISE grant requirements; conduct ≥2 public engagement sessions	Public Works / City Engineer	Consultant; STA; Benicia Chamber	Months 6–36
		2. Adopt Bikeway Plan by City Council (target: Year 3); submit ≥1 state or federal active transportation grant application; advance ≥2 priority corridor projects through preliminary engineering and/or design/permitting	Public Works	City Engineer; STA	Months 36–60
		3. Assign ongoing transportation planning capacity to advance projects from CIP and Bikeway Plan through preliminary engineering; track # projects	City Engineer / Public Works	Consultants	Annual (Months 1–60)

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		in planning, design, and permitting; include in annual grant report			

Sub-Project 4: Legacy Fleet Maintenance & Transition — $1,078,410.00

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Maintain City fleet emissions compliance through structured annual preventive maintenance and develop a phased fleet electrification roadmap.	A. Annual Fleet Maintenance Program	1. Complete annual preventive maintenance on all City fleet vehicles (heavy-duty and light-duty): engine service, brake inspection, emissions-control system checks; ensure all applicable units pass required smog and emissions inspections	Public Works / Corp Yard	N/A	Annual (Months 1–60)
		2. Implement anti-idling policy citywide; track vehicle downtime and maintenance costs; report annual fleet emissions compliance status	Public Works	All Departments with Fleet	Annual (Months 1–60)
	B. Fleet Electrification Roadmap	1. Complete full fleet inventory: document vehicle ages, mileage, emissions profiles, and replacement timelines; identify applicable clean fleet programs (CARB, HVIP, IRA, DERA, MTC); align with NV5 electric fleet study	Public Works / Corp Yard	MTC; Air District; NV5	Months 6–18
		2. Develop phased fleet electrification roadmap with vehicle-level replacement timelines and technology recommendations; present to City Council (target: Year 2–3); post on Benicia Forward; submit ≥1 clean fleet grant application using roadmap	Public Works	City Manager's Office; MTC; Air District	Months 18–36

Project Name: Benicia Forward: A Catalyst for a Clean and Resilient Future
Lead Applicant Name: City of Benicia
Term for this budget (in years): 5

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Construction	Direct	2.2.c. Pedestrian Bridge and Tunnel Improvements	Benicia City staffing costs $29,709 per year over a 5 year period	$148,545.00
Personnel/Staff Costs	Direct	2.4. Legacy Fleet Repair, Maintenance, Upgrades, and Transition Plan	Benicia City staffing costs $175,838 per year over a 5 year period	$879,190.00
Personnel/Staff Costs	Direct	2.3.b. Capital Improvement Prioritization	Benicia City staffing costs $345,842 per year over a 5 year period	$345,842.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	2.1.b. City Fleet Transition and Charging Infrastructure — Installation of EV Charging Stations	One time cost for a subcontrator to install EV Charging Stations and corresponding electrical work	$1,600,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	2.1.a. City Fleet Transition and Charging Infrastructure — Police Department Electric Vehicle Acquisition (2 Vehicles)	One time cost to acquire and outfit two electric vehicles (Ford Bronco or similar x $100k each)	$200,000.00
Construction	Direct	2.2.a. First Street Bikeway Improvements	One time cost for Benicia City staff to plan, design, and cosntruct	$220,000.00
Construction	Direct	2.2.e. Sidewalk Reapir and Improvements	$46,840 per year over a 5 year period for sidewalk improvements completed by Benicia City Staff	$234,200.00
Construction	Direct	2.2.b. Benicia High School Pedestrian Crossing Upgrades	One time cost for Benicia City staff to plan, design, and cosntruct	$300,000.00
Personnel/Staff Costs	Direct	2.3.a. Transportation Planning and Design (Bike Ped Plan)	Ongoing costs for internal transportation design and planning by city staff $32,357 per year over a 5 year period	$161,785.00
Construction	Direct	2.2.d. Curb Ramp Upgrades	Ongoing costs for internal design, planning and implementation by city staff $200,000 per year over a 5 year period	$1,000,000.00
Personnel/Staff Costs	Direct	2.0. Project Manager	25% FTE x $242,874 annual salary and fringe benefits x 5 years	$303,592.50
Personnel/Staff Costs	Direct	2.0. Grant Manager	25% FTE x $244,512 annual salary and fringe benefits x 5 years	$305,640.00
Personnel/Staff Costs	Direct	2.0. Analyst	25% FTE x $130,118 annual salary and fringe benefits x 5 years	$162,647.50
Community Engagement	Direct	2.0. Community Outreach	Planning and materials	$25,000.50

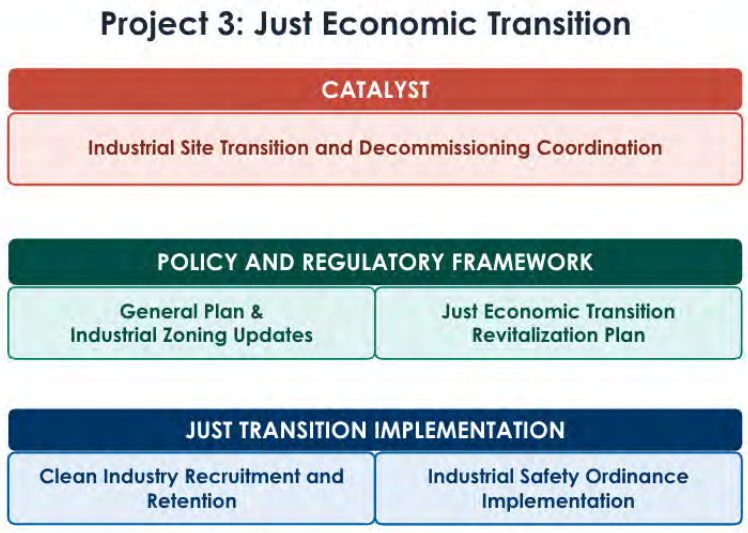
Project Narrative

Instructions:



- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Benicia Forward: A Catalyst for a Clean and Resilient Future
Lead Applicant Name	City of Benicia
Project Location	Benicia, CA
Overall Funding Request	40,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Just Economic Transition
Project Lead	City of Benicia
Project Location	City of Benicia, CA
Project Funding Request	$11,430,924.50

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Project 3 is the City of Benicia's Just Economic Transition. The Valero refinery closure is the single most consequential economic event Benicia has faced in a generation. It will eliminate well-paying industrial jobs, reshape the tax base, and leave behind a large, contaminated waterfront site whose future use will define the character of the Benicia Industrial Park for decades. The City's General Plan is from 1999, and its industrial zoning is from 1987 — neither was built for a transition of this scale, nor does it provide the tools to attract and re-regulate the type of residential, commercial, and industrial development aligned with the community's vision.

The **Just Economic Transition** Project is the City's structured response. It funds five lines of work that will run in parallel. Valero's closure is the catalyst event that necessitates Sub-Project 1 The catalyst event of Valero Industrial Site Transition and Decommissioning Coordination. Sub-Project 2: comprehensive General Plan and Industrial Zoning Updates and Sub-Project 3: Just Economic Transition Revitalization Plan together set the policy and regulatory framework for the City to realize a just transition. To implement the just transition, City Staff will work on Sub-Project 4: Clean Industry Recruitment and Retention and Sub-Project 5: Industrial Safety Ordinance Implementation initiative. While the General Plan will cover the entire city, the other projects cover the Port of Benicia, the Valero Refinery site, and the remaining Benicia Industrial Park — roughly 35 to 40 percent of the city's land area that requires transition planning, cleanup coordination, and modernized land use rules.

Given the unknown impacts of the refinery closure, timing and sequencing matter. The General Plan and Zoning update must happen early enough to shape what comes next, before reuse decisions are made, by enforcing new proactive policies and zoning. Decommissioning coordination must run in parallel because the regulatory agencies and the landowner will not wait for the City to catch up. Business attraction must start before vacancy accumulates, because empty industrial space is harder to fill the longer it sits. The Industrial Safety Ordinance (ISO) program runs throughout, because residents in the neighborhood closest to the refinery

are still being exposed to industrial hazards while all of this plays out. The $11,430,924.50 requested for Project 3 funds the staffing, planning, and technical capacity to run these tracks simultaneously.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

The five sub-projects operate at different levels of the transition, but they all work toward both project strategies - "Reduce air pollution and improve health outcomes" and "Build economic resilience for a just transition". The ISO program is the most immediate: residents in the census tracts closest to the refinery are still being exposed to industrial hazards today, and that requires active enforcement and community notification regardless of where the longer-term transition stands. The ISO implementation is addressing current public health and air quality risks to residents and workers. The Clean industry recruitment works at the market level, proactively filling the pipeline with industries such as battery manufacturers, green energy businesses, and port-related logistics companies before vacated sites get back filled by toxic and high-emission legacy uses. These recruitment efforts will reduce air pollution, which will improve public health and improve the city's fiscal sustainability, and provide residents with opportunities to obtain high-road advanced manufacturing jobs that move away from the fossil-fuel-based economy. The decommissioning coordination keeps the City present and organized in a process that would otherwise move forward without community input on important factors that ensure clean-up agreements and processes will adequately protect public health during the remediation process and post-development. The Just Economic Transition Revitalization Plan gives the community an opportunity to envision a clean industrial future, which provides the city with a road map towards both strategies (cleaner air and economic resilience). The General Plan and Industrial Zoning updates set the policy foundation for the whole city that will seek to create a policy framework that protects and enhances improved air quality and public health equity, not only through cleaner industrial operations but also integrated throughout land use, transportation, open space, and building requirements.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Sub-Project 1: Industrial Site Transition and Decommissioning Coordination: Valero Benicia Refinery site and Benicia Industrial Park waterfront.

Sub-Project 2: General Plan and Industrial Zoning Update: Citywide policy work, with a primary focus on the Port of Benicia, Valero refinery site, Benicia Industrial Park, and neighborhoods affected by industrial emissions and land use decisions.

Sub-Project 3: Just Economic Transition Revitalization Plan: Port of Benicia, Valero Benicia Refinery site, and the remaining Benicia Industrial Park; citywide worker and community engagement at accessible City and community locations.

Sub-Project 4: Industrial Safety Ordinance Implementation: Active industrial facilities citywide, with a primary focus on the refinery site and industrial park.

Sub-Project 5: Clean Industry Recruitment and Retention: Port of Benicia, Valero Benicia Refinery site, and the rest of the Benicia Industrial Park.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The decisions being made through the General Plan update, the decommissioning pathway, and the revitalization plan will directly affect what Benicia's industrial waterfront becomes — what gets built there, who owns it, who works there, and what the air quality looks like for the neighborhoods that border it. Those are not technical planning questions with predetermined answers. They require sustained input from residents, workers, business owners, and the organizations that serve them.

The City has already begun this process.

- City Council and Commission Meetings—Since December 2025, the City Council has held two sessions to develop project concepts and prioritize the ones included in this grant application.

- Industrial Safety Citizen Oversight Commission—Established the framework in 2025 and has continued to meet quarterly since its adoption last summer. The Commission will continue to meet to oversee the ISO implementation program.
- Hearing from industrial ancillary businesses affected by the Valero closure at the monthly Benicia Industrial Park Association (BIPA) and regular coordination with the Benicia Chamber of Commerce
- City Council engagement related to the Valero closure and transition planning, including the formation of councilmember-led City Task Forces for economic impact, community funding, Benicia Industrial Park collaboration, and land redevelopment since May 2025
- Coordination with the Solano Workforce Development Board and Solano Economic Development Corporation to understand the impact of refinery closure on affected workers and ancillary businesses
- City-funded preliminary assessment and related outreach to Benicia stakeholders to better understand the impact of the refinery closure on Benicia and options for reuse and redevelopment in alignment with the council's sustainability goals. This assessment builds on the City's participation in the countywide Priority Production Area planning process, which is funded through the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG).

Public engagement to date has surfaced specific concerns: residents near the industrial corridor reported uncertainty about what the refinery closure means for their neighborhood, worry about the pace of site remediation, and questions about whether the jobs that replace refinery employment will be accessible to workers without four-year degrees. Business owners in and adjacent to the Industrial Park raised concerns about vacancy and access to infrastructure. These inputs directly shaped the scope of this project. While community members are happy about the air quality improvements expected after the closure, they are very concerned with the City's ability to sustain existing levels of city programs and services due to significant revenue loss. Benicia CBOs also received donations from Valero to sustain their operations, and those philanthropic contributions will now stop, causing concern that beloved CBOs in the community may also have to cut programs and services.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

<u>Sub-Project 1: Industrial Site Transition and Decommissioning Coordination</u>

The refinery site's decommissioning is a multi-agency, multi-year process involving DTSC, the Regional Water Board, BCDC, the Air District, and multiple landowners. If the City is not actively coordinating, that process moves forward without local community input on factors that directly affect employment, health and quality of life. The City's role is coordinator and community

advocate: building an interagency framework, executing coordination agreements with applicable state and federal agencies, conducting coordination meetings per year with documented action logs, supporting affected supplier and contractor businesses, and crafting a Transition Infrastructure Funding Strategy covering water, wastewater, broadband, clean energy, and clean goods movement needs by Q2 2028. Discussions at City Council and at public engagement sessions will keep residents informed of cleanup timelines and air quality conditions during decommissioning and provide opportunities for residents to collaboratively work with staff on the clean-up approach and process.

Sub-Project 2: General Plan and Industrial Zoning Update

Benicia's current General Plan dates to 1999; its industrial zoning code dates to 1987. Neither was written to manage a full refinery closure or guide the reuse of a contaminated waterfront site in a post-fossil-fuel economic landscape. They do not reflect this generation of the community's priorities for redevelopment of the legacy industrial parts of the City. The update funded through this project will replace both with a community-led framework for the Industrial Park, recognizing the impact new uses will have on surrounding neighborhoods. New Decarbonization and Environmental Justice Elements will establish binding policy goals — including a documented 2026 NOx/PM2.5 baseline and a numeric reduction target — for the land use decisions that will govern the Industrial Park for decades. Updated land use, economic development, circulation, noise, parks and open space, and safety elements will create the framework for attracting clean industries and ensuring new development supports community health equity. The process includes public engagement at five or more stages, existing conditions analysis, administrative and public review drafts, and full CEQA review, with adoption targeted for Q1 2031.

Sub-Project 3: Just Economic Transition Revitalization Plan

The revitalization plan is where the economic transition becomes concrete for workers and families. It will produce a City-adopted roadmap developed with impacted industrial workers, ancillary local businesses, and frontline community members, including at least six community engagement events, at least five economic transition strategies, an implementation-ready project list with at least one physical and one social infrastructure project, and at least three workforce pathway MOU with the Solano County Workforce Development Board, targeted for adoption by Q1 2029. The plan will also include an inventory documenting the social determinants of work such as childcare gaps, retraining capacity, income support needs, transportation barriers, broadband and technology access, and language access barriers for workers and families affected by refinery and legacy industry closures. This plan is most intended to serve people in refinery-adjacent neighborhoods who have lived with the pollution, and the workers who need real options in whatever comes next.

Sub-Project 4: Industrial Safety Ordinance (ISO) Program Implementation

Census tracts 6095252102 and 6095252107 — home to approximately 7,600 residents and immediately adjacent to the refinery — rank between the 85th and 95th percentile statewide for

hazardous waste and cleanup site contamination. The ISO program is the City's primary tool for requiring industrial facilities to prevent accidental releases, maintain safety plans, and report to the community in real time. This program will be maintained and strengthened throughout the closure period, including independent air monitoring during industrial events, public notification and shelter-in-place guidance, and support for the ISO Oversight Commission.

Sub-Project 5: Clean Industry Recruitment and Retention

The Industrial Park's future tenants could include businesses in battery manufacturing, shipbuilding, green energy manufacturing, transportation and warehousing, and port-related logistics. The Economic Development Manager will spend approximately 90% of her program time on Industrial Park transition — recruiting clean industries, supporting businesses affected by the closure, and building relationships with site owners, Port operators, and regional economic development partners, including Solano EDC, GO-Biz, and CAEATFA. By the end of the grant term, the City will attract, retain, or expand at least 15 clean-sector businesses and create or retain at least 200 jobs. City-assisted positions will be required to offer prevailing wages, with at least 40 percent of influenced jobs targeted to priority populations and at least 25 percent accessible to workers from fossil-fuel-dependent industries. The priority is getting the right tenants that provide quality jobs for residents, especially displaced workers.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

The decisions being made through this project — what gets built on the refinery site, what the General Plan says about future industrial uses, which businesses the City actively recruits — will be easier to get right if the people most affected engage and partner with the City throughout the process. That means making a complicated regulatory and planning process legible to residents who are not specialists, and going to where people are rather than waiting for them to show up at City Hall.

Citywide information sharing: The City will establish and maintain a dedicated project webpage providing plain-language updates on General Plan milestones, decommissioning coordination status, ISO enforcement actions, and economic development progress, updated at least quarterly. The City will provide progress briefings to the City Council in open session at key project milestones.

Process engagement opportunities:

- Decommissioning: At least two decommissioning public engagement sessions per year; Targeted outreach to refinery workers and their families through partnerships with the Building Trades Council, the Solano County Workforce Development Board, and

community-based organizations. The City will also coordinate with Solano County and regional agencies — San Francisco Bay Conservation and Development Commission (BCDC), Department of Toxic Substances Control (DTSC), the Regional Water Board — whose decisions on site cleanup and permitting will shape the landscape for community engagement on reuse.

- General Plan and Industrial Zoning Updates: At least five General Plan and zoning engagement phases (scoping, existing conditions, draft elements, public review, and adoption). In addition to interactive community workshops, the General plan engagement will be robust to ensure we're reaching "hard to reach" populations by partnering with trusted CBOs and community leaders. Additional activities may include focus groups, stakeholder interviews, a General Plan Advisory Committee, pop up workshops/public event booths, mobile workshops, and capacity building / speaker series for both staff and residents. There may be additional targeted engagement with disadvantaged communities to inform the Environmental Justice and Decarbonization Elements.
- Just Transition Economic Revitalization Plan: At least six Just Transition workshops or events, with feedback collected from industrial workers and frontline community members at a minimum of three points during plan development. This sub-project will convene a Just Economic Transition Plan Advisory Group which may be comprised of industrial workers, Valero-adjacent residents, CBOs, the Benicia Industrial Park Association, Port of Benicia, and the Benicia Chamber of Commerce; County Public Health; County Environmental Health; STA; Solano WDB; Solano EDC; and other relevant community leaders and stakeholders as needed.
- Industrial Safety Ordinance Implementation. At least one ISO community safety confidence survey during the grant period; regular ISO Commission meetings; and an Annual Economic Development Report presented to City Council. Participation will be tracked by census tract or neighborhood and voluntary demographic categories. If outreach is not reaching affected workers, pollution-burdened neighborhoods, older adults, or multilingual households, the City will adjust its methods.

Feedback gathered through these processes will be documented and reported to the *Community Sustainability Commission, Planning Commission, Economic Development Board, Industrial Safety Ordinance Citizen Oversight Commission,* and *City Council*. Where community input shapes a decision — a land use policy, a priority in the work plan, a change to the engagement process itself — the City will say so publicly, in plain language.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Four outcomes define success for this project: the Industrial Park stays economically active during the transition; the City's land use policy is updated in time to shape what comes next; the refinery site's decommissioning follows a structured, public process; and the ISO program keeps protecting residents throughout. Below is a summary of each subproject's outcomes,

indicators, and key partners. Full milestone and task detail is in the companion Measurable Outcomes Plan.

Sub-Project 1: Industrial Site Decommissioning and Transition — $3,232,721.10
The City will build the regulatory, technical, and public information capacity needed to manage safe decommissioning and site transition. Key partners include Air District, Water Quality Control Board, DTSC, the Port of Benicia, affected property owners, Solano Economic Development Corporation (EDC), and the Benicia Chamber of Commerce.
By Q2 2028: Transition Infrastructure Funding Strategy completed, covering water, wastewater, broadband, clean energy, and clean goods movement needs.
By Q3 2028: At least four state and federal agency MOUs or coordination agreements executed; at least 10 interagency coordination meetings per year with documented action logs.
Ongoing: Semiannual public engagement sessions; annual public reports on decommissioning status and air quality.

Sub-Project 2: General Plan and Industrial Zoning Updates — $5,044,624.10
The City will replace outdated land use and industrial zoning policy with a planning framework built around the community's vision for the post-refinery era. Key partners include BAAQMD, community partners, consultants, the Planning Commission, and City Council.
By Q1 2031: City Council adopts updated General Plan including a voluntary Environmental Justice Element with at least five enforceable. Environmental Justice policies, and a Decarbonization standard with a documented 2026 NOx/PM2.5 baseline and numeric reduction target. Conforming Industrial Zoning Code adopted by ordinance.
Process milestones: Contract and engagement strategy at 9–12 months; existing conditions reports at 18 months; administrative drafts at 2 years; public review drafts at 2.5 years; CEQA scoping at 2 years; draft EIR at 3 years; final EIR and adoption hearings at 4 years.

Sub-Project 3: Just Transition Revitalization Plan — $1,032,322.10
The City will develop a concrete, adoptable plan for economic diversification, worker transition, and community reinvestment. Key partners include the Solano County Workforce Development Board (SCWDB), Solano Community College District, California Employment Development Department (EDD), Building Trades Council, Benicia Chamber of Commerce, and Benicia Industrial Park Association.
By Q1 2029: City Council adopts Just Transition Revitalization Plan with at least five economic transition strategies, an implementation-ready project list (including at least one physical and one social infrastructure project), and at least three workforce pathway MOUs with SCWDB.
By Q1 2029: Social infrastructure needs inventory completed, documenting childcare, retraining, income support, transportation, and language access barriers for workers and families affected by refinery closure.

Subproject 4: Industrial Safety Ordinance Implementation — $961,551.10
The City will strengthen industrial oversight and transparency through active ISO program implementation. The Fire Department leads, supported by the City Attorney, as needed.
By Q1 2028: Public information bank launched.

Ongoing annually: ISO facility inspections and Risk Management Plan reviews completed; compliance status published in plain language; at least one emergency preparedness drill held per year.

Subproject 5: Clean Industry Recruitment and Retention — $1,159,706.10
The City will proactively recruit and retain clean-economy businesses before vacated refinery-adjacent sites are backfilled by high-emission legacy industries. Key partners include Solano EDC, GO-Biz, California Alternative Energy and Advanced Transportation Financing Authority (CAEATFA), SCWDB, the Building Trades Council, Port of Benicia, and the Benicia Industrial Park Association.
By the end of the grant term: At least 15 clean-sector businesses are attracted, retained, or expanded; at least 200 jobs are created or retained.
Job quality standards: City-assisted positions offer prevailing wages; at least 40 percent of influenced jobs are targeted to priority populations; and at least 25 percent are accessible to workers from fossil-fuel-dependent industries.
By Q1 2030: Consolidated Transition Infrastructure Investment Roadmap completed. Site readiness assessments completed for at least three priority Industrial Park parcels.
Ongoing: At least 25 business outreach engagements or site visits conducted per year; annual Economic Development Report presented to City Council; job quality tracked at 6, 12, and 24 months.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The total project budget of $11,430,924.50 reflects a mix of one-time and ongoing costs. The General Plan and Industrial Zoning update ($5,044,624.10) is the highest single cost, reflecting the scope of consultant support, technical studies, CEQA, and public engagement, and adoption materials required for a comprehensive update. Decommissioning and transition coordination ($3,232,721.10) funds the Fire Department's air quality oversight role, interagency coordination, regulatory support, and public engagement. The Just Transition Revitalization Plan ($1,032,322.10) covers economic and workforce analysis, Advisory Group support, workshops, interpretation, drafting the roadmap, and the social infrastructure inventory. ISO implementation ($961,551.10) funds program coordination, inspection support, the bilingual public portal, and preparedness exercises. Clean industry recruitment and retention ($1,159,706.10) funds business attraction, sector analysis, site readiness assessments, marketing, job quality tracking, and support for accessing grants and other. All consultant and technical advisory services will be procured through the City's competitive RFP process.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The General Plan update funded through this project will extend and replace the City's 2016 Climate Action Plan, embedding climate and decarbonization commitments directly into the General Plan rather than treating them as a separate document that guides development review. The new (voluntary) Decarbonization Element will establish a 2026 NOx/PM2.5 baseline and adopt a numeric reduction target, translating climate goals into enforceable land use standards. The (voluntary) Environmental Justice Element will align the General Plan with the principles and goals of AB 617 (Community Air Protection Program), reflecting the Air District's own monitoring and enforcement work in Benicia, building on the City's longstanding commitment to environmental sustainability, air quality, and clean energy, and creating a durable local policy framework for reducing cumulative pollution burdens in the most affected census tracts.

The industrial zoning update builds on the City's designation of the Benicia Industrial Park as a Priority Production Area under the MTC/ABAG regional framework, a designation that supports industrial retention and is directly relevant to the clean industry recruitment work in this project. The decommissioning coordination work connects to DTSC's Cortese List process, the Regional Water Board's site remediation oversight, and Coordination with BCDC related to the Port of Benicia and shoreline infrastructure. The City's coordination role is designed to ensure that local land use decisions are made in alignment with — and in time to influence — those regulatory processes rather than reacting to them after the fact.

The workforce and economic development components coordinate with the Solano County Workforce Development Board, Solano Community College District, California EDD, GO-Biz, CAEATFA, and the Building Trades Council on retraining pathways, employer needs, and clean-sector business attraction. The project also coordinates with the Solano Transportation Authority on Industrial Park access improvements and waterway navigation and pursues complementary mobility investments through Project 2 that will improve freight and commute connectivity to the area. These are not parallel tracks — the regional workforce systems, regulatory agencies, and economic development partners that Project 3 engages are the same ones whose decisions will determine whether Benicia's transition produces durable results.

This project also aligns with the statewide Green Empowerment Zone framework, which provides additional policy tools for communities managing industrial transitions. The City will pursue Green Empowerment Zone designation as part of the General Plan update process, coordinating with Air District and CalEPA to maximize the regulatory and funding advantages available to Benicia during the transition period.

Project 3 does not stand alone. The General Plan update creates the land use framework that makes the clean energy, mobility, and community health investments in Projects 1, 2, and 4 coherent and durable — ensuring that new development near the refinery site is compatible with the air quality, resilience, and equity goals those projects pursue. Conversely, the visible community investments in Projects 1, 2, and 4 build the civic trust and institutional credibility that

makes Project 3's harder planning and regulatory work politically sustainable over a multi-year grant term.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

This project will be led by [redacted], who has more than twenty years of local government experience focused on land use policy, planning, and project delivery. [redacted] joined [redacted] in 2014. She led the designation of the Industrial Park as a Priority Production Area, oversaw the adoption of Benicia's 2023–2031 Housing Element — a state-mandated process completed on schedule — and has managed [redacted] land use and permitting modernization. Multi-year planning processes involving public engagement, CEQA, and City Council adoption are the core of her professional background.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

This project is not dependent on a [redacted]. It uses [redacted] established operating departments and governance structure to assign each subproject to the team with legal authority and technical expertise. [redacted] will provide overall project leadership and interagency coordination. Planning will lead the General Plan, zoning, CEQA, site readiness, and land use components. The City Manager's Office will coordinate the overall transition strategy, public reporting, Advisory Committee work, and policy issues requiring Council direction. Economic Development will lead to clean industry recruitment, business retention, workforce coordination, partner MOUs, and job quality tracking. Fire will lead to ISO implementation, industrial safety oversight, preparedness drills, and air quality oversight during decommissioning. Public Works will support infrastructure needs assessments and financing strategies. Finance and the City Attorney will handle grant accounting, procurement, contracting, and legal and risk management.

Consultant services will be procured through a competitive RFP for the General Plan update, Just Transition Revitalization Plan, and technical support for decommissioning coordination. The City has worked with planning and environmental consultants on prior projects and is prepared to initiate procurement within the first six months of the grant term. Additional resources will be leveraged through partner agencies: SCWDB, Solano Community College District, EDD, Solano EDC, GO-Biz, CAEATFA, the Building Trades Council, the Port of Benicia, BAAQMD, CalEPA, and DTSC.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- *Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.*
- *If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.*
- *Indicate "N/A" if the question is not applicable to the project*

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

This project is primarily planning, coordination, program administration, and economic development work. It is ready to begin upon execution of the Grant Agreement. The City can initiate procurement, consultant scoping, interdepartmental coordination, partner outreach, public engagement planning, and workplan development immediately using existing municipal authority. City Council approval will be required for consultant contracts, budget appropriations, plan adoption, zoning adoption, and any MOUs requiring Council authorization, and the City will obtain those approvals through its standard public meeting process. Future physical infrastructure or redevelopment projects identified through this grant will obtain required permits at the time those projects are advanced.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

The General Plan and Industrial Zoning update will require CEQA review, expected to include an Environmental Impact Report with scoping, technical studies, air quality and health risk analysis, public review, and City Council certification. CEQA work is built into the project scope, budget, schedule, and staffing plan, with environmental review beginning during the General Plan process and adoption targeted by Q1 2031. The Planning Division, City Attorney, and consultant team will manage CEQA compliance through the City's standard public review procedures.

The other components of this project — interagency coordination, workforce planning, economic development strategy, public engagement, dashboards, annual reports, business outreach, and ISO program administration — are programmatic and administrative and generally do not authorize physical changes to the environment. If any activity later advances a specific physical improvement, redevelopment action, or site-specific reuse decision, the City will conduct project-level CEQA review or document the applicable exemption before approval. This phased approach allows the grant to begin promptly while preserving full environmental review for the

actions that require it.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

No property acquisition is required to begin this project. City Hall and other City-controlled facilities support project management, public meetings, Council hearings, and stakeholder coordination. For activities involving the refinery, Port, or Industrial Park — privately held property — the City will establish coordination protocols, owner contact lists, data-sharing procedures, permitting roadmaps, and written permissions for site visits, site readiness assessments, or decommissioning coordination, as appropriate. The City's role in this project is oversight, coordination, and public accountability.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

This Project does not fund physical infrastructure. Its ongoing obligations after the grant term are primarily program administration, data systems, public dashboards, the ISO risk portal, annual reporting, and continued partner coordination. The General Plan and industrial zoning, once adopted, become the City's governing land use policy maintained through its regular planning operations. The updated policy framework will also allow the City to invest in key priorities to facilitate the decommissioning process. The ISO program is a standing municipal program funded through the operating budget. Economic development staffing will be sustained through the City's general fund and successor grant opportunities.

The project also builds the financing strategies needed for future infrastructure implementation. The Transition Infrastructure Funding Strategy, Physical Infrastructure Financing Strategy, and consolidated Transition Infrastructure Investment Roadmap will identify state and federal grants, public financing tools, lead entities, and estimated project costs — ensuring that the planning funded through Bay REPAIR produces implementation pathways that can be financed and maintained beyond the grant period.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The most significant risk is the pace of the refinery's decommissioning, which is controlled by the landowner and the regulatory agencies — not the City. The City cannot dictate when the Regional Water Quality Control Board or any other agency completes their review or when the

landowner moves through key decisions. What the City can do is arrive at that process with its General Plan update underway, technical capacity built in-house to engage effectively, its public information systems running, and its agency relationships already established — so that when decisions get made about what happens to the site, the City is in the room with a position rather than catching up from behind. If site access or data-sharing is delayed, publicly available regulatory records, formal agency coordination agreements, and phased workplans will keep the project moving.

Economic and workforce risks are also real. Clean-sector businesses may not locate in Benicia without infrastructure certainty and investment; workers may face childcare, transportation, or retraining barriers; and community members may be skeptical if transition planning does not produce visible results. The City's response to each: business attraction is tied to site readiness assessments and the infrastructure financing strategy; City-assisted positions must offer prevailing wages and benefits; training pathways are coordinated through SCWDB and Solano Community College; the social infrastructure needs assessment inventories childcare, transportation, and language access barriers; and dashboards and annual reports show progress or explain delays clearly. Staffing risks will be managed through consultant support, a central City Manager's Office coordination function, and City Council oversight at each major decision point.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for **each Project** during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	**Project 3: Just Economic Transition** — Transforms the Valero refinery closure from a fiscal and community crisis into a foundation for a cleaner, more equitable, and economically resilient city through five coordinated sub-projects: Industrial Site Decommissioning & Transition Coordination, General Plan & Industrial Zoning Update, Just Transition Revitalization Plan, Industrial Safety Ordinance (ISO) Implementation, and Clean Industry Recruitment & Retention. Total Budget: $11,430,924.50 over 5 years.

Summary of Measurable Outcomes and Indicators

Sub-Project	Measurable Outcome	Indicator(s)
SP-1: Industrial Site Decommissioning & Transition Coordination ($3,272,565.75)	Build the regulatory, technical, and public engagement capacity to manage safe Valero refinery decommissioning and develop a transition infrastructure funding strategy.	• ≥4 state/federal agency MOUs or coordination agreements executed (BAAQMD, CalEPA, SWQCB, DTSC) • ≥10 interagency coordination meetings held per year; action logs maintained • Transition Infrastructure Funding Strategy completed and presented to City Council (target: Q2 2028) • ≥2 public engagement sessions held per year; annual public report published in English and Spanish • Port-Valero property owner coordination protocol established; quarterly meetings documented
SP-2: General Plan & Industrial Zoning Update ($5,084,468.00)	Adopt an updated General Plan and Industrial Zoning Code by Q1 2031 with an Environmental Justice Element and Industrial Decarbonization standard governing future Industrial Park development.	• General Plan adopted by Q1 2031; EJ Element includes ≥5 enforceable policies; Decarbonization standard with 2026 NOx/PM2.5 baseline and numeric reduction target • Conforming Industrial Zoning Code adopted by ordinance • ≥5 structured community engagement phases conducted; post-engagement surveys at each major milestone • CEQA completed; Final EIR certified by Q4 2030
SP-3: Just Transition Revitalization Plan ($1,072,166.00)	Adopt a Just Transition Revitalization Plan by Q1 2029 with workforce pathways, a social infrastructure needs inventory, and an implementation tracking dashboard.	• Plan adopted by City Council (target: Q1 2029) with ≥5 economic transition strategies and ≥3 SCWDB workforce pathway MOUs • Social infrastructure needs inventory completed (target: Q4 2027) documenting childcare, retraining, income support, and language access barriers • ≥6 community workshops held; ≥50% of participants from impacted workers and frontline communities • Implementation tracking dashboard operational by Q3 2029

Sub-Project	Measurable Outcome	Indicator(s)
SP-4: ISO Implementation ($1,001,395.00)	Strengthen industrial safety oversight and ensure residents have timely, accurate information about industrial incidents and air quality conditions through active ISO program management.	• Annual facility reports received and reviewed; inspections and audits conducted following Level 2 and Level 3 incidents • ISO Citizen Oversight Commission meetings held; public hearings facilitated • Incident reports and notifications published to Public Information Bank • Annual ISO performance report produced and presented to City Council
SP-5: Clean Industry Recruitment & Retention ($1,199,550.00)	Attract, retain, or expand ≥15 clean-sector businesses and ≥200 jobs at prevailing wages by Q1 2031 and complete a consolidated Transition Infrastructure Investment Roadmap by Q1 2030.	• ≥15 businesses in target low-emission sectors attracted, retained, or expanded by Q1 2031 • ≥200 jobs created or retained at prevailing wages • ≥25 business outreach engagements or site visits conducted per year • Consolidated Transition Infrastructure Investment Roadmap completed (target: Q1 2030) • Annual Economic Development Report presented to City Council

Detailed Milestones and Task Plan by Sub-Project

Sub-Project 1: Industrial Site Decommissioning & Transition Coordination — $3,272,565.75

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Build the regulatory, technical, and public engagement capacity to manage safe Valero refinery decommissioning and develop a transition infrastructure funding strategy.	A. Agency Relationships & Coordination Framework	1. Map all state and federal agency roles in the Valero decommissioning process (BAAQMD, CalEPA, SWQCB, DTSC, EPA); brief City Council and Fire Chief; initiate formal relationships and draft coordination MOUs covering data-sharing, notification protocols, and joint inspection access	City Manager's Office	Fire Chief; City Attorney; BAAQMD; CalEPA	Months 1–18
		2. Establish Port-Valero property owner coordination protocol: identify key contacts, document ownership for all affected parcels, schedule quarterly coordination meetings, log barriers to site transition	City Manager's Office	Development Services; City Attorney	Q3 2027; quarterly ongoing

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		3. Conduct ≥10 interagency coordination meetings per year; maintain action log; circulate to all parties within 5 business days of each meeting	City Manager's Office	Fire Dept.; Development Services; BAAQMD	Q4 2027–Q1 2031 (ongoing)
	B. Transition Infrastructure Funding Strategy & Public Engagement	1. Inventory physical infrastructure needs across transition zones (water/wastewater, broadband, clean energy, port electrification, zero-emission freight); map applicable federal/state programs and local financing tools; present Transition Infrastructure Funding Strategy to City Council by Q2 2028	Economic Development	Public Works; Port of Benicia; GO-Biz; Solano EDC	Q2 2028
		2. Develop plain-language Q&A materials in English and Spanish; conduct ≥2 public engagement sessions per year on cleanup status, air quality, and site timeline; collect written feedback; publish annual public report on decommissioning status	City Manager's Office	Fire Dept.; Planning; Community Partners	Q4 2027; annual through Q1 2031

Sub-Project 2: General Plan & Industrial Zoning Update — $5,084,468.00

Outcome #	Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
2	Adopt an updated General Plan and Industrial Zoning Code by Q1 2031 with an Environmental Justice Element and Industrial Decarbonization standard.	A. Community Visioning & Existing Conditions	1. Award consultant; conduct community visioning process; prepare existing conditions report documenting gap between 1999 GP/1987 zoning and current conditions; establish 2026 NOx/PM2.5 baseline; confirm five priority elements with City Council	Planning Division	City Manager's Office; BAAQMD; Consultant	Q4 2027–Q3 2028
			2. Conduct ≥5 structured engagement phases (scoping, existing conditions,	Planning Division	City Manager's Office; Benicia	Q1 2028–

Outcome #	Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
			draft elements, public review, adoption); provide Spanish interpretation and childcare; collect post-engagement surveys at each milestone; publish results in plain language		CBOs; Consultant	Q1 2031
		B. Plan Drafting, CEQA & Adoption	1. Prepare administrative draft General Plan with EJ Element (≥5 enforceable policies) and Decarbonization standard (2026 baseline, numeric target); draft Industrial Zoning Code; release for 45-day public review; prepare responses to comments; revise	Planning Division	Consultant; BAAQMD; City Departments	Q1 2029–Q3 2029
			2. Initiate CEQA: prepare Draft EIR with air quality health risk assessment; 45-day public review; certify Final EIR at Planning Commission; conduct City Council adoption hearings; file required state notices; publish adopted documents in English and Spanish by Q1 2031	Planning Division	Consultant; City Attorney	Q1 2029–Q1 2031

Sub-Project 3: Just Transition Revitalization Plan — $1,072,166.00

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Adopt a Just Transition Revitalization Plan by Q1 2029 with workforce pathways, a social infrastructure needs inventory, and an implementation tracking dashboard.	A. Advisory Group, Needs Assessment & Community Engagement	1. Convene Just Economic Transition Advisory Group; award consultant; complete social infrastructure needs inventory (childcare gaps, retraining capacity, income support, transportation access, language barriers); map applicable federal/state funding programs for each identified need	City Manager's Office	SCWDB; Solano College; EDD; Building Trades; Benicia CBOs	Q2 2027–Q1 2028
		2. Conduct ≥6 community workshops at multiple locations; target ≥50% of par-	City Manager's Office	Planning Div.; Benicia CBOs;	Q3 2027–Q3 2028

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		ticipants from impacted workers, BIPOC, and frontline communities; collect post-workshop surveys at ≥3 points during plan development		Community Partners	
	B. Plan Adoption & Implementation Dashboard	1. Draft plan with ≥5 economic transition strategies, implementation-ready project list (≥1 physical, ≥1 social infrastructure project), ≥3 SCWDB workforce pathway MOUs, and social infrastructure funding strategy; release for 30-day public review; adopt by City Council (target: Q1 2029)	City Manager's Office	Economic Development; Planning; SCWDB; Consultant	Q4 2028–Q1 2029
		2. Launch implementation tracking dashboard (target: Q3 2029); update quarterly; incorporate social infrastructure appendix and dashboard metrics into Annual Economic Development Report	City Manager's Office	Economic Development; Communications	Q3 2029; annual through Q4 2031

Sub-Project 4: ISO Implementation — $1,001,395.00

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Strengthen industrial safety oversight and ensure residents have timely, accurate information through active ISO program management.	A. ISO Program Operations & Compliance Monitoring	1. Evaluate and improve ISO procedures, workflows, and enforcement mechanisms; refine data tracking systems for incidents, emissions, and compliance; coordinate with CUPA and Air District; develop standard procedures for reviewing facility reports	Benicia Fire Dept.	CUPA; Air District	Months 1–18; ongoing
		2. Receive and review annual facility reports; conduct inspections and audits of high-hazard facilities following Level 2 and Level 3 incidents; review root cause analyses; maintain centralized compliance tracking system	Benicia Fire Dept.	CUPA	Months 1–60 (ongoing)
	B. Public Information & Commission Support	1. Maintain bilingual Public Information Bank: publish incident reports, facility data, and notifications; facilitate public hearings on incident investigations	Benicia Fire Dept.	N/A	Months 1–60 (ongoing)
		2. Support quarterly ISO Citizen Oversight Commission meetings; prepare staff reports with incident data and compliance status; gather community input and incorporate feedback into program improvements	Benicia Fire Dept.	City of Benicia	Quarterly, ongoing
		3. Produce annual ISO performance report tracking incident trends, compliance rates, and air quality outcomes; present to City Council	Benicia Fire Dept.	N/A	Annual

Sub-Project 5: Clean Industry Recruitment & Retention — $1,199,550.00

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Attract, retain, or expand ≥15 clean-sector businesses and ≥200 jobs at prevailing wages by Q1 2031 and complete a consolidated Transition Infrastructure Investment Roadmap by Q1 2030.	A. Business Recruitment & Job Quality Tracking	1. Establish September 2026 employment baseline; develop sector-specific recruitment strategy (battery manufacturing, green energy, port-related logistics, shipbuilding); conduct ≥25 business outreach engagements or site visits per year; coordinate with Solano EDC, GO-Biz, CAEATFA, Port of Benicia, and BIPA	Economic Development	Solano EDC; GO-Biz; CAEATFA; Port of Benicia	Annual (Q4 2027–Q1 2031)
		2. Establish job quality tracking protocol: document FTE positions, prevailing wages, and % accessible to fossil-fuel workers; collect data at 6, 12, and 24 months post-opening; coordinate with SCWDB on workforce placements; complete ≥3 site readiness assessments for priority Industrial Park parcels	Economic Development	SCWDB; Building Trades; EDD	Q1 2028; ongoing
	B. Infrastructure Roadmap & Annual Reporting	1. Develop Physical Infrastructure Financing Strategy (target: Q2 2028); coordinate with SP-1 (Transition Infrastructure Funding Strategy) and SP-3 (Social Infrastructure findings) to produce consolidated Benicia Transition Infrastructure Investment Roadmap; publish and present to City Council (target: Q1 2030)	City Manager's Office	Economic Development; Public Works; Port of Benicia; Solano EDC	Q2 2028–Q1 2030
		2. Publish Annual Economic Development Report: business inquiries, new leases/permits, FTE jobs created, wage and equity metrics, net change vs. September 2026 baseline; present to City Council	Economic Development	City Manager's Office	Annual (Q4 2027–Q4 2031)

Project Name: Just Economic Transition
Lead Applicant Name: City of Benicia
Term for this budget (in years): 5

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	3.4. Industrial Safety Ordinance (ISO) Program Management	Existing Benicia City Staff costs of $160,435 per year over a 5 year period	$802,175.00
Personnel/Staff Costs	Direct	3.5. Economic Development & Business Attraction	Existing Benicia City Staff costs o $200,066 per year over a 5 year period	$1,000,330.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	3.3 Just Transition Revitalization Plan	One time cost for subcontractor to draft new plan	$872,946.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	3.2. General Plan & Industrial Zoning Updates	One time cost for subcontractor to draft new plan	$4,885,248.00
Personnel/Staff Costs	Direct	3.1. Industrial Site(s) Decommissioning & Transition	Existing Benicia City Staff costs to over see transition at $614,669 per year over a 5 year period	$3,073,345.00
Personnel/Staff Costs	Direct	3.0. Project Manager	25% FTE x $242,874 annual salary and fringe benefits x 5 years	$303,592.50
Personnel/Staff Costs	Direct	3.0. Grant Manager	25% FTE x $244,512 annual salary and fringe benefits x 5 years	$305,640.00
Personnel/Staff Costs	Direct	3.0. Analyst	25% FTE x $130,118 annual salary and fringe benefits x 5 years	$162,647.50
Community Engagement	Direct	3.0. Community Outreach	Planning and materials	$25,000.50

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Benicia Forward: A Catalyst for a Clean and Resilient Future
Lead Applicant Name	City of Benicia
Project Location	City of Benicia, CA
Overall Funding Request	$40,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Promoting Community Health
Project Lead	City of Benicia
Project Location	City of Benicia (various locations)
Project Funding Request	$15,500,120.50

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Project 4, the Promoting Community Health project, protects Benicia residents from the air quality threats they face most directly: hazardous refinery and industrial emissions, wildfire smoke, and vehicle emissions. Urban greening and fire prevention are powerful toosl to mitigate chronic and acute health effects of air pollution and extreme heat. . This project invests in six coordinated sub-projects. The Urban Forestry and Greening Program expands and maintains the city's tree canopy with a focus on neighborhoods that bear the greatest pollution burden and heat exposure. The Wildfire Prevention and Readiness Program consolidates fuel modification, prevention and inspection, wildland-urban interface enforcement, and weed abatement into a single, cohesive program that reduces ignition risk and protects air quality before fires start. Safety and Monitoring Equipment upgrades the Fire Department's portable air monitors — the primary field tool for real-time emergency air quality assessment — and adds Self-Contained Breathing Apparatus (SCBA) compressor capacity to keep first responders safe. A Legacy Fleet Maintenance and Transition Plan brings the same step-by-step transition strategy applied to other city fleets: structured maintenance now to improve reliability, especially during emergencies, and a phased electrification roadmap over time.

The Equitable Access to Parks and Recreation program enhances community health by investing in the maintenance, repair, and improvement of Benicia's 28 parks, 577-acre Lake Herman Regional Park, 68 open space areas, and citywide irrigation systems — with a specific focus on making those spaces safe, functional, and welcoming for the low-income residents, seniors, children, and people with disabilities who benefit most from green space but are most often shut out by deferred maintenance. The Emergency and Rapid Response to Hazardous Emissions and Community Alert System mitigates the impact of acute poor air quality events by ensuring the City can respond quickly and communicate clearly when industrial incidents, wildfires, or other hazardous events threaten air quality.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

Every component of this project reduces air pollution or protects residents from its effects. Urban forestry expands the natural filtration capacity of the city's tree canopy, sequestering carbon and intercepting particulates, including the hydrogen sulfide emissions linked to the Valero refinery. Wildfire prevention reduces the smoke events that have in the past blanketed Benicia in PM2.5 for days. Air monitor upgrades give the Fire Department the real-time data needed to protect both responders and residents during industrial incidents. Fleet maintenance and transition reduce diesel exhaust from emergency vehicles. Park improvements create the conditions for physical activity and social connection that reduce the chronic disease burden already elevated in communities exposed to refinery pollution. The emergency alert system closes the information gap that leaves residents unaware of hazardous events until they have already been exposed. The project supports energy transition by replacing reactive spending — emergency wildfire response, deferred park maintenance, crisis-driven fleet repair — with planned, preventive investment that lowers long-term

costs and protects the health of Benicia's workforce and families.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Sub-Project 1: Benicia Urban Forestry and Greening Program

- Tree planting, maintenance, and inspection: citywide, prioritizing high-exposure and underserved neighborhoods

Sub-Project 2: Benicia Wildfire Prevention and Readiness Program

- Wildfire Fuel Modification Program: wildland open space areas throughout Benicia
- Fire Prevention and Inspection: throughout Benicia,
- Building Inspection Wildland Urban Interface Program: various residential and commercial properties throughout Benicia
- Street Maintenance and Weed Abatement: City rights-of-way and approximately 30 creek and channel locations throughout Benicia

Sub-Project 3: Safety and Monitoring Equipment for Benicia Fire

- Fire Station 11: 150 Military West, Benicia, CA 94510
- Portable air monitors: deployable to fire-prone areas and emergency incident locations throughout Benicia

Sub-Project 4: Legacy Fleet Repair, Maintenance, Upgrades, and Transition Plan

- Fire Station 11 and Corp Yard fleet maintenance facilities: 150 Military West and 2400 East Second Street, Benicia, CA 94510

Sub-Project 5: Equitable Access to Parks and Recreation Facilities and Programs

- 28 City parks (211 acres of developed park and landscaped area), including: Benicia Community Park, City Park, Alvarado Ninth Street Park, Benicia Marina Green/Pavilion, Benicia Point Pier, Bridgeview Park, Channing Circle Park, City Cemetery, Civic Center Park, Duncan Graham Park, Ethelree Saraiva Park, First Street Green, Fitzgerald Field, Francesca Terrace Park, Frank Skillman Park, Gateway Park, Jack London Park, Maria & Ribeiro Baseball Fields, Matthew Turner Park, Overlook Park, Park Solano, Phenix Dog Park, Southampton Park, Turnbull Park, Waters End Park, Willow Glen Park
- Lake Herman Regional Park: 7 Lake Herman Road, Benicia, CA 94510 (577 acres)
- 68 citywide open space access areas
- 24 evapotranspiration-based central irrigation control system sites spanning over 60 locations

Sub-Project 6: Emergency and Rapid Response to Hazardous Emissions and Community Alert System

- Citywide — activated wherever emergencies and hazardous events occur throughout Benicia

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations,*

residents and other key stakeholders were meaningfully involved in the determination of community needs.

Community needs for this project were identified through extensive engagement tied to two recent planning processes: the Parks Master Plan update and the Proposition 218 (Parks, Landscape and Lighting Assessment District, or PLLAD) process, both of which involved multiple community events, information mailers, and presentations to the former Parks, Recreation and Cemetery Commission and City Council. Residents were asked directly about their comfort with specific park and open space programs, their concerns about wildfire risk and air quality, and the barriers that prevent them from using parks and green spaces. Those conversations surfaced consistent themes: deferred maintenance makes parks feel unsafe or inaccessible, seniors and families with young children are most affected when facilities are run down, and wildfire and refinery smoke events create anxiety that residents do not feel the City currently communicates about well.

The Benicia Community Air Monitoring Program (BCAMP) nonprofit shared community air monitoring data identifying the neighborhoods with the highest cumulative pollution exposure and the least tree canopy coverage — a finding that directly shaped the Urban Forestry program's equity-based planting prioritization framework, directing new trees toward the residents who need them most rather than distributing them evenly. Community members found that many property owners in wildland-urban interface areas had never been contacted by the City about defensible space requirements, which informed the decision to make property owner education a core deliverable of the Fuel Modification Program — not just enforcement. Senior services organizations and disability advocates engaged through the PLLAD process specifically identified broken pathways, inaccessible restroom facilities, and failed lighting as the conditions preventing their clients from using parks — feedback that is now the primary driver of the equity prioritization framework within Sub-Project 5. The City's weekly email communications and social media channels-maintained awareness of all ongoing planning efforts and provided additional opportunities for public input.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

<u>Sub-Project 1: Benicia Urban Forestry and Greening Program</u>

Benicia's 27,000 residents do not experience air quality equally. Neighborhoods closest to the Valero refinery, and those with less tree canopy cover and more impervious surfaces are hotter during the summer, more exposed to particulate matter, and less buffered from periodic industrial emissions, including hydrogen sulfide. Trees are among the most cost-effective tools available to address all three of these conditions simultaneously: they sequester carbon, intercept airborne particulates, reduce the urban heat island effect, and create the shaded, walkable environments that encourage outdoor activity and social connections.

This program manages Benicia's urban forest with equity as the organizing principle. The City maintains over 4,500 trees and will conduct a comprehensive inventory to assess their condition and

distribution across neighborhoods. When thinking about how to equitably implement the urban forest and greening program, the City will use established indicators to set planting priorities including things like tree canopy coverage gaps, geographic heat exposure data, proximity to pollution sources/industrial uses, and demographic data — directing new trees toward the residents who benefit most. New planting focuses on California native species (Quercus, Arbutus, Arctostaphylos, Sequoia, and Platanus) selected for drought tolerance, longevity, and ecological value. Ongoing activities include periodic inspection, pruning, and removal as needed, tree permit review, and initial care for newly planted trees. All planting and maintenance is managed from the Public Works Corp Yard and performed by or under the supervision of City staff, including an ISA-certified arborist.

Sub-Project 2: Benicia Wildfire Prevention and Readiness Program

Benicia sits at the interface of developed neighborhoods and wildland open space. When a wildfire ignites near the city — or within it — the air quality impact is immediate, severe, and disproportionately felt by seniors, young children, people with respiratory or cardiovascular conditions, and outdoor workers. A single uncontrolled wildfire can release PM2.5, carbon dioxide, nitrogen dioxide, and aromatic hydrocarbons at levels that make the air unhealthy for days. The Wildfire Prevention and Readiness Program takes a comprehensive, coordinated approach across four activity areas.

Wildfire Fuel Modification Program: The City requires a full-scope, preemptive wildfire fuel modification program. This component fills that gap by managing hazardous vegetation and fuel loads in and around the community: inspecting and enforcing defensible space requirements, coordinating weed abatement and fuel reduction in high-risk areas, and educating property owners about ember-resistant landscaping and wildfire mitigation. Lower fuel loads mean less intense fires, less uncontrolled smoke, and a reduced likelihood of the large wildland fire events that can blanket the city in unhealthy air for days. The program also protects critical evacuation routes during peak fire weather.

Fire Prevention and Inspection: Staff will conduct fire and life safety inspections for commercial, industrial, and high-risk occupancies; issue and track operational permits (hazardous materials, hot work, high-piled storage); and follow up with corrective actions to ensure compliance. *Inspections at industrial facilities reduce the risk of chemical releases and vapor incidents that affect community air quality. A single structure fire can release VOCs, including benzene and styrene, into groundwater and the air — catching fire hazards before they ignite is the most effective intervention.*

Wildland Urban Interface Inspection Program: Building Inspectors will conduct systematic field evaluations of residential and commercial properties to identify fuel-to-structure pathways, enforce defensible space requirements, and ensure existing buildings meet ignition-resistant standards, including non-combustible siding and ember-resistant venting. Plan reviews for new construction and renovations will integrate fire-resistive design at the design phase, eliminating risk before construction begins. Preventing small WUI fires from escalating into mass urban ignitions protects residents from the smoke plumes that cause regional air quality non-attainment and trigger Spare the Air alerts.

Street Maintenance and Weed Abatement: Weed abatement across City rights-of-way (streets and major roadways) and approximately 30 creek and channel locations removes combustible organic

debris, reduces the frequency of fire dispatch calls, and prevents pollutant mobilization from overgrown vegetation that traps sediment and roadway-derived contaminants. Core activities include vegetation removal using hand tools, pre- and post-emergent herbicide applications using EPA-registered products , and removal of vegetation, weeds, silt, and debris within creeks, channels, stormwater outfalls, and culverts. All herbicide applications will be documented and reported monthly to the Solano County Agricultural Commissioner's Office. The City will maintain a Fish & Wildlife Routine Maintenance Agreement covering creek and channel work.

Sub-Project 3: Safety and Monitoring Equipment for Benicia Fire

The Benicia Fire Department's ability to protect both residents and first responders during air quality emergencies depends on two pieces of equipment that are currently at or beyond their service life.

Portable Air Monitors: In 2019, Valero funded the purchase of a cache of high-quality portable air monitors for the Fire Department, valued at $48,342. Over the past seven years, these monitors have been deployed regularly — at industrial incidents, wildfire responses, and hazardous material calls — and have become a critical component of the department's emergency response capability. They are now at the end of their service life, and replacement parts and sensors are no longer available. Fixed fenceline and community monitors provide valuable information but cannot be rapidly repositioned during a dynamic incident. Portable monitors assigned to apparatus give fire personnel real-time, location-specific air quality data — including PM2.5, VOC, carbon dioxide, and hydrogen sulfide levels — that allow informed decisions about evacuation zones, shelter-in-place guidance, and responder safety. Replacing the existing cache restores a capability the department has relied on for years.

SCBA Compressors: Self-contained breathing apparatus (SCBA) compressors allow the Fire Department to refill air cylinders on-site, providing personnel with clean, breathable air during responses involving toxic chemicals, smoke, excess moisture, and oxygen-deficient environments. Without adequate compressor capacity, refill times increase and personnel must rotate out of hazardous environments more frequently, slowing response and increasing exposure. Additional compressor capacity directly supports the department's ability to sustain operations at extended incidents and rescue civilians in distress.

Sub-Project 4: Legacy Fleet Repair, Maintenance, Upgrades, and Transition Plan

Benicia Fire operates fire engines, ladder trucks, brush trucks, rescue units, and command vehicles — a specialized fleet that must be ready to respond at any hour under the most demanding conditions. Deferred maintenance on emergency vehicles is not just a budget issue; it is an air quality issue. Worn engines, exhaust leaks, and failing emissions-control components on diesel apparatus generate PM2.5, NOx, CO, and VOCs in the neighborhoods and around the stations where these vehicles operate every day. Fluid leaks from poorly maintained equipment create additional groundwater contamination risks.

This program takes the same step-by-step approach used in the City's other fleet programs. Structured annual maintenance — scheduled and tracked by staff covering preventive service, safety inspections, repairs, engine and emissions-control work, and fluid leak prevention across all fire apparatus and specialty units — reduces emissions from degraded equipment now and keeps

the fleet mission-ready. Concurrently, in coordination with MTC and the Air District and building on the NV5 electric fleet study, the City will develop a formal fleet transition plan: an inventory of each vehicle's age, emissions profile, and replacement timeline, producing a phased roadmap for transitioning emergency vehicles toward lower-emission alternatives as technology, infrastructure, and funding allow. This roadmap positions the City to pursue state and federal clean fleet programs and makes the transition planned and systematic rather than reactive.

Sub-Project 5: Equitable Access to Parks and Recreation Facilities and Programs

Benicia's parks and open spaces — 28 city parks, the 577-acre Lake Herman Regional Park, and 68 open space access areas — are among the City's most significant public health assets. Green space encourages physical activity and reduces sedentary behavior, lowering rates of cardiovascular disease, obesity, and diabetes. Time in green space supports mental health a*nd reduces stress and parks and recreation facilities provide the space for social connections that buffer against isolation, which is itself a significant health risk. Urban trees and vegetation within park environments also improve local air quality by filtering particulates and providing shade that reduces heat exposure.*

These benefits are not equally distributed. Low-income residents - especially those living in multi-family housing without a backyard/private green space, seniors, children, and people with disabilities are the populations that benefit most from accessible, maintained parks — and they are the populations most likely to be deterred by deferred maintenance, broken equipment, inadequate lighting, overgrown trails, and failed irrigation that makes facilities feel unsafe or unwelcoming. When parks fall into disrepair, the people who have the fewest alternatives for recreation, social engagement, and outdoor air quality refuge lose access first.

Park landscape maintenance covers 211 acres of developed parks and landscaped areas: pruning of shrubs and ground covers, mulching, weed control, trash and litter removal, and servicing of 33 dog waste bag stations across the system. Open space management covers 68 access areas, keeping them clear of vegetation for emergency vehicle access, maintaining the Rollye Wiskerson Trail, Braito Trail, and Bay Area Ridge Trail, responding to citizen concerns about trees and vegetation, and removing debris from unauthorized dumping and homeless encampments. Irrigation maintenance covers the evapotranspiration-based central irrigation control system with 100 field controllers at over 60 sites, including testing and adjustment of turf and ornamental systems and repair and replacement of controllers, valves, flow sensors, backflow prevention devices, main and lateral lines, sprinkler heads, and drip emitters. Well-maintained irrigation directly supports tree and plant health, which is foundational to the air quality and heat reduction benefits parks provide.

Sub-Project 6: Emergency and Rapid Response to Hazardous Emissions and Community Alert System

Benicia's location adjacent to the Valero refinery means that hazardous emissions events are not hypothetical. They happen, and when they do, the speed and clarity of the City's response — both in the field and in communication to the public — directly affects how many residents are harmed. This program has two functions: operational response and community communication.

On the operational side, the program ensures that staff are trained and equipped with current protocols for rapidly assessing immediate dangers, establishing evacuation zones and safety perimeters, containing and decontaminating affected areas, and minimizing long-term community exposure to cardiovascular and respiratory hazards from chemical or toxic releases. Response protocols will be updated to reflect current refinery monitoring data, available portable air monitor readings, and coordination procedures with the Air District and other regulatory agencies.

On the communication side, the program supports a multi-channel emergency notification system integrated with the City's existing communications infrastructure and coordinated with Solano County OES's regional alert network. The platform will deliver push notifications to opted-in residents via SMS, email alerts to registered subscribers, and — for major incidents — Wireless Emergency Alerts (WEA) that reach all mobile devices in the affected area without prior registration.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

This suite of projects protects Benicia residents from the air quality and safety threats they face most directly — refinery and industrial emissions, wildfire smoke, vehicle exhaust, and extreme heat. Investments in urban greening, wildfire prevention, emergency response, park access, and fleet maintenance work together to reduce pollution, improve public health, and ensure that the City can respond quickly and communicate clearly when hazardous events occur. Seniors and children, who are biologically most vulnerable to particulate matter and toxic air contaminants,[1] will see the greatest public health benefit from cleaner facilities, reduced wildfire smoke exposure, and expanded emergency response capacity. Residents living in multi-family housing will experience the greatest health benefits from improved park and recreation facilities and a well-maintained urban forest.

Community and stakeholder engagement for Project 4 will include:

- Facilitate ongoing two-way engagement and report implementation progress at key milestones at City Council meetings in open public session.
- Post project updates and engagement opportunities on the Benicia Forward webpage.
- The City Manager will include Benicia Forward updates and engagement invitations in his weekly email newsletter as appropriate.
- During implementation, the project team will review SeeClickFix data — particularly park condition reports, tree hazard flags, and open space concerns — and incorporate it into maintenance prioritization under the Urban Forestry and Parks programs.
- The Grants Manager will work with the Fire Department and Parks Division to directly engage community stakeholders, especially seniors, people with disabilities, non-English speaking residents, and neighborhood groups in areas of highest wildfire exposure and lowest park access.
- Updates on construction timelines and facility disruptions will be communicated through the City's weekly email blast and social media channels, with particular attention to parks and open spaces where maintenance activity will temporarily affect access.
- A grant implementation progress report will be included in the City's annual letter from the City Manager that is mailed to every Benicia address.

The *Community Sustainability Commission* will receive regular updates on the Urban Forestry and Greening program, provide input on equity-based planting prioritization, and advise on alignment with the City's climate and air quality commitments.

The *Community Services Commission* will receive regular updates on the Wildfire Prevention and Readiness Program and the Parks and Recreation investments, provide oversight on program priorities and equity-based facility improvements, and advise on public noticing before major maintenance or construction activity at park facilities.

Some possible additional engagement by project may include activities such as (specific activities will be confirmed after grant approval):

Sub-Project 1: Urban Forestry and Greening

- Post information about and maps of tree canopy on social media

Sub-Project 2: Wildfire Prevention and Readiness

- Host one annual community "Fire Ready Benicia" information table at the farmers market or other community event before fire season
- Create a one-page defensible space checklist for properties in wildland-urban interface areas
- Post before/after photos of fuel modification work on social media to build awareness

Sub-Project 3: Safety and Monitoring Equipment

- Include a short plain-language explainer in the City Manager's newsletter when new monitors are deployed — what they measure, what the readings mean, and how residents can access real-time data
- Share air quality readings from portable monitors during incidents on the City's social media channels where safe and operationally feasible

Sub-Project 4: Legacy Fleet Maintenance and Transition

- Include an annual one-paragraph update on fleet electrification progress in the City Manager's annual letter
- Post the fleet transition roadmap on the Benicia Forward webpage once complete so residents can track progress

Sub-Project 5: Parks and Recreation

- Encourage residents to report park conditions and maintenance issues on SeeClickFix
- Celebrate completed park repairs with a brief social media post and photo — keeps residents informed and builds goodwill

Sub-Project 6: Emergency Alert System

- Engage stakeholders to provide feedback on the alert system (might be focus groups or attending other existing community meetings)
- Conduct a community information session (in-person or virtual) on how the alert system works, how to opt in, and what different alert levels mean
- Test the system publicly at least once per year and communicate the test in advance so residents know what to expect.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Sub-Project 1: Benicia Urban Forestry and Greening Program — $3,396,143.50

The Urban Forestry program will be implemented over five years to maintain, enhance or expand

where needed Benicia's tree canopy with a focus on underserved neighborhoods. A comprehensive inventory will assess the condition and distribution of the City's 4,500+ existing trees and identify priority planting locations based on canopy gaps, heat exposure, and pollution burden. California native species — Quercus, Arbutus, Arctostaphylos, Sequoia, and Platanus — will be planted in priority areas. Ongoing activities include periodic inspection, pruning, and removal as needed, tree permit review, and initial care for new plantings. All work is performed by or under the supervision of City staff, including an ISA-certified arborist. Partners include the City's Parks staff and contractors procured through a competitive RFP process. Measurable targets: comprehensive inventory completed by the end of Year 1; a minimum of 200 new native trees planted in the highest-priority neighborhoods by the end of Year 5; 100% of existing trees inspected on the City's standard maintenance cycle throughout the grant term; documented reduction in dead and hazardous tree conditions relative to the Year 1 inventory baseline.

Sub-Project 2: Benicia Wildfire Prevention and Readiness Program — $3,452,676.00

The Wildfire Prevention and Readiness Program will deliver four coordinated activities over the five-year grant term. The Fuel Modification Program manages hazardous vegetation in wildland open space and high-risk areas, enforcing defensible space requirements and educating property owners. Fire Prevention and Inspection staff will conduct regular inspections of commercial, industrial, and high-risk occupancies, issuing and tracking operational permits and following up on corrective actions. The WUI Inspection Program will conduct systematic field evaluations of residential and commercial properties, enforce ignition-resistant construction standards, and integrate fire-resistive design requirements into plan review. Street Maintenance and Weed Abatement will cover both city rights-of-way and approximately 30 creek and channel locations citywide, removing combustible vegetation and debris, applying EPA-registered herbicides under an existing Fish & Wildlife Routine Maintenance Agreement, and reporting all applications monthly to the Solano County Agricultural Commissioner's Office.

Sub-Project 3: Safety and Monitoring Equipment for Benicia Fire — $261,158.40

Portable air monitors replace the 2019 Valero-funded cache (original value $48,342), now at the end of their service life, restoring real-time, field-deployable air quality monitoring capability for PM2.5, VOCs, carbon dioxide, and hydrogen sulfide. SCBA compressors add refill capacity for breathable air cylinders, reducing rotation times and sustaining personnel during extended hazardous material and wildfire responses. Both are one-time capital purchases expected to remain in service well beyond the grant term. The Fire Department is the primary operator of both systems.

Sub-Project 4: Legacy Fleet Repair, Maintenance, Upgrades, and Transition Plan — $2,028,828.40

Annual preventive maintenance and repair across the Fire Department's full fleet — fire engines, ladder trucks, brush trucks, rescue units, command vehicles and fleet — covers scheduled service, safety inspections, engine and emissions-control repairs, and fluid leak prevention. Staff schedule and track all maintenance, manage vehicle lifecycle and upfitting, and coordinate with the Corp Yard for emissions compliance. Concurrently, the City develops a fleet transition plan in coordination with MTC and the Air District, building on the NV5 electric fleet study: a full inventory of vehicle ages, emissions profiles, and replacement timelines, producing a phased roadmap for transitioning to

lower-emission alternatives. The roadmap will identify applicable state and federal clean fleet grant programs and position the City to pursue them in subsequent grant cycles.

Sub-Project 5: Equitable Access to Parks and Recreation Facilities and Programs — $4,720,933.40

Park landscape maintenance will cover 211 acres of developed parks and landscaped areas across 28 city parks: pruning, mulching, weed control, trash and litter removal, and maintenance of 33 dog waste bag stations. Open space management will cover 68 access areas, including the Rollye Wiskerson Trail, Braito Trail, and Bay Area Ridge Trail, maintaining clearance for emergency vehicle access and responding to citizen-reported tree and vegetation hazards. Irrigation maintenance will cover 100 field controllers at over 60 sites, keeping the evapotranspiration-based central irrigation control system functional through testing, adjustment, and repair of all components. Prioritization of repairs and improvements within this program will be guided by an equity lens: facilities serving the highest concentrations of low-income residents, seniors, children, and people with disabilities receive attention first. Partners include the Parks and Recreation Commission, PLLAD oversight structure, and contractors procured through competitive RFP.

This investment is explicitly additive — not a substitute for existing PLLAD (Prop 218) funding. PLLAD assessment revenues fund Benicia's baseline park landscape maintenance operations: routine mowing, pruning, litter removal, and minor irrigation repairs. Those activities will continue to be funded through PLLAD throughout the grant term. This grant funds a categorically different set of investments that PLLAD cannot cover: a backlog of deferred capital repairs to park infrastructure (damaged pathways, failed lighting, deteriorated restroom facilities, aging play equipment); ADA accessibility improvements required by the City's ADA Transition Plan obligations; capital upgrades to the evapotranspiration-based irrigation control system; and targeted programming designed to bring underserved populations into park spaces. Grant funds and PLLAD funds will be tracked in separate accounts with clear documentation of eligible activities under each funding source.

Sub-Project 6: Emergency and Rapid Response to Hazardous Emissions and Community Alert System — $1,640,380.80

This component funds staff training, protocol development, and system implementation for both field response and community communication. On the response side, updated hazmat protocols, training exercises, and coordination procedures with BAAQMD, CalEPA, and regulatory partners will be documented and tested. On the communication side, a community alert system will be designed and deployed to reach residents, commuters, and visitors through multiple channels during air quality emergencies, wildfire smoke events, and industrial incidents — providing actionable guidance without requiring residents to seek out information on their own. System design will prioritize accessibility for seniors, non-English speakers, and people with disabilities.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Total project cost: $14,700,000. Sub-Project 1 (Urban Forestry, $3,396,143.50) is fully programmatic — ongoing tree inventory, planting, maintenance, and inspection over five years. Sub-Project 2 (Wildfire Prevention, $3,452,676) is primarily programmatic — annual fuel modification, inspections, and weed abatement, with one-time costs for program setup and equipment. Sub-Project 3 (Safety Equipment, $261,158.40) consists of one-time capital purchases — portable air monitors and SCBA compressors — expected to remain in service past the grant term. Sub-Project 4 (Legacy Fleet, $2,028,828.40) is primarily programmatic — annual fleet maintenance plus transition plan development. Sub-Project 5 (Parks, $4,720,933.40) covers a mix of programmatic maintenance and targeted capital repairs and improvements. Sub-Project 6 (Emergency Response, $1,640,380.80) funds protocol development, training, and alert system implementation. Ongoing programmatic costs will be sustained through the General Fund, PLLAD (Prop 218), and future state, federal, and private grant opportunities.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project advances the City's 2016 Climate Action Plan directly, particularly Evaluation Category 3: Increasing Resource Efficiency and Maintaining a Healthy Environment — including the CAP's strategies to improve air quality (pg. A-3), its identification of existing hazards to air quality (p. 16), its Existing Conditions Report discussion of air quality risks (p. 10), and its equity focus on air quality (p. 15). Urban forestry, wildfire prevention, fleet maintenance, and park improvements each operationalize CAP goals at the program level, moving the City from stated commitments to funded, executable work.

The project is consistent with the Community Air Protection Program (AB 617), which requires affected communities to monitor and reduce emissions of criteria air pollutants and toxic air contaminants. Benicia's fence-line position adjacent to the Valero refinery makes this alignment especially significant: portable air monitor replacement restores the City's field monitoring capability; wildfire prevention reduces smoke-related PM2.5 events; urban forestry expands natural particulate filtration; and the community alert system closes the information gap between hazardous emissions events and protective action by residents. All six programs directly support Benicia's AB 617 obligations.

The project also aligns with the Benicia Fire Safe Council's Community Wildfire Prevention Plan, the City's PLLAD maintenance structure, and the MTC-funded electric fleet transition study the City is pursuing with consultant NV5. Community support has been demonstrated through public engagement associated with the Parks Master Plan update, PLLAD proceedings, and City outreach at local farmers' markets and community events. This Project connects directly to Project 1: Clean Energy Initiative: the Community Center and Library that Project 4 designates as community resilience centers are the same buildings that Project 1 is equipping with reliable HVAC, backup power, and solar — investments that only fulfill their resilience function if the buildings are also well-maintained, accessible, and trusted by the communities they serve. The emergency fleet maintenance and transition work in this project runs in parallel with the EV infrastructure and active transportation investments in Project 2, together building a coordinated approach to reducing diesel emissions and improving emergency response across all city operations.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

This project will be led by [redacted], who has over 18 years of local government experience focused on utilities and public works. As [redacted], she oversees the design, bidding, and construction of capital projects for [redacted] and manages the [redacted] divisions responsible for parks, urban forestry, fleet operations, and facilities. [redacted] has managed major Capital Improvement Projects, including the 2024 and 2025 Citywide Pavement Rehabilitation and Bike and Pedestrian Safety Enhancement Projects, and has a track record of delivering complex, multi-department projects on time and under budget.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

[redacted] will provide overall project leadership and inter-departmental coordination across all six project components. [redacted], will oversee day-to-day management of the Urban Forestry, Parks, and fleet maintenance components; [redacted] has over 27 years of local government experience spanning parks, facilities, fleet operations, and building maintenance, plus 20 years of military service with the U.S. Navy Seabees and Army Corps of Engineers.[redacted], will lead the Wildfire Prevention and Readiness Program and Safety Equipment components; [redacted] has over 28 years of experience with the [redacted], including service as Paramedic Firefighter, Captain, Division Chief, and the past eight years as [redacted]. [redacted], will support Fire Department program coordination, documentation, and reporting; [redacted] has over 10 years of public administration experience, including six years as the [redacted]. [redacted] and ISA-certified arborist ([redacted], Tree Risk Assessment Qualified), will lead field operations for the Urban Forestry and Parks programs. [redacted], will serve as administrative co-lead, coordinating grants management, reporting, and inter-departmental accountability across all six components; [redacted] has 10 years of experience in grants management, 10 years in project management, and 7 years [redacted].

Technical advisory services will be procured through competitive RFP for arborist services, wildfire fuel modification support, and alert system design and implementation. All consultant selection will comply with applicable procurement requirements. Public information and engagement will draw on both consultant support and City staff time throughout the grant term.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the

naming convention outlined in the “Application Instructions” document. Indicate the file name(s) of any supporting documentation in your response.

- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate “N/A” if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

N/A. All project activities take place on city-owned or city-controlled sites, in city rights-of-way, or involve equipment purchases and programmatic services that do not require external permits. The weed abatement program operates under an existing Fish & Wildlife Routine Maintenance Agreement and reports applications monthly to the Solano County Agricultural Commissioner’s Office — no new permits are required. Fire inspections are performed under existing municipal authority.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

The City will comply with CEQA for all proposed projects. Based on scope—primarily maintenance, minor facility upgrades, vegetation management and equipment installation— the City anticipates most activities will qualify for categorical or statutory exemptions. The City will confirm exemption eligibility and complete any required documentation as projects advance, ensuring compliance while maintaining an efficient delivery schedule.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

N/A. The City owns or controls all project sites. Parks, open spaces, fire stations, and rights-of-way are city-owned or under city jurisdiction. Fire inspections of private properties are conducted under existing municipal inspection authority. No property acquisition, easements, or third-party permissions are required to begin implementation.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Each department will submit reports and an annual review documenting costs, staff time, community feedback, and progress against grant milestones. One-time capital purchases from Project 3 (portable air monitors, SCBA compressors) are expected to remain in service for years past the grant term; post-grant maintenance will be funded through the Fire Department’s operating budget.

Programmatic components are designed to become part of standard departmental operations. Urban forestry activities will be incorporated into the Public Works maintenance program. Wildfire prevention and inspection functions are extensions of existing Fire Department and Building Inspection programs that will continue under their regular operating budgets. Park maintenance will continue to be funded through the General Fund and PLLAD (Prop 218). The fleet transition roadmap will identify state, federal, and Air District grant opportunities to fund the next phase of vehicle replacement. The community alert system, once implemented, will be maintained through the City's operating budget and supplemented by future emergency preparedness grant opportunities.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The breadth of this project — six programs across four departments — is its primary implementation risk. The City will manage this through a central coordination function led by [redacted], with quarterly cross-departmental progress reviews and clear assignment of each program to a named departmental lead. For the Urban Forestry program, a comprehensive tree inventory is a prerequisite for planting prioritization; the City will initiate the inventory in the first year to establish the baseline for all subsequent planting decisions. For the Wildfire Fuel Modification Program, securing access to private property for defensible space inspections and vegetation management requires landowner cooperation; the City will develop a written notification and engagement protocol in the first year to streamline this process. For the community alert system, technology selection and community testing take time; the City will pilot the system in the second year of the grant term and refine based on community feedback before full deployment. These projects were selected through close collaboration across departments, public comment, and City Council approval, building the institutional commitment needed to sustain a project of this scope through the full grant term.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for **each Project** during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Project 4: Promoting Community Health — Protects Benicia residents from the air quality threats they face most directly: wildfire smoke, industrial emissions, and vehicle emissions. Six coordinated sub-projects work together — Urban Forestry & Greening, Wildfire Prevention & Readiness (including fuel modification, fire prevention/inspection, and community engagement), Safety & Monitoring Equipment, Fire Department Fleet Maintenance, Equitable Access to Parks & Recreation, and Emergency Response & Community Alert (including ISO program management and hazardous materials response). Total Budget: $15,500,120.50 over 5 years.

Summary of Measurable Outcomes and Indicators

Sub-Project & Component	Measurable Outcome	Indicator(s)
SP-1: Urban Forestry & Greening ($3,396,143.50)	Expand and maintain Benicia's tree canopy, prioritizing neighborhoods with the greatest heat and pollution exposure, to increase natural air filtration and reduce urban heat.	• Citywide tree inventory completed by end of Year 1; priority planting locations identified • ≥200 new native trees planted in priority neighborhoods by Year 5 • 100% of existing trees inspected on standard maintenance cycle each year • Soil stabilization, mulch, and groundcover applied to support tree health and reduce dust • Annual planting and maintenance activities documented
SP-2: Wildfire Prevention & Readiness ($3,452,676.00)	Reduce wildfire smoke and community fire risk through targeted vegetation management and strategic fuel modification across high-risk areas.	• Acres of vegetation treated annually (goat grazing, discing, manual clearing) • Annual vegetation management schedule developed and followed • Priority access routes for firefighters cleared and maintained • Vegetation management integrated into emergency response planning and dispatch systems
	Prevent fires and reduce air pollution from hazardous conditions through regular fire prevention inspections and code enforcement.	• # inspections of commercial, industrial, and high-risk occupancies completed annually • # hazards identified and corrected; follow-up inspections confirm resolution • Violations tracked; compliance trends reported annually • Permit applications reviewed for fire and life safety compliance
	Increase community awareness of wildfire, smoke, and hazardous air risks through recurring public education and real-time protective messaging.	• # community education events held annually (station tours, school visits, open house, CPR/CERT) • # residents reached through in-person and social media outreach • Timely safety messaging issued during smoke, odor, and hazardous material incidents

Sub-Project & Component	Measurable Outcome	Indicator(s)
		• Outreach calendar adjusted annually based on seasonal risk and community feedback
SP-3: Safety & Monitoring Equipment ($261,158.40)	Restore real-time field air quality monitoring capability and SCBA cylinder refill capacity to protect first responders and inform protective action during emergencies.	• Portable air monitors (MSA ALTAIR 5X and RKI units) purchased, deployed to apparatus, and operational • SCBA air compressor (BAUER UNICUS 4) installed; aging unit decommissioned • Air output meets Grade E breathing air standards • All equipment calibrated and maintained per manufacturer schedule • # incidents where air monitors deployed (tracked in incident reports)
SP-4: Fire Department Fleet Maintenance ($2,028,828.40)	Maintain Fire Department fleet emissions compliance and operational readiness through structured preventive maintenance, reducing vehicle-related emissions and ensuring rapid emergency response.	• Routine preventive maintenance completed on all apparatus annually • All applicable units pass required smog and emissions inspections • Fleet available for simultaneous incident response; vehicle downtime tracked • Aging high-use vehicles identified for prioritized replacement
SP-5: Equitable Access to Parks & Recreation ($4,720,933.40)	Maintain parks, open spaces, and irrigation infrastructure to support public health, reduce heat exposure, and ensure safe, accessible green space for residents who benefit most.	• 211 acres of park landscape maintained annually • 68 open space access areas managed with emergency vehicle clearance maintained • 100 irrigation field controllers tested and repaired annually; leaks addressed promptly • ADA improvements completed at priority parks; SeeClickFix hazard reports resolved
SP-6: Emergency Response & Community Alert ($1,640,380.80)	Strengthen industrial safety oversight and ensure residents have timely, accurate information about industrial incidents and air quality conditions through active ISO program management.	• Annual facility reports received and reviewed; inspections and audits conducted following Level 2 and Level 3 incidents • ISO Citizen Oversight Commission meetings held; public hearings facilitated • Incident reports and notifications published to Public Information Bank • Annual ISO performance report produced and presented to City Council • Compliance tracking system maintained; coordination with CUPA and Air District documented

Sub-Project & Component	Measurable Outcome	Indicator(s)
	Reduce community exposure to hazardous air pollutants through rapid hazardous materials response and timely, clear public emergency alerts.	• HazMat responders maintain required certifications; equipment and PPE ready for deployment • Emergency alert system operational; alerts issued with protective action guidance during incidents • # multi-agency drills or exercises completed annually • # hazmat incidents responded to; releases stabilized before off-site escalation where possible • Post-incident public follow-up provided; facility incident reports reviewed

Detailed Milestones and Task Plan by Sub-Project

Sub-Project 1: Urban Forestry & Greening — $3,396,143.50

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Expand and maintain Benicia's tree canopy, prioritizing neighborhoods with the greatest heat and pollution exposure.	A. Tree Inventory & Planting Strategy (Year 1)	1. Conduct citywide tree inventory documenting condition, species, and canopy coverage for all 4,500+ existing trees; complete by end of Year 1	Public Works	ISA-Certified Arborist	Months 1–12
		2. Map canopy gaps, heat exposure, and pollution burden by neighborhood; use findings to establish equity-based planting priority areas	Public Works	Parks Staff; GIS Staff	Months 6–12
		3. Select California native species (Quercus, Arbutus, Arctostaphylos, Sequoia, Platanus); develop annual planting schedule for priority neighborhoods	Public Works	ISA-Certified Arborist	Months 6–12
	B. Annual Planting & Maintenance (Years 1–5)	1. Plant ≥40 new native trees annually in highest-priority neighborhoods (≥200 over 5 years); provide initial care (watering, staking) through first two growing seasons	Public Works	Parks Staff / Contractors	Months 6–60

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		2. Inspect and maintain all existing trees on standard cycle; remove hazardous trees; track improvement vs. Year 1 baseline	Public Works	ISA-Certified Arborist	Months 1–60
		3. Apply mulch and soil stabilization; install bioswales and green buffers where appropriate; conduct irrigation checks at tree sites	Public Works	Parks Staff	Months 6–60

Sub-Project 2: Wildfire Prevention & Readiness — $3,452,676.00

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Reduce wildfire smoke and community fire risk through targeted vegetation management and strategic fuel modification.	A. Priority Areas Mapped & Schedule Developed	1. Map high-risk wildfire zones near residential areas and sensitive populations; identify priority treatment areas based on fuel load, slope, and proximity to structures	Benicia Fire Dept.	N/A	Months 1–12
		2. Develop annual vegetation management schedule aligned with peak fire season; adjust annually based on drought conditions and growth patterns	Benicia Fire Dept.	N/A	Months 1–12
		3. Identify and map priority firefighter access routes in high-risk areas; coordinate with Parks Dept. on clearance responsibilities	Benicia Fire Dept.	Benicia Parks Dept.	Months 3–12
	B. Vegetation Treatment Implemented (Annual)	1. Deploy goat grazing operations to reduce fine fuels and invasive vegetation; conduct discing to establish and maintain strategic firebreak lines	Benicia Fire Dept.	N/A	Months 3–60
		2. Perform manual vegetation removal (weed eating/hand crews) in high-risk and inaccessible areas; create and maintain defensible space buffers around residential areas	Benicia Fire Dept.	N/A	Months 3–60

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		3. Clear vegetation along access roads, fire lanes, and emergency entry points; maintain routes annually for peak fire season usability	Benicia Fire Dept.	Benicia Parks Dept.	Months 3–60
	C. Tracking & Operational Integration	1. Track acreage treated annually by method (grazing, discing, manual); document vegetation reduction and defensible space created or maintained	Benicia Fire Dept.	N/A	Months 3–60
		2. Integrate vegetation management maps and treatment areas into emergency response planning and dispatch systems; align with evacuation planning	Benicia Fire Dept.	Dispatch; Solano County Fire	Months 6–60
		3. Conduct internal evaluations following wildfire incidents to assess access, response times, and suppression effectiveness; incorporate lessons into future planning	Benicia Fire Dept.	N/A	Months 6–60
Prevent fires and reduce air pollution from hazardous conditions through regular fire prevention inspections and code enforcement.	A. Routine Inspections & Enforcement (Ongoing)	1. Perform annual inspections of commercial, industrial, and high-risk occupancies; inspect hazardous material storage, handling, and fire protection systems	Benicia Fire Dept.	N/A	Months 1–60
		2. Issue notices of violation and corrective action requirements; conduct follow-up inspections to confirm corrections; ensure properties meet California Fire Code	Benicia Fire Dept.	N/A	Months 1–60
		3. Review fire permit applications for compliance; inspect fire protection systems and new construction; prioritize high-risk areas and vulnerable populations	Benicia Fire Dept.	N/A	Months 1–60
	B. Compliance Tracking & Annual Reporting	1. Maintain database of inspection findings, violations, and corrective actions; track compliance trends	Benicia Fire Dept.	N/A	Months 12–60

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		2. Analyze trends in hazards and incident causes; adjust inspection priorities based on risk data; report annual outcomes to City leadership	Benicia Fire Dept.	N/A	Months 12–60
Increase community awareness of wildfire, smoke, and hazardous air risks through recurring public education and real-time protective messaging.	A. Year-Round Public Safety Education	1. Develop and maintain seasonal messaging on wildfire preparedness, smoke exposure, carbon monoxide safety, and emergency readiness via social media and City channels	Benicia Fire Dept.	N/A	Months 1–60
		2. Conduct station tours, school and youth outreach, and community presentations; hold annual open house and fire prevention events; offer CPR and CERT training	Benicia Fire Dept.	N/A	Months 1–60
		3. Track attendance and social media engagement; adjust outreach priorities annually based on seasonal risk, incident trends, and community interest	Benicia Fire Dept.	N/A	Months 1–60
	B. Real-Time Protective Messaging During Incidents	1. Issue timely updates during smoke, odor, hazardous material, and vegetation fire incidents; provide shelter-in-place, avoidance, or evacuation guidance	Benicia Fire Dept.	N/A	Months 1–60
		2. Coordinate messages with City leadership and regional partners; provide follow-up information explaining hazards and protective actions after significant incidents	Benicia Fire Dept.	N/A	Months 1–60

Sub-Project 3: Safety & Monitoring Equipment — $261,158.40

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Restore real-time field air quality monitoring capability and SCBA cylinder refill capacity to protect first	A. Equipment Procured, Installed & Staff Trained	1. Purchase replacement portable air monitors (MSA ALTAIR 5X multi-gas and RKI single-gas units); assign to frontline fire apparatus and medical response units	Benicia Fire Dept.	Equipment Vendors	Months 1–6

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
responders and inform protective action during emergencies.		2. Procure and install new SCBA air compressor (BAUER UNICUS 4); decommission and safely remove aging unit; complete installation testing and operational verification	Benicia Fire Dept.	Equipment Vendor	Months 1–6
		3. Train all firefighters on portable monitor operation and SCBA compressor use; develop standard operating policy for air monitor deployment during incidents	Benicia Fire Dept.	Equipment Vendors; Air District	Months 1–6
	B. Equipment Integrated into Operations & Maintained	1. Deploy portable monitors during fire, hazmat, and medical incidents; use real-time readings to guide evacuation, isolation, or shelter-in-place decisions	Benicia Fire Dept.	Air District; CUPA	Months 3–60
		2. Operate SCBA compressor to maintain continuous cylinder availability; ensure air output meets Grade E breathing air standards; monitor system alerts	Benicia Fire Dept.	N/A	Months 6–60
		3. Conduct routine calibration and maintenance on monitors; replace sensors and filters as needed; document equipment performance	Benicia Fire Dept.	N/A	Months 6–60

Sub-Project 4: Fire Department Fleet Maintenance — $2,028,828.40

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Maintain Fire Department fleet emissions compliance and operational readiness through structured preventive maintenance, reducing vehicle-related emissions and ensuring rapid emergency response.	A. Annual Preventive Maintenance Program	1. Conduct routine preventive maintenance on all apparatus (engines, ladder truck, water tender, rescue vehicles, specialty units); diagnose and correct engine performance issues that increase fuel use or emissions	Benicia Fire Dept.	N/A	Months 1–60
		2. Ensure all applicable fleet units pass required smog and emissions inspections;	Benicia Fire Dept.	N/A	Months 1–60

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		document results; minimize downtime through scheduled maintenance			
		3. Ensure adequate apparatus availability for simultaneous emergency incidents; keep specialty units (water tender, Type 3/Type 5) available for extended operations	Benicia Fire Dept.	N/A	Months 1–60
	B. Aging Vehicle Assessment & Replacement Planning	1. Identify older high-use vehicles with declining efficiency or repeated repair needs; track downtime and maintenance costs per vehicle	Benicia Fire Dept.	N/A	Months 12–60
		2. Prioritize replacement of aging units with cleaner, lower-emission apparatus when funding allows; report fleet readiness and utilization to fire leadership annually	Benicia Fire Dept.	N/A	Months 12–60

Sub-Project 5: Equitable Access to Parks & Recreation — $4,720,933.40

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Maintain parks, open spaces, and irrigation infrastructure to support public health and ensure safe, accessible green space for residents who benefit most.	A. Park & Open Space Maintenance (Annual)	1. Maintain 211 acres of developed park and landscaped areas: pruning, mulching, weed control, litter removal, and dog waste station servicing (33 stations)	City of Benicia (Parks)	Contractors	Months 1–60
		2. Manage 68 open space access areas: maintain emergency vehicle clearance, trail maintenance, and debris/encampment removal; respond to SeeClickFix tree and vegetation hazard reports	City of Benicia (Parks)	N/A	Months 1–60
		3. Complete ADA accessibility improvements at priority parks; prioritize facilities serving highest concentrations of	City of Benicia (Parks)	ADA Coordinator; Contractors	Months 6–60

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		low-income residents, seniors, and people with disabilities			
	B. Irrigation System Maintenance (Annual)	1. Test, adjust, and repair evapotranspiration-based irrigation system: 100 field controllers at 60+ sites; document repair counts and system uptime	City of Benicia (Parks)	N/A	Months 1–60
		2. Repair deficient irrigation components (valves, flow sensors, backflow devices, sprinkler heads, drip emitters) promptly; upgrade to smart controllers where feasible	City of Benicia (Parks)	Contractors	Months 1–60

Sub-Project 6: Emergency Response & Community Alert — $1,640,380.80

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Strengthen industrial safety oversight and ensure residents have timely, accurate information about industrial incidents and air quality conditions through active ISO program management.	A. ISO Program Operations & Compliance	1. Evaluate and improve ISO procedures, workflows, and enforcement mechanisms; refine data tracking systems for incidents, emissions, and compliance	Benicia Fire Dept.	CUPA; Air District; Facilities	Months 1–18; ongoing
		2. Receive and review annual facility reports; conduct inspections and audits following Level 2 and Level 3 incidents; review root cause analyses	Benicia Fire Dept.	CUPA	Months 1–60
		3. Enhance coordination with CUPA, Air District, and regulated facilities; coordinate air quality monitoring station siting; oversee data collection and reporting	Benicia Fire Dept.	CUPA; Air District	Months 1–60
	B. Public Information & Oversight Commission	1. Maintain updated Public Information Bank: publish incident reports, post notifications, and make facility data publicly accessible; facilitate public hearings	Benicia Fire Dept.	N/A	Months 1–60

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		2. Support quarterly ISO Citizen Oversight Commission meetings; facilitate community input; incorporate feedback into policy and program improvements	Benicia Fire Dept.	City of Benicia	Months 1–60
		3. Prepare annual ISO performance report tracking incident trends, compliance rates, and air quality outcomes; present to City Council	Benicia Fire Dept.	N/A	Annual
Reduce community exposure to hazardous air pollutants through rapid hazardous materials response and timely, clear public emergency alerts.	A. HazMat Readiness & Alert Systems Maintained	1. Maintain staffing, training, and HazMat Technician certification of hazmat responders; ensure equipment, PPE, monitoring tools, and decontamination resources are operational	Benicia Fire Dept.	Solano HazMat Team	Months 1–60
		2. Maintain emergency alert tools; update alert templates for industrial incidents, fires, and hazardous releases; conduct periodic system testing and staff training	Benicia Fire Dept.	Solano OES	Months 1–60
		3. Participate in countywide hazmat planning meetings; conduct joint exercises with fire, law enforcement, and county agencies; integrate lessons learned from incidents	Benicia Fire Dept.	Regional emergency response agencies	Months 1–60
	B. Rapid Response & Public Communication During Incidents	1. Deploy trained personnel for hazardous releases, spills, vapor events, and unknown substance investigations; identify chemicals, assess hazards, and implement containment	Benicia Fire Dept.	Solano HazMat Team; CUPA	Months 1–60
		2. Issue timely public alerts with clear protective instructions (shelter-in-place, avoid area, or evacuation); coordinate messaging with City and regional agencies; provide updates until hazard resolved	Benicia Fire Dept.	Solano OES; Regional agencies	Months 1–60
		3. Provide post-incident public follow-up; review facility 72-hour reports; use	Benicia Fire Dept.	N/A	Months 1–60

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		findings to improve future warning, response, and preparedness systems			

Project Name: A Catalyst for a Clean and Resilient Future
Lead Applicant Name: City of Benicia
Term for this budget (in years): 5

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	4.1. Benicia Urban Forestry and Greening Program	Benicia City Staff costs of $652,666 per year over a 5 year period	$3,263,330.00
Personnel/Staff Costs	Direct	4.2.d. Street Maintenance Weed Abatement	Benicia City Staff costs of $25,678 per year over a 5 year period	$128,390.00
Personnel/Staff Costs	Direct	4.4. Legacy Fleet Repair, Maintenance, Upgrades, and Transition Plan	Benicia City Staff costs of $379,203 per year over a 5 year period	$1,896,015.00
Personnel/Staff Costs	Direct	4.2.b. Fire Prevention & Inspection	Benicia City Staff costs of $456,097 per year over a 5 year period	$2,280,485.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	4.3. Safety and Monitoring Equipment for Benicia Fire—Portable Air Monitors	One time cost for the purchase of Portable Air Monitors	$30,721.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	4.3. Safety and Monitoring Equipment for Benicia Fire—SCBA Compressor	One time cost for the purchase and installation of SCBA Compressor	$97,624.00
Personnel/Staff Costs	Direct	4.5. Equitable Access to Parks and Recreation Facilities and Programs	Benicia City Staff costs of $917,624 per year over a 5 year period	$4,588,120.00
Personnel/Staff Costs	Direct	4.2.a. Wildfire Fuel Modification Program	Reduction of wildfire fuels in and around the wildland urban interface. Existing Benicia City Staff costs of $174,265.52 per year over a 5 year period	$871,327.60
Community Engagement	Direct	4.6.b. Fire Department Community Engagement	Outreach to the community regarding the grant and sharing best practices and recommendations for wildfire fuel management. Benicia City Staff costs of $192,513.48 per year over a 5 year period	$962,567.40
Personnel/Staff Costs	Direct	4.2.c. Building Inspection Wildland Urban Interface Program	Benicia City Staff costs of $7,932 per year over a 5 year period	$39,660.00
Personnel/Staff Costs	Direct	4.6.a. Emergency and Rapid Response to Hazardous Emissions & Community Alert System	Benicia City Staff costs of $109,000 per year over a 5 year period	$545,000.00
Personnel/Staff Costs	Direct	4.0. Project Manager	25% FTE x $242,874 annual salary and fringe benefits x 5 years	$303,592.50
Personnel/Staff Costs	Direct	4.0. Grant Manager	25% FTE x $244,512 annual salary and fringe benefits x 5 years	$305,640.00
Personnel/Staff Costs	Direct	4.0. Analyst	25% FTE x $130,118 annual salary and fringe benefits x 5 years	$162,647.50
Community Engagement	Direct	4.0. Community Outreach Liaison	Planning and materials	$25,000.50

Application Information	
Application Title	Benicia Forward: A Catalyst for a Clean and Resilient Future
Lead Applicant Name	City of Benicia
Project Location	Benicia, CA
Overall Funding Request	$35,634,524
Grant Term Request	5 years
Project Information	
Project Title	Clean Energy Initiative
Project Funding Request	$8,621,508.50

1. *Provide a summary of the project, addressing the following:*
    - *How the project aligns with at least one of the Local Community Benefit Fund's strategies:*
        - *Reduce air pollution and improve health outcomes*
        - *Build economic resilience for a just transition*
    - *How the project addresses community needs, including the specific communities your project will benefit.*
    - *A summary of the activities that will be supported by this project.*
    - *The measurable outcomes that will be achieved through this project.*

The Benicia Clean Energy Initiative combines Benicia's innovative future-thinking with its incredible flexibility in adapting to anticipated changes following the closure of the Benicia Refinery, aligning well with the Local Community Benefit Fund's strategies. This project challenges the City to imagine Benicia's future beyond its current gas- and diesel-powered facilities, imagining a complete transformation towards cleaner, renewable

energy. Its current reliance on these facilities stem from the City's historically tight budget; forcing the City to reimagine the allocation of all current City funds at any other time would upend its staff and push its City to lay off critical staff. This would not only result in delayed or stalled operations but would set the City back in its ability to pivot to new alternatives due to a lack of resources, funding, and support that would help stabilize the City's foundations. The announcement of the Refinery's closure left the City scrambling to salvage its current operations and plans. To rebuild, the City as it is currently known must completely adapt to this post-Refinery world. Thus, the City has strategized a more sustainable reconfiguration that would completely revitalize Benicia's operations, investing in its infrastructure, departments, and public spaces. This project is now better-aligned with improving the City's air quality, concentrating on electrifying current systems, maximizing solar output, and protecting residents who already bear an outsized pollution burden from the Valero refinery. Such a shift is not only more sustainable, but also reduces long-term costs, stabilizes facility operations, and gives the City a credible, grant-supportable roadmap toward renewable power over current fossil-fuel dependence.

To address community needs, City Hall, the Police Department (including emergency dispatch), the Public Library, and the Community Center occupy a stretch of East L Street that functions as Benicia's civic center. The Library draws approximately 161,000 visits a year; the Community Center hosts over 10,000. All four buildings are publicly accessible, which matters enormously when a heat event or air quality emergency displaces people from their homes. Seniors, young children, people with disabilities, and residents with asthma or cardiovascular conditions are the most frequent users of these facilities during emergencies, and they are the same populations most affected by the refinery's chronic pollution. Enhancing the building's reliability, ventilation, and resiliency is the City's priority when investing in its community's public health. The City is designating this cluster as the Benicia Civic Center Clean Energy District, creating a framework for phased, campus-level investment.

The City is ready to establish this campus as a low-emission, climate-ready framework for a formal community resilience center in future phases. In total, 38 HVAC units will be replaced across the four buildings — 13 at City Hall (10 split systems, 1 packaged A/C, 2 water heaters), 6 at the Police Department (5 split systems, 1 packaged A/C), 5 at the Library (4 packaged A/C units, 1 water heater), and 14 at the Community Center (1 split system, 13 packaged A/C units). Together, these investments serve facilities that collectively receive over 170,000 public visits per year, setting the standards for future public investments.

Elements of the project, including their **summaries** and notable **measurable outcomes,** include:

1.1B HVAC Electrification and Smart Controls and Measurable Outcomes: Equipment ages vary across the campus, but none of function adequately. The Library is operating systems that date to 1992 — 33 years old. The Police Department's HVAC is approximately 26 years old. The Community Center's is 20 years. City Hall has a mix: some equipment installed as recently as 2010, and other units over 30 years old. All will be replaced with electric heat pumps, eliminating on-site gas combustion across the campus and improving air quality inside buildings that serve as emergency shelters. California requires replacement of gas water heaters below 75 MBH with electric models beginning in 2027, and gas furnaces and packaged HVAC units with electric heat pumps beginning in 2029; this project proactively completes those transitions. The Community Center already uses Ecobee smart thermostats with remote access; City Hall, the Police Department, and the Library will be brought to the same standard, giving facilities staff the ability to manage temperatures remotely during heat emergencies without requiring anyone on-site.

The City Hall, Police Department, Library, and Community Center will receive new HVACs and water heaters. All replacements are electric heat pumps. Gas combustion is eliminated across the entire campus. The Community Center already operates Ecobee smart thermostats with remote access; the remaining three buildings will be upgraded to the same standard, giving City staff a unified platform to monitor and manage temperatures across all four facilities — essential during heat events when these buildings serve as public cooling centers.

1.1C Solar System Modernization and Measurable Outcomes: Benicia has made a sustained commitment to solar energy, installing arrays at facilities across the city over the past decade. This component is about protecting that investment. Awarded funds would be distributed across ten installations and covers initial repairs and upgrades, and ongoing inspections, panel care, and needed repairs. Solar reliability at the water pump stations and treatment plant is particularly critical — these systems support drinking water infrastructure, and outages carry direct public health consequences. Looking ahead, the City plans to pursue battery storage additions at key solar sites through available state funding programs, which would allow the Civic Center District and other community refuge facilities to operate independently of the grid during extended emergencies.

The City of Benicia intends to pioneer an expansive, innovative project that upends its current reliance on diesel and gas power, and transition into more sustainable, cleaner alternatives that improve the City's air quality and promote green energy in the long term. Notably, the City anticipates upgrading its first responder

departments by embracing solar-powered facilities and fleet electrification. Although the push for solar reliance remains a top priority for the City, its ongoing costs have often limited staff's ability to obtain and maintain these structures. The City anticipates that grant funding will help to alleviate the burden of funds that has historically limited the City from taking on more ambitious projects.

Municipal Solar Reliability and Battery Resilience Planning Project and Measurable Outcomes: The City of Benicia will invest $4.15 million over the five-year grant performance period to strengthen the performance, reliability, and operational value of its municipal clean-energy system across ten City facilities. From this total amount, $150,000 will support a comprehensive technical assessment of all ten sites to determine the feasibility of future battery energy-storage improvements. Together, these activities will protect the clean-energy foundation needed to expand Benicia's electric vehicle fleet and charging network while preparing the City to pursue future resilience investments based on sound engineering, cost, and community-benefit analysis.

The City currently receives solar energy and related infrastructure services through a long-term agreement covering solar assets at municipal facilities. Bay REPAIR funding will support eligible costs incurred during the grant period for solar infrastructure availability, performance services, monitoring, system optimization, maintenance, performance verification, and operational coordination. The project does not seek reimbursement for costs incurred before the grant begins. Rather, it will support the continued delivery and effective use of renewable energy throughout the five-year performance period while positioning the City for additional clean-energy and fleet-electrification investments.

The project will connect planning and operational improvements across ten City facilities, creating a coordinated municipal clean-energy network rather than a series of isolated sites. The City will evaluate solar generation, facility electricity demand, critical operations, planned electric vehicle charging loads, outage vulnerability, existing electrical infrastructure, and opportunities for future energy storage at each location. This citywide approach will help Benicia maximize the value of its existing solar resources and identify where future battery investments could most effectively support public services, clean transportation, and continuity of operations.

The $150,000 battery resilience assessment will examine the technical, operational, and financial feasibility of installing battery energy-storage systems at each of the ten facilities in a future implementation phase. The assessment will evaluate available space, existing electrical panels and interconnection conditions,

solar production profiles, facility load data, critical-load requirements, anticipated EV charging demand, fire and life-safety considerations, permitting requirements, system sizing, preliminary costs, potential incentives, and expected resilience and emissions-reduction benefits. It will also identify priority sites and develop recommended implementation phases.

No battery systems will be procured or installed through this project. Instead, the assessment will provide the technical documentation and implementation roadmap needed for the City to pursue future regional, state, federal, utility, and other clean-energy funding. This planning work will reduce uncertainty, establish realistic budgets and schedules, and improve the City's readiness to secure capital funding for battery installation after the Bay REPAIR-funded assessment is complete.

The project directly advances the Local Community Benefits Fund strategy to reduce air pollution and improve public health. Benicia's municipal solar-energy system provides the clean-energy platform needed to transition police, fire, public works, and other municipal operations away from gasoline- and diesel-powered vehicles and equipment. Improving system performance and coordinating solar generation with existing and planned charging demand will support the addition of electric fleet vehicles and increase the amount of municipal transportation activity powered by renewable energy.

This investment goes beyond routine maintenance. It will optimize system performance, improve coordination among ten municipal sites, support measurable fleet-electrification outcomes, and create a technically grounded pathway for future battery resilience improvements. Reliable access to renewable electricity is necessary for the City to replace fossil-fueled vehicles, operate dependable charging infrastructure, and avoid allowing electrical-capacity or reliability concerns to slow the transition to cleaner municipal operations.

The timing of the project is particularly important as Benicia enters a period of substantial fiscal and economic transition. Without grant support, the cost of sustaining and optimizing the municipal solar program could require the City to defer clean-transportation investments, slow the addition of electric vehicles and charging infrastructure, or postpone the technical work needed to advance future battery projects. Such delays could cause Benicia to lose momentum and remain more dependent on fossil fuels at the same time it is seeking to establish a healthier and more resilient post-refinery economy.

Grant-funded activities will include five years of solar infrastructure availability and performance services; preventive and corrective maintenance; system monitoring and performance verification; coordination of solar generation with existing and planned EV charging loads; annual evaluations of system reliability; the comprehensive battery feasibility assessment for all ten facilities; development of preliminary battery concepts, cost estimates, priorities, and implementation phases; and preparation of a long-term financing and operations strategy.

The City will measure project performance through annual solar electricity generation, system availability and downtime, maintenance and optimization activities completed, renewable electricity supplied to municipal operations, electricity used for EV charging, the number of fleet vehicles and charging ports supported, gasoline and diesel use displaced through related electrification efforts, and estimated reductions in greenhouse-gas and criteria-pollutant emissions. Battery-planning outcomes will include completion of assessments at all ten facilities, identification of feasible battery locations, recommended system capacities, preliminary implementation costs, priority rankings, and a funding strategy for future deployment.

Regular public updates will describe solar performance, implementation progress, municipal fleet electrification, completion of the battery assessment, and resulting air-quality, public-health, and resilience benefits. These measurable outcomes will connect the requested budget to the Air District's scoring priorities for community impact, readiness, measurable results, budget justification, and long-term sustainability.

By the fourth year of the grant, the City will complete and begin implementing a post-grant financing and operations strategy for the ten-facility clean-energy network. The strategy will identify municipal resources, avoided energy and fuel costs, charging revenue, external grants, utility programs, and other funding sources necessary to sustain the solar program and pursue future battery installations. Through this project, Benicia will strengthen its existing renewable-energy platform, prepare ten public facilities for future resilience investments, and create the dependable clean-energy foundation needed to accelerate municipal fleet electrification and the City's broader transition away from fossil fuels.

- **Personnel/Staff Costs:** Project Manager, Grant Manager, and Analyst would be responsible for carrying out the specific elements of this project. Appropriate Community Outreach would ensure that all Benicia residents' comments and needs are considered.

Following these upgrades, the City anticipates eventually building out the Community Center and the Library as formal community resilience centers, with expanded emergency capacity, programming, and backup systems to support residents through extended climate events or other natural disasters.

2. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered. (Q6)*

This suite of projects improves indoor air quality and climate comfort in the buildings Benicia residents depend on most, reduces emissions from city operations, and ensures that the Civic Center campus can serve as a reliable resilience hub — a safe place for residents during emergencies and a coordinated center for emergency operations.
Because the Clean Energy Initiative is primarily capital and programmatic in nature, community engagement operates at the levels of informing and consulting.

- The City will facilitate ongoing two-way engagement and report implementation progress at key milestones at City Council meetings in open public session.
- As with all the projects, the City will post project updates or engagement opportunities on the Benicia Forward webpage.
- The City Manager's newsletter will include Benicia Forward updates and engagement invitations in his weekly email newsletter as appropriate.
- SeeClickFix, which allows residents to flag infrastructure or facility-specific concerns from a mobile device, will be used to flag any issues with implementation.
- The Grants Manager will directly engage community stakeholders, especially through organizations serving seniors, people with disabilities, the school district, and residents with respiratory conditions. This ensures that the populations most reliant on these facilities as emergency resources have a direct channel to the project team.
- Finally, a grant implementation progress report will be included in the City's annual letter from the City Manager that is mailed to every Benicia address.

Construction at the Civic Center campus will directly affect Library and Community Center users. Advance notice of timelines and access disruptions will go to all City email subscribers, be posted at affected facilities. HVAC and thermostat upgrades will be coordinated with facility managers and senior programming staff who depend on the Community Center as a cooling resource during heat events.

Utility Providers PG&E, MCE (Marin Clean Energy), and the City's water and wastewater utilities are engaged as technical partners whose infrastructure decisions directly affect Clean Energy Initiative investments.

Through regular interaction with the community at public meetings, City Council meetings, and community programming, the City has consistently heard the importance of maintaining access to core services, safe gathering spaces, and reliable public safety operations.

The selected facilities reflect these identified priorities. City Hall serves as a central access point for residents to pay utility bills, access the Mayor's Office, attend City Council meetings, and engage with essential City staff. The Police Department facility supports critical public safety and dispatch operations, which are vital during emergency events. The Library and Community Center are heavily utilized community hubs that provide year-round programming and serve as designated cooling centers during extreme heat, offering safe and accessible refuge for vulnerable populations.

Together, these engagement efforts ensured that the project reflects both community-identified priorities and operational realities, resulting in a targeted investment that maximizes public benefit, supports vulnerable populations, and strengthens community resilience.

Utilize this table to report information about each project in your application. ** Do not edit the cells shaded grey. Those are formulas**
Application Title: Benicia Forward: A Catalyst for a Clean and Resilient Future

Project #	Project Title (3 words maximum)	Project Summary (1-3 sentences)	Strategy Alignment	Project Lead	Total Project Budget - Direct Costs	Total Project Budget - Professional Services & Consultants	% Professional Services & Consultants (Max of 25% of Application Direct Costs)	Total Funds Requested	Lead Applicant Budget
1	Clean Energy Initiative	Modernizes the City's municipal clean energy infrastructure through HVAC electrification, solar system modernization, battery resilience planning, and integration of renewable energy wtih electric vehicle charging infrastructure. The project reduces emissions, improves energy reliability, and strengthens essential public facilities during emergencies.	Reduce Air Pollution and Improve Health Outcomes	City of Benicia	$ 8,621,509	$ -	0.0%	$ 8,621,509	$ 8,621,509
2	Clean Mobility Initiative	Accelerates Benicia's transition to clean transportation by electrifying public safety and municipal fleets, expanding public EV charging, and improving bicycle and pedestrian infrastructure. The project reduces transportation emissions while increasing safe, sustainable mobility options for the community.	Reduce Air Pollution and Improve Health Outcomes	City of Benicia	$ 8,001,508	$ -	0.0%	$ 8,001,508	$ 8,001,508
3	Just Economic Transition	Supports Benicia's transition following the Valero refinery closure through industrial site transition planning, land use revitalization, clean industry recruitment, and workforce transition strategies. The project strengthens long-term economic resilience while promoting cleaner industries and protecting community health.	Both	City of Benicia	$ 11,430,925	$ 4,885,248.00	42.7%	$ 11,430,925	$ 11,430,925
4	Promoting Community Health	Improves public health by expanding the urban tree canopy, reducing wildfire and smoke risks, strengthening emergency response capabilities, modernizing fire equipment, and investing in parks, shoreline access, and public health improvements that reduce heat exposure and improve community resilience. **NOTE: Columns G&H are used to determine whether this application meets the 25% cap on Professional Services & Consultant Costs. The cap is calculated as 25% of the application's direct costs. The values for Columns G, H, and K-U should be entered using the same values from your project budget workbooks.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for **each Project** during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The **Clean Energy Initiative** strengthens Benicia's municipal clean-energy infrastructure through HVAC Electrification and Smart Controls, Citywide Solar System Modernization, Municipal Solar Reliability and Battery Resilience Planning, and integration of renewable energy with the City's growing electric vehicle fleet and charging infrastructure.

Summary of Measurable Outcomes and Indicators

Sub-Project and Component	Measurable Outcome	Indicator(s)
1.1b: Benicia City Center Community Resilience Center Campus Phase 1—HVAC Electrification and Smart Controls	Improve indoor air quality in Civic Center buildings by replacing aging HVAC systems with high-efficiency electric units and MERV-13 filtration, reducing particulate exposure for staff, seniors, and the public.	• 38 HVAC units replaced across four buildings; all pass final inspection • MERV-13 filters installed and documented in all new units • Pre-installation IAQ walkthrough on file; post-installation check confirms improved conditions • Gas water heaters at City Hall and Library replaced with electric heat pump models • Contractor commissioning reports on file for all units
	Eliminate on-site gas combustion, upgrade to lower-emissions R-454B refrigerant, and enable remote cooling center management through smart thermostat installation.	• All replacements use R-454B refrigerant (lower GWP than R-22/R-410A) • Ecobee smart thermostats are operational at City Hall, PD, and Library • Remote pre-cooling capability verified before each heat season • Occupant IAQ complaints tracked through existing facility channels
1.1c: Benicia City Center Community Resilience Center Campus Phase 1—Solar System Modernization	Protect solar energy production across 10 city installations through targeted one-time repairs, preserving renewable generation at water and community resilience facilities.	• One-time repairs ($480K) completed; solar contractor provides pre/post kWh production report • Solar uptime maintained at Water Treatment Plant and Pump Stations P-1, P-2, P-3 • Sites with >10% output degradation flagged and addressed
Municipal Solar Reliability and Battery Resilience Planning Project	Strengthen and expand the City's municipal clean-energy system across ten facilities—optimizing solar performance, adding battery backup at selected sites, and integrating renewable generation with the City's growing EV fleet and charging network.	• Annual solar electricity generation (kWh) tracked and reported for all ten City-served sites • Battery storage capacity installed (kW/kWh); energy stored and discharged tracked annually • # of facilities improved and critical loads supported by battery backup during outages or peak demand • System availability/uptime maintained at a defined target annually; unplanned downtime logged

Sub-Project and Component	Measurable Outcome	Indicator(s)
		• Renewable electricity supplied to municipal facilities and EV charging tracked annually (kWh) • # of fleet vehicles and charging ports supported by solar-sourced electricity • Estimated gasoline/diesel displaced and GHG/criteria-pollutant emissions avoided • Post-grant financing and operations strategy completed and implementation begun by Year 4

Detailed Milestones and Task Plan by Sub-Project

1.1b: Benicia City Center Community Resilience Center Campus Phase 1—HVAC Electrification and Smart Controls

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Improve indoor air quality in Civic Center buildings by replacing aging HVAC with high-efficiency electric units and MERV-13 filtration, reducing particulate exposure for staff, seniors, and the public.	A. IAQ Baseline Assessment and Equipment Specification	1. Conduct pre-installation IAQ walkthrough at all four buildings: document odors, moisture issues, airflow problems, and existing filter ratings; establish baseline condition record	Public Works / Facilities	Technical Advisory	Months 1–6
		2. Finalize equipment specs requiring MERV-13 filtration and R-454B refrigerant; confirm unit counts and locations — City Hall (13 units), PD (6 units), Library (5 units), Community Center (14 units)	Public Works	HVAC Contractor	Months 1–6
		3. Develop construction schedule minimizing disruption to Library and Community Center operations; coordinate with facility managers and senior programming staff	Public Works	Library Director; CC Manager	Months 3–9
	B. HVAC Replacement and Water Heater Upgrades	1. Replace all 38 HVAC units across four buildings with electric heat pumps equipped with MERV-13 filters; complete all replacements by Year 2	Public Works	HVAC Contractor; Building Safety	Months 9–24

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		2. Replace gas water heaters at City Hall and Library with electric heat pump models (proactively meeting CA 2027 mandate); confirm all units use R-454B refrigerant	Public Works	HVAC Contractor	Months 12–24
		3. Obtain contractor commissioning reports for all units confirming performance to specification; verify final inspection approval from Building Safety	Public Works	Building Safety	Months 18–24
	C. Post-Installation Verification	1. Contractor conducts post-installation IAQ check at all four buildings: confirm improved ventilation and filter performance; document results for grant file	Public Works	Technical Advisory	Months 24–30
		2. Review occupant IAQ complaints via existing facility channels before and after installation; document any improvement in complaint frequency	Public Works / Facilities	Facility Managers	Months 24–36
Eliminate on-site gas combustion, upgrade to lower-emissions R-454B refrigerant, and enable remote cooling center management through smart thermostat installation.	A. Smart Thermostat Installation and Training	1. Install Ecobee smart thermostats at City Hall, Police Department, and Library (Community Center already equipped); configure remote access and pre-cooling capability for all four buildings	Public Works / Facilities	HVAC Contractor; IT	Months 18–24
		2. Train facilities staff on unified remote management platform; document staff ability to activate pre-cooling for cooling center operations without being on-site	Public Works / Facilities	IT Department	Months 18–24
	B. Cooling Center Readiness Verification (Annual)	1. Before each heat season, test remote pre-cooling capability at all four buildings; confirm HVAC, smart controls, and backup generator are all operational; log results	Public Works / Facilities	Emergency Management	Annual (Months 24–60)
		2. Report cooling center readiness status to Community Sustainability Commission annually	Public Works	N/A	Annual (Months 24–60)

1.1c: Solar System Modernization

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Protect solar energy production across 10 city installations through targeted one-time repairs, preserving renewable generation at water and community resilience facilities.	A. Year 1 Inspections and One-Time Repairs	1. Inspect all 10 solar installations: document current kWh output, inverter status, panel condition, and monitoring gaps; establish production baseline for each site (City Hall, Community Center, Community Park, Corp Yard, Fire Station 12, Swim Center, Water Treatment Plant, Pump Stations P-1, P-2, P-3)	Public Works / Facilities	Solar Contractor	Months 1–6
		2. Complete one-time repairs ($480K): Water Pump Station P-3 ($257K — meter upgrade, 2 inverter replacements, updated monitoring); remaining budget to other underperforming sites identified in inspection; prioritize water infrastructure sites	Public Works	Solar Contractor; PG&E	Months 6–18
		3. Obtain solar contractor pre/post kWh production report documenting output before and after repairs; archive for grant reporting	Public Works / Facilities	Solar Contractor	Months 18–24
	B. Citywide Solar Powered Transition	1. Solar contractor work at all 10 sites: panel cleaning, inverter servicing, monitoring verification, electrical checks; contractor submits service logs for each site	Public Works / Facilities	Solar Contractor ($400,800/yr)	Annual (Months 6–60)
		2. Review contractor's annual kWh production report for all 10 sites; flag any sites with >10% degradation for prompt repair; include solar performance summary in annual grant progress report	Public Works	N/A	Annual (Months 12–60)

Municipal Solar Reliability and Battery Resilience Planning Project

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date

Strengthen and expand the City's municipal clean-energy system across ten facilities—optimizing solar performance, adding battery backup at selected sites, and integrating renewable generation with the City's growing EV fleet and charging network.	A. Executed consultant contracts	1. Grant agreement execution, staffing assignment, and competitive procurement of consultant services	Public Works / Facilities	Solar Contractor	Months 1-3
	B. Inventories and Summaries	1. Energy data set and load summary: Collect and analyze twelve months of interval meter data, utility bills, and tariff details for every city account	Public Works / Facilities	Solar Contractor	Months 2-4
		2. Generator inventory: Inventory every standby generator serving a city facility: rating, fuel, permit or registration status, and recorded run hours	Public Works / Facilities	Solar Contractor	Months 2-5
		3. Site condition summary: Review array condition and expected remaining life at each site, coordinated with the restoration contractor	Public Works / Facilities	Solar Contractor	Months 3-5
	C. Study and Analysis	1. Critical load tables by facility: Critical load study with department staff and the Fire Department; sort loads into critical, operational, and non-essential tiers	Public Works / Facilities	Solar Contractor	Months 4-7
		2. Interconnection memo and tariff determination: Interconnection screening and utility tariff analysis, including the net metering successor tariff question	Public Works / Facilities	Solar Contractor	Months 4-8
		3. Siting feasibility findings, reviewed by the Fire Department: Fire and building code siting review, including separation distances and access	Public Works / Facilities	Solar Contractor	Months 5-8
		4. Financing and encumbrance memo: Review loan covenants on the collateralized buildings and confirm the federal tax credit pathway	Public Works / Facilities	Solar Contractor	Months 5-8
	D. Application and Publication	1. Ranked site list, concept design for the flagship facility, engineer's cost estimates: Apply selection criteria, size systems from measured loads, prepare concept design and cost estimates	Public Works / Facilities	Solar Contractor	Months 8-10
		2. Baseline and target report, published findings: Publish the emissions baseline, set targets for future phases, and present findings to the City Council	Public Works / Facilities	Solar Contractor	Months 10-12

Project Name: Benicia Forward: A Catalyst for a Clean and Resilient Future
Lead Applicant Name: City of Benicia
Term for this budget (in years): 5

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	1.1.c. Benicia City Center Community Resilience Center Campus Phase 1—Solar System Modernization	Cost for a subcontractor $400,800 to ensure continuous operations for 5 years	$1,603,200.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	1.1.b. Benicia City Center Community Resilience Center Campus Phase 1—HVAC Electrification and Smart Controls	One time cost for a subcontractor to install HVAC & Smart Controller Improvements at City Hall, Library, Community Center	$2,071,428.00
Construction	Direct	Project Manager	25% FTE x $242,874 annual salary and fringe benefits x 5 years	$303,592.50
Personnel/Staff Costs	Direct	Grant Manager	25% FTE x $244,512 annual salary and fringe benefits x 5 years	$305,640.00
Personnel/Staff Costs	Direct	Analyst	25% FTE x $130,118 annual salary and fringe benefits x 5 years	$162,647.50
Personnel/Staff Costs	Direct	Community Outreach	Funding for staff time, planning, presentation materials.	$25,000.50
Construction	Direct	Municipal Solar Reliability and Battery Resilience Planning Project	Funded upgrades to various citywide electrical infrastructure and the construction/integration of 10 solar sites, including 4 water utlities sites and 6 general fund sites ($4,000,000), Assessment of all 10 city facilities ($150,000)	$4,150,000.00

Application Information	
Application Title	Benicia Forward: A Catalyst for a Clean and Resilient Future
Lead Applicant Name	City of Benicia
Project Location	Benicia, CA
Overall Funding Request	$35,634,524
Grant Term Request	5 years
Project Information	
Project Title	Clean Mobility Initiative
Project Funding Request	$8,001,507.50

1. *Provide a summary of the project, addressing the following:*
    - *How the project aligns with at least one of the Local Community Benefit Fund's strategies:*
        - *Reduce air pollution and improve health outcomes*
        - *Build economic resilience for a just transition*
    - *How the project addresses community needs, including the specific communities your project will benefit.*
    - *A summary of the activities that will be supported by this project.*
    - *The measurable outcomes that will be achieved through this project.*

The Benicia Clean Mobility Initiative is an absolutely crucial element for the City's transition to a more holistically cleaner system. Every component of this project reduces transportation-related air pollution, which makes up Benicia's largest controllable source of PM2.5, NOx, and greenhouse gases. Fleet electrification and maintenance directly cut tailpipe emissions from city vehicles. Pedestrian and bicycle infrastructure investments

make low- and zero-emission travel practical for more residents, shifting short trips away from single-occupancy vehicles. Better-maintained pedestrian bridges, tunnels, and sidewalks give people safe, contiguous routes to reach transit, schools, and services. The Legacy Fleet transition plan advances Just Transition by replacing reactive, crisis-driven repairs with a structured, grant-supportable roadmap that progressively lowers the City's operating costs and emissions profile as vehicles turn over.

Elements of the project, including their **summaries** and notable **measurable outcomes,** include:

2.1.a. City Fleet Transition — Police Department Electric Vehicle Acquisition (5 Vehicles): The City of Benicia will acquire and deploy five battery-electric vehicles to replace gasoline-powered vehicles used by the Police Department for administrative and community-safety functions. The vehicles will support routine departmental travel, staff transportation, training, meetings, community outreach, investigations, equipment movement, and other non-patrol activities that do not require a fully equipped emergency-response vehicle. Replacing frequently used administrative vehicles with electric alternatives will immediately reduce gasoline consumption, operating emissions, and dependence on fossil fuels while advancing the City's broader transition to a cleaner municipal fleet.

Grant funding will support both the acquisition of the five vehicles and the specialized equipment and installation required to place them into law-enforcement service. The cost of a police administrative vehicle extends considerably beyond the manufacturer's advertised or base purchase price. Depending on each vehicle's assigned function, upfitting may include police radios and communications equipment, emergency or warning lights, mobile computer workstations, secure equipment storage, vehicle identification or graphics, protective components, electrical-system modifications, safety equipment, and other department-specific accessories. Grant funds may also support delivery, inspection, registration, installation labor, testing, commissioning, and staff training necessary to ensure that each vehicle is safe, reliable, and operationally ready.

The project directly advances the Air District's goal of reducing air pollution and improving public health by replacing daily gasoline-powered vehicle trips with zero-tailpipe-emission transportation. The five electric vehicles will reduce localized emissions associated with travel through residential neighborhoods, commercial areas, schools, parks, and other community locations. Regenerative braking will also reduce reliance on friction brakes, helping decrease brake wear and associated particulate emissions while extending component life.

The Police Department's sworn and professional personnel rely on administrative vehicles to perform essential duties throughout Benicia and the surrounding region. Selecting administrative vehicles for the City's initial law-enforcement fleet conversion provides a practical and operationally appropriate pathway for electrification because these vehicles generally follow predictable duty cycles and can be deployed without compromising emergency-response requirements. Their use will allow the City to evaluate vehicle range, reliability, maintenance needs, operating costs, and staff experience before expanding electric technology into additional public-safety fleet classifications.

Before acquisition, the City will identify the gasoline-powered vehicles to be replaced and document their age, mileage, annual fuel consumption, maintenance history, operating costs, and typical use. Replacement vehicles will be selected based on range, safety, reliability, cargo capacity, warranty coverage, law-enforcement upfitting compatibility, and total cost of ownership. The gasoline-powered vehicles replaced through the project will be removed from routine Police Department service to ensure that the investment results in lasting and verifiable emission reductions.

The City will measure project performance by tracking electric vehicle mileage, gasoline displaced, charging energy consumed, estimated reductions in greenhouse gases and criteria pollutants, vehicle availability, maintenance and operating costs, and staff feedback. The City will also compare the electric vehicles' performance and total ownership costs with those of the gasoline-powered units they replace. These measurable outcomes will inform the City's long-term fleet replacement strategy and provide a documented basis for expanding electrification to other municipal departments.

By acquiring five fully equipped electric police administrative vehicles, Benicia will achieve immediate mobile-source emission reductions while demonstrating that electric vehicles can reliably support essential law-enforcement operations. The project will produce lasting air-quality, public-health, operational, and financial benefits and establish a scalable model for continued municipal fleet electrification beyond the grant term.

2.1B City Fleet Transition and Charging Infrastructure — Installation of EV Charging Stations and Measurable Outcomes: Benicia currently has no EV charging stations in the Police Department and I.T. parking lot at 150 East K Street. Two Level-2 dual-port charging stations will be installed there, made accessible to City owned EV Fleet. Power-sharing technology will balance electrical load across both ports, maximizing throughput without overloading the service. Two non-patrol

EV vehicles (anticipated Electric Chevy Blazer or comparable EV) will replace fossil-fuel units in the Police Department's administrative fleet, reducing tailpipe emissions from daily operations and extending the City's EV investment beyond the charging infrastructure itself.

Benicia's 34 sworn officers and 20 non-sworn professional employees depend on reliable vehicles for community safety operations. Electrifying the admin fleet reduces fuel and maintenance costs while demonstrating that the transition to EVs is operationally viable to the public — a signal that matters as the City develops its broader fleet transition plan. Electric vehicles also eliminate brake dust containing asbestos through regenerative braking, a meaningful reduction in a city already managing cumulative pollutant exposure from the Valero refinery.

This project installs the City's first EV charging infrastructure at 150 East K Street — four charging ports across two Level 2 dual-port stations, where no charging currently exists. Three non-patrol EV vehicles replace fossil-fuel units in the Police Department's administrative fleet, displacing an estimated 15,000–20,000 miles of fossil-fuel vehicle travel annually. Both investments are designed to remain in service well beyond the grant term and establish the operational foundation for the broader fleet electrification transition.

2.2: Pedestrian & Bicycle Infrastructure Transformative Initiative: First Street Bikeway and Pedestrian Initiative/Benicia High School Pedestrian Crossing Transformation: Benicia's pedestrian and cycling network serves a community where walkability and mobility access are public health issues, not just transportation ones. According to the 2020 Census, 7.8% of Benicia residents under 65 have a reported disability, 23.7% are over 65, and 20.5% are minors. These groups depend on safe, accessible sidewalks, ramps, and crossings for daily travel — and they are the most exposed to traffic hazards and air quality impacts when infrastructure is inadequate. More people walking and cycling also means fewer short car trips, which are among the most emissions-intensive trips.

First Street runs 0.8 miles from the Military East/West intersection to the Benicia waterfront — a route that connects the City's border to its downtown core, passing through a commercial and arts district anchored by galleries, cafes, and small businesses that depend on foot and bike traffic. Three children have been struck by vehicles in this corridor recently. Planned improvements include high-visibility crosswalk markings, bike lane striping, bulbouts with ADA-compliant curb ramps, and bike racks in AB 413-mandated no-parking zones near intersections,. The full

street is scheduled for pavement rehabilitation in 2028, and this investment establishes the safety markings and infrastructure ahead of that work.

High School Pedestrian Crossing Upgrades: Benicia High School's 1,405 students navigate one of the city's most congested intersections daily, at Military West, West 11th Street, and Denfield Avenue — sandwiched between the campus and Interstate 780.

Pedestrian and bicycle improvements within the public right-of-way are fundamental to creating a safe, connected, and resilient multimodal transportation system while directly advancing the Bay Area Air District's objectives of reducing greenhouse gas emissions, improving air quality, and increasing the use of active transportation. ADA- and PROWAG-compliant curb ramps provide the essential connection between sidewalks and street crossings, eliminating accessibility gaps that can force people using wheelchairs, mobility devices, strollers, or bicycles into the roadway or require lengthy detours. Continuous Class II bicycle lanes create dedicated, predictable space for cyclists, improving safety and comfort while closing critical gaps in the City's bicycle network. Complementary improvements, including bicycle parking strategically located throughout the downtown corridor, encourage cycling by providing convenient and secure end-of-trip facilities serving local businesses, schools, parks, the waterfront, civic destinations, and transit stops. Together with high-visibility crosswalks, curb extensions, RRFBs, sidewalk rehabilitation, green infrastructure, and accessible pedestrian crossings, these improvements create seamless connections between neighborhoods, schools, downtown Benicia, the waterfront, parks, and transit. Closing gaps in both the pedestrian and bicycle networks strengthens Safe Routes to School, improves first- and last-mile transit access, expands transportation choices for residents of all ages and abilities, and encourages walking and bicycling as practical alternatives to short vehicle trips. By shifting more local trips from automobiles to active transportation, these investments help reduce vehicle miles traveled, lower transportation-related greenhouse gas emissions and criteria air pollutants, improve public health through increased physical activity, and support cleaner, healthier, and more sustainable communities—outcomes that directly align with the Bay Area Air District's mission to improve regional air quality while advancing climate resilience and equitable access to low-carbon transportation options.

The City will also install a Pedestrian Scramble (also called an Exclusive Pedestrian Phase): a signal phase during which all vehicle movements stop and pedestrians may cross in any direction, including diagonally. All approaches display red lights with lighted "No Right Turn" indications during the phase. This is

the most effective intervention for high-volume school crossings with multi-directional pedestrian demand. The upgrade also includes enhanced striping and lighting to improve visibility during the late-evening hours when after-school athletics bring students back across this intersection.

Five subcomponents address the physical gaps in Benicia's pedestrian and cycling network. By Year 5, the project will have improved 0.8 miles of First Street with bike lanes, high-visibility crosswalks, and ADA-compliant curb treatments; installed a pedestrian scramble crossing that gives Benicia High School students a safe, dedicated crossing phase at the city's most hazardous school intersection; completed repairs and upgrades on all three bridge and tunnel structures (East 3rd Street Tunnel, Military West Pedestrian Bridge, Columbus Parkway Pedestrian Bridge); upgraded curb ramps at priority locations coordinated with annual pavement rehabilitation; and repaired sidewalks at the deficiency sites with the highest use and greatest safety risk, as identified through SeeClickFix data and ADA Transition Plan obligations.

2.3 Active Transportation Planning and Design (A) and Capital Improvement Prioritization (B): Benicia's Capital Improvement Plan was last adopted in FY 2021–2022. An updated CIP is needed to reflect current infrastructure conditions, prioritize pedestrian and bicycle investments, and provide the planning pipeline that turns community input into fundable, construction-ready projects. The update will incorporate input from the community as well as all City departments to produce updated cost estimates and project sequencing and establish a formal priority framework for bike and pedestrian investments across the City.

Transportation Planning, Design, and Improvements expands this work into a formal active transportation program: preliminary engineering, design, permitting, right-of-way coordination, public involvement, and construction administration for pedestrian and bicycle projects in the pipeline. This includes coordination with the Solano Transportation Authority on regional connections and the pursuit of state and federal gap-funding grants to extend the City's network beyond what this grant funds directly. A formal Bikeway Plan will identify corridors that minimize conflicts between vehicles and people walking or biking, address conflicts with industrial uses, establish design standards for future projects, and provide the documentation needed to compete for active transportation grant programs at the state and federal levels.

An updated Capital Improvement Plan will reflect current conditions across public infrastructure and facilities, with explicit prioritization criteria for pedestrian and

bicycle investments. Transportation Planning, Design, and Improvements will advance projects through preliminary engineering, design, and permitting, building a pipeline of construction-ready projects for future grant cycles. A formal Bikeway Plan will identify and design priority corridors, apply for gap and last-mile funding at the state and federal level, and coordinate with the Solano Transportation Authority on regional connections. Together, these planning efforts reduce the timeline and cost between community-identified needs and funded construction.

2.5a. Type-1 Electric Fire Truck Acquisition: The City of Benicia will acquire and deploy a Type-1 Pierce Enforcer Volterra parallel-electric fire engine as a frontline emergency-response apparatus serving residents, businesses, schools, transportation corridors, industrial areas, and other locations throughout Benicia. The apparatus is anticipated to be the first electric fire engine placed into service in Solano County and among the first deployed in the Bay Area. Its deployment will establish Benicia as an early regional adopter of advanced, emission-reducing emergency-response technology and provide a replicable model for neighboring fire agencies considering the transition to cleaner fleets. This revised scope focuses exclusively on acquisition and operational deployment of the apparatus originally proposed by the City.

The project directly advances the Local Community Benefits Fund strategy to Reduce Air Pollution and Improve Health Outcomes by replacing the routine operation of a conventional diesel fire engine with battery-electric driving and pumping. The Pierce Volterra can respond to incidents and operate its fire pump at full capacity using onboard battery power during typical calls, providing zero-tailpipe-emission operation while in electric mode. Its parallel-electric drivetrain retains an internal-combustion backup that can provide continuous power during extended incidents, preserving operational readiness, pumping capacity, and emergency-response reliability.

The engine will be placed into regular frontline service for fire suppression, emergency medical response, rescue operations, hazardous-condition response, and other calls throughout the community. By reducing the use of diesel fuel during travel, staging, pumping, and on-scene operations, the project will reduce localized emissions and noise near homes, schools, parks, senior facilities, businesses, and other sensitive community locations. The project will also reduce firefighters' occupational exposure to diesel exhaust and excessive engine noise at the fire station and incident scenes while demonstrating that emission-reducing technology can satisfy the demanding safety and performance requirements of municipal emergency response. Vehicle replacement and the purchase of cleaner equipment are specifically identified as eligible ambient-emissions-reduction

activities under the Air District guidelines.

Grant-funded activities will include acquisition, customization, delivery, inspection, acceptance testing, firefighter and fleet-maintenance training, commissioning, and deployment of the engine. Before deployment, the City will establish a baseline using the conventional apparatus being replaced, including annual mileage, engine and pumping hours, fuel consumption, idling, call volume, maintenance costs, and estimated emissions. During the grant term, the City will track electric-mode mileage and operating hours, the percentage of calls completed primarily on battery power, diesel gallons displaced, estimated reductions in NOx, PM2.5, and greenhouse-gas emissions, apparatus availability, maintenance costs, and firefighter operational feedback. These indicators will provide specific and measurable evidence of the project's air-quality, public-health, operational, and financial benefits, consistent with the Air District's preference for calculable mobile-source emission reductions.

To expand the project's regional impact, the City will provide accessible public updates on implementation and performance, demonstrate the apparatus through community events, and share operating data and lessons learned with neighboring fire agencies and regional public-safety partners. This outreach will allow residents to understand how the investment is improving local air quality and will help other agencies evaluate the feasibility of adopting similar technology. Through this combination of direct emission reductions, measurable community benefits, operational evaluation, and regional knowledge sharing, Benicia will pioneer a cleaner model for emergency-response services that can be replicated throughout the Bay Area.

Fire Department Administrative Fleet Electrification and Charging Project: The City of Benicia will replace three gasoline-powered Ford Explorer administrative vehicles with three Rivian R1S tri-motor electric vehicles, or comparable all-electric vehicles meeting the Fire Department's operational requirements. The vehicles will be assigned to Fire Department administrative and command personnel and used for emergency-scene support, inspections, training, meetings, public education, community outreach, mutual-aid coordination, equipment transportation, and other departmental responsibilities. The project will also install a dedicated Level 2 charging system at the fire station that will house and dispatch the majority of the vehicles.

Replacing the three gasoline-powered vehicles with battery-electric alternatives will reduce fuel consumption and eliminate direct tailpipe emissions during vehicle operation. Fire Department administrative vehicles are routinely driven throughout

Benicia, including in residential neighborhoods, commercial areas, schools, parks, industrial areas, and locations affected by emergency incidents. Electrifying these vehicles will reduce localized emissions of nitrogen oxides, particulate matter, carbon monoxide, volatile organic compounds, and greenhouse gases while supporting the City's broader transition away from fossil-fuel-dependent municipal operations.

The proposed electric vehicles will provide the range, passenger capacity, cargo space, all-weather capability, and operational reliability necessary to support Fire Department administrative and command functions. Their deployment will provide a practical pathway for introducing electric technology into the Department's fleet without compromising frontline emergency-response capacity. The project will also allow the City to evaluate vehicle performance, charging patterns, maintenance requirements, energy use, and total cost of ownership before expanding electrification to additional fire-service fleet classifications.

The estimated vehicle acquisition cost is $119,000 per vehicle, including applicable taxes, licensing, delivery, and related acquisition expenses, for a total vehicle cost of approximately $357,000. An additional approximately $40,000 per vehicle, or $120,000 total, will support the specialized upfitting required to place each vehicle into Fire Department service. Depending on operational assignment, upfitting may include emergency and warning lights, radios and communications equipment, vehicle striping and identification, mobile computer equipment, secure storage, electrical modifications, command and safety equipment, and installation labor. These department-specific improvements make the cost of a fully operational fire administrative vehicle considerably higher than the vehicle's base retail price.

Approximately $100,000 will support installation of the Level 2 station charging system. Charging infrastructure costs may include design and engineering, electrical-service and panel evaluation, permitting, trenching and conduit, wiring, electrical equipment, charging hardware, protective bollards, networking, installation, inspection, testing, commissioning, and any necessary electrical upgrades. The system will be designed to reliably support the three vehicles' anticipated duty cycles and to allow the majority of charging to occur while the vehicles are stationed between assignments.

The total estimated project cost is approximately $577,000, consisting of $357,000 for vehicle acquisition, $120,000 for Fire Department upfitting, and $100,000 for charging infrastructure. This budget represents a complete and deployment-ready project rather than the purchase of three standard passenger vehicles. Each vehicle must be acquired, equipped, tested, and commissioned for public-safety

use, and the supporting charging infrastructure must be operational before the vehicles can be placed into regular service.

Before acquisition, the City will document baseline conditions for the three Ford Explorers being replaced, including vehicle age, mileage, annual fuel consumption, maintenance history, annual operating costs, duty cycles, and typical travel patterns. During the grant period, the City will track electric vehicle mileage, charging energy consumption, gasoline displaced, estimated reductions in criteria pollutants and greenhouse-gas emissions, vehicle availability, maintenance costs, charging-system performance, and staff feedback. The replaced gasoline-powered vehicles will be removed from routine Fire Department service to ensure the project produces lasting and verifiable emission reductions.

The City will incorporate the vehicles and charging system into its existing fleet-management, inspection, maintenance, and replacement programs. Fire Department personnel will receive training on electric vehicle operation, emergency procedures, charging protocols, battery management, and equipment use. The City will also establish an operations and maintenance plan for the charging system and budget for vehicle, charger, and equipment maintenance after the grant period.

By combining vehicle replacement with the infrastructure necessary for dependable daily charging, the project will create an immediately operational and sustainable Fire Department electrification program. The investment will deliver measurable air-quality and public-health benefits, reduce the Department's reliance on gasoline, demonstrate the viability of electric vehicles in fire-service administrative operations, and establish a scalable foundation for continued municipal fleet electrification.

New Public Electric Vehicle Charging Access and Community Adoption Project: The City of Benicia anticipates installing at least five publicly accessible, dual-port Level 2 electric vehicle charging stations serving a minimum of ten parking spaces at highly visible community destinations. The project will expand access to reliable charging infrastructure, reduce a key barrier to electric vehicle adoption, and encourage residents and visitors to replace gasoline-powered vehicle trips with cleaner transportation. Charging will be provided at no cost to users throughout the five-year grant performance period, creating a direct and tangible community benefit while encouraging long-term changes in transportation behavior.

The City will evaluate several potential locations, including the end of the First Street Pier, Jack London Park, Community Park, and Ninth Street Park. These sites were selected for initial consideration because they are well-known public destinations that serve residents, visitors, families, recreational users, and nearby businesses. The First Street Pier location would support waterfront access, tourism, downtown businesses, and increased pedestrian activity along the First Street commercial corridor. Charging at community parks would serve residents visiting sports fields, playgrounds, recreational facilities, walking areas, and community events, allowing vehicles to charge while users participate in activities that typically last long enough to benefit from Level 2 charging.

Final locations will be selected following an assessment of electrical capacity, site conditions, accessibility, public visibility, anticipated demand, construction feasibility, geographic distribution, safety, and proximity to community destinations. The City will prioritize sites where adequate electrical infrastructure is readily available so that grant funding can maximize the number of operational charging ports and avoid unnecessary construction costs. If one of the initially identified locations is determined to be infeasible or disproportionately expensive, the City will select another high-visibility public site that provides comparable community access and benefits.

Grant-funded activities will include site assessments, electrical-load analysis, design and engineering, environmental and permitting review, utility coordination, trenching and conduit, electrical-service or panel improvements where necessary, charging equipment, networking, protective bollards, pavement restoration, striping, signage, accessibility improvements, inspection, testing, commissioning, and project management. Stations will be designed to serve two parking spaces wherever feasible and will comply with applicable accessibility, electrical, building, and safety requirements.

Providing free public charging during the grant period will make the benefits of the project immediately available to the community and reduce the operating-cost barrier that may discourage residents from purchasing or using electric vehicles. The City may establish reasonable parking or charging-time limits to encourage turnover and ensure that the stations benefit as many users as possible. Clear signage and publicly available information will identify station locations, operating procedures, availability, and applicable use requirements.

The City will conduct a coordinated community outreach campaign to ensure residents and visitors are aware of the new charging resources. Outreach may include City newsletters, social media, public events, park and waterfront signage,

maps, website information, local business partnerships, community-based organization outreach, and demonstrations or educational events focused on the financial, air-quality, and public-health benefits of electric transportation. Outreach will also provide opportunities for residents to share feedback regarding charger locations, accessibility, reliability, and future infrastructure needs.

The project directly advances regional goals to reduce mobile-source pollution and improve community health. Public charging infrastructure enables additional electric vehicle use and helps reduce gasoline consumption, tailpipe emissions, and localized exposure to nitrogen oxides, particulate matter, volatile organic compounds, carbon monoxide, and greenhouse gases. Locating chargers at parks, the waterfront, and other public destinations will make clean transportation infrastructure visible and practical while demonstrating the City's commitment to a post-fossil-fuel future.

The City will measure project performance by tracking the number of stations and charging ports installed, station uptime, charging sessions, unique users where available, electricity dispensed, average session duration, estimated electric vehicle miles supported, gasoline displaced, estimated reductions in criteria pollutants and greenhouse-gas emissions, outreach activities completed, and community feedback. Usage data will help the City identify demand patterns and guide future decisions regarding public charging locations and infrastructure expansion.

The City will maintain the charging stations throughout the grant term and establish a long-term operations, maintenance, and funding plan before the grant concludes. The plan will address equipment warranties, network services, preventive and corrective maintenance, electricity costs, station monitoring, repair response times, and the fee structure or other funding source that will sustain public access after the period of free charging ends.

By installing at least five dual-port Level 2 charging stations at visible and frequently used community destinations, Benicia will provide an immediate public benefit, support local businesses and recreational amenities, and create the infrastructure necessary for broader electric vehicle adoption. The project will deliver measurable emission reductions while establishing a scalable foundation for continued expansion of publicly accessible clean transportation infrastructure.

Personnel/Staff Costs: Project Manager, Grant Manager, and Analyst would be responsible for carrying out the specific elements of this project. Appropriate

Community Outreach would ensure that all Benicia residents' comments and needs are considered.

2. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

This suite of projects improves the safety and accessibility of active transportation options, thus providing an option to single occupant vehicles. The bike and pedestrian concentration near schools ensure students get to school comfortably, and downtown improvements encourage more pedestrian activity which will have made downtown a more attractive destination, supporting economic development in the City. All of these projects theoretically an influence mode shift from driving to walking.

Because The Clean Mobility Initiative is primarily capital and programmatic in nature, community engagement operates at the levels of informing and consulting.

- The City will facilitate ongoing two-way engagement and report implementation progress at key milestones at City Council meetings in open public sessions.
- As with all the projects, the City will post project updates or engagement opportunities on the Benicia Forward webpage.
- The City Manager's newsletter will include Benicia Forward updates and engagement invitations in his weekly email newsletter as appropriate.
- Active transportation planning efforts will include public meetings with residents, business owners, and school community members to ensure the Bikeway Plan and CIP priorities reflect on-the-ground needs.
- During implementation, the project team will review SeeClickFix data and incorporate it into maintenance prioritization under the fleet and infrastructure programs.
- The Grants Manager will directly engage community stakeholders, especially seniors, people with disabilities, the school district/students, and downtown businesses and workers
- Updates on construction timelines, street closures, and pedestrian detours will also be communicated through the City's weekly email blast and social media channels, with particular attention to First Street — where businesses and frequent users will be directly affected by construction activity and will benefit most from early, clear communication.
- Finally, a grant implementation progress report will be included in the City's annual letter from the City Manager that is mailed to every Benicia address.

The *Economic Development Board* will receive bi-annual updates on and provide oversight for The Clean Mobility Initiative investments, and provide input on topics such as sub-project design, a fleet electrification plan, and public noticing before construction.

Community input for this project came through multiple channels. SeeClickFix, the City's mobile reporting platform available since 2022, generates location-specific, photo-documented reports from residents on street conditions, pedestrian hazards, and infrastructure problems. Each submission is routed to the appropriate department for follow-up, and the accumulated data creates a georeferenced picture of where conditions are worst and where residents feel least safe. This data drove project location priorities. City Council discussions and public comment periods provided broader structured input.

Each project component traces directly to this community and stakeholder input. First Street's inclusion reflects repeated feedback from residents, business owners, and cyclists about safety in the downtown corridor where accidents have been reported. The High School crossing upgrade responds to community concern about student safety near one of Benicia's most heavily trafficked intersections. Pedestrian bridge and tunnel maintenance addresses documented conditions — graffiti, lighting deficiencies, structural wear, and safety hazards — on routes used daily by schoolchildren, seniors, and residents with disabilities. Curb ramp and sidewalk priorities are driven by SeeClickFix data and ADA Transition Plan obligations, targeting locations where gaps in the pedestrian network most affect vulnerable users.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for **each Project** during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The **Clean Mobility Project** reduces transportation-related air pollution and advances equitable access to clean transportation through coordinated investments in fleet electrification, active transportation infrastructure, transportation planning, zero-emission emergency response vehicles, and publicly accessible electric vehicle charging infrastructure. Together, these initiatives reduce emissions, improve public safety, expand transportation options, and strengthen Benicia's long-term mobility resilience.

Summary of Measurable Outcomes and Indicators

Sub-Project	Measurable Outcome	Indicator(s)
2.1: City Fleet Transition and Charging Infrastructure — Installation of EV Charging Stations and Police Department Electric Vehicle Acquisition (5 Vehicles)	Replace five gasoline-powered Police Department administrative vehicles with battery-electric alternatives, reducing fleet emissions while maintaining law enforcement operational readiness.	• Baseline documented for the 5 gasoline-powered vehicles being replaced (age, mileage, annual fuel consumption, maintenance history, operating costs) • 5 electric vehicles acquired, upfitted for law-enforcement service, and placed into operation • Gasoline-powered vehicles removed from routine PD service upon replacement • Annual EV mileage, gasoline displaced, and charging energy consumption tracked • Estimated GHG/criteria pollutant emissions reductions calculated annually against baseline • Total cost of ownership compared between electric and gasoline-powered units
2.2: Pedestrian and Bicycle Infrastructure Transformative Initiative	Improve pedestrian and bicycle safety and accessibility across Benicia through targeted capital investments on First Street, at Benicia High School, on three bridge/tunnel structures, and on citywide curb ramps and sidewalks. Subcomponents include **First Street Bikeway and Pedestrian Initiative** (Install new protected bicycle and pedestrian infrastructure along the First Street corridor to increase active-transportation mode share and reduce vehicle trips), **Benicia High School Pedestrian Crossing Transformation.**	• 0.8 miles of First Street improved: bike lanes, high-visibility crosswalks, bulbouts, and ADA ramps • Pedestrian scramble installed at Military West/West 11th St/Denfield Ave • All 3 structures inspected and repaired: East 3rd Street Tunnel, Military West Pedestrian Bridge, Columbus Parkway Pedestrian/Bike Bridge • Curb ramps upgraded annually (≥$200,000/yr, coordinated with Pavement Rehabilitation) • Sidewalk repairs completed annually at SeeClickFix priority locations (≥$46,840/yr) • Before/after bicycle and pedestrian counts along the corridor (baseline Year 1, annual remeasurement) • Estimated vehicle miles traveled (VMT) displacement, modeled from mode-shift assumptions • Reduction in vehicle-pedestrian/cyclist collisions relative to the documented baseline • Mode-share survey conducted at 1 and 3 years post-completion

Sub-Project	Measurable Outcome	Indicator(s)
2.3: **Active Transportation Planning and Design** and **Capital Improvement Prioritization**	Complete an updated Capital Improvement Plan and formal Bikeway and Pedestrian Plan to build a prioritized pipeline of active transportation projects and position the City to compete for state and federal funding.	• Updated CIP adopted by City Council (target: Year 2) • Bikeway Plan completed with priority corridors and design standards (target: Year 3) • ≥1 state or federal active transportation grant application submitted (ATP, HSIP, or equivalent) • # projects advanced through preliminary engineering, design, or permitting by Year 5
2.5a Type-1 Fire Engine Acquisition with included Charging System	Deploy Benicia's first electric fire engine into frontline emergency response service, reducing diesel emissions and firefighter exposure while demonstrating a replicable model for regional fire agencies.	• Baseline established for the conventional apparatus being replaced (mileage, engine/pump hours, fuel consumption, maintenance costs) before deployment • Apparatus accepted, commissioned, and placed into frontline service (target date to be confirmed with Fire Department) • Electric-mode mileage and operating hours tracked; % of calls completed primarily on battery power reported annually • Diesel gallons displaced and estimated NOx/PM2.5/GHG reductions calculated annually against baseline • Apparatus availability/uptime and maintenance costs tracked and compared to baseline • ≥1 public demonstration event held annually; performance data shared with ≥1 neighboring fire agency
Fire Department Administrative Fleet Electrification and Charging Project	Replace three gasoline-powered Fire Department administrative vehicles with electric alternatives and install dedicated charging infrastructure, reducing fleet emissions while maintaining department readiness.	• Baseline documented for the three Ford Explorers being replaced (age, mileage, annual fuel consumption, maintenance history, operating costs) • 3 electric vehicles acquired, upfitted, and placed into service; Level 2 charging system installed and commissioned • Gasoline-powered vehicles removed from routine Fire Department service upon replacement • Annual EV mileage, charging energy consumption, and gasoline displaced tracked • Estimated NOx/PM2.5/GHG emissions reductions calculated annually against baseline • Charging system uptime/performance tracked; O&M plan established

Sub-Project	Measurable Outcome	Indicator(s)
New Public Electric Vehicle Charging Access and Community Adoption Project	Install at least five publicly accessible dual-port Level 2 charging stations (≥10 spaces) at high-visibility community destinations, with free charging during the grant term, to expand equitable access to clean transportation.	• ≥5 dual-port Level 2 charging stations (≥10 spaces) installed and operational at community destinations • Station uptime tracked; charging sessions, electricity dispensed, and estimated EV miles supported tracked annually • Estimated gasoline displaced and NOx/PM2.5/GHG reductions calculated annually • Community outreach campaign completed (newsletters, social media, events, signage) at launch • Long-term O&M and post-free-charging funding plan established before grant conclusion • Community feedback collected and incorporated into future siting decisions

Detailed Milestones and Task Plan by Sub-Project

2.1: City Fleet Transition and Charging Infrastructure

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
Replace five gasoline-powered Police Department administrative vehicles with battery-electric alternatives, reducing fleet emissions while maintaining law enforcement operational readiness.	A. Procurement	1. Document baseline for the 5 gasoline-powered vehicles being replaced (age, mileage, annual fuel consumption, maintenance history, operating costs)	Police Dept. / Fleet Management	N/A	Months 1–3
		2. Procure 5 electric vehicles via state purchasing agreement or competitive bid	Police Dept. / Fleet Management	Vendor	Months 1–9
		3. Procure and install upfit equipment (radios, computer workstations, secure storage, law-enforcement-specific equipment)	Police Dept.	Upfit Vendor	Months 6–12
	B. Deployment	1. Place vehicles into service for administrative and community-safety functions	Police Dept.	N/A	Months 12–15
		2. Remove gasoline-powered vehicles from routine PD service	Police Dept.	Fleet Management	Months 12–15

		1. Track annual EV mileage, gasoline displaced, and charging energy consumption	Police Dept.	N/A	Annual, Months 15–60
	C. Performance Tracking	2. Calculate GHG/criteria pollutant emissions reductions annually against baseline	Police Dept.	N/A	Annual, Months 15–60
		3. Compare total cost of ownership between electric and gasoline-powered units	Police Dept. / Finance	N/A	Annual, Months 15–60
	A. Permitting, Procurement and Installation	1. Submit PG&E utility permit application at grant execution; complete electrical capacity assessment at 150 East K Street; identify any switchgear or service upgrade needs (coordinates with Project 1 switchgear upgrade)	Public Works	PG&E; City Facilities	Months 1–6
		2. Procure installation contractor via competitive bid; install two Level-2 dual-port charging stations with power-sharing technology; ensure ADA compliance and public accessibility	Public Works	Contractor; IT	Months 6–18
		3. Identify appropriate EV model for Police Dept. admin fleet; procure 5 EV vehicles via State purchasing agreement or competitive bid; confirm charging compatibility with installed stations	Public Works / Police Dept.	Fleet Management	Months 1–18
	B. Commissioning and Annual Tracking	1. Commission charging stations; document # ports operational and access protocols; post station information on City website and EV charging directories	Public Works / IT	N/A	Months 18–24
		2. Brief drivers on EV operation and charging protocols; track annual miles driven on EV fleet, fuel cost savings, and charging utilization; include in annual grant report	Public Works / Police Dept.	Fleet Management	Months 24–60 (annual)

2.2: Pedestrian and Bicycle Infrastructure Transformative Initiative

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Improve pedestrian and bicycle safety and accessibility through targeted capital investments on First Street, at Benicia High School, on three bridge/tunnel structures, and on citywide curb ramps and sidewalks.	2.2A and 2.2B. First Street and High School Crossing (One-Time Capital)	2.2A. Complete design for First Street corridor; notify businesses and Chamber ≥60 days before construction; obtain encroachment permits; install bike lane striping, high-visibility crosswalks, bulbout curb extensions, and ADA ramps.	Public Works / City Engineer	Contractors; Benicia Chamber	Months 1–24
		2.2B. Design Pedestrian Scramble signal at Military West/West 11th/Denfield; coordinate with Benicia Unified School District on school calendar timing; install signal controller updates, push-button stations, enhanced striping, and lighting	Public Works / City Engineer	School District; Signal Contractor	Months 1–24
		2.2A and 2.2B. Conduct before/after pedestrian and cyclist counts on First Street; track accident rate at HS intersection; coordinate First Street markings protection with 2028 pavement rehabilitation	Public Works	Traffic Engineer	Months 24–60 (annual)
	B. Citywide Multimodal Transportation Transformation through Bike and Pedestrian Improvements	2.2D. Upgrade curb ramps annually (target: ≥$200,000/yr) at ADA-deficient locations coordinated with Pavement Rehabilitation; ensure compliant slopes, detectable warning surfaces, and smooth transitions	Public Works	Contractors; ADA Coordinator	Annual (Months 12–60)
		2.2E. Complete sidewalk repairs annually (target: ≥$46,840/yr) using SeeClickFix priority data and ADA Transition Plan; document # locations repaired and SeeClickFix pedestrian hazard reports resolved	Public Works	Contractors	Annual (Months 12–60)

2.3: Active Transportation Planning and Design and Capital Improvement Prioritization

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Complete an updated Capital Improvement Plan and formal Bikeway Plan that build a prioritized pipeline of active transportation projects.	2.3B. Capital Improvement Plan Update	1. Inventory infrastructure conditions; assess pedestrian and bicycle network gaps using SeeClickFix data, ADA Transition Plan, and accident records; develop prioritization criteria weighting safety, equity, and ADA compliance	Public Works / City Engineer	All Departments; Community Input	Months 1–12
		2. Develop updated CIP with prioritized investment schedule, cost estimates, and project sequencing; adopt by City Council (target: Year 2); update annually	Public Works	City Engineer; Finance	Months 6–24; annual update
	2.3A. Bikeway Plan, Grant Applications and Project Pipeline	1. Award consultant; map existing bikeway network and gaps; coordinate with Solano Transportation Authority on regional connections; develop Bikeway Plan with priority corridors, design standards, and documentation meeting ATP/HSIP/RAISE grant requirements; conduct ≥2 public engagement sessions	Public Works / City Engineer	Consultant; STA; Benicia Chamber	Months 6–36
		2. Adopt Bikeway Plan by City Council (target: Year 3); submit ≥1 state or federal active transportation grant application; advance ≥2 priority corridor projects through preliminary engineering and/or design/permitting	Public Works	City Engineer; STA	Months 36–60
		3. Assign ongoing transportation planning capacity to advance projects from CIP and Bikeway Plan through preliminary engineering; track # projects in planning, design, and permitting; include in annual grant report	City Engineer / Public Works	Consultants	Annual (Months 1–60)

2.5a Type-1 Fire Engine Acquisition with included Charging System

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
Deploy Benicia's first electric fire engine into frontline	A. Baseline and Procurement	1. Document baseline data on the conventional apparatus being replaced	Benicia Fire Dept.	Fleet Management	Months 1–3

emergency response service, reducing diesel emissions and firefighter exposure while demonstrating a replicable model for regional fire agencies.		(mileage, engine/pump hours, fuel consumption, maintenance costs)			
		2. Finalize apparatus specifications (Pierce Enforcer Volterra parallel-electric or comparable); execute purchase order	Benicia Fire Dept.	Manufacturer	Months 1–6
		3. Coordinate delivery timeline and interim frontline coverage plan	Benicia Fire Dept.	Manufacturer	Months 3–12
	B. Delivery, Commissioning and Deployment	1. Receive apparatus; complete acceptance testing and commissioning	Benicia Fire Dept.	Manufacturer	Months 12–15 (TBD)
		2. Train firefighters on operation, charging, and emergency procedures	Benicia Fire Dept.	Manufacturer	Months 14–16
		3. Place apparatus into frontline emergency-response service	Benicia Fire Dept.	N/A	Month 16–18 (TBD)
	C. Performance Tracking and Regional Outreach	1. Track electric-mode mileage and operating hours; report % of calls completed primarily on battery power annually	Benicia Fire Dept.	N/A	Annual, Months 18–60
		2. Calculate diesel gallons displaced and estimated NOx/PM2.5/GHG reductions against baseline	Benicia Fire Dept.	N/A	Annual, Months 18–60
		3. Hold ≥1 public demonstration event annually; share performance data with ≥1 neighboring fire agency	Benicia Fire Dept.	N/A	Annual, Months 18–60

Fire Department Administrative Fleet Electrification and Charging Project

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
Replace three gasoline-powered Fire Department administrative vehicles with electric alternatives and install dedicated charging infrastructure, reducing fleet emissions while maintaining department readiness.	A. Procurement and Charging Infrastructure	1. Procure three Rivian R1S tri-motor (or comparable all-electric) vehicles meeting Fire Department operational requirements	Benicia Fire Dept.	Fleet Management	Months 1–6
		2. Design and install dedicated Level 2 charging system at the fire station housing the majority of the vehicles	Benicia Fire Dept. / Public Works	Contractor	Months 3–9
		3. Document baseline for the three Ford Explorers being replaced (age, mileage,	Benicia Fire Dept.	Fleet Management	Months 1–3

		annual fuel consumption, maintenance history, operating costs)			
	B. Deployment and Commissioning	1. Assign vehicles to Fire Department administrative and command personnel	Benicia Fire Dept.	N/A	Months 9–12
		2. Commission charging system; verify operational readiness	Benicia Fire Dept.	Contractor	Months 9–12
		3. Remove the three gasoline-powered vehicles from routine Fire Department service	Benicia Fire Dept.	Fleet Management	Months 12
	C. Performance Tracking	1. Track annual EV mileage, charging energy consumption, and gasoline displaced	Benicia Fire Dept.	N/A	Annual, Months 12–60
		2. Calculate estimated NOx/PM2.5/GHG emissions reductions annually against baseline	Benicia Fire Dept.	N/A	Annual, Months 12–60
		3. Track charging system uptime/performance; maintain O&M plan	Benicia Fire Dept.	N/A	Annual, Months 12–60

New Public Electric Vehicle Charging Access and Community Adoption Project

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
Install at least five publicly accessible dual-port Level 2 charging stations (≥10 spaces) at high-visibility community destinations, with free charging during the grant term, to expand equitable access to clean transportation.	A. Site Selection and Design	1. Evaluate candidate sites (First Street Pier, Jack London Park, Community Park, Ninth Street Park); finalize at least five site selections	Public Works	Parks Dept.	Months 1–6
		2. Complete electrical capacity assessments and design for dual-port Level 2 stations (≥10 spaces total)	Public Works	Engineering Consultant	Months 4–9
		3. Obtain necessary permits and complete PG&E utility coordination	Public Works	PG&E	Months 6–12
	B. Installation and Launch	1. Procure installation contractor via competitive bid; install ≥5 dual-port charging stations	Public Works	Contractor	Months 12–20

		2. Commission stations; confirm free-charging program configuration for the grant term	Public Works / IT	Contractor	Months 18–20
		3. Launch community outreach campaign (newsletters, social media, events, signage)	Communications	Public Works	Months 20–22
	C. Utilization Tracking and Sustainability Planning	1. Track station uptime, charging sessions, electricity dispensed, and estimated EV miles supported annually	Public Works	N/A	Annual, Months 22–60
		2. Calculate gasoline displaced and NOx/PM2.5/GHG reductions annually	Public Works	N/A	Annual, Months 22–60
		3. Collect community feedback; develop long-term O&M and post-free-charging funding plan before grant conclusion	Public Works / Finance	N/A	Year 5

Project Name: Benicia Forward: A Catalyst for a Clean and Resilient Future
Lead Applicant Name: City of Benicia
Term for this budget (in years): 5

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	2.3.b. Capital Improvement Prioritization	Benicia City staffing costs $345,842 per year over a 5 year period	$345,842.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	2.1.b. City Fleet Transition and Charging Infrastructure — Installation of EV Charging Stations	One time cost for a subcontrator to install EV Charging Stations and corresponding electrical work	$1,600,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	2.1.a. City Fleet Transition and Charging Infrastructure — Police Department Electric Vehicle Acquisition **(5 Vehicles)**	One time cost to acquire and outfit five electric vehicles (x $100k each)	$500,000.00
Construction	Direct	2.2: Pedestrian & Bicycle Infrastructure Transformative Initiative: First Street Bikeway and Pedestrian Initiative	One time cost for Benicia City staff to plan, design, and construct	$220,000.00
Construction	Direct	2.2: Pedestrian & Bicycle Infrastructure Transformative Initiative: Benicia High School Pedestrian Crossing Transformation	One time cost for Benicia City staff to plan, design, and construct	$300,000.00
Personnel/Staff Costs	Direct	2.3.a. Active Transportation Planning and Design (Bike Ped Plan)	Ongoing costs for internal transportation design and planning by city staff $32,357 per year over a 5 year period	$161,785.00
Personnel/Staff Costs	Direct	2.0. Project Manager	25% FTE x $242,874 annual salary and fringe benefits x 5 years	$303,592.50
Personnel/Staff Costs	Direct	2.0. Grant Manager	25% FTE x $244,512 annual salary and fringe benefits x 5 years	$305,640.00
Personnel/Staff Costs	Direct	2.0. Analyst	25% FTE x $130,118 annual salary and fringe benefits x 5 years	$162,647.50
Community Engagement	Direct	2.0. Community Outreach	Planning and materials	$25,000.50
Materials, Supplies & Equipment (> $5K itemized)	Direct	2.5a Type-1 Fire Engine Acquisition with included Charging System	One (1) Pierce Manufacturing Inc. Enforcer Volterra 1500 GPM Pumper and a Station Charging System	$2,500,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Fire Department Administrative Fleet Electrification and Charging Project	Replace three gas ford explorer fire department admin vehicles with three Rivian R1S tri-motor electric vehicles for fire admin plus station charging system. $119,000 x 3 total cost after tax, lic, etc plus, $40K each for upfitting (lights, radios, striping, etc, plus $50k for station charging = $527,000.	$577,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	New Public Electric Vehicle Charging Access and Community Adoption Project	Installing Public EV Chargers in high visibility and accessible locations in the City. $100,000 per Level 2 Charging Station with 2 ports x5 = $500,000, totaling 10 EV Parking spots	$1,000,000.00
Only add lines above this line				
			TOTAL:	**$8,001,507.50**

Lead Applicant Budget Summary (auto-calculated)

Total Direct Costs	$8,001,507.50
Total Indirect Costs	$0.00
Total Prof. Services & Consultants	$0.00
Total Contingency	$0.00
Total Funds Requested	$8,001,507.50
Cross-check Total Budget	YES
Indirect as % of Direct	0.0%
Prof. Services & Consultants as % of Direct	0.0%
Contingency as % of Direct	0.0%

Application Information	
Application Title	Benicia Forward: A Catalyst for a Clean and Resilient Future
Lead Applicant Name	City of Benicia
Project Location	Benicia, CA
Overall Funding Request	$35,634,524
Grant Term Request	5 years
Project Information	
Project Title	Just Economic Transition
Project Funding Request	$11,430,924.50

1. *Provide a summary of the project, addressing the following:*
    - *How the project aligns with at least one of the Local Community Benefit Fund's strategies:*
        - *Reduce air pollution and improve health outcomes*
        - *Build economic resilience for a just transition*
    - *How the project addresses community needs, including the specific communities your project will benefit.*
    - *A summary of the activities that will be supported by this project.*
    - *The measurable outcomes that will be achieved through this project.*

The Just Economic Transition Project's subcomponents operate at different levels of the transition, but they all work toward both project strategies - "Reduce air pollution and improve health outcomes" and "Build economic resilience for a just transition". The ISO program is the most immediate: residents in the census tracts closest to the refinery are still being exposed to industrial hazards today, and that requires active enforcement and

community notification regardless of where the longer-term transition stands. The ISO implementation is addressing current public health and air quality risks to residents and workers. The Clean industry recruitment works at the market level, proactively filling the pipeline with industries such as battery manufacturers, green energy businesses, and port-related logistics companies before vacated sites get back filled by toxic and high-emission legacy uses. These recruitment efforts will reduce air pollution, which will improve public health and improve the city's fiscal sustainability, and provide residents with opportunities to obtain high-road advanced manufacturing jobs that move away from the fossil-fuel-based economy. The decommissioning coordination keeps the City present and organized in a process that would otherwise move forward without community input on important factors that ensure clean-up agreements and processes will adequately protect public health during the remediation process and post-development. The Just Economic Transition Revitalization Plan gives the community an opportunity to envision a clean industrial future, which provides the city with a road map towards both strategies (cleaner air and economic resilience). The General Plan and Industrial Zoning updates set the policy foundation for the whole city that will seek to create a policy framework that protects and enhances improved air quality and public health equity, not only through cleaner industrial operations but also integrated throughout land use, transportation, open space, and building requirements.

Four outcomes define success for this project: the Industrial Park stays economically active during the transition; the City's land use policy is updated in time to shape what comes next; the refinery site's decommissioning follows a structured, public process; and the ISO program keeps protecting residents throughout. Below is a summary of each subproject's outcomes, indicators, and key partners. Full milestone and task detail is in the companion Measurable Outcomes Plan.

Elements of the project, including their **summaries** and notable **measurable outcomes,** include:

> **3.1 Industrial Site Transition and Decommissioning Coordination and Measurable Outcomes:** The refinery site's decommissioning is a multi-agency, multi-year process involving DTSC, the Regional Water Board, BCDC, the Air District, and multiple landowners. If the City is not actively coordinating, that process moves forward without local community input on factors that directly affect employment, health and quality of life. The City's role is coordinator and community advocate: building an interagency framework, executing coordination agreements with applicable state and federal agencies, conducting coordination meetings per year with documented action logs, supporting affected supplier and contractor businesses, and crafting a Transition Infrastructure Funding Strategy covering water, wastewater, broadband, clean energy, and clean goods movement needs

by Q2 2028. Discussions at City Council and at public engagement sessions will keep residents informed of cleanup timelines and air quality conditions during decommissioning and provide opportunities for residents to collaboratively work with staff on the clean-up approach and process.

The City will build the regulatory, technical, and public information capacity needed to manage safe decommissioning and site transition. Key partners include Air District, Water Quality Control Board, DTSC, the Port of Benicia, affected property owners, Solano Economic Development Corporation (EDC), and the Benicia Chamber of Commerce.

- **By Q2 2028:** Transition Infrastructure Funding Strategy completed, covering water, wastewater, broadband, clean energy, and clean goods movement needs.
- **By Q3 2028:** At least four state and federal agency MOUs or coordination agreements executed; at least 10 interagency coordination meetings per year with documented action logs.
- **Ongoing:** Semiannual public engagement sessions; annual public reports on decommissioning status and air quality.

3.2 General Plan and Industrial Zoning Revitalization and Measurable Outcomes: The City of Benicia will undertake a comprehensive update of its General Plan and Industrial Zoning Code to establish a community-driven roadmap for Benicia's transition from a refinery-dependent economy to a cleaner, healthier, and more economically resilient future. Valero ceased refining crude oil in Benicia in April 2026 after decades as one of the City's largest employers, taxpayers, water customers, and contributors to the local economy. The loss of refinery operations and the associated decline in municipal revenue, employment, contracting activity, and support for local businesses create an urgent just-transition challenge that cannot be addressed through isolated policy amendments. Benicia must reconsider how land is used, how public services are funded, how new industries are attracted, how workers and businesses are supported, and how future development can improve air quality and community health.

Rather than updating only selected elements, the City will comprehensively reframe the General Plan around the realities and opportunities of a post-refinery and increasingly post-fossil-fuel economy. The General Plan and Industrial Zoning Code were last comprehensively updated in 1999 and 1987, respectively, and were created when refinery operations and fossil-fuel-related revenues were assumed to remain central to Benicia's long-term economic structure. Funding the entire update will allow land use, economic development, circulation,

environmental justice, public health, safety, noise, housing, infrastructure, parks and open space, climate resilience, and municipal fiscal policy to advance one coordinated vision. This integrated approach will prevent individual elements from retaining outdated assumptions that conflict with the City's transition goals and will ensure that air quality, public health, economic diversification, and fiscal resilience are embedded throughout the City's governing policy document.

The project directly advances the Local Community Benefits Fund strategy to Build Economic Resilience for a Just Transition. The Air District identifies economic diversification, clean-economy pathways, community planning to re-envision land use, redevelopment planning for industrial properties, and community oversight of just-transition planning as priority activities. The updated General Plan and Industrial Zoning Code will establish policies and implementation actions to attract clean and emerging industries, support high-quality local employment, reduce dependence on a single industrial taxpayer, guide the future of the Benicia Industrial Park, prevent new or continued disproportionate pollution burdens, and direct investment toward development that benefits community health.

The project will be shaped through extensive, inclusive, and continuous public engagement. Residents, refinery workers and their families, labor representatives, local businesses, industrial employers, environmental justice organizations, community-based organizations, youth, seniors, historically underrepresented residents, and other affected stakeholders will help define Benicia's post-refinery vision and evaluate the choices required to achieve it. Engagement will extend throughout the planning process rather than being limited to legally required hearings. Activities will include community workshops, neighborhood meetings, stakeholder interviews, surveys, focus groups, public study sessions, multilingual materials, accessible participation options, and recurring opportunities for the community to review and revise draft policies. The City will document how public input influenced decisions and will regularly report on project milestones, participation, policy development, and measurable indicators. This approach responds directly to the Air District's emphasis on two-way communication, community leadership, and meaningful incorporation of community feedback throughout project implementation.

The completed General Plan and Industrial Zoning Code will provide lasting and measurable outcomes, including an adopted community vision for a post-refinery economy; a strategy for municipal fiscal and economic diversification; updated industrial land-use and development standards; policies supporting clean industries and high-road employment; an environmental justice framework; a documented baseline for community-scale NOx, PM2.5, and other relevant air-

quality indicators; numeric or otherwise measurable pollution- and exposure-reduction objectives; and an implementation program assigning responsibilities, timelines, funding strategies, and performance measures. Progress will be evaluated through completion of technical studies and plan milestones, the number and diversity of residents and stakeholders engaged, the incorporation of community recommendations, adoption of updated policies and zoning standards, and establishment of a public system for tracking implementation following adoption. The updated documents are targeted for adoption by the first quarter of 2031.

Benicia's experience also presents an opportunity to create benefits beyond the City's boundaries. Benicia leaders have identified eight other California communities that remain home to refineries and may eventually face similar losses of employment, municipal revenue, industrial activity, and community identity. Benicia will document its process, community-engagement methods, fiscal and land-use analyses, policy framework, implementation tools, and lessons learned in a publicly accessible Post-Refinery Community Transition Playbook. This resource will allow other refinery-dependent cities to adapt Benicia's approach rather than beginning without a tested framework. By demonstrating how a city can comprehensively rewrite its long-range policies around clean economic development, public health, environmental justice, and fiscal resilience, Benicia can serve as a statewide model for communities preparing for the transition away from fossil fuels.

The requested budget reflects the full scope necessary to complete a legally compliant, technically sound, internally consistent, and genuinely community-led General Plan and zoning update. The project requires coordinated land-use, economic, fiscal, environmental, infrastructure, transportation, air-quality, public-health, and environmental-review analyses, together with sustained public engagement, translation, facilitation, policy development, hearings, and adoption. Partial funding limited to individual elements would result in a fragmented plan that continues to rely on outdated refinery-era assumptions in the remaining elements and would prevent the City from addressing the interconnected nature of its economic transition. Without grant funding for the comprehensive update, Benicia lacks the fiscal capacity to complete this work at the scale and quality necessary during the period when the community most urgently needs a roadmap. Full funding will allow Benicia to undertake the transition deliberately, inclusively, and comprehensively—and to produce a replicable model showing other refinery-dependent communities that a cleaner post-fossil-fuel future can be planned and achieved.

Benicia Just Economic Transition and Clean Industry Revitalization Initiative and Measurable Outcomes (3.3/3.5): The City of Benicia will implement an integrated planning and economic development initiative that converts the community's vision for a post-refinery economy into concrete workforce, business attraction, and community reinvestment actions. The project combines preparation of a City-adopted Just Economic Transition Revitalization Plan with sustained clean-industry recruitment and business-retention activities. These components are intentionally linked: the plan will establish community-supported priorities, workforce pathways, job-quality standards, infrastructure needs, and implementation projects, while the City's economic development program will use that framework to attract employers, support affected businesses, prepare priority industrial sites, and create meaningful employment opportunities for displaced workers and other priority populations.

The initiative responds to the economic and public-health impacts of Benicia's historic dependence on refinery and fossil-fuel-related activity. Refinery workers and their families face uncertainty regarding employment, income, retraining, transportation, childcare, and access to replacement careers. Local businesses that supplied or depended on refinery operations may experience reduced demand, while refinery-adjacent neighborhoods have long borne a disproportionate share of industrial pollution and related health burdens. Benicia's transition must therefore do more than replace lost revenue or recruit any available employer. It must intentionally build a cleaner and more diversified economy that provides high-quality jobs, supports affected workers and businesses, and avoids replacing one high-emission industry with another.

The Just Economic Transition Revitalization Plan will provide the community-driven foundation for this work. Developed with industrial workers, refinery-adjacent residents, ancillary businesses, labor representatives, community-based organizations, and other affected stakeholders, the plan will establish a City-adopted roadmap for economic diversification, workforce transition, and equitable community reinvestment. It will include at least five economic transition strategies, an implementation-ready project list containing at least one physical infrastructure project and one social infrastructure project, and at least three workforce-pathway memoranda of understanding with the Solano County Workforce Development Board or other qualified workforce and education partners. Adoption is targeted for the first quarter of 2029.

The plan will also include a detailed inventory of the social determinants of work affecting displaced workers and their families. The inventory will evaluate childcare

availability, retraining capacity, income-support needs, transportation barriers, broadband and technology access, language access, and other conditions that may prevent residents from successfully entering new careers. This analysis will ensure that workforce programs address the practical barriers that determine whether training and employment opportunities are genuinely accessible. The resulting strategies may include coordinated training pathways, supportive services, apprenticeship connections, employer agreements, transportation assistance, childcare solutions, and targeted outreach to workers from fossil-fuel-dependent industries.

Community engagement will occur throughout plan development rather than being limited to a final review period. The City will hold at least six Just Transition workshops or community events and will collect feedback from industrial workers and frontline community members at a minimum of three distinct points in the planning process. A Just Economic Transition Plan Advisory Group may include industrial workers, refinery-adjacent residents, community-based organizations, the Benicia Industrial Park Association, Port of Benicia, Benicia Chamber of Commerce, Solano County public-health and environmental-health representatives, Solano Transportation Authority, Solano County Workforce Development Board, Solano Economic Development Corporation, and other relevant community leaders and partners.

Community feedback will be documented and reported to the Community Sustainability Commission, Planning Commission, Economic Development Board, Industrial Safety Ordinance Citizen Oversight Commission, and City Council. When public input changes a policy, project priority, workforce strategy, or engagement method, the City will identify that change publicly and explain in plain language how community participation influenced the outcome. This transparent feedback loop will help ensure that residents and workers have a meaningful role in shaping the transition rather than simply being informed after decisions have been made.

While the plan establishes community priorities and implementation standards, the economic development component will begin translating those priorities into business investment and employment outcomes during the grant period. The City's Economic Development Manager will dedicate approximately 90 percent of program time to the Industrial Park and post-refinery transition. Activities will include recruiting clean and emerging industries, retaining and assisting businesses affected by refinery closure, coordinating with major property owners and Port operators, supporting site-selection inquiries, identifying infrastructure barriers, and building relationships with regional and state economic-development partners.

Target industries may include battery and advanced-energy manufacturing, shipbuilding, clean-energy equipment production, transportation and warehousing, port-related logistics, and other sectors capable of supporting Benicia's economic diversification without recreating the pollution burdens associated with legacy fossil-fuel industries. Recruitment will be guided by the Just Economic Transition Revitalization Plan, community priorities, job-quality standards, site compatibility, infrastructure capacity, emissions considerations, and the ability of prospective employers to provide durable benefits to Benicia residents.

The City will work with partners including the Solano County Workforce Development Board, Solano Community College District, California Employment Development Department, Building Trades Council, Benicia Chamber of Commerce, Benicia Industrial Park Association, Solano Economic Development Corporation, Governor's Office of Business and Economic Development, California Alternative Energy and Advanced Transportation Financing Authority, and Port of Benicia. These partnerships will connect business recruitment with workforce preparation, financial incentives, site development, technical assistance, and employment pathways for affected workers.

By the end of the grant term, the City will seek to attract, retain, or expand at least 15 clean-sector businesses and create or retain at least 200 jobs. City-assisted positions will be expected to offer prevailing wages, with at least 40 percent of influenced jobs targeted to priority populations and at least 25 percent accessible to workers transitioning from fossil-fuel-dependent industries. Job quality and retention will be tracked, where data are available, at six, 12, and 24 months.

The City will conduct at least 25 business outreach engagements or site visits annually and present an annual Economic Development Report to the City Council describing business recruitment, retention, employment, workforce, and implementation progress. By the first quarter of 2030, the City will complete a consolidated Transition Infrastructure Investment Roadmap identifying the transportation, utility, site, workforce, social-service, and public infrastructure investments required to support clean-industry growth. Site-readiness assessments will also be completed for at least three priority Industrial Park parcels to identify development constraints, infrastructure needs, preliminary costs, permitting considerations, and opportunities for future public or private investment.

Combining transition planning with active economic development will prevent the project from producing a plan that is adopted but not implemented. Community engagement will define what a successful transition should accomplish; workforce and social-infrastructure analysis will identify what workers and families need to participate; business attraction will pursue employers consistent with those

priorities; and site-readiness and infrastructure planning will address the physical barriers to investment. Each activity strengthens the others and creates a continuous pathway from community vision to implementation.

By the end of the grant period, Benicia will have an adopted Just Economic Transition Revitalization Plan, formal workforce partnerships, an implementation-ready portfolio of physical and social infrastructure projects, a clean-industry recruitment program, assessed priority development sites, measurable business and employment outcomes, and a long-term infrastructure investment roadmap. Together, these outcomes will create a practical and community-supported framework for replacing fossil-fuel dependency with a cleaner, more diversified, and more equitable local economy.

3.4. Industrial Safety Ordinance (ISO) Program Management and Measurable Outcomes: Census tracts 6095252102 and 6095252107 — home to approximately 7,600 residents and immediately adjacent to the refinery — rank between the 85th and 95th percentile statewide for hazardous waste and cleanup site contamination. The ISO program is the City's primary tool for requiring industrial facilities to prevent accidental releases, maintain safety plans, and report to the community in real time. This program will be maintained and strengthened throughout the closure period, including independent air monitoring during industrial events, public notification and shelter-in-place guidance, and support for the ISO Oversight Commission.

The City will strengthen industrial oversight and transparency through active ISO program implementation. The Fire Department leads, supported by the City Attorney, as needed.

- **By Q1 2028:** Public information bank launched.
- **Ongoing annually:** ISO facility inspections and Risk Management Plan reviews completed; compliance status published in plain language; at least one emergency preparedness drill held per year.

Personnel/Staff Costs: Project Manager, Grant Manager, and Analyst would be responsible for carrying out the specific elements of this project. Appropriate Community Outreach would ensure that all Benicia residents' comments and needs are considered.

2. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during*

grant implementation, and how that feedback will be considered. (Q6)

The decisions being made through this project, which includes what gets built on the refinery site, what the General Plan says about future industrial uses, which businesses the City actively recruits, will be easier to get right if the people most affected engage and partner with the City throughout the process. That means making a complicated regulatory and planning process legible to residents who are not specialists and going to where people are rather than waiting for them to show up at City Hall.

Citywide information sharing: The City will establish and maintain a dedicated project webpage providing plain-language updates on General Plan milestones, decommissioning coordination status, ISO enforcement actions, and economic development progress, updated at least quarterly. The City will provide progress briefings to the City Council in open session at key project milestones.

Process engagement opportunities:

- Decommissioning: At least two decommissioning public engagement sessions per year; Targeted outreach to refinery workers and their families through partnerships with the Building Trades Council, the Solano County Workforce Development Board, and community-based organizations. The City will also coordinate with Solano County and regional agencies — San Francisco Bay Conservation and Development Commission (BCDC), Department of Toxic Substances Control (DTSC), the Regional Water Board — whose decisions on site cleanup and permitting will shape the landscape for community engagement on reuse.
- General Plan and Industrial Zoning Updates: At least five General Plan and zoning engagement phases (scoping, existing conditions, draft elements, public review, and adoption). In addition to interactive community workshops, the General plan engagement will be robust to ensure we're reaching "hard to reach" populations by partnering with trusted CBOs and community leaders. Additional activities may include focus groups, stakeholder interviews, a General Plan Advisory Committee, pop up workshops/public event booths, mobile workshops, and capacity building / speaker series for both staff and residents. There may be additional targeted engagement with disadvantaged communities to inform the Environmental Justice and Decarbonization Elements.
- Benicia Just Economic Transition and Clean Industry Revitalization Initiative : At least six Just Transition workshops or events, with feedback collected from industrial workers and frontline community members at a minimum of three points during plan development. This sub-project will convene a Just Economic

Transition Plan Advisory Group which may be comprised of industrial workers, Valero-adjacent residents, CBOs, the Benicia Industrial Park Association, Port of Benicia, and the Benicia Chamber of Commerce; County Public Health; County Environmental Health; STA; Solano WDB; Solano EDC; and other relevant community leaders and stakeholders as needed.

- Industrial Safety Ordinance Implementation. At least one ISO community safety confidence survey during the grant period; regular ISO Commission meetings; and an Annual Economic Development Report presented to City Council. Participation will be tracked by census tract or neighborhood and voluntary demographic categories. If outreach is not reaching affected workers, pollution-burdened neighborhoods, older adults, or multilingual households, the City will adjust its methods.

Feedback gathered through these processes will be documented and reported to the *Community Sustainability Commission, Planning Commission, Economic Development Board, Industrial Safety Ordinance Citizen Oversight Commission,* and *City Council*. Where community input shapes a decision — a land use policy, a priority in the work plan, a change to the engagement process itself — the City will say so publicly, in plain language.

The decisions being made through the General Plan update, the decommissioning pathway, and the revitalization plan will directly affect what Benicia's industrial waterfront becomes — what gets built there, who owns it, who works there, and what the air quality looks like for the neighborhoods that border it. Those are not technical planning questions with predetermined answers. They require sustained input from residents, workers, business owners, and the organizations that serve them.

The City has already begun this process.

- City Council and Commission Meetings—Since December 2025, the City Council has held two sessions to develop project concepts and prioritize the ones included in this grant application.
- Industrial Safety Citizen Oversight Commission—Established the framework in 2025 and has continued to meet quarterly since its adoption last summer. The Commission will continue to meet to oversee the ISO implementation program.
- Hearing from industrial ancillary businesses affected by the Valero closure at the monthly Benicia Industrial Park Association (BIPA) and regular coordination with the Benicia Chamber of Commerce
- City Council engagement related to the Valero closure and transition planning, including the formation of councilmember-led City Task Forces for economic

impact, community funding, Benicia Industrial Park collaboration, and land redevelopment since May 2025

- Coordination with the Solano Workforce Development Board and Solano Economic Development Corporation to understand the impact of refinery closure on affected workers and ancillary businesses
- City-funded preliminary assessment and related outreach to Benicia stakeholders to better understand the impact of the refinery closure on Benicia and options for reuse and redevelopment in alignment with the council's sustainability goals. This assessment builds on the City's participation in the countywide Priority Production Area planning process, which is funded through the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG).

Public engagement to date has surfaced specific concerns: residents near the industrial corridor reported uncertainty about what the refinery closure means for their neighborhood, worry about the pace of site remediation, and questions about whether the jobs that replace refinery employment will be accessible to workers without four-year degrees. Business owners in and adjacent to the Industrial Park raised concerns about vacancy and access to infrastructure. These inputs directly shaped the scope of this project. While community members are happy about the air quality improvements expected after the closure, they are very concerned with the City's ability to sustain existing levels of city programs and services due to significant revenue loss. Benicia CBOs also received donations from Valero to sustain their operations, and those philanthropic contributions will now stop, causing concern that beloved CBOs in the community may also have to cut programs and services.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for **each Project** during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The **Just Economic Transition** project transforms the Valero refinery closure from a fiscal and community crisis into a foundation for a cleaner, more equitable, and economically resilient city through coordinated investments in Industrial Site Decommissioning and Transition Coordination, General Plan and Industrial Zoning Revitalization, Benicia Just Economic Transition and Clean Industry Revitalization, and Industrial Safety Ordinance (ISO) Program Management.

Summary of Measurable Outcomes and Indicators

Sub-Project	Measurable Outcome	Indicator(s)
3.1: Industrial Site Decommissioning and Transition Coordination	Build the regulatory, technical, and public engagement capacity to manage safe Valero refinery decommissioning and develop a transition infrastructure funding strategy.	• ≥4 state/federal agency MOUs or coordination agreements executed (BAAQMD, CalEPA, SWQCB, DTSC) • ≥10 interagency coordination meetings held per year; action logs maintained • Transition Infrastructure Funding Strategy completed and presented to City Council (target: Q2 2028) • ≥2 public engagement sessions held per year; annual public report published in English and Spanish • Port-Valero property owner coordination protocol established; quarterly meetings documented
3.2: General Plan and Industrial Zoning Revitalization	Adopt an updated General Plan and Industrial Zoning Code by Q1 2031 with an Environmental Justice Element and Industrial Decarbonization standard governing future Industrial Park development.	• General Plan adopted by Q1 2031; EJ Element includes ≥5 enforceable policies; Decarbonization standard with 2026 NOx/PM2.5 baseline and numeric reduction target • Conforming Industrial Zoning Code adopted by ordinance • ≥5 structured community engagement phases conducted; post-engagement surveys at each major milestone • CEQA completed; Final EIR certified by Q4 2030

Sub-Project	Measurable Outcome	Indicator(s)
Benicia Just Economic Transition and Clean Industry Revitalization Initiative (3.3/3.5)	Workforce Track: Adopt a Just Transition Revitalization Plan with workforce pathways, a social infrastructure needs inventory, and an implementation tracking dashboard. Recruitment Track: Attract, retain, or expand ≥15 clean-sector businesses and ≥200 jobs at prevailing wages by Q1 2031, and complete a consolidated Transition Infrastructure Investment Roadmap by Q1 2030.	<u>Workforce Track</u> • Plan adopted by City Council (target: Q1 2029) with ≥5 economic transition strategies and ≥3 SCWDB workforce pathway MOUs • Social infrastructure needs inventory completed (target: Q4 2027) • ≥6 community workshops held; ≥50% of participants from impacted workers and frontline communities • Implementation tracking dashboard operational by Q3 2029 <u>Recruitment Track</u> • ≥15 clean-sector businesses attracted, retained, or expanded by Q1 2031 • ≥200 jobs created or retained at prevailing wages; ≥40% to priority populations; ≥25% reserved for workers from fossil-fuel-dependent industries • ≥25 business outreach engagements or site visits per year • Consolidated Transition Infrastructure Investment Roadmap completed (target: Q1 2030) • Joint annual report to City Council covering both tracks

Sub-Project	Measurable Outcome	Indicator(s)
3.4. Industrial Safety Ordinance (ISO) Program Management	Strengthen industrial safety oversight and ensure residents have timely, accurate information about industrial incidents and air quality conditions through active ISO program management.	• Annual facility reports received and reviewed; inspections and audits conducted following Level 2 and Level 3 incidents • ISO Citizen Oversight Commission meetings held; public hearings facilitated • Incident reports and notifications published to Public Information Bank • Annual ISO performance report produced and presented to City Council • Compliance tracking system maintained; coordination with CUPA and Air District documented
	Reduce community exposure to hazardous air pollutants through rapid hazardous materials response and timely, clear public emergency alerts.	• HazMat responders maintain required certifications; equipment and PPE ready for deployment • Emergency alert system operational; alerts issued with protective action guidance during incidents • # multi-agency drills or exercises completed annually • # hazmat incidents responded to; releases stabilized before off-site escalation where possible • Post-incident public follow-up provided; facility incident reports reviewed

Detailed Milestones and Task Plan by Sub-Project

3.1: Industrial Site Decommissioning and Transition Coordination

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Build the regulatory, technical, and public engagement capacity to manage safe Valero refinery decommissioning and develop a transition infrastructure funding strategy.	A. Agency Relationships and Coordination Framework	1. Map all state and federal agency roles in the Valero decommissioning process (BAAQMD, CalEPA, SWQCB, DTSC, EPA); brief City Council and Fire Chief; initiate formal relationships and draft coordination MOUs covering data-sharing, notification protocols, and joint inspection access	City Manager's Office	Fire Chief; City Attorney; BAAQMD; CalEPA	Months 1–18
		2. Establish Port-Valero property owner coordination protocol: identify key contacts, document ownership for all affected parcels, schedule quarterly coordination meetings, log barriers to site transition	City Manager's Office	Development Services; City Attorney	Q3 2027; quarterly ongoing
		3. Conduct ≥10 interagency coordination meetings per year; maintain action log; circulate to all parties within 5 business days of each meeting	City Manager's Office	Fire Dept.; Development Services; BAAQMD	Q4 2027–Q1 2031 (ongoing)
	B. Transition Infrastructure Funding Strategy and Public Engagement	1. Inventory physical infrastructure needs across transition zones (water/wastewater, broadband, clean energy, port electrification, zero-emission freight); map applicable federal/state programs and local financing tools; present Transition Infrastructure Funding Strategy to City Council by Q2 2028	Economic Development	Public Works; Port of Benicia; GO-Biz; Solano EDC	Q2 2028
		2. Develop plain-language Q&A materials in English and Spanish; conduct ≥2 public engagement sessions per year on cleanup status, air quality, and site timeline; collect written feedback; publish annual public report on decommissioning status	City Manager's Office	Fire Dept.; Planning; Community Partners	Q4 2027; annual through Q1 2031

3.2. General Plan and Industrial Zoning Revitalization

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Adopt an updated General Plan and Industrial Zoning Code by Q1 2031 with an Environmental Justice Element and Industrial Decarbonization standard.	A. Community Visioning and Existing Conditions	1. Award consultant; conduct community visioning process; prepare existing conditions report documenting gap between 1999 GP/1987 zoning and current conditions; establish 2026 NOx/PM2.5 baseline; confirm five priority elements with City Council	Planning Division	City Manager's Office; BAAQMD; Consultant	Q4 2027–Q3 2028
		2. Conduct ≥5 structured engagement phases (scoping, existing conditions, draft elements, public review, adoption); provide Spanish interpretation and childcare; collect post-engagement surveys at each milestone; publish results in plain language	Planning Division	City Manager's Office; Benicia CBOs; Consultant	Q1 2028–Q1 2031
	B. Plan Drafting, CEQA and Adoption	1. Prepare administrative draft General Plan with EJ Element (≥5 enforceable policies) and Decarbonization standard (2026 baseline, numeric target); draft Industrial Zoning Code; release for 45-day public review; prepare responses to comments; revise	Planning Division	Consultant; BAAQMD; City Departments	Q1 2029–Q3 2029
		2. Initiate CEQA: prepare Draft EIR with air quality health risk assessment; 45-day public review; certify Final EIR at Planning Commission; conduct City Council adoption hearings; file required state notices; publish adopted documents in English and Spanish by Q1 2031	Planning Division	Consultant; City Attorney	Q1 2029–Q1 2031

Benicia Just Economic Transition and Clean Industry Revitalization Initiative (3.3/3.5)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date

Workforce Track: Adopt a Just Transition Revitalization Plan with workforce pathways, a social infrastructure needs inventory, and an implementation tracking dashboard.	A. Advisory Group, Needs Assessment and Community Engagement	1. Convene Just Economic Transition Advisory Group; award consultant; complete social infrastructure needs inventory (childcare gaps, retraining capacity, income support, transportation access, language barriers); map applicable federal/state funding programs for each identified need	City Manager's Office	SCWDB; Solano College; EDD; Building Trades; Benicia CBOs	Q2 2027–Q1 2028
		2. Conduct ≥6 community workshops at multiple locations; target ≥50% of participants from impacted workers, BIPOC, and frontline communities; collect post-workshop surveys at ≥3 points during plan development	City Manager's Office	Planning Div.; Benicia CBOs; Community Partners	Q3 2027–Q3 2028
	B. Plan Adoption and Implementation Dashboard	1. Draft plan with ≥5 economic transition strategies, implementation-ready project list (≥1 physical, ≥1 social infrastructure project), ≥3 SCWDB workforce pathway MOUs, and social infrastructure funding strategy; release for 30-day public review; adopt by City Council (target: Q1 2029)	City Manager's Office	Economic Development; Planning; SCWDB; Consultant	Q4 2028–Q1 2029
		2. Launch implementation tracking dashboard (target: Q3 2029); update quarterly; incorporate social infrastructure appendix and dashboard metrics into Annual Economic Development Report	City Manager's Office	Economic Development; Communications	Q3 2029; annual through Q4 2031
Recruitment Track: Attract, retain, or expand ≥15 clean-sector businesses and ≥200 jobs at prevailing wages by Q1 2031, and complete a consolidated Transition Infrastructure Investment Roadmap by Q1 2030.	A. Business Recruitment & Job Quality Tracking	1. Establish September 2026 employment baseline; develop sector-specific recruitment strategy (battery manufacturing, green energy, port-related logistics, shipbuilding); conduct ≥25 business outreach engagements or site visits per year; coordinate with Solano EDC, GO-Biz, CAEATFA, Port of Benicia, and BIPA	Economic Development	Solano EDC; GO-Biz; CAEATFA; Port of Benicia	Annual (Q4 2027–Q1 2031)
		2. Establish job quality tracking protocol: document FTE positions, prevailing wages, and % accessible to fossil-fuel workers; collect data at 6, 12, and 24 months post-opening; coordinate with SCWDB on workforce placements; complete ≥3 site readiness assessments for priority Industrial Park parcels	Economic Development	SCWDB; Building Trades; EDD	Q1 2028; ongoing
	B. Infrastructure Roadmap and Annual Reporting	1. Develop Physical Infrastructure Financing Strategy (target: Q2 2028); coordinate with	City Manager's Office	Economic Development;	Q2 2028–Q1 2030

		SP-1 (Transition Infrastructure Funding Strategy) and SP-3 (Social Infrastructure findings) to produce consolidated Benicia Transition Infrastructure Investment Roadmap; publish and present to City Council (target: Q1 2030)		Public Works; Port of Benicia; Solano EDC	
		2. Publish Annual Economic Development Report: business inquiries, new leases/permits, FTE jobs created, wage and equity metrics, net change vs. September 2026 baseline; present to City Council	Economic Development	City Manager's Office	Annual (Q4 2027–Q4 2031)

3.4. Industrial Safety Ordinance (ISO) Program Management

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
Strengthen industrial safety oversight and ensure residents have timely, accurate information about industrial incidents and air quality conditions through active ISO program management.	A. ISO Program Operations and Compliance	1. Evaluate and improve ISO procedures, workflows, and enforcement mechanisms; refine data tracking systems for incidents, emissions, and compliance	Benicia Fire Dept.	CUPA; Air District; Facilities	Months 1–18; ongoing
		2. Receive and review annual facility reports; conduct inspections and audits following Level 2 and Level 3 incidents; review root cause analyses	Benicia Fire Dept.	CUPA	Months 1–60
		3. Enhance coordination with CUPA, Air District, and regulated facilities; coordinate air quality monitoring station siting; oversee data collection and reporting	Benicia Fire Dept.	CUPA; Air District	Months 1–60
	B. Public Information and Oversight Commission	1. Maintain updated Public Information Bank: publish incident reports, post notifications, and make facility data publicly accessible; facilitate public hearings	Benicia Fire Dept.	N/A	Months 1–60
		2. Support quarterly ISO Citizen Oversight Commission meetings; facilitate community input; incorporate feedback into policy and program improvements	Benicia Fire Dept.	City of Benicia	Months 1–60
		3. Prepare annual ISO performance report tracking incident trends, compliance rates, and air quality outcomes; present to City Council	Benicia Fire Dept.	N/A	Annual
Reduce community exposure to hazardous air pollutants	A. HazMat Readiness and Alert Systems Maintained	1. Maintain staffing, training, and HazMat Technician certification of hazmat responders; ensure equipment, PPE, monitoring	Benicia Fire Dept.	Solano HazMat Team	Months 1–60

through rapid hazardous materials response and timely, clear public emergency alerts.		tools, and decontamination resources are operational			
		2. Maintain emergency alert tools; update alert templates for industrial incidents, fires, and hazardous releases; conduct periodic system testing and staff training	Benicia Fire Dept.	Solano OES	Months 1–60
		3. Participate in countywide hazmat planning meetings; conduct joint exercises with fire, law enforcement, and county agencies; integrate lessons learned from incidents	Benicia Fire Dept.	Regional emergency response agencies	Months 1–60
	B. Rapid Response and Public Communication During Incidents	1. Deploy trained personnel for hazardous releases, spills, vapor events, and unknown substance investigations; identify chemicals, assess hazards, and implement containment	Benicia Fire Dept.	Solano HazMat Team; CUPA	Months 1–60
		2. Issue timely public alerts with clear protective instructions (shelter-in-place, avoid area, or evacuation); coordinate messaging with City and regional agencies; provide updates until hazard resolved	Benicia Fire Dept.	Solano OES; Regional agencies	Months 1–60
		3. Provide post-incident public follow-up; review facility 72-hour reports; use findings to improve future warning, response, and preparedness systems	Benicia Fire Dept.	N/A	Months 1–60

Project Name: Just Economic Transition
Lead Applicant Name: City of Benicia
Term for this budget (in years): 5

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Benicia Just Economic Transition and Clean Industry Revitalization Initiative (3.3/3.5)	Existing City of Benicia Staff costs of $200,066 per year over a 5 year period	$1,873,276.00
Professional Services & Consultants (≤25% of Direct Costs at APPLICATION level)	Direct	3.2. General Plan & Industrial Zoning Revitalization	One time cost for subcontractor to draft new plan	$4,885,248.00
Personnel/Staff Costs	Direct	3.1. Industrial Site(s) Decommissioning & Transition Coordination	Existing City of Benicia Staff costs to over see transition at $614,669 per year over a 5 year period	$3,073,345.00
Personnel/Staff Costs	Direct	3.0. Project Manager	25% FTE x $242,874 annual salary and fringe benefits x 5 years	$303,592.50
Personnel/Staff Costs	Direct	3.0. Grant Manager	25% FTE x $244,512 annual salary and fringe benefits x 5 years	$305,640.00
Personnel/Staff Costs	Direct	3.0. Analyst	25% FTE x $130,118 annual salary and fringe benefits x 5 years	$162,647.50
Community Engagement	Direct	3.0. Community Outreach	Planning and materials	$25,000.50
Community Engagement	Direct	3.4. Industrial Safety Ordinance (ISO) Program Management	3.4. Industrial Safety Ordinance (ISO) Program Management Existing Benicia City Staff costs of $160,435 per year over a 5 year period ($802,175)	$802,175.00

Application Information	
Application Title	Benicia Forward: A Catalyst for a Clean and Resilient Future
Lead Applicant Name	City of Benicia
Project Location	Benicia, CA
Overall Funding Request	$35,634,524
Grant Term Request	5 years
Project Information	
Project Title	Promoting Community Health
Project Funding Request	$7,580,583.10

1. *Provide a summary of the project, addressing the following:*
    - *How the project aligns with at least one of the Local Community Benefit Fund's strategies:*
        - *Reduce air pollution and improve health outcomes*
        - *Build economic resilience for a just transition*
    - *How the project addresses community needs, including the specific communities your project will benefit.*
    - *A summary of the activities that will be supported by this project.*
    - *The measurable outcomes that will be achieved through this project.*

Every component of this project reduces air pollution or protects residents from its effects. Urban forestry expands the natural filtration capacity of the city's tree canopy, sequestering carbon and intercepting particulates, including the hydrogen sulfide emissions linked to the Valero refinery. Wildfire prevention reduces the smoke events that have in the past blanketed Benicia in PM2.5 for days. Air monitor upgrades give the Fire

Department the real-time data needed to protect both responders and residents during industrial incidents. Fleet maintenance and transition reduce diesel exhaust from emergency vehicles. Park improvements create the conditions for physical activity and social connection that reduce the chronic disease burden already elevated in communities exposed to refinery pollution. The emergency alert system closes the information gap that leaves residents unaware of hazardous events until they have already been exposed. The project supports energy transition by replacing reactive spending — emergency wildfire response, deferred park maintenance, crisis-driven fleet repair — with planned, preventive investment that lowers long-term costs and protects the health of Benicia's workforce and families.

Elements of the project, including their **summaries** and notable **measurable outcomes,** include:

4.1 Benicia Urban Forestry and Greening Program and Measurable Outcomes: Benicia's approximately 27,000 residents do not experience environmental conditions equally. Neighborhoods with limited tree canopy, extensive paved surfaces, and greater proximity to industrial land uses can experience higher summer temperatures, less shade, and greater exposure to airborne particulate matter and other pollutants. These conditions can discourage walking and outdoor recreation and can disproportionately affect children, older adults, people with respiratory or cardiovascular conditions, outdoor workers, and residents without access to air-conditioned indoor spaces. The City will address these interconnected public-health and environmental challenges through a major expansion of Benicia's urban forest organized around equity, air-quality improvement, heat resilience, and long-term community benefit.

Over the five-year grant performance period, the City will plant approximately 600 new trees, representing a substantial expansion of Benicia's municipal tree canopy. The program will include the creation of a new shaded trail connection between Community Park and Lake Herman Park, where approximately 400 drought-tolerant native and climate-appropriate trees will be planted along the route. The remaining approximately 200 trees will be strategically planted in parks, public rights-of-way, civic spaces, and neighborhoods where canopy gaps, heat exposure, impervious surfaces, proximity to pollution sources, and community need indicate that additional greening will provide the greatest benefit.

The Community Park-to-Lake Herman Park trail will serve as the program's signature greening investment. The trail will establish a shaded and more comfortable connection between two important recreational destinations while increasing access to walking, bicycling, nature, and outdoor activity. As the trees

establish and their canopies expand, they will provide progressively greater shade along the corridor, reduce heat exposure for trail users, and make the route more usable during warmer parts of the year. The project will provide particular benefits to children, families, older adults, athletes, pedestrians, and residents who may be more vulnerable to extreme heat or poor air-quality conditions.

The planting of 600 trees will produce cumulative air-quality and climate benefits that increase over time. Tree leaves and branches can intercept airborne particulate matter and reduce the amount of dust and other particles circulating near streets, trails, parks, and gathering areas. Trees also absorb carbon dioxide as they grow and store carbon in their trunks, branches, roots, and surrounding soil. By shading pavement, buildings, sidewalks, and recreational areas, the expanded canopy will reduce surface and ambient temperatures and help moderate the urban heat-island effect. Cooler conditions can reduce demand for building cooling and associated energy use, indirectly avoiding emissions from electricity generation.

The project will also support cleaner transportation and healthier community behavior. Shaded streets, trails, and public spaces are more comfortable and attractive for walking, bicycling, outdoor recreation, and social activity. By making active transportation and outdoor recreation more practical during warm weather, the program can help reduce reliance on short vehicle trips, support physical activity, and improve community connections. The new shaded trail will therefore function not only as a landscaping project but as public-health and clean-mobility infrastructure connecting residents with major recreational amenities.

Trees will be selected based on drought tolerance, expected longevity, mature canopy, ecological value, site compatibility, fire safety, root characteristics, maintenance requirements, and resilience under anticipated future climate conditions. The City will prioritize California native and other climate-appropriate species, potentially including appropriate varieties of oak, madrone, manzanita, redwood, and sycamore where site conditions support their long-term survival. Species will be diversified to reduce vulnerability to pests, disease, drought, and the widespread loss that can result from reliance on a limited number of tree types. Final selections will also account for utility clearances, roadway visibility, sidewalk conditions, soil volume, drainage, and the intended use of each planting location.

The City will use equity as the organizing principle for determining where the approximately 200 trees outside the trail corridor are planted. Planting priorities will be informed by a comprehensive inventory of Benicia's existing urban forest, which currently includes more than 4,500 City-maintained trees. The inventory will assess tree location, species, size, condition, maintenance needs, canopy

distribution, and potential planting sites. The City will combine this information with tree-canopy gaps, heat-exposure data, concentrations of paved and impervious surfaces, proximity to industrial and transportation-related pollution sources, access to parks and walking routes, and relevant demographic and public-health indicators. This process will direct investment toward areas where new trees can provide the greatest marginal public-health and environmental benefit.

Community engagement will inform planting priorities, trail design, species selection, and long-term stewardship. The City will seek input from residents, park users, nearby neighborhoods, youth sports organizations, walking and bicycling advocates, environmental organizations, seniors, schools, and other community stakeholders. Outreach may include public workshops, online surveys, neighborhood meetings, pop-up engagement at parks and community events, volunteer planting activities, educational materials, and regular project updates. The City will document feedback and explain how community input influenced final planting locations and program implementation.

New trees will receive intensive establishment care during their first three years. Because permanent irrigation infrastructure along the trail would substantially increase construction and long-term maintenance costs, the approximately 400 trail trees will be watered by truck during their initial establishment period. Watering schedules will be adjusted based on species, soil conditions, season, rainfall, temperature, and observed tree health. Mulching, staking where necessary, structural pruning, weed control, inspection, and replacement of unsuccessful plantings will support survival and healthy root development.

After approximately three years, the drought-tolerant trees are expected to be sufficiently established for routine truck watering to be substantially reduced or discontinued. The City will continue monitoring tree health and may provide supplemental water during prolonged drought, extreme heat, or other exceptional conditions. This establishment strategy avoids the capital and maintenance costs associated with installing permanent irrigation along the entire trail while ensuring that young trees receive the care necessary to survive their most vulnerable years. It also allows the project to direct a greater share of grant funding toward tree planting, site preparation, and long-term canopy expansion.

The City will implement the program through its existing urban-forestry operations based at the Public Works Corporation Yard. Work will be performed by City staff or qualified contractors under City supervision, including oversight by an International Society of Arboriculture-certified arborist. Activities will include site assessment, utility clearance, soil preparation, tree procurement, planting, mulching, staking, truck watering, inspection, structural pruning, pest and disease

monitoring, replacement planting, tree-permit review, and removal of hazardous trees where necessary to support the health of the overall urban forest. The City will use accepted arboricultural practices and maintain records for each newly planted tree.

The program will include measurable and publicly reportable outcomes. The City will track:

- The number, species, size, and location of trees planted.
- Completion of approximately 400 tree plantings along the Community Park-to-Lake Herman Park trail.
- Approximately 200 additional trees planted in priority community locations.
- Tree survival rates at one, three, and five years.
- Acres or square footage of projected canopy added at maturity.
- Linear feet of trail receiving new shade coverage.
- Neighborhoods and public facilities benefiting from planting.
- Watering, maintenance, and replacement activities.
- Estimated carbon sequestration and pollutant-interception benefits using an accepted urban-forestry methodology.
- Community participation and feedback.
- Changes in trail use and outdoor-recreation opportunities where data can be collected.

The City will establish a survival target and replace trees that fail during the grant period so that the program's intended canopy increase is maintained. Monitoring will also allow the City to identify species and planting practices that perform best under Benicia's climate and soil conditions, improving future urban-forestry investments. Tree locations and condition data will be incorporated into the City's asset-management system to support continued inspection, maintenance, and capital planning after the grant concludes.

The project's benefits will extend well beyond the five-year grant period. As the trees mature, their capacity to provide shade, intercept particulate matter, store carbon, cool public spaces, provide habitat, and improve neighborhood character will increase. The City will incorporate the new trees into its existing inspection, pruning, risk-management, and replacement programs and will plan for the limited supplemental watering that may be necessary during exceptional drought

conditions. This long-term stewardship commitment will protect the Air District's investment and ensure that the project produces lasting and increasing community benefits.

By planting approximately 600 trees, establishing a new shaded recreational trail, directing additional canopy to neighborhoods with the greatest need, and providing structured establishment and maintenance care, Benicia will make a transformative investment in public health and environmental resilience. The program will reduce heat exposure, improve localized air-quality conditions, support walking and outdoor recreation, expand equitable access to green space, and demonstrate how a refinery-transition community can reinvest in healthy, community-serving natural infrastructure.

4.2. Wildfire Prevention & Readiness and Measurable Outcomes: Benicia sits at the interface of developed neighborhoods and wildland open space. When a wildfire ignites near the city — or within it — the air quality impact is immediate, severe, and disproportionately felt by seniors, young children, people with respiratory or cardiovascular conditions, and outdoor workers. A single uncontrolled wildfire can release PM2.5, carbon dioxide, nitrogen dioxide, and aromatic hydrocarbons at levels that make the air unhealthy for days. The Wildfire Prevention and Readiness Program takes a comprehensive, coordinated approach across four activity areas.

Wildfire Fuel Modification Program: The City requires a full-scope, preemptive wildfire fuel modification program. This component fills that gap by managing hazardous vegetation and fuel loads in and around the community: inspecting and enforcing defensible space requirements, coordinating weed abatement and fuel reduction in high-risk areas, and educating property owners about ember-resistant landscaping and wildfire mitigation. Lower fuel loads mean less intense fires, less uncontrolled smoke, and a reduced likelihood of the large wildland fire events that can blanket the city in unhealthy air for days. The program also protects critical evacuation routes during peak fire weather.

Fire Prevention and Inspection: Staff will conduct fire and life safety inspections for commercial, industrial, and high-risk occupancies; issue and track operational permits (hazardous materials, hot work, high-piled storage); and follow up with corrective actions to ensure compliance. *Inspections at industrial facilities reduce the risk of chemical releases and vapor incidents that affect community air quality. A single structure fire can release VOCs, including benzene and styrene, into groundwater and the air — catching fire hazards before they ignite is the most effective intervention.*

Wildland Urban Interface Inspection Program: Building Inspectors will conduct systematic field evaluations of residential and commercial properties to identify fuel-to-structure pathways, enforce defensible space requirements, and ensure existing buildings meet ignition-resistant standards, including non-combustible siding and ember-resistant venting. Plan reviews for new construction and renovations will integrate fire-resistive design at the design phase, eliminating risk before construction begins. Preventing small WUI fires from escalating into mass urban ignitions protects residents from the smoke plumes that cause regional air quality non-attainment and trigger Spare the Air alerts.

Street Maintenance and Weed Abatement: Weed abatement across City rights-of-way (streets and major roadways) and approximately 30 creek and channel locations removes combustible organic debris, reduces the frequency of fire dispatch calls, and prevents pollutant mobilization from overgrown vegetation that traps sediment and roadway-derived contaminants. Core activities include vegetation removal using hand tools, pre- and post-emergent herbicide applications using EPA-registered products , and removal of vegetation, weeds, silt, and debris within creeks, channels, stormwater outfalls, and culverts. All herbicide applications will be documented and reported monthly to the Solano County Agricultural Commissioner's Office. The City will maintain a Fish & Wildlife Routine Maintenance Agreement covering creek and channel work.

The Wildfire Prevention and Readiness Program will deliver four coordinated activities over the five-year grant term. The Fuel Modification Program manages hazardous vegetation in wildland open space and high-risk areas, enforcing defensible space requirements and educating property owners. Fire Prevention and Inspection staff will conduct regular inspections of commercial, industrial, and high-risk occupancies, issuing and tracking operational permits and following up on corrective actions. The WUI Inspection Program will conduct systematic field evaluations of residential and commercial properties, enforce ignition-resistant construction standards, and integrate fire-resistive design requirements into plan review. Street Maintenance and Weed Abatement will cover both city rights-of-way and approximately 30 creek and channel locations citywide, removing combustible vegetation and debris, applying EPA-registered herbicides under an existing Fish & Wildlife Routine Maintenance Agreement, and reporting all applications monthly to the Solano County Agricultural Commissioner's Office.

4.3. Safety and Monitoring Equipment for Benicia Fire – Portable Air Monitor & SCBA Compressor and Measurable Outcomes: The Benicia Fire Department's ability to protect both residents and first responders during air quality

emergencies depends on two pieces of equipment that are currently at or beyond their service life.

Portable Air Monitors: In 2019, Valero funded the purchase of a cache of high-quality portable air monitors for the Fire Department, valued at $48,342. Over the past seven years, these monitors have been deployed regularly — at industrial incidents, wildfire responses, and hazardous material calls — and have become a critical component of the department's emergency response capability. They are now at the end of their service life, and replacement parts and sensors are no longer available. Fixed fenceline and community monitors provide valuable information but cannot be rapidly repositioned during a dynamic incident. Portable monitors assigned to apparatus give fire personnel real-time, location-specific air quality data — including PM2.5, VOC, carbon dioxide, and hydrogen sulfide levels — that allow informed decisions about evacuation zones, shelter-in-place guidance, and responder safety. Replacing the existing cache restores a capability the department has relied on for years.

SCBA Compressors: Self-contained breathing apparatus (SCBA) compressors allow the Fire Department to refill air cylinders on-site, providing personnel with clean, breathable air during responses involving toxic chemicals, smoke, excess moisture, and oxygen-deficient environments. Without adequate compressor capacity, refill times increase and personnel must rotate out of hazardous environments more frequently, slowing response and increasing exposure. Additional compressor capacity directly supports the department's ability to sustain operations at extended incidents and rescue civilians in distress.

Portable air monitors replace the 2019 Valero-funded cache (original value $48,342), now at the end of their service life, restoring real-time, field-deployable air quality monitoring capability for PM2.5, VOCs, carbon dioxide, and hydrogen sulfide. SCBA compressors add refill capacity for breathable air cylinders, reducing rotation times and sustaining personnel during extended hazardous material and wildfire responses. Both are one-time capital purchases expected to remain in service well beyond the grant term. The Fire Department is the primary operator of both systems.

Community Park, Jack London Park, & Bocce Court Public Health & Shade Improvements and Measurable Outcomes: The City of Benicia will implement a coordinated package of shade and solar-lighting improvements at Community Park, Jack London Park, and the City's public bocce courts to address community-identified recreation needs, reduce exposure to extreme heat, improve equity among park users, and expand opportunities for safe outdoor activity. The

approximately $519,200 project includes $179,200 for shaded dugouts at Community Park Softball Fields 1 through 4, $90,000 for shaded dugouts at Jack London Park Ballfields 1 and 2, and $250,000 for a shade structure and solar-powered LED lighting at the bocce courts.

The project responds directly to long-standing requests from residents, athletes, coaches, families, and other park users. Community members have repeatedly asked the City to provide shade over the dugouts at Jack London Park and the softball fields at Community Park, where players and coaches currently have limited protection from direct sunlight and rising temperatures. These improvements will translate community feedback into visible, permanent public-health investments at facilities that are regularly used for practices, games, tournaments, and informal recreation.

The Community Park improvements will also address an inequity in the distribution of park amenities. The boys' baseball fields currently provide shaded dugouts, while the girls' softball fields do not offer comparable protection. Installing shade at all four softball fields will provide female athletes with the same basic heat-protection amenity available to users of the baseball facilities. The project will therefore improve both physical conditions and equitable access to safe, comfortable recreation, ensuring that girls, coaches, families, and spectators are not disproportionately exposed to heat because of the field to which their sport is assigned.

Shade improvements at both parks will reduce direct sun exposure and provide cooler areas where players can rest, hydrate, receive coaching, and recover between periods of activity. These benefits are increasingly important as extreme-heat events become more frequent and intense. Children and youth participating in organized sports may spend several consecutive hours at a field, often while wearing uniforms and protective equipment that increase heat stress. Coaches, officials, family members, older adults, and residents with underlying health conditions may also face heightened risk during hot weather. By installing permanent shade at heavily used athletic facilities, the City will reduce exposure to heat-related illness and make outdoor recreation more accessible during a greater portion of the year.

At the bocce courts, the City will install a permanent shade structure and solar-powered LED lighting to improve daytime comfort and create opportunities for evening recreation. Bocce is particularly popular among older adults, who may be more vulnerable to extreme heat and poor air-quality conditions. The new shade

structure will provide relief during daytime play, while solar lighting will allow residents to use the courts during cooler evening hours when heat exposure is generally lower. Evening access will expand the hours during which the courts can be used and provide seniors and other heat-sensitive residents with a safer alternative to recreating during the hottest part of the day.

The solar-powered lighting component will extend recreational access without relying entirely on conventional fossil-fuel-supported electricity. It will provide a visible example of how renewable-energy technology can be incorporated into community-serving public facilities while reducing operating costs and supporting the City's broader transition toward cleaner infrastructure. The lighting will be designed to provide safe and reliable illumination of the playing area while minimizing unnecessary spillover into surrounding areas.

Together, the three improvements form a unified public-health project rather than a collection of unrelated park upgrades. Each component responds to a documented community need, reduces a barrier to outdoor recreation, and protects populations that may be particularly affected by heat, including children, female athletes, seniors, and people with health vulnerabilities. The project also recognizes that the health impacts of fossil-fuel use extend beyond direct emissions. Fossil-fuel combustion contributes to air pollution and climate change, which in turn increase the frequency and severity of extreme-heat conditions. The proposed investments will help Benicia adapt to these changing conditions while incorporating solar technology into public recreation infrastructure.

Grant-funded activities will include final design, engineering and site review as needed, procurement, permitting, construction, installation, inspection, and commissioning of the shade and lighting improvements. The City will coordinate implementation with park users and affected recreation programs to minimize disruptions and confirm that the final designs respond to operational and community needs. Public outreach will include project updates, information shared through City communication channels, coordination with youth sports organizations and bocce users, and opportunities for residents to provide feedback during design and implementation.

The City will measure project performance through completion of six shaded athletic-field dugout installations covering ten team-use areas, installation of the bocce court shade structure, installation and operation of solar-powered LED lighting, increased hours of court availability, participation in evening bocce activities, and feedback from athletes, coaches, seniors, families, and other park

users. The City may also track sports-program participation, field and court reservations, heat-related closures or scheduling changes, and the number of community members benefiting from the improved facilities.

The improvements will remain in public use well beyond the grant performance period. The City will incorporate the shade structures and lighting into its existing parks inspection, maintenance, and asset-management programs and will budget for routine maintenance and future repairs. By responding to sustained community requests and making targeted investments in heat protection, recreation equity, renewable-energy infrastructure, and expanded evening access, the project will produce immediate and lasting public-health benefits throughout Benicia.

Benicia Shoreline Open Space Access and Public Health Improvement Project: The City of Benicia will implement coordinated public-access, trail, accessibility, and greening improvements at Semple Crossing, John's Place, and Raymond J. Bordoni Park. Together, these projects will remove physical barriers, complete gaps in the shoreline access network, and transform underused waterfront areas into safer, greener, and more inclusive public spaces that support walking, outdoor recreation, mental well-being, and access to nature.

At Semple Crossing, the City will remove the damaged and closed staircase and construct approximately 125 feet of paved shoreline path, accessible transitions, curb ramps, and related pathway improvements. The project will replace an inaccessible stair connection and informal dirt route with a continuous trail segment connecting Semple Crossing, Gullpoint Court, West Third Street, and the West H Street terminus. The surrounding public space will also be landscaped and restored to reduce exposed dirt and create a more welcoming waterfront environment.

At John's Place, the City will rehabilitate the existing public shoreline access easement by removing the closed wooden staircase, improving slope stability and landscaping, and installing seating, a trash receptacle, public-shore signage, and other amenities. These improvements will make the access point safer, easier to identify, and more inviting while preserving appropriate shoreline views and respecting the surrounding residential setting.

At Raymond J. Bordoni Park, the City will convert a largely unimproved dirt-covered open space into a greener and more accessible shoreline park. The concept includes a gently sloped pathway with switchbacks, rest areas, benches, signage, and drought-tolerant landscaping. These improvements will allow older

adults, people with disabilities, families with strollers, and other residents to more safely reach and enjoy the shoreline.

The project will improve public health by creating safe places for walking, recreation, stress relief, and social connection. It will also advance health equity by ensuring that access to Benicia's waterfront is not limited to people who can navigate stairs, steep grades, or uneven ground. Greening the sites will reduce exposed soil and dust, improve neighborhood appearance, support stormwater absorption where feasible, and make the shoreline more comfortable and inviting.

Grant-funded activities may include final engineering, accessibility design, permitting, demolition, grading, slope protection, paving, pathway construction, curb ramps, benches, signage, landscaping, site restoration, inspection, and construction management. By completing missing shoreline connections and improving three underused public spaces, the project will expand equitable access to nature and strengthen Benicia's broader network of parks, trails, and waterfront destinations.

Electric Power Tool Transition: The City of Benicia will transition the Fire Department's existing two-stroke and four-stroke gasoline-powered hand tools, emergency equipment, and hydraulic rescue systems to commercial-grade battery-electric alternatives. The project will replace equipment used during fire suppression, ventilation, rescue, vehicle extrication, emergency lighting, and other critical response activities, including chainsaws and associated blades and chains, assorted power tools, ventilation fans, portable power equipment, hydraulic extrication tools, and portable rechargeable station and emergency-scene lighting.

Battery-powered emergency-response technology has advanced significantly and can now meet the demanding performance, durability, and reliability requirements of frontline fire service. Electric equipment can be deployed rapidly without manual starting, fuel mixing, warm-up time, or reliance on small combustion engines that may be difficult to operate under stressful emergency conditions. Battery-powered rescue and extrication tools also eliminate hydraulic hoses and separate gasoline-powered pumps, allowing firefighters to begin operations more quickly and work more freely around damaged vehicles and confined emergency scenes.

The project directly advances the Air District's goal of reducing air pollution and improving public health by eliminating direct exhaust emissions from the replaced equipment during operation. Gasoline-powered two-stroke and four-stroke engines release pollutants in close proximity to firefighters, emergency victims,

residents, and other personnel at incident scenes. These tools are also frequently tested, maintained, and operated at fire stations, creating additional exposure to exhaust, fuel vapors, noise, and vibration. Transitioning to electric equipment will reduce localized nitrogen oxide, particulate matter, volatile organic compound, carbon monoxide, and greenhouse-gas emissions while improving working conditions for firefighters and reducing noise impacts in neighborhoods and around sensitive community locations.

Grant-funded equipment will include electric saws; replacement saw blades and chains; assorted electric hand and power tools; battery-powered ventilation fans; a portable 1,600-watt battery power station; battery-powered hydraulic rescue and extrication tools, such as Holmatro systems; and portable rechargeable fire-station and emergency-scene lighting. The project will also include the batteries, charging equipment, storage systems, accessories, training, and related components necessary to place the equipment into regular frontline service. Final equipment selections will be based on operational performance, battery endurance, interoperability, safety certifications, durability, warranty coverage, and suitability for emergency-response use.

Before implementation, the Fire Department will complete an inventory of the gasoline-powered and hydraulic equipment proposed for replacement, including equipment type, age, operating hours, fuel use, maintenance history, response function, and typical frequency of deployment. The City will prioritize equipment that is used most frequently, generates the greatest direct emissions, presents the greatest exposure risk, or is approaching the end of its useful life. Existing combustion-powered equipment replaced through the project will be removed from regular frontline service so that the project produces lasting and verifiable emission reductions.

The City will measure project performance by tracking the number and type of tools replaced, battery-electric operating hours, emergency deployments, gasoline consumption avoided, estimated reductions in criteria pollutants and greenhouse-gas emissions, equipment readiness, deployment time, maintenance costs, and firefighter feedback. The Fire Department will also document improvements in operational efficiency, such as reduced startup time, elimination of fuel-mixing requirements, increased mobility at rescue scenes, and reduced maintenance and downtime.

The City will incorporate the new equipment into the Fire Department's existing inspection, training, asset-management, and replacement programs. Firefighters

and maintenance personnel will receive training in safe equipment operation, battery management, charging procedures, emergency use, and preventive maintenance. The City will maintain sufficient batteries and charging capacity to support continuous emergency readiness and will plan for future battery and equipment replacement beyond the grant term.

By converting its frontline small-engine and rescue equipment to fully electric systems, the City will achieve immediate and measurable emission reductions while improving firefighter health, emergency-scene conditions, equipment reliability, and response efficiency. The project will demonstrate how a municipal fire department can adopt cleaner technology without compromising emergency-response capability and will provide a practical model for other fire agencies seeking to reduce emissions from essential public-safety operations.

Personnel/Staff Costs: Project Manager, Grant Manager, and Analyst would be responsible for carrying out the specific elements of this project. Appropriate Community Outreach would ensure that all Benicia residents' comments and needs are considered.

2. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered. (Q6)*

This suite of subcomponents protects Benicia residents from the largest air quality and safety threats in the community: refinery and industrial emissions, wildfire smoke, vehicle exhaust, and extreme heat. Investments in urban greening, wildfire prevention, emergency response, park access, and fleet maintenance work together to reduce pollution, improve public health, and ensure that the City can respond quickly and communicate clearly when hazardous events occur. Seniors and children, who are biologically most vulnerable to particulate matter and toxic air contaminants,[1] will see the greatest public health benefit from cleaner facilities, reduced wildfire smoke exposure, and expanded emergency response capacity. Residents living in multi-family housing will experience the greatest health benefits from improved park and recreation facilities and a well-maintained urban forest.

Community and stakeholder engagement for the Promoting Community Health Project will include:

- Facilitate ongoing two-way engagement and report implementation progress at key milestones at City Council meetings in open public session.
- Post project updates and engagement opportunities on the Benicia Forward webpage.

- The City Manager will include Benicia Forward updates and engagement invitations in his weekly email newsletter as appropriate.
- During implementation, the project team will review SeeClickFix data — particularly park condition reports, tree hazard flags, and open space concerns — and incorporate it into maintenance prioritization under the Urban Forestry and Parks programs.
- The Grants Manager will work with the Fire Department and Parks Division to directly engage community stakeholders, especially seniors, people with disabilities, non-English speaking residents, and neighborhood groups in areas of highest wildfire exposure and lowest park access.
- Updates on construction timelines and facility disruptions will be communicated through the City's weekly email blast and social media channels, with particular attention to parks and open spaces where maintenance activity will temporarily affect access.
- A grant implementation progress report will be included in the City's annual letter from the City Manager that is mailed to every Benicia address.

The *Community Sustainability Commission* will receive regular updates on the Urban Forestry and Greening program, provide input on equity-based planting prioritization, and advise on alignment with the City's climate and air quality commitments.

The *Community Services Commission* will receive regular updates on the Wildfire Prevention and Readiness Program and the Parks and Recreation investments, provide oversight on program priorities and equity-based facility improvements, and advise on public noticing before major maintenance or construction activity at park facilities.

Some possible additional engagement by project may include activities such as (specific activities will be confirmed after grant approval):

4.1. Benicia Urban Forestry and Greening Program

- Post information about and maps of tree canopy on social media
- Encourage volunteer opportunities to manually hand water newly planted trees

4.2. Wildfire Prevention & Readiness

- Host one annual community "Fire Ready Benicia" information table at the farmers market or other community event before fire season
- Create a one-page defensible space checklist for properties in wildland-urban interface areas
- Post before/after photos of fuel modification work on social media to build awareness

4.3. Safety and Monitoring Equipment for Benicia Fire—Portable Air Monitors & SCBA Compressor

- Include a short plain-language explainer in the City Manager's newsletter when new monitors are deployed — what they measure, what the readings mean, and how residents can access real-time data
- Share air quality readings from portable monitors during incidents on the City's social media channels where safe and operationally feasible

Community Park, Jack London Park, and Bocce Court Public Health and Shade Improvements **and** Benicia Shoreline Open Space Access and Public Health Improvement Project

- Encourage residents to report park conditions and maintenance issues on SeeClickFix
- Celebrate completed park repairs with a brief social media post and photo — keeps residents informed and builds goodwill

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for **each Project** during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The **Promoting Community Health** improves community health by expanding the City's urban forest, strengthening wildfire preparedness and emergency response, adding shade and solar-powered amenities at parks and bocce courts, improving shoreline access and public open spaces, and transitioning Fire Department equipment to cleaner electric technologies. Together, these investments reduce environmental health risks, increase climate resilience, and improve access to safe, healthy outdoor recreation.

Summary of Measurable Outcomes and Indicators

Sub-Project and Component	Measurable Outcome	Indicator(s)
4.1. Benicia Urban Forestry and Greening Program	Expand Benicia's urban tree canopy by approximately 600 trees over the grant term—including a new shaded trail connecting Community Park and Lake Herman Park—prioritizing neighborhoods with the greatest heat and pollution exposure to increase natural air filtration and reduce urban heat.	• Citywide tree inventory (4,500+ existing trees) completed by end of Year 1; canopy gaps and priority planting locations identified • ≈400 trees planted along the Community Park–Lake Herman Park shaded trail; ≈200 additional trees planted in priority neighborhoods, by Year 5 • Tree survival rates tracked at 1, 3, and 5 years; failed plantings replaced to maintain canopy target • Linear feet of trail receiving new shade coverage tracked • Estimated carbon sequestration and pollutant-interception benefits calculated using accepted urban-forestry methodology • Community engagement and feedback documented; participation tracked
4.2: Wildfire Prevention and Readiness	Reduce wildfire smoke and community fire risk through targeted vegetation management and strategic fuel modification across high-risk areas.	• Acres of vegetation treated annually (goat grazing, discing, manual clearing) • Annual vegetation management schedule developed and followed • Priority access routes for firefighters cleared and maintained • Vegetation management integrated into emergency response planning and dispatch systems
	Prevent fires and reduce air pollution from hazardous conditions through regular fire prevention inspections and code enforcement.	• # inspections of commercial, industrial, and high-risk occupancies completed annually • # hazards identified and corrected; follow-up inspections confirm resolution • Violations tracked; compliance trends reported annually • Permit applications reviewed for fire and life safety compliance
	Increase community awareness of wildfire, smoke, and hazardous air risks through recurring public education and	• # community education events held annually (station tours, school visits, open house, CPR/CERT)

Sub-Project and Component	Measurable Outcome	Indicator(s)
	real-time protective messaging. Reduce wildfire ignition likelihood and smoke-emission severity through defensible-space enforcement and hazardous fuel load reduction in high-risk areas.	• # residents reached through in-person and social media outreach • Timely safety messaging issued during smoke, odor, and hazardous material incidents • Outreach calendar adjusted annually based on seasonal risk and community feedback
		• Acres of hazardous fuel treated annually, cumulative over grant term • WUI parcels brought into defensible-space compliance, tracked annually • Reduction in defensible-space violations vs. Year 1 baseline • Ignition-risk reduction, if Fire Department modeling tool is available
4.3: Safety and Monitoring Equipment for Benicia Fire (Portable Air Monitors and SCBA Compressor)	Restore real-time field air quality monitoring capability and SCBA cylinder refill capacity to protect first responders and inform protective action during emergencies.	• Portable air monitors (MSA ALTAIR 5X and RKI units) purchased, deployed to apparatus, and operational • SCBA air compressor (BAUER UNICUS 4) installed; aging unit decommissioned • Air output meets Grade E breathing air standards • All equipment calibrated and maintained per manufacturer schedule • # incidents where air monitors deployed (tracked in incident reports) • All applicable units pass required smog and emissions inspections • Fleet available for simultaneous incident response; vehicle downtime tracked • Aging high-use vehicles identified for prioritized replacement
Community Park, Jack London Park, and Bocce Court Public Health and Shade Improvements	Install shade structures and solar-powered lighting at high-use athletic and recreation facilities to reduce heat exposure, correct an existing equity gap between boys' and girls' athletic facilities, and expand safe evening recreation access.	• 6 shaded dugout structures installed, covering 10 team-use areas (Community Park Fields 1–4, Jack London Ballfields 1–2) • Bocce court shade structure and solar-powered LED lighting installed and operational • Evening bocce court hours of availability increased; participation in evening play tracked • Community/user feedback collected from athletes, coaches, seniors, and families post-installation • Facilities incorporated into the City's parks inspection and asset-management program

Sub-Project and Component	Measurable Outcome	Indicator(s)
Electric Power Tool Transition	Replace Fire Department gasoline-powered hand tools, rescue equipment, and hydraulic systems with battery-electric alternatives, eliminating direct exhaust exposure for firefighters and reducing localized emissions at incident scenes and fire stations.	• Inventory completed of gasoline-powered/hydraulic equipment proposed for replacement (type, age, operating hours, fuel use, maintenance history) • # and type of tools replaced with battery-electric alternatives; replaced equipment removed from frontline service • Battery-electric operating hours and emergency deployments tracked annually • Estimated gasoline consumption avoided and NOx/PM2.5/VOC/CO/GHG reductions calculated annually • Firefighter training completed on safe operation, battery management, and charging procedures • Equipment readiness, deployment time, and maintenance costs tracked and compared to baseline
Benicia Shoreline Open Space Access and Public Health Improvement Project	Remove closed and damaged shoreline access structures and complete gaps in the shoreline access network through construction of accessible pathways, site rehabilitation, and greening at three waterfront locations.	• Semple Crossing: damaged/closed staircase removed; ~125 feet of paved shoreline path, accessible transitions, and curb ramps constructed, connecting Semple Crossing, Gullpoint Court, West Third Street, and the West H Street terminus • John's Place: closed wooden staircase removed; access easement rehabilitated with slope stabilization, landscaping, seating, signage, and amenities • Bordoni Park: accessible switchback pathway, rest areas, benches, signage, and drought-tolerant landscaping constructed on currently unimproved dirt open space • Exposed soil and dust reduced through landscaping/site restoration at all three sites • Linear feet of new accessible shoreline trail constructed; # of access barriers removed • BCDC permit obtained for Semple Crossing work, if required

Detailed Milestones and Task Plan by Sub-Project

4.1: Benicia Urban Forestry and Greening Program

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Expand Benicia's urban tree canopy by approximately 600 trees over the grant term—including a new shaded trail connecting Community Park and Lake Herman Park—prioritizing neighborhoods with the greatest heat and pollution exposure to increase natural air filtration and reduce urban heat.	A. Tree Inventory and Planting Strategy (Year 1)	1. Conduct citywide tree inventory documenting condition, species, and canopy coverage for all 4,500+ existing trees; complete by end of Year 1	Public Works	ISA-Certified Arborist	Months 1–12
		2. Map canopy gaps, heat exposure, and pollution burden by neighborhood; use findings to establish equity-based planting priority areas	Public Works	Parks Staff; GIS Staff	Months 6–12
		3. Select California native species (Quercus, Arbutus, Arctostaphylos, Sequoia, Platanus); develop annual planting schedule for priority neighborhoods	Public Works	ISA-Certified Arborist	Months 6–12
	B. Annual Planting and Related Greening Conservation	1. Plant ≥40 new native trees annually in highest-priority neighborhoods (≥200 over 5 years); provide initial care (watering, staking) through first two growing seasons	Public Works	Parks Staff / Contractors	Months 6–60
		2. Inspect and maintain all existing trees on standard cycle; remove hazardous trees; track improvement vs. Year 1 baseline	Public Works	ISA-Certified Arborist	Months 1–60
		3. Apply mulch and soil stabilization; install bioswales and green buffers where appropriate; conduct irrigation checks at tree sites	Public Works	Parks Staff	Months 6–60

4.2: Wildfire Prevention and Readiness

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Reduce wildfire smoke and community fire risk through targeted vegetation management and strategic fuel modification across high-risk areas.	A. Priority Areas Mapped and Schedule Developed	1. Map high-risk wildfire zones near residential areas and sensitive populations; identify priority treatment areas based on fuel load, slope, and proximity to structures	Benicia Fire Dept.	N/A	Months 1–12
		2. Develop annual vegetation management schedule aligned with peak fire season; adjust annually based on drought conditions and growth patterns	Benicia Fire Dept.	N/A	Months 1–12
		3. Identify and map priority firefighter access routes in high-risk areas; coordinate with Parks Dept. on clearance responsibilities	Benicia Fire Dept.	Benicia Parks Dept.	Months 3–12
	B. Vegetation Treatment Implemented (Annual)	1. Deploy goat grazing operations to reduce fine fuels and invasive vegetation; conduct discing to establish and maintain strategic firebreak lines	Benicia Fire Dept.	N/A	Months 3–60
		2. Perform manual vegetation removal in high-risk and inaccessible areas; create and maintain defensible space buffers around residential areas	Benicia Fire Dept.	N/A	Months 3–60
		3. Clear vegetation along access roads, fire lanes, and emergency entry points; maintain routes annually for peak fire season usability	Benicia Fire Dept.	Benicia Parks Dept.	Months 3–60
	C. Tracking and Operational Integration	1. Track acreage treated annually by method (grazing, discing, manual); document vegetation reduction and defensible space created or maintained	Benicia Fire Dept.	N/A	Months 3–60
		2. Integrate vegetation management maps and treatment areas into emergency response planning and dispatch systems; align with evacuation planning	Benicia Fire Dept.	Dispatch; Solano County Fire	Months 6–60

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
		3. Conduct internal evaluations following wildfire incidents to assess access, response times, and suppression effectiveness; incorporate lessons into future planning	Benicia Fire Dept.	N/A	Months 6–60
Prevent fires and reduce air pollution from hazardous conditions through regular fire prevention inspections and code enforcement.	A. Routine Inspections and Enforcement (Ongoing)	1. Perform annual inspections of commercial, industrial, and high-risk occupancies; inspect hazardous material storage, handling, and fire protection systems	Benicia Fire Dept.	N/A	Months 1–60
		2. Issue notices of violation and corrective action requirements; conduct follow-up inspections to confirm corrections; ensure properties meet California Fire Code	Benicia Fire Dept.	N/A	Months 1–60
		3. Review fire permit applications for compliance; inspect fire protection systems and new construction; prioritize high-risk areas and vulnerable populations	Benicia Fire Dept.	N/A	Months 1–60
	B. Compliance Tracking and Annual Reporting	1. Maintain database of inspection findings, violations, and corrective actions; track compliance trends	Benicia Fire Dept.	N/A	Months 12–60
		2. Analyze trends in hazards and incident causes; adjust inspection priorities based on risk data; report annual outcomes to City leadership	Benicia Fire Dept.	N/A	Months 12–60
Increase community awareness of wildfire, smoke, and hazardous air risks through recurring public education and real-time protective messaging. Reduce wildfire ignition likelihood and smoke-emission severity through	A. Year-Round Public Safety Education	1. Develop and maintain seasonal messaging on wildfire preparedness, smoke exposure, carbon monoxide safety, and emergency readiness via social media and City channels	Benicia Fire Dept.	N/A	Months 1–60
		2. Conduct station tours, school and youth outreach, and community presentations; hold annual open house and fire prevention events; offer CPR and CERT training	Benicia Fire Dept.	N/A	Months 1–60

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
defensible-space enforcement and hazardous fuel load reduction in high-risk areas.		3. Track attendance and social media engagement; adjust outreach priorities annually based on seasonal risk, incident trends, and community interest	Benicia Fire Dept.	N/A	Months 1–60
	B. Real-Time Protective Messaging During Incidents	1. Issue timely updates during smoke, odor, hazardous material, and vegetation fire incidents; provide shelter-in-place, avoidance, or evacuation guidance	Benicia Fire Dept.	N/A	Months 1–60
		2. Coordinate messages with City leadership and regional partners; provide follow-up information explaining hazards and protective actions after significant incidents	Benicia Fire Dept.	N/A	Months 1–60

4.3 Safety and Monitoring Equipment for Benicia Fire—SCBA Compressor and Portable Air Monitors

Measurable Outcome	Milestone	Task	Lead Entity	Supporting	Dates
Restore real-time field air quality monitoring capability and SCBA cylinder refill capacity to protect first responders and inform protective action during emergencies.	A. Equipment Procured, Installed and Staff Trained	1. Purchase replacement portable air monitors (MSA ALTAIR 5X multi-gas and RKI single-gas units); assign to frontline fire apparatus and medical response units	Benicia Fire Dept.	Equipment Vendors	Months 1–6
		2. Procure and install new SCBA air compressor (BAUER UNICUS 4); decommission and safely remove aging unit; complete installation testing and operational verification	Benicia Fire Dept.	Equipment Vendor	Months 1–6
		3. Train all firefighters on portable monitor operation and SCBA compressor use; develop standard operating policy for air monitor deployment during incidents	Benicia Fire Dept.	Equipment Vendors; Air District	Months 1–6
	B. Equipment Integrated into Operations and Maintained	1. Deploy portable monitors during fire, hazmat, and medical incidents; use real-time readings to guide evacuation, isolation, or shelter-in-place decisions	Benicia Fire Dept.	Air District; CUPA	Months 3–60
		2. Operate SCBA compressor to maintain continuous cylinder availability; ensure air output meets Grade E breathing air standards; monitor system alerts	Benicia Fire Dept.	N/A	Months 6–60
		3. Conduct routine calibration to ensure monitors are updated; replace sensors and filters as needed; document equipment performance	Benicia Fire Dept.	N/A	Months 6–60

Community Park, Jack London Park, and Bocce Court Public Health and Shade Improvements

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
Install shade structures and solar-powered lighting at high-use athletic and recreation facilities to reduce heat exposure, correct an existing equity gap between boys' and girls' athletic facilities, and expand safe evening recreation access.	A. Design and Permitting	1. Finalize design for shaded dugout structures at Community Park Fields 1–4 and Jack London Ballfields 1–2	Parks Dept.	Engineering Consultant	Months 1–6
		2. Finalize design for bocce court shade structure and solar-powered LED lighting	Parks Dept.	Engineering Consultant	Months 1–6
		3. Obtain necessary construction permits	Parks Dept.	Building Safety	Months 6–9
	B. Construction and Installation	1. Construct and install 6 shaded dugout structures covering 10 team-use areas	Parks Dept.	Contractor	Months 9–15
		2. Install bocce court shade structure and solar-powered LED lighting	Parks Dept.	Contractor	Months 12–18
		3. Complete final inspections	Parks Dept.	Building Safety	Months 17–18
	C. Utilization Tracking	1. Track evening bocce court hours of availability and participation in evening play	Parks Dept.	N/A	Annual, Months 18–60
		2. Collect community/user feedback from athletes, coaches, seniors, and families	Parks Dept.	N/A	Annual, Months 18–60
		3. Incorporate facilities into the City's parks inspection and asset-management program	Parks Dept.	N/A	Month 18, ongoing

Benicia Shoreline Open Space Access and Public Health Improvement Project

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
Remove closed and damaged shoreline access structures and complete gaps in the shoreline access network through construction of accessible pathways, site	A. Design, Permitting and BCDC Coordination	1. Complete final engineering and accessibility design for Semple Crossing, John's Place, and Bordoni Park	Public Works / Parks Dept.	Engineering Consultant	Months 1–9
		2. Confirm BCDC permit requirement/status for Semple Crossing work; submit application if required	Public Works	BCDC	Months 3–12

rehabilitation, and greening at three waterfront locations.		3. Obtain all necessary permits (demolition, grading, construction)	Public Works	Building Safety; BCDC	Months 9–15
	B. Demolition and Construction	1. Remove damaged/closed staircase at Semple Crossing; construct ~125 feet of paved shoreline path, accessible transitions, and curb ramps connecting Semple Crossing, Gull Point Court, West Third Street, and the West H Street terminus	Public Works	Contractor	Months 15–24
		2. Remove closed wooden staircase at John's Place; stabilize slope, install landscaping, seating, trash receptacle, public-shore signage, and amenities	Public Works	Contractor	Months 15–24
		3. Construct accessible switchback pathway, rest areas, benches, signage, and drought-tolerant landscaping at Bordoni Park	Parks Dept.	Contractor	Months 18–30
	C. Site Restoration and Verification	1. Complete landscaping and site restoration to reduce exposed soil and dust at all three sites	Parks Dept.	Contractor	Months 24–33
		2. Conduct final inspection and confirm ADA/accessibility compliance at all three sites	Public Works	Building Safety; ADA Coordinator	Months 30–36
		3. Document linear feet of new accessible shoreline trail constructed and number of access barriers removed	Public Works / Parks Dept.	N/A	Month 36

2.5b Electric Power Tool Transition

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
Replace Fire Department gasoline-powered hand tools, rescue equipment, and hydraulic systems with battery-electric alternatives, eliminating direct exhaust exposure for firefighters and reducing localized emissions at incident scenes and fire stations.	A. Equipment Inventory and Selection	1. Inventory gasoline-powered and hydraulic equipment proposed for replacement—type, age, operating hours, fuel use, maintenance history, and deployment frequency	Benicia Fire Dept.	N/A	Months 1–3
		2. Prioritize equipment for replacement—highest use, greatest emissions/exposure risk, or approaching end of useful life	Benicia Fire Dept.	N/A	Months 3–4
		3. Finalize equipment selections (electric saws, hand/power tools, ventilation fans, portable power station, battery-powered Holmatro rescue tools, lighting) based on performance, battery endurance, and safety certifications	Benicia Fire Dept.	Equipment Vendors	Months 4–6
	B. Procurement, Training and Deployment	1. Procure equipment, batteries, chargers, and storage systems	Benicia Fire Dept.	Equipment Vendors	Months 6–9
		2. Train firefighters on safe operation, battery management, charging procedures, and preventive measures	Benicia Fire Dept.	Equipment Vendors	Months 9–11
		3. Remove replaced gasoline-powered/hydraulic equipment from frontline service; deploy new equipment	Benicia Fire Dept.	N/A	Months 10–12
	C. Performance Tracking	1. Track number and type of tools replaced, battery-electric operating hours, and emergency deployments	Benicia Fire Dept.	N/A	Annual, Months 12–60
		2. Calculate gasoline consumption avoided and criteria pollutant/GHG reductions annually	Benicia Fire Dept.	N/A	Annual, Months 12–60
		3. Document operational efficiency improvements and firefighter feedback; maintain sufficient battery/charging capacity for continuous emergency readiness	Benicia Fire Dept.	N/A	Annual, Months 12–60

Project Name: A Catalyst for a Clean and Resilient Future
Lead Applicant Name: City of Benicia
Term for this budget (in years): 5

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	4.1. Benicia Urban Forestry and Greening Program	Benicia City Staff costs of $652,666 per year over a 5 year period	$3,663,330.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	4.3. Safety and Monitoring Equipment for Benicia Fire—Portable Air Monitors	One time cost for the purchase of Portable Air Monitors	$30,721.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	4.3. Safety and Monitoring Equipment for Benicia Fire—SCBA Compressor	One time cost for the purchase and installation of SCBA Compressor	$97,624.00
Personnel/Staff Costs	Direct	4.2. Wildfire Prevention & Readiness	Reduction of wildfire fuels in and around the wildland urban interface. Existing Benicia City Staff costs of $174,265.52 per year over a 5 year period	$871,327.60
Personnel/Staff Costs	Direct	4.0. Project Manager	25% FTE x $242,874 annual salary and fringe benefits x 5 years	$303,592.50
Personnel/Staff Costs	Direct	4.0. Grant Manager	25% FTE x $244,512 annual salary and fringe benefits x 5 years	$305,640.00
Personnel/Staff Costs	Direct	4.0. Analyst	25% FTE x $130,118 annual salary and fringe benefits x 5 years	$162,647.50
Community Engagement	Direct	4.0. Community Outreach Liaison	Planning and materials	$25,000.50
Construction	Direct	Community Park, Jack London Park, and Bocce Court Public Health and Shade Improvements	$179,200 for shaded dugouts at Community Park Softball Fields 1 through 4, $90,000 for shaded dugouts at Jack London Park Ballfields 1 and 2, and $250,000 for a shade structure and solar-powered LED lighting at the bocce courts.	$519,200.00
Construction	Direct	Benicia Shoreline Open Space Access and Public Health Improvement Project	**John's Place Stairs and Bordoni Park Shoreline Access Improvements:** Consultants for design of pathway, overlook improvements and retaining wall including structural and geotechnical analysis **Semple Stairs (BCDC):** Consultant for design of pathway improvements including structural and geotechnical analysis	$1,300,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Electric Power Tool Transition	**Electric Saws ($34,380)**: Benicia Fire Department replacement of all gas-powered tools and equipment with modern electric and battery-powered alternatives, including chainsaws (10), circ saws (6), 4-pack chargers (3), single charges (14), and spare batteries (33); **Electric Saw Blades and Chains ($20,960)** terminator chains (40) and circ saw blades (18); **Assorted Electric Tools ($6,180):** Battery Sawzall/Tool Kit (7), Leaf Blowers (one per station, two total); **Electric Vent Fan ($5,270):** modern electric and battery-powered alternatives (Blowhard Quickee); **Electric 1600w Battery Generator ($4,550):** Generac 1600w Battery Generator; **Electric Holmatro Tools ($177,960)**: Combi Tool (1), Cutters (2), Spreader (2), Large Ram (2), Small Ram (2), Ram Extender (2), Homaltro Charger (5), Homaltro Battery (14); **Portable and Rechargable Fire Station and Emergency Lighting ($12,850):** Portable Lights (8), Box Lights (12), Flashlights (14)	$301,500.00

Overall Narrative

General Instructions:

- The "Overall Narrative" is scored out of 50 points.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 7 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Catalyst Grant Applications in Benicia:

- Due to the ongoing strain on the Benicia community's civic and organizational capacity resulting from the impending refinery closure, Co-Applicants are not required for Catalyst Grant applications in Benicia.
- Therefore, Catalyst Grant applications in Benicia should **not** answer questions related to "Partnership Structure" (Qs #3-6). Applicants should leave these questions blank, and will not receive a score for these questions.
- The "Overall Narrative" for Catalyst Grant applications in Benicia will be scored out of 30 points.

Application Information	
Application Title	BUSD Clean Future
Lead Applicant	Benicia Unified School District
Application Location	Benicia Unified School District 350 East K Street Benicia, CA 94510 Serving all 7 schools in Benicia Unified
Overall Funding Request	$25,770,910
Grant Term Request	5 years

PROPOSAL VISION (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
    - *Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.*
    - *Advance integrated projects to holistically meet community needs.*
    - *Strengthen community-driven and collaborative solutions.*

Benicia Unified School District (BUSD) proposes the **BUSD Clean Future Initiative**, a coordinated districtwide effort designed to improve student health, reduce the impacts of air pollution, modernize aging school infrastructure, and prepare students for long-term economic opportunity in a changing regional economy. As a refinery-adjacent community, Benicia has experienced the ongoing environmental and public health impacts associated with industrial emissions, poor air quality events, and aging facilities that were not designed to protect students from modern environmental conditions. At the same time, the anticipated refinery closure presents significant economic uncertainty for local families and the broader community. The BUSD Clean Future Initiative responds to these interconnected challenges through three integrated projects focused on healthy campuses, student wellness, and career pathway development.

The **Healthy Campuses** project will modernize school facilities through upgraded HVAC systems, high-efficiency filtration, window replacements, and sustainable landscaping designed to improve indoor air quality, reduce exposure to pollutants, lower energy consumption, and create safer learning environments for students and staff. The **Student Wellness** project will implement coordinated health outreach, early intervention, family support, and care navigation systems to reduce health-related absenteeism, particularly among students impacted by asthma, allergies, and respiratory illness. The **Career Pathways** project will expand Career Technical Education (CTE) opportunities in Environmental Resources, Biotechnology, and Public Health, preparing students for high-demand careers connected to sustainability, health sciences, environmental monitoring, and the region's evolving workforce needs. Together, these projects advance the goals of the Local Community Benefits Fund by reducing the impacts of air pollution, improving public health outcomes, strengthening educational and economic resilience, and supporting a just transition away from dependence on fossil fuel-based industries.

Key measurable outcomes include:

- Reduced student exposure to airborne pollutants through improved filtration and facility modernization
- Reduced health-related chronic absenteeism and increased student attendance
- Increased family engagement with health and wellness supports
- Expanded student participation in environmental health, sustainability, and biotechnology pathways
- Increased work-based learning, dual enrollment, and career exploration opportunities
- Improved student awareness of environmental health and air quality issues
- Reduced energy consumption and increased operational efficiency across district facilities

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

Benicia Unified School District serves approximately 4,300 students across four elementary schools, one middle school, one comprehensive high school, one continuation high school, and a preschool program in the City of Benicia, California. The district also employs more than 560 teachers, administrators, and classified staff members who support student learning and school operations throughout the community. According to California Department of Education DataQuest enrollment data for the 2024–25 school year, the district serves a diverse student population that includes approximately 41% White students, 26% Hispanic or Latino students, 17% students identifying with two or more races, 11% Asian students, and 5% Black students. The district also serves English learners, students with disabilities, socioeconomically disadvantaged students, foster youth, homeless students, and students experiencing a range of academic, health, and social-emotional challenges.

Benicia is a waterfront community with a long history connected to refinery operations, industrial activity, and regional transportation corridors. For decades, residents have expressed concerns regarding environmental exposures associated with industrial emissions, wildfire smoke events, diesel traffic, and regional air quality conditions. Students and families living in refinery-adjacent communities are often disproportionately impacted by respiratory illness, asthma, allergies, and other health concerns connected to environmental conditions. These impacts are particularly significant for children because their lungs, immune systems, and neurological systems

are still developing. Within BUSD, at least 487 students have documented asthma diagnoses and more than 240 students have documented allergies, with many additional students likely experiencing undiagnosed respiratory conditions or environmentally triggered health symptoms.

Air quality is linked to a wide range of health concerns, particularly for children. Because their bodies and brains are still developing, the American Lung Association reports that children are among the most vulnerable to air pollution, with exposure contributing to increased asthma prevalence, missed school days, and reduced academic performance. Poor air quality can impact the lungs, heart, brain, immune system, and overall development of young people. While all students, teachers, and staff benefit from cleaner air, improvements in air quality are especially important for students with health conditions affected by environmental factors, including asthma and allergies.

Beyond respiratory health, research supported by the National Institutes of Health demonstrates that air pollution exposure can negatively affect children's brain development, cognitive performance, and long-term neurological health. Studies have linked long-term exposure to air pollution with lower IQ scores, reduced cognitive performance, and difficulties with memory and learning (Alter et al., 2024). Additional research suggests that pollution exposure may influence emotional regulation and behavior, further highlighting the connections between environmental health, physical well-being, and mental health outcomes for students (Jara et al., 2026).

The proposed projects are designed to benefit all BUSD students, staff, and families while prioritizing populations most impacted by environmental and economic vulnerability. These include students with asthma and chronic health conditions, socioeconomically disadvantaged students, English learners, homeless youth, students with disabilities, and families experiencing barriers to healthcare access or economic instability. The initiative also supports students preparing to enter a changing regional workforce as Benicia and surrounding communities continue adapting to the anticipated transition away from fossil fuel-based industries. Through facility modernization, coordinated wellness supports, environmental health education, and expanded Career Technical Education pathways, the BUSD Clean Future Initiative seeks to improve student health, strengthen educational outcomes, and create long-term opportunities for students and families across the Benicia community.

PARTNERSHIP STRUCTURE (20 points)

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to:*
    - *Coordinate overall community engagement activities.*
    - *Track and report on indicators to assess progress towards measurable outcomes.*
    - *Collect and process reporting, reimbursement and invoicing requirements.*

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.*

N/A-This section is not required for Benicia Catalyst Grants

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

Benicia Unified School District has extensive experience implementing districtwide initiatives that improve student health, safety, and academic outcomes. Through its Local Control and Accountability Plan (LCAP), the district has established systems for coordinating programs that support student wellness, equity & inclusion, and college & career readiness.

To implement the BUSD Clean Future Initiative, the district will dedicate staff capacity across multiple departments, including:

- **District Administration** – Oversight of grant implementation and alignment with district priorities.
- **Facilities and Operations** – Implementation of air-quality improvements, monitoring equipment, and building upgrades.
- **Educational Services** – Integration of environmental health and sustainability learning opportunities into curriculum and student activities.
- **Student Services and Wellness Programs** – Coordination of health education, student engagement, and community outreach activities.

The Superintendent will directly oversee grant implementation, working with the Health and Wellness Coordinator, who will support personnel, site administration, project coordination, and reporting requirements.

The district will also leverage existing staff expertise in facilities management, curriculum development, and student wellness programs to ensure successful implementation. The district manages a $68 million budget and $122.5 million bond measure to improve facilities, security and technology.

Through these integrated efforts, the district is well positioned to implement projects that address environmental health challenges while advancing educational outcomes for students.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

Benicia Unified School District has established financial management systems and internal controls that ensure public funds are managed responsibly, transparently, and in compliance with state and federal regulations. The district's Business Services Department oversees all grant funding and financial operations and has extensive experience administering state, federal, and foundation grants.

BUSD utilizes a centralized accounting system that allows the district to track restricted funds through dedicated budget codes and project accounts. For this grant, a unique program code will be established within the district's financial management system to ensure that all expenditures associated with the project are clearly documented and easily auditable. This system allows staff to monitor spending in real time and ensure that expenditures remain aligned with the approved grant budget and activities.

Financial oversight is provided by the Business Services Department, who is responsible for budget monitoring, compliance with grant requirements, and preparation of financial reports. Business Services staff will review expenditures, verify that costs are allowable under the grant guidelines, and ensure that all procurement and contracting activities follow district purchasing policies.

The district follows established internal control procedures that include:

- Segregation of duties for purchasing, approval, and payment processes
- Multiple levels of review and approval for expenditures
- Documentation requirements for all purchases and reimbursements

- Compliance with competitive bidding and procurement regulations when applicable

These practices ensure that grant funds are used only for approved activities and that all expenditures are properly documented.

To support grant reporting requirements, BUSD will maintain detailed financial records and supporting documentation for all project expenditures, including purchase orders, invoices, contracts, and payroll documentation for staff supported through grant funding. The district will prepare periodic financial reports to track expenditures against the approved budget and ensure that spending remains on schedule throughout the grant term.

In addition, the district undergoes regular independent financial audits in accordance with California public school district requirements. These audits review financial controls, accounting practices, and compliance with grant and funding regulations. This oversight helps ensure transparency and accountability in the management of public funds.

Through these systems and procedures, Benicia Unified School District has the financial capacity and experience to responsibly manage grant funding and ensure that all funds are spent efficiently and in accordance with program goals and requirements.

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The BUSD Clean Future Student Wellness Project is a proactive, school-based initiative designed to improve student health outcomes and reduce chronic absenteeism by addressing health-related barriers to attendance. The project will implement coordinated outreach, early identification, and care navigation for students experiencing illness—particularly those affected by respiratory conditions such as asthma and allergies.

Serving approximately 4,500 students across seven schools, the project responds to a clear and urgent need: at least 487 students have been diagnosed with asthma and 243 have documented allergies, with many more likely undiagnosed. When kids miss school, especially repeatedly, academic outcomes are far-reaching and include lower test scores, gaps in learning, falling behind peers, and even risks of grade retention or dropping out. Chronic absenteeism also exacerbates social isolation and precipitates social-emotional challenges, which ultimately results in adverse mental health outcomes for students.

Research consistently shows a strong, two-way relationship between student health, school attendance, and mental well-being (Viner et al., 2026). Students who experience ongoing medical issues, particularly respiratory illnesses, chronic conditions, or frequent sickness, are more likely to miss school, and those absences are closely tied to increased anxiety, depression, and social isolation (Russo, 2022). Studies indicate that students with mental health disorders miss significantly more school, up to 23–25 days per year in secondary grades, compared to about 10–12 days for their peers, and mental health challenges account for a notable portion of all absences (Owen, 2019).

Importantly, absenteeism itself can worsen mental health, creating a compounding cycle. Missing school leads to academic gaps, disconnection from peers, and reduced access to supportive adults, all of which increase feelings of anxiety and depression. Longitudinal research shows that even modest levels of absence significantly increase the likelihood of later mental health problems, with higher absence rates doubling the risk of poor mental health outcomes (Viner et al., 2026, *The Impact of School Mental Health Services on Reducing Chronic Absenteeism | Mental Health America*, 2025). For students dealing with ongoing medical concerns, this cycle is even more pronounced. Physical illness leads to absence, absence leads to emotional distress, and that distress further reduces attendance, all of which underscore the importance of early intervention, consistent outreach, and integrated health and wellness support in schools.

By coordinating health services staff, school nurses, wellness liaisons, and administrators, the BUSD Student Wellness project delivers timely support, health education, and care connections to families. This integrated approach aims to improve student health, decrease absenteeism, and alleviate the caregiving burden on families.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This project directly aligns with the Local Community Benefit Fund's priority to reduce air pollution impacts and improve health outcomes. Respiratory conditions, such as asthma, is prevalent among BUSD students and closely linked to environmental factors that include air quality and pollution exposure. Benicia typically experiences 10-12 days per year of unhealthy air quality (Air Quality Index [AQI] ≥ 101), driven primarily by wildfire smoke, industrial emissions, and seasonal air inversions. While annual air quality averages may appear moderate, short-term pollution spikes pose significant health risks, particularly for children with respiratory conditions like asthma.

These episodic high-AQI days contribute to increased illness, missed school days, and worsening chronic conditions (Zhang et al., 2018). For the nearly 500 students in BUSD diagnosed with asthma, even brief exposure during unhealthy air quality events can trigger symptoms that lead to absenteeism and reduced classroom participation.

By strengthening early identification, family education, and access to care, this project mitigates the health impacts of environmental conditions on vulnerable students. It ensures that students affected by air quality-related illnesses receive timely intervention, reducing both the severity of health episodes and associated school absences.

Additionally, the project advances health equity by supporting families who may face barriers to healthcare access, ensuring all students—regardless of socioeconomic status—can achieve consistent attendance and improved well-being.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The BUSD Student Wellness project will be implemented across all schools within the Benicia Unified School District, serving students and families throughout the City of Benicia, California. Key locations include district school sites where health services and family outreach are coordinated.

Benicia Unified School District
350 East K Street
Benicia, CA 94510

Benicia Middle School
(~950 students)
1100 Southampton Rd,
Benicia, CA 94510

Benicia High School
(~1,400 students)
1101 Military West,
Benicia, CA 94510

Robert Semple Elementary School
(~500 students)
2015 E 3rd St,
Benicia, CA 94510

Matthew Turner Elementary School
(~500 students)
540 Rose Dr,
Benicia, CA 94510

Joe Henderson
(~500 students)
650 Hastings Dr,
Benicia, CA 94510

Mary Farmer Elementary
(~500 students)
901 Military West,
Benicia, CA 94510

Liberty High School
(~50 students)
351 E J St,
Benicia, CA 94510

The project will serve students and families across all district schools, including preschool, elementary, middle, and high school campuses.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The need for this project has been identified through ongoing engagement with families, school staff, and community partners. BUSD regularly reviews attendance data, school health office visits, and feedback from school offices, counselors, and administrators to understand the barriers that prevent students from consistently attending school.

We have sought feedback from site leaders, teachers, community members, parents, and the Benicia Board of Education through a series of meetings. Participants have provided direct feedback or have been asked to email the superintendent with questions, ideas, and suggestions. The following is a list of recent meetings:

Budget Advisory Committee	**12/16/25, 1/14/26, 2/3/26,**
Grant Committee	**2/26/26, 3/10/26, 3/23/26, 4/14/26, 4/20/26**

Parent Meetings	**3/24/26, 4/21/26**
Principal Meetings	**3/18/26, 4/21/26**
District Leaders Meetings	**3/4/26, 4/22/26**
Board Meetings	**2/28/26, 4/16/26**
Bond Oversight Committee	**2/3/26**

School staff have observed that many student absences are connected to health-related concerns, including respiratory illnesses, chronic conditions, and limited access to healthcare resources. Through conversations with families and community partners, the district has identified the need for stronger outreach, education, and coordination of health services to support families when students are ill.

Community-based organizations and local health providers have also emphasized the importance of improving communication between schools and families regarding health issues, preventative care, and available resources. This project leverages these findings to shift from reactive support to a coordinated, proactive model for student health and attendance.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The BUSD Student Wellness project directly addresses the community need for improved student health support and family outreach. Students experiencing illness or chronic health conditions often face barriers to returning to school quickly and safely. Without clear guidance and support, families may struggle to access medical care, understand health symptoms, or navigate available resources.

According to the Centers for Disease Control and Prevention (CDC), asthma is the leading chronic illness among U.S. youth and a primary driver of school absenteeism. When health conditions like asthma go unmanaged, the resulting chronic absences trigger a downward spiral of academic decline, social isolation, and deteriorating mental health. Consequently, proactive family outreach and early intervention are critical to maintaining student well-being and school engagement.

This initiative targets public health challenges, specifically respiratory illnesses and chronic health conditions like asthma, which are often exacerbated by environmental factors and poor air quality. By strengthening school-based health support and

connecting families to community health resources, the project contributes to improved student health and well-being.

Beyond clinical support, the project is a vehicle for health equity within the Benicia community. By proactively removing barriers to healthcare for underserved families, the project ensures that every student; regardless of socioeconomic status, has the resources to maintain consistent attendance. Through targeted outreach and coordinated care, the project empowers families to manage illnesses effectively and return students to the classroom safely and swiftly.

Project progress will be measured by:

- Reduction in health-related chronic absenteeism.
- Increased early intervention for respiratory and chronic conditions.
- Increased family engagement with health services.
- Increased connections to community healthcare providers.
- Improved student readiness to return to school after illness.

The success of this project will be demonstrated through a clear progression from individual student wellness to broad community impact. By reducing chronic absenteeism, the project is not only improving academic trajectories but also stabilizing family economies by reducing work-loss days for parents. Furthermore, by formalizing connections between families and community healthcare providers, this initiative will dismantle barriers to care and advance health equity. Ultimately, these measurable outcomes will result in a more resilient, healthy, and engaged community where every child has the physical well-being necessary to thrive.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

BUSD will implement a multi-layered engagement strategy to ensure families and community stakeholders remain informed, involved, and able to shape project implementation. The project ensures a two-way flow of information, and feedback is analyzed regularly to refine outreach tactics and eliminate barriers to care. This responsive approach ensures that the project remains deeply rooted in the actual needs of Benicia families, maximizing both health outcomes and community trust.

Engagement methods will include:

- Regular communication through district newsletters, school sites, and direct outreach.
- Targeted follow-up (phone calls, meetings, home-school communication) for families of students with health-related absences.
- Parent engagement events focused on health education and available resources.
- Collaboration with community health providers and organizations.

To ensure continuous improvement, BUSD will actively solicit feedback through:

- Scheduled parent meetings, meetings specific to the health of BUSD students, and community listening sessions.
- Surveys and informal feedback during outreach interactions.
- Input from school staff and community partners.

Feedback will be used to:

- Adjust outreach strategies.
- Improve accessibility of services.
- Strengthen partnerships with healthcare providers.
- Ensure the program remains responsive to community needs.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The BUSD Clean Future Student Wellness Project will implement a coordinated, data-driven system to identify, address, and reduce health-related barriers to school attendance. The vision of this project is for all students to have the support they need to be healthy and learn. Benicia students are particularly impacted. Students living near refinery-adjacent urban environments experience higher rates of asthma, respiratory illness, and stress-related conditions, all of which directly impact school attendance, academic performance, and long-term health outcomes (Gonzalez et al., 2022).

Pollution in urban environments near refineries exposes communities to harmful pollutants, such as fine particulate matter (PM2.5), sulfur dioxide, nitrogen oxides, and volatile organic compounds like benzene. These pollutants are strongly linked to increased rates of respiratory illnesses, particularly **asthma**, chronic bronchitis, and reduced lung function; especially in children (American Lung Association, 2025, World Health Organization, 2024). For students, these health challenges often translate into

frequent absences, reduced ability to participate fully in school activities, and a greater need for ongoing medical and school-based support.

In addition to physical health impacts, refinery-related pollution can affect neurological development, mental health, and overall well-being (Lewandowska, 2025, *Air Pollution's Impact on Mental Health*, 2026). Children exposed to poor air quality may experience headaches, fatigue, and difficulty concentrating, which can hinder academic performance. Chronic exposure is also associated with increased stress, anxiety, and sleep disturbances, particularly in communities that experience frequent industrial activity or environmental incidents (Zundel et al., 2022). These combined effects highlight the critical need for school-based health and wellness support, family outreach, and early intervention strategies to ensure students can attend school consistently, engage in learning, and maintain their overall health.

The project integrates early identification, targeted intervention, and continuous monitoring to improve both student health outcomes and attendance rates across the district. By expanding our current parent communication system to include direct texting, email and phone calls, we will ensure stronger communication with families. In addition to parent information sessions or podcast structures, we will better inform parents of available health support options with the use of social media and the district website.

The project's strategy is to implement a proactive outreach system that engages families after a student's second consecutive day of absence. By prioritizing respiratory health, our team identifies underlying symptoms and environmental triggers, connecting families with the medical support and community resources necessary to restore student health and academic engagement. Major components of the project include:

1. **Proactive Identification and Outreach**
   BUSD will establish a standardized early warning system using attendance and health office data to identify students experiencing repeated health-related absences (e.g., 2+ illness-related absences within a defined period). Staff will conduct timely outreach, including phone calls and emails, to engage the family and identify if assistance is needed. Priority will be given to students with known chronic conditions (e.g., asthma, severe allergies). Every time a student is absent for 2 or more days, parents/guardians will be contacted and offered support and information about identifying factors that can support their child's health needs.
2. **Coordinated, Multi-Disciplinary Support**
   A coordinated team—including the Health Services, Student Support Assistant, District Nurse, and site staff—will implement individualized support strategies for

identified students. Informal care plans or targeted support strategies will be utilized and integrated with existing student services (e.g. counseling, attendance teams).

3. **Family Education and Empowerment**
   Families will receive culturally and linguistically appropriate education and resources to support student health. Education topics may include: managing chronic conditions (e.g., asthma action plans); preventative care and symptom recognition; when to seek medical care vs. return to school safely; and resources in the area that can support families' medical needs. Materials will be provided in the family's preferred languages and may be provided in different formats, depending on need. Families will receive ongoing support, not one-time contact.
4. **Referral and Care Navigation**
   The program will actively connect families to healthcare and community resources, including referrals and warm hand-offs to: health insurance, such as Medi-Cal and Covered California; primary care providers; specialists (e.g., asthma/allergy care); and community clinics and public health services. Staff will assist families in navigating barriers such as insurance access, appointment scheduling, and transportation and language needs.
5. **Data Tracking and Continuous Improvement**
   BUSD will implement a structured system to track participation, services, and outcomes. Data points will include: Health-related absences (frequency and duration); Student/family participation in outreach/intervention; Education provided and referrals made; and Attendance improvement over time. In addition, community feedback will be collected through parent meetings, school site engagement events, and direct conversations with families receiving support through the program. The district will also gather feedback from school staff and community partners to ensure the program continues to meet the needs of students and families. Data and feedback will be reviewed regularly to identify trends, adjust intervention strategies, and ensure program effectiveness.

Benicia Unified School District will serve as the lead agency, responsible for program implementation and coordination; data tracking and reporting using a tool such as TAD Health; communication with stakeholders; staff training and oversight; and partnership development with community health providers. We have ongoing relationships with all of these community health supporters: Solano Partnership, Public Health Nurse, Solano County Family Health Services, Benicia Action Council, and Solano County Public Health.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Total direct costs for the BUSD Clean Future Student Wellness Project is $5,043,520 for a 5-year grant period. The project budget includes time and effort costs for personnel directly responsible for health outreach, coordination, and family engagement; travel for personnel to make local family health visits; staff training at conferences; development, translation, and printing costs of outreach and educational materials for families; licensing expenses for web-based data collection and communication platforms; community engagement activity costs; and laptop purchases. A brief description of each key project cost follows.

Personnel

Health & Wellness Support Coordinator (1.0 FTE). This individual plays a key role in improving student health, increasing school attendance, and removing barriers to learning. This position is designed to provide direct outreach to students and families, connect them to health and community resources, and support school sites in responding to health-related concerns, including those connected to air quality and environmental conditions. The Coordinator works closely with district nurses, school staff, and community partners to ensure students are healthy, present, and ready to learn. $750,000 is budgeted for this position for the 5-year grant term.

Health & Wellness Liaison (1 position, 1.0 FTE). The Health & Wellness Liaison provides direct support to students and families to improve student health, increase attendance, and remove barriers to learning. This role focuses on outreach, connection to resources, and ongoing follow-up to ensure students are healthy, supported, and able to attend school consistently. This individual supports the transition back to school and ongoing mental health needs. The Liaison works closely with school staff, the Health & Wellness Support Coordinator, and health services personnel to respond to student needs, particularly those impacted by illness, environmental conditions, and other wellness-related challenges. $302,500 is budgeted for the Health & Wellness Liaison for the grant term, and the position may be a contract, hourly position.

Health Services Clerk (1.0 FTE). The Health Services clerk supports district efforts to improve student health and attendance by managing data systems, tracking measurable outcomes, and ensuring accurate reporting for grant-funded and district health initiatives. This role ensures that services provided to students and families are documented, analyzed, and used to drive continuous improvement. The Health Services Clerk works closely with the Health & Wellness Support Coordinator, Health &

Wellness Liaison, and other Health Services staff to maintain strong data systems that inform decision-making and demonstrate program impact at the local, state, and grant levels. $375,000 is budgeted for this position.

Student Support Assistant (1.0 FTE). The Student Support Assistant works closely with the Health & Wellness Support Coordinator and Liaison to directly support BUSD families. This individual tracks student health cases and attendance, working in tandem with the Health Services Clerk to document details in data systems. $290,000 is budgeted for this position during the grant period.

District Nurse (1.0 FTE). The District Nurse advances the well-being, academic success, and health of all students. This individual promotes health and safety including a healthy environment, intervenes with actual and potential health problems, and actively collaborates with others to build student and family capacity for adaptation, self-management, self-advocacy, and learning. The District Nurse advances the academic success and lifelong health and well-being of students by promoting school-based health and safety through vision, hearing and oral health assessment, immunizations, health education, and coordination of health care services for students with health needs, including students with chronic illnesses and disabilities. School nurses are the primary health professional within the educational community. $1,066,735 is budgeted for this position.

Office Staff Members from 7 School Sites (0.20 FTE per person). Seven (7) office staff members from the 4 elementary, middle school, and 2 high schools will each dedicate 20% time and effort to this project to track student attendance, follow up on student absences, and input data into the appropriate data management systems. School office staff often are the first point of contact for BUSD families, and each individual from a BUSD school will serve as a school site representative for this project. $581,625 is budgeted for the cost of this line item.

4 School Vice Principals from 2 School Sites (0.20 FTE per person). 4 school Vice Principals from the middle school and 2 high schools will each provide 20% time and effort to provide high level support for this project. The Vice Principals will monitor student attendance, provide family contact and support for students who demonstrate chronic absenteeism, and support student health plans. They will also work closely with BUSD Health Services staff and the Health & Wellness Support Coordinator to ensure the project meets its objectives. $1,022,660 is budgeted for these positions during the grant period.

Other Direct Costs

Travel. Travel is budgeted at $15,000 for the 5-year grant term ($3,000 per year) to cover the cost of mileage for project personnel to conduct home visits with families experiencing high rates of school absenteeism. Travel also includes conferences and training.

Conferences. To assist with staff development during the grant period, $20,000 is budgeted to cover the cost of attendance for project staff at relevant conferences. 2 project staff members will have the opportunity to attend 1 conference(s) per year.

Database. BUSD will utilize a web-based database to collect information on student attendance and health outcomes for this project. Licensing costs for a 5-year grant period are budgeted at $350,000. This product tracks all student attendance information and health data. The license costs $70,000 a year, and is likely to increase in cost.

Communication platform. BUSD staff and project personnel will use a communication platform to distribute timely information to project stakeholders, particularly families, on a mass scale. $135,000 is budgeted for the cost of licensing this communication platform during a 5-year period.

Outreach and Educational Materials. $15,000 is budgeted for the development, printing and distribution of project outreach and educational materials for families.

Translation Services. $65,000 is budgeted for the use of translation services for outreach and educational materials, which will be made available in multiple languages to accommodate all BUSD families.

Community Engagement. $30,000 is budgeted during the 5-year grant period for community engagement activities that include food and beverage for meetings, printing, and outreach costs, such as overtime or staff stipends.

Laptops. $25,000 is budgeted for the purchase of 5 laptops. Included in this amount is technical support to set up the laptops for use within the district's network.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project aligns with several local and regional initiatives focused on improving community health and addressing environmental factors that impact public health. The project supports broader efforts to improve air quality and reduce the health impacts of environmental conditions, particularly those affecting respiratory health. Further, this project supports our student and staff health in conjunction with improving the indoor and outdoor air quality at Benicia Schools.

The project is consistent with the goals of California's Community Air Protection Program (AB 617), which focuses on addressing air pollution in communities impacted by industrial activities. By supporting early identification of respiratory health concerns and improving connections to healthcare resources, the project contributes to broader regional efforts to reduce the health impacts associated with air pollution. In addition, it is tied to regional efforts in Solano County to reduce air pollution and protect public health. Solano County's Climate Action Plan and regional air quality agencies prioritize reducing emissions, improving air quality, and mitigating the health impacts of pollution, particularly in communities impacted by industrial activity.

The project also aligns with school attendance improvement efforts aimed at addressing barriers that prevent students from fully participating in their education. When students miss school, it impacts their learning and progression in school. Missing school also has a social and mental impact on students as they often feel lost, behind and disconnected from school due to absences.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Benicia Unified School District (BUSD) has significant experience implementing programs that support student health, wellness, and attendance. The district employs credentialed school nurses, health services leadership, and trained school staff who work collaboratively to support student well-being. Yearly, our trained staff conduct hearing, eye, and scoliosis testing and provide training to staff to manage students' health concerns. Our health team supports students with asthma and allergies on a daily basis. Our goal is to expand these roles with additional support providers who will better support our students.

The Health & Wellness Support Coordinator and Student Support Assistant will oversee project implementation, with the support of district personnel, coordinating the efforts of school nurses, health and wellness staff, and school office personnel. These staff members already play a key role in supporting student health at BUSD and will expand their outreach and coordination activities as part of this project.

Estimated staffing support will include partial Full-Time Equivalent (FTE) allocations across existing staff positions responsible for health outreach, coordination, and program implementation. The district will also leverage existing resources, such as school health offices, student services teams, and partnerships with community health organizations to support project implementation.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

This project is ready to begin implementation within 30 days of the execution of the grant agreement. The program primarily involves staffing coordination, outreach activities, and program management within existing school facilities. No construction or major infrastructure changes are required.

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

No permits or special approvals are required for this project. The activities will be conducted within existing district programs and facilities.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

CEQA compliance is **not applicable (N/A)** because the project does not involve construction or physical development activities.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

Site control is not required, as all project activities will occur within existing Benicia Unified School District facilities and property.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

The program will be implemented by existing district staff within the health services department and under the oversight of district personnel, including the Superintendent of Schools. BUSD will ensure ongoing oversight and program management during the grant term. The district will also explore opportunities to integrate successful program elements into ongoing student services and attendance support programs after the grant period.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Potential obstacles may include the difficulty of establishing consistent contact with high-need families and bridging gaps in resource awareness. To mitigate these barriers, the district will employ a multi-tiered strategy. This includes utilizing our comprehensive parent messaging system for automated calls and emails, distributing all materials in the primary languages of our community, and leveraging the trusted voices of our community partners to increase outreach efficacy.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The BUSD Student Wellnessis a proactive, school-based initiative designed to improve student health outcomes and reduce chronic absenteeism by addressing health-related barriers to attendance.

Measurable Outcome	Indicator(s)
1. **A minimum of 200 students will be identified annually who experience health-related absences**	• Contact data will be tracked on Health Services web based software. Tracking every student/family contact.
2. **A minimum of 150 families will participate in Coordinated, Multi-Disciplinary Support, through one on one intake, survey or educational outreach meetings**	• Tracked by Health services web based software, including date of contacts, steps taken, follow up, and support provided.
3. **Twenty-five percent of our identified families will participate in Education and Empowerment sessions**	• Tracked on student software (Aeries)
4. **Families (200) will receive Referral and Care Navigation**	• Number of referrals made to healthcare and community providers • Percent of families successfully connected to services • Reduction in barriers to accessing care (insurance, transportation, language)
5. **Data Tracking and Continuous Improvement**	• Track student attendance and overall improvement, reduction in lost classroom time and instruction.

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. A minimum of 200 students will be identified annually who experience health-related absences	A. Set up early warning system to identify students	1. Identify how the current absentee system will be used/modified to notify health staff when students have multiple health-related absences. Identifying respiratory illness.	Educational Services Department	School Nurse, Site office staff	January 2027
		2. Identify protocols for timeframes for contacting families.	Educational Services Department	School Nurse, Site office staff	January 2027
		3. Begin using an early warning system to identify families that need support.	Educational Services Department	School Nurse, Site office staff	July 2027
	B.Identify how families will be contacted	1. Identify protocols for how families will be contacted through multiple means (phone, email, text, etc.)	Educational Services Department	School Nurse, Site office staff	March 2027
		2. Identify how contacts will be documented	Educational Services Department	School Nurse, Site	March 2027

				office staff	
		3. Ensure processes are in place to connect with families who accept, and for families who decline by tracking and periodic monitored/offered support.	Educational Services Department	School Nurse, Site office staff	March 2027
	C.Conduct outreach to families on health-related needs and services.	1. Families who are identified will be contacted by health personnel a minimum of two times and two ways.	Educational Services Department	School Nurse, Site office staff	May 2027
		2. Information is shared to the school population through newsletters and other means to reach families who may be at risk of experiencing absences for early intervention.	Educational Services Department	School Nurse, Site office staff	June 2027
2. We are targeting 150 families to receive Coordinated, Multi-Disciplinary Support	A. Identify options that will be available for individual support	1. Development of an individual support plan template	Educational Services Department	School Nurse, Site office staff	July 2027
		2. Identify the types of support that will be available and integrate them into the plan template	Educational Services Department	School Nurse, Site office staff	July 2027
	B. Integrate existing student services	1. Identify which other student services might be integrated (counseling, attendance, etc.)	Educational Services Department	School Nurse, Site	Aug-Sept 2027

				office staff	
		2. Identify how student services will interface with the health attendance team.	Educational Services Department	School Nurse, Site office staff	Sept-Oct 2027
		3. Train/orient relevant student services staff on services available and how to access and integrate services and communication	Educational Services Department	School Nurse, Site office staff	Oct - Dec 2027
	C. Work with identified families to develop care plans and/or implement individual support strategies	1. Meet with families to discuss and identify individual strategies (in-person, virtual, email)	Educational Services Department	School Nurse, Site office staff	Sept-Nov 2027?
		2. Integrate individual support strategies into care plans	Educational Services Department	School Nurse, Site office staff	Dec-Feb 2027
		3. Implement individual support strategies	Educational Services Department	School Nurse, Site office staff	Dec-Feb 2027
3. Families will participate in Education and	A. Develop standardized education	1. Identify topics for education materials	Educational Services Department	School Nurse, Site	Jan - March 2028

Empowerment sessions	materials for family empowerment.			office staff	
		2. Develop materials in multiple formats (handouts, emails, brief messages, phone talking points)	Educational Services Department	School Nurse, Site office staff	March - May 2028
	B. Translate educational materials	1. Translate materials into a minimum of English and Spanish	Educational Services Department	School Nurse, Site office staff	May - 2028
		2. Translate materials as needed into other languages based on need	Educational Services Department	School Nurse, Site office staff	June 2028
	C. Train staff on the delivery of educational materials	1. Identify best practices on health education, such as motivational interviewing	Educational Services Department	School Nurse, Site office staff	June - July 2028
		2. Train non-medical staff on health related topics	Educational Services Department	School Nurse, Site office staff	July - Aug 2028
4. Families receive referral and care navigation support	A. Community resources are identified and	1. Develop a list of local healthcare providers, clinics, and support services	Educational Services Department		June - July 2028

to access healthcare and community resources	organized for referral	2. Identify resources for asthma care, primary care, and preventative health	Educational Services Department	School Nurse, Site office staff	June - July 2028
		3. Create a centralized referral guide accessible to staff	Educational Services Department	School Nurse, Site office staff	June - July 2028
5. Implement a data tracking and continuous improvement system to monitor student health and attendance outcomes	A. Track student contact, parent resources provide and overall student attendance.	1. Develop system to track student contact, outreach, and referrals	Educational Services Department	School Nurse, Site office staff	June - July 2028
		2. Track resources provided to families	Educational Services Department	School Nurse, Site office staff	June - July 2028
		3. Integrate attendance and health data into monitoring system	Educational Services Department	School Nurse, Site office staff	June - July 2028

Project Name:	BUSD Clean Future Student Wellness Project
Lead Applicant Name:	Benicia Unified School District
Term for this budget (in years):	5 Years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Coordinator	1.0 FTE Health & Wellness Support Coordinator. Direct oversight of the project, ensure grant outcomes, develop systems of communication and follow up support of students and families.	$750,000
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Project Support	1 Health & Wellness Liaison position at 40 hours per week per person. This individual will support students and families as they return to school, connect families to resources, and engage in follow-up activities.	$302,500
Personnel/Staff Costs	Direct	Project Support	Health Services Clerk at 1.0 FTE to provide project oversight and direct support of students and families.	$375,000
Personnel/Staff Costs	Direct	Project Support	1.0 FTE Student Support Assistant will provide direct support to families, tracking student health and attendance.	$290,000
Personnel/Staff Costs	Direct	Nurse	The District Nurse will provide 1.0 FTE time and effort, supporting student health needs directly and through training of staff.	$1,066,735
Personnel/Staff Costs	Direct	Administrative Support	7 office personnel at 7 school sites will provide administrative support to the project at 0.20 FTE per person. Attendance tracking, following up on student absences, and data input.	$581,625
Personnel/Staff Costs	Direct	Administrative Support	4 Vice Principals at 2 school sites will provide high level support to this project at 0.20 FTE. Attendance monitoring, family contact and chronic absenteeism support, support of student health plan.	$1,022,660
Travel	Direct	Travel	Travel expenses include the cost of mileage for project personnel to make home visits with BUSD families and conferences. Travel is budgeted at $3,000 per year.	$15,000
Capacity-Building and Training	Direct	Conference	Travel and registration fees are budgeted for project personnel to attend conferences for staff development training.	$20,000
Community Engagement	Direct	Outreach	Production costs of outreach & educational materials for BUSD families. Cost includes development, printing, and distribution.	$15,000
Community Engagement	Direct	Translation Services	Translation of outreach materials for families in multiple languages.	$65,000
Community Engagement	Direct	Engagement	Expenses for engagement activities with the BUSD community include food and beverage for meetings, printing, and outreach costs.	$30,000
Other Direct Costs	Direct	Database	Web-based data collection tool for student attendance and health outcomes will be used during the grant period. The budgeted amount includes the cost of licensing during this time. This is a new product combined with current products in use to support health tracking.	$350,000
Materials, Supplies & Equipment (> $5K itemized)	Direct	Laptops	5 laptops will be purchased for use during the grant period. The cost includes technical support to set up the laptops for use within the district's network. liceincing and software.	$25,000
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Communication	A communication web-based software will be used for the project. The licensing cost for this software during the grant period is budgeted for the grant term.	$135,000
Contingency (≤10% of Direct Costs at PROJECT level)	Contingency	Contingency	Contingency costs	$504,352

Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	**BUSD Clean Future**
Lead Applicant Name	[redacted]
Project Location	Benicia Unified School District 350 East K Street Benicia, CA 94510 Serving all 7 schools in Benicia Unified
Overall Funding Request	
Grant Term Request	
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	BUSD Healthy Campuses
Project Lead	[redacted]
Project Location	Benicia Unified School District - all 7 schools
Project Funding Request	$15,515,869

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Benicia Unified School District (BUSD) schools face a unique environmental challenge: its proximity to the Interstate 780 corridor, Valero, and refineries across the bay. Local industry creates a constant baseline of pollution. Older buildings allow industrial odors and toxic gases to seep through cracks in windows, doors, even when windows are shut. Many older classrooms rely on "passive ventilation" (opening a window or door), which often brings in more pollution, noise, and allergens. HVAC systems have been replaced over the years; however, with limited resources, they have not been upgraded to systems with more advanced filtration and controls.

BUSD's facilities have been carefully maintained since the 19th century, but maintenance cannot replace the need for modernization. With schools dating back to the 1930s, many of the district's learning spaces are outdated by today's energy standards. BUSD is seeking to upgrade these facilities to ensure they are energy-efficient, technologically advanced, and—most importantly—provide safe and healthy environments for every student and staff member.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

BUSD proposes a comprehensive suite of facility transformations designed to eliminate fossil fuel dependency while creating a "safety shield" for student and staff health. These upgrades transition BUSD campuses from legacy infrastructure into resilient, 21st-century learning hubs through the following interventions:

<u>Building Envelope & Atmospheric Control</u>

- **High-Performance Glazing & Shading:** Replacing aged windows with dual-pane, Low-E glass and solar shades to stabilize indoor temperatures and seal out industrial pollutants. The window replacement will include door and window sensors, which will turn off the HVAC units when windows and doors are open, resulting in substantial heating and cooling savings.
- **Advanced HVAC & Filtration:** Decommissioning legacy units in favor of high-efficiency systems capable of MERV 13+ filtration, improving indoor air quality (IAQ) even during localized refinery flaring or wildfire events.

Carbon Capture and Sustainable Landscaping Initiative

The district will implement a comprehensive sustainable landscaping plan across all seven school sites, including campus grounds and surrounding hillsides, designed to reduce air pollution and improve health outcomes for students and staff. This work will focus on planting trees and vegetation that capture carbon, filter airborne toxins, and reduce dust and particulate matter that contribute to respiratory conditions such as asthma and allergies. The project will also include strategic site grading, targeted sod installation, and advanced drainage systems to prevent erosion, manage stormwater, and protect school facilities.

All landscaping will utilize a student-safe, climate-resilient plant palette selected for drought tolerance, fire resistance, low allergen impact, and long-term sustainability in our regional climate. Where applicable, the district will prioritize the use of female tree varieties that do not produce pollen, significantly reducing airborne allergens,improving air quality for students and staff. Hillside areas will be stabilized with deep-rooted plantings to reduce runoff, prevent soil erosion, and protect adjacent structures. Tree canopy and groundcover will work together to lower ambient temperatures, reduce heat islands, and create cleaner, healthier outdoor spaces that support student attendance and overall well-being. In addition, eco-friendly perimeter landscaping will serve as a natural deterrent for pests while enhancing the safety and appearance of each campus.

Representative plant selections include:

- **Trees**: Coast Live Oak and California Sycamore provide high carbon sequestration, trap airborne particulates on leaf surfaces, and create shade that reduces ground-level heat; female Western Redbud varieties support pollinators while minimizing pollen exposure and contributing to localized air filtration and cooling.
- **Shrubs**: Toyon and Coffeeberry act as dense particulate filters that reduce dust and improve air quality near walkways and play areas; Ceanothus improves soil health through nitrogen fixation while supporting pollinators; Manzanita offers fire-resistant structure and deep root systems that stabilize slopes and reduce erosion.
- **Groundcover**: Kurapia and Lippia nodiflora form dense mats that suppress dust, reduce water use, and prevent soil erosion; Creeping Thyme provides low-growing coverage that supports pollinators while minimizing allergen impact; Dymondia creates a durable, low-water surface that reduces exposed soil and airborne particulates.

By improving air quality, reducing environmental pollutants, stabilizing soil, and creating climate-resilient outdoor spaces, this project directly supports healthier school environments, reduces exposure to respiratory triggers, and aligns with the Local Community Benefit Fund's priority to reduce air pollution and improve community health outcomes. Simultaneously, they transition the District toward a water- and energy-efficient model that reduces utility waste, cuts operational costs, and honors BUSD's commitment to a just transition away from fossil fuel dependency.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

This project will be implemented at the district office and school campuses within BUSD.

Benicia, CA 94510

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

In 2016, BUSD established a comprehensive Facilities Master Plan designed as a "living document" to guide long-term infrastructure strategy. Rather than being constrained by immediate fiscal limits, the Plan identifies the full scope of district-wide needs, allowing BUSD to prioritize and execute critical upgrades systematically as funding opportunities arise. BUSD implemented a series of meetings with the general

public and internal working groups to gather community feedback regarding the Facilities Master Plan, and has continued to regularly engage with the established committees and groups.

Community Engagement & Planning Timeline

- **Stakeholder Needs Assessment (Early 2016):** Conducted a district-wide listening tour with 2–3 community meetings at every school site to capture grassroots input on facility requirements.
- **Comprehensive Facilities Audit:** Performed a rigorous technical evaluation of all existing structures to identify critical gaps in seismic safety, ADA accessibility, and core infrastructure.
- **Community Open House (February 2016):** Hosted a public forum to present proposed improvements and collaborate with stakeholders on the final prioritization of projects.
- **Board Leadership Review:** Facilitated a formal Board Study Session to align facilities priorities with the district's long-term educational and fiscal goals.
- **Establishment of the Facilities Steering Committee (Mid-2016):** Formed a diverse oversight body—including district leadership, technical staff, board members, and school-site representatives—to monitor progress and adjust priorities as needs evolve. This committee remains active, meeting annually to ensure project accountability.
- **Ongoing Public Dialogue:** Maintains a cycle of bi-annual community meetings at each school site. These sessions serve as a transparent reporting mechanism for completed works and a vital feedback loop for addressing new community concerns.
- **Digital Transparency Hub:** Provides continuous public access to the Facilities Master Plan and interactive site diagrams via the BUSD website, which is updated in real-time as project milestones are achieved.

Since the Facilities Master Plan's inception in 2016, BUSD has facilitated over 100 targeted community and committee sessions, ensuring that every phase of modernization is rooted in public consensus and technical necessity.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

This project is the direct result of a decade of systematic community dialogue. Through over 100 engagement touchpoints—including school-site listening tours, Open Houses, and the Facilities Steering Committee—BUSD stakeholders consistently identified indoor air quality (IAQ), student health, and climate resiliency as top priorities.

This project benefits the following specific communities. BUSD is proposing additional projects in this grant application that specifically address the respiratory health of students, as well as vocational programs to help train students in green careers. The impact on those communities will be described in more detail in the relevant project narrative.

- **The Student Population:** BUSD serves approximately 4,500 students across all campuses with 10%of our students currently diagnosed with asthma and an additional 5% who are at risk of an asthma diagnosis.
- **Benicia Residents:** Benicia has a population of 26,477 residents (US Census Bureau) all who live within 2 miles of the I-780 corridor, the Industrial Park, or the Valero Refinery. All of our Benicia residents and students bear the high cumulative burden of industrial and transit-related emissions.
- **The Local Workforce:** Students in the vocational programs at Benicia and Liberty High Schools who will transition into the emerging green-tech economy through the Career Technical Education infrastructure programs

This application addresses three intersecting crises unique to our refinery-adjacent "fence-line" community:

- **The Public Health Challenge:** Students suffer from chronic pulmonary inflammatory provocation due to their proximity to the Valero refinery and heavy diesel traffic. Serving approximately 4,500 students across seven schools, this project will respond to a clear and urgent need: at least 487 students have been diagnosed with asthma and 243 have documented allergies, with many more likely undiagnosed. When students miss school, especially repeatedly, academic outcomes are far-reaching including lower test scores, gaps in learning, falling behind peers, and even risks of grade retention or dropping out. Absenteeism also increases social isolation and can lead to social-emotional challenges for students. This creates an inequitable learning environment where physical health is compromised by geographic location.
- **The Environmental Justice Challenge:** For too long, the "hidden cost" of local industry has been borne by the lungs of youth. By installing MERV 13+ filtration and airtight seals, BUSD is neutralizing the "fence-line effect" and ensuring that a student's zip code does not determine their respiratory health.

- **The Just Transition Challenge:** As California moves away from fossil fuel dependency, Benicia must evolve. This project utilizes school facilities as a "Blueprint for Resilience," replacing gas-fired combustion with electric heat pumps and smart controls. This transition ensures BUSD schools remain centers of stability and clean energy as the local economy shifts toward renewables.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

BUSD will employ a multi-channel communication strategy to ensure that progress and benefits—such as improved Air Quality Index (AQI) readings and energy savings—are visible and accessible to all stakeholders.

- **The "Clean Air" Dashboard:** Working with local community groups, we will launch a public-facing digital transparency portal on the BUSD website.
- **"State of the Schools" Site Tours:** We will host guided walk-throughs, coordinating with our school site councils at each school site, showing our modernized campuses. These tours will allow community members to see the tangible benefits of green technology, such as the cooling effect of new shade structures and the noise reduction from high-performance windows.
- **Quarterly "Green Progress" sections of our Newsletters:** Dedicated updates will be sent via the district's mass communication system (ParentSquare/Email), highlighting specific milestones like "Fossil Fuel Reduction Targets" and "Water Conservation Totals" achieved through the new landscaping and HVAC controls.

Feedback is not a static requirement; it is a vital tool for project calibration. BUSD will use the following methods to gather and act on stakeholder input during the grant term:

- **The Facilities Steering Committee (FSC) Review:** The FSC will continue to serve as the primary bridge between the technical team and the community. This committee will meet at a minimum of twice a year to review progress and voice concerns regarding construction schedules or priority shifts. The FSC includes school site administrators, IT and maintenance, who directly interface with the public and gather input, which is relayed to the FSC. If a project requires prioritization, it is brought to the Executive Cabinet and Board and will be implemented sooner.

- **Biannual Digital "Health" Evaluation:** BUSD will seek opportunities twice a year to bring students, staff, and parents together to evaluate quantitative data and gather qualitative data on the felt impact of the upgrades. Questions will focus on perceived air quality, classroom temperature stability, and overall respiratory comfort.

BUSD is committed to a Responsive Implementation Model. Feedback will be processed through a formal "Input-to-Action" pipeline:

- **Technical Validation:** All community feedback is first reviewed by the Bond Director and technical consultants to determine its feasibility within the grant's scope and safety standards.
- **Steering Committee Prioritization:** Validated feedback is then presented to the Facilities Steering Committee. If a recurring concern emerges, the committee has the authority to recommend a reallocation of project resources to address the need and ensuring the same intent of the project is maintained.
- **The "Close the Loop" Policy:** Whenever community feedback results in a project change, BUSD will issue a "Response Report" via the district website explaining how the input was integrated. This ensures that the community sees their influence in the physical transformation of its schools.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The following list is in priority order. Benicia Unified School District wants to make the best use of the REPAIR grant and use it to expand its bond projects and have an impact on the reduction of pollution, energy costs and provide a healthier environment for students and staff. The potential impact of the Valero closure on our bond funding could potentially result in the loss of $660M in tax collections. This is a projected worst-case scenario when Valero closes and all operations cease at the location, leaving only the land as an asset. This impact could mean the collections for the district bond would not have sufficient funding, due to the maximum allowable in collections from residents. This could impact the district's ability to sell the future bonds it has outstanding in the original timeframe. Of the $122.5M bond, the district has sold $45M in May 2024 and $65M in Jan 2026, with $12.5M remaining to sell. With a reduction in collections, the district would likely not be able to sell the remaining for many years later (10-12 years), as the bonds being sold would need to have sufficient collections to repay. The REPAIR

grant would have a significant impact in supporting the community and especially the students of Benicia.

a) **High-Performance Windows & Smart Climate Controls:** The district will execute a comprehensive thermal envelope upgrade involving the replacement of over 1,080 windows across all campus facilities. These high-efficiency units significantly outperform legacy glass in thermal resistance and solar heat gain coefficients. Energy savings will be from 7% (when we are replacing older double-pane windows) to 30% (when we replace old single-pane windows). Additional energy savings will be realized from the HVAC interlocks above the 7-30% savings from window replacement. To maximize these gains, the project integrates an "Intelligent Shell" system:
   - **Integrated HVAC Interlocks:** Wireless sensors on doors and windows will automatically throttle or deactivate HVAC zones when openings are detected, eliminating energy waste from "open-door" cooling. This project is of high importance as it would have a direct impact on heating and air conditioning costs.
   - **Solar Managed Shading:** Advanced window coverings will be installed to further mitigate solar heat gain, reducing the peak cooling load on the district's electrical infrastructure.
   - **Performance Validation:** To ensure maximum return on investment, the district will utilize a dual-phase Building Commissioning protocol. An initial diagnostic audit—including thermal imaging and envelope pressure testing—will establish a baseline for heat transfer. Following installation, a post-construction audit will be conducted to generate a measurable "Improvement Report," verifying the reduction in thermal leakage and the corresponding decline in HVAC demand
b) **HVAC:** Replacement of HVAC units will occur at 6 schools for improved thermal performance and air quality, including duct cleaning and balancing across each entire campus's buildings. The district has replaced HVAC systems at some schools. Due to the high costs, the choice was made to replace and not upgrade systems. The goal is to improve efficiency, reduce power costs, and install more efficient HVAC systems with smart technology that will result in improved indoor air quality through HVAC filtration systems. Energy savings are estimated to be 10-15% below existing use. Potential measurable outcomes:
   - Reduced energy bills/usage.
   - Student absenteeism - see reduction over the grant period due to improved air quality
   - Reduced teacher sick time
c) **Sustainable Landscaping:** This project aims to measurably improve local air quality and climate resilience through strategic site improvements and landscaping.

By targeting campus hillsides for the installation of shrubs, sod, and female (low-pollen) trees, we will create natural buffers that capture particulate matter and reduce carbon emissions. These efforts are supported by professional grading and advanced drainage systems to prevent erosion, alongside eco-friendly pest management. Potential measurable outcomes:

- Pollutant reduction.
- Pollen reduction (female trees).
- Drought-resistant and fireproof landscaping.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Budget Per Facility Replacement/Upgrade:

a) **HVAC:** HVAC units will be replaced for improved thermal performance and air quality, including duct cleaning and balancing across the entire campus for 4 elementary schools, the middle school and one high school. The **total direct cost** is **$6,742,500** which includes **$3,500,000** for materials and supplies and **$3,242,500** for construction costs.

b) **Landscaping**: These direct costs will total $**1,400,000** and include an upgrade in landscaping and irrigation at 3 elementary schools and one high school.

c) **Windows:** The **direct cost** of replacing windows for improved thermal performance and air quality, including code-compliant double pane windows, window shades for sun control, and HVAC system connections at 6 schools (4 elementary schools, the middle school, and one high school) will be **$3,750,000**. Construction costs for window replacement is **$325,425**.

d) The total cost for **Professional Services & Consultants** for HVAC, landscaping, and window replacements is budgeted at **$500,000**, and **the contingency costs** total **$890,255**. Total indirect costs are **$1,907,689**, and the total funds requested are **$15,515,869**.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617), etc.).*

The BUSD Facilities Modernization Project is strategically designed to advance the goals of multiple regulatory and community frameworks, specifically focusing on Environmental Justice, Decarbonization, and Public Health.

a) **Consistency with AB 617 (Community Air Protection Program):** Although Benicia is considered adjacent to high-priority AB 617 communities, this project mirrors the core mission of the California Air Resources Board (CARB) to reduce exposure in "high-burden" areas. By installing MERV 13+ filtration and airtight building envelopes, BUSD is proactively implementing the exact "School Air Filtration" mitigation strategies recommended by CARB for communities near refineries and high-traffic corridors. BUSD is essentially providing an "AB 617-level" protection for students before a formal mandate is even required.
b) **Alignment with the Benicia Climate Action Plan (CAP):** The City of Benicia's Climate Action Plan explicitly calls for a reduction in community-wide greenhouse gas emissions and a transition toward a low-carbon economy. This project directly supports the CAP's Building Energy & Renewables goals by replacing aged and underperforming HVAC units with updated, energy-efficient heating and cooling units and installing sensors that turn off HVAC units when windows or doors are opened. BUSD is leading the municipal effort to "decarbonize" local infrastructure and reduce the city's overall reliance on fossil fuels.
c) **Support for the Solano County Community Health Improvement Plan (CHIP):** The Solano County CHIP identifies Asthma and Respiratory Health as a primary concern, particularly children in industrial zones. BUSD facilities upgrades, specifically the removal of dust and the prevention of "atmospheric infiltration" of industrial gases, act as a direct medical intervention with the CHIP's objective to reduce emergency room visits for respiratory distress among the youth population.
d) **Consistency with SB 100 (The 100% Clean Energy Act):** California's SB 100 mandates that 100% of the state's electricity come from carbon-free sources by 2045. By modernizing BUSD's "building brains" (lighting and HVAC controls) and improving the "building shell" (windows and roofs), BUSD is drastically lowering the Energy Use Intensity (EUI) of district campuses. This makes the transition to a 100% clean grid more feasible by ensuring BUSD schools require significantly less operational power.

CAPACITY (10 points)

Describe the Project Lead's experience managing and implementing projects of similar scope and size.

If awarded the grant, the proposed facilities projects would be managed by BUSD's Bond Director, [redacted] joined BUSD in 2016 and has overseen all Measure S and Measure C bond projects. She is a licensed architect with more than 20 years of prior experience in private practice and work with the University of California, Berkeley. She is supported by architectural teams, civil and electrical engineers, surveyors, and a DSA Inspector of Record. If additional support is needed, the District can also retain a Construction Management firm to assist with project oversight and implementation.

BUSD has extensive experience successfully managing large scale capital improvement projects. In 2014, the District secured voter approval for the $49.6 million Measure S facilities bond and completed major improvements across all school sites. Projects included districtwide fire alarm, technology, safety, roofing, flooring, HVAC, and security upgrades; new classrooms and restroom facilities; playground and shade structure additions; seismic renovations; parking lot and hardscape improvements; and major athletic facility upgrades, including a new football stadium at Benicia High School. These projects enhanced learning environments across the District and improved campus safety and functionality.

Building on the successful completion of Measure S projects, BUSD secured voter approval for the $122.5 million Measure C facilities bond in 2024. Within two years, the District has already contracted more than $40 million of approved projects. Current construction includes new baseball and softball facilities, an all-purpose turf field, parking and utility improvements, and major renovations to the Benicia High School Performing Arts Building. Additional completed projects include districtwide HVAC, roofing, flooring, restroom, and security upgrades.

Despite these investments, significant facility needs remain. The BUSD Facilities Master Plan identifies approximately $80 million in additional unfunded Priority Two facility needs beyond current Measure C funding capacity. Further compounding these challenges, the indefinite departure of Valero is expected to reduce local property values and delay approximately $12 million in anticipated Measure C funding. REPAIR Grant funding would help offset these impacts and allow BUSD to continue advancing critical facility improvements that support safer, healthier, and more effective learning environments across the District.

11. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The district's Facilities Director, in conjunction with the Director of Maintenance, will oversee the Healthy Campuses Project. The Facilities Director has extensive experience in managing large projects from design to requesting bidding, and implementation of construction. In addition to oversight of the projects and punch card management upon completion, the director will provide regular community updates to the board and to the Facilities Oversight Committee.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

12. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

Readiness Documents for the Window replacement project have not yet been achieved. Readiness documents will consist of construction documents prepared by licensed Architects and Engineers that will be approved by the Division of the State Architect (DSA). Each BUSD site will have its own set of construction documents, bidding and construction. DSA is the governing jurisdiction for school facilities with approvals and reviews similar to that of the City Building Department for private buildings. BUSD is not governed by the City and these requirements on BUSD property do not require City approval (only DSA), unless they extend onto the City property, such as a driveway upgrade. MFES window replacement Construction Documents are currently in progress, with anticipated DSA submittal targeted for November 2026 and DSA approval

anticipated in quarter one of 2027. The project will then be publicly bid and start construction in the summer of 2026, with completion anticipated in the summer of 2027. Readiness documents for the other window replacement upgrades across the remaining BUSD sites will begin in 2027, with DSA approval anticipated in 2028 and window replacement completion prior to 2030.

HVAC replacement of smaller single BARD units (self-contained wall unit) does not require DSA approval. The work could be bid anytime, and installation would occur during non-school times, which could be weekends, holidays or summer break. The smaller HVAC unit replacement could be completed by December 2028. Readiness documents for these smaller HVAC units are not yet available and will consist of bid documents and plans identifying the units to be replaced. Larger HVAC replacement may require DSA approval (dependent on each location and size). Construction documents and DSA approval are estimated to take 6-9 months. The project could be bid immediately thereafter, with installation and completion within 4 months thereafter. The larger HVAC unit replacement projects that are required to acquire the Division of State Architect approval could be completed by December 2029. Readiness documents for the larger HVAC units are not yet available and will consist of architectural drawings, specifications, bid documents, and approval through DSA.

Landscaping does not require state permitting, but will adhere to local requirements, regulations, and any permitting. Readiness documents for Landscaping are not yet available and will consist of Architectural + Landscape Architect drawings and bid documents. Separate documents will be provided for each site. The readiness documents will be complete before Dec. 2028, with construction complete before December 2030.

13. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

BUSD has regularly filed CEQA documents for our projects. The roofing, window replacement and HVAC replacement typically fall within the CEQA exemption status. BUSD does not anticipate any complications or time delay with these filings.

14. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

BUSD owns all property upon which the improvements will be built. There are no foreseeable site control complications for the proposed work.

15. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

BUSD maintains an in-house Operations and Maintenance (O&M) Department funded by the District. The department includes fifteen full-time staff members who provide ongoing maintenance and upkeep across all District sites. This dedicated team has supported District operations for decades and will continue to do so into the future.

The Maintenance Department provides routine care and upkeep of windows, including replacement of broken windows and necessary caulking. Staff also service HVAC units and replace filters in-house. For repairs beyond the department's capacity, the District utilizes qualified heating and cooling contractors as needed. In addition, the department regularly maintains landscaping and grounds across District sites.

16. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

There are no known barriers to project implementation. However, facility improvement projects can occasionally encounter unforeseen conditions that create additional challenges. In addition, construction on active school campuses requires careful coordination due to the limited periods when sites are unoccupied.

BUSD pivots quickly to address these challenges as they arise. One example would be the BMS Seismic project over 6 buildings. It became apparent that the amount of furniture that had to be moved out of all of the buildings exceeded the BUSD maintenance's manpower ability within the needed timeframe. BUSD quickly hired a moving company to assist, and the transition occurred smoothly.
FFor work that cannot be completed during the summer break, BUSD coordinates with site users to evaluate if it is possible to relocate some programs to provide a space for year-round construction. Additional alternatives include after-hours and weekend work. BUSD works very hard to avoid spending monies on temporary interim facilities, but if no other options solve the challenge, it would consider it to complete the needed work.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	BUSD will transform its campuses into safe, modern learning environments that actively protect students and staff from pollution and climate-related impacts. Through strategic facility upgrades, sustainable landscaping, and smart energy systems, the district will reduce environmental risks while improving comfort, efficiency, and long-term operational sustainability.

Measurable Outcome	Indicator(s)
1. BUSD will improve building envelope performance by replacing more than 1,080 outdated windows and installing smart climate control sensors across participating school sites.	• Number of windows replaced • Number of door/window HVAC interlock sensors installed • Post-installation commissioning report completed • Reduction in thermal leakage and energy waste documented through baseline and follow-up assessments
2. BUSD will improve indoor air quality and HVAC efficiency by replacing outdated HVAC units at six schools and completing duct cleaning and system balancing across project campuses.	• Number of HVAC units replaced • Number of campuses receiving duct cleaning and balancing • Installation of upgraded filtration and smart HVAC technology • Reduction in energy use and improved indoor air quality data • Maintenance and commissioning reports completed
3. BUSD will reduce outdoor environmental triggers by implementing sustainable	• Number of school sites receiving landscaping improvements • Number of trees, shrubs, and groundcovers installed

landscaping and hillside stabilization across seven school sites using drought-tolerant, low-allergen, fire-resistant, and pollution-reducing plant materials.	● Use of female tree varieties where applicable ● Reduction in exposed soil, erosion risk, and dust-generating areas ● Completion of grading, drainage, and stabilization improvements
4. BUSD will reduce district energy waste and improve operational efficiency through coordinated building upgrades that lower HVAC demand, reduce unnecessary heating and cooling, and support long-term cost savings.	● Utility usage before and after project implementation ● Reduction in avoidable HVAC runtime through sensor integration ● Documented decrease in heating and cooling loss ● Quarterly reporting of energy performance trends ● Completion of energy performance review

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
BUSD will improve building envelope performance by replacing more than 1,080 outdated windows and installing smart climate control sensors across all 7 school sites.	A. Finalize design, technical review, and approval process for window replacement and smart sensor installation.	1. Complete site assessments and confirm window replacement scope at participating schools.	BUSD Facilities Director, consultants, site administrators	Maintenance and Operations	March 2027
		2. Prepare construction documents and submit for approvals as needed.	BUSD Facilities Director, consultants, site administrators	Maintenance and Operations	Oct. 2027
		3. Finalize bid documents and project schedule.	BUSD Facilities Director, consultants, site administrators	Maintenance and Operations	Jan. 2028
	B.Install high-performance windows, solar-managed shades, and smart climate sensors.	1. Procure materials and contractor services.	BUSD Facilities Director, consultants, site administrators	Maintenance and Operations	July 2027-Nov 2030
		2. Replace windows and install shades at project sites.	BUSD Facilities Director, consultants, site administrators	Maintenance and Operations	July 2027-Nov 2030
		3. Install door and window sensors integrated with HVAC controls.	BUSD Facilities Director,	Maintenance and Operations	July 2027-

			consultants, site administrators		Nov 2030
	C.Validate energy and building envelope performance improvements.	1. Conduct post-installation thermal imaging and pressure testing.	BUSD Facilities Director, consultants, site administrators	Maintenance and Operations	July 2027-Nov 2030
		2. Compare baseline and post-project energy performance data.	BUSD Facilities Director, consultants, site administrators	Maintenance and Operations	July 2027-Nov 2030
		3. Share results with the Facilities Steering Committee and community.	BUSD Facilities Director, consultants, site administrators	Maintenance and Operations	July 2027-Nov 2030
BUSD will improve indoor air quality and HVAC efficiency by replacing outdated HVAC units at six schools and completing duct cleaning and system balancing across all 7 school sites.	A. Complete planning and procurement for HVAC replacement and system upgrades.	1. Confirm the final list of HVAC units and campuses included in the project.	BUSD Facilities Director, consultants, site administrators	Maintenance and Operations	July 2026-March 2027
		2. Develop technical specifications for energy-efficient HVAC systems and filtration..	BUSD Facilities Director,	Maintenance and Operations	July 2026-March 2027
		3. Bid and award contracts for HVAC replacement and associated services.	BUSD Facilities Director	Maintenance and Operations	Jan 2027 - Nov 2030

	B. Install new HVAC systems and improve air distribution performance across school sites.	1. Remove outdated HVAC units and install upgraded systems.	BUSD Facilities Director	Maintenance and Operations	Jan 2027-Nov 2030
		2. Complete duct cleaning and balancing across participating campuses.	BUSD Facilities Director	Maintenance and Operations	Jan 2027-Nov 2030
	C. Measure improvements in indoor air quality, efficiency, and building comfort.	1. Establish baseline and post-installation energy use comparison.	BUSD Facilities Director, consultant	Maintenance and Operations	Jan 2027-Nov 2030
		2. Review indoor air quality and building comfort data after upgrades.	BUSD Facilities Director, consultant	Maintenance and Operations	Jan 2027-Nov 2030
		3. Report outcomes to stakeholders through dashboard, newsletter, and committee updates.	BUSD Facilities Director	Maintenance and Operations	Jan 2027-Nov 2030
BUSD will reduce outdoor environmental triggers by implementing sustainable landscaping and	A. Develop site-based sustainable landscaping plans aligned to health and climate goals.	1. Assess each campus and hillside area for erosion, dust, heat, and planting needs.	BUSD Facilities Director	Maintenance and Operations	Jan 2026 - April 2027
		2. Finalize planting palette and design standards focused	BUSD Facilities Director	Maintenance and Operations	April 2027 -

hillside stabilization across seven school sites using drought-tolerant, low-allergen, fire-resistant, and pollution-reducing plant materials. Across all 7 school sites.		on low-allergen and drought-resistant materials.			Nov 2028
		3. Complete project sequencing for grading, drainage, sod, and planting.	BUSD Facilities Director	Maintenance and Operations	Nov. 2027 - Nov 2030
	B.Install sustainable landscaping and complete site stabilization work.	1. Complete grading and drainage improvements at designated campuses.	BUSD Facilities Director	Maintenance and Operations	Nov. 2027 - Nov 2030
		2. Install trees, shrubs, and groundcover selected for pollution reduction and climate resilience.	BUSD Facilities Director	Maintenance and Operations	Nov. 2027 - Nov 2030
		3. Stabilize hillsides and perimeter areas with deep-rooted plantings and erosion-control improvements.	BUSD Facilities Director	Maintenance and Operations	Nov. 2027 - Nov 2030

	C.Evaluate the environmental and campus health benefits of sustainable landscaping improvements.	1. Document completion of planting, grading, drainage, and stabilization work by site.	BUSD Facilities Director	Maintenance and Operations	Jan 2028 - Nov 2030
		2. Review observed impacts on dust, runoff, heat, and campus appearance.	BUSD Facilities Director	Maintenance and Operations	Jan 2028 - Nov 2030
		3. Share results with the community through updates, tours, and public reporting.	BUSD Facilities Director	Maintenance and Operations	Jan 2028 - Nov 2030
BUSD will reduce district energy waste and improve operational efficiency through coordinated building upgrades that lower HVAC demand, reduce unnecessary heating and cooling, and support long-term cost	A. Establish baseline utility and operational performance data for project sites.	1. Compile pre-project utility and HVAC usage data.	BUSD Facilities Director	Maintenance and Operations	Sept 2026 - Jan 2027
		2. Identify baseline heating and cooling inefficiencies by site.	BUSD Facilities Director	Maintenance and Operations	Sept 2026 - Jan 2027
	B. Implement energy-saving improvements through window, shading, sensor, and HVAC modernization.	3. Set site-based tracking measures for post-project comparison.	BUSD Facilities Director	Maintenance and Operations	Sept 2026 - Jun 2031
		1. Integrate smart controls into upgraded campus systems.	BUSD Facilities Director	Maintenance and Operations	June 2027 - June 2031
		2. Verify system settings and operating schedules for efficiency.	BUSD Facilities Director	Maintenance and Operations	June 2027 - June 2031

savings. across all 7 school sites.		3. Train staff on proper system use and monitoring expectations.	BUSD Facilities Director	Maintenance and Operations	June 2027 - June 2031

	Demonstrate measurable operational savings and improved facility performance.	1. Compare baseline and post-project utility trends.	BUSD Facilities Director	Maintenance and Operations	June 2027 - June 2031
		2. Prepare a summary of energy savings and efficiency gains.	BUSD Facilities Director	Maintenance and Operations	June 2027 - June 2031

		3. Present findings to the Board, community, and Facilities Steering Committee.	BUSD Facilities Director	Maintenance and Operations	June 2028 - June 2031

Project Name:	BUSD Clean Future Healthy Campuses Project
Lead Applicant Name:	Benicia Unified School District
Term for this budget (in years):	5 Years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Materials, Supplies & Equipment (> $5K itemized)	Direct	HVAC Replacement	Replace, upgrade HVAC and filtration systems at 6 BUSD schools	$3,500,000.00
Construction	Direct	HVAC Replacement	Construction costs for replacement of HVAC and filtration systems at 6 schools	$3,242,500.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Windows Replacement	Windows and open/door window monitors for improved thermal performance and air quality, including code-compliant double pane windows, window shades for sun control, and HVAC system connections.	$3,750,000.00
Construction	Direct	Windows Replacement	Replacement of windows and installation of open/door monitors at 6 schools	$325,425.00
Construction	Direct	Landscaping	Upgrade landscaping and irrigation to reduce water use and enviromental impact, improve air quality at 4 school sites	$1,400,000.00
Professional Services & Consultants (≤25% of Direct Costs at APPLICATION level)	Direct	Consulting	Design and agency fees, inspections	$500,000.00

Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	**BUSD Clean Future**
Lead Applicant Name	[redacted]
Project Location	Benicia High school, 1101 Military West, Benicia
Overall Funding Request	
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	BUSD Career Pathways
Project Lead	[redacted]
Project Location	Benicia High School
Project Funding Request	$3,950,641

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Career Technical Education (CTE) is a program of study that involves a multi-year sequence of courses that integrates core academic knowledge with technical and occupational knowledge to provide high school students with a pathway to postsecondary education and careers. Once known as vocational schools, CTE classes and programs prepare students for many career possibilities (Nesbit, 2025). Upon graduation, CTE students may obtain successful employment, continue their education in college, receive apprenticeships, or engage in entrepreneurial opportunities.

Benicia High School (BHS) serves approximately 1,400 students and offers 8 CTE Pathways with sequential coursework for students to earn a certification and college credit. CTE enrollment during the 2025-2026 school year is about 49% of the student population, and this amount represents a 6% increase in participation from the year prior. BHS students of various racial and ethnic backgrounds participate in one or more CTE course, and the highest participation rates are seen among English Learners (52.4%), Homeless youth (44.0%), Students with Disabilities (37.1%), and Socioeconomically Disadvantaged students (47.1%). Currently, CTE Pathways at BHS include Health Sciences; Engineering and Architecture; Education, Child Development, and Family Services; Business Management; Building Construction; Transportation; Performing Arts; and Media Arts.

Benicia Unified School District (BUSD) plans to expand its current CTE Pathways program by adding an **Environmental Resources Pathway** and a **Biotechnology Pathway** as part of the BUSD Clean Future Initiative. BUSD will also partner with the Touro University Public Health Program to deliver a course on environmental health for BHS students, providing a bridge between these new pathways to demonstrate the impact of air quality on health. This project will strengthen and extend current pathway offerings by adding updated curriculum, equipment, dual-enrollment for high school/college planning, work-based learning, career exploration, student supports, and community-connected experiences tied directly to public health, air quality, environmental stewardship, and regional workforce opportunities. Additionally, these pathways will prepare students for high-demand careers that help communities respond to environmental and health challenges.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

BUSD's CTE expansion directly advances a just transition by transforming the district's

educational framework into an engine for both public health and economic evolution. By integrating Environmental Sciences and Biotechnology into the CTE curriculum, we are training students to monitor and mitigate air pollution while simultaneously equipping them for high-demand careers in the post-carbon economy. This dual approach ensures that BHS graduates are prepared to lead Benicia toward a future defined by environmental health, economic resilience, and sustainable innovation.

The inclusion of these pathways creates a direct link between education and public health monitoring. Students in the Environmental Sciences pathway will use updated equipment to measure and analyze local air quality data. By training students to identify pollution hotspots, BUSD empowers the next generation to advocate for data-driven mitigation strategies that improve community health. The Biotechnology pathway allows students to study the physiological effects of pollutants on human health, specifically regarding chronic conditions like asthma. Through work-based learning, students can explore solutions in bioremediation and clinical health, directly addressing the regional need for a workforce capable of managing and reducing the impacts of air pollution. In addition, the new CTE curriculum focuses on environmental stewardship, teaching students how sustainable land management and urban forestry can act as natural carbon sinks and air filters, directly contributing to the reduction of localized air pollution.

This project positions Benicia's youth at the forefront of the green economy, ensuring they are not left behind as the regional workforce shifts away from fossil fuels. Benicia has an historical tie to heavy industry. By providing high-schoolers with dual-enrollment and work-based learning in Biotechnology and Environmental Sciences, BUSD is creating a just transition by preparing the local workforce for high-wage, high-growth sectors that do not rely on carbon-intensive industries.

These new CTE pathways are designed to meet the labor demands of a greener economy where new skills are required for a sustainable future (Grima et al., 2024). Students will gain the technical skills required for careers in renewable energy, environmental engineering, and biomedical research—industries that provide long-term economic resilience as the state moves away from fossil fuel dependence.

Through community-connected experiences and student support, BUSD ensures that students from all socioeconomic backgrounds have access to the "jobs of the future." This ensures that the economic transition is not just a shift in technology, but a shift toward a more equitable and inclusive local economy.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The Benicia Unified School District (BUSD) serves students and families throughout the City of Benicia, California. This project will primarily be implemented at Benicia High School (BHS). BHS CTE students who participate in the collaborative course with Touro University public health graduate students will have the opportunity to deliver peer health education to younger BUSD students at the middle school and elementary schools.

Benicia Unified School District
350 East K Street
Benicia, CA 94510

Benicia High School
(~1,400 students)
1101 Military West
Benicia, CA 94510

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The BHS CTE program has been serving Benicia High School students for 18 years. As a core department within Benicia High School, the CTE program maintains industry relevance through monthly staff meetings and annual advisory sessions with business partners to integrate best practices and emerging technologies. Our instructors, all of whom transitioned from successful careers in their respective industries, undergo rigorous professional development to remain experts in their fields. Students benefit from a robust curriculum that offers professional certifications such as CPR and OSHA, alongside experiential learning opportunities including field trips, job shadowing, and internships. Furthermore, most pathways are articulated with community colleges, enabling students to earn college credit concurrently with their high school coursework.

Throughout its history, the BHS CTE program has strategically prioritized resources to meet the rising costs of hands-on project materials and immersive field experiences. By sustaining long-term partnerships with local businesses and organizations, the program facilitates high-impact, real-world projects, such as student-led designs for municipal and private developers. Additionally, BHS collaborates with the Solano County Office of Education to analyze regional workforce data, ensuring our pathways remain aligned with the economic needs and career opportunities of the local community.

The BUSD Career Pathways project developed from district conversations about student opportunity, attendance, student wellness, college and career readiness, and the need to connect school programs more directly to local conditions and future-facing careers. Community needs have been identified through review of student interest in

CTE, health and attendance concerns. To date, 28 students have shown an interest in Advanced Environmental Studies for next school year. Students have expressed interest in environmental studies classes that are not Advanced Placement. CTE Advisory Meetings with local industry and educational partners, local conversations about air quality and public health, and the district's desire to strengthen relevant pathways that support both student success and community resilience. In addition to student meetings, we have sought input from our BUSD Budget Advisory Committee, Grant Committee, Parent Meetings, Site Leaders meetings, District leaders meetings, Board meetings, Rotary, meetings with local medical providers, current internship providers, County Office of Education CTE program and environmental organizations.

The district will continue to refine project design through engagement with students, families, certificated and classified staff, local employers, higher education partners, public health organizations, and community-based organizations. Local nonprofit and civic partners and monitoring, **Sustainable Solano** for sustainability and greening partnerships, and health-related partners for career exposure and resource connection. The project expands on an already successful health career pathway, with partnerships with many local medical providers: [redacted], RN, [redacted], [redacted], Fire Captain/Paramedic, [redacted], Combat Medi, [redacted], Perinatal nurse/Labor/Delivery RN [redacted], [redacted], [redacted] [redacted], Correctional Medical Facility, RN, [redacted], Social Worker, [redacted], [redacted], Yoga Therapist, [redacted], [redacted], breathing, public health, [redacted] and [redacted] from [redacted]. To name a few.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Solano County's workforce trends strongly support the development of student pathways in health care, biotechnology, and environmental careers (*Solano County, ca / Data USA*, 2024; Workforce Development Board of Solano County, 2021). Health Care and Social Assistance is the largest employment sector in the county, employing more than 32,000 individuals and projected to grow by nearly 19 percent over the next decade (*2014-2024 Projection Highlights Vallejo-Fairfield Metropolitan Statistical Area (Solano County)*, 2017). At the same time, Solano County is part of the Bay Area's globally recognized biotechnology and life sciences hub, an industry that supports more

than 400,000 jobs regionally and continues to expand with high-wage career opportunities (*North Bay Employment Connection WIOA Regional Plan Program Years 2025-2028 Photo by Trent Erwin on Unsplash*, 2025). Environmental and sustainability sectors are also growing rapidly as California advances toward its carbon neutrality goals, increasing demand for careers in clean energy, environmental science, and air quality management. Together, these industries represent some of the fastest-growing and most stable career pathways in the region, directly connecting workforce development to improved community health, environmental conditions, and long-term economic mobility.

This project responds to a clear community need by strengthening access to meaningful, locally relevant career pathways that connect student learning to real environmental and public health challenges in Benicia. Students benefit from opportunities that make learning more hands-on, engaging, and goal-oriented, while the broader community benefits from a stronger pipeline of young people prepared to contribute to healthier neighborhoods, informed environmental stewardship, and a more resilient local economy.

The project is designed to prioritize secondary students, including those historically underrepresented in high-wage career fields, students who would benefit from increased engagement and connection to school, and students seeking clear pathways to college and career opportunities. English learners, homeless students, students with disabilities, and socioeconomically disadvantaged students make up 51.5% of the 2025-26 BHS student population, and more than 37% of each grouping of these students enroll in CTE courses. English learners showed the largest jump in CTE enrollment from the prior academic year, a 21% increase, and the other three subgroups of disadvantaged students also saw an increase in CTE enrollment from the previous year (homeless youth by 15%, students with disabilities by 9%, and socioeconomically disadvantaged students by 8.5%).

The Environmental Resources pathway will address environmental justice and public health by providing hands-on learning in air quality, environmental data literacy, urban greening, exposure reduction, and sustainability problem-solving. The Biotechnology pathway will complement this work by preparing students for careers in health, wellness, public health, prevention, and patient support. These pathways align with California Career Technical Education standards, including Public and Community Health within the Health Science and Medical Technology sector, and reflect the state's emphasis on accessible and equitable K–14+ pathways. Progress will be measured through increased pathway enrollment, improved completion rates, expanded dual enrollment or articulated credit opportunities, growth in work-based learning

experiences, attainment of industry-recognized certifications where available, internships, and stronger transitions to postsecondary education and careers.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

BUSD will share implementation progress through regular district communications, Board updates, school newsletters, pathway showcases, student presentations, family information nights, and posted pathway information on district and school websites. Community members will be informed about student participation, pathway milestones, available benefits such as dual enrollment or internship opportunities, and emerging student outcomes.

We have sought feedback from site leaders, teachers, community members, county-wide advisory partners, parents, and the BUSD Governing Board through a series of meetings. Participants have provided direct feedback or have been asked to email the superintendent with questions, ideas, and thoughts.

Budget Advisory Committee	**12/16/25, 1/14/26, 2/3/26**
Grant Committee	**2/26/26, 3/10/26, 3/23/26**
Parent Meetings	**3/24/26, 4/21/26**
Principal Meetings	**3/18/26, 4/21/26**
District Leaders Meetings	**3/4/26, 4/22/26**
Board meetings	**2/28/26, 4/16/26**
Bond Oversight Committee	**2/3/26**
Solano Co. Advisory Meeting	**3/24/26**

The district will also use advisory structures to support implementation, including pathway advisory input from employers, higher education, community-based organizations, and health and environmental partners. California's student-centred pathway guidance emphasizes cross-system collaboration, equity, and alignment between K–12, postsecondary education, and industry; this project is designed around those same principles.

Community feedback will be gathered through student focus groups, advisory meetings, teacher and counselor input, partner meetings, and pathway reflection activities. Students will play a central role in evaluating pathway relevance, work-based learning experiences, and desired supports. Families and community partners will be asked to

help shape internship opportunities, guest speaker programming, scheduling, and access supports.

Feedback will be reviewed at least twice annually by district leadership and pathway staff and used to adjust course sequencing, student recruitment strategies, work-based learning design, and partnership priorities. This continuous-improvement approach is consistent with California's pathway guidance and with the design of high-quality CTE systems that are responsive to students and regional needs.

BUSD Human Resources will support the site Principal in hiring new teachers for the expansion of the project. In addition, the High School Principal will serve as the Project Coordinator and oversee the implementation of the BUSD Career Pathways Grant and expansion of the CTE pathways program.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The overall vision of this project is to transform BUSD's current CTE offerings from one Environmental Science course and one CTE Health Sciences pathway offering into three robust pathways that prepare students for college, careers, and community leadership in environmental health, sustainability, and health services. Major components include:

1. **Pathway expansion and refinement** of the current Environmental Science course and the CTE Health Sciences Pathway course sequences.
2. **Curriculum upgrades** aligned to California CTE standards in Environmental Resources and Biotechnology, including Public and Community Health.
3. **Work-based learning**, including job shadows, field experiences, internships, guest speakers, and project-based community work.
4. **Postsecondary alignment**, including dual enrollment, articulation, and exposure to local college and university pathways. California's K12 SWP specifically prioritizes seamless transitions to certificates, degrees, and employment.
5. **Industry and community partnerships** with environmental, health, nonprofit, and higher education partners.
6. **Student supports** such as pathway advising, recruitment, equity-focused outreach, and connection to college and career opportunities.
7. **Equipment and materials** to support hands-on pathway instruction, including

environmental monitoring tools, field-study materials, health simulation materials, and career exploration resources.

The Applicant, Benicia Unified School District, will serve as project lead and fiscal agent. The Benicia High School Principal will serve as the Project Coordinator and oversee project implementation, manage budget and reporting, coordinate school-site delivery, and cultivate partnerships. The Project Coordinator will interview and hire teachers for the new Environmental Services and Biotechnology Pathways, working with them on curriculum development. The Project Coordinator will also work in conjunction with the Academic Counselor and Office Support staff member to oversee the day-to-day operations of the expanded CTE pathways program.

BHS has existing partnerships with several organizations that may serve as the foundation for the new pathways: City of Benicia, Solano County Water District, Solano Community College, Diablo Valley College, Red Cross, Kaiser Permanente, Adventist Health, and Touro University. Additional partners may include other local community colleges, Bay Area universities, health systems, and regional employers. Comparable California models show the value of pairing coursework with authentic field or clinical exposure; for example, Mission High's environmental sequence, Novato's professional-skill-centred medical pathway, and LAUSD Bravo's hospital-connected health capstones.

BUSD is partnering with the Touro University Public Health Program to implement Touro's Youth Environment Empowerment Project and provide an environmental health curriculum to BHS students enrolled in the Intro to Medical Careers CTE course. Touro graduate public health students will implement classroom sessions focusing on specific topics related to the intersection of air quality and health, such as the impacts of asthma and allergies on health, and how to reduce exposure to air pollutants to reduce the impact of these health concerns. The curriculum will have an overarching emphasis on building literacy in public health equity, environmental justice, collaborative research development, and health promotion and advocacy. This project will employ Youth Participatory Action Research (YPAR) principles (Madrigal et al., 2016, Ozer & Wright, 2012) and refer to examples from Dr. Annette Aalborg's successful Touro University California Public Health Program's Youth in Action Project. Students will be taught to use research tools such as surveys, focus groups, community mapping, and air monitoring to identify environmental and other health topics that affect their school and community. They will be guided in data interpretation and be able to advocate for actions and change, developing appropriate programs to support reduction in asthma related absences, overall school well-being, or other youth-identified environmental and health concerns. Interactive learning strategies include group challenges, role plays,

and problem-solving activities.

In addition to the classroom curriculum, BHS students will have the opportunity to be trained as Peer Health Promoters, participate in afterschool sessions, and assist with planning and implementation of health promotion classroom sessions. The Peer Health Promoters will gain public health knowledge and skills to improve leadership, collaboration, and public speaking proficiencies. These high school students will then pass on this knowledge to their peers in a way that is relatable and informational. When possible, the high school students will also provide health promotion educational sessions to younger students in the Benicia Unified School District middle school and elementary schools. This not only broadens the scope of education around health and air quality to younger students; it provides the opportunity for high school students to practice their speaking and leadership skills.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Total direct costs for the BUSD Clean Future CTE Pathways project is $3,950,641 for a 5-year grant period. The budget includes time and effort for BUSD personnel to oversee the project, develop and deliver CTE course curriculum, schedule courses and enrollment of students, provide guidance to CTE students for successful completion of pathway certification and courses, subcontract to Touro University for a collaboration on an environmental health and Youth Environment Empowerment Project, field trips, community engagement, materials and supplies. Details for costs are as follows.

The Project Coordinator (0.20 FTE) will serve as the Project Lead and oversee the CTE Pathways Project during the grant period. She is also the [redacted] and will be responsible for hiring the Environmental Services and Biotechnology Pathways CTE teachers. She will oversee all project personnel and subcontractors.

CTE teachers will be hired at various FTE levels per year to match the anticipated student enrollments in new CTE courses developed and implemented during the project period. $1,770,000 is budgeted for this line item, and teachers will be hired following this schedule: Year 1 - 2 teachers at 1.20 FTE; Year 2 - 2 teachers at 2.0 FTE; Year 3 - 3 teachers at 2.4 FTE; Year 4 - 3 teachers at 3.0 FTE; Year 5 - 4 teachers at 3.2 FTE.

The Academic Counselor (0.25 FTE) will assist with implementation of the expanded CTE program and oversee students enrolled in the new pathway courses. The counselor will guide students through their pathways, internships, and community service opportunities.

An Office Support Staff Member (0.50 FTE) at BHS will support the Project Coordinator and Academic Counselor and assist with day-to-day activities of the project. This individual will coordinate schedules, order and maintain supplies, develop and reproduce marketing materials, and perform other duties required for the effective operation of the CTE expanded program.

Training and professional development for CTE Pathways personnel is budgeted at $35,000 over a 5-year period to cover the cost of staff onboarding and conference attendance for CTE teachers and the Project Coordinator at 2 times per year.

Travel. $20,000 is budgeted for the cost of mileage/airfare for CTE staff to travel to conferences for training and staff development.

Community Engagement. $10,000 is budgeted for the cost of student recruitment and marketing of the new CTE Pathways to the BUSD community. Costs include website development, podcast, informational nights, career fair, and other events that will assist in generating interest among potential students.

Materials, Supplies & Equipment. $30,375 is budgeted for the cost of purchasing biotechnology materials and supplies, including injection dummies, bandaging, DNA extraction, and disposable or reusable supplies and equipment.

Subcontractor - Field Trips. $25,000 is budgeted for the cost of student field trips to colleges, programs, work sites, and career-related activities.

Subcontractor - Touro University. A subcontract in the amount of $841,138 is requested to support the Touro University Principal Investigator (PI) (0.05 FTE), Project Coordinator (1.0 FTE), graduate student fellows, program supplies, training and education, and consultants. A breakdown of the subcontract costs follows.

- [redacted] (0.05 FTE) - $43,061
- Project Coordinator (1.0 FTE) - $468,634
- Stipends, Public Health Students providing 10 hours per week (2 fellows at $6,500 per year) - $6,500
- Program supplies including health education materials, air monitors, air purifiers - $100,000

- Training and education for Touro interns and staff to attend conferences for abstract and poster presentations - $50,000
- Consultants, honoraria for subject matter experts - $5,000
- Touro University Indirect Costs (15%) - $109,714
- Total Subcontract Costs - $841,138

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project is strongly aligned with local, regional, and statewide initiatives. At the local level, it supports Benicia's Climate Action Plan and broader sustainability and adaptation efforts by preparing students to engage with climate, environmental, and public-health issues in practical ways.

At the regional and state levels, the project aligns with California's Community Air Protection Program (AB 617), which is intended to reduce exposure in communities most impacted by air pollution, as well as the Bay Area Air District's Community Health Protection Program. The Environmental Resources pathway provides a school-based strategy for increasing environmental literacy, local monitoring awareness, and community-informed problem solving connected to those goals.

The project also aligns with California's K12 Strong Workforce Program and Workforce Pathways Guiding Policy Principles, both of which emphasize high-quality K–14 pathways, system alignment, work-based learning, equitable access, and student-centered transitions to college and careers. In health careers specifically, the project supports the state's goal of building a strong, accessible health workforce pipeline.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Benicia Unified School District has the organizational capacity to manage a pathway expansion project of this scope through its existing leadership structures in secondary education, college and career readiness, student services, and instructional programming. The district already operates a Health Services Pathway and an Advanced Placement Environmental Science class, which means the project builds on existing practice rather than starting from scratch.

Students have shown a keen interest in these topics. We are poised to expand and support more students. These are variable careers with demands locally and nationally. They not only address the impact of air quality and economic sustainability, but they can also do so well beyond the life of the grant.

Benicia High School has had a CTE program for 18 years, led by the site Principal. Our largest program serving health career fields has over 130 students enrolled. Over time, students have shown an interest in more health and environmental science CTE courses.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The Project Lead will be the [redacted] (0.20 FTE), and she will coordinate project implementation in partnership with site administrators, pathway teachers, counseling staff (0.5 FTE), and district leadership. Dedicated resources include partial FTE for office staff support (0.25), teacher stipends or release time for curriculum and pathway development, counseling or college/career support, and work-based learning coordination. Existing district infrastructure, including student scheduling, data systems, and partnership development capacity, will support implementation.

The Project Lead will also work with the Touro University personnel and graduate students, and a formal agreement for this partnership will be outlined in a subcontract. Partial FTE (0.05) is requested for [redacted], to serve as the Principal Investigator at her site. A Touro University Project Coordinator at 1.0 FTE will oversee the project activities related to the delivery of the environmental health curriculum at BHS. This Coordinator will also recruit, train, and oversee the graduate students assigned to teach the curriculum, support the development and implementation of evaluation tools to assess program outcomes (student engagement, knowledge gains, leadership development, and school wellbeing indicators).

Where possible, BUSD will leverage additional resources to strengthen this work, including K–12 Strong Workforce Program funding and dual-enrollment partnerships with Solano Community College. As our required regional partner, we begin articulation efforts with Solano. If a course or program is not available or an articulation request is not approved, we expand to other colleges. Currently, our CTE courses are articulated

with Solano Community College, Diablo Valley College, Napa Valley College, and Las Positas College. These partnerships are complemented by existing CTE Incentive Grant supports, local donations, and in-kind contributions from partners. California's K–12 Strong Workforce Program framework is particularly well aligned to this effort, as it is designed to expand access, strengthen career pathways, and connect students to high-demand regional industries. Our proposal allows us to expand this relationship and serve more students.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.

  It is not applicable to this project.

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

This project is primarily a program expansion within existing district educational operations. No major construction permits are anticipated unless the district elects to make facility modifications beyond standard classroom use. Standard district approvals for curriculum, staffing, scheduling, student transportation, dual-enrollment agreements, and partner MOUs will be obtained through existing administrative processes. At the time of grant award, BUSD will finalize any needed partner agreements and internal approvals necessary for launch.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

At this time, the project is expected to be primarily programmatic and instructional. If no physical construction or site alteration is undertaken, CEQA may be **N/A** or minimal. If the district later proposes physical improvements beyond ordinary classroom use, BUSD will work with appropriate local counsel and facilities staff to determine the

applicable CEQA pathway and complete any required documentation within the grant term.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

No external site acquisition is anticipated. Core project activities will occur at existing BUSD school sites under district control. If internships, field experiences, or off-site learning are included, those activities will be governed through partnership agreements, MOUs, or site permissions as needed.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

The project is not infrastructure-heavy. Any equipment purchased for pathway implementation, such as environmental monitoring tools, classroom lab materials, or health simulation resources, will be maintained through district inventory, school-site oversight, and ongoing CTE program management. After the grant term, BUSD will seek to sustain core pathway elements through district CTE funding, Perkins and related sources, and partner support where feasible.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Potential barriers include staffing capacity, student scheduling conflicts, transportation for work-based learning, sustaining community partnerships, and ensuring equitable student access. BUSD will address these barriers by phasing implementation, using advisory input, aligning pathway courses with student schedules early, pursuing dual-enrollment and regional partnership support, and providing targeted outreach to students who may not traditionally enroll in these pathways.

Another risk is designing pathways that are interesting but not sufficiently connected to postsecondary options and employment. To address that, BUSD will intentionally build the pathways around California's standards, Strong Workforce principles, partner input,

and proven models that include coherent course sequencing and authentic field experience.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The vision of the **BUSD Career Pathways** Project is to expand and strengthen student access to meaningful, real-world learning in environmental, biotechnology, and health-related fields. Through hands-on coursework, work-based learning, and postsecondary connections, students will be prepared for high-demand careers that directly impact community health, air quality, and sustainability. This work ensures all students, especially those historically underrepresented, have clear, supported pathways to college, career, and contribute_26 to a stronger, healthier community.

Measurable Outcome	Indicator(s)
1. Increase student enrollment annually by 5% and participation in Environmental Resources and Biotechnology pathways	• Increase in student enrollment in pathway courses • Increase in participation of underrepresented student groups • Increase in pathway course completion rates
2. Increase access to high-quality, standards-aligned CTE curriculum in environmental and biotechnology fields	• Number of new or revised courses implemented • Alignment of courses to CTE standards • Student performance in pathway coursework- successful completion of requirements and passing grades.
3. Increase student participation in work-based learning and career exploration experiences	• Number of students participating in internships, job shadows, or field experiences • Number of work-based learning opportunities created • Student completion of career exploration activities
4. Increase postsecondary readiness and successful transitions to college and career pathways	• Number of students participating in dual enrollment or articulated courses. • Program and college acceptance.

	● Increase in students pursuing postsecondary education in related fields ● Student completion of pathway sequences

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
Increase student enrollment and participation in Environmental Resources and Biotechnology pathways	A. New pathway courses are developed and launched	1. Develop course sequences for Environmental Resources and Biotechnology pathways	BUSD Instructional Services	CTE Teachers Site Administration	June 30 2027
		2. Align curriculum to California CTE standards	BUSD Instructional Services CTE Coordinator	CTE Teachers Site Administration	June 30 2027
		3. Launch initial pathway courses at Benicia High School	BUSD Instructional Services CTE Coordinator	CTE Teachers Site Administration	March 1 2027
	B. Student recruitment and outreach is implemented	1. Conduct student and family outreach to promote pathways. Through career nights, video introduction of programs, newsletters and presentations to students.	CTE Teachers Site Administration	Career Counselor Principal	March -May 2027

		2. Integrate pathway information into counseling and course selection	CTE Coordinator District Administration	Career Counselor Principal	Jan-March 2027
		3. Target outreach to underrepresented student groups	CTE Coordinator District Administration	Career Counselor	Jan- May 2027
	C. Enrollment and participation data is monitored and improved yearly by 2%.	1. Track enrollment	CTE Coordinator District Administration Career Counselor	Career Counselor	March - May 2027
		2. Track completion rates of coursework	CTE Coordinator District Administration Career Counselor	Career Counsel	End of each semester ongoing for 5 years - 2031
		3. Analyze Student Group participation data	CTE Coordinator District Administration	Career Counselor	End of each semester ongoing

			Career Counselor		for 5 years - 2031
		4. Adjust recruitment and course offerings based on data	CTE Coordinator District Administration Career Counselor	Career Counselor	Each Semester until 2031
Increase access to high-quality, standards-aligned CTE curriculum in environmental and biotechnology fields	A.Curriculum is developed and aligned to standards	1. Develop a curriculum aligned to Environmental Resources and Biotechnology standards	CTE Coordinator BUSD Instructional Services	CTE Teachers Site Administration	July 2026
		2. Integrate air quality, environmental health, and public health content	CTE Coordinator BUSD Instructional Services	CTE Teachers Site Administration	July 2026
		3. Review curriculum for rigor and relevance in alignment to industry, as shown by - Alignment to CTE program goals, Student work and grades.	CTE Coordinator BUSD Instructional Services	CTE Teachers Site Administration	July 2026
	B.Instructional materials and equipment are	1. Purchase environmental monitoring and lab equipment	CTE Coordinator	CTE Teachers	May 2026

	implemented, distributed to staff, and students have access to and use of the equipment.		BUSD Instructional Services	Site Administration	
		2. Provide materials for hands-on learning experiences	CTE Coordinator BUSD Instructional Services	CTE Teachers Site Administration	May 2026
		3. Integrate equipment into instruction by demonstration of use in classrooms and instruction.	CTE Coordinator BUSD Instructional Services	CTE Teachers Site Administration	Sept 2026
Increase student participation in work-based learning and career exploration experiences	A. Work-based learning opportunities are developed	1. Establish partnerships with local employers and organizations, through MOU, internship agreements and job shadowing opportunities.	BUSD Instructional Services CTE Coordinator	CTE Teachers Site Administration	28-29 School Year
		2. Identify internship, job shadow, and field experience opportunities, tracked through the CTE database and reported out at CTE meetings.	BUSD Instructional Services CTE Coordinator	CTE Teachers Site Administration	28-29 School Year
		3. Develop structure for student participation- Students start their Sophomore year. The	BUSD Instructional Services	CTE Teachers	28-29 School Year

		structure guides their 3-year program.	CTE Coordinator	Site Administration	
	B. Students participate in career-connected experiences	1. Coordinate student placements in internships and job shadows	CTE Coordinator	CTE Teachers	28-29 School Year
		2. Provide guest speakers and career panels	CTE Coordinator	CTE Teachers	28-29 School Year
		3. Integrate career exploration into coursework	CTE Coordinator	CTE Teachers	28-29 School Year
	C. Work-based learning participation is tracked and expanded	1. Track student participation and completion of coursework and CTE requirements.	CTE Coordinator	CTE Teachers	End of each semester ongoing for 5 years - 2031
		2. Gather student and partner feedback	CTE Coordinator	CTE Teachers	End of each semester ongoing for 5 years - 2031
		3. Expand opportunities based on demand	CTE Coordinator	CTE Teachers	End of each semester

					ongoing for 5 years - 2031
Increase postsecondary readiness and successful transitions to college and career pathways	A. Postsecondary partnerships and alignment are established through agreements and MOU's	1. Develop dual enrollment agreements and MOUs with community colleges	BUSD Instructional Services CTE Coordinator	CTE Teachers	28-29 School Year
		2. Align CTE pathway coursework with postsecondary programs for college and career readiness.	BUSD Instructional Services CTE Coordinator	CTE Teachers	July 2029
		3. Create articulated pathways to certificates and degrees, aligning CTE requirements with College and program requirements.	BUSD Instructional Services CTE Coordinator	CTE Teachers	March - May 2029

Project Name:	BUSD Clean Future Career Pathways Project
Lead Applicant Name:	Benicia Unified School District
Term for this budget (in years):	5 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Teachers	Year 1 - 2 teachers at 1.20 FTE; Year 2 - 2 teachers at 2.0 FTE; Year 3 - 3 teachers at 2.4 FTE; Year 4 - 3 teachers at 3.0 FTE; Year 5 - 4 teachers at 3.2 FTE	##########
Personnel/Staff Costs	Direct	Coordinator	0.20 FTE CTE Coordinator - Benicia High School Principal, will oversee this project.	$165,000.00
Personnel/Staff Costs	Direct	Academic Counselor	0.25 FTE Academic CTE Counselor - assists with implementation of CTE program and oversees students	$114,000.00
Personnel/Staff Costs	Direct	Office Support	0.50 FTE Office Support personnel for CTE Program and grant - coordinate schedules, ordering of supplies, marketing materials, and other duties as required	$150,000.00
Capacity-Building and Training	Direct	Training	Professional development for CTE Program staff - onboarding staff, conference attendance for teachers and CTE Coordinator 2x per year	$35,000.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Fields Trips	Field Trips to colleges, programs, work site, Career related activities.	$25,000.00
Travel	Direct	Travel	Mileage/airfare reimbursement for CTE staff to travel to conferences for training and staff development	$20,000.00
Community Engagement	Direct	Engagement	Recruitment and marketing of program to BUSD community - website development, podcast, info night, career fair	$10,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Equipment	Biotechnology equipment and supplies - includes injection dummies, bandaging, DNA extraction, some disposable/reusable supplies/equipment	$30,375.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Subcontract	Touro University subcontract for Youth Environment Empowerment Project	$841,138.00
Contingency (≤10% of Direct Costs at PROJECT level)	Contingency	Contingency	Contingency costs	$316,051.00
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	Indirect	Indirect costs	$474,077.00

Application Information	
Application Title	BUSD Clean Future
Lead Applicant Name	Benicia Unified School District
Project Location	Benicia Unified School District 350 East K Street Benicia, CA 94510 Serving all 7 schools in Benicia Unified
Overall Funding Request	$20,453,464
Grant Term Request	5 years
Project Information	
Project Title	BUSD Clean Future - Overall Narrative
Project Funding Request	$20,453,464

1. *Provide a summary of the project, addressing the following:*
    - *How the project aligns with at least one of the Local Community Benefit Fund's strategies:*
        - *Reduce air pollution and improve health outcomes*
        - *Build economic resilience for a just transition*
    - *How the project addresses community needs, including the specific communities your project will benefit.*
    - *A summary of the activities that will be supported by this project.*
    - *The measurable outcomes that will be achieved through this project.*

2. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during*

grant implementation, and how that feedback will be considered.

In this document, Benicia Unified School District seeks to clarify several items that have arisen as a result of the July 2, 2026 Bay Area Air District Board Meeting and public comments received since then.

Benicia Unified School District (BUSD) proposes the **BUSD Clean Future Initiative**, a coordinated districtwide effort designed to improve student health, reduce the impacts of air pollution,and modernize aging school infrastructure. As a refinery-adjacent community, Benicia has experienced the ongoing environmental and public health impacts associated with industrial emissions, poor air quality events, and aging facilities that were not designed to protect students from modern environmental conditions. At the same time, the refinery closure presents significant economic uncertainty for local families and the broader community.

The **Healthy Campuses** project will modernize school facilities through upgraded HVAC systems that utilize electric heat pumps, high-efficiency filtration with a MERV-15 rating, window replacements, and sustainable landscaping designed to improve indoor air quality, reduce exposure to pollutants, lower energy consumption, and create safer learning environments for students and staff. The **Student Wellness** project will implement coordinated health outreach, early intervention, family support, and care navigation systems to reduce health-related absenteeism, particularly among students impacted by asthma, allergies, and respiratory illness. Due to the Bay Area Air District feedback received, we are not resubmitting the Career Pathways Project for consideration. In addition to removing this project, we made adjustments to our budgets of the remaining two projects; this reduced our overall request by $ 5 million plus. We recognize the needs of our entire community and that both applicants serve the Bencia Community. BUSD is a willing partner with the City of Benica in all our endeavours. The total request in the revised projects totals $20,453,464.

Key measurable outcomes include:

- Reduced student exposure to airborne pollutants through improved filtration and facility modernization.
- Reduced health-related absenteeism and increased student attendance through education and direct health support.
- Direct support of student pulmonary-related health.
- Increased family engagement with health and wellness support.
- Reduced use of fossil fuels across district campuses.

- Reduced energy consumption and increased operational efficiency across district facilities.

Non-Duplication of Funds

a. Impact of Valero closure on property taxes and the Benicia Unified School District's Measure C Bond

The following statement is taken directly from our original Catalyst Grant application. We want to be clear that the district did not state a decrease in property taxes will result in less general funding from the state. Benicia Unified School District has made $1.7 million in cuts for this school year due to reduced state funding and declining enrollment. The impact of Valero closing is covered below in this section taken from our original submission.

"The following list is in priority order. Benicia Unified School District wants to make the best use of the REPAIR grant and use it to expand its bond projects and have an impact on the reduction of pollution, energy costs and provide a healthier environment for students and staff. The potential impact of the Valero closure on our bond funding could potentially result in the loss of $660M in tax collections. This is a projected worst-case scenario when Valero closes and all operations cease at the location, leaving only the land as an asset. This impact could mean the collections for the district bond would not have sufficient funding, due to the maximum allowable in collections from residents. This could impact the district's ability to sell the future bonds it has outstanding in the original timeframe. Of the $122.5M bond, the district has sold $45M in May 2024 and $65M in Jan 2026, with $12.5M remaining to sell. With a reduction in collections, the district would likely not be able to sell the remaining for many years later (10-12 years), as the bonds being sold would need to have sufficient collections to repay. The REPAIR grant would have a significant impact in supporting the community and especially the students of Benicia."

b. In addition, we want to reinstate the relationship between the Measure C bond and the REPAIR grant.

BUSD has extensive experience successfully managing large-scale capital improvement projects. In 2014, the District secured voter approval for the $49.6 million Measure S facilities bond and completed major improvements across all school sites. Projects included districtwide fire alarm, technology, safety, roofing, flooring, HVAC, and security upgrades; new classrooms and restroom facilities; playground and shade structure additions; seismic renovations; parking lot and hardscape improvements; and

major athletic facility upgrades, including a new football stadium at Benicia High School. These projects enhanced learning environments across the District and improved campus safety and functionality.

Building on the successful completion of Measure S projects, BUSD secured voter approval for the $122.5 million Measure C facilities bond in 2024. Within two years, the District has already contracted more than $40 million of approved projects. Current construction includes new baseball and softball facilities, an all-purpose turf field, parking and utility improvements, and major renovations to the Benicia High School Performing Arts Building. Additional completed projects include HVAC, roofing, flooring, restroom, and security upgrades at some school sites.

Despite these investments, significant facility needs remain. The BUSD Facilities Master Plan identifies approximately $80 million in additional unfunded Priority Two facility needs beyond current Measure C funding capacity. Further compounding these challenges, the indefinite departure of Valero is expected to reduce local property values and delay approximately $12 million in anticipated Measure C funding. REPAIR Grant funding would enhance these projects and allow BUSD to continue advancing critical facility improvements that support safer, healthier, and more effective learning environments across the District.

At the July 2, 2026 Bay Area Air District Board Meeting, it was stated that BUSD has already funded the requests in the REPAIR grant. Please note that the proposed projects outlined in the BUSD Healthy Campuses project narrative of the Catalyst Grant do not duplicate Measure C-funded projects. The following is a list of projects BUSD has or will be completing with the Measure C dollars. These projects are part of the BUSD Facilities Master Plan that was developed and prioritized with feedback from numerous community engagement events and meetings, and the BUSD Facilities Master Plan is available as a public-facing document.

- TECHNOLOGY SAFETY / CAMERA UPGRADES: ALL SCHOOLS
- ROOFING UPGRADES.
- PLAYGROUND SHADE STRUCTURE, FLOORING UPGRADES AND MPR ADA LIFT at Mary Farmar Elementary.
- *HVAC UPGRADES*
- DO FLOORING
- ELEVATOR UPGRADES
- TECH SERVER UPGRADES
- NEW T-K CLASSROOM AND PLAYGROUND IMPROVEMENTS
- Robert Semple Elementary RESTROOM, ROOFING AND FLOORING UPGRADES
- MARQUEE UPGRADES
- Benicia High School Z BUILDING RENOVATIONS

- Benicia High School HARDSCAPING IN VICINITY OF PRIOR R BUILDINGS
- BASEBALL AND SOFTBALL COMPLEX Benica HS
- Bencia Middle School SOCCER FIELDS AND TRACK

Measure C bond funds are dedicated to replacing aging facilities and infrastructure. While these funds allow the District to replace existing HVAC equipment at the end of its useful life, they do not provide sufficient funding to incorporate higher-performing technologies or system enhancements that would significantly improve air quality, energy efficiency, and long-term sustainability. Measure C bond funds do not provide funding to replace HVAC systems with electric heat pumps. Therefore, we proposed to do so in the BUSD Healthy Campuses project.

The REPAIR grant is intended to complement, not duplicate, these Measure C investments. Specifically, REPAIR funding will provide enhancements that are beyond the scope of the bond program, including high-efficiency MERV-15 filtration, window and door monitoring systems that automatically suspend heating and cooling when doors or windows are open, and the replacement of conventional gas-fired HVAC units with high-efficiency electric heat pumps. This project has four components: heat pumps, monitoring and controls, solar shading windows, and carbon-capture landscaping.

By combining Measure C bond funding with REPAIR grant funding, Benicia Unified School District can transform a basic equipment replacement project into a modern, high-performance building improvement. These enhancements will improve indoor air quality, reduce energy consumption, lower greenhouse gas emissions, decrease reliance on fossil fuels, and better protect the health of students, staff, and the surrounding community.

We respectfully ask the review committee to note that, of all the projects funded through Measure C, only the HVAC replacement project is included in this REPAIR application. Measure C provides funding only for replacing existing HVAC systems with comparable equipment. Without REPAIR funding, the District would replace aging gas-fired units with new gas-fired units because they represent the lowest-cost replacement option available within the bond budget. While this addresses equipment reliability, it does not advance the District's goals of reducing emissions or transitioning away from fossil fuels.

The District also acknowledges and supports the feedback received from the Bay Area Air Quality Management District encouraging applicants to avoid investments that continue reliance on fossil fuels. This is precisely why the District requested funding for electric heat pumps in its original proposal. Heat pumps, powered in part by the District's existing solar energy systems, represent a long-term investment in cleaner

technology that aligns with regional air quality goals while providing healthier learning environments, and reducing future operating costs.

Without the REPAIR grant, Measure C will replace aging systems with similar ones that utilize fossil fuels. With the REPAIR grant, those same projects become cleaner, healthier, more energy efficient, and aligned with California's long-term climate and air quality goals. The REPAIR grant allows the District to maximize the public's investment by leveraging local bond dollars with state grant funding, creating lasting environmental, financial, and public health benefits that neither funding source could achieve independently.

Utilize this table to report information about each project in your application. ** Do not edit the cells shaded grey. Those are formulas**
Application Title: BUSD Clean Future

Project #	Project Title (3 words maximum)	Project Summary (1-3 sentences)	Strategy Alignment	Project Lead	Total Project Budget - Direct Costs	Total Project Budget - Professional Services & Consultants	% Professional Services & Consultants (Max of 25% of Application Direct Costs)	Total Funds Requested	Lead Applicant Budget

Application Information	
Application Title	BUSD Clean Future
Lead Applicant Name	Benicia Unified School District
Project Location	Benicia Unified School District 350 East K Street Benicia, CA 94510 Serving all 7 schools in Benicia Unified
Overall Funding Request	$20,453,464
Grant Term Request	5 years
Project Information	
Project Title	BUSD Healthy Campuses
Project Funding Request	$15,515,869

1. *Provide a summary of the project, addressing the following:*
    - *How the project aligns with at least one of the Local Community Benefit Fund's strategies:*
        - *Reduce air pollution and improve health outcomes*
        - *Build economic resilience for a just transition*
    - *How the project addresses community needs, including the specific communities your project will benefit.*
    - *A summary of the activities that will be supported by this project.*
    - *The measurable outcomes that will be achieved through this project.*

STRATEGY ALIGNMENT

Benicia Unified School District (BUSD) proposes a comprehensive suite of facility transformations designed to eliminate fossil fuel dependency while creating a "safety

shield" for student and staff health, positively impacting the entire community. These upgrades transition BUSD campuses from legacy infrastructure into resilient, 21st-century learning hubs through the following interventions.

Building Envelope & Atmospheric Control

- **High-Performance Glazing & Shading:** Replacing aged windows with dual-pane, Low-E glass, and solar shades to stabilize indoor temperatures and seal out industrial pollutants. The window replacement will include door and window sensors, which will turn off the HVAC units when windows and doors are open, resulting in substantial heating and cooling savings.
- **Advanced HVAC & Filtration:** Decommissioning legacy units in favor of high-efficiency, electric Heat Pump systems capable of MERV 15 filtration, improving indoor air quality (IAQ) even during localized refinery flaring or wildfire events.

Carbon Capture and Sustainable Landscaping Initiative

The District will implement a comprehensive, sustainable landscaping plan across five school sites, including campus grounds and surrounding hillsides, designed to reduce air pollution and improve health outcomes for students and staff. The five sites will be Mary Farmar Elementary (MFE), Matthew Turner Elementary (MTE), Robert Semple Elementary (RSE), Benicia High School (BHS), and Liberty High School (LHS). Landscaping at Joe Henderson Elementary and Benicia Middle School are proposed in an Opportunity Grant in partnership with the City of Benicia and will not be duplicated in this proposal.

The work in this project will focus on planting trees and vegetation that capture carbon, filter airborne toxins, and reduce dust and particulate matter that contribute to respiratory conditions such as asthma and allergies. The project will also include strategic site grading, targeted sod installation, and advanced drainage systems to prevent erosion, manage stormwater, and protect school facilities.

All landscaping will utilize a student-safe, climate-resilient plant palette selected for drought tolerance, fire resistance, low allergen impact, and long-term sustainability in our regional climate. Where applicable, the District will prioritize the use of female tree varieties that do not produce pollen, significantly reducing airborne allergens and improving air quality for students and staff. Hillside areas will be stabilized with deep-rooted plantings to reduce runoff, prevent soil erosion, and protect adjacent structures. Tree canopy and groundcover will work together to lower ambient

temperatures, reduce heat islands, and create cleaner, healthier outdoor spaces that support student health and overall well-being of our school communities. In addition, eco-friendly perimeter landscaping will serve as a natural deterrent for pests while enhancing the safety and appearance of each campus.

Representative plant selections include:

- **Trees**: Coast Live Oak and California Sycamore provide high carbon sequestration, trap airborne particulates on leaf surfaces, and create shade that reduces ground-level heat; female Western Redbud varieties support pollinators while minimizing pollen exposure and contributing to localized air filtration and cooling.
- **Shrubs**: Toyon and Coffeeberry act as dense particulate filters that reduce dust and improve air quality near walkways and play areas; Ceanothus improves soil health through nitrogen fixation while supporting pollinators; Manzanita offers fire-resistant structure and deep root systems that stabilize slopes and reduce erosion.
- **Groundcover**: Kurapia and Lippia nodiflora form dense mats that suppress dust, reduce water use, and prevent soil erosion; Creeping Thyme provides low-growing coverage that supports pollinators while minimizing allergen impact; Dymondia creates a durable, low-water surface that reduces exposed soil and airborne particulates.

By improving air quality, reducing environmental pollutants, stabilizing soil, and creating climate-resilient outdoor spaces, this project directly supports healthier school environments, reduces exposure to respiratory triggers, and aligns with the Local Community Benefit Fund's priority to reduce air pollution and improve community health outcomes. Simultaneously, they transition the District toward a water- and energy-efficient model that reduces utility waste, cuts operational costs, and honors BUSD's commitment to a just transition away from fossil fuel dependency.

COMMUNITY NEEDS & IMPACT

This project is the direct result of a decade of systematic community dialogue. Through over 100 engagement touchpoints—including school-site listening tours, Open Houses, and the Facilities Steering Committee—BUSD stakeholders consistently identified indoor air quality (IAQ), student health, and climate resiliency as top priorities.

This project benefits the following specific communities. BUSD is proposing additional projects in this grant application that specifically address the respiratory health of

students. The impact on those communities will be described in more detail in the relevant project narrative.

- **The Student Population:** BUSD serves approximately 4,500 students across all campuses with 10% of our students currently diagnosed with asthma and an additional 5% who are at risk of an asthma diagnosis.
- **Benicia Residents:** Benicia has a population of 26,477 residents (US Census Bureau) all who live within 2 miles of the I-780 corridor, the Industrial Park, or the Valero Refinery. All of our Benicia residents and students bear the high cumulative burden of industrial and transit-related emissions.

This application addresses three intersecting crises unique to our refinery-adjacent "fence-line" community:

- **The Public Health Challenge:** Students suffer from chronic pulmonary inflammatory provocation due to their proximity to the Valero refinery and heavy diesel traffic. Serving approximately 4,500 students across seven schools, this project will respond to a clear and urgent need: at least 487 students have been diagnosed with asthma and 243 have documented allergies, with many more likely undiagnosed. When students miss school, especially repeatedly, academic outcomes are far-reaching, including lower test scores, gaps in learning, falling behind peers, and even risks of grade retention or dropping out. Absenteeism also increases social isolation and can lead to social-emotional challenges for students. This creates an inequitable learning environment where physical health is compromised by geographic location.
- **The Environmental Justice Challenge:** For too long, the "hidden cost" of local industry has been borne by the lungs of youth. By installing MERV 15+ filtration and airtight seals, BUSD is neutralizing the "fence-line effect" and ensuring that a student's zip code does not determine their respiratory health.
- **The Just Transition Challenge:** As California moves away from fossil fuel dependency, Benicia must evolve. This project utilizes school facilities as a "Blueprint for Resilience," replacing gas-fired combustion with electric heat pumps and smart controls. This transition ensures BUSD schools remain centers of stability and clean energy as the local economy shifts toward renewables.

MAJOR PROJECT ACTIVITIES

Project Planning & Management

- Establish project governance, timeline, budget, and reporting structure.
- Coordinate implementation across five school sites.

- Finalize project scopes, priorities, and sequencing with the Facilities Steering Committee.
- Monitor project schedule, budget, risk, and grant compliance.
- Prepare required grant progress reports and final performance reports.

Design & Engineering

- Complete architectural and engineering design documents for each project.
- Conduct facility assessments and existing conditions verification.
- Prepare technical specifications for HVAC, windows, controls, landscaping, irrigation, and drainage.
- Complete energy modeling and lifecycle cost analyses where appropriate.
- Develop construction phasing plans to minimize disruption to students and staff.

Procurement & Contracting

- Prepare Requests for Proposals (RFPs) and Requests for Qualifications (RFQs) for architectural, engineering, commissioning, environmental, and construction management services.
- Prepare construction bid packages for Heat Pump, window replacement, landscaping, irrigation, drainage, and associated infrastructure improvements.
- Advertise projects, conduct pre-bid conferences, evaluate proposals, and award contracts in accordance with the California Public Contract Code.
- Procure heat pumps, filtration systems, windows, sensors, controls, landscaping materials, and irrigation equipment.
- Coordinate purchasing schedules to meet project timelines and minimize supply chain delays.

Regulatory Compliance & Approvals

- Prepare and submit Division of the State Architect (DSA) construction documents where required.
- Obtain DSA approvals and required agency reviews.
- Complete CEQA documentation and applicable exemptions where needed.
- Secure any required utility coordination, inspections, and local permits.
- Maintain prevailing wage, labor compliance, and grant documentation requirements.

HVAC Modernization

- Replace aging HVAC units with high-efficiency, electric heat pumps where

funded.
- Install advanced MERV-15 filtration systems.
- Clean and rebalance ductwork throughout affected campuses.
- Install smart building controls and energy management systems.
- Install door and window sensors that automatically disable HVAC when windows or doors are open.
- Test, commission, and optimize all HVAC systems.

Building Envelope Improvements

- Replace aging single-pane and inefficient windows with high-performance Low-E dual-pane glazing.
- Install energy-efficient window coverings and solar shading.
- Improve weather sealing around windows and doors.
- Conduct thermal imaging and building envelope testing before and after construction.
- Verify reductions in air infiltration and energy loss.

Sustainable Landscaping & Site Improvements

- Prepare grading and drainage plans.
- Improve irrigation systems for water conservation.
- Install drought-tolerant, low-allergen, fire-resistant landscaping.
- Plant carbon-sequestering trees, shrubs, and groundcover.
- Stabilize hillsides to reduce erosion and stormwater runoff.
- Implement environmentally friendly pest management practices.
- Improve outdoor comfort through shade and heat-island reduction strategies.

Construction Management

- Coordinate construction schedules to minimize impacts on instruction.
- Conduct regular construction meetings with contractors and consultants.
- Monitor quality assurance and quality control throughout construction.
- Manage change orders, inspections, and project closeout.
- Complete punch-list items and final acceptance of all work.

Commissioning & Performance Verification

- Perform pre-construction baseline assessments.
- Commission all HVAC and building systems.
- Verify indoor air quality improvements.

- Validate reductions in energy consumption.
- Measure system performance against design specifications.
- Document operational savings and environmental benefits.

Community Engagement & Communications

- Launch and maintain a public Clean Air Dashboard.
- Provide quarterly updates through District newsletters and ParentSquare.
- Conduct school site tours highlighting completed improvements.
- Convene Facilities Steering Committee meetings throughout implementation.
- Collect stakeholder feedback from students, staff, families, and community members.
- Publish updates describing how community input influenced project decisions.

Operations, Maintenance & Long-Term Sustainability

- Train maintenance staff on new HVAC systems, controls, and heat pumps.
- Develop preventative maintenance schedules.
- Update asset management and replacement plans.
- Monitor long-term building performance.
- Track key performance indicators including:
    - Energy consumption
    - Utility cost savings
    - Indoor air quality
    - Staff and student absenteeism
    - Carbon emissions reductions
    - Water savings
    - Community satisfaction

MEASURABLE OUTCOMES

a) **High-Performance Windows & Smart Climate Controls:** The District will execute a comprehensive thermal envelope upgrade involving the replacement of over 1,080 windows across all campus facilities. These high-efficiency units significantly outperform legacy glass in thermal resistance and solar heat gain coefficients. Energy savings will range from 7% (when we are replacing older double-pane windows) to 30% (when we replace old single-pane windows). Additional energy savings will be realized from the HVAC interlocks above the 7-30% savings from window replacement. To maximize these gains, the project integrates an "Intelligent Shell" system:

- **Integrated HVAC Interlocks:** Wireless sensors on doors and windows will automatically throttle or deactivate HVAC zones when openings are detected, eliminating energy waste from "open-door" cooling. This project is of high importance as it would have a direct impact on heating and air conditioning costs.
- **Solar Managed Shading:** Advanced window coverings will be installed to further mitigate solar heat gain, reducing the peak cooling load on the District's electrical infrastructure.
- **Performance Validation:** To ensure maximum return on investment, the District will utilize a dual-phase Building Commissioning protocol. An initial diagnostic audit—including thermal imaging and envelope pressure testing—will establish a baseline for heat transfer. Following installation, a post-construction audit will be conducted to generate a measurable "Improvement Report," verifying the reduction in thermal leakage and the corresponding decline in HVAC demand.

b) **HEAT PUMPS:** Replacement of HVAC units with electric heat pump systems will occur at 7 schools for improved thermal performance and air quality, including duct cleaning and balancing across each entire campus's buildings. The District has replaced HVAC systems at some schools with Measure C funds. Due to the high costs, the choice was made to replace and not upgrade systems. Therefore, this project will improve efficiency, reduce power costs, and install more efficient electric HEAT PUMP systems with smart technology that will result in improved indoor air quality through HVAC filtration systems at all 7 District campuses. Energy savings are estimated to be 10-15% below existing use. Potential measurable outcomes:
   - Reduced energy bills/usage.
   - Student absenteeism - see reduction over the grant period due to improved air quality.
   - Reduced Staff sick time.
   - Reduced carbon emissions into the school neighbourhood.

c) **Sustainable Landscaping:** This project aims to measurably improve local air quality and climate resilience through strategic site improvements and landscaping. By targeting campus hillsides for the installation of shrubs, sod, and female (low-pollen) trees, we will create natural buffers that capture particulate matter and reduce carbon emissions. These efforts are supported by professional grading and advanced drainage systems to prevent erosion, alongside eco-friendly pest management. Potential measurable outcomes:

- Pollutant reduction.
- Pollen reduction (female trees).
- Drought-resistant and fireproof landscaping.
- Carbon capture and sequestration
- Improved air quality in Bencia

2. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

BUSD will employ a multi-channel communication strategy to ensure that progress and benefits—such as improved Air Quality Index (AQI) readings and energy savings—are visible and accessible to all stakeholders.

- **The "Clean Air" Dashboard:** Working with local community groups, we will launch a public-facing digital transparency portal on the BUSD website.
- **"State of the Schools" Site Tours:** We will host guided walk-throughs, coordinating with our school site councils at each school site, showing our modernized campuses. These tours will allow community members to see the tangible benefits of green technology, such as the cooling effect of new shade structures and the noise reduction from high-performance windows.
- **Quarterly "Green Progress" sections of our Newsletters:** Dedicated updates will be sent via the District's mass communication system (ParentSquare/Email), highlighting specific milestones like "Fossil Fuel Reduction Targets" and "Water Conservation Totals" achieved through the new landscaping and HVAC controls.

Feedback is not a static requirement; it is a vital tool for project calibration. BUSD will use the following methods to gather and act on stakeholder input during the grant term:

- **The Facilities Steering Committee (FSC) Review:** The FSC will continue to serve as the primary bridge between the technical team and the community. This committee will meet at a minimum of twice a year to review progress and voice concerns regarding construction schedules or priority shifts. The FSC includes school site administrators, IT and maintenance, who directly interface with the public and gather input, which is relayed to the FSC. If a project requires prioritization, it is brought to the Executive Cabinet and Board and will be implemented sooner.

- **Biannual Digital "Health" Evaluation:** BUSD will seek opportunities twice a year to bring students, staff, and parents together to evaluate quantitative data and gather qualitative data on the felt impact of the upgrades. Questions will focus on perceived air quality, classroom temperature stability, and overall respiratory comfort.

BUSD is committed to a Responsive Implementation Model. Feedback will be processed through a formal "Input-to-Action" pipeline:

- **Technical Validation:** All community feedback is first reviewed by the Bond Director and technical consultants to determine its feasibility within the grant's scope and safety standards.
- **Steering Committee Prioritization:** Validated feedback is then presented to the Facilities Steering Committee. If a recurring concern emerges, the committee has the authority to recommend a reallocation of project resources to address the need and ensure the same intent of the project is maintained.
- **The "Close the Loop" Policy:** Whenever community feedback results in a project change, BUSD will issue a "Response Report" via the District website explaining how the input was integrated. This ensures that the community sees their influence in the physical transformation of its schools.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	BUSD will transform its campuses into safe, modern learning environments that actively protect students and staff from pollution and climate-related impacts. Through strategic facility upgrades, sustainable landscaping, and smart energy systems, the district will reduce environmental risks while improving comfort, efficiency, and long-term operational sustainability.

Measurable Outcome	Indicator(s)
1. BUSD will improve building envelope performance by replacing more than 1,080 outdated windows and installing smart climate control sensors across all school sites.	• Number of windows replaced • Number of door/window HVAC interlock sensors installed • Post-installation commissioning report completed • Reduction in thermal leakage and energy waste documented through baseline and follow-up assessments
2. BUSD will improve indoor air quality and HVAC efficiency by replacing outdated HVAC units at 7 schools and completing duct cleaning and system balancing across project campuses.	• Number of HVAC units replaced with electric heat pumps • Number of campuses receiving duct cleaning and balancing • Installation of upgraded filtration with MERV 15 rating and smart HVAC technology • Reduction in energy use and improved indoor air quality data • Maintenance and commissioning reports completed
3. BUSD will reduce outdoor environmental triggers by implementing sustainable landscaping and hillside stabilization	• Number of school sites receiving landscaping improvements • Number of trees, shrubs, and groundcovers installed • Use of female tree varieties where applicable

across 7 school sites using drought-tolerant, low-allergen, fire-resistant, and pollution-reducing plant materials.	● Reduction in exposed soil, erosion risk, and dust-generating areas ● Completion of grading, drainage, and stabilization improvements
4. BUSD will reduce district energy waste and improve operational efficiency through coordinated building upgrades that lower HVAC demand, reduce unnecessary heating and cooling, and support long-term cost savings.	● Utility usage before and after project implementation ● Reduction in avoidable HVAC runtime through sensor integration ● Documented decrease in heating and cooling loss ● Quarterly reporting of energy performance trends ● Completion of energy performance review

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. BUSD will improve building envelope performance by replacing more than 1,080 outdated windows and installing smart climate control sensors across all 7 school sites. **Sites:** **JHE, MFE, MTE, RSE, BMS, BHS, LHS**	A. Finalize design, technical review, and approval process for window replacement and smart sensor installation.	1. Complete site assessments and confirm window replacement scope at participating schools.	BUSD Facilities Director, Consultants, Site Administrators	Maintenance and Operations	Mar 2027
		2. Prepare construction documents and submit for approvals as needed.	BUSD Facilities Director, Consultants, Site Administrators	Maintenance and Operations	Oct 2027
		3. Finalize bid documents and project schedule.	BUSD Facilities Director, Consultants, Site Administrators	Maintenance and Operations	Jan 2028
	B. Install high-performance windows, solar-managed shades, and smart climate sensors.	1. Procure materials and contractor services.	BUSD Facilities Director, Consultants, Site Administrators	Maintenance and Operations	Jul 2027-Nov 2030
		2. Replace windows and install shades at project sites.	BUSD Facilities Director, Consultants, Site Administrators	Maintenance and Operations	Jul 2027-Nov 2030
		3. Install door and window sensors integrated with HVAC controls.	BUSD Facilities Director, Consultants, Site Administrators	Maintenance and Operations	Jul 2027-Nov 2030

	C. Validate energy and building envelope performance improvements.	1. Conduct post-installation thermal imaging and pressure testing.	BUSD Facilities Director, Consultants, Site Administrators	Maintenance and Operations	Jul 2027-Nov 2030
		2. Compare baseline and post-project energy performance data.	BUSD Facilities Director, Consultants, Site Administrators	Maintenance and Operations	Jul 2027-Nov 2030
		3. Share results with the Facilities Steering Committee and community.	BUSD Facilities Director, Consultants, Site Administrators	Maintenance and Operations	Jul 2027-Nov 2030
2. BUSD will improve indoor air quality and HVAC efficiency by replacing outdated HVAC units at 7 schools and completing duct cleaning and system balancing across all 7 school sites. **Sites:**	A. Complete planning and procurement for HVAC replacement and system upgrades.	1. Confirm the final list of HVAC units and campuses included in the project.	BUSD Facilities Director, Consultants, Site Administrators	Maintenance and Operations	Jul 2026-Mar 2027
		2. Develop technical specifications for energy-efficient, electric heat pump systems and filtration with MERV-15 rating.	BUSD Facilities Director	Maintenance and Operations	Jul 2026-Mar 2027
		3. Bid and award contracts for HVAC replacement and associated services.	BUSD Facilities Director	Maintenance and Operations	Jan 2027 - Nov 2030
	B. Install new HVAC systems and improve air	1. Remove outdated HVAC units and install upgraded systems.	BUSD Facilities Director	Maintenance and Operations	Jan 2027-Nov 2030

JHE, MFE, MTE, RSE, BMS, BHS, LHS	distribution performance across school sites.	2. Complete duct cleaning and balancing across participating campuses.	BUSD Facilities Director	Maintenance and Operations	Jan 2027-Nov 2030
	C. Measure improvements in indoor air quality, efficiency, and building comfort.	1. Establish baseline and post-installation energy use comparison.	BUSD Facilities Director, Consultants	Maintenance and Operations	Jan 2027-Nov 2030
		2. Review indoor air quality and building comfort data after upgrades.	BUSD Facilities Director, Consultants	Maintenance and Operations	Jan 2027-Nov 2030
		3. Report outcomes to stakeholders through dashboard, newsletter, and committee updates.	BUSD Facilities Director	Maintenance and Operations	Jan 2027-Nov 2030
3. BUSD will reduce outdoor environmental triggers by implementing sustainable landscaping and hillside stabilization across 5 school sites using drought-tolerant, low-allergen,	A. Develop site-based sustainable landscaping plans aligned to health and climate goals.	1. Assess each campus and hillside area for erosion, dust, heat, and planting needs.	BUSD Facilities Director	Maintenance and Operations	Jan 2026 - Apr 2027
		2. Finalize planting palette and design standards focused on low-allergen and drought-resistant materials.	BUSD Facilities Director	Maintenance and Operations	Apr 2027 - Nov 2028
		3. Complete project sequencing for grading, drainage, sod, and planting.	BUSD Facilities Director	Maintenance and Operations	Nov 2027 - Nov 2030
	B. Install sustainable landscaping	1. Complete grading and drainage improvements at designated campuses.	BUSD Facilities Director	Maintenance and Operations	Nov 2027 - Nov 2030

fire-resistant, and pollution-reducing plant materials. **Sites:** **MFE, MTE, RSE, BHS, LHS**	and complete site stabilization work.	2. Install trees, shrubs, and groundcover selected for pollution reduction and climate resilience.	BUSD Facilities Director	Maintenance and Operations	Nov 2027 - Nov 2030
		3. Stabilize hillsides and perimeter areas with deep-rooted plantings and erosion-control improvements.	BUSD Facilities Director	Maintenance and Operations	Nov 2027 - Nov 2030
	C. Evaluate the environmental and campus health benefits of sustainable landscaping improvements.	1. Document completion of planting, grading, drainage, and stabilization work by site.	BUSD Facilities Director	Maintenance and Operations	Jan 2028 - Nov 2030
		2. Review observed impacts on dust, runoff, heat, and campus appearance.	BUSD Facilities Director	Maintenance and Operations	Jan 2028 - Nov 2030
		3. Share results with the community through updates, tours, and public reporting.	BUSD Facilities Director	Maintenance and Operations	Jan 2028 - Nov 2030
4. BUSD will reduce district energy waste and improve operational efficiency through coordinated building	A. Establish baseline utility and operational performance data for project sites.	1. Compile pre-project utility and HVAC usage data.	BUSD Facilities Director	Maintenance and Operations	Sept 2026 - Jan 2027
		2. Identify baseline heating and cooling inefficiencies by site.	BUSD Facilities Director	Maintenance and Operations	Sept 2026 - Jan 2027
		3. Set site-based tracking measures for post-project comparison.	BUSD Facilities Director	Maintenance and Operations	Sept 2026 - Jun 2031

upgrades that lower HVAC demand, reduce unnecessary heating and cooling, and support long-term cost savings. across all 7 school sites. **Sites:** **JHE, MFE, MTE, RSE, BMS, BHS, LHS**	B. Implement energy-saving improvements through window, shading, sensor, and HVAC modernization.	1. Integrate smart controls into upgraded campus systems.	BUSD Facilities Director	Maintenance and Operations	June 2027 - June 2031
		2. Verify system settings and operating schedules for efficiency.	BUSD Facilities Director	Maintenance and Operations	June 2027 - June 2031
		3. Train staff on proper system use and monitoring expectations.	BUSD Facilities Director	Maintenance and Operations	June 2027 - June 2031
	C.Demonstrate measurable operational savings and improved facility performance.	1. Compare baseline and post-project utility trends.	BUSD Facilities Director	Maintenance and Operations	June 2027 - June 2031
		2. Prepare a summary of energy savings and efficiency gains.	BUSD Facilities Director	Maintenance and Operations	June 2027 - June 2031
		3. Present findings to the Board, community, and Facilities Steering Committee.	BUSD Facilities Director	Maintenance and Operations	June 2028 - June 2031

Project Name: BUSD Clean Future Healthy Campuses Project
Lead Applicant Name: Benicia Unified School District
Term for this budget (in years): 5 Years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Materials, Supplies & Equipment (> $5K itemized)	Direct	HVAC Replacement	Replace/upgrade HVAC to heat pumps and filtration systems with MERV 15 rating at 6 BUSD schools	$3,500,000.00
Construction	Direct	HVAC Replacement	Construction costs for replacement of HVAC to heat pumps and filtration systems with MERV 15 rating at 6 schools	$3,242,500.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Windows Replacement	Windows and open/door window monitors for improved thermal performance and air quality, including code-compliant double pane windows, window shades for sun control, and electric-based heating/cooling system connections.	$3,750,000.00
Construction	Direct	Windows Replacement	Replacement of windows and installation of open/door monitors at 6 schools	$325,425.00
Construction	Direct	Landscaping	Upgrade landscaping and irrigation to reduce water use and enviromental impact, improve air quality at 4 school sites	$1,400,000.00
Professional Services & Consultants (≤25% of Direct Costs at APPLICATION level)	Direct	Consulting	Design and agency fees, inspections	$500,000.00
Contingency	Contingency	Contingency	Contingency	$890,255.00
Indirect Costs (≤15% of Direct Costs	Indirect	Indirect	Indirect	$1,907,689.00

Application Information	
Application Title	BUSD Clean Future
Lead Applicant Name	Benicia Unified School District
Project Location	Benicia Unified School District 350 East K Street Benicia, CA 94510 Serving all 7 schools in Benicia Unified
Overall Funding Request	$20,453,464
Grant Term Request	5 years
Project Information	
Project Title	BUSD Student Wellness
Project Funding Request	$4,937,595

1. *Provide a summary of the project, addressing the following:*
    - *How the project aligns with at least one of the Local Community Benefit Fund's strategies:*
        - *Reduce air pollution and improve health outcomes*
        - *Build economic resilience for a just transition*
    - *How the project addresses community needs, including the specific communities your project will benefit.*
    - *A summary of the activities that will be supported by this project.*
    - *The measurable outcomes that will be achieved through this project.*

STRATEGY ALIGNMENT

The BUSD Clean Future Student Wellness Project directly advances the Local

Community Benefit Fund's goal of **reducing air pollution and improving health outcomes** by addressing the human health impacts of environmental pollution in Benicia. The project complements the District's Healthy Campuses facilities initiative, which reduces students' exposure to pollution through modernized HVAC systems, high-efficiency filtration, electric heat pumps, improved building envelopes, and sustainable landscaping. Together, these two projects create a comprehensive environmental health strategy.

The Healthy Campuses Project addresses the environmental source of respiratory illness by reducing exposure to particulate matter, ozone, wildfire smoke, industrial emissions, and fossil fuel combustion. The Student Wellness Project addresses the students already affected by those environmental conditions through early identification, coordinated health interventions, family education, and connections to healthcare. One project improves the environment; the other improves children's ability to remain healthy enough to benefit from that healthier environment.

The project also supports **economic resilience and a just transition** by reducing preventable illness, decreasing parent work-loss days associated with caring for sick children, improving school attendance, reducing healthcare utilization, and preparing families to navigate the health impacts associated with changing environmental conditions. By connecting families with healthcare providers, insurance programs, and community resources, the project strengthens long-term community resilience while complementing the District's transition toward cleaner, lower-emission school facilities.

COMMUNITY NEEDS & IMPACT

Benicia Unified School District serves approximately 4,500 students across seven schools, including at least **487 students diagnosed with asthma** and **243 students with documented allergies**. Students attend school in a community influenced by Interstate 780 traffic, industrial activity, and seasonal wildfire smoke. Benicia experiences approximately **10 to 12 days each year** when the Air Quality Index exceeds unhealthy levels for sensitive populations, exposing children to episodic increases in particulate matter and ozone that are known triggers for asthma and other respiratory illnesses.

According to state surveillance data, Solano County experiences asthma-related emergency department utilization rates that exceed statewide averages, with children representing one of the populations most affected (California Department of Public Health [CDPH], 2023). Statewide, asthma remains one of the leading chronic childhood diseases and one of the primary causes of school absenteeism (American Lung

Association, 2024; World Health Organization, 2024). Data from the California Asthma Dashboard confirms that **Solano County's asthma emergency department visit rate exceeds the statewide average**, signaling a heightened burden of severe pediatric asthma requiring emergency intervention (CDPH, 2023; Tracking California, 2024). Dr. Diane Dooley, retired board-certified pediatrician from Contra Costa Regional Medical Center and Health Centers and a Benicia resident, pertinently summarized the local need to Chris Calabrese, BUSD Superintendent, in personal communication from April 12, 2026.

"Children are particularly vulnerable to both chronic and acute health problems due to exposure to air pollution. Children breathe more rapidly than adults, taking in more pollutants per body weight while their lungs and other organs continue to develop. Exposure contributes not only to asthma but also to abnormal organ development, neurodevelopmental disorders, pediatric cancers, cardiovascular disease, and other lifelong health conditions. Benicia's industrial activity, freeway corridor, and marine inversion patterns create areas of elevated exposure, particularly near Benicia High School, Benicia Middle School, and Mary Farmar Elementary School, all located adjacent to Interstate 780."

The Student Wellness Project responds to these documented environmental health impacts by ensuring students affected by poor air quality are identified early, connected with healthcare, and supported before respiratory illness results in emergency department visits, chronic absenteeism, or declining academic performance.

MAJOR PROJECT ACTIVITIES

The project will establish a coordinated districtwide Student Wellness system focused on preventing health-related absenteeism through proactive intervention. Project activities include:

- Implementing an early warning system that identifies students experiencing repeated illness-related absences.
- Contacting families after two consecutive illness-related absences to determine health needs and environmental factors contributing to illness.
- Developing individualized student wellness and attendance support plans.
- Reviewing and updating Asthma Action Plans and coordinating with healthcare providers.
- Providing respiratory health education on asthma management, Air Quality Index alerts, wildfire smoke, medication use, environmental triggers, and healthy home environments.

- Assisting families with enrollment in Medi-Cal, Covered California, and other health insurance programs.
- Connecting families with primary care physicians, pediatric specialists, asthma clinics, behavioral health providers, and community health resources.
- Providing care navigation, appointment coordination, transportation assistance, translation services, and ongoing follow-up until identified barriers have been resolved.
- Coordinating interventions among District nurses, Health & Wellness staff, school administrators, attendance teams, and community healthcare partners.
- Monitoring attendance, health outcomes, referrals, and interventions through a districtwide data management system to support continuous improvement.

The additional grant-funded personnel—including the Health & Wellness Support Coordinator, Health & Wellness Liaison, Health Services Clerk, Student Support Assistant, District Nurse, school office staff, and administrators—provide the human infrastructure necessary to ensure that environmental improvements achieved through the Healthy Campuses Project result in measurable improvements in student health and educational outcomes.

MEASURABLE OUTCOMES

During the five-year grant period, Benicia Unified School District will:

- Reduce health-related chronic absenteeism among participating students by **15 percent**.
- Increase attendance among participating students by **5 percent annually**.
- Ensure **100 percent** of students absent for two or more consecutive illness-related days receive outreach and intervention.
- Increase documented Asthma Action Plans by **25 percent**.
- Provide direct instruction on Inhaler use to students and families.
- Provide community classes on responding to an asthma attack.
- Connect more than **300 families** with healthcare providers, specialists, health insurance programs, or community health resources.
- Increase the percentage of participating students with an identified primary care provider.
- Reduce repeat illness-related absences among participating students.
- Reduce asthma-related emergency responses occurring at school.
- Increase family participation in respiratory health education and asthma management programs.
- Implement standardized Air Quality Index response protocol training at every

school site.
- Track referrals, interventions, attendance improvements, healthcare connections, and family engagement using district data systems, with quarterly program evaluation and continuous improvement.
- Provide Community education on Asthma and the effects of pollution.

Collectively, these outcomes demonstrate improved student health, reduced barriers to learning, stronger family engagement, increased healthcare access, improved attendance, and greater community resilience.

2. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Community engagement is central to the success of this project. BUSD will provide regular updates through Board of Education meetings, District newsletters, ParentSquare communications, the District website, social media, and annual Student Wellness reports. Parent workshops, community health fairs, school site meetings, and informational podcasts will educate families about respiratory health, asthma management, wildfire smoke preparedness, Air Quality Index alerts, and available community resources.

The District will continue collaborating with Solano County Public Health, Solano Family Health Services, Benicia Action Council, healthcare providers, and community organizations to coordinate services and maximize community impact.

Community feedback will be collected through parent surveys, focus groups, school site meetings, advisory committees, healthcare partners, and direct conversations with families receiving services. Program data and stakeholder feedback will be reviewed quarterly to evaluate effectiveness, identify emerging needs, refine intervention strategies, and ensure the project remains responsive to the health priorities of Benicia's students and families. This continuous improvement process will ensure that both the Healthy Campuses Project and the Student Wellness Project evolve together as one integrated environmental health initiative that reduces children's exposure to air pollution while providing the direct support necessary for every student to thrive.

Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The BUSD Student Wellness Project is a proactive, school-based initiative designed to address the human health impacts of environmental pollution in Benicia. The project complements the District's Healthy Campuses facilities initiative, which reduces students' exposure to pollution through modernized HVAC systems, high-efficiency filtration, electric heat pumps, improved building envelopes, and sustainable landscaping. Together, the BUSD Student Wellness and Health Campuses projects create a comprehensive environmental health strategy.

Measurable Outcome	Indicator(s)
1. Reduce health-related chronic absenteeism among BUSD students.	• A minimum of 200 students will be identified annually who experience health-related absences. • BUSD will reduce students' repeat illness-related absences by 15% during the grant term. • BUSD will increase student attendance overall by 5% annually. • 100% of students who are absent for 2 or more days will receive outreach and intervention. • Contact data will be tracked on Health Services web-based software. Tracking every student/family contact.
2. Provide direct support for students diagnosed with asthma and asthma-related educational resources for the larger BUSD population.	• Increase documented Asthma Action Plans for students by 25% during the grant term. • Provide direct instruction on inhaler use to students and families.

	● Provide community classes on responding to an asthma attack. ● Reduce asthma-related emergency responses occurring at school. ● Implement standardized Air Quality Index response protocol training at every school site at least once per school year for staff and sports coaches. ● A minimum of 150 families will participate in coordinated, multi-disciplinary support, through one-on-one intake, survey or educational outreach meetings. ● Tracked by Health services web-based software, including date of contacts, steps taken, follow-up, and support provided.
3. Engage the community to provide education, resources, and direct connection to healthcare.	● 25% of identified BUSD families will participate in respiratory health education and asthma management programs. ● Provide education on the effects of air pollution. ● Tracked on student software (Aeries).
4. Families (300) will receive Referral and Care Navigation	● Number of referrals made to healthcare and community providers. ● Increase percentage of families successfully connected to services. ● Increase the percentage of participating students with an identified primary care provider. ● Reduction in barriers to accessing care (insurance, transportation, language).
5. Data Tracking and Continuous Improvement	● Track referrals, interventions, attendance improvements, healthcare connections, and family engagement using district data systems.

	• Conduct quarterly program evaluation and continuous improvement.

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Reduce health-related chronic absenteeism among BUSD students.	A. Set up an early warning system to identify students.	1. Identify how the current absentee system will be used/modified to notify health staff when students have multiple health-related absences. Identifying respiratory illness.	Educational Services Department	School Nurse, Site office staff	Oct 2027
		2. Identify protocols for timeframes for contacting families.	Educational Services Department	School Nurse, Site office staff	Oct-Nov 2027
		3. Begin using an early warning system to identify families that need support.	Educational Services Department	School Nurse, Site office staff	Nov 2027
	B. Identify how families will be contacted.	1. Identify protocols for how families will be contacted through multiple means (phone, email, text, etc.)	Educational Services Department	School Nurse, Site office staff	Dec 2027
		2. Identify how contacts will be documented	Educational Services Department	School Nurse, Site office staff	Dec 2027
		3. Ensure processes are in place to connect with families who accept, and for families who decline by tracking and periodic monitored/offered support.	Educational Services Department	School Nurse, Site office staff	Jan- Feb 2027
	C. Conduct outreach to families on	1. Families who are identified will be contacted by health personnel a minimum of two times and two ways.	Educational Services Department	School Nurse, Site office staff	March-April 2027

	health-related needs and services.	2. Information is shared to the school population through newsletters and other means to reach families who may be at risk of experiencing absences for early intervention.	Educational Services Department	School Nurse, Site office staff	Jan 2027
2. Provide direct support for students diagnosed with asthma and asthma-related educational resources for the larger BUSD population.	A. Identify options that will be available for individual support.	1. Development of an individual support plan template.	Educational Services Department	School Nurse, Site office staff	Jan- Feb 2027
		2. Identify the types of support that will be available and integrate them into the plan template.	Educational Services Department	School Nurse, Site office staff	Dec 2026 Feb 2027
	B. Integrate existing student services.	1. Identify which other student services might be integrated (counseling, attendance, etc.).	Educational Services Department	School Nurse, Site office staff	Jan- Feb 2027
		2. Identify how student services will interface with the health attendance team.	Educational Services Department	School Nurse, Site office staff	Jan- Feb 2027
		3. Hire/Train/orient relevant student services staff on services available and how to access and integrate services and communication.	Educational Services Department	School Nurse, Site office staff	Oct 2026- Feb 2027
	C. Work with identified families to develop Asthma Action Plans and/or implement individual support strategies.	1. Meet with families to discuss and identify individual strategies (in-person, virtual, email).	Educational Services Department	School Nurse, Site office staff	Nov 2026 March 2027
		2. Integrate individual support strategies into care plans.	Educational Services Department	School Nurse, Site office staff	March 2026- June 2026
		3. Implement individual support strategies, including proper instruction on inhaler use at all 7 schools	Educational Services Department	School Nurse, Site office staff	March 2026- Nov 2027

	D. Update current standardized Air Quality Index (AQI) response protocol for BUSD.	1. Revise and update, implement standardized Air Quality Index response protocol for BUSD.	Educational Services Department	Site Principals	Oct 2026-Dec 2026
		2. Deliver AQI response protocol training to staff and sports coaches at each BUSD school at least once per year.	Educational Services Department	Site Principals	Dec 2026-April 2027
3. Engage the community to provide education, resources, and direct connection to healthcare.	A. Develop standardized education materials for family empowerment.	1. Identify topics for education materials, including respiratory health, asthma management, and effects of air pollution.	Educational Services Department	School Nurse, Site office staff	Jan - March 2027
		2. Develop materials in multiple formats (handouts, emails, brief messages, phone talking points).	Educational Services Department	School Nurse, Site office staff	March - June 2027
	B. Translate educational materials.	1. Translate materials into a minimum of English and Spanish.	Educational Services Department	School Nurse, Site office staff	May - 2027
		2. Translate materials as needed into other languages based on need.	Educational Services Department	School Nurse, Site office staff	May 2027
	C. Train staff on the delivery of educational materials.	1. Identify best practices on health education, such as motivational interviewing.	Educational Services Department	School Nurse, Site office staff	May 2027-Aug 2027
		2. Train non-medical staff on health related topics.	Educational Services Department	School Nurse, Site office staff	March 2027-July 2027
4. Families will receive referral and care navigation support to	A. Community resources are identified and organized for referral.	1. Develop a list of local healthcare providers, clinics, and support services.	Educational Services Department	School Nurse, Site office staff	Aug 2026-Oct 2026

access healthcare and community resources. Target is at least 300 families.		2. Identify resources for asthma care, primary care, and preventative health.	Educational Services Department	School Nurse, Site office staff	Aug 2026-Oct 2026
		3. Create a centralized referral guide accessible to staff.	Educational Services Department	School Nurse, Site office staff	May - July 2027
5. Implement a data tracking and continuous improvement system to monitor student health and attendance outcomes.	A. Track student contact, parent resources provided, and overall student attendance.	1. Develop system to track student contact, outreach, and referrals.	Educational Services Department	School Nurse, Site office staff	Jan 2027-June 2027
		2. Track resources provided to families.	Educational Services Department	School Nurse, Site office staff	March 2027-June 2027
		3. Integrate attendance and health data into monitoring system.	Educational Services Department	School Nurse, Site office staff	March 2027-June 202

Project Name:	BUSD Clean Future Student Wellness Project
Lead Applicant Name:	Benicia Unified School District
Term for this budget (in years):	5 Years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Coordinator	1.0 FTE Health & Wellness Support Coordinator. Direct oversight of the project, ensure grant outcomes, develop systems of communication and follow up support of students and families.	$750,000.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Project Support	One Health & Wellness Liaison position at 40 hours per week per person. This individual will support students and families as they return to school, connect families to resources, and engage in follow-up activities.	$302,500.00
Personnel/Staff Costs	Direct	Project Support	Health Services Clerk at 0.30 FTE to provide project oversight and direct support of students and families.	$112,500.00
Personnel/Staff Costs	Direct	Project Support	1.0 FTE Student Support Assistant will provide direct support to families, tracking student health and attendance.	$290,000.00
Personnel/Staff Costs	Direct	Nurse	The District Nurse will provide 0.30 FTE time and effort, supporting student health needs directly and through training of staff.	$320,020.00
Personnel/Staff Costs	Direct	Administrative Support	7 office personnel at 7 school sites will provide administrative support to the project at 0.20 FTE per person. Attendance tracking, following up on student absences, and data input.	$581,625.00
Personnel/Staff Costs	Direct	Administrative Support	4 Vice Principals at 2 school sites will provide high level support to this project at 0.20 FTE. Attendance monitoring, family contact and chronic absenteeism support, support of student health plan.	$1,022,660.00
Travel	Direct	Travel	Travel expenses include the cost of mileage for project personnel to make home visits with BUSD families and conferences. Travel is budgeted at $3,000 per year.	$15,000.00
Capacity-Building and Training	Direct	Conference	Travel and registration fees are budgeted for project personnel to attend conferences for staff development training.	$20,000.00
Community Engagement	Direct	Outreach	Production costs of outreach & educational materials for BUSD families. Cost includes development, printing, and distribution.	$15,000.00
Community Engagement	Direct	Translation Services	Translation of outreach materials for families in multiple languages.	$65,000.00
Community Engagement	Direct	Engagement	Expenses for engagement activities with the BUSD community include food and beverage for meetings, printing, and outreach costs.	$30,000.00
Other Direct Costs	Direct	Database	Web-based data collection tool for student attendance and health outcomes will be used during the grant period. The budgeted amount includes the cost of licensing during this time. This is a new product combined with current products in use to support health tracking.	$350,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Laptops	3 laptops will be purchased for use during the grant period. The cost includes technical support to set up the laptops for use within the district's network. liceincing and software.	$5,000.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Communication	A communication web-based software will be used for the project. The licensing cost for this software during the grant period is budgeted for the grant term.	$135,000.00
Contingency (≤10% of Direct Costs at PROJECT level)	Contingency	Contingency	Contingency costs	$321,144.00
Indirect Costs (≤15% of Direct Costs	Indirect	Indirect	Indirect Costs	$602,146.00

CLEAN AIR FOR ALL

Benicia Opportunity

City of Benicia Application

Bay REPAIR
Local Community Benefits Fund – Round 1
Opportunity and Catalyst Grants
Overall Narrative

Application Information	
Application Title	Benicia Energy and Air Quality Rebate Program
Lead Applicant	City of Benicia
Application Location	City of Benicia
Overall Funding Request	$5,000,000
Grant Term Request	$5,000,000

PROPOSAL VISION (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
    - *Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.*
    - *Advance integrated projects to holistically meet community needs.*
    - *Strengthen community-driven and collaborative solutions.*

The City of Benicia is requesting $5,000,000 through the Bay REPAIR Local Community Benefits Fund Opportunity Grant program for the Benicia Energy & Air Quality Rebate Program. In partnership with Solano Economic Development Corporation (Solano EDC) as a co-applicant, Franklin Energy Services, LLC (Franklin Energy) as a non-co-applicant partner, and with no-cost technical assistance from Marin Clean Energy (MCE), the program will provide rebates, outreach, and technical assistance to help residents and businesses complete energy efficiency, electrification, and air quality improvement projects. Because the Valero refinery is located within Benicia and near homes, schools, businesses, and community-serving facilities, Benicia residents and businesses are the Solano County community most directly affected by refinery-related emissions and related air quality impacts. Eligible improvements may include heat pump HVAC systems, electrical panel upgrades, rooftop solar, battery storage, EV charging infrastructure, insulation, dual-pane windows, and indoor air quality improvements. The program will prioritize outreach to older homes and businesses, low- and moderate-income households, and neighborhoods located closer to refinery-related air quality impacts.

The program directly supports the goals of the Local Community Benefits Fund by reducing air pollution and energy consumption, improving public health outcomes, and strengthening long-term community resilience through cleaner and more energy-efficient buildings. A major focus of the project will be community education and engagement to ensure residents understand available clean energy incentives, rebate opportunities, and strategies to improve indoor air quality and reduce household emissions. Through targeted multilingual mailers, digital outreach, workshops, and direct engagement, the City anticipates reaching all approximately 11,000 single-family and multifamily homes in Benicia during the three-year grant period. The program will also include quarterly technical assistance and informational workshops led by Solano EDC, resulting in approximately 12 workshops over the grant performance period focused on electrification, incentive stacking, energy efficiency, and air quality improvements. Additional measurable outcomes will include the number of residential assessments and businesses conducted virtually or in-person and the number of homes ultimately receiving improvements through the rebate program. Final project installation and participation totals will be determined at the conclusion of the grant performance period; however, program performance, outreach metrics, and participation data will be tracked and reported continuously throughout the life of the grant.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

The proposed project will benefit the City of Benicia, a waterfront community in Solano County with a diverse mix of residential neighborhoods, small businesses, industrial areas, and older housing stock. While Benicia is often viewed as an affluent Bay Area community, many residents live in older homes that lack modern electrical infrastructure, energy efficiency upgrades, and air quality protections. Portions of the community are located in closer proximity to the Valero refinery and major transportation corridors, resulting in heightened concerns related to air pollution exposure, wildfire smoke impacts, and energy reliability. Unlike other Solano County communities, Benicia contains the refinery within its city limits, meaning local residents, workers, schools, small businesses, and community facilities are closest to the emissions source associated with the penalty funds. The project is designed to ensure that the benefits of those funds are reinvested directly in the community that bears the most direct local air quality burden. The community has also experienced increasing concerns regarding climate resilience, extreme heat, utility costs, and the long-term economic transition associated with California’s shift away from fossil fuel dependency.

The project is specifically designed to benefit households and businesses that face barriers to completing costly energy efficiency and electrification upgrades. Priority populations targeted through the program include low- and moderate-income households, seniors, medically vulnerable residents, renters in smaller multifamily properties, small businesses, and residents living in older homes requiring electrical upgrades to support cleaner technologies. The program will also prioritize outreach and engagement in neighborhoods located closer to refinery-related air quality impacts and areas with aging building infrastructure. Through direct outreach, multilingual educational materials, technical assistance workshops, and individualized application support, the City aims to ensure that historically underserved and environmentally impacted populations are able to access clean energy incentives and participate in the transition toward healthier, more energy-efficient homes and businesses. The program is intended to improve indoor and outdoor air quality, reduce household energy burden, increase awareness of available clean energy resources, and strengthen long-term environmental and economic resilience throughout the Benicia community.

PARTNERSHIP STRUCTURE (20 points)

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

The City of Benicia will serve as the Lead Applicant for the proposed Benicia Energy & Air Quality Rebate Program. The City's mission is to provide high-quality public services, protect public health and safety, support environmental stewardship, and strengthen long-term community resilience. The City maintains longstanding relationships with residents, businesses, local organizations, and regional agencies throughout Benicia and has played a central role in addressing community concerns related to air quality, climate resilience, wildfire preparedness, and economic transition. Through this program, the City will provide overall grant oversight, fiscal administration, reporting coordination, and public accountability while ensuring the program aligns with local community priorities and environmental justice goals.

The Solano Economic Development Corporation (Solano EDC) will serve as a Co-Applicant and lead community outreach, marketing, and technical assistance activities. Solano EDC is a regional nonprofit organization focused on supporting economic vitality, workforce development, and sustainable growth throughout Solano County. Solano EDC has an established history of collaboration with the City of Benicia through prior business and energy efficiency initiatives, including the Solano Energy Watch and Benicia Business Resource Incentive Program (BRIP). As a regional BayREN Program Steward, Solano EDC has extensive experience conducting energy efficiency outreach, coordinating incentive programs, and connecting residents and businesses with clean

energy resources. Solano EDC's deep regional relationships and direct community engagement experience position the organization to effectively lead multilingual outreach, quarterly workshops, and participation efforts throughout the grant period.

Franklin Energy will serve as a non-co-applicant partner supporting program delivery, rebate processing, technical assistance, customer support, and quality assurance activities. Franklin Energy is a nationally recognized energy efficiency and electrification program administrator with extensive experience implementing large-scale residential and commercial rebate programs across California and the United States. Franklin Energy administers similar rebate and incentive programs for Bay Area entities, including BayREN, and has prior experience supporting energy efficiency work in Solano County. Through this partnership, Franklin Energy will help residents and businesses navigate complex energy upgrade projects, incentive stacking opportunities, contractor coordination, application processing, and project implementation requirements.

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

The partnership structure for the Benicia Energy & Air Quality Rebate Program combines City oversight, local outreach, and technical rebate administration. The City of Benicia will serve as the Lead Applicant and will be responsible for overall grant management, fiscal oversight, reporting, compliance, partner coordination, and final decision-making on program direction, eligibility priorities, and use of grant funds.

Solano Economic Development Corporation will serve as a Co-Applicant and lead community outreach, marketing, intake routing, and technical assistance workshops. Solano EDC will help residents and businesses understand available rebates, identify opportunities to stack incentives, complete initial intake, and connect eligible participants with the technical implementation team. Franklin Energy will serve as a technical implementation partner, contracted through Solano EDC. Franklin Energy will support identification of construction partners, rebate application processing, eligibility review, scoring assistance, customer support, funding administration, quality control, and reporting. Franklin Energy brings experience administering similar rebate and incentive programs, including programs for Bay Area entities such as BayREN.

Decision-making will be coordinated through regular project meetings led by the City. Solano EDC and Franklin Energy will provide implementation updates, data, and recommendations, while the City will retain final approval authority over major program decisions, budget changes, eligibility priorities, and grant reporting.

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to:*
    - *Coordinate overall community engagement activities.*
    - *Track and report on indicators to assess progress towards measurable outcomes.*
    - *Collect and process reporting, reimbursement and invoicing requirements.*

The City of Benicia will coordinate closely with Solano EDC through regular project management meetings, shared tracking tools, and clearly defined partner roles. The City will serve as the Lead Applicant and will be responsible for overall grant administration, partner coordination, compliance, fiscal oversight, and submission of required reports to the Air District. Solano EDC will lead community engagement activities, including targeted outreach, marketing, resident and business education, quarterly technical assistance workshops, and initial intake routing. Franklin Energy will support technical program implementation, including rebate application processing, eligibility review, assessment coordination, customer support, and quality control.

To assess progress toward measurable outcomes, the partners will track outreach and participation indicators throughout the grant period. These may include the number of households and businesses reached through mailers and digital campaigns, number of workshop attendees, number of inquiries received, number of applications submitted, number of virtual or in-person assessments completed, number of rebates approved, and number of homes or businesses receiving improvements. Solano EDC will provide outreach and engagement data, Franklin Energy will provide application, assessment, rebate, and quality control data, and the City will compile this information into required progress reports. Franklin Energy's proposed role includes implementation support, rebate processing, quality control, customer care, and reporting-related tasks, while Solano EDC's role includes outreach, events, marketing, administrative routing, and technical assistance support.

For reporting, reimbursement, and invoicing, the City will establish a centralized administrative process to collect documentation from each Co-Applicant. Solano EDC and Franklin Energy will submit invoices, supporting records, activity summaries, and performance data to the City on a regular schedule. The City will review partner submissions for consistency with approved scopes, budgets, and grant requirements before submitting reimbursement requests and reports to the Air District. This structure will allow the City to maintain accountability while ensuring that community engagement, technical assistance, rebate administration, and measurable outcomes are tracked consistently throughout the three-year performance period.

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.*

Yes. The City of Benicia, as Lead Applicant, is subject to approval by the Benicia City Council. The City Council authorized the City's submission of a Bay REPAIR Opportunity Grant application in an amount up to $5,000,000 on May 19, 2026. This approval provides the necessary local authorization for the City to proceed with the application, and the City will return to Council for any additional actions required prior to execution of the Grant Agreement, if awarded.

Solano EDC is not required to obtain board approval to participate as a Co-Applicant in this application. Solano EDC has provided a signed partnership letter confirming their role and commitments to the project, and the letter is being submitted as part of the application package. Any additional administrative or contractual approvals required by the City or the Air District will be completed prior to execution of the Grant Agreement.

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

The City of Benicia has the administrative, fiscal, and program management capacity to oversee overall implementation of the Benicia Energy & Air Quality Rebate Program. As Lead Applicant, the City will be responsible for grant administration, fiscal oversight, partner coordination, compliance with Bay REPAIR requirements, reimbursement requests, reporting, and final approval of major program decisions. The City will coordinate closely with Solano EDC and Franklin Energy through regular project meetings, shared tracking tools, and defined reporting procedures to ensure outreach, technical assistance, rebate processing, and measurable outcomes remain on schedule throughout the three-year performance period.

The City has budgeted staff capacity for reporting, administration, and oversight, with City resources dedicated to reviewing invoices, monitoring partner performance, tracking expenditures, compiling progress data, and submitting required reports to the Air District. The high-level budget identifies City of Benicia reporting, administration, and oversight costs, while Solano EDC will support outreach, events, and marketing, and Franklin Energy will support technical implementation and rebate administration. The City anticipates dedicating partial FTE capacity from existing administrative, finance, and

program management staff to oversee the grant, with additional implementation capacity provided by the Co-Applicant and partners. This structure allows the City to maintain accountability as Lead Applicant while leveraging partner expertise to deliver community outreach, technical assistance, assessments, rebate processing, and quality control.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

The City of Benicia has the financial management systems and public agency experience necessary to manage grant funds efficiently and ensure funds are used only for approved grant activities. As a municipal government, the City maintains established budgeting, accounting, procurement, contract management, invoicing, and financial reporting procedures for public funds. The City will serve as the Lead Applicant and fiscal agent for the grant, with responsibility for tracking expenditures, reviewing partner invoices, submitting reimbursement requests, maintaining documentation, and ensuring compliance with Bay REPAIR requirements.

Grant funds will be tracked separately from other City funds through dedicated accounting codes, project numbers, or cost centers established specifically for the Benicia Energy & Air Quality Rebate Program. The City will review all expenditures against the approved scope of work, budget, and grant agreement before payment or reimbursement is processed. Co-Applicants will be required to submit invoices, backup documentation, activity summaries, and performance data on a regular schedule. The City will verify that costs are allowable, reasonable, properly documented, and tied to eligible grant activities such as outreach, technical assistance, rebate processing, assessments, quality control, and approved re-grants or rebates.

The City will also maintain internal controls to support transparent and accountable use of funds, including review by program and finance staff, documentation retention, budget-to-actual monitoring, and regular reconciliation of grant expenditures. Rebate and re-grant funds will be tracked separately from implementation and oversight costs to ensure that direct incentives are distributed in accordance with adopted program guidelines and approved eligibility criteria. This structure will allow the City to monitor spending throughout the grant period, identify budget issues early, and ensure that all grant funds are used to advance the program's goals of reducing air pollution, improving public health, and expanding equitable access to clean energy improvements.

Project Funding Request	$5,000,000

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The Benicia Energy & Air Quality Rebate Program aims to combat the disproportionate effects of air pollution emitted from the Valero refinery by providing rebates, outreach, and technical assistance to help Benicia residents and businesses complete clean energy, energy efficiency, electrification, and indoor air quality improvements. Because the refinery is located within Benicia and near residential neighborhoods, schools, businesses, and community-serving facilities, Benicia residents experience the most direct local exposure to refinery-related emissions in Solano County. Through the program, eligible participants may receive support for upgrades such as heat pump HVAC systems, heat pump water heaters, electrical panel upgrades, rooftop solar, battery storage, EV charging infrastructure, insulation, dual-pane windows, and air filtration or ventilation improvements.

The City of Benicia will lead the project in partnership with Solano Economic Development Corporation (Solano EDC) as co-applicants and Franklin Energy Services, LLC (Franklin Energy) as a partner. The program will focus on community education, targeted outreach to approximately 11,000 homes, quarterly technical assistance workshops, application support, assessments, and rebate administration. By helping households and businesses reduce energy use and transition away from fossil fuel-based systems, the project will reduce air pollution, improve public health, lower energy burdens, and expand equitable

access to clean energy improvements throughout Benicia. Marin Clean Energy (MCE) will also provide no-cost technical assistance to support development of the regranting and rebate criteria, drawing on its experience with clean energy, electrification, and residential energy programs

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

The Benicia Energy & Air Quality Rebate Program aligns most directly with the strategy to reduce air pollution and improve health outcomes by helping residents and businesses complete upgrades that reduce fossil fuel combustion, improve indoor air quality, and lower energy use. This is especially important in Benicia because the Valero refinery is located within the City and near homes, schools, businesses, and community-serving facilities, making Benicia residents the Solano County population most directly affected by refinery-related emissions and related air quality impacts. By supporting improvements such as heat pump HVAC systems, heat pump water heaters, electrical panel upgrades, solar, battery storage, EV charging, insulation, dual-pane windows, ventilation, and filtration, the program will help reduce household-level emissions while also mitigating exposure to air pollution impacts in the surrounding community.

The project also supports economic resilience for a just transition by helping Benicia residents and small businesses participate in the clean energy transition rather than being left behind by the cost and complexity of electrification. Through rebates, technical assistance, incentive-stacking support, and quarterly workshops, the program will reduce financial and informational barriers to clean energy improvements, particularly for older homes, low- and moderate-income households, and properties closer to refinery-related air quality impacts. This approach advances public health, reduces pollution exposure, and supports a more resilient local economy as Benicia adapts to long-term changes in the fossil fuel sector.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The project will be implemented citywide throughout the City of Benicia in Solano County. Because this is a communitywide rebate, outreach, education, and technical assistance program, there is no single project site or address. Program activities will be available to eligible residents, households, and businesses across all six Benicia census tracts:

06095252000, 06095252102, 06095252105, 06095252106, 06095252107, and 06095252108. The citywide geography is important because the Valero refinery is located in Benicia, meaning the residents, workers, schools, and businesses within the City are the closest Solano County community to the emissions source associated with the penalty funds.

The program will serve all neighborhoods within Benicia, including single-family homes, multifamily housing with four units or fewer, local businesses, and community-serving properties. Outreach will be conducted citywide, with targeted engagement for properties in closer proximity to the Valero refinery and related industrial emissions, as well as older homes and buildings that may need energy efficiency, electrification, and indoor air quality upgrades. The City will use targeted mailers, digital outreach, technical assistance workshops, and partner outreach to ensure residents and businesses throughout Benicia are informed of available rebate opportunities.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The City of Benicia used a public, community-informed process to identify priorities for the proposed Energy & Air Quality Rebate Program. The project was shaped through five widely publicized public meetings where residents, commissioners, City Councilmembers, and other community stakeholders had the opportunity to discuss eligible Bay REPAIR project concepts and provide feedback. These meetings included the February 19, 2026 Annual City Council Goal Setting Workshop, the March 16, 2026 Community Sustainability Commission meeting, the March 18, 2026 Industrial Safety Citizen Oversight Commission meeting, the April 21, 2026 City Council meeting, and the May 19, 2026 City Council meeting. Through these meetings, the City gathered input from both elected officials and citizen-led advisory bodies with direct interest in sustainability, industrial safety, air quality, public health, and community resilience.

The feedback received through this process directly informed the City's decision to pursue a regranting and rebate program for Benicia residents and businesses who are disproportionately disadvantaged by the Benicia Valero Refinery's emissions. Participants recognized that because the refinery operates within the City's boundaries, the benefits of penalty funds should be directed back to Benicia households and businesses that live and operate closest to the source of emissions. Community members and commissioners identified residential and commercial incentive programs as a top priority because they would provide direct and practical benefits to Benicia residents and

businesses, particularly those in older buildings or properties located closer to refinery-related air quality impacts. The Community Sustainability Commission and Industrial Safety Citizen Oversight Commission also supported projects that reduce emissions, improve air quality, and help the community transition to cleaner and more energy-efficient technologies. Based on this input, the City refined its application to focus on a citywide rebate program that combines direct financial assistance, public education, technical assistance workshops, and outreach to help residents and businesses access energy efficiency, electrification, indoor air quality, and clean energy improvements.

The project will continue this community engagement approach during implementation. Solano EDC will lead outreach, events, marketing, and quarterly technical assistance workshops, while the City and Franklin Energy will support program information, application assistance, technical review, and implementation tracking. MCE will provide no-cost guidance on rebate program design and community-facing criteria to help ensure the program reflects best practices in clean energy access, electrification, and equitable participation. Engagement methods will include targeted mailers to approximately 11,000 single-family and multifamily homes, digital outreach, business outreach, public workshops, and ongoing reporting on participation and program outcomes. This approach will ensure that community members are informed of available benefits, have opportunities to ask questions and receive technical support, and can help shape program implementation over the three-year grant period.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The proposed Benicia Energy & Air Quality Rebate Program directly responds to community-identified needs for practical, accessible, and locally available rebate programs that help residents and businesses complete energy efficiency, electrification, and air quality improvements. Through the City's public engagement process, residents and citizen-led commissions identified regranting, incentive, and rebate programs for residential and commercial properties as a top priority because they provide direct, tangible benefits to the community. The project will serve residents and businesses citywide across all six Benicia census tracts, with targeted outreach to older homes, low- and moderate-income households, seniors, medically vulnerable residents, small businesses, and properties located closer to the Valero refinery and related industrial emissions.

The project addresses environmental justice and public health challenges by helping ensure that the residents most impacted by refinery-related air quality concerns receive direct benefits from penalty funds. Among Solano County communities, Benicia residents are uniquely and most directly affected because the refinery is located within Benicia and near the homes, schools, businesses, and public facilities where residents live, work, learn, and gather. Many Benicia homes and businesses are located near the Valero refinery and related industrial activity, and residents have expressed a need for projects that reduce pollution exposure, improve indoor air quality, and support long-term community health. At the same time, many older homes and commercial buildings lack the electrical capacity, efficient HVAC systems, adequate insulation, modern windows, or roof conditions needed to support clean energy technologies such as heat pumps, solar panels, battery storage, and EV charging. Without financial and technical assistance, these upfront readiness costs can prevent households and small businesses from participating in clean energy upgrades.

The rebate program is specifically designed to address those barriers. Eligible improvements may include roof repairs needed to make a home solar-ready or solar-eligible, which is often a major obstacle for lower-income homeowners who want solar but cannot afford the roof upgrades required before installation. Similarly, the program may support electrical panel upgrades, wiring, and related electrical work needed to make homes and businesses ready for solar, battery storage, heat pumps, or EV charging. These enabling improvements are critical because many traditional rebate or incentive programs focus only on the final technology and do not cover the underlying repairs or infrastructure upgrades needed to make participation possible.

The project will also serve Benicia's "missing middle," including residents who may earn too much to qualify for income-restricted programs but not enough to afford major electrification, solar, roof, window, HVAC, or electrical upgrades on their own. This is particularly important in Benicia, where household incomes may appear too high for some assistance programs even though the cost of older-home improvements remains financially out of reach for many families. By combining rebates, education, technical assistance, application support, and incentive-stacking guidance, the program is designed to meet residents and businesses where they are and help them navigate the full path from interest to completed improvements.

The project will demonstrate community impact through measurable outcomes tied to outreach, education, assessments, and completed improvements. The City anticipates reaching approximately 11,000 single-family and multifamily homes through targeted mailers, in addition to digital outreach, business outreach, and community-based engagement. Solano EDC will lead quarterly informational and technical assistance workshops over the three-year performance period, resulting in approximately 12

workshops focused on clean energy rebates, electrification, indoor air quality, incentive stacking, solar readiness, and project readiness. The City and its partners will also track the number of inquiries received, applications submitted, homes and businesses assessed virtually or in person, rebates awarded, and properties that ultimately receive improvements. While final installation totals will be available at the end of the grant term, ongoing reporting will show whether the program is increasing awareness, reducing participation barriers, and moving Benicia residents and businesses toward healthier, cleaner, and more energy-efficient buildings.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

The City and its partners will use a multi-channel engagement strategy to keep community members informed of implementation progress and available project benefits throughout the grant term. Outreach will include targeted mailers to approximately 11,000 single-family and multifamily homes in Benicia, regular email updates to the City's email list of more than 4,000 residents, digital outreach through City and partner communication channels, updates on the City's website, business outreach through Solano EDC, and quarterly informational and technical assistance workshops. These methods will ensure residents and businesses understand available rebates, eligibility criteria, incentive stacking opportunities, solar and EV readiness requirements, roof and electrical upgrade needs, indoor air quality improvements, and the steps needed to move from application to completed project.

Workshops will be intentionally designed to meet people where they already are. The City anticipates holding workshops at familiar and accessible community locations such as the Benicia Senior Center, while also offering evening and weekend workshops so that working individuals, families, and small business owners can participate outside of traditional business hours. Solano EDC will lead much of this outreach and engagement work, drawing on its extensive experience conducting community and business outreach, marketing energy programs, coordinating technical assistance, and connecting residents and businesses with clean energy resources. Franklin Energy will support accessibility by offering translation services in more than 100 languages, including access to Spanish and Tagalog-speaking staff, which is important because Spanish and Tagalog are among the most commonly spoken languages in Benicia after English.

Community feedback will be collected throughout implementation through workshop discussions, participant surveys, website inquiry forms, application assistance interactions, email responses, contractor and partner feedback, and ongoing engagement with City staff, Solano EDC, and Franklin Energy. Feedback will be reviewed during regular project coordination meetings to identify barriers to participation, common questions, gaps in eligibility, outreach needs, and opportunities to improve program materials or rebate criteria. The City will use this information to refine outreach strategies, adjust workshop topics, improve application guidance, and ensure that the program continues to meet residents and businesses where they are. This feedback loop will help ensure that program benefits remain accessible, that implementation responds to community needs, and that residents most affected by refinery-related air quality impacts are able to access the clean energy, air quality, and building readiness improvements supported by the project. The approach is consistent with the program's emphasis on ongoing community engagement, two-way communication, and mechanisms for incorporating community feedback throughout implementation.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The Benicia Energy & Air Quality Rebate Program is a citywide initiative designed to help residents and businesses complete clean energy, energy efficiency, electrification, solar readiness, EV readiness, and indoor air quality improvements. The project vision is to ensure that the community members most affected by Valero refinery emissions and related industrial air quality impacts receive direct benefits from the penalty funds through practical, accessible rebates and hands-on technical assistance. The program is also designed to serve Benicia's "missing middle," including households that may not qualify for income-restricted programs but still cannot afford major home upgrades such as roof repairs for solar, electrical panel upgrades, heat pump systems, insulation, windows, or EV charging readiness.

Major project components include direct rebates and contractor payments for eligible residential and business improvements, virtual or in-person assessments, targeted mailers to approximately 11,000 single-family and multifamily homes, quarterly technical assistance workshops over the three-year performance period, business outreach, multilingual engagement, and ongoing application support. Eligible improvements may include heat pump HVAC systems, heat pump water heaters, electrical upgrades, solar panels, battery storage, EV chargers, insulation, dual-pane windows, air filtration,

ventilation upgrades, roof repairs needed to make homes solar-ready, and electrical work needed to support solar or EV charging. These activities are consistent with eligible project examples such as indoor air quality improvements, green and healthy residential buildings, zero-NOx appliances, energy efficiency and weatherization retrofits, technical assistance, clean energy technologies, EV infrastructure, and public education related to air quality and climate resilience.

Measurable outcomes will focus on community education, participation, assessments, and completed improvements. The City and its partners will track the number of households and businesses reached through mailers, email updates, digital outreach, and workshops; the number of technical assistance workshops held and participants served; the number of inquiries and applications received; the number of homes and businesses assessed virtually or in person; the number of rebates awarded; and the number of properties that ultimately receive improvements. Final improvement totals will be available at the end of the grant term, but progress will be tracked and reported throughout implementation through regular partner coordination and required progress reporting.

The City of Benicia will serve as Lead Applicant and will oversee grant administration, fiscal management, reporting, compliance, partner coordination, and final approval of program direction and eligibility priorities. Solano EDC, as a co-applicant, will lead outreach, marketing, business engagement, intake routing, and quarterly technical assistance workshops. Franklin Energy will serve as the technical implementation partner, supporting application processing, eligibility review, rebate scoring, customer care, assessments, quality control, funding administration, and reporting. MCE will provide no-cost technical assistance to help develop the regranting guidelines and rebate criteria, ensuring that the program incorporates best practices for clean energy, electrification, equity, and customer accessibility.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The proposed project budget totals $5,000,000 over the three-year grant period. The budget is structured to maximize direct community benefit, with $3,392,952, or 68% of total funds, dedicated to re-grants, rebates, incentives, assessments, and contractor payments for eligible residential and business improvements. These funds will support

energy efficiency, electrification, solar readiness, EV readiness, indoor air quality, and related building improvements that help Benicia residents and businesses reduce energy use, lower emissions, and mitigate exposure to air pollution impacts. The re-grant budget is phased over the implementation period, with $848,238 in Year 1, $1,357,181 in Year 2, and $1,187,533 in Year 3.

The remaining $1,607,048, or 32% of the total budget, will support implementation, community outreach, technical assistance, administration, and oversight. This includes $150,000 for City of Benicia reporting, administration, and oversight; $557,048 for Solano EDC to lead outreach, events, marketing, and community engagement; and $900,000 for Franklin Energy to support program implementation, rebate processing, customer care, engineering review, quality control, and reporting support. Implementation costs also include quarterly technical assistance workshops, application support, outreach to residents and businesses, program management, marketing, re-grant processing, and quality control. These activities are necessary to ensure the program is accessible, equitably implemented, and able to reach residents who may otherwise face barriers to participating in clean energy and air quality improvement programs.

The budget anticipates a startup period followed by three years of implementation. During the startup period, funds will be used to establish program systems, finalize eligibility and rebate criteria, prepare outreach materials, and coordinate partner roles. During Years 1 through 3, the project will scale outreach, assessments, technical assistance, rebate approvals, and completed improvements. The budget includes several implementation scenarios, including options to fund approximately 500 to 1,000 selective assessments and approximately 250 to 500 completed rebate projects depending on final program design, average rebate size, and conversion rates. Final participation totals will depend on community demand, project cost, household and business readiness, and the types of improvements selected by participants.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The Benicia Energy & Air Quality Rebate Program is consistent with local, regional, and statewide priorities to reduce air pollution, improve public health, expand access to clean energy, and support an equitable transition away from fossil fuel-based systems. At the local level, the project supports Benicia's broader sustainability, climate resilience, and public health priorities by helping residents and businesses reduce energy consumption,

improve indoor air quality, and prepare older buildings for clean technologies such as solar, battery storage, heat pumps, and EV charging. The project also responds directly to community input received through City Council meetings, the Community Sustainability Commission, and the Industrial Safety Citizen Oversight Commission, where residents and commissioners identified residential and commercial rebate programs as a priority strategy for delivering direct benefits to the community.

The project also aligns with regional air quality and environmental justice priorities by investing penalty funds back into a community affected by refinery-related emissions and industrial air quality impacts. Benicia homes, schools, businesses, and residents are located in proximity to the Valero refinery, and the proposed program is designed to ensure that those most affected by refinery emissions can access direct benefits through clean energy, electrification, energy efficiency, and indoor air quality improvements. This approach supports regional objectives to reduce exposure to air pollution, improve health outcomes in impacted communities, and increase equitable access to clean energy resources. Eligible project examples specifically include indoor air quality improvements, green and healthy residential buildings, zero-NOx appliances, residential energy efficiency and weatherization retrofits, clean energy technologies, EV infrastructure, and technical assistance for households facing barriers to participation.

At the statewide level, the project supports California's clean energy, building decarbonization, transportation electrification, and environmental justice goals. By helping residents and businesses complete improvements such as heat pump installations, electrical upgrades, solar readiness, EV charging readiness, insulation, windows, ventilation, filtration, and roof repairs needed for solar, the program advances statewide efforts to reduce greenhouse gas emissions and transition buildings and transportation systems away from fossil fuel combustion. The project also complements existing programs offered through regional and utility partners by filling gaps for Benicia's "missing middle," including residents who may not qualify for income-restricted programs but still cannot afford major clean energy or building readiness upgrades without assistance.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The City of Benicia has the experience and administrative capacity to serve as Project Lead for the Benicia Energy & Air Quality Rebate Program. As a municipal government, the City regularly manages public funds, contracts, procurement processes, community engagement efforts, public reporting, and multi-partner projects that require coordination

across City departments, outside agencies, consultants, and community stakeholders. For this project, the City will provide overall grant oversight, fiscal management, reporting, compliance, partner coordination, and final decision-making authority for program direction, eligibility priorities, and use of funds.

The City has also structured the project to ensure that the right implementation capacity is in place by bringing in experienced Co-Applicants with specialized expertise. Solano EDC will support outreach, events, marketing, administrative routing, business engagement, and technical assistance workshops. Solano EDC has prior experience working with Benicia through energy and business support programs and serves as a regional BayREN partner, with experience promoting energy efficiency programs and connecting Solano County residents and businesses with clean energy resources.

Franklin Energy, as a partner, will provide technical implementation support, including rebate processing, eligibility review, customer support, assessment coordination, engineering support, quality control, and reporting assistance. Franklin Energy has extensive experience administering energy efficiency and rebate programs, including more than 450 programs for 175 clients across 47 states, and has issued more than 334,340 rebate and incentive payments totaling over $881 million over the past seven years. Franklin Energy also administers similar programs for Bay Area entities such as BayREN and has California experience serving residential, multifamily, and commercial participants.

This partnership model ensures that the City does not rely solely on internal capacity to implement a complex rebate and regranting program. Instead, the City will provide public accountability and grant oversight while Solano EDC leads community outreach and participant engagement, and Franklin Energy manages technical program delivery and rebate administration. This division of responsibilities provides the management capacity, financial controls, community reach, and technical expertise necessary to implement the project successfully over the three-year grant period.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The City of Benicia will manage project implementation as the Lead Applicant and will be responsible for overall grant administration, fiscal oversight, partner coordination, reporting, compliance, reimbursement requests, and final approval of program direction and eligibility priorities. The City will establish a regular coordination structure with Solano

EDC and Franklin Energy to review outreach progress, workshop schedules, application activity, assessments, rebate approvals, expenditures, and measurable outcomes. City staff will also ensure that grant funds are tracked separately, invoices and supporting documentation are reviewed before reimbursement, and required progress reports are submitted on schedule.

The project budget includes dedicated City resources for reporting, administration, and oversight, with partial FTE capacity from existing City staff expected to support implementation throughout the three-year performance period. The budget includes $150,000 for City reporting, administration, and oversight, along with partner resources for Solano EDC to lead outreach, events, marketing, and technical assistance, and Franklin Energy to support program implementation, customer care, engineering review, rebate processing, and quality control. This structure allows the City to maintain public accountability while relying on specialized Co-Applicant and partner capacity for day-to-day outreach, technical assistance, assessment coordination, application review, and rebate administration.

The project will also leverage outside resources by helping residents and businesses stack Benicia rebate funds with other available utility, regional, state, and federal incentives where applicable. Solano EDC and Franklin Energy will help participants understand available funding opportunities, while MCE will provide no-cost technical assistance to help shape regranting criteria based on clean energy program best practices. This leveraged approach is especially important for older homes, small businesses, and 'missing middle' households that may need roof repairs, electrical upgrades, or other enabling improvements before they can access solar, EV charging, heat pumps, or other clean energy technologies.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

N/A

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

N/A

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

The project does not require City acquisition of property, leasehold interests, easements, or right-of-way because it is structured as a citywide rebate and technical assistance program for voluntary residential and business improvements. Eligible work will occur on privately owned homes, small multifamily properties, and commercial properties throughout Benicia, and participation will be initiated by the property owner or authorized applicant. Site control will therefore be addressed at the individual project level through applicant documentation, property owner authorization, and any required permission from landlords, homeowners' associations, or building owners before rebates are approved.

For owner-occupied homes and owner-operated businesses, the applicant will be required to confirm ownership or provide documentation demonstrating authority to approve the proposed work. For rental housing, small multifamily properties, tenant-occupied commercial spaces, or other properties where the applicant is not the property owner, the program will require written property owner permission before any rebate-funded improvement moves forward. Franklin Energy and the City will incorporate these requirements into the rebate application and eligibility review process, and no funds will be disbursed for property-specific improvements until appropriate site access and authorization have been confirmed. The City will ensure that site control or property permission documentation is collected and maintained for applicable projects prior to execution of rebate agreements or contractor payments, and any broader program-level site control documentation required by the Air District will be provided by the time the Grant Agreement is executed.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Because the project is structured as a rebate and technical assistance program, operations and maintenance responsibilities will primarily rest with the participating property owners, homeowners, landlords, businesses, and contractors that complete eligible improvements. Physical infrastructure funded through the program may include equipment or improvements such as heat pump HVAC systems, heat pump water heaters, solar panels, battery storage, EV chargers, electrical upgrades, roof repairs needed for solar readiness, windows, insulation, ventilation, and air filtration systems. Prior to rebate approval, applicants will be required to acknowledge their responsibility for maintaining the installed improvements after project completion and for complying with any manufacturer warranties, contractor maintenance guidance, permitting requirements, and applicable building standards.

The City, Franklin Energy, and Solano EDC will help ensure long-term viability by incorporating operations and maintenance expectations into the rebate application, technical assistance, and project review process. Franklin Energy will support eligibility review, technical review, quality control, and documentation to help ensure that funded improvements are appropriate, installed by qualified contractors where applicable, and supported by relevant warranties or service information. For improvements installed on rental, multifamily, or commercial properties, the program will require appropriate property owner authorization before funding is approved, helping ensure that the party responsible for long-term maintenance understands and accepts those obligations.

No grant funds are anticipated to be used for operations and maintenance expenses after the grant term. Ongoing maintenance costs will be the responsibility of the property owner or business receiving the improvement, while utility bill savings, available warranties, manufacturer service agreements, and any applicable maintenance plans may help support long-term performance. This approach is consistent with the program requirement that physical infrastructure projects describe how operations and maintenance will be assured during and after the grant term.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Several implementation barriers are anticipated, but the project has been designed to address them through direct financial assistance, technical support, and strong partner

capacity. One of the primary barriers is the high upfront cost of clean energy and air quality improvements, especially for older homes and small businesses that may need roof repairs, electrical panel upgrades, wiring, or other readiness work before they can install solar panels, EV chargers, heat pumps, or battery storage. Many Benicia residents may also fall into the “missing middle,” meaning they earn too much to qualify for existing income-restricted programs but not enough to afford major building upgrades on their own. The project will address this barrier by providing local rebates that can help cover both final improvements and enabling work, while Solano EDC and Franklin Energy will help participants identify opportunities to stack the City’s rebate with utility, regional, state, and federal incentives.

Another barrier is the complexity of navigating clean energy upgrades, contractor selection, eligibility requirements, rebate applications, and permitting. This can discourage residents and businesses from applying, particularly seniors, working families, small business owners, renters, and residents with limited time or technical knowledge. The project will address this through quarterly technical assistance workshops, targeted mailers, regular email updates, City website information, multilingual support, and one-on-one customer assistance. Workshops will be held at accessible community locations such as the Benicia Senior Center, Benicia Community Center, Benicia Library, as well as during evenings and weekends to reach working individuals and families. Franklin Energy will support technical review, application processing, quality control, and customer care, while Solano EDC will use its experience with community and business outreach to generate participation and help route residents and businesses to the appropriate resources.

A final implementation risk is uncertainty around demand, project readiness, contractor capacity, and the mix of improvements residents and businesses ultimately request. Some homes may require more extensive assessments or readiness work than anticipated, while others may be ready for immediate installation. To manage this uncertainty, the City will use a phased implementation approach, with a startup period to finalize eligibility criteria, outreach materials, intake systems, assessment protocols, and partner workflows before scaling rebates. The City and its partners will track inquiries, applications, assessments, rebate approvals, project completions, workshop participation, and budget utilization throughout the grant term. Regular coordination meetings will allow the City, Solano EDC, and Franklin Energy to identify bottlenecks early, adjust outreach strategies, refine application guidance, and ensure that funds are directed toward eligible activities that provide meaningful air quality, public health, and community resilience benefits.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The Benicia Energy & Air Quality Rebate Program will provide citywide outreach, education, technical assistance, assessments, and rebates to help Benicia residents and businesses complete energy efficiency, electrification, solar readiness, EV readiness, and indoor air quality improvements. The project is designed to ensure that residents and businesses most impacted by Valero refinery emissions and related industrial air quality concerns receive direct benefits from penalty funds, while also serving Benicia's "missing middle" households that may not qualify for existing income-restricted programs but cannot afford major clean energy upgrades on their own. The program will meet residents where they are through direct mailers, email updates, workshops at accessible community locations, evening and weekend events, multilingual assistance, and hands-on support from the City, Solano EDC, and Franklin Energy.

Measurable Outcome	Indicator(s)
1. Increase citywide awareness of clean energy, air quality, and rebate opportunities among Benicia residents and businesses by the end of the grant term.	• Targeted mailers sent to approximately 11,000 single-family and multifamily homes; regular email updates sent to the City's email list of more than 4,000 residents; number of businesses reached through Solano EDC outreach; website visits, inquiries, or digital engagement related to the program.
2. Increase resident and business understanding of electrification, indoor air quality improvements, incentive stacking, solar readiness, EV readiness, and available rebates through quarterly technical assistance workshops.	• Approximately 12 workshops delivered over the three-year performance period; number of workshop participants; number of workshops held during evenings or weekends; participant survey results showing increased understanding of rebate opportunities, air quality benefits, and project readiness steps.

3. Provide individualized technical assistance and assessments to help residents and businesses identify feasible clean energy and air quality improvements.	• Number of inquiries received; number of applications started; number of virtual or in-person assessments completed; target range of approximately 500 to 1,000 selective assessments depending on final program design and demand; number of participants receiving guidance on roof repairs, electrical work, solar readiness, EV charging readiness, or other enabling improvements.
4. Complete rebate-funded improvements that reduce energy use, support electrification, improve indoor air quality, and help reduce pollution exposure.	• Number of rebates approved; number of homes and businesses receiving improvements; target range of approximately 250 to 500 completed rebate projects depending on average rebate size and program demand; total rebate dollars distributed; types of improvements completed, such as heat pumps, electrical upgrades, roof repairs for solar readiness, solar, battery storage, EV chargers, insulation, windows, ventilation, or filtration.
5. Expand equitable access to clean energy improvements for priority households and businesses, including residents closer to Valero refinery impacts, older homes, low- and moderate-income households, seniors, medically vulnerable residents, small businesses, and “missing middle” households.	• Number and share of participants from priority groups; geographic distribution of applications and rebates across all six Benicia census tracts; number of older homes or buildings served; number of participants receiving support for enabling upgrades that are often not covered by traditional programs, such as roof repairs and electrical readiness work.
6. Maintain accountable, collaborative implementation through ongoing partner coordination, reporting, and community feedback.	• Regular coordination meetings held among the City, Solano EDC, and Franklin Energy; semi-annual progress reports and final report completed; reimbursement documentation submitted; participant feedback collected and reviewed;

	examples of program adjustments made based on community feedback.

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1.	A. Program outreach strategy finalized	1. Finalize outreach calendar, target audiences, and messaging; prepare mailer and digital content; coordinate website updates	City of Benicia	Solano EDC, Franklin Energy	Startup period
		2.			
		3.			
	B. Citywide launch materials distributed	1. Send targeted mailers to approximately 11,000 homes; send email updates to 4,000+ resident email list; launch website and digital outreach	Solano EDC	City of Benicia	Year 1 Q1-Q2
		2.			
		3.			
	C. Ongoing outreach maintained	1. Continue digital, email, business, and community outreach; track engagement data; adjust outreach based on participation trends	Solano EDC	City of Benicia, Franklin Energy	Years 1-3
		2.			
		3.			
2.	A. Workshop curriculum and materials developed	1. Develop workshop topics on rebates, air quality, electrification, solar readiness, EV readiness, and incentive stacking; prepare translated or accessible materials as needed	Solano EDC	City of Benicia, Franklin Energy	Startup period
		2.			
		3.			

	B. Quarterly workshops delivered	1. Hold quarterly workshops, including workshops at the Benicia Senior Center; offer evening and weekend options; provide language access and technical assistance	Solano EDC	City of Benicia, Franklin Energy	Years 1-3
		2.			
		3.			
	C. Workshop feedback collected and used	1. Collect participant surveys; summarize common questions and barriers; refine future workshop topics and materials	Solano EDC	City of Benicia, Franklin Energy	Years 1-3
		2.			
		3.			
3.	A. Intake and assessment process finalized	1. Finalize application intake, eligibility screening, assessment protocols, and referral workflow between partners	Solano EDC	City of Benicia, Solano EDC	Startup period
		2.			
		3.			
	B. Participant assessments completed	1. Conduct virtual or in-person assessments; identify eligible improvements; document readiness needs such as roof repairs, electrical upgrades, or ventilation improvements	Solano EDC	Franklin Energy	Years 1-3
		2.			
		3.			
	C. Assessment results tracked	1. Track assessment volume, recommended improvements, priority population participation, and barriers to project completion	Solano EDC	City of Benicia	Years 1-3

		2.			
		3.			
	A. Rebate criteria and approval process finalized	1. Finalize rebate categories, eligible costs, scoring criteria, documentation requirements, and approval process	City of Benicia	Franklin Energy, Solano EDC	Startup period
		2.			
		3.			
4.	B. Rebate applications reviewed and approved	1. Review applications, verify eligibility, score applications, confirm documentation, and approve eligible rebates	Solano EDC	City of Benicia, Franklin Energy	Years 1-3
		2.			
		3.			
	C. Improvements completed and documented	1. Track completed projects, contractor payments or reimbursements, quality control documentation, and types of improvements installed	Solano EDC	City of Benicia, Franklin Energy	Years 1-3
		2.			
		3.			
5.	A. Priority outreach approach finalized	1. Identify priority outreach groups and geographies, including older homes, fenceline-adjacent areas, seniors, medically vulnerable residents, small businesses, and “missing middle” households	City of Benicia	Franklin Energy	Startup period
		2.			
		3.			

	B. Priority populations engaged	1. Conduct targeted outreach through mailers, email, workshops, business outreach, and partner communication channels	Solano EDC	City of Benicia, Franklin Energy	Years 1-3
		2.			
		3.			
	C. Equity participation tracked	1. Track geographic distribution, participant characteristics where available, priority household/business participation, and access to enabling upgrades such as roof and electrical work	City of Benicia	Franklin Energy, Solano EDC	Years 1-3
		2.			
		3.			
6.	A. Partner coordination structure established	1. Establish regular project meetings, shared tracking tools, reporting responsibilities, and invoice review procedures	City of Benicia	Franklin Energy, Solano EDC	Startup period
		2.			
		3.			
	B. Progress and reimbursement reporting completed	1. Collect invoices, activity summaries, outreach metrics, assessment data, rebate data, and supporting documentation; submit required reports and reimbursement requests	City of Benicia	Franklin Energy, Solano EDC	Years 1-3
		2.			
		3.			
	C. Community feedback incorporated	1. Review workshop feedback, surveys, inquiry trends, and partner observations;	City of Benicia		Years 1-3

	adjust outreach, technical assistance, and program materials as needed		Franklin Energy, Solano EDC	
	2.

Bay Area Air District
CLEAN AIR FOR ALL

Benicia Opportunity

Mt. Diablo Unified School District Application

Bay REPAIR
Local Community Benefits Fund – Round 1
Opportunity and Catalyst Grants
Overall Narrative

General Instructions:

- The "Overall Narrative" is scored out of 50 points.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 7 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Catalyst Grant Applications in Benicia:

- Due to the ongoing strain on the Benicia community's civic and organizational capacity resulting from the impending refinery closure, Co-Applicants are not required for Catalyst Grant applications in Benicia.
- Therefore, Catalyst Grant applications in Benicia should **not** answer questions related to "Partnership Structure" (Qs #3-6). Applicants should leave these questions blank, and will not receive a score for these questions.
- The "Overall Narrative" for Catalyst Grant applications in Benicia will be scored out of 30 points.

Application Information	
Application Title	MDUSD Clean Air
Lead Applicant	Mount Diablo Unified School District
Application Location	Bay Point
Overall Funding Request	$5,000,000
Grant Term Request	3 Years

PROPOSAL VISION (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
    - *Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.*
    - *Advance integrated projects to holistically meet community needs.*
    - *Strengthen community-driven and collaborative solutions.*

The "MDUSD Clean Air" initiative is a comprehensive, multi-stakeholder Opportunity Grant designed to mitigate extreme air pollution exposure, tangibly improve public health, and build economic resilience for a just transition in Bay Point, California. To holistically address these challenges, our application integrates four highly synergistic projects: 1) upgrading the failing Ventilation/HVAC systems at Riverview Middle School; 2) deploying a fleet of six electric school buses while permanently destroying six legacy diesel buses; 3) expanding the farm-to-school education and nutrition program located on a 1-acre garden farm at Rio Vista Elementary and installing a school-based air-monitoring network of 8-10 monitors to better understand

student outdoor air pollutant exposure and potential impacts of school greening; and 4) funding middle and after-school STEM programs to build clean-economy workforce pathways.

The following table quantifies the anticipated environmental and health benefits of our two primary capital infrastructure projects: the Electric Bus Fleet and the Riverview HVAC Upgrade. Utilizing standardized methodologies—including the US EPA Diesel Emissions Quantifier (DEQ) for mobile sources and BAAQMD midpoint factors for school HVAC upgrades—these calculated metrics demonstrate our application's capacity to directly eliminate localized toxic emissions, reduce greenhouse gases, and yield quantifiable health benefits in Bay Point:

MEASURE
Replace 6 Diesel Buses with EV School Buses
Calculation from US EPA Diesel Emissions Quantifier (DEQ)

Eelctric School Bus Emissions Benefits Results

Consistent with EPA/eGRID factors for electricity, and
Consistent with BAAQMD/AP-42 factors for on-site combustion

BAAQMD regulates stationary sources locally
Electricity emissions occur outside the airshed
But still contribute to regional pollutant formation

Rather than addressing symptoms in isolation, this proposal tackles the root causes of exposure and inequity through integrated solutions. The destruction of six legacy diesel buses will eliminate 100% of the targeted fleet's localized ambient emissions, removing 0.053 short tons of Diesel PM2.5 and 0.863 short tons of NOx annually. The new electric buses will be explicitly utilized to transport students from across the district to the Rio Vista Pacifica Garden Farm for

outdoor education, with this grant directly funding the required bus driver stipends. The farm features outdoor classrooms constructed organically from hay bales and operates as a low-carbon, closed-loop ecosystem where food grown on site is harvested and sent to the cafeteria for student meals, and cafeteria food waste is composted back into the farm. The Pacifica Garden Farm will serve as an urban green community hub where impacted students and community members will be engaged in the project through community events, plant giveaways, and community update and feedback sessions. Meanwhile, the STEM pathways keep students engaged after school and prepare them for high-road clean economy jobs, and the high-efficiency HVAC upgrades (which will yield annual energy savings of 18.33 MWh of electricity and 2,022.9 MMBTU of natural gas) ensure a safe, breathable indoor environment for developing lungs. Crucially, MDUSD has already installed solar arrays at 90% of our school facilities and is awaiting a California Energy Commission (CEC) grant for battery storage, allowing this Opportunity Grant to hyper-focus on the specific environmental justice vulnerabilities of Bay Point.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

Bay Point is a geographically vulnerable, unincorporated community lacking robust municipal resources and governed by the county board of supervisors. Geographically, the community is situated in an inland waterway where hazardous particulate matter from the nearby refinery belt is funneled into and trapped by a large hill to the north. As a result, the Title I school communities and residents of Bay Point suffer from some of the poorest, most concentrated air quality in the Bay Area. The specific populations targeted by this proposal are the heavily disadvantaged students, their families, and at-risk workers living directly within this pollution bottleneck.

PARTNERSHIP STRUCTURE (20 points)

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

Mount Diablo Unified School District (MDUSD) serves as the Lead Applicant, bringing deep institutional roots, infrastructure, and operational capacity across the eligible geography, specifically operating three schools directly in Bay Point. We are partnering with three local Co-Applicants: (i) the Mount Diablo Education Foundation (MDEF) (ii) Growing Healthy Kids, and (iii) Sigler Corp. MDEF is a dedicated non-profit with a proven track record of funding educational enrichment and STEM pathways for at-risk youth in the district. Growing Healthy Kids is a community-based organization deeply connected to the community that actively manages the 1-acre food farm and outdoor education spaces at Rio Vista Elementary. Sigler Corporation is a local employer based in Concord, CA, and will serve as the specialized local contractor for the Riverview Middle School project.

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

Together, we have developed a meaningful, deeply rooted co-management structure. MDUSD will oversee overarching project management, major capital procurement (including the HVAC units and electric buses), prevailing wage compliance, and financial reporting. MDEF will co-manage the implementation of after-school STEM pathways, develop and implement a year-long career exploration course for middle school students focused on engaging them in preparation for the STEM career pathways offered in MDUSD high schools, and expose middle school students to STEM and sustainability/green job careers through field trips. Growing Healthy Kids will manage the farm-to-table greening, field trip and school-day outdoor education, and the deployment of the "flex air" Purple Air monitors. GHK Head of Programs Angela Barry (MPH, Epidemiology) and Garden Educator Kim Chacon (Ph.D, Geography) will design and implement the Bay Point school air-monitoring network in order to 1) better understand student air-pollution exposure along the Bay Point corridor and 2) examine the air-quality improvement benefits of school greening projects at impacted sites. Sigler Corporation is a local employer, based in Concord, CA, and is a local supplier of Ventilation and HVAC equipment. The equipment for the Riverview Middle School Ventilation/HVAC project will be sourced from Sigler.

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to:*
    - *Coordinate overall community engagement activities.*
    - *Track and report on indicators to assess progress towards measurable outcomes.*
    - *Collect and process reporting, reimbursement and invoicing requirements.*

To ensure transparent decision-making, the entities will form a Project Steering Committee that meets quarterly. MDUSD will coordinate overall community engagement activities by hosting bilingual town halls and deploying surveys to parents and stakeholders. Crucially, the Steering Committee will utilize an actionable feedback loop; if the community indicates that bus routes are inaccessible or STEM hours conflict with working parent schedules, the Committee holds the authority to adjust workflows to meet these evolving needs. For indicator tracking, the partnership has explicitly budgeted dedicated staff time to monitor outcomes, utilizing [redacted]'s epidemiological expertise to manage the air quality data, with [redacted] from MDEF overseeing STEM reporting responsibilities. MDUSD will handle all centralized financial administration, processing reporting and reimbursements to our Co-Applicants on a monthly basis. To reflect their substantive contributions to the project's success, MDEF, Growing Healthy Kids, and Sigler Corporation will collectively be allocated exactly 25.0% of the overall $5,000,000 budget, strictly adhering to the Local Community Benefits Fund partnership requirements.

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.*

Yes, the Lead Applicant is subject to a Board of Education. This proposal possesses exceptionally strong political alignment; the President of the MDUSD Board of Education, Deborah Mason, is a Bay Point resident who intimately understands the community's needs and environmental challenges. The preliminary project design was presented to the board on April 15, 2026, and Board Resolution 25/26-78 authorizing the project was unanimously passed at the May 13, 2026 board meeting. Additionally, MDEF has a Board of Directors, who enthusiastically approved their role as a co-applicant at their May 11, 2026, board meeting.

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

MDUSD possesses extensive, proven experience managing large-scale public funds, complex state and federal grants, and multimillion-dollar capital improvement bonds. Demonstrating our profound financial readiness and organizational commitment, MDUSD is contributing $1,564,805 from its own facilities and transportation funds to leverage the grant request for the Riverview Middle School HVAC project and Electric Bus driver overtime. MDUSD will dedicate 0.5 FTE Facilities Director, 0.25 FTE Grants Manager, and 0.15 FTE Data Analyst to oversee the programmatic implementation of this grant. Furthermore, Co-Applicant Growing Healthy Kids and MDUSD successfully completed a $300,000 farm-to-school grant from the California Department of Food and Agriculture (CDFA) for the Rio Vista site, proving the exceptional capacity of our partnership network.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

MDUSD utilizes established, audit-ready accounting systems and rigorous internal controls to track public funds efficiently. Grant expenditures will be strictly segregated and tracked using the district's secure financial software, ensuring transparent financial reporting and compliance with reimbursement-based funding rules. All invoices, payroll records, and subcontractor expenses will be reviewed against the approved budget to ensure funds are spent exclusively on authorized grant activities. MDUSD maintains sufficient liquidity to manage cash flow prior to

reimbursement and has no unresolved material audit findings. Demonstrating exceptional financial efficiency, this application operates with an incredibly lean 0.2% indirect cost rate and a 1.7% professional services rate, ensuring that nearly 100% of the $5,000,000 request flows directly into tangible community benefits and hard capital.

MDUSD LCBF Budget Narrative

The total LCBF grant request is $5,000,000. Additionally, MDUSD is contributing an additional $1,500,000 towards the Riverview Middle School Ventilation/HVAC project. The total project costs are $6,500,000.

MDUSD is the LCBF Lead Applicant. There are three LCBF Co-Applicants, two that are local non-profit organizations (i) Growing Healthy Kids; (ii) Mt. Diablo Education Foundation, and the third that is a local for-profit business and employer, (iii) Sigler Corporation.

There are four (4) projects included in MDUSD's LCBF grant request.

- **$2,274,437;** Purchase six (6) EV School Buses and destroy (6) Diesel School Buses, plus Grant Administration. (Lead-Applicant, public school district.)
- **$125,000;** Implement an ambient air-monitoring network and provide funding for an established food-to-school farm program in the Bay Point community. (Growing Healthy Kids, non-profit.)
- **$125,000;** Provide funding for Middle-School STEM programs in the Bay Point community. (Co-Applicant, Mt. Diablo Education Foundation, non-profit.)
- **$2,475,563;** Implement a Ventilation / HVAC retrofit and air filtration upgrade at the Riverview Middle School in the Bay Point community. (Sigler Corporation, for-profit.)

Total LCBF Grant Request: $5,000,000.

Additionally, MDUSD is contributing $1,500,000 from its Facilities, Maintenance and Operations funds towards project #4, Riverview MS Ventilation / HVAC. MDUSD will pay for DSA required upgrades to the Riverview Middle School campus that result as a consequence of the Riverview MS Ventilation / HVAC project, plus up to $583,121 for finishing work contingencies to the school resulting from the project, and will pay sales tax on the Ventilation / HVAC & Air Filtration project equipment. The Bay Area Air District can therefore be assured that the LCBF funding is being spent on the items that are providing direct air-basin community benefits.

Total Project Costs: $6,500,000

Application Title: Mt Diablo USD

Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	MDUSD Clean Air
Lead Applicant Name	Mount Diablo Unified School District
Project Location	Bay Point
Overall Funding Request	$5,000,000
Grant Term Request	3 Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Electric Bus Fleet
Project Lead	Mount Diablo Unified School District
Project Location	Bay Point / District-wide routes
Project Funding Request	$2,274,437

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

This project will rapidly decarbonize student transportation by procuring and deploying six (6) new electric, zero-emission school buses to its evolving EV School Bus fleet. Crucially, the project pledges the verifiable permanent retirement and physical destruction of six (6) legacy diesel school buses to guarantee the permanent removal of those highly localized emission sources. Significant EV charging resources (16 Ports) are already installed and presently operable on a daily basis. An additional ten (10) DC Fast Chargers are presently under construction, funded under BAAQMD Grant Agreement #25SBP123. A Notice of Proposed Award, recently received under CEC GFO-25-301 will add yet another 10 fast charging ports in 2027, in coordination with a PG&E Flex-Connection, ensuring an economical and reliable school bus charging depot. Now that the charging resources are evolving predictably, MDUSD needs to accordingly increase its EV School Bus fleet size, while also reducing its diesel-fueled fleet vehicles, locking in long term air basin benefits for years to come.

Beyond hardware, this project creates a vital educational synergy. The requested grant funds explicitly include contract stipends to cover the salaries and benefits of MDUSD bus drivers to operate these specific vehicles for weekly outdoor educational field trips. These drivers will utilize the new electric buses to transport students from across the entire district to the 1-acre Rio Vista Elementary farm in Bay Point, merging emission reductions with hands-on environmental education.

(Please refer to the consolidated Air Benefits table located under Question 1 in the Overall Narrative document for a complete, itemized breakdown of this project's calculated emission reductions, energy savings, and estimated health benefits).

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This project strongly aligns with the "Reduce Air Pollution and Improve Health Outcomes" strategy. By permanently retiring and destroying six legacy diesel buses, the project directly eliminates 100% of the targeted fleet's tailpipe emissions. According to calculations utilizing the US EPA Diesel Emissions Quantifier (DEQ), this upgrade will result in an annual reduction of 0.863 short tons of NOx, 0.163 short tons of HC, 0.409 short tons of CO, and 91.8 short tons of CO2. Most critically for our vulnerable student populations, the project will eliminate 0.053 short tons of Diesel PM2.5 annually. Based on the EPA's Health Benefits Results, this specific reduction in PM2.5 directly translates to an estimated $74,000 in annual health benefits for Contra Costa County.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The electric vehicles will be housed and charged at the MDUSD bus yard in Concord, CA (1490 Gasoline Alley and 2326 Bisso Lane, both MDUSD owned properties that are contiguous to each other). The buses will serve daily routes within Bay Point and surrounding eligible fenceline communities, as well as district-wide field trip routes to Rio Vista Elementary in Bay Point.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Through ongoing district-wide transportation reviews and direct feedback from parents and community-based organizations (like our Co-Applicant, Growing Healthy Kids), local stakeholders consistently expressed a need for cleaner, safer transit options. Residents of Bay Point have specifically highlighted that the constant presence of idling diesel buses exacerbates the already extreme air quality issues they face from nearby industrial zones, elevating zero-emission transit to a top community priority.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Bay Point faces a profound environmental justice challenge; due to local topography, heavy refinery emissions are channeled and trapped against a large hill north of the Highway 4 corridor. Legacy diesel school buses compound this crisis by exposing children and neighborhoods to additional, highly localized toxic air contaminants. Retiring and physically destroying six diesel engine blocks addresses this challenge head-on, guaranteeing these vehicles will never again pollute the Bay Area. Our measurable outcomes will track the calculated annual reduction of 0.053 short tons of diesel PM2.5 and 0.863 short tons of NOx, proving a quantifiable, permanent public health benefit for the community.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

To inform the community of project benefits, we will prominently feature the new electric buses at "Back to School" nights and community fairs, providing bilingual materials and allowing parents and students to tour the zero-emission vehicles. To ensure two-way communication, we will distribute digital and physical surveys soliciting feedback on bus route optimization. The Project Steering Committee will review this feedback to ensure we prioritize deploying these clean vehicles on the routes and in the neighborhoods with the highest CalEnviroScreen pollution burden scores.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The vision for this project is to reduce mobile diesel exposure for our most vulnerable students and create a clean-transit bridge to outdoor agricultural education. Measurable outcomes include the verified destruction of 6 diesel buses and successful deployment of 6 electric buses. Project milestones include placing the vehicle order with AtoZ Bus Sales by January 10, 2027, receiving delivery by December 10, 2027, and formally submitting the legacy diesel buses to a Vehicle Recycler for destruction by January 10, 2028. MDUSD will serve as the Lead Entity, handling the major capital procurement of the vehicles, and managing the transit workforce. Furthermore, in alignment with Appendix D guidelines, MDUSD will prioritize the recruitment of workers laid off or facing layoffs from refineries, as well as local residents, for any associated infrastructure installation labor.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

We are requesting $2,189,874 in direct grant funding to procure six electric buses, with an additional $84,563 allocated for centralized grant administration. No funds are requested for the charging infrastructure as MDUSD has already secured sufficient EV charging ports to reliably service the six additional EV School Bus vehicles as soon as they are received. Importantly, while the LCBF grant budget does not request funding for stipends/salaries for the bus drivers facilitating the weekly Rio Vista farm trips, MDUSD will subsidize these bus driver salaries, benefits, and overtime in accordance with its existing Transportation labor agreements. An estimate of these costs, $75,000 over three years, is calculated and shown in the budget under Other Sources of Funding. Any infrastructure installation utilizing contractors will stringently adhere to prevailing wage labor standards and prioritize state-registered apprenticeship programs to ensure high-road economic benefits. *(Please see the attached Excel Budget document).*

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project directly advances the California Air Resources Board's (CARB) aggressive mandates to transition heavy-duty fleets and school buses to zero-emission vehicles. Furthermore, it operates as a critical mobile piece within MDUSD's broader, district-wide climate action portfolio; the district has already installed solar arrays at 90% of our schools. Additionally, MDUSD recently received a Notice of Proposed Award for the highly competitive California Energy Commission (CEC) GFO-25-301 grant for advanced battery storage, and UL-3141 microgrid aligned with the PG&E Flex-Connect program.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

MDUSD possesses extensive, proven experience successfully managing complex capital improvement projects and heavy-duty vehicle deployments. Our transportation and logistics teams possess the technical capacity, routing expertise, and administrative oversight historically proven to successfully manage strict state transit compliances and workforce training.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The district will dedicate 0.5 FTE Transportation Director to manage the procurement, infrastructure integration, and deployment of the vehicles. MDUSD's robust existing administrative infrastructure will support the financial tracking and deployment without requiring outside consultants, maximizing the grant dollars spent directly on the six (6) additional EV School Buses and supporting the local workforce.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

The present EV infrastructure project funded under BAAQMD Grant Agreement no. 25SBP123 is permitted by City of Concord building permit number B252615, issued on November 14, 2025. The permit and inspection card is uploaded with this submittal for your review and verification.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

The installation of electric vehicle charging stations within existing facilities is typically categorically exempt under CEQA. A CEQA Notice of Exemption was filed with the appropriate Local and State authorities on September 25, 2025, §15304 Minor Alterations to Land. The CEQA NOE is uploaded with this submittal for your review and verification.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

MDUSD holds sole ownership and direct operational control of the bus yards where the vehicles will be housed and charged: (i) 1490 Gasoline Alley, and (ii) 2326 Bisso Lane.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

MDUSD's transportation department will manage the ongoing operations and maintenance of the fleet. The district anticipates significant, permanent operational savings from the elimination of diesel fuel purchases, which will be directly reinvested into the general operating budget to fund long-term EV maintenance and charging upkeep beyond the grant term.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The primary barrier to fleet electrification is the risk of delays in utility grid upgrades and charging infrastructure installation. MDUSD has an executed Agreement in Place with the PG&E EV Fleets Program, No. FLEET014662732. The utility grid upgrade project is presently in the Construction Phase.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The vision for this project is to rapidly decarbonize student transportation by procuring 6 zero-emission electric school buses while verifiably and permanently destroying 6 legacy diesel buses, reducing mobile diesel exposure in fenceline communities.

Measurable Outcome	Indicator(s)
1. Verify the permanent retirement and physical destruction of 6 legacy diesel school buses.	• Official documentation and certificates of destruction from certified vehicle recyclers for 6 diesel engine blocks.
2. Procure and successfully deploy 6 zero-emission electric school buses on optimized routes.	• Delivery and active routing of 6 EV buses. Calculated estimated annual reduction in diesel PM and NOx emissions.
3.	•
4.	•
5.	•
6.	•

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1.	A. Retire and Destroy Legacy Diesel Buses	1. Identify 6 specific legacy diesel buses for retirement	MDUSD		Month 2
		2. Transfer buses to a certified heavy-duty vehicle recycler	MDUSD		Month 12
		3. Obtain and record official certificates of destruction	MDUSD		Month 14

BAY AREA AIR QUALITY MANAGEMENT DISTRICT

CARL MOYER PROGRAM

Electric Vehicle Infrastructure Training Program (EVITP) Certification Form

California Public Utilities Code 740.20 states that for work performed on or after January 1, 2022, all electric vehicle charging infrastructure and equipment on the customer side of the electrical meter funded or authorized by this Grant Agreement shall be installed by a contractor with the appropriate license classification, as determined by the Contractors' State License Board (CSLB), and at least one electrician on each crew, at any given time, who holds an Electric Vehicle Infrastructure Training Program (EVITP) certification. Projects that include installation of a charging port supplying 25 kilowatts or more to a vehicle shall have at least 25 percent of the total electricians working on the crew for the project, at any given time, who hold EVITP certification. One member of each crew may be both the contractor and an EVITP certified electrician.

The requirements stated in this paragraph do not apply to any of the following:

1. Electric vehicle charging infrastructure installed by employees of an electrical corporation or local publicly owned electric utility.
2. Electric vehicle charging infrastructure funded by moneys derived from credits generated from the Low Carbon Fuel Standard Program (Subarticle 7 (commencing with Section 95480) of Article 4 of Subchapter 10 of Chapter 1 of Division 3 of Title 17 of the California Code of Regulations).
3. Single-family home residential electric vehicle chargers that can use an existing 208/240-volt outlet.

By signing this certification form, the Grantee attests under penalty of perjury under State of California law that

(X) the charging infrastructure installation project using Bay Area Air Quality Management District (Air District) Carl Moyer Program funding, Project #: 25SBP123, will comply with California Public Utilities Code 740.20.

( ) California Public Utilities Code 740.20 does not apply to the charging infrastructure installation project using Air District Carl Moyer Program funding, Project #:_____, for the following reason(s):

_____

_____

CHARGING LOCATION INFORMATION

The charging location address must match the address listed in the executed Grant Agreement.

Charging Location Address: 1490 Gasoline Alley (2326 Bisso Lane - PG&E Service Address)

BUILDING PERMIT & INSPECTION CARD

City of Concord
Building Division
1950 Parkside Drive, MS/51
Concord, CA 94519
(925) 671-3330 (Inspectors)

PERMIT INFORMATION:

PERMIT NO.: **B252615**
PARCEL NO.: **112211043**
JOBSITE ADDRESS: 2326 BISSO LN

DATE ISSUED: 11/14/2025
VALUATION: $3,000,000.00

DESCRIPTION OF WORK: Installation of (10) new level 3 EV bus chargers for fleet charging, with steel canopy above the chargers

SCHEDULING AN INSPECTION:

Schedule your inspection at www.cityofconcord.org/BuildingInspections by selecting the "Request an Inspection" button.

All inspection requests are scheduled for the next business day. For example, a request submitted up to 11:59pm on Thursday will be scheduled for Friday. A request submitted any time Friday through 11:59pm Sunday will be scheduled for Monday. Holidays are treated the same as a weekend day.

Next day inspections are not guaranteed. You will be notified if your inspection needs to be rescheduled.

While we do our best to accommodate preferred AM or PM time windows, requests are not guaranteed.

After 8 a.m. the day of your inspection, you can confirm your inspection and AM or PM time window at www.cityofconcord.org/BuildingInspections by selecting the "View Today's Building Inspection Schedule" button.

REQUIRED AT TIME OF INSPECTION:

1. Permit card must be on site
2. For those permits with plans, a **printed hard copy** of the City approved plans must be on site
3. For contractor installed work, contractor must be on site for inspections, not just the home owner
4. Work must be completed and ready for inspection

If any of these requirements are not met, a re-inspection fee may be charged.

For general inspection questions, please email the inspectors at *inspectors@cityofconcord.org* or call the inspector's hotline at (925) 671-3330. Inspectors' office hours are 7:30 to 8:30 a.m. and 4 to 4:30 p.m. Monday through Friday.

Smoke and Carbon Monoxide Alarms: For residential additions, alterations or repair projects smoke alarms and carbon monoxide alarms must be installed per the California Residential Building Code.

Feedback:
Your feedback on Community and Economic Development Department services would be appreciated. Please take a moment to complete our on-line surveys here:
For development review services: *http://www.surveymonkey.com/s/DRS1*
For building inspection services: *http://www.surveymonkey.com/s/BuildingInspection1*

Address: 2326 BISSO LN

JOBSITE INSPECTION RECORD

Permit No.: B252615

- Inspections shall be made in consecutive order as shown. Do not cover or proceed with any work until the required Inspections have been made.
- Clearance from all Departments and Jurisdictions and payment of all applicable fees are required before Final Inspections will be made
- Permits shall expire if a major inspection is not passed within 12 months of permit issue, or within 12 months of a previously passed major inspection.

Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	MDUSD Clean Air
Lead Applicant Name	Mount Diablo Unified School District
Project Location	Bay Point
Overall Funding Request	$5,000,000
Grant Term Request	3 Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	STEM Career Exploration
Project Lead	Mount Diablo Education Foundation (Co-Applicant)
Project Location	Riverview Middle School, Bay Point
Project Funding Request	$125,000

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

MDEF will support the development and implementation of a year-long career exploration course for MDUSD middle school students, focused on engaging middle school students in preparation for the STEM career pathways offered in MDUSD high schools; and exposing middle school students to STEM and sustainability/green job careers through field trips.

This project will fund the creation of a middle school career exploration program, focusing on STEM (Science, Technology, Engineering, and Mathematics) and sustainable/green job career paths for Riverview, a Title I middle school serving the unincorporated community of Bay Point. Our Co-Applicant, the Mount Diablo Education Foundation (MDEF), will serve as fiscal agent for this initiative, which will develop a high-quality environmental education and foundational career preparation program focusing on STEM and environmental education directly to students living in a deeply disadvantaged, blue-collar fenceline community. Additionally, this project will encourage future STEM and sustainability/green job careers for middle school students through field trips.

While most career and technical education (CTE) courses aren't offered until high school, this project would engage students earlier to raise their curiosity about career options. Offering a career exploration course for middle school students in the seventh and eighth grades will allow them to make a more informed decision about joining high school STEM pathways. MDUSD high schools offer a variety of STEM career pathways, including engineering, healthcare, and robotics.

By establishing this career exploration program for seventh and eighth graders at Riverview Middle School, we will equip them to make educated decisions about entering the STEM career pathways available at MDUD high schools. Additionally, field trips to local STEM-industry companies and organizations will give the students a first-hand look at the career options – many of which are unknown to students - that they could pursue after graduating from high school.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This project strongly aligns with the "Build Economic Resilience for a Just Transition" strategy. A just transition requires a prepared, localized workforce. While California has invested heavily in high school Career Technical Education (CTE) programs, this project closes a critical pipeline gap by targeting middle school students. By engaging younger students in foundational STEM concepts, this project prepares them to seamlessly transition into high school CTE pathways and, ultimately, high-road jobs in STEM and the expanding clean-economy sector. Additionally, by supporting the creation of a career exploration program, middle school students from an economically underserved area will be exposed to career options that could significantly impact their life's economic resiliency.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The project will be located at a Title I middle school (Riverview) operating in the unincorporated community of Bay Point, CA, serving students who reside entirely within the eligible community boundary. The career exploration project will be created for the students of Riverview Middle School, 205 Pacifica Ave., Bay Point, CA.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-*

based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.

From the deep organizational ties and continuous dialogue with Bay Point families, MDUSD and local educators consistently identified a critical gap in early workforce exploration. Furthermore, local stakeholders identified that students from these disadvantaged neighborhoods were often entering high school unprepared to take advantage of advanced CTE and green-technology pathways compared to their peers in more affluent areas of the district. This program will bridge the gap, allowing the Riverview students to make educated, informed decisions when choosing their high school career pathways.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Located in Bay Point, Riverview Middle School serves 677 students in sixth through eighth grade. 89.30% of Riverview's students qualify for free and reduced-price meals, and 34.8% of the students are English Language Learners. The minority population of Riverview is 97.6% and 81% of the students come from socioeconomically disadvantaged homes. According to the State Accountability Report Card (SARC) and *U.S. News* Report Card, the chronic absenteeism rate at Riverview is 33%, only 39% of students were at grade level for math and 9% were at grade level for language arts/literacy. We need to inspire these students to not only attend school but give them the inspiration needed to not only complete middle school but look forward to high school and career pathways. This program is all-about offering options and opportunities to explore.

As Paige Tutt stated in her Aug. 13, 2025, article in *Edutopia*, "By giving (middle school) kids the opportunity to explore possible careers without the heavy burden of expectation on their shoulders (often placed on high school students), we can help students determine not just what jobs they might want in the future, but who they are. What makes their eyes light up? What are they curious to try? What can they talk about for hours? The research says middle schoolers crave these opportunities: 85% are already thinking about future careers and 87% are interested in ways to match their skills and interests to potential careers, according to a 2022 report from American Student Assistance." This program strives to encourage those cravings.

This project addresses a fundamental environmental justice and just transition challenge: ensuring that the communities most burdened by fossil fuel pollution are actually equipped to secure the high-quality jobs generated by the clean-energy transition. By establishing robust middle school STEM programs, we are building economic resilience from the ground up. Our

measurable outcomes will track student enrollment numbers and utilize longitudinal surveys to measure students' increased knowledge and confidence in pursuing clean-energy and technology careers, demonstrating a tangible pipeline toward long-term community economic resilience

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

To ensure the curriculum remains culturally responsive and relevant, the MDUSD will form a Parent Advisory Group to review program materials before it is offered to the students. Riverview will host interactive, end-of-year community showcases where students present their STEM projects to their families, fostering a two-way dialogue about the importance of clean-economy education. Additionally, local STEM-industry employers will be involved in both the course creation as well as hosting student field trips - showcasing the future local STEM careers that could be available to the students.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The vision for this project is to build an equitable, early-education pipeline to the clean economy for Bay Point's youth. Measurable outcomes include enrolling up to 40 seventh and eighth grade middle school students annually in the elective STEM career exploration program, delivering a full academic year (140 hours) of specialized curriculum and field trips, and tracking a measurable increase in students' readiness and intention to enter high school CTE pathways. MDEF will serve as the fiscal agent for the project, working with the district's Director and Assistant Director of Curriculum and Instruction as they develop the program. MDUSD teachers will be hired (or given re-assign time) to develop curriculum and to procure Paxton lab materials, which are engaging, accessible and easy to implement, allowing students to dive into career research. The course teachers will partner with local STEM-industry employers to host field trips for the students. These grant funds will also underwrite the cost of transportation and substitute teachers for field trip days.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

We are requesting $125,000 to cover curriculum development, program materials, transportation to field trip sites and substitute teachers for field trip days. By purchasing a well-established, proven career exploration lab program (Paxton), the career exploration program will go beyond the traditional lecture model and actively engage the students to spur interest and excitement. Importantly, the budget is designed to deliver immediate economic benefits to the local workforce by offering highly competitive, high-road stipends to district teachers assigned to this program. The budget also allocates specific MDUSD staff time for indicator tracking and grant reporting. *(Please see the attached Excel Budget document).*

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project bridges a critical, widely recognized gap in California's statewide Career Technical Education (CTE) pathways, which traditionally under-invest in middle school foundational skills. The Golden State Pathways Program (AB 181) is a statewide initiative designed to create seamless transitions from TK–12 education to postsecondary education and high-quality careers in high-wage, high-skill, and high-growth industries. The program's overarching goal is to ensure that all Californians, especially those from historically underserved groups, can access meaningful educational and career opportunities.

The Middle School STEM Career Exploration project puts Bay Point Riverview students on the path to those high-quality careers, and to be prepared for the transition into high school by introducing them early to STEM career options, making their high school career path a deliberate choice. Furthermore, it directly aligns with regional workforce development board goals to cultivate a robust pipeline of homegrown talent for the expanding green energy, advanced manufacturing, and climate technology sectors in the Bay Area.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

As an official Co-Applicant and fiscal agent, the Mount Diablo Education Foundation (MDEF) is a dedicated non-profit organization with a long, proven history of successful fundraising, grant management, and delivering high-quality educational enrichment across the district. The Mt.

Diablo Education Foundation, second Co-Applicant, has been supporting educational enrichment programs for the students of the Mt. Diablo Unified School District, focusing primarily on Title I schools, since 2018. MDEF works with the teachers, principals and staff of our most severely underfunded schools to help bridge the equity gap and provide enrichment programs for all students – regardless of their socio-economic status.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

MDEF possesses the administrative capacity to oversee the fiscal and reporting responsibilities of this program. As MDUSD hires or re-assigns specialized educators, who then will develop responsive curriculum and purchase customized lab equipment and materials, MEDF will assure that funding is available and accessible as needed. MDEF has no paid FTEs and is a 100% volunteer organization. With over 15 years of multi-million-dollar grant oversight experience, MDEF's [redacted] and volunteer, [redacted], will oversee the fund distribution and reporting responsibilities for the program. As a highly leveraged benefit, the deeply rooted partnership between MDEF and MDUSD allows the delivery of this program seamlessly within existing MDUSD classrooms, completely eliminating facility overhead costs and ensuring that 100% of grant funds are directed toward student programming and high-road educator stipends.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

N/A. No construction, environmental modifications, or ground disturbances are required for the implementation of this educational programming.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

N/A. After-school educational programs hosted within existing school facilities do not trigger CEQA compliance requirements.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

Programs will take place within existing MDUSD classrooms. Site access is already secured and authorized under the formal, legally binding partnership agreement between MDUSD (the Lead Applicant and property owner) and MDEF (the Co-Applicant). Additionally, MDEF's Board of Directors enthusiastically approved this project on May 11, 2026.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

N/A for physical infrastructure. The STEM curriculum and program framework developed under this grant will be maintained by MDEF for use in future educational cycles beyond the grant term.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The primary anticipated barrier is the difficulty of recruiting qualified STEM educators to work during after-school hours. MDEF will overcome this risk by proactively offering competitive, high-road stipends to attract top-tier teaching talent, ensuring the program is fully staffed by dedicated professionals. Additionally, MDEF has a Board of Directors, who enthusiastically agrees to be co-applicant on this important project at their May 11, 2026, board meeting.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The vision for this project is to build an equitable, early-education pipeline to the clean economy for Bay Point's youth by establishing a robust, year-long middle school STEM career exploration course.

Measurable Outcome	Indicator(s)
1. Enroll middle school students annually in the year-long career exploration course and deliver specialized curriculum.	• Number of enrolled 7th and 8th-grade students. Number of specialized curriculum hours and STEM field trips delivered
2. Increase students' readiness, knowledge, and intention to enter high school CTE (Career Technical Education) and clean-energy pathways.	• Pre- and post-program longitudinal surveys measuring student confidence and intention to pursue green STEM careers.
3.	•
4.	•
5.	•
6.	•

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1.	A. Develop Year-Long Course and Recruit Educators	1. Procure Paxton lab materials and customize the in-school, year-long curriculum	MDEF	MDUSD	Month 3
		2. Hire specialized educators using competitive, high-road stipends	MDEF	MDUSD	Month 4
		3. Form Parent Advisory Group to review materials	MDEF	MDUSD	Month 5
	B. Execute Curriculum and Field Trips	1. Enroll 7th and 8th-grade students in the year-long course	MDEF	MDUSD	Month 6
		2. Deliver interactive STEM lab hours during the academic year	MDEF	MDUSD	Ongoing
		3. Underwrite and conduct clean-economy career field trips, including funding transportation and substitute teachers	MDEF	MDUSD	Ongoing
	C.	1.			
		2.			
		3.			
2.	A. Evaluate Program Impact and Readiness	1. Administer baseline career-readiness surveys to enrolled students	MDEF	MDUSD	Month 7
		2. Host interactive end-of-year community STEM showcases	MDEF	MDUSD	Month 12 (Annually)
		3. Administer end-of-year surveys and analyze longitudinal shifts in CTE pathway intention	MDEF	MDUSD	Month 12 (Annually)

Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	MDUSD Clean Air
Lead Applicant Name	Mount Diablo Unified School District
Project Location	Bay Point
Overall Funding Request	$5,000,000
Grant Term Request	3 Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Rio Vista Farm
Project Lead	Growing Healthy Kids (Co-Applicant)
Project Location	Ray Vista Elementary, Bay Point
Project Funding Request	$125,000

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

This project will expand an existing 1-acre educational garden farm and field trip program, increase on-site propagation of and community access to California Native plants species that improve outdoor air quality, increase school greening efforts by planting CA Native carbon sinking gardens at Bel Air, Shore Acres and Delta View Elementary Schools, and deploy a rigorous, hyper-local air-monitoring network and associated student curriculum. Led by our official Co-Applicant, Growing Healthy Kids, the 1-acre Pacifica Garden Farm acts as an immersive outdoor education space featuring innovative, low-impact outdoor classrooms centered around California Native plant species such as Coast Live Oaks and Elderberries that capture carbon, improve soil quality, and increase local biodiversity. The produce grown on the farm directly supplies the Rio Vista Elementary school cafeteria, as well as being used for class tastings, cooking and nutrition lessons, organically lowering the carbon footprint of commercial food delivery. Any food waste generated by the cafeteria is actively composted and recycled directly back into the farm to grow the next crop cycle.

Simultaneously, this project will deploy a network of 8-10 high-tier "flex air" Purple Air monitors to gather vital comparative epidemiological data. We will install these 8-10 monitors directly at the Pacifica Garden Farm, throughout the broader Bay Point fenceline community, and in non-greened outdoor campus areas. To measure success and analyze the exposure data without the use of an outside control group, Growing Healthy Kids will identify differences in exposure between urban green space and non-greened areas to track the differences in exposure and build a community-owned epidemiological data network. GHK will develop a standards aligned, grade level appropriate curriculum about air pollution, carbon sequestration, and CA Native plants that will be used during field trips and incorporate examining real-time air-monitoring data from the network and discussion of strategies for health protection.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This project aligns directly with the "Reduce Air Pollution and Improve Health Outcomes" strategy by expanding urban greening, reducing commercial food transport emissions, and establishing a community-owned data network to inform public health decisions.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The project is located at Rio Vista Elementary, 611 Pacifica Ave, and will also serve students at Bel Air, Shore Acres, and Delta View Elementary Schools in the unincorporated community of Bay Point, CA. The air monitoring network will be deployed in the neighborhoods surrounding the schools to monitor air quality in the Highway 4 corridor pollution belt.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

As a deeply rooted community-based organization, Growing Healthy Kids maintains continuous dialogue with Bay Point families. Through our existing school programming and community events, residents consistently identified two compounding environmental justice needs: first, persistent lack of green space, food access and fresh produce challenges; and second, a profound lack of granular, neighborhood-level air quality data. While residents know their air is heavily polluted by nearby refineries, they expressed frustration over lacking the specific, hyper-local

data required to advocate for change or make daily health decisions for their children.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Bay Point faces an extreme environmental justice challenge due to topography that traps refinery emissions directly within the community, as well as an identified lack of access to green space and healthy, fresh food. The MDUSD 2023-2024 CA Healthy Kids Survey highlighted student health and access inequities, illustrating the need to increase access to nature and healthy foods in the lowest income and most highly polluted communities of Bay Point. Approximately 25% of MDUSD 5th graders self-report that they need to be driven or walk 15 minutes or more to access safe and healthy natural spaces outside of school environments, demonstrating a need for access to nature which is exacerbated in MDUSD's low-income areas including Bay Point. This project addresses the identified data gap by creating a community-owned air monitoring network that directly targets the Title I school communities and families within this pollution bottleneck and increases community urban green space both at school and at homes through distribution of air cleaning CA Native plants, which are often inaccessible due to cost and rarity. We will track number of community events held and attendees, assess knowledge, attitudes and practices (KAP) about air-pollution before and after a sample of field trips, number of students attending field trips and number and location of plants distributed and planted.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Growing Healthy Kids will hold quarterly, bilingual community meeting and harvest days at the Pacifica Garden Farms. Project staff will provide project report-outs, encourage community involvement, invite families to volunteer on the farm, teach about sustainable agriculture, distribute plants, and solicit direct, two-way feedback on the program. The Project Steering Committee will review this feedback monthly to adjust operations, ensuring project data remains accessible through community reports that highlight how to access Purple Air data and identify school based sensors, and the food grown and plants given away reflect the rich multitude of cultures present in the Bay Point community.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The vision is to establish a sustainable, hyper-local farm-to-school food system and CA Native plant nursey in conjunction with a school-based air-monitoring network. Measurable outcomes include installation and location mapping of 8-10 high-tier "flex air" monitors, publication of comparative epidemiological air-quality and project status community reports, mapping of neighborhood planting locations of air-quality improving CA Native plants and tracking total number and plant species given away, tracking number of students who receive field trips, assessing increase in KAPs after receiving air-pollution field trip curriculum from sample of field trips, and tracking the pounds and type of local produce generated and sent to school cafeteria. Growing Healthy Kids will serve as the Lead Entity for this project, leveraging MDUSD's facility access for the farm and monitor installations.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

We are requesting $125,000 to fund the procurement and installation of the advanced "flex air" Purple Air monitors, necessary data analysis software, and the agricultural materials required to expand the farm's yield and hay bale outdoor classrooms. Crucially, the budget explicitly allocates dedicated staff time (FTEs) for indicator tracking and rigorous data analysis, ensuring grant outcomes are scientifically measured. *(Please see the attached Excel Budget document).*

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project aligns seamlessly with the California Department of Food and Agriculture's (CDFA) urban greening and farm-to-school initiatives, from which the project already receives foundational support. Furthermore, it aligns with the Air District's explicit goals—and the Community Air Protection Program (AB 617)—to expand community-owned air monitoring

networks and exposure-reduction strategies within disproportionately impacted fenceline communities.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

As an official Co-Applicant and Project Lead for this component, Growing Healthy Kids is highly capable and financially ready. The organization is successfully managed a $300,000 budget from the California Department of Food and Agriculture (CDFA) for this exact site, proving their profound operational success and capacity to manage public funds.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

Crucially, the Program Director overseeing this initiative for Growing Healthy Kids, [redacted], holds a Master of Public in Epidemiology, and project education lead [redacted] holds a Ph.D in landscape architecture, specializing in the ecosystem and air quality benefits of urban greening. GHK staff's advanced academic credentials make the organization uniquely qualified to lead this project and further impactful farm-to-school and greening projects in MDUSD while managing the air monitoring network, perform rigorous comparative epidemiological data analysis, and translate complex health data into actionable insights.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

The purple-air monitors are lightweight, battery-powered, fit in the palm of one's hand, and will be attached to existing structures with adhesive, therefore requiring no building permit. The agricultural component requires no major permitting, and we are fully prepared to secure any minor sensor installation approvals well within the 3-year grant term.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

The installation of minor environmental sensors (air monitors) and the maintenance of an existing community garden on public school property typically qualify for a categorical exemption under CEQA §15061(b)(3).

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

Site control is already fully established. The 1-acre farm operates seamlessly on MDUSD property at Rio Vista Elementary, managed under a legally binding, existing joint-use partnership agreement between the Lead Applicant (MDUSD) and the Co-Applicant (Growing Healthy Kids).

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Growing Healthy Kids will maintain the farm infrastructure and monitor hardware using their established organizational budget and existing CDFA funding, ensuring the sustainability of the agricultural and monitoring network far beyond the conclusion of the grant term.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The primary anticipated barrier is the technical troubleshooting and ongoing calibration of the air monitors to ensure data integrity. We will mitigate this risk directly through our staffing model:

[redacted] advanced epidemiological expertise and the organization's existing technical capacity will ensure immediate hardware maintenance and scientific validity throughout the lifespan of the project.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The vision is to establish a sustainable, hyper-local farm-to-school food system and CA Native plant nursery in conjunction with a community-owned, school-based air-monitoring network to measure and mitigate student exposure to pollutants.

Measurable Outcome	Indicator(s)
1. Deploy a network of high-tier "flex air" Purple Air monitors to gather comparative epidemiological air-quality data.	• Installation and location mapping of 8-10 high-tier monitors. Publication of comparative epidemiological air-quality community reports comparing the fenceline to control areas.
2. Increase community urban green space and establish a closed-loop food system.	• Mapping of neighborhood planting locations for CA Native plants. Tracking total number and species of plants given away. Tracking pounds of local produce generated and sent to the cafeteria. Calculated reduction in carbon footprint from eliminating commercial food delivery using the UT Austin peer-reviewed methodology.
3. Increase environmental health knowledge and awareness among students and the community.	• Number of students attending agricultural and air-quality field trips. Pre- and post-program assessments measuring increases in Knowledge, Attitudes, and Practices (KAPs) regarding air pollution. Number of community events held and attendees.

Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	MDUSD Clean Air
Lead Applicant Name	Mount Diablo Unified School District
Project Location	Bay Point
Overall Funding Request	$5,000,000
Grant Term Request	3 Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Riverview HVAC Upgrade
Project Lead	Sigler Corp (General Contractor) / MDUSD
Project Location	Riverview Middle School, Bay Point
Project Funding Request	$2,475,563

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

This project proposes a comprehensive HVAC and ventilation upgrade for Riverview Middle School, a Title I school located in Bay Point. The focus of the Riverview MS HVAC project is to improve ventilation where children learn. By replacing existing, failing legacy infrastructure in classrooms and other essential learning environments—including multi-purpose rooms (MPRs) and gymnasiums—with new, high-efficiency equipment featuring the replacement of gas heating with heat pump technology, and the replacement of high GWP refrigerants with a new low GWP type. With advanced air filtration and demand-controlled ventilation, the project aims to create a safe, breathable indoor learning environment for vulnerable students and staff exposed to severe industrial pollution.

Based on BAAQMD midpoint factors for school HVAC upgrades, estimated benefits are based on replacing existing equipment, which will yield substantial annual energy savings in electricity and natural gas. This reduction in on-site combustion and electrical grid demand translates to direct environmental benefits, eliminating localized NOx, SO2, and PM2.5 emissions annually.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This project strongly aligns with the "Reduce Air Pollution and Improve Health Outcomes" strategy. By facilitating high-efficiency air filtration upgrades where children learn in a public school facility, this project tangibly improves community health and well-being. It specifically mitigates indoor exposure to trapped, hazardous refinery emissions, directly protecting the respiratory health of a highly burdened student population.
(Please refer to the consolidated Air Benefits table located under Question 1 in the Overall Narrative document for a complete, itemized breakdown of this project's calculated emission reductions, energy savings, and estimated health benefits).

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The project is located at Riverview Middle School, 205 Pacifica Ave., in Bay Point, CA. Bay Point is an unincorporated community situated along an inland waterway between Concord and Pittsburg; in an area where upwind refinery emissions tend to concentrate due to topographical conditions and prevailing sea-breezes.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Through school surveys and maintenance requests, parents and staff consistently identified the aging ventilation units as a primary health and comfort concern, triggering the district to prioritize Riverview MS for this capital upgrade.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The environmental justice challenges of Bay Point mean students are chronically exposed to hazardous outside air. Therefore, indoor school environments must act as clean-air sanctuaries. This project directly addresses this need. Measurable outcomes include verified reductions in energy use (MWh and MMBTU savings) and calculated removal of PM2.5, NOx, and SO2 pollutants.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

MDUSD and Sigler Corp. will utilize bilingual (English/Spanish) communication strategies to ensure transparent, two-way engagement. We will host quarterly community town halls at Riverview Middle School, providing essential support such as childcare and refreshments to eliminate barriers to participation. During these meetings, we will update parents on the construction progress, timelines, and expected health benefits in the spaces where their children learn. Furthermore, we will distribute regular surveys to solicit ongoing community feedback. The Project Steering Committee will review this feedback monthly to adjust our implementation strategies—for example, shifting construction phasing if residents express concerns regarding noise disruptions or communication gaps.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The vision for this project is to create a safe, breathable, and climate-resilient indoor learning environment for the students and staff at Riverview Middle School by reducing their exposure to refinery-related particulate matter. The primary measurable outcome is to significantly reduce indoor PM2.5 levels, verifying energy savings, and tracking pre- and post-installation air quality indicators. Co-Applicant Sigler Corporation will serve as the General Contractor and Project Lead, running the entirety of the project and overseeing the procurement, specialized installation, and final commissioning of the HVAC units across the campus. In alignment with the grant's high-road labor standards, Sigler Corp. will prioritize the recruitment of workers laid off or facing layoffs from regional refineries, as well as local Bay Point residents, to fulfill the specialized installation labor.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

We are requesting **$2,475,563** in grant funding to cover the capital costs of the high-efficiency HVAC equipment and specialized labor, according to the submitted budget. Co-applicant Sigler Corporation, a local Concord-based employer will serve as the General Contractor running the project.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project aligns directly with the Bay Area Air Quality Management District's goals to support climate resilience initiatives and indoor air quality improvements in public facilities. Furthermore, the transition to high-efficiency ventilation systems and heat pumps supports state and regional Climate Action Plans focused on building decarbonization and efficiency, while aligning with the Community Air Protection Program (AB 617) by focusing critical infrastructural investments in a disproportionately impacted fenceline community. Notably,

Riverview Middle School already generates 59,000 kWh annually from an on-site solar PV array. The new electric equipment replacing legacy natural gas units will be partially powered by this existing renewable energy, creating a powerful zero-emission synergy.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

As the General Contractor running the project, Co-Applicant Sigler Corporation possesses extensive commercial experience and a projected annual operating budget of $184.4 million, providing exceptional financial stability and liquidity to seamlessly manage this large-scale installation and their $2,475,563 grant allocation without risk.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

Sigler Corp. will act as the General Contractor leading the project's execution. MDUSD will act in a supporting role, dedicating 0.5 FTE Facilities Director to oversee the district-side compliance and contractor management.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

MDUSD and Sigler Corp. are highly experienced with, and fully prepared to secure the necessary DSA approvals well within the 3-year grant term. Sufficient matching funds have been allocated based on architectural estimates to cover any required DSA upgrades (such as ADA restrooms, T-24 lighting, structural roof reinforcements, and fire alarms) triggered in the spaces where children learn. The team has allocated more than the sufficient 20% cost requirement for anticipated DSA upgrades, the exact scope of which will be determined by the final equipment replacement layout.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

Ventilation/HVAC replacements at existing public schools generally qualify for categorical exemptions under the California Environmental Quality Act (CEQA) §15301. A CEQA NOE will be filed by MDUSD with local and State authorities, accordingly.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

MDUSD holds sole, legally binding ownership and operational control of the Riverview Middle School facility and the surrounding campus.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

MDUSD's facilities department will oversee the ongoing operations and maintenance of the new HVAC system for its entire functional lifespan. These ongoing maintenance costs will be securely financed through the district's general operating budget.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The primary anticipated barrier to this project is the risk of ongoing supply chain delays for commercial HVAC components. To mitigate this risk, Sigler Corp. and MDUSD will initiate the procurement process as soon as the Grant Agreement is executed. An additional primary regulatory barrier is ensuring the modernization does not exceed the Division of the State Architect (DSA) limit of 50% of the building's total replacement cost (DSA EB-4). Exceeding

this would trigger mandatory, expensive structural and seismic code upgrades. The team will carefully manage the generalized equipment replacement scope to avoid this threshold.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The vision for this project is to create a safe, breathable, and climate-resilient indoor learning environment for Riverview Middle School by upgrading failing HVAC systems and significantly reducing student exposure to refinery-related particulate matter.

Measurable Outcome	Indicator(s)
1. Significantly reduce indoor PM2.5 levels and improve indoor air quality in the 5,130 sq. ft. Multi-Purpose room (and add-alternates).	• Pre- and post-installation indoor air quality metrics demonstrating a percentage reduction in PM2.5.
2. Replace aging HVAC infrastructure to increase ventilation, improve efficiency, and remove natural gas reliance while meeting DSA compliance.	• Verified removal of 12 aging R-22 RTUs and existing gas lines. Verified installation of new variable speed heat pumps featuring CO2 demand-controlled ventilation and actuated outside air dampers. Completion of necessary ADA and restroom upgrades.

Agenda Item

Agenda | << Previous | 10.3 (Original Item 10.4) Review and Potential Appr | Next Item >>

Meeting Date: 5/13/2026 - 6:00 PM

Category: Recognitions and Resolutions

Type: Action

Subject: 10.3 (Original Item 10.4) Review and Potential Approval of Resolution 25/26 (78) Authorizing Submission of Applications for the Bay Area Air District Local Community Benefits Fund Competitive Grant Program

LCAP (Local Control Accountability Plan) Goal:

Goal 1:
All students will receive a high quality education in a safe and welcoming environment with high expectations and rigorous instruction in the California State Standards that prepare them for college and career. All students will demonstrate growth meeting standards in English, English language development, and mathematics.

Goal 2:
Highly qualified, culturally proficient, and responsive staff will create learning environment respectful of all students' backgrounds ensuring they are college and career ready when they graduate.

Goal 3:
Families and community will be informed and empowered as partners with Mt. Diablo Unified to support student learning and improve student outcomes.

Policy:

Enclosure Resolution 25/26 (78) Bay Area Air District Local Community Benefits Fund (LCBF) Competitive Grant Program Project Information

File Attachment:

- Resolution Bay Area Air District Local Community Benefits Fund (LCBF) Competitive Grant Program.pdf
- Bay Area Air District Local Community Benefits Fund (LCBF) Competitive Grant Program Project Information.pdf

Summary:

Staff is requesting Board approval of Resolution 25/26 (78) authorizing the Mount Diablo Unified School District to submit applications to the Bay Area Air District Local Community Benefits Fund (LCBF) Competitive Grant Program.

The Local Community Benefits Fund was established to reinvest air quality penalty and mitigation funds into communities disproportionately impacted by air pollution. Eligible applicants include school districts and local government agencies serving qualifying communities within the Bay Area.

Through this grant opportunity, the District intends to pursue funding for several projects and initiatives, including:

Procurement of additional electric school buses;
Rio Vista Elementary School Farm to School and community air monitoring initiatives;
Riverview Middle School HVAC, ventilation, and indoor air quality upgrades; and
Expanded middle and after-school STEM programming through the Mt. Diablo Education

Foundation partnership.

The proposed projects align with the goals of the LCBF program, including reduction of greenhouse gas emissions, improvement of indoor air quality, expansion of clean transportation infrastructure, and support for underserved communities impacted by air pollution.

Approval of the resolution authorizes staff to submit grant applications prior to the May 29, 2026 application deadline. If awarded, staff will return to the Board for consideration and acceptance of grant funding.

Bay Area Air District Local Community Benefits Fund (LCBF) Competitive Grant Program

Project Discussion:

MDUSD presently owns and operates 23 EV School Buses in its overall 106 school bus fleet. Its goal is to add an additional seventeen (17) EV Vehicles to its fleet by 2029, including at least eleven (11) EV School Buses. The additional EV Vehicles are intended to be added if/as grant funding becomes available over the course of the next three years. The LCBF Opportunity Grant is one of the early opportunities for MDUSD to meet its EV Fleet growth objectives.

The LCBF grant identifies a list of local communities that are both underserved and impacted by air pollution from regional oil refinery operations. One of the key identified communities is Bay Point, which being unincorporated, would not otherwise be in a position to apply to the LCBF Opportunity Grant.

Staff is focusing on two Bay Point schools and project proposals in its LCBF Grant Application: (i) Rio Vista Elementary Farm to School program and local air monitoring network by Growing Healthy Kids local non-profit, and (ii) Riverview Middle School HVAC/Ventilation/Indoor air quality system upgrades.

Additionally, staff is also including support for middle- and after-school STEM programs in its LCBF Grant Application through its partnership with the Mt. Diablo Education Foundation.

MDUSD's LCBF Opportunity Grant Application is in alignment with the following example projects and outcomes written in Appendices C & D of the LCBF Grant Guidelines:

- Facilitate high-efficiency air filtration upgrades in schools, libraries, daycares, senior centers, or other buildings frequented by the public;
- Fund community-based organizations to develop and deliver effective outreach and education regarding any of the above technologies to overburdened and hard-to- reach households;
- Installation of electric vehicle charging infrastructure;
- Vehicle replacement and clean vehicle programs;
- Establish community gardens or plant nurseries on public or underutilized land;
- Calculable emission reductions from stationary or mobile sources of air pollution;
- Quantifiable reduction in exposure to air pollution, through strategies such as air filtration and clean air centers;
- Demonstration of how air monitoring data collected meets a community need unmet by existing data, increases the understanding of local impacts of air pollution emissions, and provides information needed for specific actions that reduce emissions or exposure;
- Achieve co-benefits of reducing greenhouse gas emissions that contribute to climate change.

Budget Discussion

The following table summarizes the budget request for the LCBF Grant Application.

Role	Applicant Name	Total Funds Requested	Total Professional Services & Consultants Costs	Co-Applicant % (application min of 25% of Total Funds Requested)
Lead Applicant	Mt. Diablo Unified School District	$ 3,749,999	$ 84,563	75.0%
Co-Applicant 1	Mt Diablo Education Foundation	$ 125,000	$ -	2.5%
Co-Applicant 2	Growing Healthy Kids	$ 125,000	$ -	2.5%
Co-Applicant 3	Local HVAC Ventilation Vendor	$ 1,000,001	$ -	20.0%
TOTAL		**$ 5,000,000**	**$ 84,563**	**25.0%**

LCBF Opportunity Grant – Proposed Budget

Additionally, the District will contribute and additional $1,500,000 towards the cost of the Riverview Middle School HVAC/Ventilation/Indoor Air Quality project. These funds are allocated from the District's Operations and Maintenance Budget.

BOARD OF EDUCATION
MT. DIABLO UNIFIED SCHOOL DISTRICT
Resolution 25/26-78

RESOLUTION AUTHORIZING FILING OF APPLICATION(S) FOR THE BAY AREA AIR DISTRICT LOCAL COMMUNITY BENEFITS FUND COMPETITIVE GRANT FOR THE MOUNT DIABLO UNIFIED SCHOOL DISTRICT

WHEREAS, In May 2024, the Bay Area Air District established the Community Benefits Penalty Funds Policy, which reinvests air quality penalties in communities disproportionately impacted by air pollution; and

WHEREAS, The Local Community Benefits Fund (LCBF) for Benicia, Richmond, and the surrounding areas is reinvesting approx. $100,000,000 in penalties and mitigation funds in the specific communities affected by the air quality violations associated with those funds; and

WHEREAS, Eligible communities in the Benicia air basin include Vallejo, Rodeo, Crockett, Port Costa, Mountain View, Vine Hill, Pacheco, Clyde, Bay Point, Pittsburg, Portions of Concord and Martinez; and

WHEREAS, Eligible lead applicants include non-profit organizations, local government agencies, cities, counties, school districts, unions and California Native American Tribes; and

WHEREAS, School Districts are eligible to apply to the LCBF under the Opportunity Grant category, eligible for total funding up to five million dollars, and

WHEREAS, the Mount Diablo Unified School District ("District") intends to file applications for funding to procure an additional six (6) EV School Buses, and for two projects for its Bay Point schools, (i) Rio Vista Elementary Farm to School program, and (ii) Riverview Middle School HVAC/Ventilation/Indoor air quality system upgrades. Additionally to provide funding for middle and after-school STEM programs through its partnership with the Mt. Diablo Education Foundation; and

WHEREAS, MDUSD will supplement the LCBF funding, if awarded, with sufficient operations and maintenance funds from its own accounts, to ensure all requirements of the Riverview MS HVAC/Ventilation project are completed to the highest standards; and

NOW, THEREFORE BE IT RESOLVED, that the Governing Board of the Mount Diablo Unified School District hereby authorizes the filing of application(s) for the Bay Area Air District Local Community Benefits Fund Competitive Grant Program, and authorizes the Superintendent or designee to execute and submit all documents, applications, agreements, and related materials necessary to apply for and administer such grant funds on behalf of the District.

Dear Members of the Bay Area Air District Review Committee,

On behalf of Mt Diablo Unified School District, this letter confirms that, if awarded, the District will provide all required permits and approvals, if applicable, necessary to begin implementation of the project. This will include separate documentation demonstrating the status of any required architectural, utility, or related permits and approvals.

The District also confirms that, if awarded, it will provide all required CEQA compliance documentation, if applicable. This will include separate documentation demonstrating CEQA compliance, including any applicable exemption filings, determinations, or approvals necessary for project implementation.

Mt Diablo Unified School District understands these items are required as part of the project award and implementation process and will submit the applicable documentation in support of the project.

Sincerely,

Melanie Kolsow

NorthBay Healthcare Corporation Application

Bay REPAIR
Local Community Benefits Fund – Round 1
Opportunity and Catalyst Grants, Overall Narrative

Application Information	
Application Title	Vallejo BREATHE Initiative (VBI)
Lead Applicant	NorthBay Health
Application Location	884 Admiral Callaghan Ln, Vallejo, CA
Overall Funding Request	$5M
Grant Term Request	36 months

PROPOSAL VISION (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
    - *Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.*
    - *Advance integrated projects to holistically meet community needs.*
    - *Strengthen community-driven and collaborative solutions.*

The Vallejo BREATHE Initiative (VBI) is a collaborative environmental health and workforce development initiative led by NorthBay Health in partnership with Touro University California (TUC) that addresses the disproportionate burden of air-pollution-related cardiopulmonary disease in Vallejo. The initiative integrates three coordinated project components: 1) the Air Aware Healthcare Workforce, which recruits and trains Vallejo residents as Community Health Workers (CHWs) to support environmental health outreach, asthma prevention, and home-based interventions while creating long-term healthcare career pathways; 2) BREATHE Healthy Homes, which provides home environmental assessments, asthma education, HEPA air purifiers, indoor air quality mitigation resources, and household-level interventions for high-risk residents; and 3) the BREATHE Cardiopulmonary Care Clinic, a dedicated outpatient specialty clinic focused on early diagnosis, treatment, and management of respiratory and cardiovascular conditions associated with environmental exposure. Collectively, these components establish an integrated prevention and care continuum that links workforce development, environmental mitigation, community outreach, specialty clinical care, referral coordination, and longitudinal care management for residents disproportionately impacted by poor air quality, wildfire smoke exposure, and cumulative environmental burdens.

VBI advances the goals of the Local Community Benefits Fund by reducing air pollution exposure and health impacts through environmental health interventions, improved access to care, and community prevention in Vallejo's high-burden neighborhoods. Outcomes include fewer indoor pollutants and asthma triggers, household mitigation, better respiratory management, expanded outpatient cardiopulmonary care, shorter referral wait times, earlier detection of respiratory and cardiovascular issues, fewer emergency department (ED) visits for asthma, and stronger healthcare pathways. The initiative also supports economic resilience by creating healthcare career opportunities via CHW workforce development, scholarships, mentorship, training, and education. By integrating healthcare, academic, community, and public health partners, VBI promotes collaborative, community-driven solutions to environmental justice, health disparities, workforce inequities, and resilience.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

The proposed project will benefit residents of Vallejo, California, a diverse community of approximately 123,000 residents that are disproportionately impacted by environmental pollution, poor air quality, and longstanding health and economic inequities. The initiative will primarily focus on neighborhoods within and surrounding ZIP code 94590, where residents experience elevated rates of asthma, cardiopulmonary disease, environmental exposure, and socioeconomic vulnerability. Vallejo includes a high proportion of low-income households, Medi-Cal beneficiaries, communities of color, and residents historically impacted by cumulative pollution burdens associated with transportation corridors, industrial activity, wildfire smoke exposure, and poor indoor air quality. Vallejo communities have also historically experienced disproportionate environmental burdens and reduced access to preventive healthcare and environmental mitigation resources compared to more affluent Bay Area communities.

Residents of Vallejo experience persistent environmental health challenges associated with exposure to fine particulate matter (PM2.5), wildfire smoke, transportation emissions, and other environmental pollutants linked to respiratory and cardiovascular disease. Solano County’s asthma-related ED visit rate (61.1 per 10,000 residents) significantly exceeds the statewide California rate (34.9 per 10,000 residents) (Tracking California, 2023). Within ZIP code 94590, asthma-related ED utilization reaches 94.5 visits per 10,000 residents, approximately 2.7 times the statewide rate. CalEnviroScreen 4.0 further identifies census tracts in Vallejo as among the highest cumulative pollution-burden communities in Solano County and the broader Bay Area region.
VBI is designed to directly serve populations disproportionately impacted by these conditions, including individuals with diagnosed or undiagnosed asthma and other

cardiopulmonary conditions, residents with frequent ED utilization, and individuals with limited access to preventive and specialty healthcare services. Priority populations include Medi-Cal and uninsured residents, children, older adults, households with limited resources to improve indoor air quality, and residents living in neighborhoods with elevated environmental and socioeconomic vulnerability.

Community engagement efforts informed the development of the initiative through discussions with healthcare providers, community-based organizations, Fresh Air Vallejo, TUC, and other local stakeholders regarding environmental health needs and barriers to care. These discussions consistently identified transportation challenges, cost concerns, distrust of healthcare systems, fragmented referral pathways, and limited access to culturally responsive care as barriers contributing to delayed diagnosis and reliance on emergency services. NorthBay Health also launched a bilingual community survey (Appendix A), which received 70 responses from Vallejo residents and workers, to better understand how air quality affects them and to identify community priorities related to respiratory health, environmental mitigation, and access to care. Preliminary findings demonstrated strong interest in household air-quality interventions, environmental health education, improved access to respiratory care, and workforce opportunities in healthcare and environmental health fields.

In addition to improving health outcomes, the initiative will create accessible workforce development and healthcare career pathways for residents of impacted communities through training and employment opportunities for CHWs and environmental health workers. By investing in local workforce capacity, culturally responsive outreach, and community-based prevention strategies, the initiative supports long-term economic resilience, strengthens community capacity to respond to environmental health challenges, and advances a more equitable, community-centered approach to improving health outcomes and resilience in Vallejo communities.

PARTNERSHIP STRUCTURE (20 points)

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

NorthBay Health's mission is to improve the well-being of our communities by providing conveniently accessible, high-quality care. This initiative directly aligns with this mission by expanding access to integrated clinical, environmental, and community-based interventions focused on reducing the health impacts of air pollution exposure in Vallejo.

NorthBay Health is expanding its presence in Vallejo by developing a new primary care and urgent care clinic at 884 Admiral Callaghan Lane, expected to open in early 2027. This investment establishes a long-term clinical presence within the community and

serves as the foundation for the BREATHE Cardiopulmonary Care Clinic and broader VBI. NorthBay Health brings extensive experience managing large-scale healthcare operations, integrated care programs, electronic health record infrastructure, grant-funded initiatives, and community health improvement activities.

TUC's mission is to provide educational excellence in the health sciences and public health, expand community access to healthcare through partnerships, and prepare graduates to serve underserved populations. As a Vallejo-based institution with longstanding ties to the community, TUC brings deep expertise in public health, workforce development, interdisciplinary healthcare education, and community engagement. TUC will lead the implementation of workforce development, CHW training, Healthy Homes interventions, outreach, and environmental health education activities associated with the VBI.

Together, NorthBay Health and TUC provide complementary expertise in clinical care delivery, environmental health, public health education, community engagement, workforce development, and interdisciplinary training necessary to implement a comprehensive and sustainable environmental health initiative.

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

NorthBay Health will serve as the Lead Applicant and fiscal agent for VBI, with TUC serving as the Co-Applicant and lead implementation partner for community-based outreach, workforce development, Healthy Homes interventions, and environmental health education activities. The partnership is designed to integrate outpatient specialty care, household-level environmental mitigation, CHW engagement, and workforce development into a coordinated, community-centered model addressing the health impacts of air pollution exposure in Vallejo.

NorthBay Health will provide overall project leadership, fiscal oversight, grant administration, performance monitoring, reimbursement management, compliance oversight, and clinical implementation. NorthBay will establish and operate the BREATHE Cardiopulmonary Care Clinic, oversee clinical care pathways, coordinate referrals between project components, and manage data integration and outcome tracking through the Epic electronic health record platform.

TUC will lead community-based implementation activities, including CHW recruitment and supervision, Healthy Homes interventions, environmental health outreach, workforce development programming, educational pathway activities, and community-based program evaluation. TUC will also coordinate student field placements,

interdisciplinary environmental health education, and career pathway opportunities associated with the Air Aware Healthcare Workforce Project.

The initiative will be governed through a collaborative decision-making structure led by a joint Steering Committee composed of leadership representatives from both organizations. The Steering Committee will provide strategic oversight, review implementation progress, evaluate measurable outcomes, and guide program refinements based on community feedback and evaluation findings. Day-to-day implementation activities will be coordinated through a NorthBay-led Project Manager working collaboratively with designated Touro operational and evaluation leads. Decision-making for programmatic activities will be collaborative and consensus-driven, while NorthBay Health will retain final authority over fiscal oversight, compliance, reimbursement requests, contractual obligations, and submission of required reports.

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to:*
    - *Coordinate overall community engagement activities.*
    - *Track and report on indicators to assess progress towards measurable outcomes.*
    - *Collect and process reporting, reimbursement and invoicing requirements.*

Community Engagement Coordination: NorthBay Health and TUC will jointly coordinate community engagement activities throughout the grant period. TUC will lead day-to-day outreach, environmental health education, CHW deployment, Healthy Homes implementation, and workforce recruitment activities, while NorthBay Health will provide strategic oversight, integration with clinical services, and referral pathways.

CHWs will conduct outreach, education, environmental assessments, and navigation activities within priority neighborhoods while helping connect residents with cardiopulmonary specialty services, environmental mitigation resources, and other community supports. Community meetings, listening sessions, outreach events, and partnerships with community-based organizations will support ongoing engagement and responsiveness to community priorities.

Tracking and Reporting on Measurable Outcomes: NorthBay Health and TUC will collaborate on evaluation, performance monitoring, and reporting activities. NorthBay Health will oversee overall data integration, clinical outcome tracking, Epic registry management, and consolidated funder reporting. TUC will lead community-based data collection, environmental assessment tracking, workforce development evaluation, implementation monitoring, and milestone reporting.

NorthBay Health will use its Epic EHR system to establish a VBI registry to track clinical utilization, ED visits, referral completion, specialty care engagement, and continuity-of-care indicators. TUC will collect standardized, community-based data on home assessments, indoor air-quality interventions, CHW engagement, workforce participation, outreach activities, and participant-reported outcomes.

Both organizations will participate in ongoing data review meetings to assess implementation progress, monitor measurable outcomes, identify emerging needs, and guide continuous quality improvement activities.

Reporting, Reimbursement, and Invoicing: NorthBay Health will manage all grant reporting, reimbursement requests, financial oversight, and compliance activities. TUC will operate under a subaward agreement and submit invoices and supporting documentation for reimbursement.

NorthBay Health will review and approve all subrecipient invoices, monitor expenditures for consistency with approved budgets and deliverables, maintain financial documentation, and submit consolidated reimbursement requests and required reports to the funder. Both partners will maintain detailed financial and programmatic records to support compliance, audit readiness, and accurate reporting during the grant period.

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.*

Both NorthBay Health and TUC are governed by formal board and executive leadership structures and are subject to established review and approval processes for new initiatives, grant-funded activities, and partnership agreements.

For NorthBay Health, projects of this scope are reviewed through executive leadership and Board of Trustees governance processes. TUC similarly uses institutional, administrative, and board-level oversight to approve new academic, workforce, and externally funded initiatives. At the time of application submission, both organizations have reviewed and advanced the proposed Vallejo BREATHE Initiative concept through their respective internal planning and leadership review processes. Final organizational approvals and authorizations will be secured prior to execution of any grant agreement, consistent with funder requirements.

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

NorthBay Health has the infrastructure, leadership, and experience to oversee VBI. As Lead Applicant, it will manage project coordination, clinical oversight, finances, compliance, and ensure grant alignment. Staff includes a 0.60 FTE BREATHE Clinic Operations Manager for daily operations, workflows, and reporting, and a 0.60 FTE APN for outpatient assessment, treatment, and care coordination. Additional support comes from existing NorthBay resources. TUC will provide operational, outreach, workforce, and evaluation staff to support community activities, oversee CHW training, environmental outreach, and program evaluation. Cohorts of Air Aware CHWs will be trained annually to support outreach, education, and community-clinical linkages in Vallejo. NorthBay's infrastructure, including clinical operations, electronic health records, and partner management, offers a strong foundation. It will also handle subawards, finances, and performance monitoring, with regular meetings and governance to maintain alignment. With dedicated staff and leadership from both entities, VBI aims to improve environmental health outcomes and access in Vallejo.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

As Lead Applicant and fiscal agent, NorthBay will oversee budgeting, expenditure tracking, reimbursements, subawards, reporting, and compliance for VBI. Grant expenditures are tracked in dedicated project cost centers within its financial system, keeping them separate from other operations. The organization employs standardized controls, including segregation of duties, multi-level approvals, routine monitoring, monthly reconciliations, and reviews, to ensure expenditures align with budgets, milestones, allowable costs, and grant requirements. Its finance and grants teams have experience with state and federal funding, reimbursement models, compliance, documentation, audits, and reporting.

NorthBay will manage the subaward with TUC, which will submit invoices and documentation for review. All expenditures will be reviewed for allowability, accuracy, and alignment before reimbursement requests and reports are submitted. To ensure transparency, NorthBay will keep detailed records of expenses, contracts, invoices, activities, and program data, and will work with operational and evaluation staff to align resources with progress and outcomes. These practices position NorthBay well to manage funds efficiently, remain compliant, and responsibly steward the Local Community Benefits Fund.

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The Vallejo BREATHE Initiative (VBI) is an integrated environmental health initiative designed to reduce the burden of air-pollution-related cardiopulmonary disease in Vallejo neighborhoods disproportionately impacted by environmental exposures, poor air quality, and cumulative health disparities. The initiative combines three integrated components: 1) Air Aware Healthcare Workforce, which recruits and trains Vallejo residents as Community Health Workers (CHWs) to conduct home-based air-quality and asthma interventions while creating long-term healthcare career pathways; 2) BREATHE Healthy Homes, which provides home environmental assessments, asthma education, indoor air quality mitigation resources, and household-level interventions for high-risk residents; and 3) BREATHE Cardiopulmonary Care Clinic, a community-based outpatient program focused on early diagnosis, prevention, treatment, and ongoing management of respiratory and cardiovascular conditions associated with environmental exposure.

Collectively, these components establish a coordinated prevention and care continuum that links community outreach, workforce development, environmental mitigation, specialty clinical care, and longitudinal care coordination. CHWs trained through the initiative will support community engagement, home-based interventions, referral coordination, and linkage to the outpatient cardiopulmonary clinic, strengthening continuity between community-based prevention and specialty medical care. The initiative prioritizes low-income and medically underserved populations, including Medi-Cal beneficiaries, older adults, children, and individuals with chronic respiratory conditions living in high-burden Vallejo neighborhoods (e.g., ZIP code 94590). VBI

addresses environmental disease factors, expands access to preventive and specialty care, reduces ED visits, strengthens community health resilience, and builds sustainable workforce capacity in communities burdened by environmental issues.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    a. *Reduce air pollution and improve health outcomes*
    b. *Build economic resilience for a just transition*

VBI aligns directly with the Local Community Benefits Fund strategies to ***reduce air pollution and improve health outcomes,*** and ***build economic resilience for a just transition.*** The initiative addresses the environmental and clinical impacts of poor air quality through an integrated model that combines CHW workforce development, household-level environmental mitigation, and outpatient cardiopulmonary specialty care for residents disproportionately impacted by environmental burdens in Vallejo.

The initiative reduces exposure to indoor and outdoor air pollutants by identifying and mitigating asthma triggers, improving asthma self-management, expanding early intervention and preventive care, and increasing access to coordinated outpatient cardiopulmonary services for high-risk residents, including Medi-Cal beneficiaries, older adults, children, and individuals with chronic respiratory conditions living in CalEnviroScreen priority communities such as ZIP code 94590.

Through the integration of the BREATHE Healthy Homes and BREATHE Cardiopulmonary Care components, residents receive coordinated environmental health interventions, referral navigation, access to specialty care, and longitudinal care management designed to reduce avoidable emergency department utilization and improve long-term respiratory and cardiovascular health outcomes.

The initiative promotes economic resilience and a just transition by creating accessible healthcare career paths for local residents impacted by environmental exposures and health inequities. Vallejo residents will be trained as CHWs supporting environmental health interventions, outreach, asthma prevention, and care coordination. It also supports workforce development through mentorship, scholarships, interdisciplinary training, and educational pathways into public health and healthcare, strengthening the regional workforce and community capacity to address environmental health issues.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

VBI activities will occur across multiple coordinated community, academic, and clinical settings. Located at 1310 Club Drive, Vallejo, CA 94592, TUC will serve as the initiative's primary hub for Air Aware Workforce development, training, and coordination. CHW training, workforce development activities, interdisciplinary education, student field placements, and implementation oversight for the Air Aware Healthcare Workforce and BREATHE Healthy Homes components will be administered by TUC in partnership with local healthcare providers, CBOs, and public health partners throughout Vallejo.

The BREATHE Cardiopulmonary Care Clinic will be located at 884 Admiral Callaghan Lane, Vallejo, CA 94591, within NorthBay Health's new primary and urgent care site (opening Q1 2027). The clinic will serve as an integrated community health resource within the broader BREATHE Initiative, expanding access to early detection, prevention, treatment, and ongoing care for Vallejo residents disproportionately impacted by poor air quality, wildfire smoke exposure, and environmental health inequities.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Community engagement efforts informing the VBI include reviewing NorthBay Health's 2025 Community Health Needs Assessment (CHNA), analyzing local public health and environmental health data, maintaining ongoing engagement with local public health partners, healthcare providers, and CBOs, and collaborating with organizations that work directly with families affected by asthma and environmental exposures in Vallejo and Solano County. Stakeholder engagement activities included 1) communication via email and Zoom with Fresh Air Vallejo, the City of Vallejo, and Solano County Public Health; 2) administering NorthBay Health's community survey (Appendix A) and distributing the survey QR code at food distribution and Earth Day events.

Community engagement consistently identified significant concerns related to asthma burden, poor indoor air quality, environmental exposures, transportation barriers, distrust of healthcare systems, cost concerns, provider shortages, long wait times, fragmented referral pathways, and limited access to culturally/linguistically responsive care. Residents and stakeholders emphasized the need for more proactive, home-based prevention services; stronger education on environmental triggers and asthma management; improved navigation between community services and clinical care; and expanded workforce opportunities in healthcare, environmental health, and community resilience. These findings informed the development of the integrated model.

The project addresses significant environmental justice and public health needs in Vallejo, particularly in ZIP code 94590, where residents experience disproportionate exposure to poor air quality and elevated rates of asthma and cardiopulmonary disease associated with environmental exposure. Solano County's asthma-related ED visit rate (61.1 per 10,000 residents) significantly exceeds the statewide California rate (34.9 per 10,000 residents), while ZIP code 94590 experiences rates as high as 94.5 per 10,000 residents, *2.7 times greater* than the statewide average. CalEnviroScreen 4.0 data further identify census tracts within and around ZIP code 94590 as among the highest cumulative-pollution-burden areas in the Bay Area

NorthBay Health's bilingual community survey (Appendix A) targeted Vallejo residents and workers to understand the effects on air quality and community health priorities. Results from the seventy responses highlighted concerns about asthma, indoor air quality, access to specialty care, and the need for environmental interventions, improved access to care, and workforce training. Respondents also expressed interest in HEPA purifiers, indoor air support, asthma education, respiratory care services, and healthcare and environmental job training.

Despite prior statewide asthma mitigation investments through California's Department of Health Care Services' Asthma Mitigation Project (AMP), administered by The Center at Sierra Health Foundation, Solano County did not receive substantial infrastructure investment to support coordinated asthma prevention and environmental health programming. The Vallejo BREATHE Initiative addresses these persistent gaps by integrating CHW workforce development

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

VBI addresses significant environmental justice, health, and workforce issues in Vallejo by integrating CHW development, household environmental mitigation, and outpatient cardiopulmonary care into a unified strategy. It addresses high asthma, COPD, and respiratory illness rates in vulnerable communities, where poor air quality, wildfire smoke, housing, transportation, and environmental burdens increase health risks. Low-income households face barriers to improving indoor air quality due to financial and resource constraints.

VBI provides integrated interventions in prevention, environmental mitigation, workforce development, and clinical care. The Air Aware Healthcare Workforce trains a community-based team in environmental health, asthma management, and home-based air quality interventions. Vallejo residents recruited and trained as CHWs support outreach, Healthy Homes activities, asthma education, environmental assessments, and referral linkage. They also receive mentorship in career pathways into healthcare professions and scholarship opportunities for continued study in health, with recruitment prioritizing impacted communities through partnerships with organizations, workforce programs, public health agencies, schools, faith groups, and bilingual outreach. The BREATHE Healthy Homes component targets household environmental exposures via assessments, asthma education, trigger reduction, indoor air mitigation, and clinical referrals. Households may receive HEPA purifiers, monitors, cleaning supplies, pest management, dehumidifiers, and minor ventilation or mold improvements, with priority given to low-income households, including Medi-Cal-eligible children, older adults, and those with chronic respiratory conditions.

To reduce barriers to participation and improve equitable access to services, VBI will provide targeted participant supports and engagement incentives for eligible residents participating in workforce development, Healthy Homes, outreach, and evaluation activities. Supports may include transportation assistance for outpatient cardiopulmonary appointments, follow-up services, community engagement activities, and environmental health interventions; childcare and transportation support for Community Health Worker training and community listening sessions; and survey or key informant participation incentives to encourage meaningful community engagement and feedback from historically underserved populations. These supports are intended to reduce barriers to participation, strengthen sustained engagement, and ensure that low-income residents and families disproportionately affected by environmental burdens can fully access program services and opportunities.

The BREATHE Cardiopulmonary Care Clinic focuses on early diagnosis, treatment, and management of respiratory and cardiovascular conditions linked to environmental exposures. It serves residents from Healthy Homes, frequent ER users, high-exposure communities, and those referred by providers or community groups. CHWs support care linkage, navigation, and disease management.

This integrated model strengthens links between outreach, household interventions, workforce development, prevention, and clinical care. Outcomes include reductions in indoor pollutants and asthma triggers, increased adoption of mitigation measures, improved management of respiratory symptoms, better access to specialty care, shorter referral times, higher diagnosis rates, fewer asthma-related ED visits among

participants, and greater workforce participation. These progress indicators aim to reduce environmental exposure, build community capacity, improve continuity of care, and enhance resilience in communities facing environmental burdens.

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Community engagement during implementation of VBI will occur through sustained collaboration among NorthBay Health, TUC, CBOs, local public health agencies, healthcare providers, and CHWs participating in the Air Aware Healthcare Workforce initiative. Engagement activities will focus on improving awareness of available environmental health and cardiopulmonary services, strengthening referral pathways, supporting workforce development opportunities, and ensuring that implementation remains responsive to evolving community needs and barriers identified throughout the grant period.

CHWs trained through the initiative will serve as the primary community-facing workforce and trusted community liaisons, conducting home visits, outreach activities, asthma education, environmental trigger assessments, referral coordination, and navigation into outpatient specialty care and environmental mitigation resources. CHWs will also maintain continuous feedback loops regarding environmental conditions, barriers to care, transportation needs, scheduling concerns, language access needs, and community priorities. Their role is intentionally designed to strengthen trust, improve communication between residents and providers, and ensure VBI remains grounded in residents' lived experiences and neighborhood-level environmental health concerns.

Implementation will begin with an initial community outreach and listening phase to gather additional input from Vallejo residents, CBOs, public health partners, and healthcare providers on project eligibility, recruitment strategies, outreach priorities, and program rollout. NorthBay Health and TUC will coordinate with community organizations to conduct listening sessions, stakeholder meetings, and community forums in conjunction with existing neighborhood meetings, outreach events, and local gatherings in high-burden communities. Throughout implementation, project staff and CHWs will continue participating in local community events, outreach activities, and educational efforts designed to increase awareness of environmental health risks, Healthy Homes resources, workforce development opportunities, and cardiopulmonary prevention and care services.

Residents participating in Healthy Homes and Cardiopulmonary Care components will engage with the initiative through direct, high-touch household and clinical interactions, including home visits, environmental health assessments, asthma self-management education, indoor air quality mitigation activities, outpatient specialty care encounters, and care coordination services. Participants will have opportunities to provide feedback regarding program effectiveness, environmental mitigation strategies, referral coordination, scheduling, transportation barriers, communication, language access, and overall access to services. The initiative will also maintain a public-facing website where residents can access program information, submit questions, and apply for participation.

Community feedback will be collected through structured and pulse surveys, listening sessions, interviews, CHW encounter records, patient satisfaction surveys, community meetings, and ongoing informal feedback from home visits, outreach activities, and clinical interactions. Participant questionnaires administered at enrollment, at six months, and at program completion will assess participants' experiences, barriers to participation, satisfaction with services, and recommendations for improvement. CHWs will also provide real-time observations of emerging environmental concerns, neighborhood-level barriers, and shifting community priorities that may not be captured by formal systems.

Feedback collected through these engagement activities will be systematically reviewed through quarterly leadership meetings, project team discussions, partner convenings, and continuous quality improvement processes. Findings will be used to refine outreach strategies, workforce training content, educational materials, referral workflows, equipment distribution practices, patient navigation support, scheduling processes, language access strategies, and follow-up services. Summary findings and implementation updates will be shared with participating households, CBOs, public health partners, and other stakeholders to maintain transparency, strengthen accountability, and ensure continued alignment with community priorities.

To assess distrust of healthcare systems/providers, the CHW community screening will include an index to measure it among participants. Possible indices for this project include the Past Discrimination in Healthcare Scale, Group-Based Medical Mistrust Scale, Medical Mistrust Index, and the Healthcare System Distrust Scale.

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The **vision** of VBI is to reduce the burden of air-pollution-related disease in Vallejo by integrating CHW workforce development, household-level environmental mitigation, and outpatient specialty cardiopulmonary care into a coordinated environmental health prevention and care model. The initiative is designed to strengthen long-term regional healthcare capacity, improve continuity between community-based environmental interventions and specialty medical care, and expand pathways into healthcare careers for residents from disproportionately impacted communities.

Major components of the initiative include: 1) recruitment, training, and supervision of CHWs; 2) implementation of workforce development and career pathway activities; 3) interdisciplinary environmental health education, student field placements, and clinical rotations; 4) home environmental trigger assessments and indoor air quality mitigation interventions; 5) self-management asthma education and environmental health outreach within home visits; 6) establishment of a dedicated outpatient cardiopulmonary care clinic in Vallejo; and 7) coordinated referral, navigation, and community-clinical linkage activities integrated across all components of the broader BREATHE Initiative.

Air Aware Healthcare Workforce Outcomes: the number of CHWs trained; the number of trainees pursuing additional healthcare education pathways and receiving scholarships; MPH student field practicums completed; clinical rotations completed in cardiopulmonary, environmental, and community health settings; and demonstrated competency gains among clinical and public health students in environmental health, asthma prevention and management, interdisciplinary care coordination, and collaboration with CHWs in community-based settings. Competency gains will be measured through structured assessments and faculty and/or preceptor evaluations.

BREATHE Healthy Homes Outcomes: the number of homes enrolled and assessed; reductions in indoor air pollutant levels such as PM2.5; increased adoption of environmental mitigation strategies; participant evaluations of program effectiveness; and improvements in self-reported respiratory symptoms measured through validated survey instruments, including assessment tools like the Asthma Control Test and Healthy Homes and Asthma Test. These outcomes demonstrate progress toward reducing environmental exposure, strengthening household-level environmental health capacity, and improving respiratory health outcomes among vulnerable populations.

BREATHE Cardiopulmonary Care Outcomes: increased access to outpatient specialty care; reduced time from referral to appointment; improved follow-up completion; increased early-stage diagnosis of cardiopulmonary conditions; improved continuity between community-based environmental interventions and specialty medical management; and reduced asthma-related emergency department utilization among

participating residents. These outcomes demonstrate progress toward reducing environmental health disparities and improving long-term community health outcomes in disproportionately impacted communities.

NorthBay Health will serve as Lead Applicant and provide overall project oversight, fiscal management, clinical integration, Epic-enabled data infrastructure, outpatient clinic operations, referral coordination, performance monitoring, and overall implementation management. TUC will serve as Co-Applicant and lead implementation of workforce development activities, CHW training and supervision, interdisciplinary healthcare education, student placements, Healthy Homes implementation activities, and community-based outreach and environmental health interventions.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators, and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The Air Aware Healthcare Workforce budget component funds interdisciplinary environmental health workforce activities to develop regional capacity in asthma and air pollution prevention, community care, and environmental health response. It covers personnel for project leadership, workforce development, bilingual outreach, curriculum creation, faculty oversight, and Community Health Worker staffing. Curriculum and training activities are led by TUC faculty with expertise in public health, environmental health, asthma, and healthcare education, in collaboration with NorthBay Health. The budget also supports MPH practicums, clinical student rotations, scholarships for Vallejo residents, CHW training, outreach, engagement, and evaluation to enhance long-term workforce capacity and environmental health resilience in impacted communities.

The BREATHE Healthy Homes budget component funds community-based environmental mitigation and asthma prevention to lower indoor air pollution in Vallejo. It covers personnel for project oversight, bilingual outreach, CHW staffing, education, and implementation coordination. Funds are used for household assessments, HEPA air purifiers, indoor air quality monitoring, mold mitigation, pest management resources, asthma-safe supplies, transportation, and ventilation interventions to reduce asthma triggers. Additional costs support community engagement, CHW training, outreach materials, listening sessions, participant support, and independent evaluation.

The BREATHE Cardiopulmonary Care Clinic budget supports a specialty outpatient clinic for early detection, diagnosis, and management of respiratory and cardiovascular conditions linked to environmental exposure. Major costs include tenant improvements and shared infrastructure at NorthBay Health Vallejo, such as exam rooms, telehealth, diagnostic equipment, and patient access upgrades. Personnel costs fund leadership, clinical staff, care coordination, referral systems, patient navigation, and oversight. It also includes construction management support for tenant improvements, permitting, contractor coordination, and clinic readiness. Other costs cover telehealth infrastructure, transportation, outreach, diagnostic equipment, Epic EHR integration, and support services to connect household interventions, CHW work, and outpatient care.

The proportional allocation of the clinic remodel, construction contractor, architect, and engineering costs was determined by identifying the dedicated exam rooms and additional shared space within the renovated footprint. The clinic exam rooms represent 18% of the total renovated area; a conservative 15% allocation was applied to account for associated shared patient circulation, workflow, and operational support spaces that support project implementation. For imaging (CT, X-ray, and ultrasound), the allocation methodology reflects estimated utilization associated with the dedicated cardiopulmonary clinic and related outpatient respiratory health services.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional, or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The Vallejo BREATHE Initiative aligns with state, regional, and local environmental justice, air quality, workforce development, climate resilience, and public health priorities. The initiative supports California’s Community Air Protection Program (AB 617) and Bay Area Air Quality Management District priorities by addressing both the environmental and health impacts of cumulative pollution exposure in high-burden communities. Through CHW outreach, Healthy Homes interventions, environmental mitigation, workforce development, and expanded access to specialty care, the initiative strengthens community health resilience by building local capacity to respond to wildfire smoke exposure, chronic air pollution exposure, asthma exacerbations, and environmental health emergencies.

The initiative also aligns with NorthBay Health’s Community Health Needs Assessment (CHNA), the Solano County Public Health Improvement Plan, and the City of Vallejo's planning efforts, identifying significant needs related to environmental health, chronic disease prevention, transportation barriers, access to specialty care, culturally

responsive outreach, and workforce shortages. Certain barriers identified in the CHNA, including transportation access, specialty care shortages, and care navigation challenges, are addressed through the integrated structure of the broader BREATHE Initiative rather than through any single component alone**.**

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

NorthBay Health, a nonprofit serving Solano, Napa, and Yolo Counties, operates two hospitals, a Level II Trauma Center, and 21 outpatient clinics offering primary, specialty, urgent, and occupational care. It supports outpatient services, care coordination, specialty care, referral management, quality improvement, telehealth, population health, and community health for underserved populations. Recently, NorthBay managed healthcare projects including clinical construction, operational integration, and regulatory compliance. Notably, it received a $14.9 million grant for the NorthBay Behavioral Health & Addiction Medicine Center in Fairfield, which combines behavioral health/mental health urgent care, substance use treatment, and outpatient counseling on a single campus. This project requires planning, construction, compliance, workflow integration, and interdisciplinary programs. The leadership team has experience in outpatient and infrastructure projects, care coordination, and community health. For the Vallejo BREATHE Initiative, NorthBay will oversee clinic development, permitting, operational planning, referral systems, workflow, quality, and sustainability.

TUC maintains accredited colleges of osteopathic medicine, pharmacy, physician assistant studies, and public health and has longstanding partnerships with healthcare systems and community organizations throughout Northern California, including NorthBay Health, Solano County Public Health, Kaiser Permanente, Sutter Health, federally qualified health centers, community clinics, and nonprofit community organizations serving vulnerable populations.

TUC currently operates a bilingual Community Health Worker Micro-Credential Program and has extensive experience supporting interdisciplinary training, workforce development, public health practicums, community-based learning activities, and student placements focused on underserved communities. CHWs participating in the initiative are not required to possess bachelor's degrees. The initiative is intentionally designed to create accessible healthcare career pathways for Vallejo residents, including individuals without prior healthcare education experience. Scholarships and mentorship opportunities will support educational advancement following successful participation in the program.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

NorthBay Health will serve as Lead Applicant and provide fiscal oversight, grant administration, compliance monitoring, operational coordination, Epic-enabled data integration, reporting, clinic implementation oversight, and coordination across all project components.

TUC will serve as Co-Applicant and lead workforce development activities, CHW training and supervision, interdisciplinary environmental health education, Healthy Homes implementation, student placements, outreach, and evaluation support.

The initiative will be supported by a multidisciplinary implementation team that includes a Program Director, Program Coordinator, bilingual Outreach Coordinator, Faculty Lead, Community Health Workers, Clinic Operations Manager, Advanced Practice Nurse, independent Evaluation Consultant, and in-kind construction project management support responsible for coordination of tenant improvements, permitting oversight, contractor coordination, and clinic readiness activities.

NorthBay Health will leverage existing Epic infrastructure, referral coordination systems, patient registries, telehealth capabilities, and operational systems to support implementation. NorthBay Health is also evaluating interoperable care coordination platforms that support CHW mobile workflows and closed-loop referral tracking.

Long-term sustainability will be supported through institutional investment; integration of workforce activities into ongoing academic programming; outpatient reimbursement revenue; applicable Medi-Cal Community Health Worker and Asthma Preventive Services reimbursement pathways, where available; and future environmental health and workforce development funding opportunities. While future reimbursement and external funding cannot be guaranteed, both NorthBay Health and Touro University California are committed to sustaining core workforce, outreach, and clinical activities through broader organizational infrastructure and operational systems.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

The Air Aware Workforce and Healthy Homes components do not require construction-related permits. The BREATHE Cardiopulmonary Care Clinic will require standard tenant improvement permits, including building, MEP, accessibility, and fire/life safety approvals for outpatient medical office buildout activities. NorthBay Health has experience managing outpatient healthcare permitting and anticipates that all required approvals can be obtained within the grant term. An executed lease agreement and a site plan are included as Additional Documentation (per *GUIDE_Application Instructions)*.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

The Air Aware Workforce and Healthy Homes components do not require CEQA review. The proposed clinic involves tenant improvements at an existing commercial development site that previously underwent environmental review and obtained entitlement approvals. NorthBay Health anticipates that any required CEQA review will be limited and can be completed within the grant term.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

No additional site acquisition or easements are required for the Air Aware Workforce or Healthy Homes components. The proposed clinic will operate in a leased outpatient healthcare space at 884 Admiral Callaghan Lane, Vallejo, California. NorthBay Health has secured leasehold site control and expects to provide all required documentation prior to execution of the Grant Agreement. The executed lease agreement is included as Additional Documentation (per *GUIDE_Application Instructions)*.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

NorthBay Health will be responsible for ongoing operations and maintenance of the proposed clinic, including utilities, janitorial services, IT support, diagnostic equipment

maintenance, telehealth infrastructure, and operational oversight. Certain operational and maintenance costs associated with clinic infrastructure and implementation support may be reflected as organizational in-kind support. Facility operations and maintenance expenses will be covered by NorthBay Health operating funds and outpatient reimbursement revenue from commercial insurance, Medicare, Medi-Cal, and other payer sources.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Potential implementation barriers include coordination among multiple partners, timing related to leased clinical space and tenant improvements, healthcare workforce recruitment challenges, transportation barriers, participant engagement challenges, and distrust of healthcare systems among historically underserved populations.

The initiative is intentionally structured as a phased implementation model, allowing workforce development, outreach, environmental mitigation, referral coordination, and implementation planning to begin before full clinic operations. NorthBay Health will work closely with contractors, architects, property owners, and the City of Vallejo through proactive project management, implementation timelines, and regular coordination meetings to minimize permitting or construction delays.

Healthcare workforce recruitment challenges will be addressed through interdisciplinary workforce pipelines, bilingual CHW recruitment, partnerships with Touro University California, utilization of existing NorthBay Health clinical infrastructure, and creation of local healthcare career pathways designed to strengthen long-term workforce retention in Vallejo communities.

Transportation barriers and distrust of healthcare systems will be addressed through culturally responsive outreach, bilingual CHW-led engagement, home-based interventions, referral navigation support, transportation assistance where feasible, partnerships with trusted community organizations, and recruitment of CHWs from the communities being served. These approaches strengthen trust, improve communication between residents and providers, and increase utilization of preventive and specialty care services.

Long-term sustainability of outreach and preventive care activities will be supported through integration into NorthBay Health outpatient and population health infrastructure, reimbursement-supported clinical service delivery, integration into Touro University

California academic programming, and continued organizational commitment to addressing environmental health disparities in Vallejo communities.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:

NorthBay Health, in partnership with Touro University California (TUC), proposes the Vallejo BREATHE Initiative (VBI), a comprehensive, community-centered environmental health initiative designed to reduce the health impacts of air pollution exposure in Vallejo, California. The initiative integrates three coordinated components: 1) Air Aware Healthcare Workforce, which trains local residents as Community Health Workers (CHWs) while building long-term educational and healthcare career pathways focused on environmental health, asthma prevention, and community-based care; 2) the BREATHE Healthy Homes Project, which provides home-based environmental assessments, indoor air quality mitigation resources and improvements, asthma education, and environmental trigger reduction support; and 3) the BREATHE Cardiopulmonary Care Clinic, which provides outpatient specialty evaluation, treatment, and ongoing management of asthma and cardiopulmonary conditions associated with environmental exposure.

Collectively, these components establish an integrated prevention and care continuum designed to expand workforce opportunities for residents disproportionately impacted by environmental burdens, reduce exposure to indoor air pollutants, improve asthma self-management, expand access to specialty care, strengthen continuity of care, and reduce asthma-related emergency department utilization. Through CHW-led outreach, environmental mitigation, referral coordination, medication adherence support, and ongoing care navigation, the initiative addresses both the environmental and clinical drivers of respiratory and cardiopulmonary disease while strengthening long-term community health resilience.

VBI directly advances the goals of the Local Community Benefits Fund by reducing the harmful impacts of air pollution through targeted household and clinical interventions, improving public health outcomes through integrated preventive and specialty care, and promoting economic resilience through workforce development and educational pathways for local residents. Through sustained partnerships with community stakeholders, healthcare providers, public health agencies, and community-based organizations, the initiative is designed to remain responsive to community priorities while advancing a scalable and sustainable model to address the long-term health impacts of cumulative environmental exposure and historically inequitable environmental conditions.

Measurable Outcome	Indicator(s)
1. **AIR AWARE WORKFORCE DEVELOPMENT:** Develop and implement a sustainable Air Aware Healthcare Workforce pipeline focused on environmental health, asthma prevention, and community-based care coordination.	• Total # of CHWs hired • Total # of Vallejo residents participating in workforce development pathways • Total # of MPH practicum placements completed • Total # of student clinical rotations completed • Total # of scholarships awarded to Vallejo residents pursuing healthcare or public health careers • % of workforce trainees demonstrating competency gains in environmental health, asthma management, interdisciplinary care coordination, and community-based outreach • Workforce trainee retention
2. **REDUCE INDOOR AIR POLLUTION EXPOSURE:** Reduce indoor air pollutant exposure among participating households through Healthy Homes interventions	• Total # of asthma home visits (includes both environmental assessments and asthma self-management education) initiated • Total # of households and individuals receiving environmental mitigation resources • % of households implementing at least one mitigation recommendation • Participant-reported changes in respiratory triggers and symptoms • Participant satisfaction with Healthy Homes interventions and support services
3. **EARLY IDENTIFICATION OF CARDIOPULMONARY CONDITIONS:** Expand participation in community-based cardiopulmonary screening, referral, and specialty care services among high-risk Vallejo residents.	• Total # of individuals screened or assessed through CHW outreach, Healthy Homes interventions, and NorthBay referral pathways using evidence-informed environmental health, asthma, and cardiopulmonary risk assessment tools and standardized screening measures • Screening yield rate (asthma, COPD, hypertension, or cardiopulmonary condition diagnoses per 100 screenings) • Total # of referrals for outpatient cardiopulmonary care from CHW Outreach & Healthy Homes • % of referred patients completing initial visit • Average time from screening referral to completion of initial clinic visit
	• Total # of referrals generated from CHW Outreach, Healthy Homes, NorthBay • % of referred patients completing initial visit

4. IMPROVE ACCESS, REFERRAL COORDINATION, & CONTINUITY OF CARE: Increase access to outpatient cardiopulmonary specialty care & improve continuity of care for Medi-Cal and high-risk populations.	• Total # of patients seen in *Cardiopulmonary Care Clinic* • % of patients served from high-burden zip codes (e.g., 94590) • % of patients insured by Medi-Cal or uninsured • Average time from screening referral to completion of initial clinic visit • Follow-up completion rates within 30/60 days
5. REDUCE ASTHMA-RELATED ED-UTILIZATION: Reduce asthma-related ED visits among enrolled participants by 25% within three years.	• Reduction in asthma-related ED visits among participants actively engaged in Healthy Homes and/or BREATHE Cardiopulmonary Care Clinic services for at least 12 months, comparing pre-enrollment and post-enrollment utilization • Reduction in asthma-related hospitalizations among participants actively engaged in Healthy Homes and/or BREATHE Cardiopulmonary Care Clinic services for at least 12 months, comparing pre- and post-enrollment utilization • % of participants *actively engaged** in Healthy Homes and/or BREATHE Cardiopulmonary Care Clinic services for at least 12 months demonstrating improved scores on validated asthma control measures between enrollment and 12-month follow-up • % of participants *actively engaged** in Healthy Homes and/or BREATHE Cardiopulmonary Care Clinic services for at least 12 months, demonstrating improved asthma self-management behaviors including trigger reduction, symptom monitoring, and adherence to care plans • % of participants *actively engaged** in Healthy Homes and/or BREATHE Cardiopulmonary Care Clinic services for at least 12 months, demonstrating improved adherence to prescribed asthma or cardiopulmonary medication regimens • % of participants *actively engaged** in Healthy Homes and/or BREATHE Cardiopulmonary Care Clinic services for at least 12 months reporting reductions in respiratory symptoms, asthma triggers, and environmental exposure concerns

*For evaluation purposes, *active engagement* will be operationally defined in a detailed and measurable manner during the implementation and planning period. For purposes of this application, active engagement refers to ongoing participation in Healthy Homes and/or BREATHE Cardiopulmonary Care Clinic services over a minimum 12-month period, including participation in program activities such as home visits, environmental mitigation activities, outpatient visits, care coordination, asthma education, CHW engagement, and follow-up services.

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
AIR AWARE HEALTHCARE WORKFORCE DEVELOPMENT	Launch Air Aware Workforce Infrastructure and Curriculum Development	Develop a CHW curriculum that includes modules on environmental health, asthma prevention, indoor air quality, wildfire smoke exposure, and cardiopulmonary disease, integrating existing content where possible. NorthBay Health and TUC will explore participation in the Asthma Management Academy (AsMA), a training program designed to teach community health workers, educators, and frontline medical staff how to provide evidence-based asthma education to patients and families.	Touro University California (TUC)	NorthBay Health (NB)	Month 6
		Develop interdisciplinary training materials and a student placement framework	TUC	NB	Month 6
		Establish scholarship, mentorship, and career pathway framework	TUC	NB	Month 6
	Implement workforce recruitment, training, and deployment activities	Recruit Vallejo residents into CHW training pathways through bilingual outreach, community partnerships, and NorthBay asthma ED visit referral.	TUC	NB	Months 6-18
		Conduct CHW training, supervision, and deployment into Healthy Homes and outreach activities	TUC	NB	Months 9-36
		Coordinate MPH practicums and PA, PharmD, and medical student clinical rotations	TUC	NB	Months 9 - 36
	Evaluate workforce development outcomes	Conduct trainee competency assessments and evaluations	TUC	Evaluation consultant	Annually
		Monitor scholarship utilization, educational advancement, and workforce placement outcomes	TUC	Evaluation consultant	Annually

REDUCE INDOOR AIR POLLUTION EXPOSURE	Launch Healthy Homes outreach and enrollment activities	Conduct outreach and enrollment in high-burden Vallejo communities	TUC	CHWs, CBO partners	Months 1-12
		Identify eligible households through referrals, outreach, and ED utilization data	TUC	NorthBay Health,	Months 6-12
		Schedule and conduct household environmental assessments	TUC CHWs	CHWs	Months 12-36
	Implement household environmental mitigation interventions	Distribute HEPA air purifiers and environmental mitigation resources	TUC CHWs	NorthBay Health	Months 12-36
		Provide asthma education and environmental trigger reduction counseling	TUC CHWs	CHWs	Months 12-36
		Coordinate ventilation, HVAC, moisture, and mold-related mitigation activities	TUC CHWs	NorthBay Health	Months 12-36
	Evaluate household environmental outcomes	Conduct participant respiratory symptoms and satisfaction surveys	TUC CHWs	Evaluation Consultant	Months 12-36
EARLY IDENTIFICATION OF CARDIOPULMONARY CONDITIONS	Establish screening and referral workflows	Develop standardized environmental health and cardiopulmonary screening tools	NorthBay Health	TUC	Months 4-9
		Develop Epic-enabled participant tracking and referral coordination workflows	NorthBay Health	IT/Analytics Teams	Month 9
		Train CHWs and clinical staff on screening and referral protocols	NorthBay Health	TUC	Months 9-12
	Implement outreach and screening activities	Conduct home-based environmental and cardiopulmonary screenings	TUC CHWs	NorthBay Health	Months 12-36
		Identify high-risk residents requiring specialty care referral	TUC CHWs	NorthBay Health	Months 12-36
		Refer high-risk participants into BREATHE Cardiopulmonary Care Clinic	TUC CHWs	NorthBay Health	Months 12-36
	Evaluate screening and referral outcomes	Monitor screening completion and referral rates	TUC/NorthBay Health	Evaluation Consultant	Months 12-36
		Analyze diagnostic yield and early-stage identification outcomes	NorthBay Health	Evaluation Consultant	Months 12-36

IMPROVE ACCESS, REFERRAL COORDINATION, AND CONTINUITY OF CARE	Establish integrated specialty care infrastructure	Launch community-centered outpatient cardiopulmonary prevention and care services (clinic)	NorthBay Health	Construction and Facilities Teams	Month 9
		Develop closed-loop referral coordination workflows	NorthBay Health	TUC	Month 9
		Implement interoperable referral and care coordination systems	NorthBay Health	IT/Analytics Consultants	Month 12
	Implement Coordinated specialty care services	Provide outpatient diagnostic and specialty cardiopulmonary care services	NorthBay Health	Clinical providers	Months 9-36
		Provide bilingual navigation, scheduling, and follow-up support	CHWs	NorthBay Health	Months 12-36
		Coordinate referrals from Healthy Homes, CBOs, and healthcare providers	NB	TUC CHWs, CBO partners	Months 12-36
	Evaluate continuity of care outcomes	Track referral completion and follow-up rates	NB	Eval Consultant	Quarterly
		Monitor appointment access and participant retention	NB	TUC	Quarterly
REDUCE ASTHMA RELATED ED UTILIZATION	Implement integrated asthma prevention and disease management interventions	Coordinate CHW-led asthma self-management education and medication adherence support	TUC	NB	Months 12-36
		Provide coordinated environmental mitigation and outpatient specialty care services	NB	TUC	Months 12-36
		Conduct longitudinal care coordination and follow-up activities	TUC CHWs	NorthBay Health	Months 12-36
	Evaluate utilization and health outcomes	Compare pre- and post-enrollment asthma-related ED utilization	NorthBay Health	Evaluation Consultant	End of Y2; End of Y3
		Monitor asthma hospitalization rates and symptom improvement outcomes	NorthBay Health	Evaluation Consultant	End of Y2; End of Y3
		Conduct quarterly CQI review and program improvement activities	NorthBay Health	TUC	Quarterly

Total Project Cost (All Applicants))	$5,000,000.00

Project Name:	Vallejo BREATHE Initiative: Cardiopulmonary Care Clinic
Lead Applicant Name:	NorthBayHealth
Grant Term Request:	

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Construction	Direct	BREATHE Clinic remodel / tenant improvements ($4,096,000 x 15%)	Proportional allocation of clinic remodel and tenant improvement costs associated with implementation of the BREATHE Cardiopulmonary Care initiative, including exam room modifications, shared-use clinical workflow improvements, telehealth integration, patient-access enhancements, and infrastructure supporting outpatient environmental health and respiratory care services. Shared renovation and infrastructure costs were proportionally allocated to the project based on estimated clinic utilization and square footage associated with the dedicated cardiopulmonary clinic space. The clinic exam rooms represent 18% of the total renovated area; a conservative 15% allocation methodology was applied to account for associated shared patient circulation, workflow, and operational support space supporting project implementation.	$614,400.00
Professional Services & Consultants (<25% of total budget)	Direct	Construction Contractor ($65K x 15%)	Preconstruction planning, estimating, and implementation coordination services associated with the BREATHE cardiopulmonary clinic buildout.	$9,750.00
Professional Services & Consultants (<25% of total budget)	Direct	Architect and Engineering Design Services ($260K x 15%)	Architectural, engineering, permitting coordination, and reimbursable design services associated with proportional buildout and implementation of the BREATHE cardiopulmonary clinic and shared-use diagnostic integration.	$39,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	CT ($899,308 x 5%)	Proportional allocation of shared-use CT imaging infrastructure supporting diagnostic evaluation and early identification of cardiopulmonary conditions associated with environmental exposures, including asthma complications, chronic respiratory disease, and other pollution-related health impacts among high-risk and underserved populations participating in the BREATHE Initiative. Allocation methodology reflects estimated utilization associated with the dedicated cardiopulmonary clinic and related outpatient respiratory health services.	$44,965.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	X-ray ($318,617 x 5%)	Proportional allocation of shared-use X-ray imaging infrastructure supporting outpatient assessment and management of respiratory and cardiopulmonary conditions associated with the BREATHE Initiative.	$15,931.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Ultrasound ($145,193 x 5%)	Proportional allocation of shared-use ultrasound imaging infrastructure supporting cardiopulmonary evaluation, diagnostic services, and outpatient care coordination activities associated with implementation of the BREATHE Initiative.	$7,260.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Spacer Devices for Metered-Dose Inhalers (in kind)	Spacer devices to support asthma and respiratory disease self-management, improve medication delivery, and reduce preventable exacerbations among high-risk participants. In-kind valued at $7000.	
Materials, Supplies & Equipment (> $5K itemized)	Direct	Peak Flow Meters (in kind)	Peak flow monitoring devices for respiratory assessmeent, patient education, and home monitoring of asthma symptoms and pulmonary function. In-kind valued at $12,000.	
Materials, Supplies & Equipment (> $5K itemized)	Direct	Spirometry Equipment and Supplies (in kind)	Spirometry testing equipment and disposable supplies to support early identification and management of pollution-related respiratory disease. In-kind valued at $20,000.	
Materials, Supplies & Equipment (> $5K itemized)	Direct	Nebulizer Equipment and Supplies (in kind)	Nebulizer equipment and respiratory treatment supplies for outpatient stabilization and patient education activities. In-kind valued at $11,000.	
Other Direct Costs	Direct	Respiratory Education Materials (in kind)	Educational materials and printed resources related to asthma management, air quality exposure reduction, wildfire smoke safety, and respiratory disease prevention. In-kind valued at $5000.	
Materials, Supplies & Equipment (> $5K itemized)	Direct	Limited Respiratory Starter Supplies for Uninsured Participants	Limited patient respiratory support kits for uninsured/high-risk participants, including basic asthma self-management supplies and discharge support materials.	$24,694.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Clinical Furniture and Fixtures (in-kind: $185K x 15%)	Proportional allocation of clinical furniture and fixtures assoicated with implementation of the BREATHE cardiopulmonary care model, including exam room furnishings, patient seating, care coordination workstations, and shared patient access infrastructure. In-kind valued at $27,750.	
Materials, Supplies & Equipment (> $5K itemized)	Direct	Signage ($85K x 15%)	Proportional allocation of patient-access, educational, and wayfinding signage associated with implementation of the BREATHE cardiopulmonary care initiative, including clinic identification, environmental health education, patient navigtaion, and shared-use clinical access signage.	$12,750.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Moveable Medical Equipment (in-kind: $110K x 15%)	Proportional allocation of general movable clinical equipment and patient-care devices associated with implementation of the BREATHE cardiopulmonary care initiative, including mobile carts, exam room support equipment, monitoring accessories, telehealth support equipment, and shared outpatient clinical care devices. In-kind valued at $16,500.	
Construction	Direct	Security and Access ($205K x 15%) Infrastructure	Proportional allocation of security, access-control, and patient-safety infrastructure associated with implementation of the BREATHE cardiopulmonary care initiative within shared-use outpatient clinical environment.	$30,750.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Network and Clinical Data Infrastructure ($45K x 15%)	Proportional allocation of network electronics and clinical data infrastructure supporting implementation of the BREATHE cardiopulmonary care initiative, including telehealth connectivity, clinical workflow integration, patient tracking, and environmental health program reporting	$6,750.00
Other Direct Costs	Direct	Permitting and Regulatory Fees ($65K x 15%)	Porportional allocation of permitting, plan review, inspection, and regulatory compliance fees associated with implementation of the BREATHE cardiopulmonary care clinic within a shared-use outpatient healthcare facility.	$9,750.00
Personnel/Staff Costs	Direct	Pulmonary APN (0.6 FTE, 30 months)	Pulmonary nurse practitioner supporting outpatient evaluation, treatment, follow-up care, environmental exposure assessment, and care coordination for patients with pollution-related cardiopulonary conditions through the BREATHE cardiopulmonary care initiative. APN will begin seeing patients after the initial six month planning and	$416,000.00
Personnel/Staff Costs	Direct	Cardiopulmonary Clinic Operations / Project Manager (0.6 FTE, 36 months)	The Clinic Operations / Project Manager will oversee operational implementation of the BREATHE Cardiopulmonary Care clinic and serve as the primary coordination lead for clinic-based activities associated with the broader BREATHE Initiative. Responsibilities include startup coordination, clinic workflow development, scheduling and referral system implementation, coordination with Touro University California and community partners, operational troubleshooting, grant reporting support, quality monitoring, procurement and equipment coordination, compliance support, and oversight of implementation timelines and deliverables. The position will also coordinate with Epic and data teams regarding patient tracking, referral workflows, outcome monitoring, and reporting infrastructure. This role is essential to ensuring successful integration between clinical services, community-based environmental health interventions, and workforce development activities. The Project Manager will be responsible for planning and coordination at the start of the grant period.	$288,000.00
Personnel/Staff Costs	Direct	Construction Project Manager (in-kind)	Operational oversight and implementation support associated with BREATHE clinic development, construction coordination, and operational readiness activities (in-kind)	
Personnel/Staff Costs	Direct	Patient Receptionist / Care Coordinator (0.6 FTE, 30 months)	Patient navigator responsible for scheduling support, referral coordination, patient outreach, follow-up tracking, care navigation, and linkage to cardiopulmonary and environmental health services for participants in the BREATHE Initiative. Patient Receptionsit will begin scheduling and referring patients at the end of the initial six	$147,000.00
Professional Services & Consultants (<25% of total budget)	Direct	Epic Registry Build, Referral Tracking, and Outcomes Reporting Infrastructure	Development of a project-specific Epic registry and associated reporting infrastructure to support participant tracking, referral management, outcome monitoring, care coordination workflows, and implementation reporting for the BREATHE Initiative. Costs include Epic configuration, workflow development, reporting/dashboard support, and integration of community-based environmental health interventions with outpatient cardiopulmonary care services.	$140,000.00
Professional Services & Consultants (<25% of total budget)	Direct	Interoperability / Care Coordination Platform Consultant	This individual will configure field platform and workflow integration, support interoperability planning, coordinate secure referral workflows, support CHW/mobile documentation processes, and ensure data compatibility between field platforms and Epic workflows.	$85,000.00

Project Summary (auto-calculated)

Total Direct Costs	$1,932,000.00
Total Indirect Costs	$375,000.00

FLOOR PLAN GENERAL NOTES

1. DIMENSIONS ARE TO FACE OF INTERIOR GYPSUM BOARD, TILE BACKER BOARD, FACE OF EXTERIOR WALL MATERIALS, STRUCTURAL GRIDS AND CENTERLINES WHERE INDICATED.
2. ALL GYPSUM WALLBOARD TO BE 5/8" UNO TYPE 'X' EXCEPT AT THE FOLLOWING LOCATIONS:
   A. AT RESTROOMS WITHOUT A SHOWER (TCNA COM2 AREAS), PROVIDE 5/8" UNO MOISTURE AND MOLD RESISTANT GYPSUM BOARD COMPLYING WITH ASTM C1396 FOR WALLS AND BEHIND TILE.
   B. AT WET AREAS INCLUDING BUT NOT LIMITED TO SHOWERS, STERILE PROCESSING ROOMS, JANITOR CLOSETS, SAUNAS, AND SWIMMING POOLS (TCNA COM3/4 AREAS), PROVIDE:
      1. AT TILE AND WALL PROTECTION LOCATIONS: PROVIDE 5/8" UNO COATED GLASS-MAT FACED WATER-RESISTANT GYPSUM WALLBOARD COMPLYING WITH ASTM C1178 OR 5/8" UNO CEMENT BACKER BOARD COMPLYING WITH ASTM C1325
      2. AT PAINTED GYPSUM BOARD LOCATIONS (INCLUDING CEILINGS): PROVIDE 5/8" UNO TYPE 'X' MOISTURE AND MOLD RESISTANT GYPSUM BOARD COMPLYING WITH ASTM C1396
3. PROVIDE RATED ENCLOSURES OR PUTTY PACKS AROUND ALL OUTLETS, BOXES, CABINETS, PIPING, DUCTWORK, ETC., THAT ARE RECESSED IN WALLS. ENCLOSE TO PROVIDE SAME RATING AS THE WALL WHERE IT IS LOCATED. SEE DETAILS ON THE A7 SHEETS.
4. DOORS SHALL BE LOCATED 4" FROM ADJACENT PERPENDICULAR WALL TO THE INSIDE EDGE OF THE DOOR FRAME, UNO. SEE DOOR DETAILS ON THE A8 SHEETS.
5. J-BOXES SHOWN BACK-TO-BACK MAY BE ADJUSTED TO OFFSET THE BOXES WITH APPROVAL FROM THE ARCHITECT. SEE DETAILS ON THE A7 SHEETS.
6. HIGHEST PRIORITY PARTITIONS ARE LISTED FIRST IN THE PARTITION LEGENDS. SUBSEQUENT PARTITIONS DECREASE IN PRIORITY. HIGHER PRIORITY WALLS TAKE PRECEDENCE, SEE WALL PRIORITY DETAILS ON A7 SHEETS.
7. EXISTING PARTITIONS APPEAR AS "HALF-TONE" ON PLANS.
8. FOR LEVEL 5 DRYWALL FINISH LOCATIONS REFER TO FINISH LEGEND AND FINISH PLANS.

EDITOR'S NOTE: MODIFY THE NOTES LISTED TO YOUR PROJECT SPECIFIC NEEDS OR REMOVE THEM ENTIRELY.

IF YOUR PROJECT IS IN SEISMIC DESIGN CATAGORY C, D, OR E THEN ADD THESE NOTES TO THE CEILING PLAN GENERAL NOTES:

SEISMIC:

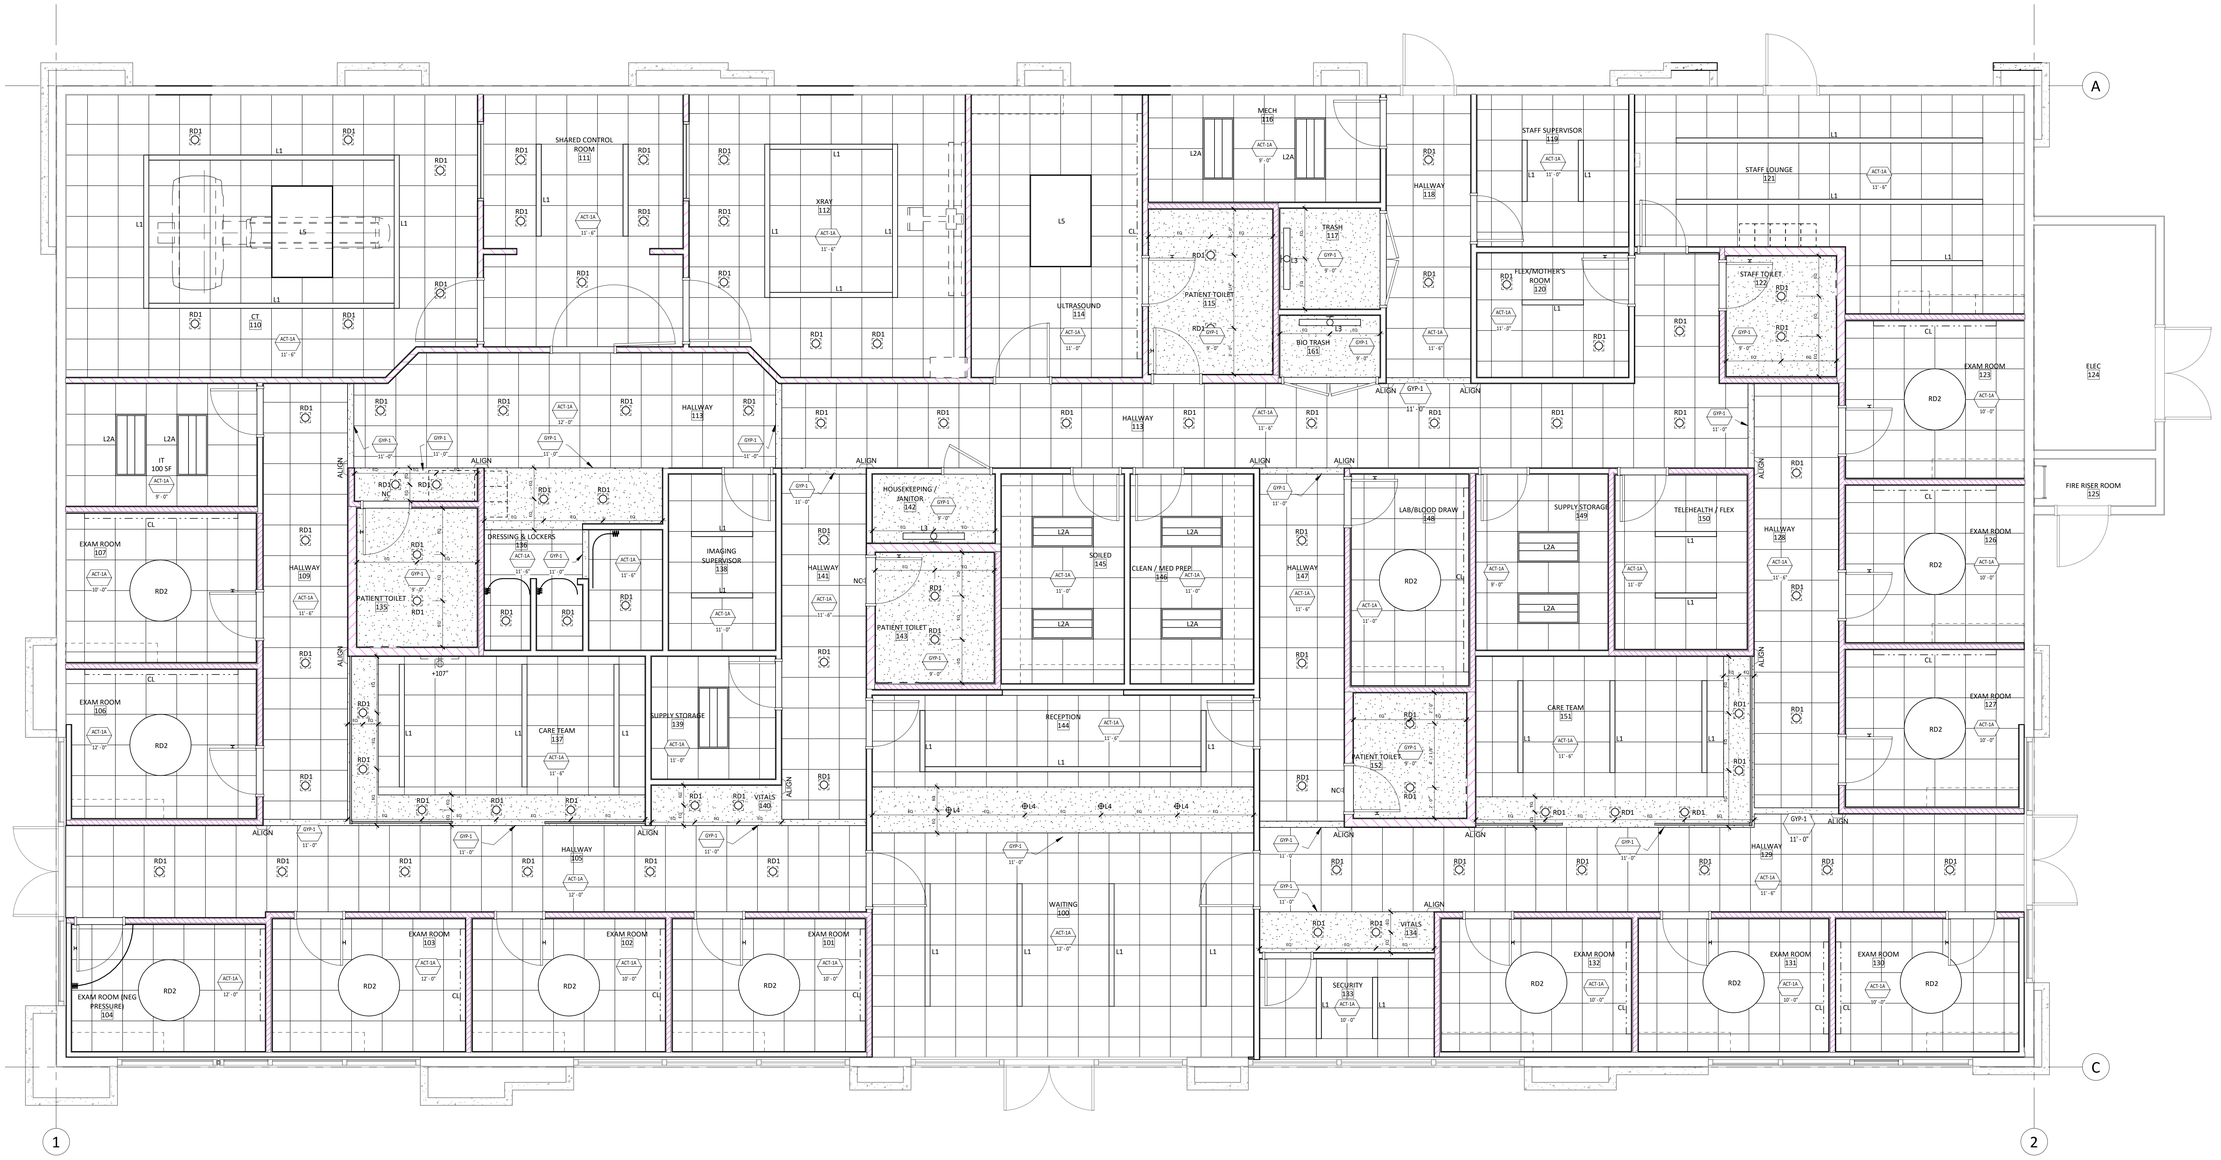
1. *CONTRACTOR TO PROVIDE SEISMIC MOUNTING FOR CEILINGS AND FIXTURES PER DETAILS ON A7.40 FOR ALL CEILINGS.*
2. *CONTRACTOR TO PROVIDE ADDITIONAL SUPPORT PER DETAILS ON A7.40 FOR ALL SPACES OVER 144SF.*
3. *CONTRACTOR TO PROVIDE ADDITIONAL LATERAL BRACING PER DETAILS ON A7.40 FOR ALL SPACES GREATER THAN 1,000SF.*

CEILING PLAN GENERAL NOTES

CEILING FINISH:

1. GENERAL CEILING PAINT SHALL BE [P3], UNLESS NOTED OTHERWISE.
2. [PAINT AND WALLCOVERING INDICATED FOR SOFFITS SHALL WRAP ALL EXPOSED SURFACES OF SOFFIT, UNLESS NOTED OTHERWISE.]
3. [ALL SIDES OF GYP. BOARD SOFFITS ABOVE UPPER CABINETRY SHALL BE PAINTED TO MATCH ADJACENT WALL FINISH, UNLESS NOTED OTHERWISE.]
4. REFER TO MATERIALS LIST ON A2 SHEETS FOR PAINT AND WALLCOVERING INFORMATION.
5. [EDGES OF CUT CEILING TILES ARE TO BE PAINTED WITH CEILING MANUFACTURER'S MATCHING TOUCH UP PAINT.]

CEILING GRID:



1. LOCATE FIXTURE IN RELATION TO CEILING GRID AS SHOWN ON PLAN. IF ACTUAL CONDITIONS CONFLICT WITH PLAN, CONTACT ARCHITECT PRIOR TO INSTALLATION.
2. SUSPENDED CEILING SYSTEMS TO COMPLY WITH APPLICABLE PROJECT CODES.
3. [ACT BRACING TO BE ANGLED/ATTACHED AWAY FROM OPEN STRUCTURE. SEE TYPICAL DETAILS.]

MEP COORDINATION:

1. SEE MECHANICAL AND ELECTRICAL DRAWINGS FOR LIGHTING, REGISTER, GRILLES, AND DIFFUSER LEGENDS.
2. AT GWB CEILINGS PROVIDE ACCESS PANELS AS REQUIRED FOR EQUIPMENT AND SYSTEM MAINTENANCE, INCLUDING BUT NOT LIMITED TO: FIRE SMOKE DAMPERS, FIRE LIFE SAFETY UJ-BOXES, FAN COILS AND VAV BOXES PER MANUFACTURER'S WRITTEN RECOMMENDATIONS, CONDUIT BANK PULL BOXES, CONTROL AND SHUT-OFF VALVES. UNLESS OTHERWISE SHOWN PROVIDE FLUSH DRYWALL TYPE ACCESS PANELS W/ CONCEALED FRAME AT ALL NON-RATED LOCATIONS. COORDINATE LOCATIONS WITH ARCHITECT PRIOR TO INSTALLATION.
3. [IN OPEN TO STRUCTURE AREAS ALL WIRES AND CABLING SHALL BE RUN IN TIGHT BUNDLES, RIGID CONDUIT, OR CABLE TRAYS AS COORDINATED WITH ARCHITECT AT A UNIFORM HEIGHT ABOVE FINISH FLOOR.]
4. [REFERENCE LIGHTING & ELECTRICAL DRAWINGS AND CUTSHEETS FOR MOUNTING HEIGHTS, DIMENSIONS, AND ADDITIONAL INFORMATION NOT SHOWN ON DRAWINGS. NOTIFY ARCHITECT OF CONFLICTS IN MOUNTING LIGHT FIXTURES.]
5. [WHERE WALL WASHERS ARE CO-LOCATED WITH WHITE BOARDS CENTER THE WHITEBOARD UNDER THE WALL WASHER FIXTURE AND ACT.]
6. [COORDINATE AV ITEM LOCATIONS SUCH AS PROJECTOR, SPEAKERS, CAMERA, MICROPHONES WITH ACOUSTIC CEILING TILE IN AV ROOMS, AV AND AV READY CONFERENCE ROOMS W/ ARCHITECT & OWNER PRIOR TO INSTALLATION.]
7. [REFER TO ENGINEERING DRAWINGS FOR LIFE SAFETY DEVICES REQUIRED BY CODE AND EMERGENCY LIGHT FIXTURES. COORDINATE LOCATION OF DEVICES W/ ARCHITECTURAL DOCUMENTS.]

OTHER:

1. DIMENSIONS ARE TO FACE OF INTERIOR GYPSUM BOARD, TILE BACKER BOARD, STRUCTURAL GRIDS, AND CENTERLINES WHERE INDICATED.

Bay Area Air District
CLEAN AIR FOR ALL

Benicia Opportunity
Public Health Institute Application

Bay REPAIR
Local Community Benefits Fund – Round 1
Opportunity and Catalyst Grants
Overall Narrative

Application Information	
Application Title	Childcare Clean Air & Resilient Environments (C-CARE): Benicia
Lead Applicant	Regional Asthma Management & Prevention (RAMP), a project of the Public Health Institute
Application Location	Benicia and surrounding communities
Overall Funding Request	$2,473,897.88
Grant Term Request	3 years

PROPOSAL VISION (10 points)

1. *Provide a short summary that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund.*

The Childcare Clean Air & Resilient Environments (C-CARE): Benicia project will mitigate air pollution's impacts and improve public health for young children in childcare settings in Benicia and surrounding communities. Because young children are particularly vulnerable to the health impacts of air pollution, our goal is to improve air quality in the locations where children ages 0-5 spend most days: childcare settings. We will achieve this through:

- Improved air filtration through the distribution of high-efficiency particulate air (HEPA) cleaners and replacement filters to a target of at least 500 of the childcare facilities in the area.
- Heating, air conditioning and ventilation systems (HVAC) optimization and upgrades at select facilities including First 5 resource centers in Vallejo and Pittsburg and 3-4 large childcare centers.
- Education of childcare providers about indoor air quality including cleaning products, pests and pesticides, moisture and mold, and gas stoves, and outdoor air pollution including refinery emissions and wildfire smoke.
- Education of parents/caregivers who attend the First 5 resource centers on air quality and actions they can take to improve indoor air quality.
- Distribution of 200 HEPA air cleaners and replacement filters to parents/caregivers who attend the First 5 resource centers who attend the trainings.

This project directly advances the Local Community Benefits Fund strategy to reduce air pollution and improve health outcomes by integrating education, environmental interventions, and monitoring to mitigate air pollution's impacts and improve public health for young children in childcare settings in Benicia and surrounding communities. The project also supports economic resilience for a just transition by investing in community-based organizations, strengthening local childcare infrastructure, and reducing the economic burden of asthma and poor air quality on families and providers.

The proposed scope of work meets community-identified needs and engages communities in the development and implementation of the project. For this proposal, we engaged for over three months with our community partners, including CoCo Kids, Solano Family and Children's Services, First 5 Contra Costa, First 5 Solano, Bay Area Community Resources (BACR), and Lincoln Families to develop this

project. We also conducted surveys (using smartphone compatible platforms including SurveyMonkey and Qualtrics) of childcare providers in the Benicia area and parents who attend the First 5 Resource Centers in Vallejo and Pittsburg. The surveys were conducted in Spanish and English in February through April 2026. Additionally, the Parent Advisory Group of the First 5 Resource Center in Pittsburg provided input. The purpose of the surveys and advisory group input was to gather information on community air quality needs and priorities and help shape the proposed project.

Measurable outcomes, co-developed with our partners and informed by surveys, include:

- Reduction in indoor air pollution in childcare settings.
- Increased knowledge of childcare providers and parents/caregivers with young children about the health effects of air pollution and how to effectively reduce exposure to outdoor and indoor air pollution in childcare and home settings.
- Changes in behaviors that influence indoor air quality in order to improve air quality in childcare and home settings.
- Improved asthma symptoms among young children who attend childcare settings.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

The population that will benefit most from the proposed project is young children who are at greater risk from inhaled pollutants. Relative to body size, children eat, breathe, and drink more than adults, and their natural biological defenses are less developed. The protective barrier surrounding the brain is not fully developed, and children's nasal passages aren't as effective at filtering out pollutants. Developing lungs, immune, and metabolic systems are also at risk. Children are particularly susceptible during development. Environmental exposures during fetal development, the first few years of life, and puberty have the greatest potential to influence later growth and development.[i]

The First 5 Center in Pittsburg serves about 1,100 children annually and the First 5 Center in Vallejo serves about 1,800. The number of children attending childcare facilities in the project area is approximately 11,100. Overall, the children and their families served by this project are racially and ethnically diverse, including large percentages of both Black/African American and Latino/Hispanic children. For example, of the families served in the last year by Lincoln Families (in the Pittsburg area of Contra Costa), 64% identified as Hispanic or Latino and 14% as African American or Black, while Solano Family and Children's Services reports that in the Solano County portion of the grant area, 32% of the children are Hispanic or Latino and 33% are African American or Black. This is noteworthy as asthma disproportionately impacts Black/African American and Latino/Hispanic populations.

Meanwhile, the following chart shows the asthma emergency department rate and per capita income for several of the zip codes served by this project. These communities have a lower per capita income and have faced numerous environmental challenges (many, in fact, are ranked in high percentiles for various types of air pollution on the CalEnviroScreen), leading to higher asthma emergency department rates than for California as a whole.

City	Zip code	Asthma ED rate/10,000*	Per Capita income**
Pittsburg	94565	74.9	28,100

Concord (a portion of which is in the target area)	94520	42.9	28,900
Vallejo	94590	94.5	27,200
Rodeo	94572	56.8	35,000
Bay Point	94565	74.9	28,100
California		34.9	37,300
*Data from Tracking California. https://trackingcalifornia.org/#gsc.tab=0 Accessed March 5, 2026.			
**Data from California Healthy Places Index. https://map.healthyplacesindex.org/ Accessed March 5, 2026.			

A secondary population that will benefit is the childcare workers themselves, as most childcare workers are low-income women. Low-income Californians experience more asthma symptoms, use the emergency room more for asthma care, miss more school due to asthma, and are more likely to encounter asthma risk factors.

PARTNERSHIP STRUCTURE (20 points)

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

Childcare Clean Air & Resilient Environments (C-CARE): Benicia, was developed by a diverse team of partner organizations that jointly developed two proposals—C-CARE: Benicia and C-CARE: Richmond—with the recognition that young children in both areas face the same health risks of indoor air pollution. Regional Asthma Management & Prevention (RAMP), a project of the non-profit Public Health Institute is the lead on C-CARE: Benicia, UCSF is the lead on C-CARE: Richmond. The two proposals were carefully designed to be complementary and not duplicative. Each proposal can be implemented independently, yet if both proposals are funded, they will be implemented in a coordinated manner.

Regional Asthma Management & Prevention (RAMP), a project of the non-profit Public Health Institute, has extensive experience working with communities to reduce exposure to air pollution and will serve as the project lead. Co-Applicants include: the University of California, San Francisco (UCSF) and its Western States Pediatric Environmental Health Specialty Unit (PEHSU); Bay Area Community Resources (BACR) and Lincoln Families, each of which manages educational programming at family resource centers on behalf of the First 5 organizations; and two childcare resource and referral networks, CoCoKids and Solano Family and Children's Services. First 5 Solano County and First 5 Contra Costa County will serve as advisors and participate in the Leadership Team as an in-kind contribution. Additional descriptions of the project team follow.

RAMP, the lead applicant, works to reduce the burden of asthma with a focus on health equity. Emphasizing both prevention and management, RAMP builds capacity, creates linkages, and mobilizes networks to advocate for policy and systems changes targeting the root causes of asthma disparities. RAMP staff have over two decades of experience providing responsive technical assistance in support of asthma work in both Solano and Contra Costa Counties.

The University of California, San Francisco will be a co-applicant, bringing in expertise from the UCSF Division of Occupational, Environmental and Climate Medicine (OECM) and from the Western States Pediatric Environmental Health Specialty Unit (PEHSU). The Division of OECM, led by [redacted] has extensive experience with implementation science, community-engaged health research, and air pollution monitoring. The PEHSU's mission is to improve reproductive and children's health by leading

the integration of environmental health into clinical care and public health while supporting communities. The PEHSU team has extensive experience co-developing and delivering training programs with and for community partners.

Bay Area Community Resources (BACR) works in the heart of communities to foster generational change. Lincoln Families disrupts cycles of poverty and trauma, empowering children and families to build strong futures. Among many other services, each organization manages the programming at a First 5 Resource Center: BACR manages First 5 Vallejo and Lincoln Families manages First 5 Pittsburg.

CoCoKids and Solano Family & Children's Services are two childcare resource and referral agencies that champion and advance quality childcare and early education. They provide services to improve the lives of thousands of children, families and early educators through: free child care referrals for all families; parent education and resources, including links to other community services; financial assistance to at-risk and low-income working families so disadvantaged children can have access to child care and preschool education; child safety, health and nutrition education; provider training and support to help child care professionals build sustainable businesses and to provide quality, healthy and age-appropriate care; and public education about the importance of a child's early years of growth and development, and the need to invest in children for our future.

First 5 agencies were established by a ballot measure in 1998 in all 58 counties in California. They are dedicated to improving the lives of California's young children and their families through a comprehensive system of education, health services, childcare, and other programs. First 5 Solano County and First 5 Contra Costa County will both provide in-kind support and will serve on the Leadership Team to support effective project implementation.

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

As the Lead Applicant, RAMP convened a Leadership Team that worked together to develop this proposal; that same group will continue meeting throughout the 3-year grant term to serve as the key venue for collaborative decision-making to ensure the project is implemented effectively, guided by the overall goal of advancing integrated efforts to holistically meet community needs. The Leadership Team includes a representative from each Co-Applicant organization plus each of the First 5 agencies. Together, the members of the Leadership Team offer a well-balanced mix of different content and skill strengths coupled with across-the-board experience in project implementation. To take two examples: RAMP and UCSF have extensive experience in designing and implementing trainings on a wide range of air quality topics, while the other Co-Applicants have extensive experience in structuring the delivery of trainings to respond well to the often competing demands faced by the training participants (i.e., parents/caregivers and childcare providers). Similarly, RAMP and UCSF have experience in researching and selecting air cleaners appropriate for different spaces, while the Co-Applicants have considerable understanding how best to get those air cleaners to childcare providers and parents/caregivers.

During the proposal writing process, the Leadership Team worked collaboratively to develop the overall scope of work, as well as roles and responsibilities, for the proposed project. As the Lead Applicant, RAMP will be responsible for overall project management and administration. Together, RAMP and UCSF (a Co-Applicant) will play a key role in developing the training curricula, providing trainings, selecting air cleaners for distribution, and evaluating the project. UCSF will also take the lead on air quality monitoring and HVAC upgrade assessments. Other Co-Applicants, including BACR, Lincoln

Families, CoCoKids, and Solano Family and Children's Services will serve as the primary liaison with the parents/caregivers and childcare providers, including providing feedback on the training curricula, handling the logistics of ongoing trainings including recruitment, and distributing air cleaners to training participants. First 5 Solano County and First 5 Contra Costa County will serve as advisors and participate in the Leadership Team as an in-kind contribution. They will also serve as a point of contact for HVAC improvements at First 5 resource centers, as they own the facilities.

While these roles are clear, they will not be executed in disconnected silos. Rather, cooperation and collaboration is central to this project, so over the course of the project, the Lead Applicant and Co-Applicants will continue their joint planning efforts. Specifically, once the grant period begins, the Leadership Team will meet at least monthly for the first 6 months, reducing to bi-monthly or quarterly for the remainder of the grant depending on needs. The Leadership Team will jointly make all key decisions about project design and implementation, including working together to identify and overcome challenges. Importantly, the Leadership Team will ground its decisions in community perspectives, as RAMP and the Co-Applicants will individually and/or collectively gather community input throughout the grant period (see the next section for additional details about this project's community engagement and responsiveness). RAMP will also serve as a liaison between the Leadership Team and other funded projects in the greater Benicia area to ensure complementary efforts are implemented in a coordinated and effective manner.

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to: Coordinate overall community engagement activities; Track and report on indicators to assess progress towards measurable outcomes; Collect and process reporting, reimbursement and invoicing requirements.*

Coordinate overall community engagement activities: The Co-Applicants based in the greater Benicia area have extensive connections to the communities they serve, including parent advisory councils, in-person engagement through classes and drop-in visits, and regular email communication that can be used to share updates or request input. This community engagement infrastructure will be central to project implementation. The infrastructure provided input that shaped this proposal's development; for example, the Solano First 5 Parent Advisory Group identified both indoor and outdoor air quality as priority concerns. Parent surveys conducted by BACR and Lincoln Families showed that 60% of respondents consider the intrusion of outdoor air pollution as a top concern related to indoor air quality. Some of the top outdoor air quality concerns included roads/freeways (69% of respondents), wildfire smoke (54% of respondents), and refineries (52% of respondents). Sixty percent of respondents said that they have never used an air cleaner, and 85% said they would use an air cleaner if they were given one. Similarly, CoCo Kids and Solano Family and Children's Services surveyed childcare providers as part of the grant development process and found that 68% of respondents are concerned about outdoor air pollution getting inside. With regard to air quality outside their childcare facilities, 68% said they are concerned about pollution from nearby freeways, 64% are concerned about pollution from nearby refineries or industries, and 54% are concerned about wildfire smoke. Among respondents who do not currently use an air cleaner in their childcare facility, 58% said that it is because they cannot afford an air cleaner or replacement filters. Ninety-eight percent said they would use an air cleaner if given one.

Using the existing communication infrastructure, we will also seek input on the educational materials and the content and format of trainings so that continuous improvements can be made in

response to community priorities. We will also share air monitoring data and details of building improvements with childcare providers and parents/caregivers using the facilities. RAMP will lead development of surveys or tools; the Benicia-area based Co-Applicants will use their communication channels to gather input and RAMP staff will conduct follow-up analyses in coordination with UCSF.

Track and report on indicators to assess progress towards measurable outcomes: To evaluate air quality and document improvements, UCSF will monitor indoor and outdoor PM2.5, PM10, CO2, relative humidity, and temperature at each First 5 resource center with monitors in each of the child activity rooms and one monitor outdoors. Staff will also install monitors in each of the childcare facilities that receive HVAC upgrades, including one monitor indoors and one monitor outdoors. We will provide consumer-grade monitors to building staff and will develop a schedule for testing and calibrating them with research-grade instruments. As the Lead Applicant, RAMP will coordinate with UCSF and the First 5 center staff and childcare center staff to ensure completion of these activities with minimal burden on the regular activities of the centers and facilities. UCSF will analyze the data and share the findings with the Leadership Team and the center/facility staff. As part of the HVAC upgrades, UCSF will train staff at the centers/facilities on how to use and maintain the HVAC systems, including protocols to implement during wildfire smoke events or other high pollution days, such as closing windows and external doors, turning on the portable air cleaners, changing the settings of the HVAC system to recirculate air and operate continuously, pushing invitations to client families and the greater community to use the community cleaner air facilities and modifying programming to emphasize indoor activities.

RAMP will lead activities related to the indicators on knowledge, behavior change, and health outcomes. This will include developing surveys in partnership with the Leadership Team and administering pre/post-surveys for all training participants (for both parent/caregiver trainings and childcare provider trainings). RAMP staff will work with BACR and Lincoln Families to administer 3-month post-surveys to participating parents/caregivers and with CoCo Kids and Solano Family and Children's Services to administer 3-month post-surveys to participating childcare providers. The surveys will assess changes in knowledge, changes in behaviors related to indoor air quality, and changes in asthma symptom frequency.

Collect and process reporting, reimbursement and invoicing requirement: Since its inception thirty years ago, RAMP has served as the lead on hundreds of federal, state, regional and private foundation grants, always successfully completing grant objectives as well as reporting and financial tracking requirements. As the Lead Applicant, RAMP will collect all information necessary to produce reports for the funder. RAMP will work with central administration staff at the Public Health Institute to establish agreements with each Co-Applicant that outlines their scope of work, reporting requirements, and invoicing processes. Once the agreements are in place, RAMP staff will track progress on the scope of work and will ensure that reporting and invoicing are completed in a timely manner.

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council?*

The Lead Applicants and Co-Applicants' boards do not have a role in approving the proposed project.

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

RAMP staff have extensive experience overseeing a range of grants and contracts. [redacted], has been the [redacted] of RAMP for 24 years. She served as the PI on a REACH US grant from the US Centers for Disease Control and Prevention, four 3-year Cooperative Agreements with the US EPA, a contract with the Bay Area Air District, as well as hundreds of other government and private grants. Under [redacted] direction, RAMP has significantly expanded its breadth, scope, and size. [redacted] is a graduate of Bowdoin College and received a Master's degree in Public Health from the University of Michigan. She will dedicate 25% FTE to this project. [redacted], has been the [redacted] of RAMP for 23 years and served as Program Manager on the CDC grant. He has extensive experience in project management, tool development, providing technical assistance, and conducting trainings. He also has a background in communications and extensive experience with dissemination. After graduating from Whitman College, he served as a Peace Corps volunteer. He will dedicate 40% FTE to this project. [redacted], RAMP [redacted], has been with PHI since 2014. Prior to that, [redacted] worked in higher education including CSU Los Angeles, CSU East Bay and CSU Sacramento. At CSU, he served as A/P Manager and Management Analyst for the University Auxiliary Services Inc. Contracts and Grants Department. He will dedicate 10% FTE to this project, bringing his extensive experience with financial management as well as contract and invoice management.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

RAMP, as project of PHI, has the necessary fiscal management systems and staffing experience in place to ensure funds are used per the work plan, the intent of the funding opportunity, and to prevent unobligated balances. RAMP has successfully completed grants and contracts from federal agencies, including the US Environmental Protection Agency, and the Centers for Disease Control and Prevention, as well as state agencies, including the California Department of Pesticide Regulations and California Department of Public Health, and regional agencies, including the Bay Area Air District. RAMP's Program Administrator utilizes tools to track anticipated expenditures against actual expenditures on a monthly basis. Combined with PHI's internal systems for tracking finances, invoices, and subcontract expenditures, effective systems are in place to ensure accurate tracking and reporting. PHI offers robust program support consisting of grants and contracts management, operations, finance and accounting, legal and communications. The team provides close monitoring of project progress in terms of finance and award compliance to assure project implementation is on track and within budget. PHI's Finance and Accounting department manages the money of PHI's programs, ensuring financial compliance and performing over 17,000 accounting transactions every year. The finance department manages banking and credit relationships, oversees the audits of our financial statement and 403b plan, and prepares PHI's annual Federal Form 990 filing and all other state and local filings. PHI has a history of receiving unqualified opinions on its audits - an important designation that indicates financial compliance and transparency, and which makes PHI a trustworthy partner and low risk for federal funding agencies.

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The Childcare Clean Air & Resilient Environments (C-CARE): Benicia project will mitigate air pollution's impacts and improve public health for young children in childcare settings in Benicia and surrounding communities. Because young children are particularly vulnerable to the health impacts of air pollution, our goal is to improve air quality in the locations where children ages 0-5 spend most days: childcare settings. We will achieve this through:

- Improved air filtration through the distribution of high-efficiency particulate air (HEPA) cleaners and replacement filters to a target of at least 500 of the childcare facilities in the area.
- Heating, air conditioning and ventilation systems (HVAC) optimization and upgrades at select facilities including First 5 resource centers in Vallejo and Pittsburg and 3-4 large childcare centers.
- Education of childcare providers about indoor air quality including cleaning products, pests and pesticides, moisture and mold, and gas stoves, and outdoor air pollution including refinery emissions and wildfire smoke.
- Education of parents/caregivers who attend the First 5 resource centers on air quality and actions they can take to improve indoor air quality.
- Distribution of 200 HEPA air cleaners and replacement filters to parents/caregivers who attend the First 5 resource centers and attend the trainings.

Measurable outcomes include: reduction in indoor air pollution in childcare settings; increased knowledge of childcare providers and parents/caregivers with young children about the health effects of air pollution and how to effectively reduce exposure to outdoor and indoor air pollution in childcare and home settings; changes in behaviors that influence indoor air quality in order to improve air quality in

childcare and home settings; and, improved asthma symptoms among young children who attend childcare settings.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This project directly advances the Local Community Benefits Fund strategy to reduce air pollution and improve health outcomes by integrating education, environmental interventions, and monitoring to mitigate air pollution's impacts and improve public health for young children in childcare settings in Benicia and surrounding communities. Improving air filtration in childcare settings as well as in children's homes, combined with education for childcare providers and parents/caregivers, will not only reduce exposure to air pollution today but will also help reduce exposure risks in the future from poor air quality from a wide range of industrial or other (e.g., wildfire smoke) sources. This project aligns with several of the examples provided in the grant guidelines under this strategy, including: indoor air quality improvements; green and healthy residential and public buildings; exposure reduction strategies; and health programming for communities impacted by air pollution.

The project also supports economic resilience for a just transition by investing in community-based organizations, strengthening local childcare infrastructure, and reducing the economic burden of asthma and poor air quality on families and providers. By building knowledge, capacity, and healthier indoor environments in communities disproportionately impacted by pollution, the project contributes to a more equitable and sustainable transition away from the harms of a fossil fuel–based economy.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Overall, this project will serve children ages 0 to 5 throughout Benicia and surrounding communities as defined in the grant guidelines. Many of the project activities will occur at two First 5 resource centers: East County First 5 Center, 355 E. Leland Rd, Pittsburg and Vallejo First 5 Center Address 3375 Sonoma Blvd, Ste 10, Vallejo. Activities at these sites will include HVAC upgrades, parent/caregiver education, and HEPA air cleaner and replacement filter distribution. Other activities will occur at childcare facilities within the geographic boundaries identified in the grant announcement. Two Co-Applicants, CoCo Kids and Solano Family and Children's Services (the childcare resource and referral agencies that serve the grant area), serve the following numbers and types of childcare facilities in the grant's geographic area:

Solano Family & Children's Services	
Vallejo Family Childcare	141
Vallejo Licensed Centers	19
Vallejo Exempt Centers	15
Vallejo Family, Friend, and Neighbor providers	638
Benicia Family Childcare	14

Benicia Licensed Centers	12
Benicia Exempt Centers	3
Benicia Family, Friend, and Neighbor providers	27
CoCo Kids (for the East County communities within the geographic parameters of the grant)	
Family Childcare	239
Licensed Centers	97
Licensed Exempt Centers	11
Family, Friend, and Neighbor providers	254

(Per the CA Department of Social Services, licensed family childcare is care offered in a childcare provider's home with smaller adult-to-child ratios. Licensed childcare centers are facilities that operate in a commercial setting by community-based organizations, school districts, religious institutions, or private businesses. Licensed exempt centers are typically after-school programs run by schools or affiliated organizations. Licensed exempt family, friend or neighbor providers provide care in a child's or childcare provider's home by a person who is a relative, friend, neighbor.)

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Community engagement identified and informed the needs and priorities of the C-CARE Benicia project and will continue to shape the project as it progresses. Four Co-Applicants (Bay Area Community Resources [BACR], Lincoln Families, CoCoKids, and Solano Family and Children's Services) have a long history of significant community engagement with residents – specifically parents/caregivers and childcare providers – in the grant area. Additionally, First 5 Solano County and First 5 Contra Costa County, which own the First 5 resources centers managed by BACR and Lincoln Families, respectively, will be involved in the project and have deep community ties. While both organizations are not Co-Applicants, they will serve on the Leadership Team to support effective project implementation.

Parents/caregivers: BACR and Lincoln Families manage the programmatic offerings at two First 5 resource centers (Vallejo and Pittsburg, respectively). In their management roles, BACR and Lincoln Families regularly engage with parents/caregivers who use the First 5 resource centers. This engagement includes providing parent/caregiver classes and drop-in visits, facilitating a parent advisory council, and communicating regularly through email to share updates or request input. Air quality has long been identified as a community concern by both parents/caregivers and Center staff. A staff member noted that families with young children and expecting parents frequently express concerns about asthma flare-ups, breathing difficulties, and eye, nose, and throat irritation during periods of poor air quality. During unhealthy air quality days, parents often seek guidance on how to safely protect infants and young children, limit outdoor exposure, and reduce respiratory health risks. Sometimes their concerns keep them away from the center and other times they find the center to be a clean and healthy solution. Additionally, parents express concerns about traffic-related pollution because one center is located near heavily traveled roadways with daily commuter traffic. Parents worry about the impact that prolonged exposure to vehicle emissions and fine particulate matter can have on developing lungs, particularly for infants, toddlers, and children with asthma or other respiratory sensitivities.

Additionally, members of the Solano First 5 Parent Advisory Group identified both indoor and outdoor air quality as high priority concerns; for instance, some parents mentioned worries about pollution from nearby traffic and industrial areas, including toxins from the refineries. They also expressed concerns about dust, allergens, and strong odors from cleaning products or cooking that can build up indoors. Families expressed that these issues can sometimes lead to allergies, breathing discomfort, or other health concerns for both children and adults. Of the 69 parents/caregivers who responded to a recent survey (conducted in both English and Spanish), 60% of respondents consider outdoor air pollution as a top concern related to indoor air quality. Some of the top outdoor air quality concerns included roads/freeways (69% of respondents), wildfire smoke (54% of respondents), and refineries (52% of respondents). Sixty percent of respondents said that they have never used an air cleaner, but 85% said they would use an air cleaner if they were given one.

Childcare providers: The grant area's two childcare resource and referral agencies, CoCo Kids and Solano Family and Children's Services (both Co-Applicants), regularly engage childcare providers through a variety of methods, including providing educational and professional development classes and other resources, and regularly communicating via email. Similar to the parent/caregiver-focused organizations, both CoCo Kids and Solano Family and Children's Services have long heard from childcare providers about their air quality concerns and interest in learning steps they can take to better protect the children in their care (as well as their own staff members). For instance, staff at the organizations shared that childcare providers note asthma is prevalent among the children they serve, and they regularly have questions about how to care for them during extreme heat events or when air quality is poor from a variety of sources including wildfire smoke. Many childcare providers report needing clearer, practical guidance on when to keep children indoors, and what affordable tools or upgrades can meaningfully improve the indoor air quality at their site.

Recently the agencies surveyed childcare providers in the Benicia grant area about air quality concerns and found that of the 62 respondents, 71% are concerned about outdoor air pollution getting inside their childcare facilities. Further, 65% said they are concerned about pollution from nearby freeways, 61% are concerned about pollution from nearby refineries or industries, and 48% are concerned about wildfire smoke. Among respondents who do not currently use an air cleaner in their childcare facility, 92% said they would use an air cleaner if given one.

Additionally, conversations with BACR and Lincoln Families staff at the First 5 resource centers identified indoor air problems (such as high temperatures and stuffiness or stale-feeling air) as well as the need to improve indoor air quality through planning and training. For example, the staff working at each site are responsible for turning the HVAC system off and on, adjusting the temperature and reporting problems. The HVAC controls also have a "fan only" setting; however, staff were unaware that using this might improve air quality during wildfire smoke episodes. Both sites have portable air cleaners for each classroom, and the staff know to turn them on when the air quality is bad, but most of the air cleaners have inadequate clean air delivery rates for the rooms they are in; some air cleaners emitted potentially harmful ions (which may generate aldehydes – a type of volatile organic compound – in indoor air); and there were clear conflicts between optimal positioning of the air cleaners and maintaining the free movement of the children. This project will help address these indoor air challenges.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

This project directly addresses priority community needs in Benicia and surrounding communities, including Vallejo, Pittsburg, and nearby areas impacted by industrial activity and transportation-related air pollution. These communities experience ongoing environmental health challenges related to refinery emissions, cumulative pollution exposures, and indoor asthma triggers and other pollutants. Families with young children and childcare providers in these areas often face barriers to accessing resources, information, and infrastructure needed to reduce indoor air pollution exposures, despite spending the majority of time indoors where exposures can be significant.

The project responds to these needs through an integrated set of interventions focused on improving indoor air quality and reducing asthma risk in homes and childcare settings serving young children (ages 0–5), particularly in low-income communities and communities of color disproportionately impacted by environmental burdens. Key activities include culturally appropriate training for parents/caregivers and childcare providers on asthma prevention and indoor air quality; distribution of high-efficiency air cleaners and replacement filters; targeted HVAC assessments and upgrades in early childhood settings; and air quality monitoring to assess changes in exposure. By working through trusted community partners such as CoCo Kids, Solano Family & Children's Services, BACR, Lincoln Families, First 5 Contra Costa, and First 5 Solano, the project ensures that interventions are accessible, culturally responsive, and reach those most affected.

Portable, HEPA filter-based air cleaners will be our primary physical means of improving indoor air quality, supported by HVAC upgrades at select childcare centers. Air cleaner technology is changing rapidly. Our criteria for selecting the air cleaners we provide will include:

- HEPA filters with particle removal rates that are verified in accord with ANSI/ASHRAE Standard 52.2, AHRI 680 or ISO 16890 methods.
- Front-to-top air path: In our prior research, we found that portable air cleaners that drew air in through the front and vented out the top were much more likely to be used than air cleaners that drew air on four sides. Childcare centers and low-income homes are often crowded. Being able to place the air cleaner next to walls and furniture without blocking airflow was very important to the families we worked with and a critical predictor of air cleaner use and improved indoor air quality.
- Affordable, durable replacement filters and washable pre-filters: We want the childcare centers and families to keep using their air cleaners after this project ends, so we will prioritize air cleaners with replacement filters that last a long time, are inexpensive, and easy to find.
- Child-safe: We will choose air cleaners that do not have exterior parts (grilles, knobs) that are easily removed, damaged or may present entanglement or choking hazards.
- Ionization and UV germicidal features on some air cleaners have the potential to create additional air pollutants. We will only choose air cleaners that either do not have these features or allow them to be inactivated.

Other selection criteria: Where feasible we will purchase air cleaner filters that include activated charcoal to remove gas phase air pollutants like nitrogen oxides, hydrocarbons, and other volatile organic compounds.

In our pre-proposal assessment of First 5 resource centers in in the grant area within Contra Costa and Solano counties, we found that most sites had air cleaners that were too small to achieve at least the recommended 4.8 air changes per hour in the rooms they were located in. Because they are often more crowded and used for higher activity levels, childcare centers have higher air exchange rate recommendations than residential spaces, typically 10 CFM per person, per area. We will use a target equivalent air exchange rate of 7 per hour to achieve the goal of 80% reduction in $PM_{2.5}$ pollutant concentrations during emission events and wildfires in the challenging environment of childcare centers. Further, participating families will receive an air cleaner sized to provide ~5 air changes per hour to a small studio apartment (350 ft2) or ~12 air changes per hour to a large bedroom (150 ft2).

Air cleaner distribution and Installation: We will provide the air cleaners and replacement filters to childcare facilities when staff attend the trainings or later at the facilities, and provide extension cords and materials to secure the air cleaners to walls for safety. For families, the air cleaners and replacement filters will be distributed from the First 5 resource centers to families who attend a training session on air quality.

Curricula on air pollution, indoor air quality and the actions childcare providers can take to protect children's health will be developed by UCSF and RAMP, in collaboration with Lincoln Families, BACR, Solano Family & Children's Services, and CocoKids. The training will include information on the health hazards of air pollution, and specific recommendations on ways to reduce indoor air pollution, including reduction of emissions from cooking, gas appliances, cleaning products, incense, candles and pesticides. Additional training on indoor environmental pollutants and concerns will include safe control of household insects, moisture and mold, and other to-be-identified issues. Education on outdoor air pollution will focus on refinery emissions, transportation sources, and wildfire smoke.

We will work with CoCo Kids and Solano Family & Children's Services to identify childcare centers that participated in training and received an air cleaner that may also benefit from HVAC optimization and upgrades. UCSF staff will visit each site to further assess needs and capacity. Three to four sites will be chosen for improvements based on the following criteria: poor baseline indoor air quality and temperature control, serving 25 or more children, the capacity to authorize modifications to the HVAC and building systems, and geographic distribution within the grant area.

For the HVAC improvements, we will use competitive bidding to select and hire a local HVAC contractor to assess the HVAC systems and building envelopes. The HVAC contractors will develop recommendations for each site, informed by ASHRAE Guideline 44-2024, to improve indoor air quality and mitigate pollution exposure during industrial pollutant release events and wildfires. This will include assessing the ease/difficulty of implementing each measure identified, estimating costs, and creating a ranked set of recommendations for each site. In ascending order of cost, the improvements may include any or all of the following: sealing gaps in the HVAC unit to improve filtration, upgrading HVAC controls, replacing gas-burning kitchen stoves with electric stoves, repairing or installing kitchen stove hoods that vent to the outdoors, upgrading fans and filter holders to allow the use of filters with higher MERV ratings, upgrading ducting to reduce leaks and condensation, and installing new, energy-efficient heating and air conditioning units.

By working together with trusted community partners —including BACR, Lincoln Families, CoCoKids, Solano Family and Children's Services, First 5 Contra Costa, and First 5 Solano – the project ensures that interventions reach those most impacted and are delivered in accessible, community-centered ways.

This work addresses critical environmental justice and public health challenges by reducing inequitable exposure to harmful air pollutants and mitigating associated respiratory health impacts during early childhood, a particularly vulnerable developmental period. It also supports a just transition by investing in healthier, more resilient community infrastructure in areas facing economic and environmental changes related to shifts in the fossil fuel industry, helping reduce the health and financial burden of poor air quality on families and childcare providers.

Measurable outcomes will demonstrate progress toward community impact through multiple indicators:

- Environmental outcomes will include documented improvements in indoor air quality, measured through pre- and post-intervention indoor and outdoor monitoring for temperature, relative humidity, PM_{10}, $PM_{2.5}$, CO_2, total VOCs (TVOCs), and nitrogen oxides (NO_x) in the First 5 resource centers and selected childcare facilities (Model O-1PST, AirGradient Co. or for sites without outdoor power, Model Node-S, Clarity Co., Ltd.). We will visit each site quarterly to check the placement and usage of the air cleaners, clean the prefilters and spot test the air monitoring instruments using research-grade $PM_{2.5}$ monitors (model AM520, TSI Inc.).
- Knowledge and behavioral outcomes will include increased understanding and adoption of air quality–protective practices among parents and childcare providers. These will be assessed through surveys conducted prior to trainings, immediately following the trainings, and again 3-months after the trainings. Surveys will include questions assessing knowledge of air pollution health effects, indoor and outdoor sources of air pollution, and effective strategies to reduce air pollution. Behavioral outcomes measures will focus on self-reported actions taken to improve indoor air quality. To the extent possible, we will adapt existing validated air quality surveys to allow our results to be comparable to prior published studies.
- Health-related outcomes will include improvements in asthma-related indicators, such as caregiver-reported symptom reduction or improved management.
- Process measures—such as the number of individuals trained, air cleaners distributed, and facilities upgraded—will demonstrate project reach and implementation progress.

Together, these outcomes provide a comprehensive framework for assessing reductions in exposure, improvements in health, and increased community capacity, demonstrating meaningful progress toward addressing the cumulative environmental health burdens faced by the communities in the grant area.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

As detailed above, four of the Co-Applicants – BACR, Lincoln Families, CoCo Kids and Solano Family and Children's Services – have ongoing and extensive community engagement activities, which will be leveraged to keep community members informed about the project's progress, including the benefits available to community members. Other Leadership Team members First 5 Contra Costa and First 5 Solano have similarly extensive community connections. For example, BACR and Lincoln Families regularly communicate with the First 5 Centers' parent advisory councils, conduct in-person engagement through classes and drop-in visits, and exchange regular email messages with parents and caregivers – all of which will be used to inform the community about upcoming indoor air quality classes and the availability of air cleaners and replacement filters for those parents/caregivers that participate in the educational sessions. Similarly, CoCo Kids and Solano Family and Children's Services have well-developed, preexisting infrastructure that keeps them in frequent communication with childcare providers in the grant area. That communication network will be leveraged for this project to keep childcare providers informed and updated. We will solicit and respond to community feedback through multiple pathways:

- The project's Leadership Team will include representatives from the community-based partner organizations, and everything we do will reflect co-development with these groups to ensure that the project is tailored to their needs and community needs from start to finish.
- Using the existing communication infrastructure, we will seek input on the educational materials and the content and format of trainings so that they are tailored to community priorities, at a level that is readily understandable and engaging to community members and childcare providers.
- Pre- and post-training surveys will provide feedback on the curriculum and guide any adjustments; surveys three months after the training will provide feedback on the air cleaner usage and behavioral changes, allowing us to make additional adjustments as needed.
- We will share summaries of air monitoring data and building improvements with childcare providers and parents/caregivers who use the facilities.
- BACR and Lincoln Families staff will provide regular feedback about the HVAC improvements and adjustments at the First 5 Centers, which may result in additional adjustments to HVAC-related procedures.
- RAMP will work with the four community partner organizations to identify the best activities for community engagement and will take the lead in the development of any surveys or other tools. The co-applicants will use their communication channels to gather input with parents/caregivers and childcare facility staff, and RAMP staff will conduct follow-up analysis.
- Given that BACR, Lincoln Families, CoCo Kids, Solano Family and Children's Services, First 5 Contra Costa, First 5 Solano are regularly in touch with parents/caregivers and/or childcare providers, the co-applicants will also be able to provide their own feedback on what they're seeing and hearing about project implementation and shape implementation accordingly.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The Childcare Clean Air & Resilient Environments (C-CARE): Benicia project will mitigate air pollution's impacts and improve public health for young children in childcare settings in Benicia and surrounding communities. Because young children are particularly vulnerable to the health impacts of air pollution, our goal is to improve air quality in the locations where children ages 0-5 spend most days: childcare settings. We will achieve this through:

- Improved air filtration through the distribution of high-efficiency particulate air (HEPA) cleaners and replacement filters to a target of at least 500 of the childcare facilities in the area.
- Heating, air conditioning and ventilation systems (HVAC) optimization and upgrades at select facilities including First 5 resource centers in Vallejo and Pittsburg and 3-4 large childcare centers.
- Education of childcare providers about indoor air quality including cleaning products, pests and pesticides, moisture and mold, and gas stoves, and outdoor air pollution including refinery emissions and wildfire smoke.
- Education of parents/caregivers who attend the First 5 resource centers on air quality and actions they can take to improve indoor air quality.
- Distribution of 200 HEPA air cleaners and replacement filters to parents/caregivers who attend the First 5 resource centers who attend the trainings.

Measurable outcomes include:

- By the end of the grant term, reduce indoor air pollution in childcare settings through the distribution of appropriately sized HEPA air cleaners to 500 childcare facilities and HVAC upgrades to 2 First 5 resource centers and a minimum of 3 childcare centers.
- By the end of the grant term, increase knowledge of a minimum of 85% of the participating 500 childcare providers and 200 parents/caregivers of young children in the greater Benicia area about the health effects of air pollution and how to effectively reduce exposure to outdoor and indoor air pollution in childcare and home settings.
- By the end of the grant term, document changes in behaviors to improve air quality in homes and childcare settings among 75% of childcare providers and parents/caregivers who participated in trainings.
- By the end of the grant period, improve asthma outcomes among 50% of young children who use the 2 First 5 resource centers or attend childcare in the greater Benicia area.

The nonprofit Public Health Institute's program, Regional Asthma Management & Prevention (RAMP), has extensive experience working with diverse communities across the Bay Area to reduce exposure to air pollution and will serve as the lead, working in partnership with the University of California, San Francisco (UCSF), including their Western States Pediatric Environmental Health Specialty Unit (PEHSU). Other Co-Applicants include the Bay Area Community Resources (BACR) and Lincoln Families, each of which manages educational programming at a family resource center on behalf of the First 5 agencies (Contra Costa and Solano), and two childcare resource and referral networks, CoCoKids and Solano Family and Children's Services. First 5 Solano County and First 5 Contra Costa County will serve as advisors and participate in the Leadership Team as an in-kind contribution.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to*

measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

In collaboration with project partners, RAMP has thoughtfully developed a project budget that:

- Supports the valuable roles of Co-Applicants with 41.1% of the total budget going to partner organizations.
- Directs funds toward sustainable air quality improvements by including $300,000 for HVAC upgrades and over $344,000 for air cleaners and replacement filters.
- Incorporates support for substantial community-focused training on reducing risks from air pollution in home and childcare settings, as well as corresponding funding to support meaningful engagement, including translation services and participant incentives.
- Ensures robust measurement of the outcomes and indicators, including the use of both consumer- and research-grade air quality monitors as well as surveys of childcare providers and parents/caregivers at different points in time, so that successful components can be scaled across the Air District's jurisdiction.
- Minimizes the use of consultants and professional services to just 14.5% of the overall budget, the vast majority of which are for HVAC improvements at select locations in alignment with the grant program goals.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project is closely aligned with key community, regional, and statewide initiatives aimed at reducing air pollution and addressing environmental health inequities in Benicia and surrounding communities, including Vallejo, Pittsburg, and other areas identified in the Local Community Benefits Fund geography. It supports the Bay Area Air District's Community Benefits Fund goals by reinvesting resources into communities impacted by industrial emissions and advancing projects that reduce pollution exposure, improve public health, and strengthen community resilience.

At the regional level, the project complements local Climate Action and Adaptation Plans in Benicia, Vallejo, and Contra Costa and Solano Counties, which emphasize improving building efficiency, reducing exposure to air pollution, and protecting vulnerable populations—especially young children—from environmental hazards, including wildfire smoke and industrial emissions. The focus on indoor air quality improvements, air filtration, and HVAC upgrades directly advances these priorities by strengthening the resilience of homes and childcare settings. The focus on the greater Benicia area also connects to the District's longstanding efforts to connect Pittsburg, Rodeo, Vallejo and adjacent communities to the state's Community Air Protection Program authorized under AB 617; these areas are

all identified by the California Air Resources Board as Consistently Nominated Communities that would benefit from additional and focused air quality improvement efforts.

The project also aligns with broader California environmental justice and public health initiatives, including efforts to reduce disparities in asthma and other pollution-related health outcomes, particularly among low-income communities and communities of color living near industrial and transportation corridors. By leveraging trusted community-based organizations and early childhood systems, the project supports coordinated, place-based strategies that enhance community capacity, reduce health and economic burdens associated with poor air quality, and contribute to a more equitable transition away from fossil fuel–related impacts.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Since its inception thirty years ago, RAMP has served as the lead on hundreds of federal, state, regional and private foundation grants, from $25,000 over one year to $5m over five years. No matter the size or scope of the award, RAMP has always successfully completed grant objectives as well as reporting and financial tracking requirements. Public funders include the US Environmental Protection Agency, and the Centers for Disease Control and Prevention; state agencies, including the California Department of Pesticide Regulation and California Department of Public Health; and regional agencies, including the Bay Area Air District.

A common characteristic among the large grants that RAMP has led is the involvement of multiple partner organizations. In some cases, the partners have been subcontractors. For example, through a multi-year grant from the Blue Shield of California Foundation, RAMP contracted over half of the budget to four partner organizations focused on tenants' rights and affordable housing. Part of RAMP's role was to successfully facilitate coordination among partners and to ensure that each partner completed their deliverables with their allocated budget to collectively achieve our shared objectives. Using a similar model, RAMP subcontracted with La Clinica and Black Cultural Zone on a successful grant from the San Francisco Foundation. RAMP has also served as the lead on partnerships where we don't have a grantor/grantee relationship with the partner organizations. For example, the Sierra Health Foundation funded 28 asthma home visiting programs to participate in the Asthma Mitigation Project, while separately funding RAMP to provide technical assistance and coordination to those 28 groups. Despite the fact that RAMP did not fund the asthma home visiting programs, we succeeded in ensuring that all funded partners completed their individual grant objectives so that the overall project could be a success. As another example, The California Endowment funded asthma coalitions across the state to conduct an array of local activities and also funded RAMP to coordinate a network of the asthma coalitions called Community Action to Fight Asthma. Even though The California Endowment stopped funding these activities over a decade ago, RAMP still convenes regular meetings of the Community Action to Fight Asthma network at the request of local partners who saw such a benefit from RAMP's coordination and leadership role that they wanted to keep participating even without funding. Our approaches include: developing shared goals and priorities; providing clear, proactive communication; identifying and addressing challenges early; keeping detail-oriented records of activities, decisions, and data; and facilitating group discussions in a way that builds trust among partners.

The RAMP staff leading this proposed project have each been in their current positions for over 20 years and were involved in the above examples in leadership and/or management roles. Staff will leverage their experience, expertise, and relationships with partners to successfully implement the grant.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

Through careful consideration and planning, RAMP developed the following staffing plan to sure effective and efficient implementation of this project. Specific staff roles follow:

- [redacted], has been the [redacted] of RAMP for 24 years. She served as the PI on a REACH US grant from the US Centers for Disease Control and Prevention, four 3-year Cooperative Agreements with the US EPA, a contract with the Bay Area Air District, as well as hundreds of other government and private grants. Under [redacted] guidance and direction, RAMP has significantly expanded its breadth, scope, and size. [redacted] is a graduate of Bowdoin College and received a Master's degree in Public Health from the University of Michigan. She will dedicate 25% FTE to this project, serving as the point of contact with the funder and providing overall leadership to ensure grant deliverables are completed effectively.
- [redacted], has been the [redacted] of RAMP for 23 years and served as Program Manager on the CDC grant. He has extensive experience in project management, tool development, providing technical assistance, and conducting trainings. He also has a background in communications and extensive experience with dissemination. After graduating from Whitman College, he served as a Peace Corps volunteer. He will dedicate 40% FTE to this project, including the day-to-day management of grant activities as well as serving as the primary point of contact with the other Co-Applicants.
- [redacted], RAMP [redacted], has been with PHI since 2014. Prior to that, [redacted] worked in higher education including CSU Los Angeles, CSU East Bay and CSU Sacramento. At CSU, he served as A/P Manager and Management Analyst for the University Auxiliary Services Inc. Contracts and Grants Department. He will dedicate 10% FTE to this project, bringing his extensive experience with financial management as well as contract and invoice management.

[redacted] and the UCSF project lead, [redacted], have successfully implemented multiple grants together including two from the Rose Foundation for Communities and the Environment and one from the US Environmental Protection Agency. Our positive working relationship will help facilitate the success of this project.

Given the extensive experience of RAMP staff in successfully implementing similar projects with large budgets and multiple partners, we are ready to implement the proposed scope of work. Between our partnership practices that facilitate effective communication and build trust and our thorough and detail-oriented approach to financial management, we will apply our best practices to this project while also being open to adjusting in response to suggestions from the funder or partners.

The budget also includes support for the Co-Applicants. Both First 5 Solano County and First 5 Contra Costa County will provide in-kind support as advisors and members of the Leadership Team.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- *Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.*
- *If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.*
- *Indicate "N/A" if the question is not applicable to the project N/A*

The HVAC improvements at the First 5 resource centers and the childcare centers will require that building owners agree to the work. The First 5 agencies (i.e., First 5 Contra Costa and First 5 Solano) own their buildings, so approvals will not be difficult. As for the HVAC improvements for the childcare facilities, RAMP will collaborate with the Leadership Team to select 3-4 childcare facilities according to criteria that include: Larger size (>25 children served), building owner agreement to the HVAC improvements, and staff agreement to collect data at the site. Based on discussions with CoCo Kids and Solano Family and Children's Services, we do not anticipate difficulty finding four facilities that meet these criteria. The HVAC improvements will require permitting, which will be done by the HVAC contractor. RAMP will select a contractor after receiving three formal bids from local companies.

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

Standard permitting will be required for the HVAC improvements. These will be obtained by the HVAC contractor and will not result in delays.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

N/A

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

N/A

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

The project budget includes funds to provide HVAC upgrades and repairs at two First 5 resource centers and 3-4 childcare facilities. As part of that process, RAMP, in collaboration with UCSF, will provide training and written operations and maintenance protocols to staff at each location, including such things as a schedule for filter replacement that will continue after the completion of the grant. With sufficient training and follow-up, we anticipate that ongoing operations and maintenance will be easily factored into the facilities' overall upkeep.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

RAMP does not anticipate significant barriers associated with this project. We have already developed excellent working relationships with First 5 Contra Costa, First 5 Solano County, BACR, Lincoln Families, CoCo Kids and Solano Family & Children's Services. These trusted community partners shaped this proposal, and they are comfortable and confident it can be implemented successfully at their sites. As is normal for a project of this size and complexity, we anticipate multiple minor challenges with scheduling and logistics, as well as minor technical challenges with air monitoring equipment and HVAC systems. These challenges are ones we have encountered in prior projects and successfully addressed. Such minor barriers are accounted for in the project timelines and can be successfully addressed by this strong project team.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The Childcare Clean Air & Resilient Environments (C-CARE): Benicia project will mitigate air pollution's impacts and improve public health for young children in childcare settings in Benicia and surrounding communities. Given that young children are particularly vulnerable to the health impacts of air pollution, the overall goal of the project is to improve indoor air quality in the locations where young children spend most of their days: childcare settings with additional support for their home environments.

Measurable Outcome	Indicator(s)
1. By the end of the grant term, reduce indoor air pollution in childcare settings through the distribution of appropriately sized HEPA air cleaners to 500 childcare facilities and HVAC upgrades to 2 First 5 resource centers and a minimum of 3 childcare centers.	• HVAC improvements made in 2 First 5 resource centers and 3-4 childcare centers • Pre- and post-air monitoring for PM2.5, PM10, NOx and VOCs conducted in 2 First 5 resource centers and 3-4 childcare centers where HVAC improvements are made • Appropriately sized HEPA air cleaners distributed to 40% of childcare settings (target 500)
2. By the end of the grant term, increase knowledge of a minimum of 85% of the participating 500 childcare providers and 200 parents/caregivers of young children in the greater Benicia area about the health effects of air pollution and how to effectively reduce exposure to outdoor and indoor air pollution in childcare and home settings.	• Education provided to 500 childcare providers and 200 parents/caregivers of young children • Increased knowledge of a minimum of 85% of training participants (both childcare providers and parents/caregivers) comparing pre- and post-surveys • Improved knowledge retained for a minimum of 75% of training participants (both childcare providers and parents/caregivers), as documented through 3-month post-survey
3. By the end of the grant term, document changes in behaviors to improve air quality in homes and childcare settings among 75% of childcare providers and parents/caregivers who participated in trainings.	• Changes in behaviors related to indoor air quality reported by 75% of childcare staff in a survey conducted 3 months after attending a training session

	• Changes in behaviors related to indoor air quality reported by 75% of parents/caregivers in a survey conducted 3 months after attending a training session • Protective behaviors and actions reported in a survey conducted after a significant air pollution event, e.g., wildfire or refinery release. (Note: This survey will be conducted only if an event occurs.)
4. By the end of the grant period, improve asthma outcomes among 50% of young children who use the 2 First 5 resource centers or attend childcare in the greater Benicia area.	• Reduction in asthma symptoms among children reported by 50% of childcare staff in a survey conducted 3 months after attending a training session and receiving an appropriately sized HEPA air cleaner. • Reduction in asthma symptoms reported by 50% of parents/caregivers in a survey conducted 3 months after attending a training session and receiving an appropriately sized HEPA air cleaner.

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
By the end of the grant term, reduce indoor air pollution in childcare settings through the distribution of appropriately sized HEPA air cleaners to 500 childcare facilities and HVAC upgrades to 2 First 5 resource centers and a minimum of 3 childcare centers.	A. Collect pre- and (after completion of HVAC upgrades per the next milestone) post-intervention air quality data at First 5 centers and selected childcare centers	1. Install AirGradient monitors (Model I-9PSL for indoors, Model O-1PST for outdoors) at each First 5 resource center including 1) monitors in each of the child activity rooms and 2) one monitor outdoors.	UCSF	First 5s, RAMP	Y1, Q1
		2. Continuously monitor indoor and outdoor $PM_{2.5}$, PM_{10}, NO_x, VOCs, CO_2, relative humidity, and temperature at First 5 resource centers	UCSF	First 5s, BACR, Lincoln Families,	Ongoing from Y1, Q2 through Y3, Q2
		3. Select a local HVAC contractor after 3 bids and select 3-4 childcare centers to receive HVAC upgrades or repairs based upon criteria established by the Leadership Team	CoCo Kids and Solano Family & Children's Services	RAMP, UCSF	Y1, Q1-Q2
		4. Install AirGradient monitors (Model I-9PSL for indoors, Model O-1PST for outdoors) in main childcare room at the selected childcare centers.	UCSF	CoCo Kids, Solano Family & Children's Services, RAMP	Y1, Q3
		5. Continuously monitor indoor and outdoor $PM_{2.5}$, PM_{10}, NO_x, VOCs, CO_2, relative humidity, and	UCSF	Selected childcare centers	Ongoing from Y1, Q3 through Y3, Q2

	temperature at selected childcare centers			
	6. Conduct quarterly testing and calibration of AirGradient monitors with research-grade instruments (Model AM520, TSI, Inc.). Also conduct troubleshooting site visits whenever monitors go offline.	UCSF	First 5s, BACR, Lincoln Families, Selected childcare centers	Ongoing from Y1, Q1 through Y3, Q2
B. Provide HVAC upgrades and/or repairs at First 5 centers and selected childcare centers	1. Conduct assessment of First 5 HVAC needs and prioritize repairs and/or upgrades focused on health and aligned with the program budget	UCSF, HVAC consultant	First 5s, RAMP	Y1, Q2
	2.Complete HVAC optimization and upgrades at First 5 centers including providing appropriately sized HEPA air cleaners	HVAC consultant	UCSF, First 5s, RAMP	Y2, Q1
	3. Conduct assessment of selected childcare centers' HVAC needs and prioritize repairs and/or upgrades focused on health and aligned with program budget	UCSF HVAC consultant	CoCo Kids, Solano Family & Children's Services, RAMP	Y1, Q3
	4. Complete HVAC optimization and upgrades at childcare centers including providing appropriately sized HEPA air cleaners	HVAC consultant	UCSF, CoCo Kids, Solano Family & Children's	Y1, Q4 through Y2, Q1

				Services, RAMP	
		5. Educate staff at First 5 centers and childcare sites about best practices in the use of the HVAC systems	UCSF	BACR, Lincoln Families, RAMP	Y2, Q1 and Y2, Q1
	C. Analyze pre- and post-intervention air quality data at First 5s and selected childcare centers	1.Conduct analysis of pre- and post-data	UCSF		Y2, Q3 and Y3, Q3
		2.Share findings from analysis with First 5 staff and childcare centers staff	UCSF	First 5s, RAMP, BACR, Lincoln Families	Y2, Q4 and Y3, Q4
	D. Provide appropriately sized HEPA air cleaners to 500 childcare facilities.	1.Collect information on room size of main childcare room from childcare facilities that sign up for air quality training (described below)	CoCo Kids and Solano Family & Children's Services	RAMP	Y1, Q3 through Y2, Q2
		2. Procure mechanical HEPA air cleaners based on indicated room sizes.	RAMP		Y1, Q3 through Y2, Q2
		3. Provide air cleaners to training participants and record the facility and point person. Provide replacement filters a year later.	CoCo Kids and Solano Family & Children's Services	RAMP	Y1, Q3 through Y3, Q3
By the end of the grant term, increase knowledge of a minimum of 85% of the participating 500	A. Conduct comprehensive air quality training for First 5 staff at two resource centers	1. Develop curriculum on air quality, health, and actions childcare providers can take to keep children healthy.	UCSF RAMP	BACR, Lincoln Families, CoCo Kids, Solano	Y1, Q2-3

childcare providers and 200 parents/caregivers of young children in the greater Benicia area about the health effects of air pollution and how to effectively reduce exposure to outdoor and indoor air pollution in childcare and home settings.				Family & Children's Services	
		2. Provide input on draft curriculum from community to ensure cultural and linguistic accessibility.	BACR, Lincoln Families, CoCo Kids, Solano Family & Children's Services	RAMP UCSF	Y1, Q3
		3. Refine and translate training materials and produce final versions of PowerPoints, factsheets, and other materials (e.g., videos, flipbooks).	RAMP UCSF		Y1, Q3
		4. Conduct a training session for First 5 staff at each First 5 center	UCSF RAMP	BACR, Lincoln Families	Y2, Q1
		5. Conduct pre- and post- knowledge surveys and analyze results	RAMP	BACR, Lincoln Families	Y1, Q3
	B. Conduct at least 9 comprehensive air quality trainings for staff from 500 childcare facilities supported by the CoCo Kids	1.Coordinate at least 3 training sessions per year, including outreach to childcare facilities, getting facilities registered for training, and hosting the trainings.	CoCo Kids, Solano Family & Children's Services	RAMP	Y1, Q3 through Y3, Q3

and Solano Families & Children	2.Conduct the training sessions.	UCSF RAMP	CoCo Kids, Solano Family & Children's Services	Y1, Q3 through Y3, Q3
	3. Conduct pre- and post- knowledge surveys and analyze results	RAMP	CoCo Kids, Solano Family & Children's Services	Y1, Q3 through Y3, Q3
C. Conduct in-depth trainings on additional air quality topics, like safe cleaning products and safe pest management practices for staff from up to 50 childcare facilities.	1. Develop, test, refine and produce curricula on expanded training topics.	UCSF	RAMP	Y1, Q4
	2.Coordinate at least 2 training sessions, including outreach to childcare facilities, getting facility staff registered for training, and hosting the trainings.	CoCo Kids and Solano Family & Children's Services	RAMP	Y2, Q1 through Y3, Q3
	3. Conduct pre- and post- knowledge surveys and analyze results	RAMP	CoCo Kids and Solano Family & Children's Services	Y2, Q1 through Y3, Q3
D. Conduct asthma and air quality training for 200 parents/caregivers who use the First 5 resource centers and provide each	1.Develop curricula on asthma, air quality, and actions parents/caregivers can take at home	UCSF RAMP	BACR and Lincoln Families	Y1, Q4
	2. Train and support BACR and staff to conduct trainings for parents at	UCSF RAMP BACR		Y2, Q1

	participant with an air cleaner.	one site (RAMP/UCSF will conduct trainings at other site)			
		3. Coordinate 9 trainings at each First 5 resource center, including outreach to parents/caregivers, hosting the trainings, and gathering information about the participants.	BACR Lincoln Families	RAMP	Y2, Q2 through Y3, Q3
		4. Provide mechanical HEPA air cleaners to each training participant.	BACR Lincoln Families	RAMP	Y2, Q2 through Y3, Q3
		5. Conduct pre- and post- knowledge surveys, including 3-month post-survey and analyze results	RAMP	BACR Lincoln Families	Y2, Q2 through Y3, Q3
By the end of the grant term, document changes in behaviors to improve air quality in homes and childcare settings among 75% of childcare providers and parents/caregivers who participated in trainings.	A. Assess changes in behaviors resulting from the trainings for childcare staff and parents/caregivers, described above.	1. Incorporate questions related to behaviors that improve or worsen indoor air quality to the pre-post surveys developed for childcare providers and parents/caregivers, described above.	RAMP		Y1, Q2
		2. In addition to the pre-post training surveys described above, conduct the survey again 3 months post-training and analyze results.	RAMP	CoCo Kids, Solano Family & Children's Services, BACR, Lincoln Families	Y1, Q4 through Y3, Q4
		3. Develop a post-event survey for use after an air quality pollution	UCSF	RAMP	Y1, Q4

		event (e.g., wildfire, refinery release).			
		4. Deploy and analyze the post-event survey if an air quality event occurs.	UCSF	RAMP, CoCo Kids, Solano Family & Children's Services, BACR	[contingent on timing of event]
By the end of the grant period, improve asthma outcomes among 50% of young children who use the 2 First 5 resource centers or attend childcare in the greater Benicia area.	A. Assess changes in asthma symptoms among childcare facilities that attended a training and received HVAC upgrades.	1. Develop tracking form to assess frequency of inhaler/nebulizer use, absences, and ED visits in children with asthma	UCSF	RAMP	
		2. Track inhaler/nebulizer use, absences and ED visits for 3 months pre-HVAC upgrades	Childcare facilities	RAMP, CoCo Kids, Solano Family & Children's Services	Y1, Q4
		3. Track inhaler/nebulizer use, absences and ED visits for 3 months post-HVAC upgrades	Childcare facilities	RAMP, CoCo Kids, Solano Family & Children's Services	Y2, Q3
		4.Analyze data	UCSF	UCSF	Y3, Q1
	B. Assess changes in asthma symptoms among children whose parents/caregivers	1. Incorporate questions about asthma symptom frequency, ED visits, hospitalizations to the pre-	RAMP	UCSF	Y2, Q3

	attended a training and received a HEPA air cleaner.	survey and the 3-month post-survey described above.			
		2. Analyze data	RAMP	UCSF	Y3, Q2

Project Name:	Childcare Clean Air & Resilient Environments (C-CARE) - Benicia
Co-Applicant 1 Name:	The Regents of the University of California, San Francisco
Term for this budget (in years):	3 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Consortium PI (5% effort over 3 years)	[redacted] will contribute health expertise to inform all aspects of the project, including the educational materials, decisions about HVAC upgrades, and questionnaires. She will also manage the subaward to UCSF and ensure that UCSF meets all deliverables under this grant. These costs include salary and fringe benefits.	$49,192.00
Personnel/Staff Costs	Direct	[redacted], PERSU (20% in Year 1 and 15% in Years 2-3)	[redacted] will oversee development of all educational materials for this project, ensuring scientific accuracy, community consultation, and excellent design. He will also develop FAQs to address air quality and health questions from community members. These costs include salary and fringe benefits.	$97,268.00
Personnel/Staff Costs	Direct	Air pollution intervention specialist (20% effort over 3 years)	[redacted] will manage air quality measurements, assess how many and what kind of air cleaners each site needs and lead parent and childcare provider classes. She will also work with the HVAC contractors to assess sites and determine appropriate and cost-effective interventions. These costs include salary and fringe benefits.	$174,354.00
Personnel/Staff Costs	Direct	Research Assistant (20% effort over 3 years)	[redacted] will install air monitors indoors and outdoors at the First 5 sites and selected childcare centers, test and calibrate the instruments monthly, download data monthly, and analyze the air pollution data for this project. These costs include salary and fringe benefits.	$86,036.00
Personnel/Staff Costs	Direct	Project Coordinator (15% effort over 3 years)	[redacted] will coordinate meetings, schedules, and trainings, ensuring efficient information flow and quick responses to questions from community partners. These costs include salary and fringe benefits.	$59,591.00
Personnel/Staff Costs	Direct	Project Pediatrician (5% effort over 3 years)	[redacted] will work closely with [redacted] and [redacted] on development of educational materials. She will deliver talks to childcare center staff. These costs include salary and fringe benefits.	$39,122.00
Personnel/Staff Costs	Direct	Data Analyst (10% effort in Year 1 and 5% effort in Years 2-3)	[redacted] will design and test surveys in RedCAP, an IRB-approved survey platform. She will analyze survey results for all surveys that contain health-related questions. These costs include salary and fringe benefits.	$41,875.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Equipment	For purchase of research-grade particle monitor and CO_2 monitor for regular calibration of the low-cost air monitors that will be installed indoor and outdoors.	$5,000.00
Travel	Direct	Local Travel ($800/year)	12-24 round-trip drives from San Francisco to the Benicia area to install, check and calibrate air monitoring equipment, download data, lead trainings, and meet with local partners. These costs are limited to mileage reimbursement.	$2,400.00
Other Direct Costs	Direct	Data Network Recharge	This vital component of the University's ENS provides funding for critical equipment in support of UCSF's electronic information flow and is based on the current rate per FTE, consistent with the current billing rates. Calculations are based on the percent effort to be charged to the project for each person named in the grant.	$2,123.00
Other Direct Costs	Direct	IT Field Services (ITFS) Desktop Support	ITFS includes software installation/updates, internet security, hardware setup/configuration, and centrally managed patching, storage and backup. The ITFS charge is based on the current rate per FTE, consistent with the current billing rates. Calculations are based on the percent effort to be charged to the project for each person named in the grant.	$2,312.00
Other Direct Costs	Direct	GAEL Insurance	GAEL funds the University's self-insurance program which provides broad coverage for the University's legal or "tort" liability which arises from University activities. GAEL provides protection of mistakes (negligence) by UCSF employees resulting in personal or bodily injury or damage to third parties. Coverage is applicable worldwide. These costs are calculated by applying the current GAEL rate x $100 of salaries budgeted.	$3,690.00
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	Indirect Costs	Indirect costs are requested at 15% of direct costs budgeted.	$84,444.45

Project Name:	Childcare Clean Air & Resilient Environments (C-CARE) - Benicia
Co-Applicant 2 Name:	Bay Area Community Resources
Term for this budget (in years):	3 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Associate Director; 192 hours over 3 years	Associate Director will provide overall grant leadership, strategic coordination, and organizational oversight for the project. Acting as the primary liaison between RAMP and BACR leadership, the Associate Director will coordinate communication, ensure alignment between grant goals and Center operations, and support implementation fidelity across all project components. Responsibilities include participating in leadership and planning meetings; supporting Center Director with staff training planning and capacity building; overseeing grant reporting, budget monitoring, and compliance requirements; troubleshooting implementation challenges; and providing high-level supervision and technical assistance to the Center Director. The Associate Director will also coordinate with RAMP and internal BACR leadership to ensure timely communication, strong partnership alignment, and overall grant success.	$15,000.00
Personnel/Staff Costs	Direct	Center Director; 264 hours over 3 years	Center Director will oversee the day-to-day implementation of grant activities at the First 5 Center site. Responsibilities include scheduling and participating in all grant activities; supervising and supporting staff facilitating parent workshops to ensure successful implementation and ongoing professional development support; implementing outreach strategies to support family participation and engagement; coordinating staff participation in trainings and project-related meetings; managing on-site logistics for air filter distribution and workshop implementation; tracking participation and program activities; and ensuring grant activities are carried out consistently within the Center environment. The Center Director will collaborate regularly with the Associate Director regarding reporting needs, implementation updates, and budget-related documentation while serving as the primary on-site lead for program execution and family engagement.	$15,000.00
Personnel/Staff Costs	Direct	Parent Training Facilitators	Three staff members will participate in the Train-the-Trainer curriculum. Four parent workshops will be facilitated annually, with two staff members leading each workshop. Responsibilities include preparation and delivery of parent trainings; coordinating parent participation and engagement; classroom setup and breakdown; distribution of air cleaners and filters; participation in 1 hour debrief following each workshop during the first year of implementation; entering attendance data into the database; distributing participant surveys; and providing gift cards upon survey completion.	$30,030.00
Personnel/Staff Costs	Direct	Child Watch	Two staff members will provide childwatch services for each workshop, totaling approximately 3 hours per workshop, including setup, cleanup, and sanitizing materials. Services will be provided across 4 workshops annually over 3 years.	$3,510.00
Personnel/Staff Costs	Direct	Staff time to participate in training	Seven direct service staff will participate in one training session on air quality and actions to take to protect children from indoor and outdoor pollutants, and review and provide feedback on tools and training materials that will be developed for the parent workshops	$4,751.25
Capacity-Building and Training	Direct	Staff training food	Lunch for 4 meetings X $30/staff X 9 staff/team across 3 years= $3,240, Lunch for 4 parent trainings X $30/individual X12 individuals X 3 years = $4,320, lunch for the train the trainer meeting $30 X 5ppl (3 staff/CD/trainer) = $150	$7,710.00
Community Engagement	Direct	Workshop flyers	Printing of flyers promoting the workshops and air filter distributions, printing of handouts for parent trainings, etc	$300.00
Community Engagement	Direct	Incentive for survey completion	Gift cards for parents who complete 3-month post-training survey.	$2,500.00
Community Engagement	Direct	Workshop materials	Paper for printing, chart paper for note taking during parent trainings, markers, etc	$300.00
Travel	Direct	Travel for transporting air cleaners	Travel to pick up 100 air cleaners from storage across 3 years; 24 round trips X 10 miles x $.62=$149	$149.00
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	Indirect Costs	BACR Administrative fee is 15% and includes BACR Executive Management, People and Culture, IT, Development, Payroll, Finance , Insurance and other agency infrastructure	$11,887.50

Bay Area Air District
CLEAN AIR FOR ALL

Benicia Opportunity
Sustainable Solano Application

Bay REPAIR
Local Community Benefits Fund – Round 1
Opportunity and Catalyst Grants
Overall Narrative

Application Information	
Application Title	From Soil to Society: A Just Transition Initiative
Lead Applicant	Sustainable Solano
Application Location	Benicia and Vallejo, CA
Overall Funding Request	$2,410,392
Grant Term Request	3 years

PROPOSAL VISION (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
    - *Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.*
    - *Advance integrated projects to holistically meet community needs.*
    - *Strengthen community-driven and collaborative solutions.*

A coalition of established Benicia and Vallejo nonprofits with strong ties in each community will work together to implement a comprehensive multiple-benefit program that addresses the immediate need to mitigate air pollution and resulting public health issues while raising awareness for longer-term just transition strategies and social change. Called "From Soil to Society," the program recognizes how community gathers around healthy public spaces that start at the soil level to improve the natural environment and people's connection to one another. It seeks to foster the creation of a just society from the ground up.

The program includes two major components: multiple nature-based green infrastructure projects through the Healing Green Spaces project, including urban forestry, community gardens and sustainable landscapes; and a Community Engagement project that involves youth and the greater community through an EcoArt Camp for younger children and teens, a high school Just Transition Youth Service Corps, and Community Conversations program and Just Transition Multimedia Journal. Healing Green Spaces will deliver immediate ecological and public health benefits through improved air quality, healthy soil and increased local food production. A new community garden farm stand will contribute to youth education, the local economy and resilience. The Community Engagement project around just transition will empower

youth through education, workforce and service opportunities and support ongoing community dialogue around reconciling the need for both community health and wealth by tackling existential questions around the transition away from a fossil fuel economy. Advisory Boards with representatives from each city will ensure community voices are part of the process from conception through program delivery and feedback-driven improvement to identify the most pressing needs in Benicia and Vallejo.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s)*

The project will benefit the broader community of Benicia and Vallejo, while recognizing that mitigating pollution will benefit historically disadvantaged groups who have been disproportionately affected by poor air quality and other environmental problems. Mitigation projects help clean the air and create publicly accessible green spaces; community gardens and a farm stand will increase local food access. The paid Just Transition Youth Service Corps will remove participation barriers for socioeconomically disadvantaged youth and encourage active participation. Free workshops, talks, tours and Community Conversations will create opportunities for people to participate and share with others within their communities; the Just Transition Multimedia Journal will share from the community's lived experience with a wider audience.

"From Soil to Society" is grounded in a holistic approach to the problems facing our communities. Closure of a major industrial facility (Valero) leaves behind environmental and public heath degradation and economic decline. Solano County received over $3M in funding to provide immediate relief to workers who lost their jobs.[1] This program's focus is healing the environment and planning for a future where communities thrive without these types of jobs. Youth Service Corps members will gain knowledge about air pollution effects and test soils for contaminants, then share their findings with the **wider community**, increasing community knowledge.

Poor air quality directly ties to health. Solano County has some of the highest asthma rates in California (22.3% vs. 15.1% statewide)[2]. Rates for emergency visits for asthma, COPD and bronchiectasis were highest for Native Hawaiian and Pacific Islander and Black residents between 2016-2024.[3] Vallejo neighborhoods are consistently above the 80th percentile for asthma — some are in the 100th percentile; Benicia asthma rates are in the 67th percentile.[4] In Solano County, Black residents have the highest age-adjusted asthma hospitalization rates.[5] Solano Public Health notes the elderly and children with asthma are most vulnerable to air pollution harms. A study published in 2020 concluded that "proximity to an oil refinery was associated with a significantly increased risk of cancer diagnosis across all cancer types examined."[6] Solano County shows higher age-adjusted cancer rates compared to the state: 29.1% vs. 23.8%.[7]

An immediate way to mitigate poor air quality is to increase the urban tree canopy. This work will be led by Benicia Tree Foundation in Benicia and guided in both cities by the Advisory Boards using relevant data to prioritize areas with the most need. Sustainable demonstration gardens with multiple ecological benefits will create sites for public education and annual tours, providing the community with approaches they can bring to their own yards and neighborhoods.

Through the Just Transition Youth Service Corps, led by Sustainable Solano in Benicia and 4th Second in Vallejo, **high school students (ages 14-19)** will learn about just transition principles, imagine a healthy society, work on green infrastructure and air quality projects, and engage with community members through outreach and the Community Conversations series. SuSol, 4th Second and Arts Benicia will develop the curriculum with input from the Advisory Boards. This opportunity will serve **Benicia and Vallejo youth** who will be most affected by climate change, and their **communities,** helping to reach community members we may not otherwise reach, since the youth share what they've learned with peers, family and neighbors.

The arts can be a powerful tool in community healing and education. Arts Benicia will equip **younger students (ages 6-14)** with environmental knowledge through experiential, arts-based ecological education and a native plant learning garden that will become part of the EcoArts Camp curriculum. Arts Benicia staff will create public educational events, offering inspiring artistic activities to the Youth Service Corps and the general public, and talks and exhibits that further the conversation around just transition, sustainability and air quality.

The community is divided: some are celebrating the exodus of a major polluter, while others are mourning the loss of stable jobs and tax income. **The program establishes an ongoing public dialogue, education, and concrete examples of the major principle of just transition: a healthy economy and a clean environment can and should co-exist**, so that the community can begin to heal.

The Community Conversations series will address just transition topics identified by community members, youth and partner organizations to nurture community dialogue, and the Multimedia Journal will capture and share from people's lived experience. Other community engagement opportunities involve public educational events establishing green infrastructure sites (urban forestry, demonstration gardens and community gardens) and talks and tours. The program will be supported by Advisory Boards with lived experience and knowledge of community needs and priorities. The Advisory Boards will assist with site selection for the green infrastructure projects, inform curriculum development and delivery for the Youth Service Corps, and advise on Community Conversations topics and public engagement in their communities.

PARTNERSHIP STRUCTURE (20 points)

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

Sustainable Solano has been serving Solano County for more than 25 years. From its beginning as Benicia Community Gardens, it has grown to a countywide nonprofit organization working towards an environmentally regenerative, economically viable and socially just future. Its accomplishments include 80 gardens that save 4.7M gallons of water annually, and almost 20,000 workshop, event and program participants. SuSol has worked with more than 400 Solano County high school youth on envisioning the world they want to live in and providing practical, hands-on experience shaping local change and educating and advocating for wider change. This funding will build a broader coalition supporting larger conversations about a just and sustainable future, living within the Earth's limits, the local economy, and healthy and happy communities.

Benicia Tree Foundation was established in 2009 to strengthen the community by promoting and supporting tree planting, maintenance, and education. It has planted almost 1,100 trees in Benicia, working mostly as an all-volunteer organization. Given the significant budget reduction in Benicia and the loss of the Tree City USA designation Benicia held since 2008, it is absolutely critical to strengthen this nonprofit. SuSol will act as a mentoring partner, managing some of the administrative and payroll functions, and is prepared to provide additional financial structures and support if needed.

Arts Benicia is another long-standing organization serving Benicia since 1987 with the mission to stimulate, educate, and nurture cultural life in Benicia primarily through the visual arts. This community-based nonprofit organization provides exhibitions, educational programs, and classes that support artists and engage the broader community. The EcoArt Camp has been serving Benicia youth for 14 years through integrating ecological and environmental concepts in ways that are engaging, age-appropriate, and aligned with educational standards.

4th Second in Vallejo was established in 2016 to catalyze systemic change through direct service, fostering collaboration, and growing community capacity to bridge gaps between community needs and resources. In 2017, 4th Second launched the Catalyst Fellowship, a hands-on social innovation fellowship to empower Vallejo youth and equip them with tools to address community needs. The organization continues building strong youth-led programs in Vallejo and currently operates two youth centers in town. Just Transition curriculum and projects will be a great addition to its current offerings.

The City of Benicia will provide support for urban greening projects on city property through staff time to review projects and prepare sites for volunteers to plant trees.

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

All partners will sign a Partnership Agreement that will define governing roles, financial relationships, and decision-making processes. The program team will include all paid staff on this funding and organizational leadership. Program launch will consist of a day-long planning session to review the grant agreement and program objectives, and develop a detailed work plan, including milestones, accountability for each step and regular meetings (monthly for the paid staff on the project and quarterly for the entire program team). Advisory Boards will meet quarterly. All key decisions will be made by consent during these meetings by all partners, striving for consensus. The City of Benicia's involvement is limited to staff hours dedicated to project review and preparing sites for tree planting on city property.

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to:*
    - *Coordinate overall community engagement activities.*
    - *Track and report on indicators to assess progress towards measurable outcomes.*
    - *Collect and process reporting, reimbursement and invoicing requirements.*

The program is envisioned within the common "From Soil to Society" framework for "rebuilding society from ground up," and will be used for all public engagement. The SuSol program manager (SuSol PM) funded through the Community Engagement project will guide planning activities, supported by a joint Master Calendar shared among the partners. SuSol PM will be responsible for overseeing program promotion (with the help of coordinators), including social and traditional media, partners' websites and newsletters, outreach through a network of community-based organizations that serve different populations, and cross-promotion during partners' public events.

SuSol PM will be responsible for ongoing tracking of program activities and collecting impact data for reporting. Management of the activities and hours for the Just Transition Youth Service Corps will be handled by the SuSol PM in Benicia and 4th Second in Vallejo, with close coordination to ensure uniformity of experiences for the youth.

Monthly working group meetings will review the work plan, accomplishments, challenges and upcoming events against the goals and milestones of the program. Collected feedback data will be discussed and inform program adjustments.

All program partners will be required to collect and report financial data in a standard format. The SuSol PM will consolidate fiscal information monthly to prepare the invoice. Program director will be the key funder contact, review submitted documents, approve the invoice, and approve the distribution of funds to partners after payment.

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for*

the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.

All four nonprofit organizations are governed by their own Board of Directors. Sustainable Solano does not require board pre-approval since the program is within the organization's mission and strategic plan, and co-executive directors are given full authority to initiate new programs. The board was informed about the program and board president involved in shaping the vision and coordinating with the City of Benicia.

The 4th Second executive director has the authority granted by the organization's board and bylaws to execute contracts on behalf of the organization and to engage in expansion of current programs and new programs in alignment with the mission.

Benicia Tree Foundation's operation is entirely managed by its Board of Directors. Board President Zack Ioakimedes was actively involved in shaping the program vision and serves as the main contact. No further formal approval is required.

Arts Benicia has board approval. Arts Benicia Executive Director Celeste Smeland continues to keep the board informed, provide written updates and answer any questions about the project at monthly board meetings. No further approval to initiate the program will be needed if awarded the funding.

The Benicia City Council voted on May 19 to issue a proclamation that supports the City of Benicia as a co-applicant related to green infrastructure projects on city property.

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

Sustainable Solano has received numerous federal and state grants and has an established process for launching and managing multi-year complex programs, budgets and reporting. SuSol will host a project commencement partner meeting to define concrete, measurable deliverables for each team member and partner. An online program management document will allow project team members to coordinate, communicate, and share data. The program working team will meet monthly to share information, assess findings, monitor progress and plan next steps. SuSol has an established subaward management procedure, following federal guidance, that will be used to manage subawards on this project and an experienced project director who will ensure fiscal and legal compliance for all partners.

A dedicated full-time program manager through the Community Engagement project will oversee the program, including planning, on-the-ground activities, program promotion and outreach, budget management and reporting. The Healthy Green Spaces project

requires another full-time dedicated program manager, who is a longtime Benicia resident with extensive experience managing green infrastructure projects.

One full-time program coordinator, divided between SuSol and BTF, will be responsible for logistical support. SuSol will carry the payroll function through the length of the project, while assisting BTF with other funding and building their own operation.

A SuSol senior leader will serve as project director at 0.25 FTE, ensuring compliance, overall relationship with the funder and key stakeholders, and mentoring staff. Youth interns will be employed through the program to help with essential tasks in educational programs for younger children and community engagement.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

Sustainable Solano's budgets and operations are based on funded programs and strong internal financial systems. SuSol does not spend funding it does not have and keeps careful records and forecasting for each program to meet the operational needs of the organization. Program managers receive extensive fiscal management training to oversee program financials and are supported by a dedicated operations coordinator. An independent bookkeeper experienced in the nonprofit sector keeps the books: this allows for the separation of duties and strict following of accounting rules and regulations. ADP handles payroll and tax reporting. Executive leadership and a Finance Committee led by the Board Treasurer review financials in-depth monthly; the Board reviews financials at each board meeting. A CPA reviews annual financials and prepares the 990 form. While SuSol is not subject to audit based on the size of the organization, it conducts a volunteer audit every three years (upcoming audit for 2025).

Grant Term Request	3 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Healing Green Spaces
Project Lead	Sustainable Solano
Project Location	Benicia and Vallejo
Project Funding Request	$907,146

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

A coalition of Benicia and Vallejo nonprofits will work together to implement multiple nature-based green infrastructure projects in both cities that address the immediate need to mitigate air pollution and resulting public health issues. Projects will include urban forestry, community gardens and sustainable landscapes. This green infrastructure program, called Healing Green Spaces, will deliver immediate ecological and public health benefits through improved air quality, healthy soil and increased local food production. Through a new community garden farm stand, it will also contribute to youth education, the local economy and community resilience.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*

    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

Green infrastructure projects based on the principles of sustainable landscaping, urban forestry, healthy soil, and use of secondary water sources will provide multiple ecological benefits contributing to the health of the environment and local residents: air purification, carbon sequestration, shade/heat mitigation, dust control, covering bare soil, and water capture. Community gardens and sustainable demonstration garden sites will increase access to healthy produce. Benicia and Vallejo have a chronic air pollution problem due to their proximity to the Valero and Martinez refinery operations.

Creating food-growing green spaces will start with soil health. While the immediate effects of pollutants in the air are understood, the long-term consequences to soil health are less known. The Just Transition Youth Service Corps (see Community Engagement project narrative) will incorporate soil testing and community education on air quality and soil health as part of their service — bringing knowledge to the community that touches the soil every day through gardening, landscaping and children playing.

The urban canopy of both cities will be expanded by planting trees in city parks and private property through organized community volunteer days and the Youth Service Corps, and the management of a "tree keepers" program where people can request trees to plant in their yards. More trees will reduce air pollution and increase shade, creating more comfortable, walkable spaces.

Expansion of Swenson Community Garden in Benicia will allow more people to grow their own food, and part of the garden and the orchard will be maintained and harvested by the Youth Service Corps to operate a farm stand on-site. This will increase food access and education on the benefits of reduced "food miles" when sourcing from community gardens or local farms, as the site also hosts a hub for local farms to deliver direct-to-consumer Community Supported Agriculture boxes.

These projects will be developed and installed with the community. Youth Service Corps members and community participants will gain knowledge about sustainable urban greening practices, increased physical activity planting and maintaining these spaces, and receive mental health benefits from spending time in green spaces and with fellow community members.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Some project locations have been identified; additional sites for public green spaces or demonstration gardens will be identified by the program team with support from Advisory Boards and youth who live in these communities. Projects on city-owned land will be done with City of Benicia's approval and support.

Identified shovel-ready projects:
Urban Forestry (Benicia):

- East 5th Street Corridor (1491-1493 & Francesca Terrace Park), urban forestry, 30+ trees, Benicia Tree Foundation
- East 2nd Street Slope (Riverhills to I-780), 30+ trees, Benicia Tree Foundation

- Southampton Hills (Rose Drive & Old Southampton) – a few potential sites, urban forestry, Benicia Tree Foundation

Publicly Accessible Green Spaces (Benicia):

- Swenson Community Garden extension (Heritage Presbyterian Church, corner of East Second and Military West streets), Sustainable Solano
- Arts Benicia Native Plant Learning Garden, Sustainable Solano

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The program's partners used various methods to identify needs and priorities for this program: direct observation and experience on the ground with current programming, personal experiences of each organization's staff and board members living and working in these cities, conversations with partner organizations (including those that run community gardens), surveys from participants in urban greening events; various Benicia and Vallejo city planning documents (e.g. General Plans, Climate Mitigation Plan, Parks & Rec Master Plans) created with extensive involvement by community members, presentation of the project proposal to the Benicia Community Sustainability Commission; and research data on the benefits of green urban spaces, and specific data sets. Below is a detailed description of methods and findings.

Sustainable Solano staff presented the overall grant proposal to the Benicia Community Sustainability Commission for community feedback. Commission members expressed strong support for green infrastructure projects that would grow community garden presence and more trees to improve the city's air quality. Benicia City Council approved being a co-applicant on this project for community planting on city-owned property (e.g. parks).

Sustainable Solano started as Benicia Community Gardens in 1999 with the creation of Swenson Garden, the very first community garden in Benicia. The second community garden, Avant Garden, was created on First Street in 2010. This site is a welcome green public space in the downtown area, but has been sold for development, which would affect more than 40 garden members. There is an urgent need to continue supporting urban agriculture in Benicia, while also expanding opportunities for people to grow and buy local produce, reducing food miles and improving the environment.

There is a constant request for *truly local food*. In 2015, SuSol partnered with local farms to start a Community Supported Agriculture hub near Swenson Garden, coupled with a public education program. The CSA program is still going strong, with over 50

subscribers. Organizations such as Cultivate Community Food Co-op represent an additional 350 members in Benicia and Vallejo looking for hyper-local food.

In 2014, Sustainable Solano launched a Sustainable Backyard program in Benicia, which later expanded to the entire county. Using the principles of permaculture and secondary water, the program creates lush ecosystems that include trees and understory plants using mostly rainwater captured through in-ground swales to recharge groundwater and laundry-to-landscape greywater. Twelve demonstration gardens in Benicia and 15 in Vallejo produce almost 9,000 pounds of food and save over 1.28M gallons of water annually. Rising temperatures, cost of water, and desire to grow local food have increased community interest in these gardens. Since 2015, more than 10,000 people have attended SuSol workshops to learn sustainable landscaping and gardening techniques. Survey respondents consistently ask for more workshop opportunities, and there is a waiting list of residents who want demonstration gardens. Each educational public event brings around 20 engaged community members.

SuSol's internships in Vallejo engage youth on air quality issues, and the organization has built relationships with citizen-based air quality organizations in both cities. SuSol is working with communities around air quality issues across the county. Countywide surveys show 1/3 of respondents have or know someone who has a condition worsened by poor air quality (e.g. asthma, cardiovascular disease). CalEnviroScreen data shows Vallejo neighborhoods are above the 80th percentile for asthma compared with the state; some are in the 100th percentile. For cardiovascular disease, some parts of Vallejo are as high as the 95th percentile. Benicia ranks in the 67th percentile for asthma and around the 55th percentile for cardiovascular disease. Community members who participated in tree planting events voiced a desire for more trees and shrubs to provide a buffer, particularly along roadways, to improve air quality and walkability in their communities. The call for more trees in each city is a constant request; residents desire the shade, carbon sequestration, air quality improvement and beautification.

To identify community needs around tree canopy, the Benicia Tree Foundation's board president, a lifelong Benicia resident and arborist for the City of Benicia's Parks Department, relied on his own experience and observations, as well as conversations with fellow arborists and residents. Trees in Benicia and Vallejo have been stressed and lost due to drought, disease and storm damage. The organizations have heard from residents about the need for trees and shade at playgrounds, parks and schools.

Tree removal permit applications issued in Benicia between April and September 2025 approved 40 trees for removal. This data does not capture the number of unpermitted tree removals. Cal Fire's Urban Tree Canopy Viewer provided data on Benicia's canopy loss on a larger scale from 2018 to 2022: Every neighborhood within the city

experienced canopy loss, with some areas experiencing declines of nearly 10%. Two tracts within Benicia currently have canopy levels that are “very low” when compared to the baseline state level set by Cal Fire. In Vallejo, the Canopy Viewer identified six census tracts in the city that are either “very low” or just below or near statewide levels.

Community need for the Arts Benicia Native Plant Learning Garden has been identified through ongoing observation and direct feedback from participants, visitors, and students. Arts Benicia is in a lush, park-like setting, but barren dirt and gravel areas beside the building are seen as underutilized and visually uninviting. These spaces are used during EcoArt Camp and related programs for outdoor learning and artmaking, but they lack the ecological richness and infrastructure to fully support these activities. Campers, families, and visitors have consistently expressed interest in transforming these areas into a more functional and engaging environment.

City priorities and planning, often done with community engagement, reflect the need for these types of green infrastructure projects, even when funding is not readily available.

Benicia has a *chronic air pollution problem*, and the *need for expanding the city’s green infrastructure* has been on top of the community’s priority list for decades. Benicia’s Parks, Trails and Open Space Master Plan calls for more trees and landscaping (#8 on the list of almost 40 priorities) and community gardens (#12 on the list). Community members participated in plan creation through a survey and in-person meetings.

In 2008, after a multi-year public process, the City of Benicia started a tree program with the adoption of an updated tree ordinance, which eventually lead to Benicia being designated as a Tree City USA. Community members shared pride in this designation, but it was lost a few years ago due to budget cuts and lack of resources to focus on planting and maintaining the city’s tree canopy.

It is also *difficult to fund projects in Benicia.* Due to its wealthier socioeconomic profile, the city is not considered a priority community, though serious pollution incidents have been happening here for years. This funding is a unique opportunity for Benicia nonprofits to strengthen programming and operations and support the community going through a difficult transition due to the Valero closure.

The Propel Vallejo 2040 plan includes urban greening initiatives; its 10-Year Comprehensive Parks and Recreation Master Plan emphasizes upgrading landscaping, including tree canopy improvement and shade enhancements. Both documents were driven by extensive public engagement with stakeholders and outreach to Vallejo citizens and visitors through a survey, focus group interviews, and virtual public forums.

Vallejo is facing a serious budget deficit and city leadership transition. Combined with a lack of capacity for Vallejo-based nonprofits to focus on urban greening, this presents a serious risk for further green space development and upkeep.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Green spaces created through this program will provide direct and immediate ecological and human health benefits to communities in Benicia and Vallejo.

The proposed 12 urban greening projects and planting more than 300 trees will address gaps in both cities' capacity to develop and maintain green spaces, which are a stated priority for both cities. These green spaces will provide multiple community benefits, including air pollution mitigation, healthy soil, carbon sequestration, shade, pollinator habitat, walkable spaces, educational spaces, and local food production. Active community engagement through at least 30 public events will provide physical activity, mental health benefits from increased green space, and social cohesion leading to improved physical and emotional health.

There is a growing body of research that confirms "urban green spaces provide environmental benefits through their effects on negating urban heat, offsetting greenhouse gas emissions, and attenuating storm water. They also have direct health benefits by providing urban residents spaces for physical activity and social interaction, and allowing psychological restoration to take place."[1]

"Exposure to urban green spaces ... significantly improves community health by lowering stress, enhancing mental well-being, and promoting physical activity. Access to nature fosters social cohesion and reduces health disparities, with particularly pronounced benefits for mental health, immune function, and cardiovascular health."[2] The World Health Organization finds increased access to quality, safe green spaces is a key factor in improving overall public health and promoting healthier lifestyles.[3]

For increased tree canopy to improve air quality, shade, walkability and beauty, the data will help prioritize projects with the most community benefit. The Cal Fire Urban Tree Canopy Viewer underscores areas of opportunity for planting more trees; CalEnviroScreen data identifies environmental justice communities that suffer the most from health conditions affected by poor air quality and would benefit from such projects. American Forests' Tree Equity Score shows Vallejo would need nearly 27,000

additional trees to get all of its communities to an equity score of 75. Scores range from 0-100. For Benicia, it would take an additional 11,000 trees. A Tree Equity Score shows "whether there are enough trees in a neighborhood for everyone to experience the health, economic and climate benefits that trees provide."[4] Locations identified by the community and the Advisory Board will be prioritized.

Strengthening the Benicia Tree Foundation fills a gap in city capacity for urban forestry by empowering a local nonprofit whose mission is tree planting and maintenance for long-term health.

Food-producing demonstration and community gardens and expansion of Swenson Garden to supply a farm stand will help meet demand for local food that is healthy for people and planet and show Benicia residents the benefits of economic diversification that focuses on the local economy and local supply chains. Just Transition Youth Service Corps members will build that knowledge by working on garden installations, the farm stand and community outreach. Community gardens in both cities will increase food production and access. In Vallejo, many community gardens are run as outreach efforts for those who most need it in the local community (e.g. unhoused or under-resourced residents).

The demonstration gardens will provide environmental benefits in their communities and widespread benefit from the educational workshops, talks and tours. They will help restore healthy soils and green spaces to communities that have often shifted to dead lawns or hardscape to deal with drought and the high cost of water.

Arts Benicia Native Plant Learning Garden will replace a bare dirt and gravel surface with living vegetation, helping reduce localized air pollution and dust, sequester carbon, and improve overall air quality. By offering free or low-cost programming for youth, school groups, and community members, the project helps reduce barriers to participation in environmental learning — especially for those who may not otherwise have access to nature-based education or garden spaces.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Each program partner has a long history of meaningful community engagement in their cities and has built long-lasting relationships with the communities they serve. The program will continue to develop community trust and interest for the entire vision of the

“From Soil to Society: A Just Transition Initiative”. The goal is to have transformative relations that can hold the community as it is going through a transitional crisis by offering space and time to connect and process uncertainty and difficult decisions. There are many opportunities for authentic community engagement during in-person interactions at garden installations and tree plantings and during Community Conversations. We expect regular visitors to the youth-run farm stand and will host speakers at various urban greening sites and annual demonstration garden tours.

Community engagement centers community-based decision-making to drive equitable choices for the program, curriculum, topics and projects. This project will rely on continuous relationship-building within both cities. Outreach and feedback will be done through each project partner’s networks, including other community partners that work directly with under-represented community members, such as churches, health clinics and other youth-serving organizations.

Sustainable Solano’s standard practice is to collect community feedback after each public event through a simple survey, asking questions about people’s expectations for the event, their experience of the activity and its impact (learning, inspiration, curiosity), and suggestions for future events. The results of these surveys will be documented and analyzed by the program manager, and all constructive feedback will be presented and discussed during quarterly program meetings with partner organizations. This feedback, coupled with check-ins with Youth Service Corps members, will inform adjustments to the program to best serve the community.

The Advisory Boards will be a powerful way to bring community voices to the process, especially in the creation of the just transition curriculum for the Youth Service Corps, identifying green infrastructure projects and developing ideas for Community Conversations around the creation of a just and regenerative economy. A Just Transition Multimedia Journal will document what comes out of the conversations, projects and program for each city.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The Healing Green Spaces project is about addressing air quality and public health through near-term mitigation projects in Benicia and Vallejo. These projects will increase tree canopy, plant green spaces that improve air quality and benefit physical and mental health, and increase local food production and access. This project includes

four critical components to reduce air pollution and improve health outcomes.

1) Urban Canopy – (Benicia Tree Foundation will hold community tree planting events and manage the Benicia Tree Keepers program; Sustainable Solano will manage the Vallejo Tree Keepers program) The Benicia Tree Foundation will lead planting 300 trees while strengthening the nonprofit to fill the gap in the Benicia's tree management. This will provide direct improvement to air quality, more shade, lower temperatures and increased walkability. BTF will manage volunteer tree-planting events in Benicia at large public sites approved by the city and on private property. The Tree Keepers program will provide up to 100 fruit and shade trees to Benicia and Vallejo residents interested in planting trees in their yards.

2) Swenson Garden expansion (SuSol in Benicia) — The Swenson Community Garden expansion led by SuSol will create an opportunity for more people to grow their own food, and part of the garden and orchard will be maintained and harvested by the Just Transition Youth Service Corps for a farm stand on-site. This will increase food access and educate people about the benefits of reduced "food miles" for local food, as the site is a hub for local farms to deliver direct-to-consumer Community Supported Agriculture boxes. The expanded garden will include an outdoor education area that can host talks, demonstrations and Community Conversations.

3) Arts Benicia Native Plant Learning Garden (SuSol in Benicia) — This garden, installed through community workshops by SuSol, will be planted and supported as part of Arts Benicia's EcoArt Camp with support from the Just Transition Youth Service Corps. It will feature regionally appropriate native plant species, pollinator habitat, waterwise landscaping techniques, and interpretive signage that illustrates ecological relationships, air quality benefits, and sustainable practices. By replacing a bare dirt and gravel surface with living vegetation, the project will reduce localized air pollution and dust, sequester carbon, and improve overall air quality. The garden will serve as a hands-on teaching tool, helping students understand sources of air pollution and practical ways to reduce it — such as planting trees, conserving energy, dust reduction and making environmentally conscious transportation choices.

4) Demonstration Sustainable Gardens (SuSol in Benicia & Vallejo) — These garden installations will include at least 1 additional publicly accessible site each in Benicia and Vallejo, and 8 new gardens on private or public sites (4-5 in Vallejo and 3-4 in Benica) led by SuSol through public community workshops and the Just Transition Youth Service Corps. These gardens will demonstrate techniques to mitigate air pollution, lessen drought and stormwater flood conditions, and can provide fresh, healthy produce for the property owners and surrounding community. These could be at private homes or community gardens managed by organizations such as churches or schools. Using

the principles of permaculture and secondary water (greywater, roofwater and in-ground capture and storage through swales), lawns or bare patches of ground transform into lush and productive gardens. These gardens include fruit and native trees and supporting plants, creating a thriving ecosystem that needs very little municipal water once established. Landowners agree to host public education and open them for public tours, creating a long-lasting public education and inspiration resource.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

   Template Measurable Outcomes.docx

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The Healing Green Spaces budget totals $907,146 (SuSol: $695,191; BTF: $195,155; City of Benicia: $16,800)

Sustainable Solano (direct costs related to Swenson Garden expansion, Native Plant Learning Garden, 10 additional demonstration gardens & Vallejo Tree Keepers):

- Personnel/Staff ($458,250 total): Salary and benefits for 1 full-time project manager to plan, manage and complete 30 community workshops for 12 green infrastructure projects ($104,000/year); 0.125 FTE program director for oversight of the project as part of the From Soil to Society initiative ($16,250/year); 0.5 FTE project coordinator (a position shared with BTF for community outreach and logistics support) ($32,500/year).
- Subcontractors ($32,600 total): Landscaping contractors for landscape/garden design, guiding community and youth in about 30 workshop events for 12 project installations and growing, & performing maintenance and technical tasks that cannot be performed by the community, such as site prep with machinery (based on hourly rates ranging from $65-$125/hour for 30-50 hours/project)
- Construction ($86,800 total): Base amount ($5,000/project) for plants, soil, irrigation supplies, etc., for 12 green infrastructure projects including native plant learning garden, demonstration sustainable gardens; community garden expansion ($19,400) includes fence, shade structure for educational space, garden bed materials; 50 trees for Vallejo Tree Keepers ($100/tree)
- Community Engagement ($7,000 total): Promotion/outreach materials ($1,000) and snacks/water for 30 green infrastructure community installation days ($6,000)

- Travel ($1,820): Staff mileage reimbursement directly related to travel for green infrastructure project management (site assessments, community installation workshops, outreach) or professional development
- Capacity-Building ($5,000): Professional development courses in sustainable landscaping & other relevant education for project staff
- Indirect (15%): $88,721 / Contingency (2.5%) ($15,000)

Benicia Tree Foundation (direct costs related to community tree planting events and Benicia Tree Keepers program):

- Personnel/Staff ($97,500): Salary and benefits for 0.5 FTE project coordinator (a position shared with SuSol for community outreach and logistics support)
- Construction ($68,000 total): 300 trees for volunteer-based community planting on public and private property in Benicia ($200/tree, stakes and other planting materials); 50 trees for Benicia Tree Keepers ($100/tree); tree delivery costs
- Community Engagement ($4,200 total): Community outreach/promotion ($1,000) and snacks/water for 16 community tree planting events ($3,200)
- Indirect (15%): ($25,455)

City of Benicia (direct costs related to projects on city property, such as parks):

- Personnel/Staff ($16,800 total): Salary and benefits for city staff time to coordinate with project team and review projects on city property, including the Native Plant Learning Garden and BTF tree planting projects ($5,685); Parks staff hours for site preparation for volunteers to plant 150 trees on city property based on an average hourly rate across three different pay scales ($11,115)

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

In January 2023, the City of Benicia updated its General Plan Safety Element, incorporating a new Climate Change Vulnerability Assessment (Appendix L). This assessment identifies risks such as extreme heat, flooding and wildfires, directing future sustainability efforts to reduce greenhouse gas emissions and strengthen community. Public engagement and mitigation projects in this proposal address these needs.

Climate Adaptation Plan 2016: The effects of climate change in Benicia include sea level rise, more frequent and intense heat waves, and an increase in the number of flood events. One of the named strategies is to invest in green infrastructure. This proposal addresses directly the need to invest in green infrastructure.

Benicia's General Plan includes a section on public health that describes a comprehensive definition of a healthy community that includes physical, intellectual and social environments, and emotional and spiritual health. The proposal will contribute to physical and emotional health of residents.

Other Benicia policies and guidance that are directly related to the outcomes:

- POLICY 4.3.3: Promote establishment of demonstration gardens at schools, churches, fire stations, and other sites.
- Program 4.3.D: Consider utilizing vacant City property for gardening of fruits and vegetables.
- April 2025: Industrial Safety Ordinance. The ordinance aims to help protect Benicians against potential fires, explosions and toxic emissions connected to the Valero Refinery
- Section 4: Educate the public regarding air quality issues; increase in public understanding of air pollution and measures to reduce air pollution

Benicia Parks, Trails and Open Space Master Plan – 2023 update to 1997 original plan. The community needs assessment for investment priorities (p. 3) assigned trees and landscaping 112.9 points (#8 on the list of almost 40 priorities); community gardens have 91.0 rating (#12 on the list of priorities)

In Vallejo, the Propel Vallejo 2040 plan includes urban greening initiatives, and the 10-Year Comprehensive Parks and Recreation Master Plan emphasizes upgrading landscaping, including essential tree canopy improvement and shade enhancements. This proposal aligns with that vision.

In Senate Bill 1000, local governments must incorporate environmental justice policies into their general plans, including reducing health risks and promoting civic engagement in polluted communities. This proposal engages community members in conversations and decision-making about projects within their communities.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Sustainable Solano has been working in urban agriculture and sustainable green infrastructure projects for over 25 years. The organization's capacity to manage complex projects has been developed organically, from relatively simple community gardens in Benicia, to a network of demonstration and community gardens on private and public land, first in Benicia and now throughout the county. SuSol has received numerous federal and state grants and has an established process for launching and

managing complex programs, their budgets and reporting. In 2025, SuSol managed an operational budget of $1.2M, including federal (USDA), state (CDFA & CARB), local and private funding. SuSol has structures in place that will serve to ensure that all partner organizations are aligned toward the same objectives with each playing their part to achieve those goals.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The intensive green infrastructure project will require a full-time dedicated program manager to lead the extension of Swenson Garden, and installing the Arts Benicia Native Plant Learning Garden, demonstration gardens and other green infrastructure projects identified during the program, managing contractors and a program coordinator. The Sustainable Landscaping program manager in this role is a longtime Benicia resident and has a bachelor of science in biology and Permaculture Design Certificate; she has been managing these types of projects for 10 years.

One full-time program coordinator will be responsible for logistical support for the program: scheduling and arranging for public education events, purchasing and ensuring delivery of the plants, materials, and supplies, and assisting with promotion. This position will be divided between SuSol and Benicia Tree Foundation: BTF has an urgent need to have dedicated paid staff, but cannot afford the payroll infrastructure. SuSol will carry this function through the length of the project, while assisting BTF with other funding and building their own operation.

One of the senior leaders of SuSol will assume the responsibility of the project director at 0.25 FTE for the entire From Soil to Society initiative, ensuring compliance, overall relationship with the funder and key stakeholders, and mentoring program staff. Youth Service Corps members will be employed through the program to support community benefit projects and help with essential tasks in educational programs for younger children and community engagement.

Greywater systems when suitable will be provided through SuSol general funds.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be

evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.

Demonstration gardens on private land do not require any permits; gravity-fed laundry-to-landscape greywater systems do not require permits in California. We have the city's support to create green spaces on city-owned property, specifically the learning garden for Arts Benicia and tree planting in city parks in the proclamation from Benicia City Council (Benicia_26LCB34_Healing Green Spaces_ City of Benicia Resolution).

- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.

During the grant term, additional sites and agreements will be signed. SuSol has a standard agreement used with property owners for demonstration gardens on private property, and will follow the format of current agreements it holds with cities if additional sites are identified on city property (eg. along streets, in city parks).

- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*
    N/A
14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*
    N/A
15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*
    N/A

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

The Benicia Tree Foundation will organize volunteer days to support and maintain trees planted through this program, and the Youth Service Corps will also support maintenance. Demonstration gardens created on private land and trees planted under the Tree Keeper program will be the full responsibility of the landowner — ensuring their

longevity. Community Gardens have ongoing membership fees for necessary maintenance and upkeep or are maintained by organizations as part of their community service, such as churches or schools. Arts Benicia has a solid revenue stream through public education and arts exhibitions that will support the learning garden.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

One of the obstacles to green infrastructure is the ever-rising cost of water. This is why careful attention to secondary water sources is so important to the overall design of these projects. Bioswales in the ground to slow, spread and sink rainwater, roofwater diverted to these swales, laundry-to-landscape greywater when feasible, mulching to prevent water evaporation — all of these proven methods and techniques significantly reduce the need for city water and make these gardens more accessible.

There can be a kind of “community fatigue” when people have been asked to participate in so many activities, planning, surveys, etc. The Youth Service Corps will help install the greening projects, ensuring planting will get done, even if there is low public attendance. By having a variety of activities and touchpoints (EcoArt Camp and other events in the learning garden, the farm stand at Swenson Garden, garden tours and talks), we also hope to reach those who may not be drawn to hands-on workshops.

Working with cities can take significantly more time than working with other organizations or individuals, but the benefits of projects on public property make those efforts worth it. We are in dialogue with the City of Benicia around some of these projects. In Vallejo, we have established relationships with the city through SuSol and 4th Second’s work that we hope will support conversation around potential project sites.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Create new and expand existing inspiring and healing green spaces in Benicia and Vallejo that support the health of people and planet.

Measurable Outcome	Indicator(s)
1. Increase access to public green spaces in Benicia & Vallejo by creating new and expanding existing urban green oases	• Expand Swenson Community & Market Garden in Benicia • Create Arts Benicia Native Plant Learning Garden • Guided & supported by community, identify & develop at least one more public site each in Benicia and Vallejo
2. Expand tree canopy in Benicia & Vallejo through community-supported tree plantings and care	• Plant at least 300 trees in Benicia • # of public events and volunteers participating in urban tree planting • Develop & introduce the Tree Keeper program in Benicia and Vallejo
3. Increase number of sustainable demonstration gardens in Benicia and Vallejo	• Install at least 8 new demonstration gardens (4-5 in Vallejo & 3-4 in Benicia) featuring additional trees & secondary water use
4. Educate & inspire community members about connection between green spaces & community health (air & soil quality, physical, mental & emotional health)	• Hold at least 30 public educational events throughout the grant term • # of community members attending the events • Percentage of participants who reported being educated and inspired & other feedback captured through exit surveys

Abbreviations used: Sustainable Solano – SuSol, Benicia Tree Foundation – BTF, Arts Benicia - AB, 4th Second – 4thS

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1.Increase access to public green spaces in Benicia & Vallejo by creating new and expanding existing urban green oases	A. Swenson Community & Market Garden expansion	1. Work with Heritage Presbyterian Church and community members to design the expansion	SuSol		Feb. 2027
		2. Build infrastructure: level the site, install fence, irrigation, garden beds; community education shaded space, fill beds with soil	SuSol		June 2027
		3. Plant shade and fruit trees along Military West / garden edge	SuSol	BTF	April 2027
	B. Arts Benicia Learning Garden	1. Design garden with AB & its patrons & students	AB	SuSol	March 2027
		2. Install the foundation of the garden: swales, roofwater capture, irrigation, major tree	SuSol	AB	June 2027
		3. Finish planting understory with students	AB	SuSol	December 2027
	C. Develop one more publicly accessible site each in Benicia and Vallejo identified during the project implementation	1. Develop community outreach campaign & materials to gather insights from community members in Vallejo & Benicia	SuSol	4th Second	Ongoing until January 2028
		2. Gather input from the program Advisory Board & youth in the Just Transition certification program & Youth Service Corps	SuSol	4th Second	Ongoing, aiming for the first site identified by June 2027
		3. Select the sites based on community input & site feasibility, schedule design & installations	SuSol	4th Second	Ongoing, aiming to finalize the first site by Sept 2027 & install by Dec 2027
2. Expand tree canopy in	A. Tree planting Year 1	1. Confirm planting sites & prep work for Year 1 with the city and landowners	BTF	City of Benicia	Jan 2027

Benicia & Vallejo through community-supported tree plantings and care		2. Schedule public tree planting day (Youth Service Corps and general public)	BTF	SuSol	Jan 2027
		3. Order trees & supplies; coordinate with the city for prep work if feasible	BTF	SuSol	Feb-April 2027
	B. Tree planting Year 2 & 3	1. Confirm planting sites & prep work for Year 2 &3 with the city and landowners	BTF	City of Benicia	Oct. 2027 (Yr. 2) Oct. 2028 (Yr. 3)
		2. Schedule public tree planting day (Youth Service Corps and general public)	BTF	SuSol	Dec. 2027 (Yr. 2) Dec. 2028 (Yr. 3)
		3. Order trees & supplies; coordinate with the city for prep work if feasible	BTF	SuSol	Jan. 2028 (Yr. 2) Jan. 2029 (Yr. 3)
	C. Develop & implement the Tree Keepers Program	1. Develop community outreach campaign and materials, promote under the overall Just Transition program	SuSol	BTF	March 2027
		2. Finalize logistics of trees delivery & planting support	BTF (Benicia)	SuSol & 4th Second (Vallejo)	July 2027
		3. Start the program (during the rainy season to ensure success of the planting)	BTF (Benicia)	SuSol & 4th Second (Vallejo)	October 2027
3. Increase number of sustainable demonstration gardens in Benicia and Vallejo	A. Promote opportunity to landowners to become a demonstration garden keeper	1. Design & execute a promotional campaign targeting Vallejo & Benicia	SuSol		Feb 2027
		2. Reconnect with people on the waiting list to host a demo garden	SuSol		Feb 2027
		3. Follow up with all community members who expressed interest	SuSol		Ongoing from March 2027 through Nov 2029
	B. Garden planning & design	1. Select potential sites, arrange for site visits, make final selection	SuSol		Ongoing from Feb 2027 through June 2029

		2. Design each site with demo garden keepers (landowners) & professional permaculture designers (contractors)	SuSol		Ongoing from Feb 2027 through June 2029
		3. Schedule public and Youth Service Corps installations	SuSol	4th Second	Ongoing from Feb 2027 through June 2029
	C. Install demo gardens	1. Promote the final schedule	SuSol		Ongoing from Feb 2027 through June 2029
		2. Begin installations (can only be done during rainy season	SuSol		Ongoing from Feb 2027 through June 2029
4. Educate & inspire community members about connection between green spaces & community health (air & soil quality, physical, mental & emotional health)	A. Develop & maintain ongoing schedule of green infrastructure project public installations	1. Work with landowners & contractors to design the sites & schedule installations	SuSol		Ongoing throughout the program
		2. Coordinate with youth program leadership for the availability of Youth Service Corps members for these events	SuSol	4th Second	Ongoing throughout the program
		3. Publish scheduled events on the partners' websites & newsletters	SuSol	4th Second, BTF, AB	Ongoing throughout the program
	B. Review & expand current educational curriculum for public events to highlight air & soil quality, and introduce air quality information sources (health benefits are already a part of the standard curriculum)	1. Review the current curriculum with the program team and Advisory Board	SuSol	BTF, 4th Second	March 2027
		2. Research best practices and similar educational programs; consult air quality information sources & other publicly available data sources	SuSol	BTF, 4th Second	April 2027
		3. Finalize the curriculum & train program manager & other relevant staff on delivery	SuSol	4th Second	May 2027

	C. Design & implement a promotional campaign for these events	1. Design an overarching “Just Transition” program visual & informational package	SuSol	Arts Benicia	March 2027
		2. Share the program’s outreach package with all partners; ensure consistent usage across all program’s elements; provide training, if necessary	SuSol		April 2027
		3. Coordinate promotional efforts across all program activities among all partners	SuSol		Ongoing

Local Community Benefits Fund – Round 1
Project Narrative

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	From Soil to Society: A Just Transition Initiative
Lead Applicant Name	Sustainable Solano
Project Location	Benicia and Vallejo
Overall Funding Request	$2,410,392
Grant Term Request	3 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Community Engagement
Project Lead	Sustainable Solano
Project Location	Benicia and Vallejo
Project Funding Request	$1,503,246

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Community engagement will start with youth engagement to drive air quality mitigation projects and just transition conversations in Benicia and Vallejo. This project engages youth ages 6-14 in Arts Benicia's EcoArt Camp, where they will learn about environmental science, art-making, and hands-on stewardship to support environmental literacy, wellness, and creative expression. Sustainable Solano and 4th Second will conduct a Just Transition Youth Service Corps for high school students ages 14-19 to advance knowledge on environmental justice, pollution mitigation, community health and wealth, and envisioning a just society and just transition. Youth Service Corps members will be paid to support urban greening projects, support the EcoArt Camp, and additional air quality and community outreach projects.

This project engages residents through Community Conversations, which will create opportunities to gather and tackle topics and issues around just transition identified as most important to community members. Community Conversations will take on a variety of formats that offer space for conversation and contemplation, such as youth presentations, expert speakers, documentaries or art exhibits. A Just Transition Multimedia Journal will capture community experience and insight. Community Advisory Boards from both cities will guide this work from their lived experience.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*

- *Reduce air pollution and improve health outcomes*
- *Build economic resilience for a just transition*

Carbon intensive activities have been critical economic sources for Benicia and Vallejo. Shutting down these facilities will have a devastating ripple effect on Benicia and Vallejo's local economy and workforce while leaving behind pollution that has exacerbated health risks such as asthma, cardiovascular disease, and low birth weight in these frontline and fenceline communities. Meaningful community engagement is critical to co-design a transition where initiatives improve community health outcomes, reduce air pollution, and build economic resilience for equitable transition.

This project empowers youth through active participation in mitigation projects within their communities that will reduce air pollution and improve health outcomes. Children and teens (ages 6-14) will participate in Arts Benicia's EcoArt Camp as an early introduction to just transition and support a native plant learning garden. High school students (ages 14-19) will have the opportunity to join the Just Transition Youth Service Corps to support urban greening projects and growing and selling local produce to community members, tying their work directly to community health and the importance of a local economy in ensuring just transition. They will conduct presentations and projects, such as building DIY air purifiers, that provide direct community benefit for air quality and health. The Youth Service Corps will offer youth employment to build workforce skills and experiences, ranging from experiential learning to public speaking and leadership, which will strengthen the next generation of community leaders.

Community Conversations will explore community-identified topics around just transition and sustainability to build community knowledge and resilience to a changing climate and economy. Topics will be determined through conversations with the youth, guidance from Advisory Boards from both cities with lived experience and knowledge of their local community, and a constant feedback loop through surveys and in-person conversations with event and Community Conversations participants. Community experiences and perspectives around just transition and reconciling community health and wealth will be captured and shared through the Just Transition Multimedia Journal.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Due to the nature of the hands-on mitigation projects and community outreach and engagement, local youth in Benicia and Vallejo participating in the Youth Service Corps will serve communities in their respective cities, empowering youth to make a tangible change in their communities to reduce air pollution and improve health outcomes.

The Benicia Youth Service Corps will be anchored in two local high schools where training and just transition curriculum education will take place (Benicia High School, 1101 Military W; and Liberty High School, 351 E J St.). The Vallejo Youth Service Corps will be open to all high school students in the city, with training and just transition curriculum education taking place at the 4th Second Youth Centers (1788 Tuolumne St. and 236 Georgia St. STE 100).

Youth Service Corps and community members will work across their cities on urban greening and air quality projects. Urban greening projects will be at locations identified in the Healing Green Spaces project narrative, including Swenson Community Garden expansion, Arts Benicia Native Plant Learning Garden, and Benicia Tree Foundation tree plantings at Benicia parks.

Community Conversations will be held in public spaces that fit the topic of conversation (eg. community centers, gardens, libraries, etc.).

The Advisory Boards, made up of community members from each city, will help shape localized action and initiatives, and will help identify project sites that best serve the needs of communities in Vallejo and Benicia.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The program's partners used various methods to identify the needs and priorities for this program, including direct experience on the ground with our current programming, direct personal experience of the staff living and working in these cities, conversations with partner organizations, and presentation of the project proposal to the Benicia Community Sustainability Commission. Below is a detailed description of some of these methods and findings.

Arts Benicia has successfully run its EcoArt Camp for 14 years. Youth and parents want dynamic arts experiences that integrate interdisciplinary environmental topics, including climate resilience, ecological health and sustainable consumer choices — in ways that are engaging, age-appropriate, and aligned with educational standards.

Through previous community engagement efforts, facilitating youth internship programs around environmental justice and youth wellness, and leading green infrastructure and air quality projects in Benicia and Vallejo, Sustainable Solano is familiar with community-identified needs and priorities in both cities.

Sustainable Solano's internship programs were created out of a need and desire from local youth to have experiences with environmental science and community service that support their pursuit of college and career pathways. The format and curriculum for those internships were built through community interviews with stakeholders that included youth, school districts, teachers, and nonprofit partners who serve youth, and continues to be improved based on feedback through intern exit surveys and collaborative partners. Youth in these internships have consistently requested additional internship opportunities.

4th Second works with under-represented youth in Vallejo who are seeking safe spaces, new opportunities for advancement, and ways to serve their communities while building leadership skills. The organization hosts youth-directed programs that give participating youth a voice and leadership in how the program is designed and run. Through youth surveys, check-ins and listening sessions, 4th Second has identified the needs and priorities of the youth in its programs.

When this grant application was presented to the Benicia Community Sustainability Commission for public feedback, members expressed strong support for paid youth internships with advancement opportunities while building service and workforce skills.

The need for Community Conversations around sustainability and just transition also comes from shared experience and community feedback across partner organizations. SuSol previously had funding for a "Conversations" series that brought in films and talks on topics ranging from soil biology and health to economics. These events were well-attended with positive feedback. Arts Benicia has an ongoing "Art Talks & Timely Conversations" series that reflects the desire in the community for tackling some of these issues and how they are referenced through the arts. SuSol has conducted internships in Vallejo that tackled air quality issues and has built relationships with citizen-based air quality organizations in both cities. These have all helped identify community needs and priorities when it comes to pollution mitigation, education and conversation around air quality. In post-event surveys, community members have expressed the desire to have conversations around the local economy, individual and community-based action, and air quality mitigation strategies.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

This project fosters community engagement and data-driven evidence to create localized changes in Benicia and Vallejo that are guided by community members, improve community health and build economic resilience.

The EcoArt Camp and Just Transition Youth Service Corps provide direct youth engagement in environmental learning that incorporates communication and outreach through the arts, events, and public speaking. Youth are provided a pathway that addresses their desire to advance to paid work around environmental justice, advocacy, outreach and service within their communities.

Through partnerships with local agencies and community-based organizations, this project will include Community Conversations events with residents in Benicia and Vallejo to engage them on various topics related to air quality, community health, and just transition. Community Conversations will be: 1) educational, providing residents with knowledge on just transition, sustainability, climate data analysis and personal actions they can take, and 2) empowering, giving residents ways to take action in their communities and space to share their needs and priorities to improve air quality, health outcomes, and the local economy.

Youth Service Corps projects, such as the creation of DIY air purifiers, will be distributed to populations that are most vulnerable to poor air quality through existing organizational partnerships, such as with organizations that serve low-income seniors.

Advisory Boards will comprise residents from both cities who are members of their city governments, community-based organizations, educational institutions, youth and more. Members will guide localized action in both cities around the just transition curriculum for youth, selecting sites that would benefit most from mitigation projects or outreach, and suggesting and reviewing topics for the Community Conversations series.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Each program partner has a long history of meaningful community engagement in their cities and has built long-lasting relationships with the communities they serve. The program will continue to develop community trust and interest for the entire vision of the “From Soil to Society: A Just Transition Initiative”. The goal is to have transformative relations that can hold the community as it is going through a transitional crisis by

offering space and time to connect and process uncertainty and difficult decisions. There are many opportunities for authentic community engagement during in-person interactions at garden installations and tree plantings and during Community Conversations. We expect regular visitors to the youth-run farm stand and will host speakers at various urban greening sites and annual demonstration garden tours.

Community engagement centers community-based decision-making to drive equitable choices for the program, curriculum, topics and projects. This project will rely on continuous relationship-building within both cities. Outreach and feedback will be done through each project partner's networks, including other community partners that work directly with under-represented community members, such as churches, health clinics and other youth-serving organizations.

Sustainable Solano's standard practice is to collect community feedback after each public event through a simple survey, asking questions about people's expectations for the event, their experience of the activity and its impact (learning, inspiration, curiosity), and suggestions for future events. The results of these surveys will be documented and analyzed by the program manager, and all constructive feedback will be presented and discussed during quarterly program meetings with partner organizations. 4th Second will continue its practice of engaging youth through listening sessions, surveys and check-in/check-out with youth to encourage their self-identification of what they most need from the program for further improvements. This feedback will inform adjustments to the program to best serve the community.

The Advisory Boards will be a powerful way to bring community voices to the process, especially in the creation of the just transition curriculum for the Youth Service Corps, identifying green infrastructure projects and developing ideas for Community Conversations around the creation of a just and regenerative economy. The program establishes an ongoing public dialogue, education, and concrete examples of the major principle of just transition: a healthy economy and a clean environment can and should co-exist, and a Just Transition Multimedia Journal will document people's lived experience and perspectives on those topics.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

A critical aspect of this program is the involvement of community members in supporting community healing and recovery toward a cleaner and healthier Benicia and Vallejo as the cities evolve through a just transition. This project establishes a public dialogue, education, and opportunity to practice and implement concrete examples of the major principle of just transition: a healthy economy and a clean environment can and should co-exist. This will be accomplished through Community Conversations and through education, inspiration and meaningful community benefit service opportunities for youth in Benicia and Vallejo to improve air quality and public health outcomes.

1) Just Transition Youth Service Corps

Youth are key to bringing change to communities most impacted by carbon intensive activities through their power to reshape policy through activism and drive innovation for a shift to a low carbon and regenerative economy.

The Just Transition Youth Service Corps is a paid youth program that will be led by Sustainable Solano in Benicia and 4th Second in Vallejo. SuSol, 4th Second and Arts Benicia will work together to develop the Just Transition curriculum with Advisory Board input. The organizations will develop related lessons that can be integrated into their existing youth programs as an introduction for youth interested in community action, environmental justice, and the Just Transition Youth Service Corps.

This program will be conducted in 3 stages. Stage 1 will be an intensive 5-week course where high school youth will learn about just transition, environmental justice, individual and community-based action, and building community resilience. Youth will envision a healthy society and how to achieve it, participate in inspiring artistic activities tied with evidence-based science, and volunteer in hands-on community events, such as tree planting. We anticipate four cohorts, each with up to 15 high school students, participating in this introductory course each year of the grant. Those who complete stage 1 will be eligible to join the paid Service Corps.

Stage 2 will be the start of the paid Just Transition Youth Service Corps, with members working on community benefit projects, facilitating public education workshops, advocacy and outreach, supporting the EcoArt Camp, and other projects and presentations as identified by the partner program managers, youth and the Advisory Boards. Youth in Benicia and Vallejo will help activate and expand green urban spaces that will improve health outcomes. They will gain knowledge about air pollution effects on all forms of life, from soil micro-organisms to human, and will test soils in their cities for contaminants. During this stage, Service Corps members will promote community

education and awareness by regularly presenting their experiences in the program. Stage 2 ends when they complete 160 hours of service.

Service Corps members who work beyond 160 hours are eligible for Stage 3 paid leadership roles as members of the Youth Leadership Circle, where they will take on more responsibility by leading workshops, supporting the next cohort of Service Corps members, and helping to improve the program through active feedback or serving as an Advisory Board member. In total, we expect the Just Transition Youth Service Corps to deliver up to 20,000 community benefit service hours in three years.

Each cohort will facilitate and lead community outreach and education efforts by presenting to the wider community and participating in Community Conversations. While actively engaging with the comprehensive curriculum and supporting community service projects, the youth will take action on 3 key goals: 1) supporting and protecting the city's health, 2) supporting the local economy, and 3) building community resilience through education and awareness.

The Service Corps invites students to think critically, solve real-world problems and gain practical skills. Complex concepts like just transition, environmental justice, natural resource management and sustainability come to life through hands-on experiences and localized impacts.

2) Community Conversations

Community Conversations will address community-informed just transition-related topics through speakers, films, art programs and other formats to inspire and support community discussion.

Sustainable Solano will lead the Community Conversations program in Benicia and Vallejo. Youth Service Corps members will spend some of their service hours supporting Community Conversations — with SuSol leading Benicia Youth Service Corps engagement, and 4th Second supporting Vallejo Youth Service Corps engagement. Outreach will be measured through the number of workshops and participants in the Community Conversations program in Benicia and Vallejo, the percentage of participants who report increased confidence in understanding environmental and economic challenges cities are facing, and increased confidence that the path forward will be secured. The Just Transition Multimedia Journal will create a living record of the project, people's perspectives and lived experience.

Urban greening through the Healing Green Spaces project in Vallejo and Benicia will create and expand spaces that serve as gathering and healing places for the community, promoting mental and emotional health, and improving health outcomes

and access to local, healthy food. Community members will be invited and encouraged to help develop these green spaces and join other community members in taking action that improves air quality and health outcomes for their community. These gardens will host talks and tours that foster authentic community engagement and conversations around environment, health and the local economy.

While some project locations and actions have been identified (see the Healing Green Spaces project), other locations will be identified during the implementation of the program with the support of the Advisory Boards and Youth Service Corps members who live in the community. This ensures that actions to improve air quality and health outcomes are shaped by community members.

Arts Benicia will develop public education events that provide community members with arts-based ecological education, talks by artists, family art days or exhibits that align with these themes. The path to sustainability is different for different people; by involving art, we hope to achieve broad outreach and engagement.

3) EcoArt Camp

In Arts Benicia's EcoArt Camp, students ages 6-14 will gain experiential, arts-based ecological education at the Arts Benicia Native Plant Learning Garden. Through this program, EcoArt campers will help create and maintain the learning garden and learn about the sources of air pollution and practical ways to reduce it — such as planting trees, conserving energy and natural resources, and making environmentally conscious choices that can lead to sustainable practices. Additionally, campers will understand the critical role of native plants and pollinators in supporting healthy soil and ecology, and use art to create natural dyes and garden crafts. By offering free or low-cost programming for youth, school groups and community members, the learning garden helps reduce barriers to participation in environmental learning — especially for those who may not otherwise have access to nature-based education or garden spaces.

This camp will introduce youth to these concepts and provide some foundational understanding to build their interest in joining the Just Transition Youth Service Corps. Youth Service Corps members can be paid camp counselors as part of their service opportunities. Not only will they be able to build leadership and teaching skills, but also serve as mentors in teaching campers about their responsibility in protecting nature, ensuring a greener future.

4) Local Advisory Boards

To ensure that program and project implementation are equitable, tailored to local needs, and community supported, Advisory Boards for Vallejo and Benicia will use their

lived experiences, knowledge, and connections to represent their local community. The Advisory Boards will serve as the voice of the broader community in Vallejo and Benicia and advise the program team by helping to inform the Youth Service Corps curriculum, guide site selection and implementation of green infrastructure projects, develop workshop ideas to enhance community outreach and education, and advise program teams on public engagement in their communities. Advisory Boards will be a powerful way to bring community voices to the program process and ensure that community voices are represented and heard in transitioning to a just and regenerative economy.

The Advisory Board members will include community leaders, community-based organization representatives, city leaders, and youth leaders. Members will be compensated for their participation through small meeting stipends and food at quarterly in-person meetings.

We measure success by the relationships formed and connections made. A program is successful when it increases community capacity to work together to address pressing challenges and utilize opportunities and solutions.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

   Template Measurable Outcomes.docx

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The Community Engagement budget totals $1,503,246 (SuSol: $707,740; 4th Second: $546,588; Arts Benicia: $248,918)

Sustainable Solano (direct costs related to Community Conversations and Youth Service Corps):

- Personnel/Staff ($518,870 total): Salary and benefits for 1 full-time program manager to oversee the project, including Community Conversations and Youth Service Corps ($91,000/year); 0.125 FTE program director for oversight of the project as part of the From Soil to Society initiative ($16,250/year); up to 100 Benicia Youth Service Corps members (internship rate of $15/hour + 12% benefits) for up to 10,000 service hours ($168,000); and Youth Leadership Circle for a small group of youth leaders up to 0.5 FTE at $25/hour + 12% benefits ($29,120).

- Subcontractors ($33,300 total): 8 speakers per year ($450 speaker fee) for Community Conversations to increase community confidence in understanding environmental and economic challenges ($10,800); Just Transition Multimedia Journal curator to design and edit community contributions to capture community experience ($22,500)
- Community Engagement ($42,750 total): $200 stipend for 90 Benicia youth to participate in a certification program (Stage 1) to be eligible for the Youth Service Corps ($18,000); outreach, room rental and food for 30 Community Conversations events ($16,950); $50 stipends and food for quarterly meetings for 10 Advisory Board members ($7,800)
- Materials, Supplies, Equipment ($3,000 total): Materials for the Youth Service Corps to build and distribute DIY air purifiers ($1,800); and handouts, snacks and other materials for certification ($1,200)
- Mileage ($1,820): Staff travel to project sites or professional development
- Training ($7,000): Professional development in facilitation and other relevant training for staff or Youth Leadership Circle leaders
- Indirect (15%): ($91,000) / Contingency (1.6%): ($10,000)

4th Second (direct costs related to Vallejo Youth Service Corps):

- Personnel/Staff ($444,620 total): Salary and benefits for 0.5 FTE Project Manager to lead the youth certification and Youth Service Corps in Vallejo ($50,000/year); 0.5 FTE Project Coordinator to assist the project manager in those activities ($32,500/year); up to 100 Vallejo Youth Service Corps members (internship rate of $15/hour + 12% benefits) for up to 10,000 service hours ($168,000); and Youth Leadership Circle for a small group of youth leaders up to 0.5 FTE at $25/hour + 12% benefits ($29,120).
- Materials, Supplies, Equipment ($3,000 total): Materials for the Youth Service Corps to build and distribute DIY air purifiers ($1,800); and handouts, snacks and other materials for certification ($1,200)
- Community Engagement ($25,500 total): $200 stipend for 90 Vallejo youth to participate in certification program (Stage 1) to be eligible for the Youth Service Corps ($18,000); Share of building cost/room rental to host youth certification meetings ($7,500)
- Indirect (15%): ($70,968) / Contingency (0.5%): ($2,500)

Arts Benicia (direct costs related to the EcoArt Camp):

- Personnel/Staff ($187,200): Salary and benefits for 0.5 FTE to be divided among 3 Arts Benicia staff for project manager and EcoArt Camp instructors to deliver EcoArt Camp to youth and engage the public in the new learning garden
- Subcontractors ($12,000): Speaker fees for 8 visiting artists or other speakers per year for $500 speaker fee for EcoArt Camp and community engagement
- Materials, Supplies, Equipment ($17,250 total): EcoArt Camp art materials ($4,000/year); plants and supplies for learning garden maintenance ($1,000/year); municipal water for establishing garden ($750/year)
- Indirect (15%): ($32,468)

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

In January 2023, the City of Benicia updated its General Plan Safety Element, incorporating a new Climate Change Vulnerability Assessment (Appendix L). This assessment identifies risks such as extreme heat, flooding, and wildfires, directing future sustainability efforts to reduce greenhouse gas emissions and strengthen community. Public engagement and mitigation projects in this proposal address these needs.

Benicia's General Plan includes a section on public health that describes a comprehensive definition of a healthy community that includes physical, intellectual and social environments, and emotional and spiritual health. The proposal will contribute to physical and emotional health of residents.

Other Benicia policies and guidance that are directly related to the outcomes of this proposal:

- April 2025: Industrial Safety Ordinance. The ordinance aims to help protect Benicians against potential fires, explosions and toxic emissions connected to the Valero Refinery
- Section 4: Educate the public regarding air quality issues; increase in public understanding of air pollution and measures to reduce air pollution

On a state level, there are multiple legislative actions on improving youth mental health, drug use and media addiction prevention, and building meaningful youth engagement. AB 2158 (the Outdoor Learning and Environmental Literacy Act of 2026, that would help make outdoor learning experiences a reality for more students across California)

passed the Assembly Floor 61-0 and now heads to the state Senate. This proposal provides such opportunities for youth.

In Senate Bill 1000, local governments must incorporate environmental justice policies into their general plans, including reducing health risks and promoting civic engagement in polluted communities. This proposal engages community members in conversations and decision-making about projects within their communities.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Sustainable Solano has received numerous federal and state grants and has an established process for launching and managing complex programs, their budgets and reporting to funders. Examples of successful similar programs include: two successive rounds of CDFA funding, totaling almost $750,000 to build community awareness of and support for the local food system, including countywide public education and engagement and multiple key stakeholders policy work; and three CARB grants totaling more than $750,000 for youth internship and community engagement opportunities, funding the Youth Air Protectors internship program in multiple cities, community meetings, creation of city-based community action plans on air quality, and an upcoming countywide Air Quality Summit. CARB commended SuSol on the breadth of meaningful community engagement, capacity building, physical improvements of green spaces, and commitment to engaging and empowering youth that came out of its work on the grant that ended most recently.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The program will be overseen by a dedicated full-time program manager whose responsibility will include planning, on-the-ground activities, program promotion and outreach, budget management and reporting.

One full-time program coordinator funded in the Healthy Green Spaces project will support outreach and public engagement.

One of the senior leaders of SuSol will assume the responsibility of the project director at 0.25 FTE for the entire From Soil to Society initiative, ensuring compliance, overall relationship with the funder and key stakeholders, and mentoring program staff. Senior

leadership developed and has on-the-ground experience running SuSol's youth internships. Youth Service Corps members will have an opportunity to be employed through the program to support community benefit projects and help with essential tasks in educational programs for younger children and community engagement.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

N/A

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*
    N/A
14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*
    N/A
15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*
    N/A
16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*
    N/A

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

There are potential barriers to youth involvement and participation. Though large numbers of students apply for internship positions, some students are not engaged or drop out of the program. With this model, the project team expects to identify those youth who are most interested in the program during Stage 1 to ensure active participation in the paid Youth Service Corps. There could be limits on how many opportunities/hours can be offered to leadership youth based on the budget if a large number are motivated and interested. The budget is realistic for the number of youth anticipated. The project team will look for future funding that will support continuing these positions once the grant ends.

Another barrier is competing with other demands on people's time for community engagement. Community members don't always turn out for garden installations or talks on air quality, depending on their interests. Addressing this barrier means working with the community-based Advisory Boards and the program partners to offer a variety of different entry points for people based on their interests. By offering Community Conversations that may be based in growing food, planting trees, art exhibits, talks on air quality, demonstrations of DIY air purifiers or just transition and the local economy, there are multiple opportunities to attract diverse audiences to engage with the program.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Support community recovery through conversations around Just Transition and provide opportunities for high school youth for meaningful community education and engagement, community benefit mitigation projects and assistance in the process of transition

Measurable Outcome	Indicator(s)
1. Support community healing & recovery through programming that increases community understanding of tension between health & wealth and ways of reconciling it, and providing tools & space for a dialogue, education, awareness and inspiration	• Number of workshops and participants in the Community Conversations program in Benicia and Vallejo • Percentage of participants who report increased confidence in understanding environmental and economic challenges cities are facing, and increased confidence that the path forward will be secured • Number of entries accepted to the Just Transition Multimedia Journal that captures community experience and perspectives on impact
2. Through education, inspiration and meaningful community benefit service opportunities, mobilize youth in Benicia and Vallejo to support air quality improvement and public health outcomes	• Number of registered students at each stage of the program: EcoArt Camp (age 6-14) in Benicia, Just Transition Certification Program (age 14-18), Benicia and Vallejo; Just Transition Youth Service Corps, Youth Leadership Circle • Percentage of youth moving to the next stage of the program • Number of community benefit service hours by the Just Transition Youth Service Corps

	• Direct benefit to the community from youth engagement: 1) # of green infrastructure projects and their impact (# of trees & other plants, area of cultivation, water, CO2/air quality impact); • 2) # and impact of other air quality projects (e.g. building DIY air purifiers for community distribution); 3) # of community engagement events led or supported by youth and # of people reached during these events

Abbreviations used: Sustainable Solano – SuSol, Benicia Tree Foundation – BTF, Arts Benicia - AB, 4th Second – 4thS

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Support community healing & recovery through programming that increases community understanding of tension between health & wealth and ways of reconciling it, and providing tools & space for a dialogue, education, awareness and inspiration	A. Advisory Board is active	1. Develop guidelines and responsibilities for Advisory Board members	SuSol	4th S, AB, BTF	February 2027
		2. Recruit Advisory Board members from Benicia and Vallejo	SuSol	4th S, AB, BTF	April 2027
		3. Schedule and conduct first in person meeting	SuSol		May 2027
	B. Develop annual schedule for Community Conversations Series in Benicia and Vallejo	1. Brainstorm topics and speakers for series with partners and Advisory Board	SuSol	4th S, AB, BTF	First 3 - March 2027; then – ongoing with Advisory Board
		2. Determine logistics of series (dates, times, location)	SuSol		Ongoing throughout the program
		3. Design & implement promotional campaign and outreach for this series	SuSol		Ongoing throughout the program
	C. Receive submissions for multimedia Just Transition community journal	1. Recruit a Journal Curator	SuSol		Feb 2027
		2. Design & develop Journal infrastructure including guidelines, requirements, and logistics of submissions, identify & secure online platform for submissions	SuSol		April 2027
		3. Promote the Journal, review, vet & post submissions	SuSol		Ongoing throughout the program

2. Through education, inspiration and meaningful community benefit service opportunities, mobilize youth in Benicia and Vallejo to support air quality improvement and public health outcomes	A. Start EcoArt Camp Program in Benicia	1. Finalize the curriculum	AB		March 2027
		2. Develop Native Learning Garden completion and ongoing maintenance plan	AB	SuSol	April 2027
		3. Start EcoArt Program	AB		April 2027
	B. Start Just Transition Certification Program, a pre-requisite to the Youth Service Corps	1.Develop Just Transition curriculum with Advisory Board & finalize operational logistics & schedule	SuSol	AB, 4thS	Feb 2027
		2. Develop promotional material and open enrollment in Benicia and Vallejo	SuSol	4thS	March 2027
		3. Select & launch a first cohort of students	SuSol	4thS	April 2027, then ongoing during grant term
	C. Activated Youth Service Corps	1. Develop youth Service Corps framework including legal / risk management, enrollment requirements & onboarding, payroll process, sign up for service opportunities, accountability & reporting, community benefit project management, feedback processes	SuSol	4thS	May 2027
		2. Introduce Service Corps to the first graduating Certification cohort, work closely with their experience to fine-tune the process	SuSol	4thS	Sep 2027
		3. Maintain Service Corps work opportunity inventory and manage the program, collect, analyze & incorporate feedback	SuSol	4thS	Ongoing
		4. Develop job description, identify meaningful work projects/ tasks & coordination framework for the Youth	SuSol	4thS	January 2028

		Leadership Circle (Service Corps members who successfully completed 160 service hours)

Local Community Benefits Fund – Round 1
Opportunity and Catalyst Grants
Overall Narrative

Application Information	
Application Title	Martinez Application Form
Lead Applicant	University of California Berkeley
Application Location	Benicia and Surrounding communities
Overall Funding Request	$682,654
Grant Term Request	3 years

PROPOSAL VISION (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
    - *Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.*
    - *Advance integrated projects to holistically meet community needs.*
    - *Strengthen community-driven and collaborative solutions.*

This project will address exposure hazards and community education regarding air pollution exposures from day-to-day activities and from the Martinez Refining Company (MRC) complex, which is located in close proximity to Martinez homes, schools, and businesses. MRC has had over 160 violations from 2020 to 2024, which include illegal flaring, spills, coke releases, and fires, and has led to understandable concern for health and safety of Martinez residents. A 2022 spent catalyst release prompted the formation of Healthy Martinez, a grassroots organization that is dedicated to environmental health advocacy for frontline households. Healthy Martinez has played a central role in identifying air monitoring gaps, highlighting community concerns, and facilitating relationships necessary for project implementation. The team proposes to expand community measurement capabilities, develop and implement community education materials, and develop a new system for the communication of pertinent air pollution, exposure risk, and exposure mitigation information to Martinez residents. This project will also provide supplemental air, visual, and vibration monitoring in addition to the forthcoming BAAD community air monitoring site at the Martinez Reservoir at 3470 Pacheco Blvd. to supplement the singular regulatory monitoring site. This will enable spatial characterization of air quality in an area that is subject to complex wind patterns and geography. Air filtration supplies will also be made available for households with high baseline levels of $PM_{2.5}$. Project activities will take place in the City of Martinez and nearby communities, including frontline refinery households outside of City limits.

Measurable outcomes include a reduction of baseline indoor air pollution in 125 Martinez households; implementation of individualized exposure reduction plans for up to 120 Martinez residents; increased understanding of data-driven air pollution trends of up to 200 design-charrette attendees per year; and increased engagement with real-time, local data that characterizes ambient conditions driven by nearby sources through an informative website. This project aligns with the strategy to reduce air pollution and improve health through the development of personalized and household exposure mitigation plans and the dissemination of risk and mitigation information

through a public website for community education. The data collected during the project period will be related back to environmental conditions and activities at MRC using visual and vibration feedback and through various modeling approaches. Exposure mitigation activities will directly improve health outcomes by reducing the exposure burden of Martinez community members.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

Martinez is unique from the perspective of the traditional demographics of an environmental justice community being that residents are mainly white and the poverty score is below 35th percentile where most residents live. However, the toxic release score for three overlapping census tracts ranges from 65-99th percentiles. This demonstrates that while environmental justice challenges in California reflect historical trends for low-income and communities of color, they can also be highly intersectional, necessitating community-driven investigations when historical indicators do not reflect present-day lived experiences. The proposed work plan will address the injustice of near-source contamination by providing educational material that supports data-driven community exposure mitigation. This is an important aspect of the project, as MRC is the second largest refinery in the Bay Area. It has dense residential housing at its fenceline with no protective barrier for adjacent households. Additionally, while portions of Martinez may not rank highly across all traditional socioeconomic indicators, residents living this closely near refinery operations (including transport) experience disproportionate exposure concerns associated with industrial emissions, accidental releases, and have limited access to monitoring data. Project benefits will be shared by over 60,000 community members of Martinez and nearby unincorporated communities (Mountain View, Vine Hill).

PARTNERSHIP STRUCTURE (20 points)

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

University of California Berkeley will serve as the lead applicant, and the City of Martinez will be the co-applicant. UC Berkeley's Air Quality Modeling and Exposure Lab (AQMEL) and the City work in close partnership with the grassroots advocacy group Healthy Martinez. Healthy Martinez leaders hold full-time positions in other fields, and spend their own spare time and resources to support community advocacy for their fellow neighbors. Due to capacity challenges, Healthy Martinez is not incorporated, and

hence were not able to serve as co-applicants for this proposal. However, the group has been inextricably linked to the conceptualization and development of this proposal, support of preceding studies, and all community outreach efforts to-date in Martinez. In this collaboration, UC Berkeley and the City of Martinez provide administrative and research capacity in collaboration with Healthy Martinez. This continues from ongoing work conducted as part of an organic collaboration formed around community needs.

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

The City of Martinez will be responsible for acquisition and distribution of air monitoring and filtration supplies. UC Berkeley will be responsible for quality assurance, data analysis, reporting, and website development and maintenance. Healthy Martinez will support community engagement, communication with their partnering organizations, and project advising to ensure alignment with cultural norms, community goals, and unmet needs. All project partners will participate in the planning and execution of community meetings and the development and distribution of educational materials.

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to:*
    - *Coordinate overall community engagement activities.*
    - *Track and report on indicators to assess progress towards measurable outcomes.*
    - *Collect and process reporting, reimbursement and invoicing requirements.*

UC Berkeley will lead all coordination, tracking, reporting, and grant management activities. UC Berkeley will coordinate with the City of Martinez during bi-weekly during startup and implementation and less frequently during monitoring and analysis. Both entities will contribute to progress reporting, and project documents will be shared through Google Drive.

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.*

N/A

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

The project leader, [redacted], has extensive experience with project implementation. She previously led a technical and educational grant sponsored by the Community Air Protection Program for work in west San Bernardino, CA. This project consisted of household air monitoring, personal monitoring, and subsequent delivery of personalized exposure reduction plans. In a second effort that is in its last year (2022-2026), her team investigates how varying the level of personalization of exposure information impacts actionable exposure prevention in the Bay Area. The project required deployment of Clarity nodes, personal monitoring, and community education through digital summaries. Other externally funded projects (e.g., NSF and CARB projects) have been completed in the past several years. AQMEL also supports various community efforts throughout the Bay Area through UC Berkeley's Undergraduate Research Apprenticeship Program (URAP), which has become a popular avenue for research participation in our lab. Five URAP cohorts have supported community-driven research in Marin City (in collaboration with Marin City Climate Resilience, 501(c)(3)) and Martinez since the spring of 2025.

Technical activities will be carried out by graduate student researcher [redacted] with support from undergraduate research assistants and URAP cohorts in spring and fall semesters throughout the project period. [redacted] will provide grant administration, purchasing, and outreach support for the City of Martinez. Healthy Martinez will provide community knowledge, guidance, and feedback on data context, communications, and community nuances. At this time, no additional funding will be used to support project completion, aside from the 9-month salary of the PI from the University of California.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

AQMEL research funds are managed by the Engineering Research and Support Organization (ERSO) and governed by the UC Berkeley Sponsored Projects Office (SPO). Yearly effort reporting is required, and payment journals can be electronically accessed at any time through the PI Portfolio system, which promotes efficiency and transparency. Grant charges are labeled according to the proposed budget categories to ensure that actual activities match proposed budget allocations. Funds are

encumbered ahead of time to prevent overspending. UC Berkeley will administer a subaward to the City of Martinez and will oversee their project expenditures.

Project Title (3 words maximum)	Project Summary (1-3 sentences)	Strategy Alignment	Project Lead	Total Project Budget (sum of columns to right)	Lead Applicant Budget	Co-Applicant 1 Budget

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

This project will address exposure hazards and community education regarding air pollution exposures from day-to-day activities and from the Martinez Refining Company (MRC) complex, which operates in close proximity to Martinez homes, schools, and businesses. MRC has had over 160 violations from 2020 to 2024, which include illegal flaring, spills, coke releases, and fires, and has led to understandable concern for health and safety of Martinez residents. A 2022 spent catalyst release prompted the formation of Healthy Martinez, a grassroots organization that is dedicated to environmental health advocacy for frontline households. Healthy Martinez has played a central role in identifying air monitoring gaps, highlighting community concerns, and facilitating relationships necessary for project implementation. An ongoing collaboration with the Air Quality Modeling and Exposure Lab (AQMEL) at UC Berkeley has provided microenvironmental exposures of $PM_{2.5}$ and CO_2 for community members, alongside filter-based measurements of total $PM_{2.5}$, speciated $PM_{2.5}$, temperature, and relative humidity. The City of Martinez has also supported the ongoing collaboration for nearly two years, providing insight on the use of public resources. The team proposes to expand community measurement capabilities, develop and implement community education materials, and develop a new system for the communication of pertinent air pollution, exposure risk, and exposure mitigation information to Martinez residents. This project will also provide supplemental air, visual, and vibration monitoring in addition to the forthcoming BAAD community air monitoring site at the Martinez Reservoir at 3470 Pacheco Blvd to supplement the singular regulatory monitoring site. This will enable spatial characterization of air quality in an area that is subject to complex wind patterns and geography. Air filtration supplies will also be made available for households with high baseline levels of $PM_{2.5}$. Project activities will take place in the City of Martinez and nearby communities, including frontline refinery households outside of City limits (**Figure 1**). It is worth noting that there is no fenceline monitoring on the north side of MRC's operations. This area is particularly vulnerable to releases and leaks because of the number of holding tanks and transfer points to trains and ships. These are areas where people recreate, and there are residential housing and other businesses in the area, which put more community members at risk of monitored exposures. Our project would also support the characterization of pollutants that may travel north towards Benicia.

Figure 1: City of Martinez boundary, Martinez Reservoir (gold star, 3470 Pacheco Blvd), and public-school locations. Source: cityofmartinez.org.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This project aligns with the strategy to reduce air pollution and improve health through the development of personalized and household exposure mitigation plans and the dissemination of risk and mitigation information through a public website for community education. In previous efforts, AQMEL researchers have established preliminary evidence for the efficacy of access to personalized exposure data in motivating exposure prevention actions. For example, we engaged with members of the AB 617 community of west San Bernardino, CA for nine non-consecutive weeks of personalized monitoring, which took place over 6 months. Community members were provided wearable $PM_{2.5}$ monitors (Applied Particle Technology, Menlo Park, CA), and we developed individualized resilience plans based on 7-days of high temporal resolution exposure estimates.[1] In a second project involving interviews with users of indoor air monitors, we learned that having access to consumer-grade monitors enabled occupants to conduct sensitivity testing of indoor air pollution levels with respect to their activities. Data availability prompted behavioral changes, such as the use of range hoods or window opening during cooking.[2] In an ongoing Bay Area study of public engagement with exposure risk information, preliminary findings suggest that participants who had access to personalized exposure data engaged with more educational information, and 60% of all participants reported behavioral changes (**Figure 2**). In this example, participants were engaged in the study for seven consecutive days, provided with one of four levels of increasingly personalized information, and received a report in the middle of the engagement period. These studies inform the proposed plans in Martinez, where personalized data and educational activities at the individual, household, and community scale will encourage exposure mitigation actions. The data will be related back to environmental conditions and activities at MRC using visual and vibration feedback and through various modeling approaches. Exposure mitigation activities will directly improve health outcomes by reducing the exposure burden of Martinez community members.

COMMUNITY IMPACT (20 points)

3. Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.

Project activities will take place throughout Martinez, California and nearby locations. The project has three main components: personal and household monitoring; co-located stationary monitoring; and community education through a public website, community meetings, and the Sustainability Subcommittee of the City of Martinez City Council. Personal and household monitoring will take place within city limits and in neighborhoods adjacent to MRC. Stationary monitoring will be co-located at the Bay Area Air District Community Monitoring Station at the Martinez Reservoir (**Figure 1**, *gold star*), and permission has been obtained for this activity from the City of Martinez Public Works Director (email attached to application). Community meetings will be held at the Martinez Library two times per year for design charrettes and intermittently via Zoom for project updates.

4. Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.

AQMEL researchers have worked alongside the Healthy Martinez advocacy group since November of 2024, when we first met with City of Martinez officials to discuss local air pollution and MRC emissions concerns. Subsequent collaborative activities include local and personal monitoring and canvassing at community events (e.g., John Muir Birthday/Earth Day Celebration, Martinez Farmers' Market) (**Figure 3)**. At local events, we engage in meaningful discussions of local air pollution concerns, distribute educational information about air filtration, and invite community members to participate in our ongoing personal monitoring study. Through these efforts, our group has learned about the specific concerns surrounding exposure to emissions from MRC and the community's desire for comprehensive characterization of MRC impacts on community exposure risk.

Figure 3: Healthy Martinez table at John Muir Birthday/Earth Day Celebration in April 2026 (*top*) and UC Berkeley/Healthy Martinez informational card with sign-up link distributed at the event (*bottom*). Source: Sumukhi Prasad.

Further, AQMEL researchers and Healthy Martinez advocates have had several planning meetings to discuss preliminary data and future community engagement plans. To date, 22 community members have participated in a week-long personal exposure monitoring activity to collect space-time $PM_{2.5}$ and CO_2 and filter-based speciated $PM_{2.5}$ concentrations. For one community member in summer of 2025, space-time distributions of $PM_{2.5}$ concentrations reveal exposure-risk variability during voluntary activities in Martinez (**Figure 4**, *left*). Healthy Martinez feedback contextualized the associated time-activity patterns based on location and their own lived experiences. For example, the stark "unhealthy" cluster in downtown Martinez is a popular restaurant, where customers often congregate around a gas-powered fire pit. Speciated $PM_{2.5}$ concentrations are time integrated and represent 8-24 hours of sample time (**Figure 4**, *right*). Speciated $PM_{2.5}$ concentrations exceeded the community average for 10 elements, and future research will include the development of methods to link speciated measurements to microenvironments.[4] We provided individualized summaries and exposure mitigation recommendations to community members, along with transect and speciated data as shown below. It is worth noting that MRC was partially shut down, so preliminary personal monitoring from summer 2025 and spring 2026 will provide a control period for comparison to conditions after the entire facility comes back online.

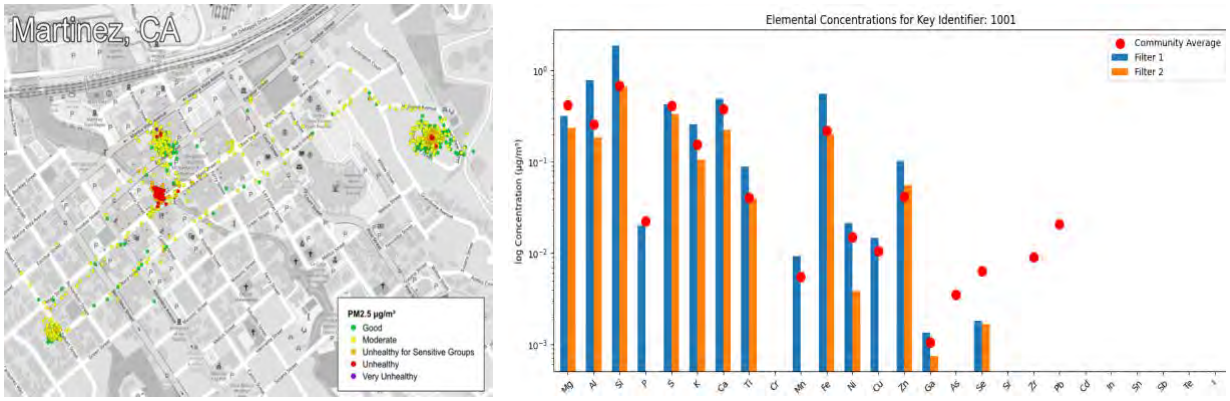

Figure 4: Space-time transects of air quality based on $PM_{2.5}$ in Martinez, CA (*left*) and time-integrated speciated $PM_{2.5}$ concentrations (*right*) for one community member. Source: Sumukhi Prasad

5. Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.

The proposed work plan addresses the concerns brought forth by community leaders regarding exposure to emissions from MRC. Healthy Martinez has communicated a focused desire for real-time access to data that captures community observations of air pollutants, wind patterns, vibrations, and visual data to inform their protective responses to fast-changing conditions that are often associated with living near a refinery fenceline (e.g., flaring, fires, accidental releases).

Providing this information to community members via a public website managed by AQMEL researchers promotes data sovereignty for the Martinez community and validates personalized exposure mitigation measures and public advocacy activities.[5] The data generated by work plan activities fills a gap in air monitoring and will support data sovereignty for community members.

Martinez is unique from the perspective of the traditional demographics of an environmental justice community being that residents are mainly white, and the poverty score is below 35th percentile where most residents live (**Figure 5**). However, the toxic release score for three overlapping census tracts ranges from 65-99th percentiles (**Figure 6**). This demonstrates that while environmental justice challenges in California reflect historical trends for low-income and communities of color, they can also be highly intersectional, necessitating community-driven investigations when historical indicators do not reflect present-day lived experiences.[6,7] The proposed work plan will address the injustice of near-source contamination by providing educational material that supports data-driven community exposure mitigation. This is an important aspect of the project, as MRC is the second largest refinery in the Bay Area. It has dense residential housing at its fenceline with no protective barrier for adjacent households. Additionally, while

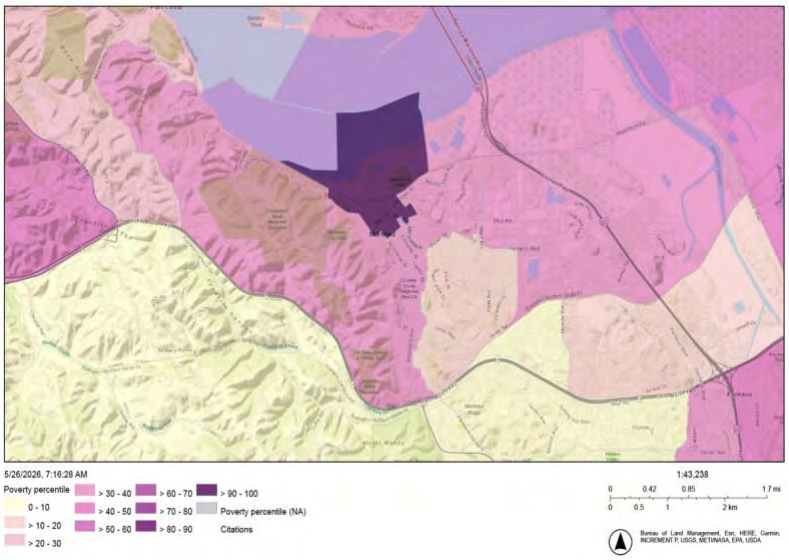

Figure 5: Poverty percentiles from CalEnviroScreen 4.0.[8]

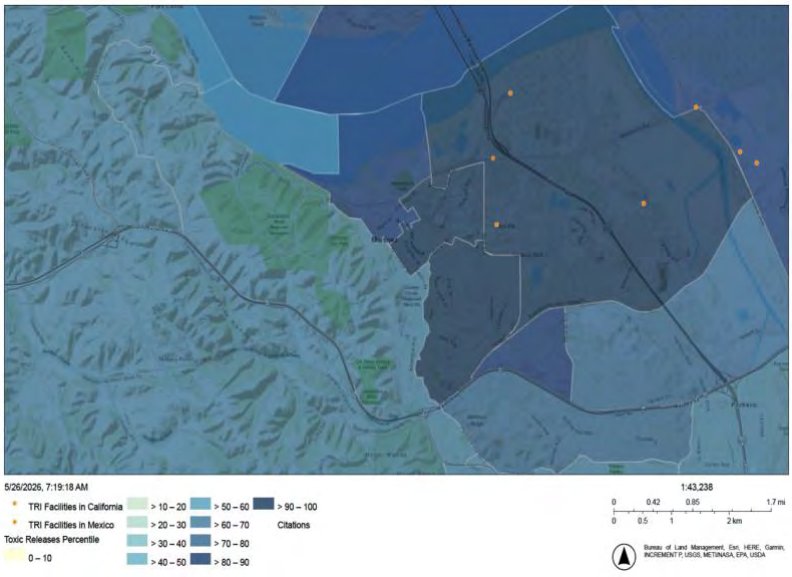

Figure 6: Toxic release facilities and percentiles from CalEnviroScreen 4.0.[8]

portions of Martinez may not rank highly across all traditional socioeconomic indicators, residents living this closely near refinery operations (including transport) experience disproportionate exposure concerns associated with industrial emissions, accidental releases, and have limited access to monitoring data. Lastly, the work plan includes several co-learning activities and opportunities to receive feedback on project efficacy.

COMMUNITY ENGAGEMENT (10 points)

6. Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.

The work plan includes multiple meetings for community feedback, and they are described as follows:

Bi-annual design charettes: The project team and Healthy Martinez will host two public charrettes per year to inform the implementation and iteration of community monitoring and educational material development. Every community has a preferred communication method based on cultural norms (e.g., email vs. phone calls, printed vs. digital outreach), and we seek to understand and appropriately work along those norms. Community members also provide abundant knowledge of pollution hotspots, sensitive receptor sites, and community assets. This information will inform the selection of ambient monitoring locations. We will provide catering, childcare, and translation (as needed) at each meeting.

Bi-weekly community leadership meetings: The project team will regularly meet with Healthy Martinez leaders to discuss project data, goals, and milestone successes. These meetings are historically held via Zoom to accommodate work schedules, and we will continue this practice during the project period.

Meetings with City leaders: The project team and Healthy Martinez leaders will meet (as needed) to discuss project outcomes with the Sustainability Subcommittee of the Martinez City Council. We strive to maintain alignment with City's Climate Action Plan, which includes initiatives around transportation, energy, solid waste, water, green building, and climate adaptation. Ongoing dialogue has informed the selection of public locations for ambient monitoring with consumer-grade equipment.

Educational website: The project team will host a public website to inform community members on project implementation progress, project benefits available to community members, and key indicator tracking based on UC Berkeley Institutional Review Board (IRB) guidelines for data sharing (Protocol ID: 2024-02-17158). More details on the website are provided in the work plan that follows. Healthy Martinez partners will also share the website on their platform and push out messages and updates to their community partners and mailing list.

Community outreach: The team will continue to collaborate with Healthy Martinez for annual Earth Day celebrations, where educational information is shared with community members from Martinez and surrounding communities. We will also work together to further the Healthy Martinez campaign to distribute on how to report strange smells and observations (e.g., fallout, flaring) to the Bay Area Air District. This information is provided on magnets and will be produced in other languages as needed (**Figure 7**).

Figure 7: Educational magnet for reporting smells and observations to the Bay Area Air District. Source: Healthy Martinez.

Personalized mitigation plans: Individualized exposure mitigation plans will be provided to each community member who agrees to engage in the wearable monitoring portion of the project. Participants will receive customized recommendations for $PM_{2.5}$ and CO_2 exposure mitigation based on their collected data along with links to publicly available educational material.[1]

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

In this work plan, we detail a three-year, community-informed monitoring campaign and three years of community education to support air pollution exposure mitigation and increased public understanding of how MRC impacts the lived experiences of Martinez residents. Indoor air monitoring and filtration will be conducted in residential locations, and ambient monitoring will be conducted at the Martinez reservoir and other community-informed points of interest (**Figure 8**). The additional air monitoring is crucial for the community to have a clear understanding of the air they are breathing. We will also host a multi-pollutant monitor (QuantAQ MODULAIR) at the Martinez Reservoir, up to 25 Clarity Nodes across the community, and visual and vibration monitoring, which will fill important gaps in overall understanding of MRC impacts. Educational engagement will be conducted as described in the Community Engagement section, as incorporating community knowledge into the project workflow will ensure relevance, contextual accuracy, and viability of project activities. The project team will lead all monitoring activities and educational events, and Healthy Martinez will provide context for the data collected and guidance on all community outreach plans.

Measurable outcomes will include the following:

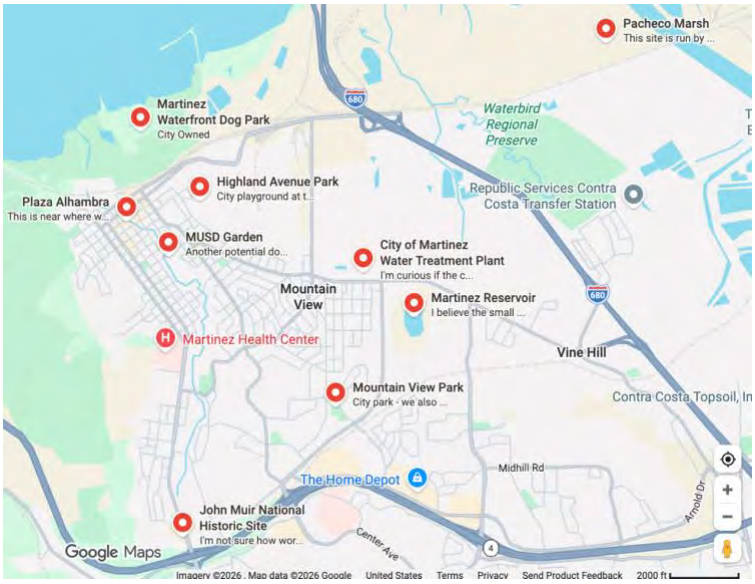

Figure 8: Points of interest for community monitoring based on recommendations from the Healthy Martinez leadership team. The ambient monitoring network will be composed of up to 25 Clarity nodes and one MODULAIR instrument at the Martinez Reservoir). Source: Healthy Martinez.

1. Reduction of baseline indoor air pollution in 125 Martinez households. By the end of the grant term, baseline average indoor $PM_{2.5}$ in 125 Martinez households will be reduced by 2 $\mu g/m^3$. This will be monitored through the installation of PurpleAir monitors in 125 Martinez households. Indoor $PM_{2.5}$ will be measured and analyzed at the beginning of the grant term and again at the end each year to identify changes in $PM_{2.5}$ levels over the grant period. Indicators will include the number of households for which PurpleAir monitors are installed (target: 125 households), $PM_{2.5}$ levels measured using PurpleAir monitors in households within the first year of grant period and annually thereafter, average $PM_{2.5}$ infiltration calculated using Clarity sensors for analysis of outdoor-indoor pollutant penetration[9], and number of air purifiers provided to the community (target: 125 air purifiers).

2. ***Implementation of individualized exposure reduction plans for up to 120 Martinez residents***. By the end of the grant term, mobility-driven personal exposure to $PM_{2.5}$ will be measured and analyzed across space and time for 120 Martinez residents to improve awareness of air pollution exposure hotspots in day-to-day activities. 120 Martinez residents will receive individualized exposure reduction plans through the Mailchimp platform. Indicators will include number of residents whose mobility-driven exposure is measured and analyzed (target: 120 residents), number of residents who received an individualized exposure reduction plan (target: 120 residents), aggregated $PM_{2.5}$ and speciated $PM_{2.5}$ across all Martinez residents to identify $PM_{2.5}$ hotspots, number of residents who engaged with their individualized exposure reduction plans tracked across the Mailchimp platform, identification of number of clicks of emails, Clarity data website, personal exposure data summary on the Mailchimp platform.

3. ***Increase understanding of data-driven air pollution trends of up to 200 design-charrette attendees per year***. By the end of the grant term, there will be increased understanding of data-driven air pollution trends and increased awareness of air pollution mitigation strategies for up to 200 design charrette attendees. Indicators will include number of attendees at the charrettes (target: 200 attendees), the percentage of individuals who reported increased awareness of air pollution exposure mitigation strategies (using surveys), percentage of individuals who reported increased understanding of data-driven air pollution trends (using surveys), participant reflections on additional air pollution sources not covered in research results, and participant reflections on avenues for further research investigation.

4. ***Increase in engagement with real-time, local data that characterizes ambient conditions driven by nearby sources (website hosting)***. The project team will host a website that will display the air pollution measurements (CO, NO, NO_2, O_3, $PM_{2.5}$), visual feed and vibration monitoring data in near-real-time. Engagement will be quantified with analytics from the website. Indicators include launching the first website rendition at the second design charrette, level of website engagement over time, and participant feedback at the remaining design charrettes. The website will be accessible to over 60,000 community members of Martinez and nearby unincorporated communities (Mountain View, Vine Hill) across all seasons and geographies in the area.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

We request $682,654 to support activities over a project period of three years. Budget items include effort for faculty, graduate, and undergraduate personnel; stipends for community partners; funds for community engagement and catering for in-person meetings; monitoring supplies for ambient and indoor environments; air purifiers; campus insurance; publication fees; travel to technical conferences; rental fees and project administration; and indirect costs. We provide details for project costs as follows.

Lead Applicant Budget: UC Berkeley

Personnel: Faculty: [redacted], will be the principal investigator of this project and will provide direction and oversight of project outcomes. Responsibilities include serving as UC Berkeley site leader and overall management of the research project. In addition to overall project responsibility, she will supervise one

graduate student researcher and several undergraduate research assistants. [redacted] will commit 0.5 summer months in each project year.

Personnel: Graduate Student Researcher: [redacted] will support monitoring and community education activities through Y3 Q3, and this builds on her current graduate work in Healthy Martinez. UAW contract for GSRs effective 2026 increases each step by roughly 4% each year. Year 2030 is outside the current contract, and a 4% flat rate is used.

Step	10/1/25	increase at next period	10/1/26	increase at next period	10/1/27	increase at next period	10/1/28	increase at next period	10/1/29
1	5,991.25	5.95%	6,348.00	5.95%	6,726.00	5.95%	7,126.00	5.95%	7,550.00
2	6,455.58	4.00%	6,714.00	3.99%	6,982.00	3.98%	7,260.00	3.99%	7,550.00
3	6,955.92	3.88%	7,226.00	3.87%	7,506.00	3.86%	7,796.00	3.87%	8,098.00
4	7,495.08	3.75%	7,776.00	3.76%	8,068.00	3.77%	8,372.00	3.75%	8,686.00
5	8,076.00	3.64%	8,370.00	3.63%	8,674.00	3.64%	8,990.00	3.63%	9,316.00
6	8,701.92	2.97%	8,960.00	2.97%	9,226.00	2.97%	9,500.00	2.97%	9,782.00

Personnel: Other Personnel: Support is allocated for undergraduate research support, which includes funding for up to 600 support hours per project year. Undergraduate researchers provide laboratory assistance for preparing samples for personal monitoring, and they provide data analysis support for GIS mapping, measurement corrections, and summary statistics. See escalation table below.

Salary Escalations: Group	FY24	FY25	FY26	FY27	FY28
Faculty, effective 7/1	4.00%	4.00%	4.00%	4.00%	4.00%
Academic Researchers (ARs), effective 7/1/23 and annually on 7/1	4.50%	3.50%	3.50%	3.50%	4.00%
Non-Academic, effective 7/1	4.00%	4.00%	4.00%	4.00%	4.00%
Graduate Student Researchers (GSRs), effective 10/1/23 and annually on 10/1	6.40%	6.40%	6.40%	6.40%	6.40%

Salaries are based on actual salaries at time of submission and are projected to include yearly escalations as per the table above. Postdoc and GSR salaries are based on experience level and escalated annually in October. All other titles escalate in July.

Personnel: Benefit Subtotal: The University of California, Berkeley Composite Fringe Benefit Rates (CFBR) have been reviewed and federally approved by the Department of Health and Human Services (DHHS) on 04/10/2024 for use by all fund sources for UC Berkeley's FY24-25. Rates beyond June 30, 2025, are estimates and are provided for

planning purposes only. Future CFBR rates are subject to review and approval by DHHS on an annual or bi-annual basis. Fringe benefits are assessed as a percentage of the respective employee's salary. The benefit rates are as follows:

	Approved						Projections* -->	
CBR Rate Group	**FY20**	**FY21**	**FY22**	**FY23**	**FY24**	**FY25**	**FY26**	**FY27-29**
Academic	36.50%	35.90%	35.90%	35.40%	34.40%	35.50%	35.90%	38.50%
Students (Graduate and Undergraduate)	2.40%	2.40%	2.60%	2.80%	2.30%	3.00%	2.30%	2.30%

**For Planning Purposes*

The University of California provides full remission of tuition, fees, and graduate student health insurance to all graduate students who are employed on-campus 25% time or greater during the academic year. For FY25-26, the rate for out-of-state remission is $19,931.75 per semester, which is escalated annually in the budget at a rate of 4% each during the project period.

Other Direct Costs: Publications: We request funds for two open-access publications in an American Chemical Society journal, such as *Environmental Science & Technology* and *ACS ES&T Air*, to support dissemination of our findings in peer-reviewed journals. Publication fees are recently quoted at a temporarily discounted rate of $3,750, which is subject to change in future years.

Other Direct Costs: GAEL: The General, Automobile, and Employment Liability (GAEL) charge was instituted in 1998 to fund the campus' share of expenses associated with claims and lawsuits defended by the University. It is essentially a payroll tax. For Fiscal Year 2025-2026 and onward, the GAEL charge is $2.35 per $100 of payroll. This applies to all funds, including gifts and grants, with the exception of direct federal contracts, grants, and flowthroughs.

Participant Support: We request funds for three years of community engagement support. This includes funds for two in-person design charrettes per year with catering ($1500 per meeting) and estimates are based on a maximum of 100 attendees per meeting. Childcare and translation will be provided upon request, but funds are not requested here for these accommodations. We also request funds for annual stipends of $10,000 for three community partners from Healthy Martinez. Additional funds will support $50 stipends per week for community members that engage with personal exposure activities, and we request support for up to 120 person-weeks.

Indirect Costs: Indirect costs are based on the allowable rate of 15% of the total budget and the rate is applied using the modified total direct cost (MTDC) formula. MTDC

excludes equipment, capital expenditures, charges for patient care, student tuition remission, participant support costs, rental costs of off-site facilities, scholarships, and fellowships, as well as the portion of each subgrant and subcontract in excess of $25,000.

Co-Applicant Budget: City of Martinez

Supplies: For indoor air monitoring, 125 PurpleAir Classic monitors will be purchased for each home to establish an indoor baseline for $PM_{2.5}$ pollution. We include funds for a 25 Clarity Nodes and a 2-year data subscription. The Clarity network will provide an ambient baseline for $PM_{2.5}$. We include funds for the purchase and pre- and post-sample weighing of UPAS (Access Sensor Technologies, Fort Collins, CO) filters at Colorado State University. We request funds for the QuantAQ MODULAIR for CO, NO_2, NO, O_3, $PM_{2.5}$, and local meteorology monitoring, plus solar power and a cloud subscription. Additionally, we include funds for standalone air purifiers and replacement filters, HVAC filters, vibration monitoring, a digital camera for visual monitoring, and miscellaneous supplies (e.g., tools, adhesives, mounting supplies, cleaning supplies, Nylon gloves, educational flyers, etc.).

Personnel and Indirect Costs: Funds will support an annual rental fee ($2000 per year) for air monitoring at the Martinez Reservoir, and project administration support for purchasing, outreach, and grant management.

ECOSYSTEM ALIGNMENT (10 points)

10. Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).

This project aligns with objectives of the Community Air Protection Program (AB 617). While Martinez is not an AB 617 community, the proposed project would bring similar benefits, specifically for community air monitoring. Healthy Martinez has also been in communication with BAAD for the deployment of an air monitoring station at the Martinez Reservoir (**Figure 1**, *gold star*). Our monitoring plan would supplement measurements at the new station, with a focus on visual and vibration monitoring and gaseous measurements (CO, ozone, NO_x).

The City of Martinez supports efforts to increase community awareness of air quality through educational outreach, and our plan proposes a collaborative and community-driven dashboard for sharing local insights on air pollution and nearby source activity. The City's Climate Action Plan (CAP), adopted in 2009, includes strategies to prepare the community for effects of global warming. Program A5, "Increase Public Awareness Regarding Potential Health Impacts of Global Warming," specifically focuses on public outreach to inform residents of potential health hazards associated with global warming, including ways that residents can prepare and protect themselves. The proposed project aligns with the City's CAP by prioritizing increase community awareness of air quality.

Additionally, the City's Four-Year Strategic Plan, adopted in 2025, includes "Goal E: Community health, safety, and well-being", which focuses on partnering with the community to develop programs that promote public health and safety, foster environmental responsibility, and celebrate our diverse identities, to strengthen the City's resilience and wellbeing. Goal E, Strategy 4 focuses on continuing communication and coordination with the County and Air District to advocate for the community's health, monitor community benefit payments related to the PBF Energy incident, and continue pursuing Industrial Safety Ordinance.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The UC Berkeley research team has completed collaborative projects of this size and scope, which includes a technical and educational grant from the Community Air Protection Program for work in west San Bernardino, CA.[1] This project consisted of household air monitoring, personal monitoring, and subsequent delivery of personalized exposure reduction plans. In a second effort that is in its last year (2022-2026), we investigate how varying the level of personalization of exposure information impacts actionable exposure prevention in the Bay Area (**Figure 2**).[3] The project required deployment of Clarity nodes, personal monitoring, and community education through digital summaries. We also support various community efforts throughout the Bay Area through UC Berkeley's Undergraduate Research Apprenticeship Program (URAP), which has become a popular avenue for research participation in our lab. Five URAP cohorts have supported community-driven research in Marin City and Martinez since the spring of 2025. In Martinez, 2025-2026 URAP cohorts supported laboratory preparation of personal monitoring samples, GIS mapping of personal exposures, ambient data analyses, and educational outreach at Martinez Farmers' Market. Ongoing preliminary work in Martinez was previously supported by the NSF Graduate Research Fellowship Program (2023-2026) and URAP students, and two rounds of personal monitoring and personalized mitigation plan dissemination are underway.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

Project implementation will be managed by [redacted], and technical activities will be carried out by graduate student researcher [redacted] with support from undergraduate research assistants and URAP cohorts in spring and fall semesters throughout the project period. The City of Martinez will lead the acquisition and distribution of air monitoring and filtration supplies, and they will manage the distribution of supplies to community members. They will keep track of community outreach throughout the project and schedule presentations to City Council's Sustainability Subcommittee. Healthy Martinez will provide community knowledge, guidance, and feedback on data

context, communications, and community nuances. At this time, no additional funding will be used to support project completion, aside from the 9-month salary of the PI from the University of California Berkeley.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.

A statement of permission is attached to this application from the City of Martinez that grants permission to co-locate project equipment at the Martinez Reservoir.

14. Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.

The project is categorically exempt from CEQA pursuant to CEQA Guidelines Section 15306 (Information Collection), which applies to basic data collection, research, and resource evaluation activities that do not result in a major disturbance to environmental resources. Additionally, the project is exempt pursuant to CEQA Guidelines Section 15061(b)(3) (Common Sense Exemption) because it can be seen with certainty that the project has no potential to result in a significant environmental impact.

15. Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.

Project team members do not need to obtain site control for the project. At the start of the project execution, the City of Martinez will have already begun steps to establish the BAAD community monitoring station at the Martinez Reservoir, and as mentioned above, we have obtained permission to add additional monitors at the site once established. Community members will participate voluntarily, so site control is not required for residential and ambient monitoring.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Operation and maintenance of the MODULAIR at the Martinez Reservoir at 3470 Pacheco Blvd will be managed by UC Berkeley.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

There are several common barriers that arise in community-based work, including delays in deployment of equipment, equipment malfunctions, cloud inaccessibility, power losses, etc. Undergraduate research assistants will carry out checks for equipment responsiveness in regular intervals. We are working closely with Healthy Martinez to select viable deployment locations and evaluate the feasibility of the scope and scale of project activities. The engagement projections are based on the scale of community engagement during preliminary activities. We do not anticipate communication barriers given the ease of sharing information over the past year.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	We envision project outcomes that increase the availability of ambient, household, and personal exposure data for a frontline community impacted by chemical refining operations. Data will inform exposure mitigation and exposure risk associated with proximity to an industrial source.

Measurable Outcome	Indicator(s)
1. ***Reduction of baseline indoor air pollution in 125 Martinez households***.	• Number of households for which PurpleAir monitors are installed (target: 125 households) • $PM_{2.5}$ levels measured using PurpleAir monitors in households within the first year of grant period and annually thereafter • Average $PM_{2.5}$ infiltration calculated using Clarity sensors for analysis of outdoor-indoor pollutant penetration • Number of air purifiers provided to the community (target: 125 air purifiers)
2. ***Implementation of individualized exposure reduction plans for up to 120 Martinez residents***.	• Number of residents whose mobility-driven exposure is measured and analyzed (target: 120 residents) • Number of residents who received an individualized exposure reduction plan (target: 120 residents) • Aggregated $PM_{2.5}$ and speciated $PM_{2.5}$ across all Martinez residents to identify $PM_{2.5}$ hotspots • Number of residents who engaged with their individualized exposure reduction plans tracked across the Mailchimp platform • Identification of number of clicks of emails, Clarity data

	website, personal exposure data summary on the Mailchimp platform.
3. ***Increase understanding of data-driven air pollution trends for up to 200 design charrette attendees per year***.	● Number of attendees at the charrettes (target: 200 attendees) ● Percentage of individuals who reported increased awareness of air pollution exposure mitigation strategies (using surveys) ● Percentage of individuals who reported increased understanding of data-driven air pollution trends (using surveys) ● Participant reflections on additional air pollution sources not covered in research results ● Participant reflections on avenues for further research investigation ● Number of people signed up for the community early warning system
4. ***Increase in engagement with real-time, local data that characterizes ambient conditions driven by nearby sources (website hosting)***.	● Launching the first website rendition at the second design charrette ● Level of website engagement over time ● Participant feedback at design charrettes

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. By the end of the grant term, baseline weekly average indoor $PM_{2.5}$ in 125 Martinez households will be reduced by 2 $\mu g/m^3$.	A. Install PurpleAir monitors in 125 Martinez households.	1. Create and design engaging and accessible recruitment material and informational guides regarding expectations of the project.	UC Berkeley	City of Martinez, Community members	Y1 Q1
		2. Order and co-locate 125 PurpleAir monitors.			Y1 Q1
		3. Recruit participating households at the Martinez farmers market and distribute air monitors			Y1 Q3
		4. Provide educational information during distribution and as needed over the project period.			Y1 Q3
	B. Collect $PM_{2.5}$ measurements via PurpleAir monitors in households within the first three months of PurpleAir monitor deployment and installation.	1. Quality assurance and control of PurpleAir measurements every week within the first month of data collection to ensure effective and accurate operation of sensors.	UC Berkeley	Community members	Y1 Q3
		2. Write Python script to consolidate weekly indoor $PM_{2.5}$ measurements collected.			Y1 Q3
		3. Send summary of indoor $PM_{2.5}$ results to households using Mailchimp. Inform participants of refinery operation capacity during this data collection period.			Y3 Q3
	C. Deploy air purifiers to the 125 Martinez households for which PurpleAir monitors were installed.	1. Order air purifiers.	UC Berkeley	City, of Martinez, Community Members	Y1 Q1
		2. Recruit participating households at the Martinez farmers market and distribute air purifiers			Y1 Q3

		3. Create educational material regarding the efficacy of air purification devices and when to use.			Y1 Q3
		4. Schedule time to connect with participants for technical assistance as needed.			Y1 Q3
	D. Discuss indoor $PM_{2.5}$ results with attendees during the second design charrette (to occur during the first year of grant).	1. Summarize indoor $PM_{2.5}$ results for every household.	UC Berkeley	City of Martinez, Healthy Martinez, Community Members	Y1 Q4
		2. Populate $PM_{2.5}$ results on QGIS to identify correlation between indoor air pollution and distance from Martinez Refining Company.			Y1 Q4
		3. Contact households regarding design charrette.			Y1 Q3
	E. Discuss indoor PM2.5 results with attendees during the fourth design charrette (to occur during the second year of grant).	1. Summarize indoor $PM_{2.5}$ results for every household up until this time period.	UC Berkeley	City of Martinez, Healthy Martinez, Community Members	Y2 Q4
		2. Populate $PM_{2.5}$ results from the last two years on QGIS to identify correlation between indoor air pollution and distance from Martinez Refining Company.			Y2 Q4
		3. Contact households regarding design charrette.			Y2 Q3
	F. Discuss differences in baseline indoor air pollution levels and air pollution levels during the last 6 months of grant period with attendees during the sixth design charrette (to occur during third year of grant).	1. Summarize indoor $PM_{2.5}$ results for every household up until this time period.	UC Berkeley	City of Martinez, Healthy Martinez, Community Members	Y3 Q3
		2. Populate $PM_{2.5}$ results from the last two years on QGIS to identify correlation between indoor air pollution and distance from Martinez Refining Company.			Y3 Q3

		3. Identify the difference in air pollution levels between baseline measurements and measurements from the last 6 months of grant period.			Y3 Q3
		4. Contact households regarding design charrette.			Y3 Q3
2. Implementation of individualized exposure reduction plans for up to 120 Martinez residents	A. Collect mobility-driven personal exposure measurements and create individualized reduction plans for 40 Martinez residents in the first year of the grant period.	1. Recruit 40 participants through community events such as Farmer's Markets and Healthy Martinez connections.	UC Berkeley	City of Martinez, Community Members	Y1 Q2
		2. Deploy three personal monitors, called the Ultrasonic Personal Air Sampler, each week for 14 weeks.			Y1 Q4
		3. Send filter samples from personal monitors for X-Ray Fluorescence analysis for identification of metals in samples.			Y1 Q4
		4. Analyze optical measurements and filter measurements using Python and QGIS.			Y2 Q2
		5. Create individualized exposure reduction plans using information collected and analysis conducted to participants using Mailchimp Platform.			Y2 Q2
	B. Collect mobility-driven personal exposure measurements and create individualized reduction plans for 80 Martinez residents by the end of the second year of the grant period.	1. Recruit 40 participants through community events such as Farmer's Markets and Healthy Martinez connections.	UC Berkeley	City of Martinez, Community Members	Y2 Q2
		2. Deploy three personal monitors, called the Ultrasonic Personal Air Sampler, each week for 14 weeks.			Y2 Q4

		3. Send filter samples from personal monitors for X-Ray Fluorescence analysis for identification of metals in samples.			Y2 Q4
		4. Analyze optical measurements and filter measurements using Python and QGIS.			Y2 Q2
		5. Create individualized exposure reduction plans using information collected and analysis conducted to participants using Mailchimp Platform.			Y3 Q2
	C. Collect mobility-driven personal exposure measurements and create individualized reduction plans for 120 Martinez residents by the end of the third year of the grant period.	1. Recruit 40 participants through community events such as Farmer's Markets and Healthy Martinez connections.	UC Berkeley	City of Martinez, Community Members	Y3 Q2
		2. Deploy three personal monitors, called the Ultrasonic Personal Air Sampler, each week for 14 weeks.			Y3 Q4
		3. Send filter samples from personal monitors for X-Ray Fluorescence analysis for identification of metals in samples.			Y3 Q4
		4. Analyze optical measurements and filter measurements using Python and QGIS.			Y3 Q4
		5. Create individualized exposure reduction plans using information collected and analysis conducted to participants using Mailchimp Platform.			Y3 Q4
3. Increase understanding of data-driven air pollution trends for up to 200 design charrette	A. Conduct Year 1 Design Charrettes	1. Publicize the charrette through City mailing lists, community events, Healthy Martinez connections, and canvassing.	UC Berkeley	City of Martinez, Healthy Martinez,	Y1 Q4
		2. Coordinate catering, book venue, print material for event.			Y1 Q4

attendees per year.		3. Create an agenda and outline for the event.		Community Members	Y1 Q4
	B. Conduct Year 2 Design Charrettes	1. Publicize the charrette through City mailing lists, community events, Healthy Martinez connections, and canvassing.	UC Berkeley	City of Martinez, Healthy Martinez, Community Members	Y2 Q4
		2. Coordinate catering, book venue, print material for event.			Y2 Q4
		3. Create an agenda and outline for the event extending upon Year 1 Design Charrettes.			Y2 Q4
	C. Conduct Year 3 Design Charrettes	1. Publicize the charrette through City mailing lists, community events, Healthy Martinez connections, and canvassing.	UC Berkeley	City of Martinez, Healthy Martinez, Community Members	Y3 Q4
		2. Coordinate catering, book venue, print material for event.			Y3 Q4
		3. Create an agenda and outline for the event extending upon Year 2 Design Charrettes			Y3 Q4
4. Increase in engagement with real-time, local data that characterizes ambient conditions driven by nearby sources (website hosting)	A. Launch Website	1. Concepting, design and beta testing	UC Berkeley	City of Martinez, Healthy Martinez	Y1 Q4
		2. Data integration with air monitors, visual and vibration feed			Y1 Q4
		3. Premier at Year 1 design Charette			Y1 Q4
	B. Community Feedback	1. Collect iterative feedback on the website at each subsequent charrette after launch	UC Berkeley	Community Members	Y3 Q4
	C. Summary of 3-Year Analytics	1. Detailed summaries of website engagement throughout the project period	UC Berkeley	Community Members	Y3 Q4

Bay Area Air District
CLEAN AIR FOR ALL

Benicia Opportunity
Western States Council Application

Bay REPAIR
Local Community Benefits Fund – Round 1
Opportunity and Catalyst Grants
Overall Narrative

Application Information	
Application Title	Equitable HP Transition
Lead Applicant	Western States Council of SMART
Application Location	Benicia & Surrounding Cities
Overall Funding Request	$5,000,000
Grant Term Request	3 Years

PROPOSAL VISION (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
    - *Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.*
    - *Advance integrated projects to holistically meet community needs.*
    - *Strengthen community-driven and collaborative solutions.*

This application proposes a coordinated initiative to accelerate building electrification, improve indoor air quality (IAQ), and expand access to High-Road, family-sustaining careers in Benicia and surrounding communities through three interconnected projects. The Heat Pump Equity project expands a proven point-of-sale rebate program for high-efficiency heat pump HVAC systems and heat pump water heaters in refinery-impacted communities, with rebates tied to qualified High-Road contractors to ensure quality installations that deliver energy savings, improved IAQ, and emissions reductions. The Community Contractor Growth project supports skilled HVAC technicians in becoming High-Road contractors that provide family-sustaining wages, healthcare, retirement benefits, and long-term career pathways while expanding the region's capacity to deliver quality clean energy installations. In preparation for BAAQMD's Rule 9-4 implementation in 2029, the Workforce Impact Research project will evaluate how High-Road union rebate programs improve workforce outcomes, contractor economics, installation quality, and community economic impacts compared to conventional HVAC rebate programs, while identifying barriers to equitable participation and developing policy recommendations to improve program design and outreach in disproportionately impacted communities. Measurable outcomes include heat pump installations,

greenhouse gas emissions reductions, improved indoor air quality, contractor and technician participation, workforce advancement into clean energy careers, and a research initiative producing community-based barrier analysis, a comparative study of High-Road versus conventional HVAC rebate programs, and a publicly available report with policy recommendations for future BAAQMD electrification programs.

Together, these projects directly support the Local Community Benefits Fund goals by reducing harmful air pollution and associated health impacts while strengthening economic resilience through workforce and contractor development aligned with a just transition away from fossil fuels. By integrating consumer incentives, workforce development, contractor growth, research, and ongoing community engagement, the initiative holistically addresses environmental, public health, and economic challenges facing frontline communities. Partnerships among labor organizations, community-based organizations, researchers, and local stakeholders ensure the work remains community-driven, responsive to local needs, and focused on expanding equitable access to clean technologies and quality jobs.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

The projects will benefit communities within the eligible Bay REPAIR geography, including Benicia, Vallejo, Rodeo, Crockett, Port Costa, Martinez (areas north of Highway 4), Mountain View, Vine Hill, Pacheco, Concord (areas north of Highway 4 and south of Highway 4 between I-680 and Highway 242), Clyde, Bay Point, and Pittsburg. These communities have experienced disproportionate exposure to pollution from refinery operations, industrial activity, and major transportation corridors, resulting in elevated asthma rates, lower life expectancy, and higher cumulative pollution burdens.

The program is designed to serve working families across the full eligible community geography, ensuring broad access to rebate, training, and health-focused program benefits. At the same time, the initiative will dedicate targeted outreach, responsive engagement, and a defined portion of funding to low-income households. By combining universal access with equity-focused investments, the program aims to deliver immediate health benefits through reduced emissions and improved IAQ, while also expanding long-term economic opportunities through access to high-quality clean energy careers.

Local 104's Skilled and Trained HVAC/Heat Pump Residential Rebate Program has demonstrated a strong commitment to serving disadvantaged communities across the Bay Area since 2010, with nearly 46,000 rebates issued and 6,000 completed jobs in

CalEnviroScreen Disadvantaged Communities (CDCs) and 62% of installers identifying as people of color or living in CDCs. By providing union-supported rebates for energy-efficient HVAC and heat pump upgrades, the program has reduced energy costs, lowered greenhouse gas emissions, and expanded access to high-quality clean energy services and workforce opportunities in historically underserved communities.

PARTNERSHIP STRUCTURE (20 points)

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

Lead Applicant – Western States Council of SMART

The Western States Council of SMART (Sheet Metal, Air, Rail and Transportation Workers) is well-positioned to serve as Lead Applicant due to its extensive experience managing regional workforce and energy initiatives across California. The Council coordinates apprenticeship and journey-level training programs through affiliated local unions, contractors, and Joint Apprenticeship Training Committees (JATCs), providing centralized leadership, fiscal oversight, and technical coordination.

The Council maintains longstanding connections to Contra Costa County communities through affiliated unions, contractors, and training programs serving and surrounding areas. Its work supports workforce development, economic resilience, and environmental improvements by expanding access to clean energy careers and supporting communities disproportionately impacted by industrial pollution.

Co-Applicant – Sheet Metal Workers' Local Union 104

Local 104 represents more than 9,000 skilled sheet metal and HVAC professionals across California and operates state-certified apprenticeship and journey-level training programs focused on advanced, energy-efficient technologies.

Local 104 has strong ties to Contra Costa County communities where members live and work. The union supports access to family-sustaining careers, apprenticeship opportunities, and High-Road labor standards while helping deliver building electrification projects that improve air quality and public health outcomes.

Local 104 has a proven track record of successfully administering rebate programs, funded by union member dues, that expand access to energy efficiency and IAQ improvements for all working families across eligible communities. Building on this experience, the Local 104 Rebate Program will continue providing broad community access while dedicating targeted outreach and funding to low-income households and other disproportionately impacted populations. Through this work, Local 104 seeks to lead the regional heat pump transition by combining direct consumer incentives with a

highly trained union HVAC workforce capable of installing, maintaining, and scaling advanced heat pump technologies in homes across the community.

Co-Applicant – Emerald Cities Collaborative NorCal
Emerald Cities Collaborative NorCal (ECC NorCal) works with community organizations, labor, government, and disadvantaged contractors to ensure historically underrepresented businesses and workers benefit from clean energy investments.

ECC NorCal has supported equitable building decarbonization efforts throughout the Bay Area, including collaboration with the Bay Area Air District on zero-NOx appliance implementation and participation in the East Contra Costa Healthy Homes Initiative. ECC NorCal also administered an E-Contractor training academy in Concord that trained minority and small contractors to install heat pump technologies and expand their businesses.

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

This application includes three coordinated projects designed to support scalable heat pump adoption using the existing infrastructure of Local 104 and partner organizations. The Western States Council will provide overall grant administration, oversight, and coordination.

The Heat Pump Equity project and the Community Contractor Growth project will have a Lead Co-Applicant responsible for coordination among partners, subcontractors, and vendors and for ensuring all deliverables are completed. The Workforce Impact Research project will have the Western States Council coordinating subcontractors and vendors. Co-Applicants will make decisions within their approved scopes of work, while broader project decisions will be coordinated with the Council to ensure compliance with grant requirements and alignment with program goals.

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to:*
    - *Coordinate overall community engagement activities.*
    - *Track and report on indicators to assess progress towards measurable outcomes.*
    - *Collect and process reporting, reimbursement and invoicing requirements.*

The Western States Council, as Lead Applicant, will establish a coordinated project management and reporting structure with all Co-Applicants to ensure effective implementation, accountability, and ongoing community engagement throughout the grant term. Consistent with the Bay REPAIR program's emphasis on "community-led

and collaborative solutions" and measurable outcome tracking, the partnership will utilize regular coordination meetings, shared workplans, centralized data tracking systems, and standardized reporting procedures to monitor progress toward project deliverables and measurable outcomes.

ECC NorCal, as lead for the Community Contractor Growth Project, will coordinate contractor and technician engagement activities, including outreach to small, diverse, and local High-Road contractors. ECC NorCal will collect and manage participation data, including contractor demographics, certifications, training completions, and business development indicators. ECC NorCal will also administer pre- and post-program surveys to assess contractor satisfaction, workforce outcomes, and program effectiveness. Findings and implementation updates will be incorporated into periodic progress reports and final project summaries documenting outcomes, challenges, lessons learned, and opportunities for long-term workforce and contractor development.

Local 104 will lead implementation of the Heat Pump Equity Project and oversee all rebate program administration, installation tracking, and project performance documentation. Local 104 will also coordinate ongoing engagement with trusted community-based organizations, local stakeholders, and residents to support outreach, distribute educational materials, gather participant feedback, and ensure the project remains responsive to community needs and priorities. These engagement activities align with the program requirement for ongoing two-way community engagement and mechanisms for incorporating community feedback throughout implementation.

The Council will oversee overall grant administration, partnership coordination, compliance, invoicing, reimbursement processing, and reporting requirements across all projects and Co-Applicants. The Council will maintain centralized financial tracking systems to ensure all expenditures, invoices, payroll documentation, subcontractor costs, and reimbursement requests comply with Air District grant requirements. In addition, the Council will lead the Workforce Impact Research Project and coordinate research partners and subcontractors to ensure the research team has access to implementation data, measurable outcomes tracking, contractor participation information, and community feedback generated through both the Heat Pump Equity and Community Contractor Growth projects. This integrated coordination structure will support consistent evaluation of project effectiveness, accountability to grant objectives, and timely submission of required semi-annual and final reports.

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.*

Western States Council
The Council is governed by an Executive Board that authorizes the President to enter agreements and approve projects subject to Board oversight.

Sheet Metal Workers' Local Union 104
Local 104 is governed by a Business Manager with oversight from both the membership and Executive Board. The Business Manager is authorized to approve agreements and projects.

Emerald Cities Collaborative
Emerald Cities is governed by a board that has authorized the Chief Executive Officer to review and approve the final project agreement.

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

The Western States Council has substantial experience managing large-scale workforce and industry initiatives across California, including statewide apprenticeship, workforce development, and energy transition programs.

The Council will dedicate approximately 2.0–3.0 Full Time Equivalent (FTE) staff to grant implementation, including a Special Projects Coordinator, Grants and Compliance Manager, and administrative support staff responsible for project oversight, reporting, compliance, data tracking, and coordination.

Additional implementation support of approximately 1.0–2.0 FTE will be provided by Co-Applicants to support project delivery, contractor coordination, participant services, and community engagement. The Council will maintain centralized oversight to ensure accountability, compliance, and consistent execution across all project components.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

The Western States Council has extensive experience managing public funds, including a statewide High-Road Training Partnership (HRTP) grant exceeding $13 million, a federal Department of Energy (DOE) award totaling $2.6 million, and multiple regional workforce grants.

The Council utilizes grant-specific accounting systems that segregate funding sources and track expenditures by project. Dedicated finance and administrative staff oversee budgeting, invoicing, reimbursements, cost allocation, and compliance monitoring to ensure all expenditures are allowable and aligned with approved grant activities.

For this project, the Council will implement formal budget controls, expenditure documentation requirements, and routine financial reviews. Subawards to Co-Applicants and subcontractors will include defined scopes of work, budgets, and reporting requirements, and all reimbursement requests will be reviewed and approved by the Council.

The Council also undergoes annual independent financial audits, ensuring accountability, transparency, and compliance with all grant requirements.

Application Title: **Equitable HP Transition**

Project #	Project Title (3 words maximum)	Project Summary (1-3 sentences)	Strategy Alignment	Project Lead	% Co-Applicant Allocation (Min of 25% of Total Application Budget)	Total Project Budget - Direct Costs	Total Project Budget - Professional Services & Consultants	% Professional Services & Consultants (Max of 25% of Application Direct Costs)	Total Funds Requested	Lead Applicant Budget	Co-Applicant 1 Budget	Co-Applicant 2 Budget
1	Heat Pump Equity	The **Heat Pump Equity** project expands a proven rebate program to provide point-of-sale incentives for homeowners to install high-efficiency heat pump HVAC systems and HP water heaters, reducing upfront costs and accelerating adoption in refinery-impacted communities. Rebates are specifically tied to installations performed by qualified high-road contractors, ensuring systems are installed correctly and deliver reliable energy savings, improved indoor air quality, and emissions reductions.	Both	S.M.A.R.T., SMW Local Union No.104	89.3%	$ 3,230,160		0.0%	$ 3,637,500	$ 390,500	$ 3,247,000	$ -
2	Community Contractor Growth	The **Community Contractor Growth** project supports skilled HVAC technicians in becoming high-road contractors; businesses that provide good jobs with family-sustaining wages, comprehensive healthcare benefits, and the ability for workers to retire with dignity. By combining business development support with demand from heat pump rebate programs, the project also helps existing contractors transition to high-road standards, building a strong, community-based contractor network that delivers quality clean energy installations and long-term economic opportunity.	Both	Emerald Cities Collaborative	95.5%	$ 495,000	$ 30,000.00	6.1%	$ 975,000	$ 44,000	$ 331,000	$ 600,000
3	Workforce Impact Research	The **Workforce Impact Research** project evaluates how high-road union rebate programs compare to conventional HVAC rebate alternatives across dimensions of workforce outcomes, contractor economics, installation quality, and community economic impact. Drawing on original program data, comparative analysis, and community-based research conducted directly in Benicia and surrounding communities, the project culminates in a publicly available research report with actionable policy recommendations to help BAAQMD and future program administrators design clean energy investments that deliver measurable, lasting benefits to frontline communities navigating the transition away from fossil fuels. STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The **Community Contractor Growth** project supports skilled HVAC technicians in transitioning into High-Road contracting businesses that provide family-sustaining wages, comprehensive healthcare benefits, career advancement opportunities, and pathways to secure retirement. The project expands access to building electrification and heat pump markets by equipping contractors with the technical, operational, and business development support needed to successfully participate in clean energy programs and deliver high-quality installations in frontline communities.

By aligning contractor capacity-building with growing demand from the Heat Pump Equity rebate program, the project also supports existing contractors in adopting High-Road labor standards and scaling clean energy services. This approach strengthens a locally rooted contractor network capable of delivering quality installations, supporting long-term emissions reductions, and creating sustainable economic opportunities in communities disproportionately impacted by air pollution and fossil fuel dependence.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This project aligns with the Local Community Benefits Fund strategies to reduce air pollution, improve health outcomes, and build economic resilience for a just transition by

expanding the availability of High-Road contractors trained to properly install heat pump technologies in residential homes.

Heat pumps reduce reliance on fossil fuel combustion and, when paired with MERV 11 or MERV 13 filtration, can significantly reduce indoor concentrations of PM2.5 and PM10 (a byproduct of fossil fuel combustion), improving indoor air quality and associated health outcomes for residents in communities disproportionately impacted by air pollution. Unlike conventional combustion-based systems that burn fossil fuels to generate heat, heat pumps transfer heat using highly efficient refrigerant technology, reducing both direct emissions and household energy consumption. Proper installation is critical to achieving these benefits, yet California studies indicate that approximately 85% of new and 50% of existing HVAC systems are not operating properly, creating a growing need for a highly trained workforce as heat pump adoption accelerates.

Installation concerns are growing with increased adoption of heat pump water heaters, which are particularly susceptible to improper installation due to their configuration and performance sensitivity. This underscores the importance of expanding access to rigorously trained High-Road contractors capable of ensuring systems are correctly sized, installed, and commissioned to deliver their intended environmental and health benefits.

The project also advances economic resilience by creating pathways for Benicia-area HVAC technicians, many from disadvantaged and frontline communities, to transition into High-Road contracting businesses that provide family-sustaining wages, healthcare benefits, and long-term career opportunities. Through business development support, technical training, and connections to expanding heat pump rebate and incentive programs, participating contractors will be positioned to grow sustainable local businesses while supporting increased regional demand for quality electrification services. When paired with the Heat Pump Equity rebate program, the project will help ensure that low- and moderate-income households can access both financial incentives and qualified High-Road contractors, delivering lasting environmental, public health, and economic benefits to the community.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Project Location

The project will serve residential neighborhoods in proximity to the Valero refinery in southwestern Solano County, including Vallejo, Rodeo, Crockett, Port Costa, Mountain

View, Vine Hill, Pacheco, Clyde, Bay Point, Pittsburg and areas of Concord and Martinez. These communities are disproportionately impacted by refinery emissions, industrial activity, and transportation-related air pollution and are priority areas for emissions reductions and equitable investment.

Project activities will be implemented across residential and community-serving locations throughout the region and will include workforce development, contractor training, community outreach, and electrification education. Outreach and engagement will be conducted in partnership with trusted local organizations, workforce development programs, faith-based institutions, neighborhood councils, and community centers to ensure equitable access, culturally competent engagement, and broad participation among frontline and disadvantaged communities.

Emerald Cities Collaborative (ECC) will deliver in-person electrification and business capacity-building training in Benicia for contractors and prospective contractors across all Benica-area census tracts. Incubator services, including technical assistance, office hours, and coaching, will be provided virtually and at SMART Local 104 facilities as needed.

Local 104 will coordinate with ECC to provide additional hands-on, apprenticeship-aligned training opportunities at Benicia -area facilities. These courses will prepare prospective contractors to meet High-Road labor standards, participate in SMART Union-affiliated contracting opportunities, navigate rebate programs, and support growing regional demand for high-quality heat pump and building electrification installations.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

ECC led a year-long contractor engagement initiative with East Contra Costa Healthy Homes, a California Jobs First initiative, to gain direct input, insight, feedback, and questions from small MWVDBE contractors in the Benicia area on the equitable design of a direct install program. We administered surveys, held focus groups and conducted interviews. These critical community members indicated workforce education and training programs, investing in pipeline development, and ensuring eligibility criteria support High-Road contractor development by providing supports (including training and technical assistance) and time. East Contra Costa Healthy Homes partners included other community-based organizations and workforce stakeholders – Lift Up Contra Costa, CocoKids, Future Build provided additional insight into community priorities,

identifying jobs as a top focus. Further, ECC held an E-Contractor Academy in East Contra Costa where we engaged in-person with key workforce stakeholders such as Mission Possible, Opportunity Junction, Rubicon, Pittsburg Adult School and many others.

Over the past 15 years, ECC has also maintained extensive partnerships with small, diverse, and frontline contractors, including Black- and Latinx-owned businesses operating in historically underserved communities. Contractor feedback is regularly incorporated into program design to ensure training, technical assistance, and business development services remain responsive to evolving market conditions and community needs. ECC's long-term technical assistance model supports trusted, multidirectional communication and sustained engagement with participating contractors and community stakeholders. Through ongoing advocacy and cross-sector collaboration, ECC works to reduce barriers to participation and expand opportunities for frontline contractors to help shape clean energy program implementation, workforce pathways, and local economic development strategies. ECC's E-Contractor Academy graduates include contractors from Pittsburg, Benicia, and surrounding areas.

SMART Local 104 maintains longstanding relationships within Benicia communities through apprenticeship recruitment, workforce training, and direct engagement with local workers and residents. Through these efforts, Local 104 identified a growing need for support services that help skilled tradespeople transition into High-Road contracting businesses capable of participating in the region's expanding building electrification market. Local 104 has engaged with local government agencies, workforce partners, and advocacy organizations to refine the proposed program and ensure it reflects community priorities related to job quality, equitable access, and long-term economic opportunity. The organization will continue ongoing outreach and stakeholder engagement throughout implementation to gather feedback, strengthen community participation, and connect eligible residents and contractors to program opportunities.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Addressing Community Needs and Outcomes

This project addresses community-identified needs related to workforce development, clean energy access, and environmental health in Benicia and surrounding frontline communities within the Path to Clean Air (PTCA) area. It expands pathways into High-

Road clean energy careers for Benica-area residents and contractors while strengthening the local contractor network needed for building electrification and residential decarbonization efforts.
The project addresses environmental justice and public health challenges including exposure to refinery emissions, freeway pollution, and indoor air pollution from fossil fuel appliances. Gas-powered appliances and existing environmental hazards in Benica contribute to exposure to harmful contaminants with significant negative health impacts, including:

- **Nitrogen Dioxide (NO_2):** Lung irritation, increased asthma symptoms, enhanced allergic responses, chronic lung disease, increased risk of stroke and dementia, and cardiovascular impacts.
- **Carbon Monoxide (CO):** Chest pain, fatigue, headaches, reduced mental alertness, and possible mortality at high concentrations.
- **Formaldehyde, Benzene, and other Volatile Organic Compounds (VOCs):** Cancer risk, eye, nose, and throat irritation, nausea, fatigue, dizziness, and liver, kidney and central nervous system damage.
- **Particulate Matter ($PM_{2.5}$ and PM_{10}):** Increased asthma symptoms, respiratory illnesses, cardiovascular disease, stroke risk, dementia risk, and premature death due to their ability to penetrate deep into the lungs.

By supporting transition to zero-NOx heat pump technologies and improving installation quality through High-Road contractor training, the project reduces both indoor and outdoor exposure to harmful pollutants and improves household energy efficiency, comfort, resilience, and indoor air quality, particularly when paired with MERV 11 or 13 filtration.

The project advances a just transition by supporting HVAC workers and frontline contractors in moving into clean energy careers and promoting a clean energy economy rather than remaining dependent on fossil fuel-based systems and markets. ECC works closely with labor, government agencies, community organizations, and small MWVDBE contractors to ensure historically underrepresented businesses are positioned to compete for and benefit from clean energy investments. Through ECC's E-Contractor Academy and partner networks, participants receive licensing, business development, and compliance support, technical assistance and are connected to real project opportunities ensuring participants are connected to viable long-term career and business pathways.

Measurable outcomes include number of contractors trained, MWVDBE businesses supported, increased participation in clean energy projects, expanded installation capacity, reductions in air pollution emissions, increased access to High-Road

employment opportunities, and strengthened local contractor capacity to support ongoing residential electrification efforts.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Community Engagement and Feedback Methods

ECC will implement a multi-layered community engagement strategy to ensure ongoing transparency, accountability, and responsiveness throughout project implementation. This strategy is grounded in deep partnerships with local government, Environmental Justice organizations (including Rubicon, Aliados, Alliance of Californians for Community Empowerment (ACCE), Pogo Park, and others), regional energy agencies such as BayREN and the Bay Area Air District (BAAD), and workforce partners including SMART Local 104 and technical subject matter experts embedded in the E-Contractor Academy.

Community Engagement on Progress

ECC will provide ongoing communication to participants and stakeholders, including weekly updates during active training cohorts and milestone-based reporting on program progress, outcomes, and available opportunities. These updates will communicate program progress, training outcomes, available supports, contractor opportunities, and community benefits such as access to electrification workforce pathways and improved access to heat pump installation services in underserved communities. Trusted community partners will support outreach and dissemination to ensure culturally responsive communication and broad participation.

Methods for Soliciting Community Feedback

ECC will incorporate multiple feedback channels throughout implementation to ensure continuous input from both participants and community stakeholders. These methods will include:

- Structured feedback sessions at key program milestones (e.g., cohort completion, curriculum checkpoints, and contractor transition stages)
- Regular check-in meetings with community-based organization partners and technical trainers
- Ongoing participant feedback loops during training and mentorship activities
- Direct input gathered through ECC staff engagement during one-on-one mentorship sessions

- Coordination meetings with regional partners to assess ecosystem alignment and implementation effectiveness

These mechanisms are designed to capture both real-time participant experience and broader community perspective on program accessibility, effectiveness, and relevance.

How Feedback Will Be Used

ECC will systematically review and integrate all feedback into continuous program improvement cycles. Feedback will be documented, synthesized, and reviewed by program leadership on a regular basis to identify emerging themes, barriers to participation, and opportunities for curriculum or delivery improvements. Adjustments may include refining training content, modifying mentorship approaches, improving contractor support tools, or strengthening coordination with external partners such as unions and rebate administrators.

ECC will also share summarized feedback and responsive program changes with community partners during milestone convenings to ensure transparency and close the feedback loop. This iterative process ensures that community voice directly informs program design, strengthens implementation quality, and increases equitable access to program benefits over time.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

This project is designed to build a pipeline of new High-Road contractors capable of delivering high-quality heat pump installation services to households in Benicia and surrounding communities. The overall vision is to expand equitable access to electrification by reducing barriers for skilled technicians to transition into licensed, union-affiliated contractors serving the growing clean energy market.

The project includes four integrated components that collectively support contractor development, workforce advancement, and long-term market capacity for heat pump deployment.

1. E-Contractor and Technical Training Program

ECC will deliver a foundational electrification training program for prospective contractors focused on the technical competencies required for heat pump HVAC and heat pump water heater installation. Training will include system sizing, load calculations, panel upgrades, circuit demand analysis, and compliance with relevant electrical codes and standards. Additional contractor specific training will include project

estimation, access to bonding, capital and insurance and back-office operations. **Measurable outcomes include** participant completion rates, demonstrated competency through skills assessments, and successful application of technical knowledge in simulated or supervised installation scenarios.

2. Technician-to-Contractor Transition and Mentorship Program
ECC will operate a structured mentorship and contractor readiness program to support licensed technicians—including current SMART Local 104 members and non-member technicians—in transitioning into High-Road contracting roles. This includes guidance on California contractor licensing requirements, exam preparation, bonding and insurance acquisition, contract management, rebate program navigation and stacking strategies, and permitting and compliance processes.
Each participant will receive dedicated ECC staff mentorship hours monthly over a 12-month period, including individualized business planning and start-up navigation support.
Measurable outcomes include contractor license attainment rates, successful completion of business readiness milestones, and participant progression from technician status to registered or active contractor status.

3. Union Contractor Integration and Compliance Training (SMART Local 104)
SMART Local 104 will provide targeted training to ensure new contractors are fully prepared to operate within union standards and systems. This includes instruction on labor agreements, payroll processing, fringe benefit contributions, dispatch procedures, and compliance with collective bargaining requirements. Contractors will also receive structured onboarding into Local 104 systems and direct access to union representatives during their initial years of operation.
Measurable outcomes include successful completion of union onboarding, compliance adherence rates, and contractor retention within union-affiliated contracting networks.

4. Entrepreneurial Startup Support and Equipment Access
Upon successful completion of training requirements and verification of eligibility criteria, participants will be eligible for entrepreneurial scholarships to support the acquisition of essential tools and equipment for heat pump installation and diagnostic work. This targeted financial support reduces a key barrier to entry for emerging contractors.
Measurable outcomes include number of scholarships awarded, equipment procurement completion, and successful initiation of contractor operations.

Overall Project Outcomes and Partnership Roles
Collectively, this program is designed to increase the number of qualified High-Road

contractors in the Benica region who are capable of independently delivering safe, code-compliant, and energy-efficient heat pump installations. Expected system-level outcomes include increased local installation capacity, improved workforce retention in High-Road careers, and expanded access to electrification services for residents. ECC will serve as the lead implementer responsible for program design, technical training delivery, mentorship coordination, and participant tracking and evaluation. SMART Local 104 will lead union-specific contractor training, ensure alignment with labor standards, and facilitate integration into union systems and workforce pipelines. Additional partners will support outreach, recruitment, and coordination with rebate programs and permitting jurisdictions to ensure participants can effectively operate within the regional electrification ecosystem.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The Community Contractor Growth project requests a total of $975,000 over a three-year grant term. The budget is structured to support two years of active technician to contractor training and one year for curriculum development and contractor support.

The largest cost categories are personnel costs. The project lead, Emerald Cities Collaborative, will provide 3 staff with FTEs ranging from 17% to 55% over three years, including fringe benefits, and accounts for $449,350 and will provide overall project coordination, partner management, and program oversight. $30,000 is allocated by the project lead for Business Preparatory Technical Assistance for prospective contractors supplying approx. 10 hours per program participant for 12 months. A Special Projects Coordinator at 3% FTE over three years, including fringe benefits, accounts for $30,000 and will support administrative and reporting functions. SMART Local 104 will supply a Business Development Representative at 13% FTE over 3 years to work with the project lead to support LU 104 membership scheduling and coordination as well as providing sheet metal union specific instruction and support to prospective contractors. They will also work with the WSC to provide Entrepreneurial Scholarships to qualified applicants at a cost of $150,000 over three years. The project lead has allocated $15,000 over three years to subsidize newly established High-Road contractors' costs for state fees, licenses and bonding costs.

Indirect costs are budgeted at $94,000, representing 10.9% of total direct costs and within the allowable 15% cap. A contingency of $20,000, representing 2.3% of total

direct costs, is included to cover any unforeseen expenses that may arise during the grant term.

Remaining costs are used to support technician to contractor curriculum development and anticipated training delivery costs.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project is strongly aligned with local, regional, and statewide initiatives advancing decarbonization of the built environment, clean energy workforce development, and equitable access to High-Road career pathways in disadvantaged communities.

At the regional level, the project aligns with Bay Area Air District rules (9-4 and 9-6) by expanding a trained local workforce capable of delivering heat pump installation services. By creating structured pathways for technicians to become High-Road contractors, the program strengthens local contractor capacity while accelerating building electrification. The project also supports the Contra Costa County Climate Action Plan by advancing building sector emissions reductions and expanding workforce development in clean energy industries.

In addition, the project aligns with the Contra Costa County Just Transition Economic Revitalization Plan by prioritizing equitable workforce development and ensuring that MWDBE contractors and local residents have access to High-Road careers in the clean energy economy. The contractor incubation model helps reduce barriers to entry in the HVAC and electrification sector while strengthening local ownership of clean energy work. The project also supports the CA Jobs First Catalyst project East Contra Costa Healthy Homes by aligning to local MBE- and DBE-informed workforce program design.

At the state level, the project supports the California Energy Commission's Equitable Building Decarbonization Program by expanding the pipeline of trained, licensed contractors capable of serving underserved communities. It directly advances state goals for equitable building electrification by addressing a key implementation barrier: the shortage of qualified, locally rooted specialty trade contractors.

Collectively, this project serves as a bridge between policy goals and on-the-ground implementation capacity, ensuring that climate, workforce, and equity objectives are realized at the community level.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

ECC has extensive experience managing workforce development and clean energy training programs that integrate technical instruction, contractor development, and equity-focused outreach.

ECC has led multi-stakeholder initiatives involving public agencies, labor, and community organizations, managing complex funding requirements, compliance systems, and program delivery structures. Prior work includes cohort-based training, licensing support, business development, and mentorship programs similar in scope to this proposal.

ECC has also managed multi-component programs combining technical training, workforce systems coordination, and participant tracking, demonstrating strong capacity to deliver complex, outcomes-driven initiatives across clean energy and workforce sectors.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

ECC will ensure strong and accountable project implementation through a clearly defined staffing structure, experienced leadership, and integration of existing program infrastructure and partnerships.

The project will be led by ECC's NorCal Regional Director, who will serve as Project Lead at 17% FTE. In this role, the Regional Director will provide overall oversight, ensure alignment with grant requirements and program goals, support partner coordination, and guide high-level strategy and problem-solving across implementation activities.

Day-to-day program execution will be managed by a Program Manager (55% FTE), who will serve as the primary operational lead. The Program Manager will coordinate training delivery, manage partner and instructor schedules, oversee participant recruitment and onboarding, track progress against program milestones, and ensure timely implementation of all program components. This role will also facilitate coordination between ECC, SMART Local 104, community-based organizations, and technical training partners.

A Program Coordinator (38% FTE) will support implementation logistics, including participant communications, scheduling for training and mentorship sessions, data collection and reporting, documentation of program activities, and administrative and participant support. This role ensures smooth day-to-day operations and consistent participant engagement throughout the contractor development process.

ECC will leverage its established E-Contractor Academy curriculum, including proven training modules, instructional materials, and delivery frameworks focused on heat pump electrification, contractor development, and High-Road workforce pathways. This existing infrastructure reduces startup time and ensures consistency and quality in program delivery. ECC will also draw on its established network of technical subject matter experts, union partners, and community-based organizations to support recruitment, training delivery, mentorship, and field-based technical assistance.

No additional external funding is required for core program delivery. ECC will leverage existing organizational resources, including regional workforce development partnerships, curriculum assets, recruitment pipelines, and partner infrastructure, to enhance program reach and effectiveness.

This staffing and implementation structure ensures clear accountability, efficient delivery, and strong integration of ECC's existing systems and partnerships over the three-year performance period.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

N/A

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

N/A

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

N/A

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

N/A

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

BARRIERS AND RISK MITIGATION

ECC recognizes several key barriers that may affect participant recruitment, retention, and successful completion of the pathway from training to licensure and business formation. These challenges are common in contractor pipeline and workforce development programs serving disadvantaged workers and emerging small contractors in underserved communities.

1. Recruitment and Long-Term Participation

A primary barrier is converting initial interest into sustained participation through training, licensure, and business establishment. Participants may face competing work demands, family responsibilities, or uncertainty about long-term career transitions. **Mitigation Strategy:** ECC uses a structured intake and onboarding process that sets clear expectations, outlines time commitments, and develops individualized success plans early in the program. Recruitment is supported through trusted community-based organizations and labor partners to ensure participants enter with realistic expectations and strong support systems. Ongoing check-ins and mentorship help maintain engagement and reduce attrition.

2. Structural Barriers for Disadvantaged Workers

MWDBE participants and disadvantaged workers often face limited access to capital, licensing support, professional networks, and industry-specific social capital, which can slow progression through licensing, bonding, and business formation.

Mitigation Strategy: ECC provides intensive one-on-one mentorship and navigation support for licensing, compliance, and business development, including assistance with bonding, insurance, permitting, and rebate program navigation. This support helps bridge gaps in institutional knowledge and access.

3. Capacity Constraints for Emerging Contractors

Emerging contractors often face limited administrative capacity, financial constraints, and competing work obligations, which can make full participation in training challenging during business transition.

Mitigation Strategy: ECC addresses this through phased training, flexible scheduling, and embedded technical assistance that allows participants to remain economically active while building new skills. Entrepreneurial support, including equipment scholarships, further reduces financial barriers to business launch.

4. Trust, Retention, and Completion Risk

Maintaining engagement over the full program period can be challenging in workforce transition programs, particularly for participants balancing multiple responsibilities.

Mitigation Strategy: ECC employs a relationship-based model supported by trusted community partners, labor organizations, and ECC staff. Regular milestone tracking, structured mentorship, and peer cohort support reinforce accountability and improve completion rates.

Conclusion

While these barriers are well-documented in workforce and contractor development pipelines, ECC's delivery model is designed to address them through trust-based recruitment, intensive mentorship, structured navigation support, and flexible program design. These strategies collectively reduce implementation risk and strengthen participant progression from enrollment through licensure and business formation.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	A holistic Benicia community workforce pipeline that provides the support, coaching and training necessary to create high road clean energy contractors from Benicia tradespeople and existing small hyperlocal contractors, creating a pool of highly skilled, small local Minority/BIPOC and Disadvantaged contractors eligible to perform cost effective electrification work in Benicia, Vallejo, Rodeo, Crockett, Port Costa, Mountain View Neighborhood, Vine Hill, Pacheco, Clyde, Bay Point, Pittsburg, and portions of Concord and Martinez.

Measurable Outcome	Indicator(s)
1. Increase the number of HVAC technicians becoming High-Road clean energy HVAC contractors	• Number of Local Union 104 participants in Clean Energy HVAC Contractor Incubator • Number of new High-Road contractors or new licenses for High-Road participants in Clean Energy HVAC Contractor Incubator
2. Increase qualified small hyperlocal High-Road contractor pool for Benicia residential electrification projects	• Number of E-Contractor training participants • Demonstrated increase in heat pump knowledge • Number of Technical Assistance hours to contractors • Number of small MWVDBEs equipped to perform heat pump and electrification projects in Benicia and surrounding areas with High-Road standards
3. Build the Benicia High-Road electrification workforce pipeline ecosystem	• Number of Benicia area-based clean energy project initiators engaged in Program • Number of Benicia community-based and workforce organizations engaged in Program
4. Strengthen Local Union 104's capacity to support the transition to a High-Road clean energy contractor network.	• Number of Local Union 104 members participating in contractor advancement activities • Number of Local Union 104 contractors engaged in electrification initiatives

	• Number of workforce and contractor outreach events conducted by Local Union 104 • Number of contractors connected to apprenticeship and High-Road workforce pathways

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Increase HVAC technicians becoming High-Road clean energy contractors	A. Project Kickoff	1. Establish team roles and meeting schedules	ECC	Local Union 104, WSC	Q1 2027
		2. Recruit participating HVAC technicians	Local Union 104	ECC	Q1 2027
		3. Develop procedures for participant handoffs and any joint advising	ECC	Local Union 104, WSC	Ongoing through Q4 2029
		4. Establish project schedule	ECC	Local Union 104WSC	Q1 2027
	B. Develop: Incubator Curriculum, Intake System, and Case Management Infrastructure and licensing stakeholders/materials	1. Develop HVAC Contractor Incubator curriculum	ECC	Local Union 104, WSC	Q2 2027
		2. Create online program registration and case management system, stand-up support infrastructure	ECC	Local Union 104, WSC	Q2 2027
		3. Purchase necessary materials	ECC	Local Union 104	Q2 2027
		4. Provide contractor mentorship and operational guidance	Local Union 104	ECC	Ongoing through Q4 2029
	C. Incubator Outreach and Support Service Development	1. Develop and disseminate engagement and promotional materials	ECC	Local Union 104	Q3 2027

	2. Develop the suite of supportive services for Incubator participants	ECC	Local Union 104	Q3 2027
	3. Connect participants with clean energy contracting opportunities	Local Union 104	ECC	Ongoing through Q4 2029
D. Incubator Enrollment and Intake, Delivery of Program (exam prep, business prep case management)	1. Intake of recruits, including Local Union 104 HVAC techs	ECC	Local Union 104	Q3 2027
	2. Form HVAC Contractor Incubator cohort 1	ECC	Local Union 104	Q3 2027
	3. Perform needs assessment with Incubator participants for business preparatory needs and develop individual personalized licensing and business development support plans	ECC	Local Union 104	Q3 2027
	4. Administer exam prep and business development curriculum, participants meet w/ case manager	ECC	Local Union 104	Q3 2027
	5. Depending on enrollment in cohort 1, form Incubator cohort 2. Develop and disseminate marketing materials through online, social media and traditional channels	ECC	Local Union 104	Q4 2028
	6. Intake of eventual cohort 2 and perform needs assessment for cohort 2 Incubator participants for business preparatory needs and develop individual personalized licensing and business development support plans	ECC	Local Union 104	Q4 2028
	7. Administer exam prep and business development curriculum to cohort 2, participants meet with case manager	ECC	Local Union 104	Q4 2028
	1. Administer E-Contractor Academy	ECC	Local Union 104	Q1 2028, Q2 2029

	E. Incubator participants participate in E-Contractor training	2. Support incumbent High-Road clean energy contractor mentorship of Incubator participants and graduates	ECC	Local Union 104	Q1 2028, Q2 2029
	F. Post-Academy	1. Continued Delivery of Technical Assistance	ECC	Local Union 104	Q2 2028
		2. Mid-program checkpoint	ECC	Local Union 104	Q2 2028
		3. Continue providing business preparatory Assistance and update curriculum a needed	ECC	Local Union 104	Q2 2028, Q3 2029
		4. Form second contractor candidate cohort as needed	ECC	Local Union 104	Q3 2028
		5. Support Local Union 104 members in addressing final needs and test taking	ECC	Local Union 104	Q4 2029
2. Increase qualified small hyperlocal High-Road contractor pool	A. ECA Curriculum Development and Baseline Market Assessment	1. Refine E-Contractor Academy curriculum in consultation with input from LOCAL UNION 104 and local stakeholders; evaluation of labor market for Benicia MWVDBE contractors and opportunities	ECC	Local Union 104	Q2 2027
		2. Create/update online course registration system and assessment materials	ECC	Local Union 104	Q2 2027
	B. E-Contractor Academy Outreach and Support Service Development, Continued Delivery	1. Develop and disseminate E-Contractor marketing materials through community partnerships	ECC	Local Union 104	Ongoing through Q4 2029
		2. Finalize directory of business back-office and other support services	ECC	Local Union 104	Q3 2027, Q4 2028
		3. Prepare tools to assess contractors' business capacity and technical skills capacity	ECC	Local Union 104	Q3 2027, Q4 2028

	4. Initiate and complete recruitment of E-Contractor course faculty	ECC	Local Union 104	Q3 2027, Q4 2028
	5. Outreach to municipal partners, regional workforce partners, and/or community-based organizations to engage with academy participants on project opportunities	ECC	Local Union 104	Q3 2027, Q4 2028
	6. Deliver heat pump and electrification education	Local Union 104	ECC	Ongoing through Q4 2029
C. Contractor Enrollment and Intake, Delivery of TA	1. Outreach to 5,000-10,000 union and non-union contractors and associates	ECC	Local Union 104	Q4 2027, Q1 2029
	2. Enroll 10-15+ Benicia contractors and soon-to-be contractors for the Initiative, with a focus on building capacity with BIPOC/Minority, Women, Veteran-owned and disadvantaged construction business enterprises	ECC	Local Union 104	Q4 2027, Q1 2029
	3. Complete confidential business capacity intake forms	ECC	Local Union 104	Q4 2027, Q1 2029
	4. Identify contractor wraparound support opportunities based on the business capacity intake	ECC	Local Union 104	Q4 2027, Q1 2029
	5. Support contractor onboarding into High-Road programs	Local Union 104	ECC	Ongoing through Q4 2029
D. E-Contractor Academy Implementation	1. Execute E-Contractor curriculum over two cohorts (one in Q1 2028, one in Q2 2029) of 6 fully in-person academy sessions each, including all material and event preparation, session facilitation, and contractor, speaker and industry stakeholder engagement	ECC	Local Union 104	Q1 2028, Q2 2029

	2. Complete course evaluations and collect contractor feedback	ECC	Local Union 104	Q1 2028, Q2 2029
	3. Support contractors in determining wraparound services needed	ECC	Local Union 104	Q1 2028, Q2 2029
	4. Facilitate warm introductions to local project initiators during last academy week	ECC	Local Union 104	Q1 2028, Q2 2029
	1. Finalize learning assessment and program evaluation results	ECC	Local Union 104	Q2 2028, Q3 2029
	2. Offer follow-up support to contractors on accessing local retrofit and weatherization projects presented during academy	ECC	Local Union 104	Q2 2028, Q3 2029
	3. Admit E-Contractor graduates into Northern CA E-Contractor Network, providing regular project opportunities, additional trainings, resources, and events	ECC	Local Union 104	Q2 2028, Q3 2029
E. Final Academy Wrap-up	4. Facilitate contractor supportive services/capacity-building investments worth up to $1,500 per contractor for up to 10 eligible contractors	ECC	Local Union 104	Q2 2028, Q3 2029
	5. Support non-union contractors in steps to become union and/or have staff become members	ECC	Local Union 104	Q2 2028, Q3 2029
	6. Academy post-mortem with Program Team	ECC	Local Union 104	Q2 2028, Q3 2029
	7. Update curriculum as needed, establish project schedule for Academy #2 and Kick-off, activate online	ECC	Local Union 104	Q2-Q3 2028

		registration system, Continued Delivery of Technical Assistance			
		8. Mid-program checkpoint	ECC	Local Union 104	Q2 2028
		9. Continue providing contractor Technical Assistance	ECC	Local Union 104	Q2 2028, Q3 2029
3. Build High-Road electrification workforce pipeline ecosystem	A. Develop: Incubator Curriculum, Intake System, and Case Management Infrastructure and licensing stakeholders/materials	1. Establish licensing partnerships and subsidization structures	ECC	Local Union 104	Q2 2027
	B. Incubator Outreach and Support Service Development	1. Engagement with Benicia and surrounding area partnerships to recruit Benicia and surrounding area HVAC technicians	ECC	Local Union 104	Q3 2027
	C. ECA Curriculum Development and Baseline Market Assessment	1. Local stakeholders contribute to curriculum enhancements and tailoring to Benicia communities and markets	ECC	Local Union 104	Q2 2027
	D. E-Contractor Academy Outreach and Support Service Development, Continued Delivery	1. E-Contractor marketing materials are developed and disseminated through community partnerships	ECC	Local Union 104	Q3 2027, Q4 2028
		2. Add relevant local partners to directory of business back-office and other support services	ECC	Local Union 104	Q3 2027, Q4 2028
		3. Add local partners to outreach to engage with academy participants on project opportunities	ECC	Local Union 104	Q3 2027, Q4 2028
	E. E-Contractor Academy Implementation	1. Wrap local stakeholders into facilitation warm introductions to local project initiators during last academy week	ECC	Local Union 104	Q1 2028, Q2 2029

	F. Final Academy Wrap-up	1. Plug E-Contractor graduates into local partnerships, ongoing resources, events and project opportunities through the Northern CA E-Contractor Network	ECC	Local Union 104	Q2 2028, Q3 2029
	G. Final Reporting and Ramp Down	1. Establish contacts and set up next steps for relationship maintenance and ongoing communications with local partners in CRM	ECC	Local Union 104	Q4 2029
		2. Document our model and program structure, including robust program evaluation for statewide scaling	ECC	Local Union 104	Q4 2029
4. Strengthen Local Union 104's clean energy contractor support network	A. Expand Local Union 104 contractor engagement	1. Conduct outreach to Local Union 104 contractors, members, and contractors wishing to learn more about becoming High-Road contractors.	Local Union 104	WSC, Community Organizations	Ongoing through Q4 2029
		2. Promote participation in contractor advancement activities	Local Union 104	ECC	Ongoing through Q4 2029
		3. Connect contractors with apprenticeship and workforce resources	Local Union 104	ECC	Ongoing through Q4 2029
	B. Support High-Road workforce development	1. Promote High-Road employment standards and benefits	Local Union 104	WSC, Community Organizations	Ongoing through Q4 2029
		2. Support participation in apprenticeship pathways	Local Union 104	WSC, Community Organizations	Ongoing through Q4 2029
		3. Facilitate contractor participation in electrification initiatives	Local Union 104	WSC, Community Organizations	Ongoing through Q4 2029

Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Equitable HP Transition
Lead Applicant Name	Western States Council of SMART
Project Location	Benicia & Surrounding Cities
Overall Funding Request	$5,000,000
Grant Term Request	3 Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Heat Pump Equity
Project Lead	SMART Local 104
Project Location	Benicia & Surrounding Cities
Project Funding Request	$3,637,500

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The **Heat Pump Equity** project expands a proven rebate program to provide point-of-sale incentives for homeowners to install high-efficiency heat pump HVAC systems, reducing upfront costs and accelerating adoption in refinery-impacted communities. Rebates are tied to installations performed by qualified High-Road contractors, ensuring systems are installed correctly and deliver reliable energy savings, improved Indoor Air Quality (IAQ), and emissions reductions. To avoid creating unintended barriers to participation, 90% of the rebate funding will be available without income eligibility requirements beyond residence within the program's geographic boundaries. Instead, we will partner with trusted community-based organizations to conduct targeted outreach and ensure that disadvantaged households are informed about and able to access the program.

To further advance equity and prioritize support for households with the greatest financial need, 10% of the rebate funding will be reserved for low-income families. Eligible households from priority census tracts, verified through a self-attestation process, will receive enhanced rebate amounts designed to make participation more accessible and impactful.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*

- *Reduce air pollution and improve health outcomes*
- *Build economic resilience for a just transition*

Reduce air pollution and improve health outcomes:

The project accelerates the replacement of fossil fuel HVAC and water heating systems with high-efficiency heat pump technologies, delivering immediate reductions in outdoor air pollution and greenhouse gas emissions. Heat pumps also improve IAQ by eliminating combustion sources within the home, reducing exposure to harmful pollutants. Because IAQ is closely linked to outdoor conditions, these upgrades, combined with improved filtration and the potential introduction of fresh air, help reduce the buildup of contaminants and create healthier living environments, particularly in communities disproportionately impacted by air pollution.

Properly installed HVAC systems equipped with high-efficiency filtration can play a critical role in reducing asthma triggers and improving indoor air quality for children. Asthma is the most common chronic childhood disease in the United States, affecting more than 6 million children[1], with nearly 1 in 13 school-aged children living with the condition[2]. Poor indoor air quality and exposure to air pollution can trigger or worsen asthma symptoms,[5,6] contributing to approximately 13.8 million missed school days each year[3]. Evidence shows that replacing inefficient filters with higher-efficiency filtration systems can significantly reduce asthma-related health burdens4 by capturing harmful airborne pollutants, allergens, and particulate matter before they circulate indoors.

Unfortunately, many heat pump HVAC systems are not installed correctly and therefore fail to deliver the expected energy savings, thermal comfort, indoor air quality (IAQ), and emissions reductions. A 2008 California Energy Commission (CEC) study[6] found that poor-quality HVAC installation was widespread, with over 50% of new HVAC systems not performing properly and nearly 85% of replacement systems exhibiting installation-related performance issues. The study also found that improper installation can increase HVAC energy consumption by 20–30%. Unfortunately, despite years of rebate program funding, most programs have prioritized installation quantity over installation quality, allowing many of these well-documented issues to persist, and in some cases worsen, throughout the residential HVAC market.

More recently, a 2022 U.S. Department of Energy (DOE) review of 44 studies[7] again identified workforce quality and installation practices as major barriers to achieving expected HVAC performance outcomes. The review found that installation defects remain extremely common across refrigerant-based HVAC systems, including widespread duct leakage, airflow problems, and refrigerant charge faults. Studies cited in the review found

that 90–100% of systems required duct sealing or repair, while more than 50% of systems experienced low airflow conditions. Refrigerant charging issues were also common, with 29–78% of systems undercharged and 4–50% overcharged. As a result, measured real-world HVAC performance was often only 59–84% of rated efficiency levels.

These findings reinforce the importance of the project's focus on High-Road Contractors, skilled and trained installation practices, quality assurance, and workforce development to ensure that heat pump systems deliver their intended public health, energy efficiency, and climate benefits.

Build economic resilience for a just transition:
Unlike traditional rebate programs that prioritize volume over quality, this project centers on High-Road union contractors to ensure long-term community benefits. These contractors invest in comprehensive training, provide family-sustaining wages and benefits, and ensure installations meet design intent, resulting in better system performance and durability. By supporting and building a skilled local workforce with stable, high-quality jobs, the project strengthens economic resilience, reduces reliance on public assistance, and creates a sustainable pathway for workers and communities transitioning away from a fossil-fuel-based economy.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The proposed Benicia and surrounding communities project will serve residential neighborhoods located within the eligible Bay REPAIR geography, including Benicia, Vallejo, Rodeo, Crockett, Port Costa, Martinez (areas north of Highway 4), Mountain View, Vine Hill, Pacheco, Concord (areas north of Highway 4 and south of Highway 4 between I-680 and Highway 242), Clyde, Bay Point, and Pittsburg. Project activities will occur across multiple residential locations throughout the eligible region and will include residential HVAC and heat pump water heater installations and quality assurance activities. Community outreach, education, and engagement activities will be conducted in partnership with trusted local organizations, workforce programs, faith-based institutions, neighborhood councils, and community centers to ensure equitable access and broad community participation throughout the region.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

SMART Local 104 works closely with Benicia communities and has engaged with multiple local government and advocacy groups to discuss and refine this program to better meet the needs and concerns of the local community. They will continue to solicit feedback and utilize their network of constituents to conduct outreach to the community to gain further insight as the program progresses and potentially offer opportunities to eligible and interested candidates.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

In developing the Heat Pump Equity Project, Local 104 and WSC engaged extensively with regional stakeholders and community organizations, including Greenbelt Alliance, Benicia Mayor Steve Young, Benicia City Council Member Kari Birdseye, Rebuilding Together Solano County (RTSC), and the Napa Working Families Coalition. These discussions provided critical feedback that helped shape the project's community engagement, implementation, and accessibility strategies. Stakeholders consistently emphasized the importance of creating a streamlined, user-friendly rebate and participation process that reduces barriers for both homeowners and contractors while improving overall program accessibility and participation. Discussions highlighted that many existing programs unintentionally create unnecessary administrative and permitting hurdles that discourage otherwise eligible residents from participating and reduce overall program effectiveness. Stakeholders also stressed the importance of designing the program to reflect real-world conditions, including emergency equipment replacements, affordability challenges facing middle-income households, and the need for complementary home repairs and energy efficiency improvements to support successful electrification outcomes. In response, the program will prioritize simplicity, transparency, and equitable access by utilizing only High-Road contractors who provide transparent invoices to customers and rebate administrators to ensure participants receive the full benefit of the rebate. The rebate application process will be streamlined for qualified contractors who meet and maintain program eligibility standards, minimizing administrative burdens while supporting quality installations, workforce standards, and long-term community trust.

Trusted community organizations that we engaged throughout project development expressed strong interest in helping promote the program and conduct outreach within communities where affordability challenges and unmet needs are greatest. These partners

will help connect eligible low-income residents to Local 104 High-Road contractors participating in the program, who will have access to dedicated set-aside funding intended to ensure equitable access, high-quality installations, and long-term community benefits. This funding will allow the High-Road contractor to offer a rebate covering approximately 90% of the installation cost of a new heat pump. Initially the Western States Council (WSC) intends to set aside 10% of the rebate funding ($300,000) for this set-aside funding, however, we will monitor the usage and demand for these set-aside rebates and will increase (or decrease) the set-aside funding based on demand. This will generate useful data for our proposed research project, Workforce Impact Research, as well as help better inform future rebate programs design and implementation.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Our meetings with Benicia-region community stakeholders, including Benicia Mayor Steve Young, Benicia City Council Member Kari Birdseye, Greenbelt Alliance, Rebuilding Together Solano County (RTSC), and the Napa Working Families Coalition, were conducted to ensure that the proposed projects are responsive to local community needs, aligned with regional air quality and workforce priorities, and capable of achieving meaningful long-term outcomes. These discussions focused on reducing barriers to heat pump adoption, improving program accessibility, supporting High-Road workforce standards, addressing housing and indoor air quality challenges, and ensuring equitable participation across Benicia and surrounding communities. Each organization expressed interest in supporting the project through its established communication channels, community relationships, regional partnerships, and continued participation in implementation and outreach efforts. Stakeholders also identified opportunities for collaboration through local government engagement, trusted community-based organizations, environmental and labor partnerships, and public education efforts to strengthen awareness and participation throughout the region.

Throughout the grant period, Local 104's Business Development and Codes and Standards Representative will coordinate quarterly check-ins with community partners to gather ongoing feedback, review project progress and outcomes, identify implementation challenges and opportunities for improvement, and provide updated outreach and educational materials for distribution throughout partner networks and constituent communities. Local 104 will also continue expanding engagement efforts by meeting with

additional community organizations, neighborhood groups, environmental justice advocates, workforce partners, housing and rehabilitation organizations, and trusted local institutions to strengthen outreach and ensure broad, inclusive community participation across the Benicia region and surrounding disadvantaged communities.

All community feedback received will be documented and reviewed collaboratively with WSC staff to evaluate whether program adjustments, implementation improvements, outreach enhancements, or corrective actions are necessary. If updates are determined to be appropriate, Local 104 and WSC will implement the changes and, where necessary, coordinate with BAAQMD regarding any required grant modifications. Approved program updates and implementation changes will then be communicated through multiple channels, including contractor meetings, direct stakeholder communications, public outreach materials, community engagement events, and digital platforms, to ensure participating High-Road contractors, community partners, and residents remain informed and aligned throughout project implementation.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The Heat Pump Equity Project primarily consists of a heat pump rebate program administered through the existing infrastructure of Local 104 to offer a stackable rebate of $5,000 for the installation of HVAC or water heater heat pumps in residential homes throughout Benicia and surrounding communities. This rebate is intended to make heat pump technology costs comparable to, or lower than, traditional fossil fuel HVAC systems or water heaters and will be available to any customer who chooses to utilize a participating High-Road contractor for the installation. Participating contractors will provide transparent, itemized invoices to both customers and program administrators to ensure the rebate directly benefits the homeowner and does not simply result in inflated installation pricing.

A separate amount of rebate funds will be set aside exclusively for use by customers who attest to annual income of 80% or less of the Area Median Income (AMI). This set-aside funding will allow for a rebate up to 90% of the full cost of installation of HP technology.

Local 104 and the Council will conduct research to find any additional rebates available to be stacked upon this rebate to further reduce the installation costs for customers. Any findings will be relayed to participating High-Road contractors to offer to their customers.

Measurable outcomes for this project will primarily focus on the number of rebates successfully delivered to participating households. Over the three-year grant period, the program aims to provide approximately 540 rebates, with a target of 180 rebates annually. The program will provide a $5,000 rebate that can be used toward either a heat pump HVAC system or a heat pump water heater (HPWH). For heat pump HVAC installations specifically, an additional $500 incentive funded by Local 104 members will be provided, bringing the total HVAC rebate amount to $5,500. Local 104 is also currently exploring the addition of a similar $500 supplemental rebate for HPWH installations beginning in 2027, although this has not yet been finalized.

The project also includes a dedicated set-aside component intended to support households with greater financial need. The number of rebates set-aside will vary depending on the type of heat pump installed and the overall installation cost. Based on projected installation costs, it is anticipated that approximately 75% of rebate funding will support heat pump HVAC systems, which generally have significantly higher installation costs than HPWHs. The program currently estimates providing enhanced set-aside rebates for approximately five HVAC projects and three HPWH projects annually.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The Heat Pump Equity project requests a total of $3,637,500 over a three-year grant term. The budget is structured to support three years of active rebate dissemination to customers through High-Road contractors.

The largest cost category, $3,000,000, for this project is for customer rebates given for heat pump installation by High-Road contractors. Of that, an initial amount of $300,000 will be set-aside for customers in target census tracts to increase the rebate to up to 90% of the installation cost. This amount may be adjusted dependent on customer demand in those target areas. The project lead, SMART Local Union 104 , will provide a Rebate Dispersal Manager at 13% FTE over three years, including fringe benefits, and accounts for $62,000 whose primary task will be verifying rebate eligibility, documentation, and rebate processing. Local 104 will also provide a Business Development Representative at 13% FTE, including fringe benefits, accounting for $155,000 over 3 years to work with High-Road contractors to promote the program and outreach to customers along with coordination

with other co-applicants and community groups. The WSC will provide a Special Projects Coordinator at an FTE of 33%, including fringe benefits accounting for $293,000 over 3 years to provide overall project coordination, partner management, support administrative and reporting functions, and program oversight of accounts.

Indirect costs are budgeted at $77,500, representing 2.2% of total direct costs and within the allowable 15% cap. A contingency of $40,000, representing 1.1% of total direct costs, is included to cover any unforeseen expenses that may arise during the grant term.

Remaining costs will be used to cover any program marketing costs to target prospective customers interested in utilizing the program.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The proposed projects are consistent with and directly support regional and statewide climate, air quality, workforce, and environmental justice initiatives, including BAAQMD's upcoming 2029 furnace rule transition, California's broader building decarbonization goals, Community Air Protection priorities established under AB 617, and local efforts to improve housing quality, indoor air quality, and equitable access to clean energy technologies. The projects are specifically designed to reduce greenhouse gas emissions and criteria air pollutants by accelerating the adoption of high-efficiency heat pump HVAC and heat pump water heating systems while ensuring installations are performed by skilled, trained High-Road contractors that support long-term system performance, workforce standards, and community benefits.

Local 104 and the Western States Council (WSC) developed the proposed implementation and engagement strategy through extensive discussions with Benicia-area stakeholders and regional organizations, including Benicia Mayor Steve Young, Benicia City Council Member Kari Birdseye, Greenbelt Alliance, Rebuilding Together Solano County (RTSC), and the Napa Working Families Coalition. These discussions consistently reinforced that successful electrification and air quality improvement efforts must prioritize affordability, accessibility, trusted community partnerships, workforce quality, and practical implementation strategies that reflect real-world housing conditions and community needs. Stakeholders emphasized the importance of reducing barriers associated with permitting, rebate applications, and contractor coordination while ensuring residents

receive high-quality installations that deliver meaningful indoor air quality, energy efficiency, and climate benefits.

The project also aligns closely with regional resilience and environmental justice priorities identified by community stakeholders. Organizations such as RTSC and the Napa Working Families Coalition highlighted the significant challenges associated with deferred housing maintenance, poor indoor air quality, and aging building infrastructure within disadvantaged communities. In response, the proposed projects incorporate a holistic implementation strategy that emphasizes coordination with community-based organizations, home rehabilitation efforts, and trusted local institutions to help ensure electrification upgrades are successful and accessible to a broad range of households, including low- and moderate-income residents, veterans, seniors, and working families.

Consistent with recommendations from Greenbelt Alliance and local elected officials, the project includes a strong community engagement and public education component centered on trusted messengers, local government partnerships, labor-environmental collaboration, and ongoing stakeholder involvement. Outreach and education efforts will leverage existing community networks, regional partnerships, local communication channels, and public engagement opportunities to improve awareness of rebate opportunities, workforce pathways, indoor air quality improvements, and long-term climate benefits associated with building electrification. Stakeholders also emphasized the importance of ensuring equitable access across Benicia and surrounding communities, including areas that may have fewer resources or lower levels of existing community support infrastructure.

The proposed projects further support California's workforce development and High-Road economic goals by expanding opportunities for skilled, trained workers and supporting the growth of High-Road contractors capable of delivering quality electrification installations. Stakeholders consistently reinforced that workforce quality, ongoing training, and installation standards are essential to achieving intended emissions reductions, energy savings, and public health outcomes. The inclusion of a Workforce Impact Research component also aligns with broader statewide goals related to market transformation, accountability, and documenting best practices that can inform future policy and program development.

Throughout implementation, WSC and Local 104 will maintain ongoing coordination with community organizations, local governments, workforce partners, and regional stakeholders to ensure the projects remain responsive to evolving community needs and implementation challenges. This includes regular stakeholder meetings, community

feedback processes, public outreach activities, and continuous evaluation of program accessibility, contractor performance, customer experience, and overall project outcomes. Through this coordinated and community-informed approach, the proposed projects will advance regional air quality goals, support equitable building decarbonization, strengthen workforce pathways, and deliver meaningful long-term health, climate, and economic benefits for Benicia and surrounding communities.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Local 104 has extensive experience managing and implementing rebate and workforce-focused programs of similar scope and complexity throughout California. For over 15 years, Local 104 has successfully administered the Skilled and Trained HVAC/Heat Pump Rebate Program across the 49 northern counties of California, providing incentives for residential HVAC servicing, tune-ups, and heat pump installations performed by qualified union contractors. The program is funded entirely through union dues and has delivered over $5.8 million in rebates since 2010, supporting 45,926 residential projects through 2025, including both system installations and tune-ups.

The program has demonstrated measurable economic, workforce, and environmental benefits, including an estimated $21.6 million in customer energy savings, over 208 million pounds of greenhouse gas emissions reductions, and 134 million kWh in energy savings. Local 104's rebate program has also successfully served disadvantaged communities, with nearly 6,000 projects completed in DACs and 62% of participating installers consisting of people of color or DAC residents. Importantly, 100% of participating contractors are small businesses.

Western States Council (WSC) has also already been working with California Local unions to develop and maintain a public-facing website, https://www.skilledandtrainedhvac.com/, designed to educate community members about the rebate program, the benefits of utilizing High-Road contractors, and the importance of quality heat pump installation practices. The website also allows homeowners to search for participating High-Road contractors offering rebates by simply entering their zip code. WSC and Local 104 will leverage this existing outreach and marketing platform as a key implementation and community engagement tool for the Heat Pump Equity Project.

Through this established program infrastructure, Local 104 has developed administrative systems, contractor relationships, outreach capacity, invoice review procedures, and rebate processing experience necessary to successfully implement the proposed Heat Pump Equity Project. This includes coordinating with contractors and homeowners, verifying project eligibility and documentation, distributing rebates, maintaining transparent financial oversight, and conducting ongoing outreach and education throughout the region.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

Local 104 has significant experience successfully managing, marketing, and implementing rebate programs with minimal administrative overhead to ensure that the maximum amount of funding directly benefits participating households and communities. Project implementation will primarily be managed through existing Local 104 administrative infrastructure and staff resources developed through the long-running Skilled and Trained HVAC/Heat Pump Rebate Program operating across Northern California.

The project will include a dedicated Rebate Dispersal Manager funded at approximately 12% FTE who will oversee rebate processing, review and approve rebate applications, verify project eligibility and supporting documentation, maintain required records, and collect program performance data and metrics. Local 104 will also dedicate a Business Development Representative funded at approximately 12% FTE through the grant, with up to 50% FTE additionally supported directly by Local 104, to coordinate community outreach, contractor engagement, marketing activities, and partnerships with community organizations and local stakeholders.

Additional project coordination, stakeholder engagement, contractor communication, and community outreach support will be provided through existing Local 104 staff resources, including the organization's Codes and Standards Representative and Legislative Director. These staff will assist with community engagement activities, contractor participation, workforce standards implementation, and coordination with local governments, environmental organizations, and community partners throughout the grant period.

In addition to grant funding, Local 104 will leverage substantial organizational resources to support successful project implementation. This includes existing rebate administration systems, contractor networks, outreach infrastructure, staff support, and direct financial contributions from Local 104 members, including the additional $500 HVAC rebate

incentive funded outside of the grant. These leveraged resources will help ensure efficient project delivery, strong community engagement, and long-term program sustainability.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

Permits will be acquired by the installation contractor for HVAC or water heater HPs for each residence receiving a rebate. The responsibility is on the contractor to open a permit and provide closed-out permits.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*
    N/A

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*
    N/A

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*
    N/A

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

One of the primary barriers associated with this project is effectively reaching and serving lower-income and disadvantaged households, which historically have lower participation rates in rebate and electrification programs due to complicated applications, burdensome income verification requirements, limited trust in contractors or programs, and financial constraints. To address these challenges, Local 104 and WSC will leverage existing relationships with trusted community organizations while continuing to develop new partnerships with community groups, local governments, and faith-based organizations to conduct outreach directly through established community networks.

To further reduce participation barriers, the project includes a dedicated set-aside rebate fund intended to cover up to 90% of installation costs for qualifying households. Rather than requiring complex verification processes, the pilot program will initially reserve 10% of rebate funding ($300,000) for customers who live in target census tracts and submit a simple self-attestation confirming eligibility based on household income below 80% of Area Median Income (AMI). This streamlined approach is intended to reduce application burden and improve participation among households that might otherwise not utilize available programs.

Another significant risk is ensuring that rebate funding directly benefits homeowners rather than unintentionally contributing to inflated installation costs. To address this, participating High-Road contractors will be required to provide transparent, itemized invoices to both customers and the Rebate Dispersal Manager. This process will help verify project costs, promote accountability, and ensure rebates meaningfully reduce the cost difference between traditional fossil fuel equipment and heat pump technologies.

The project also recognizes broader implementation risks related to installation quality and customer confidence. To mitigate these concerns, the program is limited to participating High-Road contractors with trained and skilled workforces and includes ongoing contractor communication, quality assurance oversight, and community feedback mechanisms throughout the grant period.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The Heat Pump Equity project will provide $3,000,000 in rebates to Benicia and surrounding cities residents who utilize a High-Road contractor to install HVAC or water heater heat pumps. This rebate program will feature a low administration cost through existing union structures, limit the barriers to access compared to traditional rebate programs, and designate a set-aside amount of funding for low-income customers to provide more generous rebates.

Measurable Outcome	Indicator(s)
1. Increase adoption of high-efficiency heat pump HVAC systems in eligible communities	• Number of rebate applications processed • Number of completed heat pump HVAC installations • Total rebate dollars distributed • Geographic distribution of projects within eligible communities
2. Reduce residential exposure to harmful indoor and outdoor air pollutants	• Number of fossil fuel HVAC systems replaced • Estimated reduction in combustion-related emissions • Number of homes receiving upgraded filtration and ventilation improvements • Homeowner surveys regarding indoor comfort and air quality
3. Improve energy efficiency and long-term system performance	• Estimated annual energy savings • Estimated reduction in greenhouse gas emissions
4. Improve community health outcomes associated with poor air quality	• Number of homes receiving improved filtration systems
5. Expand participation of High-Road union contractors serving disadvantaged communities	• Number of participating High-Road contractors • Number of contractors newly participating in the rebate program • Number of technicians employed on funded project

	• Contractor participation from targeted communities
6. Support workforce development and economic resilience through High-Road employment pathways	• Number of apprentices and journey-level technicians performing project work • Number of workers receiving advanced heat pump training • Retention of workers in High-Road employment pathways
7. Increase equitable access to clean heating and cooling technologies	• Number of outreach events conducted • Number of community-based organization partnerships • Percentage of rebates delivered within disadvantaged communities • Number of low-income households receiving enhanced rebates

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Increase adoption of high-efficiency heat pump systems in eligible communities	A. Launch rebate program and complete first phase of installations	1. Finalize rebate guidelines	Local Union 104	WSC, Participating Contractors, Community Partners	Q1-4, 2027
		2. Launch application process	Local Union 104	WSC, Participating Contractors, Community Partners	Q1-4, 2027
		3. Verify eligibility	Local Union 104	WSC, Participating Contractors, Community Partners	Q1-4, 2027
		4. Process and distribute rebates	Local Union 104	WSC, Participating Contractors, Community Partners	Q1-4, 2027
	B. Complete qualifying heat pump installations	1. Coordinate contractor participation	Local Union 104	Participating Contractors	Q1 2028 through Q4 2029
		2. Track installations	Local Union 104	Participating Contractors	Q1 2028 through Q4 2029
		3. Process homeowner rebates	Local Union 104	Participating Contractors	Q1 2028 through Q4 2029

		4. Maintain installation database	Local Union 104	Participating Contractors	Q1 2028 through Q4 2029
2. Reduce residential exposure to harmful indoor and outdoor air pollutants	A. Indoor air quality improvement measures implemented in participating homes	1. Replace fossil fuel HVAC systems	Participating Contractors	Local Union 104, Community Partners	Q2 2027 through Q4 2029
		2. Install upgraded filtration systems	Participating Contractors	Local Union 104, Community Partners	Q2 2027 through Q4 2029
		3. Educate homeowners on healthy ventilation and filter maintenance	Participating Contractors	Local Union 104, Community Partners	Q2 2027 through Q4 2029
3. Improve energy efficiency and long-term system performance	A. Ongoing tracking of completed heat pump installations	1. Track completed installations	Local Union 104	Participating Contractors	Q3 2027 through Q4 2029
		2. Estimate energy savings and emissions reductions	Local Union 104	Participating Contractors	Q3 2027 through Q4 2029
		3. Maintain project performance database	Local Union 104	Participating Contractors	Q3 2027 through Q4 2029
4. Improve community health outcomes associated with poor air quality	A. Indoor air quality education campaign launched	1. Develop educational materials	Local Union 104	Participating Contractors, WSC, Community Partners	Q2 2027 through Q4 2029
		2. Conduct community workshops	Local Union 104	Participating Contractors, WSC,	Q2 2027 through Q4 2029

				Community Partners	
		3. Educate households on filtration and ventilation maintenance	Local Union 104	Participating Contractors, WSC, Community Partners	Q2 2027 through Q4 2029
5. Expand participation of High-Road union contractors serving disadvantaged communities	A. Recruit and onboard participating contractors	1. Conduct contractor outreach	Local Union 104	WSC, Industry Partners	Q1 2027 through Q2 2028
		2. Verify participation standards	Local Union 104	WSC, Industry Partners	Q1 2027 through Q2 2028
		3. Provide onboarding assistance and technical support	Local Union 104	WSC, Industry Partners	Q1 2027 through Q2 2028
6. Support workforce development and economic resilience through High-Road employment pathways	A. Heat pump and indoor air quality workforce training implemented	1. Deliver advanced heat pump training	Local Union 104 Training Programs	Participating Contractors, Workforce Development Partners	Q2 2027 through Q4 2029
		2. Support apprenticeship participation	Local Union 104 Training Programs	Participating Contractors, Workforce Development Partners	Q2 2027 through Q4 2029
		3. Track technician participation and workforce metrics	Local Union 104 Training Programs	Participating Contractors, Workforce Development Partners	Q2 2027 through Q4 2029

7. Increase equitable access to clean heating and cooling technologies	A. Community outreach and enhanced low-income rebate program implemented	1. Conduct targeted outreach in disadvantaged communities	Local Union 104	Community Partners	End of Q1 2027 through Q4 2029
		2. Partner with trusted local organizations	Local Union 104	Community Partners	End of Q1 2027 through Q4 2029
		3. Provide enhanced rebates for low-income households	Local Union 104	Community Partners	End of Q1 2027 through Q4 2029

Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Equitable HP Transition
Lead Applicant Name	Western States Council of SMART
Project Location	Benica & Surrounding Cities
Overall Funding Request	$5,000,000
Grant Term Request	3 Years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Workforce Impact Research
Project Lead	Western States Council of SMART (WSC)
Project Location	Benicia & Surrounding Cities
Project Funding Request	$387,500.00

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*
   The Workforce Impact Research project will evaluate how High-Road union rebate programs improve workforce outcomes, contractor economics, installation quality, and community economic impacts compared to conventional HVAC rebate programs. Led by the Western States Council of SMART in partnership with an academic research institution and a community-based research organization with prior presence in Benicia and surrounding communities, the project will produce original analysis, community-informed policy recommendations, and a publicly available report designed to inform future BAAQMD electrification programs and statewide residential decarbonization policy. The research will draw directly on program data generated through the concurrent Heat Pump Equity and Community Contractor Growth projects, creating an integrated feedback loop between program implementation and evidence-based learning.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
   - **Reduce air pollution and improve health outcomes**
     - The Workforce Impact Research project supports the strategy to Reduce Air Pollution and Improve Health Outcomes by examining

how High-Road installation standards affect the quality and performance of heat pump systems in Benicia area homes. Research into installation outcomes and barriers to equitable program participation contributes to a broader understanding of how program design choices affect the degree to which clean energy investments actually reach and benefit communities that have borne a disproportionate share of industrial pollution. Findings will inform recommendations that help future programs maximize both adoption rates and real-world health and air quality outcomes in fenceline communities navigating the transition away from fossil fuel infrastructure.

- **Build economic resilience for a just transition**
  - The project also directly advances the Local Community Benefits Fund's strategy to Build Economic Resilience for a Just Transition by generating community-informed research on how High-Road union rebate programs create superior workforce and economic outcomes compared to conventional alternatives. Benicia and surrounding communities are at the epicenter of the Bay Area's industrial transition — the closure of the Valero refinery has created urgent economic disruption for workers and families whose livelihoods have depended on the fossil fuel economy for generations. By analyzing contractor economics, workforce quality, career pathways, and community economic impacts in this context, the project produces actionable findings that can guide future program design toward models that prioritize family-sustaining jobs, local business development, and lasting economic opportunity for residents navigating this transition. The research findings and policy recommendations will directly inform how BAAQMD and other funders structure future electrification investments to maximize community economic benefit in communities facing the most acute disruption from the shift away from fossil fuels.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*
   The Workforce Impact Research project will serve Benicia and surrounding communities within the eligible geography, including Vallejo, Rodeo, Crockett, Port Costa, Martinez, Bay Point, and Pittsburg. While the research itself will be conducted across the eligible community geography, community engagement

activities will be concentrated in the neighborhoods most heavily impacted by refinery emissions, industrial pollution, and the economic disruption of the ongoing transition away from fossil fuel infrastructure, where barriers to clean energy adoption are most acute.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*
   The need for this research emerged directly from Local Union 104's longstanding engagement with Benicia and surrounding communities. Through years of delivering the Skilled & Trained HVAC Rebate Program in the region, Local Union 104 has developed close working relationships with local government agencies, advocacy organizations, and community members, through which recurring concerns have surfaced about program access, contractor quality, workforce outcomes, and the equitable distribution of clean energy benefits, concerns that have taken on added urgency given the economic disruption facing workers and families in the wake of the Valero refinery closure. These conversations have shaped the research questions at the heart of this project and will continue to inform its direction throughout the grant term.

   Building on this foundation, the project's community-based research partner has an established presence in Benicia and surrounding communities, having served over 1,600 homes in Vallejo and Benicia through residential energy efficiency programming. Through this work the organization has developed relationships with residents and local organizations that will be essential for conducting focus groups, interviews, and barrier assessments with community members who have firsthand experience with, or have been excluded from, residential decarbonization programs.

   Together these existing relationships ensure that the research is not designed from the outside in, but is grounded in the priorities, experiences, and concerns of the people it is meant to serve.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Benicia and surrounding communities face compounding environmental justice, public health, and economic challenges that make this research both timely and essential. The Valero Benicia Refinery, one of the largest in California, has long been responsible for elevated levels of sulfur dioxide, carbon monoxide, and fine particulate matter across the city. According to IQAir, Solano County has nearly 36,000 residents with asthma, over 24,000 with cardiovascular disease, and more than 168,000 residents in vulnerable age groups — children under 18 and adults over 65 — all at heightened risk from the area's elevated pollution levels. A 2019 refinery malfunction sent toxic plumes across Benicia for hours, prompting dozens of 911 calls from residents reporting difficulty breathing and triggering shelter-in-place orders at surrounding elementary schools. Valero has recently agreed to pay an additional $3.25 million penalty to BAAQMD for 118 air quality violations between 2019 and 2023, all penalties that directly fund this grant.

At the same time, the closure of the Valero refinery represents a moment of profound economic disruption for workers and families whose livelihoods have been tied to the fossil fuel economy for generations. Residential electrification programs represent a critical opportunity to address these challenges simultaneously but only if designed to actually reach frontline communities, deliver quality installations, and generate family-sustaining employment. Currently, the field lacks research comparing how High-Road union programs and conventional alternatives perform across these dimensions in communities like Benicia. The Workforce Impact Research project fills that gap directly, producing findings and policy recommendations that help BAAQMD and future program administrators design clean energy investments that deliver measurable, lasting benefits to the communities that need them most.

Progress toward community impact will be demonstrated through concrete, trackable outcomes including the number of Benicia area community members and organizations engaged through focus groups and interviews, delivery of interim research findings, and publication of a final report with actionable policy recommendations informed directly by community input.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*
   Here's the updated Community Engagement section for Benicia:

Community engagement is embedded throughout the Workforce Impact Research project rather than treated as a standalone activity. The project's community-based research partner — an organization with established presence in Benicia and surrounding communities through prior residential energy efficiency programming — will lead structured community engagement activities designed to ensure the research reflects the lived experiences and priorities of residents most impacted by industrial pollution and the economic disruption of the Valero refinery closure.

A key asset of this project is the community-based research partner's existing database of households served through prior energy efficiency programming in Vallejo and Benicia, which includes household demographics, homeownership status, program satisfaction, water and energy savings data, and client testimonials documenting barriers and challenges residents have faced when attempting to decarbonize their homes. This ready-made dataset provides an immediate, community-grounded foundation for the research and significantly reduces the time and cost typically required to establish a baseline understanding of participation barriers in a new community.

Building on this foundation, the community-based research partner will conduct 5-10 focus groups and interviews with past program recipients and Benicia area community members, with a focus on documenting barriers to participation in decarbonization programs and gathering recommendations for program improvement, with particular attention to households facing economic uncertainty from the refinery transition. An additional 5-10 interviews will be conducted with local community-based organizations and regional stakeholders working on equitable building decarbonization, informed by best practices developed through prior interview and focus group work including over 75 interviews conducted in developing the organization's most recent policy priorities framework.

Community feedback gathered through these activities will be directly incorporated into the research findings and policy recommendations, ensuring that the final report reflects community priorities rather than researcher assumptions. Progress and findings will be shared with community members and organizations through quarterly progress updates, and the final report will be made publicly available and disseminated in formats accessible to non-technical audiences. Local Union 104 will also continue to leverage its existing relationships with Benicia area community members, local government agencies, and advocacy organizations throughout the grant term to solicit ongoing

feedback and ensure the research remains responsive to evolving community needs.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

   The Workforce Impact Research project is structured as a three-year initiative with two distinct phases. During Years 1 and 2, the project's academic research partner will conduct a comprehensive comparative analysis of the Skilled & Trained HVAC Rebate Program against conventional HVAC rebate programs, examining High-Road program design elements, costs and pricing, installation quality, workforce outcomes, and community economic impacts. Simultaneously, the project's community-based research partner will conduct focus groups and interviews with Benicia area residents and community organizations, analyze existing residential service data to establish a baseline understanding of barriers to participation, and develop community-informed policy recommendations, with particular attention to households and workers navigating the economic disruption of the Valero refinery closure and the broader transition away from fossil fuels. Both research streams will draw directly on program data generated through the concurrent Heat Pump Equity and Community Contractor Growth projects, ensuring findings are grounded in real implementation experience rather than theoretical assumptions.

   Year 3 will focus on synthesizing findings from both research streams into a single, cohesive final report with actionable policy recommendations for BAAQMD and other electrification program administrators. The report will be made publicly available and disseminated in formats accessible to non-technical audiences, including community members and organizations in Benicia and surrounding communities. The Western States Council of SMART will coordinate all research activities, facilitate data sharing between research partners and program implementation teams, and oversee report production and dissemination.

   Measurable outcomes for this project include the completion of community focus groups and interviews, delivery of interim research findings, completion of the comparative program analysis, and publication of the final report with policy recommendations. These outcomes collectively demonstrate that the research was conducted with community input, produced actionable findings, and is capable of improving how future public investments in clean energy are designed

and delivered in communities like Benicia that are navigating the intersection of industrial pollution, public health disparities, and economic transition.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*
   The Workforce Impact Research project requests a total of $387,500 over a three-year grant term. The budget is structured to support two years of active research and one year of report synthesis and dissemination.

   The largest cost categories are personnel and research subcontractors. A Research Lead at 25% FTE over three years, including fringe benefits, accounts for $125,000 and will provide overall project coordination, partner management, and research oversight. A Special Projects Coordinator at 2% FTE over three years, including fringe benefits, accounts for $17,500 and will support administrative and reporting functions. A SMART Local Union 104 Business Development Representative at 6% FTE over three years, including fringe benefits, accounts for $25,000 and will support contractor outreach, participant recruitment, and community connections throughout the grant term. An academic research institution will conduct the comparative program analysis, literature review, and data analysis over Years 1 and 2 at a cost of $125,000. A community-based research organization with established presence in Benicia and surrounding communities will lead community engagement, focus groups, interviews, and policy recommendation development over Years 1 and 2 at a cost of $62,500. Printing and dissemination of the final report is budgeted at $5,000 to ensure findings are accessible to community members and stakeholders in Benicia and surrounding areas.

   Indirect costs are budgeted at $17,500, representing 5.2% of total direct costs and within the allowable 15% cap. A contingency of $10,000, representing 3% of total direct costs, is included to cover any unforeseen expenses that may arise during the grant term.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The Workforce Impact Research project is directly aligned with community, regional, and statewide initiatives aimed at advancing equitable building decarbonization, improving air quality, and building economic resilience in frontline communities.

At the community level, the project supports local just transition planning efforts underway in Benicia and surrounding communities in response to the Valero refinery closure, which have identified workforce development, clean energy deployment, and economic diversification as priority strategies for community stabilization. The project also aligns with BAAQMD's Community Health Protection Program, which works with Bay Area communities most impacted by air pollution to reduce emissions and improve public health, all goals directly served by generating research that improves how clean energy programs are designed and delivered in fenceline communities like Benicia.

At the regional level, the project aligns with the Green Empowerment Zone initiative in Contra Costa and Solano Counties. Benicia sits within Solano County, making this alignment particularly direct. The GEZ is focused on growing clean energy manufacturing and workforce capacity in communities impacted by the industrial transition away from fossil fuels, and the research findings will contribute directly to the evidence base informing how the region attracts clean technology investment and develops the skilled workforce needed to support it. The project also supports BAAQMD's upcoming Rule 9-4 implementation in 2029 by providing timely, community-grounded research on High-Road program design that can inform how the Air District structures future electrification incentive programs.

At the statewide level, the project is directly consistent with the California Public Utilities Commission's Environmental and Social Justice Action Plan, specifically Goal 7: promoting High-Road career paths and economic opportunity for residents of Environmental and Social Justice communities, and Goal 2: increasing investment in clean energy resources to benefit ESJ communities and improve local air quality and public health. The project is also consistent with MTC/ABAG's Plan Bay Area 2050+ Strategy EC2, which calls for expanding job training and incubator programs across the region. The project further aligns with California's High-Road Training Partnership framework and broader building decarbonization goals, ensuring that the clean energy transition delivers

equitable economic benefits to the communities most impacted by fossil fuel pollution.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

    The Western States Council of SMART will serve as Project Lead for the Workforce Impact Research project, with day-to-day project management led by a Research Lead with extensive experience in labor policy research, grant management, and community-centered data analysis.

    The Research Lead holds a Master of Public Policy from UCLA with a concentration in labor policy and data analytics. Prior research experience includes a study of wage theft in the car wash industry in Los Angeles, work that required building trust with undocumented and monolingual populations and handling sensitive worker data with care and confidentiality, as well as industry analyses of multiple sectors conducted in partnership with the UCLA Labor Center examining High-Road training partnerships across California. This background reflects both the technical research skills and the community-centered approach essential to a project rooted in Benicia and surrounding communities.

    The Research Lead currently oversees statewide grant reporting and writing for the Western States Council and is actively managing an ongoing research initiative examining the workforce, economic, and climate impacts of the SMART Local Union 104 Skilled & Trained HVAC Rebate Program. That research, which analyzes program outcomes across nearly 46,000 jobs completed between 2010 and 2024, documents $21.7 million in energy cost savings, and quantifies 208 million pounds of avoided greenhouse gas emissions, directly establishes the foundation and methodological framework for the Workforce Impact Research project proposed here. The Research Lead's prior experience working with the UCLA Labor Center on academic research partnerships also demonstrates a proven ability to manage relationships with institutional research partners, a core requirement of this project.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The Research Lead will dedicate 25% FTE to project implementation over the three-year grant term, providing overall coordination, partner management, data oversight, and report production. A Special Projects Coordinator at 2% FTE and a SMART Local Union 104 Business Development Representative at 6% FTE will provide administrative, reporting, and community outreach support. The Western States Council will leverage its existing relationships with Local Union 104, signatory contractors, and community partners in Benicia and surrounding communities to facilitate data access and research coordination throughout the grant term. The Council brings demonstrated capacity to manage complex, multi-partner grants, currently overseeing a three-year California High-Road Training Partnership grant totaling $13.3 million with over nine subrecipients.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*
    N/A

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*
    N/A

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*
    N/A

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*
N/A

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*
The primary barriers for this project are data access, partner coordination, and community participation in engagement activities, all of which have been anticipated and addressed in the project design. Data access is mitigated by Local Union 104 and the Western States Council providing the academic research partner with direct access to Skilled & Trained HVAC Rebate Program data from the outset, supplemented by publicly available data from BAAQMD, CalEnviroScreen, and other regional sources.
Partner coordination will be managed through monthly check-ins, a shared workplan with clearly defined milestones, and standardized reporting procedures across all research partners.

Community participation risks are mitigated by the community-based research partner's established presence in Benicia and surrounding communities through prior residential energy efficiency programming, including existing relationships with households and local organizations in Vallejo and Benicia. Additionally, Local Union 104's longstanding engagement with Benicia area community members, local government agencies, and advocacy organizations provides a complementary network for participant recruitment and community outreach

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	The Workforce Impact Research project will produce community-grounded evidence on how High-Road union rebate programs deliver superior workforce, economic, and community outcomes compared to conventional alternatives, generating actionable policy recommendations to guide future BAAQMD electrification investments in Benicia and surrounding communities.

Measurable Outcome	Indicator(s)
1. Community engagement conducted with Benicia area residents and organizations to identify barriers to decarbonization program participation and inform research findings	• Number of focus groups and interviews conducted with Benicia area community members • Number of interviews conducted with local community based organizations (CBOs) and regional organizations • Evidence that community feedback is reflected in interim research findings and final policy recommendations
2. Existing community household data analyzed to establish a baseline understanding of barriers to decarbonization program participation in Benicia and surrounding communities	• Completion of analysis of existing household database • Number of households represented in the dataset • Documentation of key trends and barriers identified through data analysis
3. A comparative analysis of High-Road union versus conventional HVAC rebate programs is completed, examining program design, costs and pricing, installation quality, and workforce and community economic impacts	• Completion of High-Road program design review and identification of comparison programs • Number of comparison HVAC rebate programs analyzed • Documentation of program costs, pricing, and installation quality data across programs

	• Quantification of workforce and community economic impacts including wages, benefits, job quality, and career pathways
4. Actionable policy recommendations are developed to improve equitable access, program design, and outreach in future BAAQMD electrification programs	• Number of policy recommendations developed • Evidence that recommendations are informed by both academic research findings and Benicia area community input • Completion of policy brief submitted to BAAQMD
5. A final research report is published and disseminated to BAAQMD, community stakeholders, and statewide policy audiences	• Completion and publication of final research report • Number of community and policy stakeholders receiving the report • Report available in accessible format for non-technical audiences

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Community engagement conducted with Benicia area residents and organizations to identify barriers to decarbonization program participation and inform research findings	A. Focus groups and interviews conducted with Benicia area community members	1. Develop interview and focus group protocols in collaboration with WSC and Local Union 104	Community-based research partner	WSC	Q3 2027
		2. Conduct 5-10 focus groups and interviews with past program recipients and Benicia area community members on barriers to decarbonization program participation, with particular attention to households affected by the Valero refinery closure	Community-based research partner	WSC	Q2 2028
		3. Consolidate findings, document barriers and recommendations, and share with research team	Community-based research partner	WSC	Q3 2028
	B. Interviews conducted with CBOs and regional organizations on equitable decarbonization	1. Identify and recruit 5-10 local CBOs and regional organizations working on equitable building decarbonization in Benicia and surrounding communities	Community-based research partner	WSC	Q4 2027
		2. Conduct interviews to capture best practices and gaps in outreach for equitable building decarbonization programs	Community-based research partner	WSC	Q2 2028
		3. Consolidate findings and integrate into research framework and policy recommendation development	Community-based research partner	WSC, Academic research partner	Q3 2028

	C. Community engagement findings integrated into research and recommendations	1. Share community engagement findings with academic research partner for integration into comparative analysis	Community-based research partner	WSC	Q3 2028
		2. Incorporate community feedback into draft policy recommendations	Community-based research partner	WSC	Q4 2028
		3. Document community engagement process and outcomes for inclusion in final report	WSC	Community-based research partner	Q4 2028
2. Existing community household data analyzed to establish a baseline understanding of barriers to decarbonization program participation in Benicia and surrounding communities	A. Existing household database analyzed for decarbonization barriers	1. Identify and extract relevant data fields from existing household database of Benicia area residents served through prior energy efficiency programming	Community-based research partner	WSC	Q3 2027
		2. Analyze data for trends in barriers and pain points related to decarbonization program participation in Benicia and surrounding communities	Community-based research partner	WSC	Q4 2027
		3. Document findings and share with full research team to inform interview design and comparative analysis	Community-based research partner	WSC, Academic research partner	Q4 2027
	B. Database findings synthesized with community engagement results	1. Compare database trends with focus group and interview findings to identify consistent patterns	Community-based research partner	WSC	Q3 2028

		2. Identify gaps between what data shows and what community members report to surface qualitative barriers	Community-based research partner	WSC	Q3 2028
		3. Produce summary of combined quantitative and qualitative barrier findings for use in policy recommendations	Community-based research partner	WSC	Q4 2028
	C. Barrier analysis findings shared with research partners	1. Present combined barrier findings to academic research partner for integration into comparative analysis	Community-based research partner	Academic research partner, WSC	Q4 2028
		2. Incorporate barrier findings into equity and access section of final report	WSC	Community-based research partner, Academic research partner	Q2 2029
		3. Document methodology and data sources for reproducibility and transparency	Community-based research partner	WSC	Q4 2028
3. A comparative analysis of High-Road union versus conventional HVAC rebate programs is completed,	A. High-Road program design review and industry baseline established	1. Review Skilled & Trained HVAC Rebate Program design and identify High-Road elements with focus on job quality, wages, benefits, and training	Academic research partner	WSC, Local Union 104	Q4 2027
		2. Identify comparison HVAC rebate and incentive programs to establish an industry baseline	Academic research partner	WSC	Q4 2027

examining program design, costs and pricing, installation quality, and workforce and community economic impacts		3. Estimate and document number of units installed under Skilled & Trained program and alternative programs	Academic research partner	WSC, Local Union 104	Q4 2027
	B. Program costs, pricing, and installation quality analyzed across programs	1. Analyze Skilled & Trained program data on customer pricing and contractor costs	Academic research partner	WSC, Local Union 104	Q2 2028
		2. Identify and analyze available data on alternative HVAC rebate program costs and pricing	Academic research partner	WSC	Q2 2028
		3. Investigate quality of work outcomes including callbacks, energy savings, and customer reviews across High-Road and comparison programs	Academic research partner	WSC, Local Union 104	Q2 2028
	C. Workforce and community economic impacts assessed	1. Assess impact of High-Road workforce elements on job creation, wages, benefits, and career pathways for workers in Benicia and surrounding communities	Academic research partner	WSC, Local Union 104	Q3 2028
		2. Analyze access for local and disadvantaged workers and capacity of minority and worker-owned contractors under each program model	Academic research partner	WSC, Community-based research partner	Q3 2028
		3. Consolidate all analysis areas into consolidated findings document to support report and recommendation development	Academic research partner	WSC	Q4 2028
4. Actionable policy	A. Research-backed policy recommendations developed	1. Develop draft policy recommendations for HVAC rebate	Academic research partner	WSC	Q4 2028

recommendations are developed to improve equitable access, program design, and outreach in future BAAQMD electrification programs		program design based on comparative analysis findings			
		2. Develop recommendations for BAAQMD Rule 9-4 implementation and labor partnership strategies, with attention to just transition needs in Benicia and surrounding communities	Academic research partner	WSC	Q4 2028
		3. Integrate research-backed recommendations with community-informed recommendations from Outcomes 1 and 2	WSC	Academic research partner, Community-based research partner	Q4 2028
	B. Policy brief drafted and submitted to BAAQMD	1. Draft policy brief consolidating all recommendations for BAAQMD program design, contractor accountability, and equitable access in communities navigating the fossil fuel transition	WSC	Academic research partner, Community-based research partner	Q1 2029
		2. Review and refine policy brief with all research partners	WSC	Academic research partner, Community-based research partner	Q1 2029
		3. Submit final policy brief to BAAQMD Community Investments Office	WSC		Q1 2029

	C. Policy recommendations validated with Benicia area community stakeholders	1. Share draft recommendations with Benicia area community organizations and Local Union 104 for feedback	WSC	Community-based research partner	Q4 2028
		2. Incorporate community stakeholder feedback into final recommendations	WSC	Community-based research partner	Q1 2029
		3. Document community validation process for inclusion in final report	WSC	Community-based research partner	Q1 2029
5. A final research report is published and disseminated to BAAQMD, community stakeholders, and statewide policy audiences	A. Final report drafted and reviewed	1. Receive draft report sections from academic research partner and community-based research partner covering their respective research findings	WSC	Academic research partner, Community-based research partner	Q1 2029
		2. Conduct internal review of all partner-contributed sections with full research team	WSC	Academic research partner, Community-based research partner	Q2 2029
		3. Synthesize partner contributions into unified report draft and incorporate feedback	WSC	Academic research partner, Community-based	Q2 2029

			research partner	
B. Final report published and disseminated to BAAQMD and community stakeholders	1. Publish final report in publicly accessible format and submit to BAAQMD	WSC		Q3 2029
	2. Disseminate report to Benicia area community organizations, local government agencies, and advocacy partners	WSC	Community-based research partner	Q3 2029
	3. Share report with statewide policy audiences including CPUC, California Workforce Development Board, and relevant state agencies	WSC	Academic research partner	Q3 2029
C. Report disseminated in accessible formats to Benicia area community	1. Develop accessible summary of key findings for non-technical community audiences in Benicia and surrounding communities	Community-based research partner	WSC	Q3 2029
	2. Distribute accessible summary through community-based research partner's existing Benicia area community networks	Community-based research partner	WSC	Q4 2029
	3. Present findings at relevant BAAQMD, community, and statewide policy convenings	WSC	Academic research partner, Community-based research partner	Q4 2029

Benicia Opportunity
Working Waterfront Coalition Application

Bay REPAIR
Local Community Benefits Fund – Round 1
Opportunity and Catalyst Grants
Overall Narrative

Application Information	
Application Title	Greening the Maritime Industry
Lead Applicant	Working Waterfront Coalition
Application Location	Mare Island, Vallejo California
Overall Funding Request	$1,755,400
Grant Term Request	Three Years

PROPOSAL VISION (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
    - *Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.*
    - *Advance integrated projects to holistically meet community needs.*
    - *Strengthen community-driven and collaborative solutions.*

The Working Waterfront Coalition (WWC) is a first-of-its-kind, industry-led workforce development initiative that is building a skilled maritime workforce pipeline for the San Francisco Bay Area while simultaneously advancing a just transition to a clean transportation economy. Through our Marine Trades and Water Transportation Careers program, WWC proposes to enroll 165 participants over three years in accelerated, employer-designed and supported training pathways in marine trades, water transportation, Electronic Drive Technician (low and zero emission) technology, and design and construction of an electric tugboat— preparing workers to build, operate, maintain, and repair the Bay Area's next generation of electric and low-emission vessels. Measurable outcomes include: 80% or higher training completion rates; 75%+ of completers attaining industry-recognized credentials (including OSHA 10, USCG endorsements, and marine trade competency certifications); and 70–80% placement in unsubsidized employment or registered apprenticeships with partner employers earning prevailing wages of $57,000 to over $96,000 annually.

WWC's application directly supports all three Program Goals of the Local Community Benefits Fund. First, by training workers for electric and zero-emission vessel maintenance, repair and shipbuilding — in partnership with Cal Poly Maritime and SF Bay Ferry— WWC advances the reduction of maritime air pollution and builds the skilled workforce necessary to sustain a fossil-fuel-free water transportation system.

Second, WWC's holistic program model integrates job training with a full suite of wraparound services — including training stipends, transportation assistance, childcare support, legal aid, and nutrition services — to address the interconnected barriers that prevent underserved residents from accessing quality employment. Third, WWC's coalition model is inherently community-driven and collaborative: it brings together shipyards, ferry services and operators, unions, and community-based organizations in Solano and Northern Contra Costa County to deliver coordinated solutions rooted in both industry need and community voice.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

The communities that this application will benefit are concentrated in Solano County and the northern Contra Costa County corridor and— a stretch of waterfront and near-waterfront cities with deep industrial and maritime histories, and with persistent economic challenges that have left many residents without access to the quality jobs that exist within their own region. The primary target communities are Vallejo, Rodeo, Crockett, Port Costa, Martinez (areas north of Highway 4), Mountain View, Vine Hill, Pacheco, Concord (areas north of Highway 4, and south of Highway 4 between I-680 and Highway 242), Clyde, Bay Point, and Pittsburg. These communities sit adjacent to or within close proximity of the very waterways and industrial facilities — refineries, shipyards, ferry terminals, and marine infrastructure — that have long defined the economic character of this part of the Bay Area. In particular, the operation and projected closing of the Valero refinery has had a significant impact on the local economy and employment for residents. Despite this proximity to the maritime economy and related petrochemical infrastructure, residents of these communities have rarely been connected to the well-paying maritime careers available to them. Many of these cities and unincorporated communities were built around heavy industry, and their residents have historically borne a disproportionate share of the air quality and public health burdens associated with fossil-fuel-dependent operations at ports and industrial facilities along the Carquinez Strait and Suisun Bay. As the maritime industry transitions to electric and low-emission vessels and operations, these same communities stand to benefit — but only if their residents are trained and positioned to fill the jobs that the transition will create.

The specific populations WWC will prioritize for recruitment across these communities include: Hispanic and Latino residents, who represent a significant and growing share of the population in cities like Pittsburg, Bay Point, Martinez, and Vallejo, and who remain substantially underrepresented in the maritime trades; African American residents, particularly in Vallejo and Bay Point, communities with long-standing economic disinvestment and limited local pathways to family-sustaining employment; justice-involved individuals and returning citizens, for whom the maritime industry has demonstrated strong rates of employment and retention when a structured

training pathway is provided; English Language Learners and recent immigrants, who will be served through bilingual outreach and culturally competent program delivery; young adults ages 18–24 who are disconnected from both post-secondary education and stable employment; and unemployed and underemployed workers displaced from the industrial and refinery sectors who are seeking new careers as the regional energy economy shifts. What unites these populations is not a lack of drive or capacity, but a lack of a visible, accessible on-ramp to the maritime jobs that exist within their own communities. The maritime industry offers wages of $57,600 for marine machinists, $62,750 for water transportation workers, and up to $96,000 for Captains, Mates, and Pilots — careers that require no college degree and offer clear pathways for advancement. WWC will recruit from these communities through partnerships with the Solano County Workforce Development Board, the Contra Costa County Workforce Development Board, local labor unions, community-based organizations, and county probation departments, ensuring that the residents who have long lived alongside the waterfront are the first to benefit from its future.

PARTNERSHIP STRUCTURE (20 points)

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community*.

The mission of the Working Waterfront Coalition (WWC) is to bridge the gap between the abundance of available maritime jobs and the pressing need for skilled workers within the maritime industry. WWC is already serving the communities and populations of priority identified in the RFP. The program training facility is located on Mare Island in the City of Vallejo, and collaborates with maritime industry partners co-located on the island. With hundreds of maritime positions waiting to be filled, the WWC serves as a vital conduit for job seekers from Solano County and the Northern Contra Costa County corridor to connect with career opportunities in the maritime sector.

Cal Poly Maritime Academy is also located in the City of Vallejo, and is one of seven degree-granting maritime academies in the United States — and the only one on the West Coast. The mission of the School of Maritime Transportation, Logistics and Management (MTLM) is to instill students with the necessary knowledge, practical skills, judgment and character needed to broaden their horizons and become ethical leaders in the global maritime marketplace. Using a Learn by Doing approach, students gain hands-on experience and build strong leadership skills for a successful future.

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

The project will operate under a shared leadership structure between Working Waterfront Coalition and Cal Poly Maritime Academy, with Working Waterfront Coalition serving as the Lead Applicant. To support this partnership, the organizations will convene monthly meetings to identify training needs, develop complementary strategies, and explore new opportunities. Cal Poly Maritime Academy also serves as a

member of Working Waterfront Coalition's Industry Advisory Board, further embedding the relationship within a formal governance framework. Decision-making will follow a co-management structure consistent with other joint initiatives the two organizations are pursuing, including an application to the Navy through the Maritime Industrial Base to establish a national marine trades training center on the West Coast; collaboration with the Governor's GO-BIZ Office to create a Maritime Incubator in the region; and joint efforts to build a career pathways ecosystem spanning K-12 education, community colleges, the Working Waterfront Coalition, and Cal Poly Maritime Academy.

Beyond their internal collaboration, the partners are actively coordinating with external stakeholders to advance the broader maritime workforce agenda. This includes ongoing engagement with the Governor's Office of GO-BIZ and conversations with Solano County leaders—including the County Administrator and County Supervisors—focused on growing the maritime industry in the region and attracting shipyard operators interested in establishing a presence there. These external partnerships will reinforce the initiative's regional impact and ensure alignment with state and local economic development priorities.

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to:*
    - *Coordinate overall community engagement activities.*
    - *Track and report on indicators to assess progress towards measurable outcomes.*
    - *Collect and process reporting, reimbursement and invoicing requirements.*

The Working Waterfront Coalition (WWC) leads community engagement efforts by hosting information sessions for interested applicants in Vallejo and Concord, and by delivering targeted presentations to labor unions, economic development organizations, chambers of commerce, and community groups to raise awareness about the project. WWC also works in close partnership with the Workforce Development Boards in Solano and Contra Costa Counties to establish a steady pipeline of qualified participants, ensuring that outreach efforts translate into meaningful enrollment and program participation.

Cal Poly Maritime Academy (CPM) brings a robust foundation of community engagement to the partnership, drawing on established relationships with local non-profit organizations, schools, and government agencies. CPM's ongoing engagement initiatives span a wide range of community needs, including literacy improvement, housing support for veterans, and participation in K–12 arts and sports programs — all of which foster sustainable partnerships and promote a culture of service among CPM students, faculty, and staff. CPM will support coordination through monthly reports that capture key data on outreach, enrollment, and other relevant indicators of progress.

Together, WWC and CPM will coordinate closely to align their messaging and community engagement strategies, combining their efforts wherever shared interests exist and joint action will produce stronger outcomes. This collaborative approach will ensure consistent communication, efficient tracking of progress toward measurable

goals, and timely fulfillment of all reporting, reimbursement, and invoicing requirements throughout the life of the project.

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.*

The Working Waterfront Coalition is guided by a ten member Board of Directors representing marine employers, the marine trades, water transportation operators, and transportation operator unions. The Executive Committee of the Board is empowered to make decisions on behalf of the board, and has met and given its approval to the project proposed in the application.

Cal Poly Maritime Academy is not subject to board or council approval regarding participation in grant application and/or contracts. Vice President & CEO Corey Cook provides approvals for activities of this kind, and is aware of the planned project and has provided his approval for this joint effort.

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

The Working Waterfront Coalition (WWC) has demonstrated capacity to oversee complex, multi-year workforce development programs across multiple simultaneous grants. As a first-of-its-kind SF Bay Area industry-led workforce development initiative, WWC has built the organizational infrastructure, employer relationships, and program delivery systems necessary to successfully implement and manage this grant.

WWC has experience implementing a number of large workforce development programs: a Workforce Accelerator Fund 11.0 Innovation Impact Grant (Marine Trades Skills Training Program — MTST) for $500,000 18 months, and a California High Road Training Partnership (HRTP) Implementation Grant (Marine Trades and Water Transportation Careers — MTWTC) $3,933,848, both funded by the California Workforce Development Board 3 years, through June of next year. The WCC partnered with the Contra Costa and Solano County Workforce Development Boards in the implementation of these grants. The Clean Ports Grant from the EPA in the amount of $2M began work in March, and has a three year time frame, with partners SF Ferry and Port of SF, part of a larger grant award of $55M. Since the start of operations, WWC has overseen the training of 6 cohorts and 130 participants.

The following WWC staff will be dedicated to implementation of this grant:

- Program Director (0.33 FTE): Provides overall program leadership, manages employer relationships and the Industry Advisory Board (IAB), and ensures contractual compliance. The Program Director brings deep experience in maritime workforce development and community-based programming.

- Program Manager (0.33 FTE): Oversees day-to-day training delivery, cohort coordination, participant tracking, and community-based organization (CBO) partnerships. Manages participant Individual Employment Plans (IEPs) and case management services.
- Lead Instructor — Marine Trades (0.33 FTE): Delivers the accelerated marine trades curriculum covering marine welding, shipfitting, painting, electrical, carpentry, and pipefitting.
- Assistant Instructor — Marine Trades (0.33 FTE): Supports the Lead Instructor, provides individualized participant support, and assists with OSHA 10 safety training delivery.
- Administrative Assistant (0.33 FTE): Provides data entry, case file management, scheduling, and participant intake and enrollment support.
- Budget/Fiscal Manager (0.33 FTE): Manages all financial reporting, grant compliance, cost allocation, budget-to-actual monitoring, and coordination with program funders on fiscal requirements.
- Employer Services Coordinator (0.33 FTE): Manages First Source Hiring Agreement relationships, employer outreach, job placement activities, and coordination with funder Employer Services units.
- Community Engagement/Industry Engagement Specialist (1.0 FTE): Builds and strengthens relationships with community members, organizations, non-profits and industry employers.

In addition, WWC will partner with Cal Poly Maritime to provide marine welding training and subcontract with Bay Ship & Yacht to deliver onsite skills training at their shipyard. Cal Poly Maritime will be involved in curriculum development related to design, fabrication, and operation of an electric tugboat. These training partners bring industry-recognized expertise and established relationships with WWC from prior programs.

WWC's coalition structure further amplifies its implementation capacity. Employer partners including Bay Ship & Yacht, American Navigation, SF Bay Ferry, Westar Marine Services, the Port of San Francisco, Northrop Grumman, and others provide direct hiring pipelines and training infrastructure. Labor partners including Machinist's District Lodge 190, Inlandboatmen's Union of the Pacific, the International Organization of Masters, Mates and Pilots, and Pile Drivers Local 34 take part in curriculum design and mentor program participants. CBO recruitment partners in Solano and Contra Costa Counties will ensure robust participant pipelines from priority communities.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

WWC has a demonstrated track record of managing public funds across multiple grants from state and federal agencies, including the California Workforce Development Board (CWDB) and the U.S. Environmental Protection Agency (EPA). WWC's financial

management practices are designed to ensure accountability, transparency, and compliance with all applicable grant requirements.

WWC's Budget/Fiscal Manager (0.33 FTE dedicated to this grant) maintains primary responsibility for all financial oversight functions, including:

- Budget-to-actual monitoring: WWC conducts ongoing comparison of actual expenditures against approved budget line items to identify variances and ensure spending remains aligned with approved grant activities.
- Cost allocation: Costs are allocated across programs according to documented cost allocation methodologies that comply with applicable federal and state cost principles.
- Financial reporting: WWC prepares and submits all required financial reports to funders on the schedules specified in each grant agreement, including quarterly and annual reports as applicable.
- Grant compliance: The Fiscal Manager coordinates with the Program Director and Program Manager to ensure that expenditures are tied to allowable grant activities and that proper documentation is maintained for all transactions.
- Audit readiness: WWC maintains organized grant files, supporting documentation for all expenditures, and systems for tracking participant-level data in alignment with funder requirements.

WWC has successfully managed grant budgets of significant scale, including a $500,000 Workforce Accelerator Fund grant for Marine Trades Skills Training and a High Road Training Partnership HRTP Implementation Grant for the Marine Trades and Water Transportation Careers Program in the amount of $3,933,848. Both of these grants were administered in partnership with the Contra Costa County Workforce Development Board. This multi-grant management experience reflects WWC's ability to track and report on funds across multiple concurrent funding streams simultaneously. To track grant funds and ensure appropriate expenditure, WWC uses dedicated grant accounting practices, including the use of unique cost center codes for each grant, segregation of grant revenues and expenditures in its accounting system, and regular internal reviews by the Fiscal Manager in coordination with program leadership. Participant-level service and expenditure data is tracked using case management systems that document training participation, supportive services provided, and employment outcomes — ensuring that expenditures can be tied back to specific allowable activities and individuals served.

WWC is committed to fiscal transparency and to working collaboratively with program officers to resolve any compliance questions promptly. The Fiscal Manager serves as the primary point of contact for all fiscal matters and is available to respond to funder inquiries, provide supporting documentation, and participate in monitoring visits or audits as needed.

Project Title (3 words maximum)	Project Summary (1-3 sentences)	Strategy Alignment	Project Lead	Total Project Budget (sum of columns to	Lead Applicant Budget	Co-Applicant 1 Budget
Greening the Marine Industry	The Working Waterfront Coalition (WWC), in partnership with Cal Poly Maritime Academy, is seeking $1,755,400 over three years through the Bay REPAIR Local Community Benefits Fund to run a workforce development program called "Greening the Maritime Industry." Based at Mare Island in Vallejo, the program will enroll 165 participants in accelerated training pathways covering marine trades, water transportation, electric drive technology, and the design and construction of an electric tugboat. The goal is to prepare workers to build, operate, maintain, and repair the next generation of electric and low-emission vessels on San Francisco Bay, and as a result, reduce air pollution and build economic resilisence for a just transition.	The proposed project directly advances the strategy of reducing air pollution and improving health outcomes by training workers specifically for electric and zero-emission vessel maintenance, repair, and shipbuilding, and building the skilled workforce necessary to sustain a fossil-fuel-free water transportation system on San Francisco Bay. In addition, the project builds economic resilience for a just transition by creating accessible pathways to well-paying maritime careers for residents who have been historically disconnected from the economic opportunities in their own region, specifically prioritizing workers who have been displaced from employment in fossil-fuel related industries.	Working Waterfront Coalition	$ 1,755,400.00	$ 1,316,550.00	$ 438,850.00

Application Title	Greening the Maritime Industry
Lead Applicant Name	Working Waterfront Coalition
Project Location	Vallejo, CA
Overall Funding Request	$1,755.400
Grant Term Request	Three years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Greening the Maritime Industry
Project Lead	Working Waterfront Coalition
Project Location	Vallejo, CA
Project Funding Request	$1,755,400

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The Working Waterfront Coalition (WWC), in partnership with Cal Poly Maritime Academy, is seeking $1,755,400 over three years through the Bay REPAIR Local Community Benefits Fund to run a workforce development program called "Greening the Maritime Industry." Based at Mare Island in Vallejo, the program will enroll 165 participants in accelerated training pathways covering marine trades, water transportation, electric drive technology, and the design and construction of an electric tugboat. The goal is to prepare workers to build, operate, maintain, and repair the next generation of electric and low-emission vessels on San Francisco Bay, with target outcomes including 80% training completion rates, 75%+ of graduates earning industry-recognized credentials, and 70–80% placement in jobs paying $57,000 to over $96,000 annually.

The communities targeted by the project are concentrated in Solano County and the northern Contra Costa County corridor — including Benicia, Vallejo, Bay Point, Pittsburg, Martinez, Crockett and Rodeo — areas with deep industrial and maritime histories that have long borne disproportionate air quality and public health burdens from fossil-fuel operations. Priority populations include Hispanic and Latino residents, African Americans, justice-involved individuals, English Language Learners, disconnected youth ages 18–24, and workers displaced from refinery and industrial jobs. WWC will leverage a broad coalition of shipyards, ferry operators, labor unions, and community-based organizations to recruit from these communities and connect them to careers that exist in their own region, ensuring that the people who have historically lived alongside the waterfront are the first to benefit from its clean energy future.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

Reduce Air Pollution and Improve Health Outcomes: The Working Waterfront Coalition's program directly advances this goal by training workers specifically for electric and zero-emission vessel maintenance, repair, and shipbuilding. In partnership with Cal Poly Maritime and SF Bay Ferry, the program builds the skilled workforce necessary to su55stain a fossil-fuel-free water transportation system on San Francisco Bay. The target communities — located along the Carquinez Strait and Suisun Bay — have historically borne a disproportionate share of air quality and public health burdens from fossil-fuel-dependent operations at ports and industrial facilities in the region. By accelerating the maritime industry's transition to electric and low-emission vessels, and by training the workforce needed to maintain and operate that new fleet, the project directly reduces the sources of maritime air pollution that have long affected these

waterfront communities.

Build Economic Resilience for a Just Transition: The project builds economic resilience by creating accessible pathways to well-paying maritime careers for residents who have been historically disconnected from the economic opportunities in their own region. Training pathways lead to jobs paying $57,600 to over $96,000 annually — careers that require no college degree and offer clear advancement opportunities. The program specifically prioritizes workers displaced from the refinery and industrial sectors (including those affected by the projected closure of the Valero refinery), returning citizens, disconnected youth, and other underserved populations, equipping them with industry-recognized credentials and direct connections to hiring partners. The holistic program model further strengthens economic resilience by pairing job training with wraparound supports — including stipends, transportation assistance, childcare, legal aid, and nutrition services — to address the practical barriers that prevent underserved residents from completing training and securing stable employment.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The majority of the proposed marine trades training activities will take place at the primary WWC training site, located at 182 Pintado Street on Mare Island in Vallejo. Program partner Cal Poly Maritime Academy will provide additional training at its campus, also located in Vallejo. Additional hands-on training in ship building and repair will be provided at Bay Ship and Yacht, at 2900 Main Street #2100 in Alameda. Water transportation training will be provided at 182 Pintado Street in Mare Island with hands-on exposure on San Francisco Bay aboard a ferry provided by coalition partner Blue & Gold Fleet.

Each of these sites is readily accessible by the target communities for the project, which include Vallejo, Rodeo, Crockett, Port Costa, Martinez (areas north of Highway 4), Mountain View, Vine Hill, Pacheco, Concord (areas north of Highway 4, and south of Highway 4 between I-680 and Highway 242), Clyde, Bay Point, and Pittsburg.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The Working Waterfront Coalition employs multiple strategies to ensure that program design and delivery remain grounded in authentic community voice. Information sessions for prospective participants are structured not only to recruit applicants, but to gather meaningful input on community needs and residents' own vision for a clean maritime industry — ensuring the program evolves in response to the priorities of the people it serves. Feedback from students from the target communities is

captured through surveys administered at the end of each cohort, with questions designed to surface student and community needs that the program can address in future iterations.

WWC maintains active relationships with elected officials at the local, state, and federal levels to ensure the program remains connected to broader policy and community priorities. This includes active communication with Solano County Supervisor Cassandra James, Tiffanee Jones chief of staff for Assembly Member Lori Wilson, Vallejo City Mayor Andrea Sorce and Councilwoman Toni Lediju, and staff of U.S. Congressmen John Garamendi and Mark DeSaulnier. These relationships keep program leadership informed about community concerns and create channels for advocating on behalf of program participants and the communities they come from.

To reach the justice-involved population identified as a priority group, WWC partners with Project Dove in Vallejo, Solano Workforce Development Board, and Rubicon Programs, organizations with deep roots serving returning citizens in the community. This partnership ensures that individuals with justice involvement have a trusted, culturally familiar on-ramp into the program, and that WWC's outreach and support services are designed to meet their specific needs.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The communities targeted by the Greening the Maritime Industry initiative — Vallejo, Benicia, Rodeo, Crockett, Martinez, Bay Point, and Pittsburg — share a common history of bearing disproportionate environmental and public health burdens as a direct consequence of the industrial and fossil-fuel operations that have long defined the Carquinez Strait and Suisun Bay waterfront. The California Healthy Places Index and CalEnviroScreen data make this burden clear: Vallejo's impacted communities score high on multiple CalEnviroScreen 4.0 indicators including asthma, relative unemployment, low birth weight, cardiovascular disease, housing burden, and poverty, and are formally identified as impacted communities due to their exposure to environmental contaminants. Along the northern Contra Costa County corridor, Pittsburg and Bay Point carry CalEnviroScreen scores of 85 and 87 respectively, with sensitive populations in the 98th percentile for asthma and the 88th percentile for cardiovascular disease in both communities. Rodeo's situation is similarly acute: the eastern part of Rodeo faces some of the region's highest pollution burdens, with asthma rates in the 93rd percentile, high rates of low birthweight, and close proximity to hazardous waste sites — a direct legacy of the Phillips 66 refinery and related industrial

operations that have impacted these communities for generations. The HPI demonstrates that these health disparities are not random but are tightly linked to the same economic conditions the project seeks to address: limited job opportunities, lower educational attainment, and constrained access to the kinds of careers that provide stable, family-sustaining wages.

The environmental justice and just transition challenges driving this application are two sides of the same coin. The fossil-fuel economy that created the region's air quality and public health crisis also structured its labor market, concentrating industrial employment in these waterfront communities while leaving residents with few pathways into the emerging clean economy taking shape in their own backyard. The Greening the Maritime Industry initiative directly addresses both dimensions: by training workers specifically for electric drive technology, zero-emission vessel maintenance and repair, and the design and construction of electric vessels, the program builds the skilled workforce necessary to sustain the maritime sector's transition away from the fossil-fuel operations that have driven cumulative pollution burdens in these communities. At the same time, it creates accessible career pathways — requiring no college degree, paying prevailing wages of $57,600 to over $96,000 annually — for the workers displaced from refinery and industrial jobs, returning citizens, disconnected youth, and other residents who have historically been excluded from the economic opportunities generated along the waterfront they live beside.

Progress toward community impact will be demonstrated through measurable outcomes tracked over the three-year grant term: 165 participants enrolled from the priority communities, an 80% or higher training completion rate, 75% or more of completers earning industry-recognized credentials including OSHA 10, USCG endorsements, and marine trade competency certifications, and 70–80% placement in unsubsidized employment or registered apprenticeships with partner employers. Together, these outcomes directly operationalize the fund's goals. Each credential earned represents a worker equipped to maintain or build the zero-emission vessels that will reduce maritime air pollution along the Carquinez Strait corridor. Each job placement at prevailing wages represents a family in Vallejo, Bay Point, Pittsburg, Rodeo, or Crockett with greater economic stability and a foothold in a clean-energy industry — turning the just transition from a policy aspiration into a lived reality for the communities that have waited longest for it.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

The Working Waterfront Coalition will engage community members throughout grant implementation through a structured annual schedule of information sessions, site visits, and public events designed to both share progress and gather meaningful input. WWC, in partnership with the Solano and Contra Costa County Workforce Development Boards, will host regular community information sessions to inform residents about jobs and career pathways in the maritime industry — including the specific opportunities created by the region's transition to electric and zero-emission vessels. These sessions serve a dual purpose: recruiting qualified applicants for each training cohort while also providing an accessible forum for residents to ask questions, raise concerns, and share their priorities for how the program should evolve. The next Marine Trades Training cohort is scheduled to launch in August 2026, and WWC's annual planning process establishes clear timelines for outreach, application intake, and cohort start dates so that community members can anticipate and participate in each cycle.

To deepen engagement beyond information sharing, WWC will host site visits and tours of its Mare Island training facility for community residents, elected officials, and community-based organization partners. These visits give community members a firsthand look at the training environment and the zero-emission technologies participants are learning to build, operate, and maintain — grounding community understanding of the program in direct experience rather than abstraction. Graduations will serve as additional touchpoints for community engagement: WWC will actively invite residents, local officials, and partner organizations to attend each cohort's graduation, creating opportunities for direct interaction with program graduates and informal dialogue about what is and is not working.

Feedback from the community is embedded into program operations rather than treated as a periodic add-on. At the close of each cohort, program staff conduct a structured debrief that incorporates formal evaluations completed by every graduate, capturing their assessment of recruitment, training quality, wraparound support services, and job placement follow-through. These evaluations are reviewed to identify patterns, gaps, and opportunities that inform improvements in the design and delivery of training for the next cohort. WWC’s active relationships with elected officials at the local, state, and federal levels will enable community concerns surfaced through those channels to inform program planning, ensuring that elected officials' constituent feedback reaches the program team in real time.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The Working Waterfront Coalition (WWC) is a first-of-its-kind, industry-led workforce development initiative that is building a skilled maritime workforce pipeline for the San Francisco Bay Area while simultaneously advancing a just transition to a clean transportation economy. Through the proposed “Greening the Maritime Industry” initiative, WWC proposes to enroll 165 participants over three years in accelerated, employer-designed and supported training pathways in marine trades, water transportation, Electronic Drive Technician (low and zero emission) technology, and

design and construction of an electric tugboat— preparing workers to build, operate, maintain, and repair the Bay Area's next generation of electric and low-emission vessels. Measurable outcomes include: 80% or higher training completion rates; 75%+ of completers attaining industry-recognized credentials (including OSHA 10, USCG endorsements, and marine trade competency certifications); and 70–80% placement in unsubsidized employment or registered apprenticeships with partner employers earning prevailing wages of $57,000 to over $96,000 annually.

WWC's application directly supports all three Program Goals of the Local Community Benefits Fund. First, by training workers for electric and zero-emission vessel maintenance, repair and shipbuilding — in partnership with Cal Poly Maritime and SF Bay Ferry— WWC advances the reduction of maritime air pollution and builds the skilled workforce necessary to sustain a fossil-fuel-free water transportation system. Second, WWC's holistic program model integrates job training with a full suite of wraparound services — including training stipends, transportation assistance, childcare support, legal aid, and nutrition services — to address the interconnected barriers that prevent underserved residents from accessing quality employment. Third, WWC's coalition model is inherently community-driven and collaborative: it brings together shipyards, ferry services and operators, unions, and community-based organizations in Solano and Northern Contra Costa County to deliver coordinated solutions rooted in both industry need and community voice.

Lead applicant WWC will provide overall administrative and fiscal management of the project; staffing of key roles for project operations; facilitation of relationships with employer, workforce development, public sector and non-profit partners; and tracking and reporting of proposed project outcomes. Project partner Cal Poly Maritime will develop and implement a curriculum for the design and construction of an electronic tugboat, support employer-based training in the marine trades, and administer the PaCE program(Professional and Continuing Education) to provide continuing education and credentialing of participants.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

See attached Measurable Outcomes Plan.

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Total Grant Request: $1,755,400

Total Direct Costs: $1,471,250

Total Indirect Costs: $184,150

Total Contingency: $100,000

Grant Term: September 1, 2026 – August 30, 2029

Lead Applicant: Working Waterfront Coalition—Funds Requested: $1,316,550

Personnel/Staff Costs — $481,400 (Direct)

- **Program Director (0.33 FTE):** $125,000 total — Responsible for project oversight, partnership development, and strategic leadership of the maritime workforce training initiative across the grant term.
- **Program Manager (0.33 FTE):** $90,000 total — Manages day-to-day training operations and participant services, coordinating between instructors, employer partners, and support staff.
- **Lead Instructor — Marine Trades (0.33 FTE):** $60,000 total — Delivers marine trades and transportation training curriculum, including sustainable welding, painting, and outside machinist practices.
- **Instructor Assistant (0.33 FTE):** $45,000 total — Supports lead instructor in delivering hands-on marine trades and transportation training.
- **Administrative Assistant (0.33 FTE):** $50,000 total — Responsible for tracking, reporting, and administrative coordination across program activities.
- **Budget/Fiscal Manager (0.33 FTE):** $51,400 total — Manages budget, invoicing, and fiscal compliance for the grant.
- **Employer Services Coordinator (0.33 FTE):** $60,000 total — Leads employer and industry engagement activities, cultivating partnerships with maritime and transportation sector employers.

Community Engagement — $276,000 (Direct)

- **Community Engagement / Industry Engagement Specialist (1.0 FTE):** $276,000 total — Full-time position dedicated to community engagement, job placement, and participant follow-up. This role serves as the primary connection between program participants and employer partners.

Capacity-Building and Training — $150,000 (Direct)

- **Employer-Based Training — Sustainable Practices:** $45,000 total — Training for participants in sustainable practices in welding, painting, and outside machinist work delivered in partnership with employer hosts.
- **Instructional Services — Electronic Drive Technology:** $60,000 total — Specialized curriculum and instructional services covering electric drive technology relevant to the maritime and transportation sectors.
- **Instructional Services — Sustainable Welding Technology:** $45,000 total — Instruction in sustainable practices in welding technology aligned with industry demand for green maritime skills.

Subcontractors & Vendors — $15,000 (Direct)

- **OSHA 10 Construction Safety Training:** $15,000 total — Third-party vendor contract for OSHA 10 certification training, ensuring participants meet baseline industry safety requirements.

Materials, Supplies & Equipment — $5,000 (Direct)

- **Instructional Materials and Consumable Supplies:** $5,000 total — Consumable instructional supplies and materials necessary for hands-on marine trades curriculum delivery.

Other Direct Costs — Participant Support Services & Stipends — $165,000 (Direct)

- **Participant Support Services & Stipends:** $165,000 total — Includes training stipends, transportation assistance, and other wrap-around supportive services to ensure low-income and underserved participants can access and complete training without financial barriers.

Contingency — $100,000

A contingency of $100,000 is included, representing approximately 9.15% of total direct costs, within the allowable 10% cap. This reserve covers unforeseen expenses that may arise during implementation of a complex, multi-sector workforce training program over the three-year grant term.

Indirect Costs — $124,150

Indirect costs of $124,150 represent approximately 9.4% of the total budget, within the allowable 15% cap. Indirect costs cover insurance, accounting, payroll processing, and general administrative overhead necessary to support program operations.

<u>Co-Applicant Cal Poly Maritime: Funds Requested—$438,850</u>

Capacity-Building and Training — $285,850 (Direct)

- **Technical Skills Training — Electric Tugboat Curriculum Development:** $50,000 total — Development of specialized curriculum on electric tugboat design and project management, positioning Cal Poly Maritime as a hub for emerging zero-emission vessel workforce training.
- **Employer-Based Training — Fabrication, Construction & Electric Outfitting:** $235,850 total — Hands-on employer-based training encompassing fabrication, construction, electric outfitting, and testing of maritime vessels. Training is delivered in partnership with industry employers and directly tied to job placement outcomes.

Materials, Supplies & Equipment — $5,000 (Direct)

- **Consumable Instructional Supplies & Materials:** $5,000 total — Consumable materials used during hands-on technical and employer-based training activities.

Other Direct Costs — $50,000 (Direct)

- **PaCE Program — Professional & Continuing Education:** $50,000 total — Costs associated with Cal Poly Maritime's Professional and Continuing Education (PaCE) program infrastructure, supporting credentialing, continuing education administration, and participant enrollment.

Contingency — $38,000

Cal Poly Maritime has included a contingency of $38,000 to address unforeseen program implementation costs. Note: This line item is classified as a direct cost in the budget template.

Indirect Costs — $60,000

Indirect costs of $60,000 represent approximately 14.89% of the total Cal Poly Maritime budget, within the allowable 15% cap. These costs cover insurance, accounting, and general administrative overhead required to support Cal Poly Maritime's participation in the grant program.

Other Sources of Project Funding

- **Clean Ports EPA Grant (Awarded):** $2,000,000 — An awarded EPA Clean Ports grant to support workforce development in 'greening the maritime industry.' These funds will be layered with the Air District award to expand program reach and deepen participant services.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The "Greening the Maritime Industry" project is strongly consistent with a range of community, local, regional, and statewide initiatives that collectively prioritize environmental justice, clean energy workforce development, and the transition away from fossil-fuel-dependent industries.

At the statewide level, the project directly advances the goals of California's Community Air Protection Program (AB 617), which was enacted to reduce air pollution in communities disproportionately burdened by cumulative environmental health impacts. The target communities — including Vallejo, Bay Point, Pittsburg, Rodeo, and Crockett — are formally identified as impacted communities under AB 617 criteria, with CalEnviroScreen 4.0 scores reflecting high burdens across indicators including asthma,

cardiovascular disease, and low birth weight. By building the skilled workforce necessary to accelerate the maritime industry's transition to electric and zero-emission vessels, the project directly reduces the maritime air pollution sources that have driven these cumulative health burdens. The project also aligns with the California Workforce Development Board's High Road Training Partnerships (HRTP) initiative, which funds industry-led, worker-centered partnerships focused on creating high-quality jobs while advancing equity and a low-carbon economy — the precise model WWC has been implementing through prior HRTP grant awards.

At the regional level, the project is consistent with the Bay Area Air District's 2024–2029 Strategic Plan, specifically its Environmental Justice strategies focused on community partnership and community-directed funds. The project further aligns with the Green Empowerment Zone (GEZ) initiative in Contra Costa and Solano Counties, a regional framework designed to grow clean energy manufacturing and attract clean technology investment by leveraging the region's skilled energy workforce — the same communities and workforce the project serves. WWC's partnership with the Solano County and Contra Costa County Workforce Development Boards and its active relationships with regional elected officials, including Solano County Supervisor Cassandra James and the offices of Assembly Member Lori Wilson and U.S. Congressmen Garamendi and DeSaulnier, ensure that program design and implementation remain anchored in regional priorities. Finally, the project directly complements WWC's existing EPA Clean Ports Grant, a $2 million federal award focused on maritime industry decarbonization and workforce development, enabling the two investments to be layered for greater reach and impact across the same communities.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The Project Lead Working Waterfront Coalition (WWC) has demonstrated capacity to oversee complex, multi-year workforce development programs across multiple simultaneous grants. As a first-of-its-kind SF Bay Area industry-led workforce development initiative, WWC has built the organizational infrastructure, employer relationships, and program delivery systems necessary to successfully implement and manage this grant.

WWC has experience implementing a number of large workforce development programs: a Workforce Accelerator Fund 11.0 Innovation Impact Grant (Marine Trades Skills Training Program — MTST) for $500,000 18 months, and a California High Road Training Partnership (HRTP) Implementation Grant (Marine Trades and Water Transportation Careers — MTWTC) $3,933,848, both funded by the California Workforce Development Board 3 years, through June of next year. The WWC partnered

with the Contra Costa and Solano County Workforce Development Boards in the implementation of these grants. The Clean Ports Grant from the EPA in the amount of $2M began implementation in March, and has a three year time frame, with partners SF Ferry and Port of SF, part of a larger grant award of $55M. Since the start of operations, WWC has overseen the training of 6 cohorts and 130 participants.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The following WWC staff will be dedicated to implementation of this grant:

- Program Director (0.33 FTE): Provides overall program leadership, manages employer relationships and the Industry Advisory Board (IAB), and ensures contractual compliance. The Program Director brings deep experience in maritime workforce development and community-based programming.
- Program Manager (0.33 FTE): Oversees day-to-day training delivery, cohort coordination, participant tracking, and community-based organization (CBO) partnerships. Manages participant Individual Employment Plans (IEPs) and case management services.
- Lead Instructor — Marine Trades (0.33 FTE): Delivers the accelerated marine trades curriculum covering marine welding, shipfitting, painting, electrical, carpentry, and pipefitting.
- Assistant Instructor — Marine Trades (0.33 FTE): Supports the Lead Instructor, provides individualized participant support, and assists with OSHA 10 safety training delivery.
- Administrative Assistant (0.33 FTE): Provides data entry, case file management, scheduling, and participant intake and enrollment support.
- Budget/Fiscal Manager (0.33 FTE): Manages all financial reporting, grant compliance, cost allocation, budget-to-actual monitoring, and coordination with program funders on fiscal requirements.
- Employer Services Coordinator (0.33 FTE): Manages First Source Hiring Agreement relationships, employer outreach, job placement activities, and coordination with funder Employer Services units.
- Community Engagement/Industry Engagement Specialist (1.0 FTE): Builds and strengthens relationships with community members, organizations, non-profits and industry employers.

In addition, WWC will partner with Cal Poly Maritime to provide marine welding training and subcontract with Bay Ship & Yacht to deliver onsite skills training at their shipyard. Cal Poly Maritime will be involved in curriculum development related to design, fabrication, and operation of an electric tugboat. These training partners bring

industry-recognized expertise and established relationships with WWC from prior programs.

WWC's coalition structure further amplifies its implementation capacity. Employer partners including Bay Ship & Yacht, American Navigation, SF Bay Ferry, Westar Marine Services, the Port of San Francisco, Northrop Grumman, and others provide direct hiring pipelines and training infrastructure. Labor partners including Machinist's District Lodge 190, Inlandboatmen's Union of the Pacific, the International Organization of Masters, Mates and Pilots, and Pile Drivers Local 34 take part in curriculum design and mentor program participants. CBO recruitment partners in Solano and Contra Costa Counties will ensure robust participant pipelines from priority communities.

With regard to additional funding that will be leveraged to support the project, the WWC is the recipient, in partnership with the Port of San Francisco and the San Francisco Bay Ferry, of a Clean Ports Grant from the EPA, in the amount of $2,000,000, The activities funded by this grant also focus on workforce development in 'greening the maritime industry.' These funds will be layered with the Air District award to expand program reach and deepen participant services.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

Because all of the training sites for the proposed project are already in operation under the auspices of WWC and Cal Poly Maritime Academy, no new permits or approvals are required.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

N/A

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

The WWC has full access to the primary training site on Mare Island in the City of Vallejo, and has trained 5 cohorts of participants there over the past several years. The training site for Cal Poly Maritime Academy is located in an Academy facility in Vallejo and is fully under control of the Academy, Agreements are already in place with Bay Ship and Yacht and other employer partners for training to occur at their facilities.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Operations and maintenance of the project training facilities will be provided by the facility owner, Mare Island Company, and by Cal Poly Maritime Academy. The WWC pays a nominal fee of $2,500 (rent & utilities) per month to lease the Mare Island Training Facility.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The Working Waterfront Coalition has identified a number of barriers to implementation and has developed strategies to address each one, drawing on lessons learned from prior programs.

Participant Recruitment and Retention A persistent barrier in workforce development programs is recruiting from and retaining participants drawn from historically underserved communities — particularly communities of color, English Language Learners, immigrants, disconnected young adults, and justice-involved individuals. These populations frequently face practical obstacles such as transportation, childcare, and housing instability that create significant attrition risk. WWC addresses this through partnerships with trusted community-based organizations — including those with specific expertise serving reentry populations such as Project Dove in Vallejo and Rubicon Programs serving Rodeo, Crockett, Martinez, & Bay Point residents— that provide warm referrals and culturally competent outreach rather than relying on traditional workforce channels. Wraparound services including training stipends, transportation assistance, childcare support, legal aid, and nutrition services are available from Day 1 of training, as WWC's experience has shown that participants who encounter these barriers early in a program are at highest risk of dropping out.

Limited Awareness of Maritime Career Pathways in Target Communities Many residents in the priority communities of Solano and northern Contra Costa County are unaware that well-paying maritime careers exist within their own region — let alone that

they can access them without a post-secondary degree. WWC directly counters this through multi-channel outreach including in-person community information sessions, multilingual social media campaigns via WaterfrontJobs.com, and outreach through workforce development boards, labor unions, county probation departments, and elected officials' offices. Relationships with officials including County Supervisor Cassandra James, Assembly Member Lori Wilson's office, and U.S. Congressmen Garamendi and Desaulnier's staff extend WWC's reach into communities that may be skeptical of or disconnected from traditional workforce programs.

Employer Hiring Fluctuations The maritime industry, like all industries, is subject to shifts in employer demand and hiring capacity that can affect job placement outcomes. WWC mitigates this risk by maintaining a diversified employer partner base spanning shipyards, ferry operators, port contractors, and tugboat companies — so that a slowdown at one employer does not undermine the program's overall placement performance. First Source Hiring Agreements with Industry Advisory Board employer partners create formal, documented commitments to interview and prioritize WWC graduates, providing a structural protection against ad hoc hiring decisions. The Industry Advisory Board meets regularly to monitor hiring demand in real time, enabling rapid curriculum or placement strategy adjustments when needed.

Organizational Data and Compliance Infrastructure As a growing organization managing multiple concurrent public grants, WWC has recognized that building robust data tracking and compliance systems is an ongoing challenge. WWC has proactively invested in client management systems and reporting tools, engaged staff with public workforce grant experience, and established internal financial controls — including a dedicated Budget/Fiscal Manager responsible for budget-to-actual monitoring, cost allocation, and audit readiness. If any performance measure falls below 80% of target, a corrective action plan is developed within 30 days, ensuring that challenges are identified and addressed before they escalate.

Access Barriers for Justice-Involved Participants Returning citizens face unique barriers to employment including background check challenges, limited documentation, and gaps in work history that can complicate both program enrollment and job placement. WWC's work with Project Dove in Vallejo provides a trusted community entry point for this population, and employer partners have demonstrated strong retention rates with justice-involved workers in the maritime sector. The Assistant Instructor and Community Engagement/Industry Engagement Specialist will develop individualized employment plans that proactively address documentation, background, and other barriers before participants reach the job placement stage.

Applicants can use this page when planning their Measurable Outcomes Plan before filling out the application.

1. **List your key outcomes (aim for a short list that reflects the most important changes your project can deliver)**

- Outcome 1: Increasing community residents' knowledge of "Greening of the Maritime industry"
- Outcome 2: Training a skilled workforce of jobs and careers in zero emissions maintenance & repair of maritime vessels (ferries & tugboats)
- Outcome 3: Training a skilled workforce for operations of zero emissions maritime vessels (ferries & tugboats)
- Outcome 4: Facilitating employment & careers in maritime and zero emission technology
- Outcome 5: Increasing equity and access for sustainable maritime careers for under-represented communities and residents
- Outcome 6: Positive Environmental impacts

2. **For each outcome, list indicators (1–3 per outcome)**

- **Outcome 1** – indicators: # of community Info & Education Sessions provided
  # number of community residents attending Info & Education Sessions
  # number of residents signing up for Marine Trades & Water Transportation training
- **Outcome 2** – indicators: # of residents enrolling in Marine Trades & Marine Transportation training
  # of residents completing Marine Trades & Marine Transportation training
- **Outcome 3** – indicators: # of residents enrolled in zero emissions technology training
  # of residents completing zero emissions technology training
- **Outcome 4** – indicators: # of residents obtaining employment in the maritime industry
  # of enrolling in apprenticeship programs
- **Outcome 5**-indicators: # of residents attending Info & Education Sessions from under-represented communities
  # of residents from under-represented communities enrolling in Marine Trades & Water Transportation training
  # of residents completing training
- **Outcome 6**-indicators: # of zero emission maritime vessels operating in the SF Bay Area

3. **Sketch your milestones and tasks**

- **Outcome 1**: Increasing community residents' knowledge of "Greening of the Maritime industry"

- Milestone #1: Slide deck, materials and schedule for community Info Sessions are finalized.

  Tasks: Publicize program and schedule of info sessions using social media and partner agencies.

  Project Lead: Working Waterfront Coalition (WWC)

  Supporting Entity(ies): Cal Poly maritime, community -based organizations, elected officials, workforce development boards.

  Completion Date: September 2026

- Milestone #2: Host the first three (3) info sessions with 100 area residents signed up and attending to learn about career pathways in "Greening of the Maritime industry".

  Tasks: Select access-friendly community sites and register 100 residents to attend.

  Project Lead: WWC

  Supporting Entity(ies): Community-based organizations, Cal Poly Maritime, representatives from elected officials, and workforce development boards.

  Completion Date: November 2026

  Outcome 2: Indicators: # of residents enrolling in Marine Trades & Marine Transportation training

  Milestone #1: Identify and enroll 165 residents in maritime pathways with a focus on sustainability in the industry.

Tasks: Partner with community-based organizations and workforce development boards on recruitment and selection of qualified applicants.

Project lead: WWC

Supporting entity(ies); Community-based organizations, workforce development boards and offices of elected officials

Completion Date:
Months 3-26

- **Outcome 3**: indicators: # of residents enrolled in zero emissions technology training
And # of residents completing zero emissions technology training

Milestone #1: Identify number of residents enrolled and number completing zero emissions technology training

Tasks: Confirm enrollments and provide wrap around support for successful completion of training.

Project lead: WWC

Supporting Entity (ies): CBOs and workforce development boards

Completion Date:
Months 3-36

- **Outcome 4** – indicators: # of residents obtaining employment in the maritime industry
# of enrolling in apprenticeship programs

Milestone #1: Identify # of residents obtaining employment in the maritime industry and/or enrolling in an apprenticeship program.

Tasks: Provide active job search and job placement assistance for training graduates in collaboration with CBOs and workforce development boards.

Project Lead: WCC & Cal Poly Maritime

Supporting Entity(ies): Community-based organizations, workforce development boards and offices of elected officials

Completion Date:
Months 6-36

- **Outcome 5**-indicators: # of residents attending Info & Education Sessions from under-represented communities, # of residents from under-represented communities enrolling in Marine Trades & Water Transportation training, # of residents completing training

Milestone # 1: Identify and track # of residents from under represented communities participating in career pathways in “Greening of the Maritime Industry”.

Tasks: Gather data on demographics of participants & identify those from under represented communities.

Project Lead: WWC

Supporting Entity(ies):
Cal Poly Maritime, CBOs, & workforce development boards.

Completion Date:
Months 3-36

- **Outcome 6**-indicators: # of zero emission maritime vessels operating in the SF Bay Area

Milestone #1: Identify and document # of zero emission maritime vessels operating in the SF Bay Area.

Tasks: Partner with San Francisco Marine Exchange, ferry operators and tugboat operators to document & record # of zero emission maritime vessels.

Project Lead: WWC & Cal Poly Maritime

Supporting Entity(ies): San Francisco Marine Exchange, SF Ferry, Golden Gate Ferry, Blue & Gold Fleet, Red & White Fleet, and tugboat operators American Navigation and Foss.

Completion Date:
Months 12-36

4. **Check alignment with your budget**

- Which budget items support Outcome 1?

A: Personnel/Staff Costs & Community Engagement

- Which budget items support Outcome 2?

A: Personnel/Staff Costs, Community Engagement, Materials, Supplies…Capacity building, Subcontractors & Vendors

- Which budget items support Outcome 3?

A: Personnel/Staff Costs, Community Engagement, Materials, Supplies…Capacity building, Subcontractors & Vendors

- Which budget items support Outcome 4?

A: Personnel/Staff Costs & Community Engagement

- Which budget items support Outcome 5?

A: Personnel/Staff Costs & Community Engagement

- Which budget items support Outcome 6?

A: Personnel/Staff Costs

- Have you included staff time and resources for indicator tracking and reporting? [YES/ NO] -Yes

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Established in 2019 as a 501(c)(3) non-profit, Benicia Community Air Monitoring Program ["BCAMP"] has an educational mission to provide real-time air monitoring technology and expertise for public benefit. Accurate, reliable reporting of local air pollution conditions informs and aids a community's defense against health risks associated with exposure to air toxins. The mission provides scientifically defensible data for residents at risk, encouraging regulatory enforcement. In 2022, BCAMP launched its unique, independent air monitoring station within the Benicia Industrial Park. The station comprises an array of monitors measuring key air pollutants, including particulate matter; PM 2.5 and PM1 by low-cost sensor, meteorological measurements, benzene, toluene, ethylbenzene, xylene, sulfur dioxide, and black carbon. An open access website informs the public of pollutant concentrations registered in real time at five-minute intervals. The website also provides vetted resources describing public health risks related to key measured air toxins.

Public and regulatory concern about levels of PM2.5 dispersed in ambient air from wildfire smoke, fossil fuel combustion, production, and transportation sources, spurred BCAMP's proposed project – **The Ambient Air Quality Sensor Network Enhancement: Purple AIR PM Sensor Calibration Program**["Project"]. As designed, The Project will rectify discrepancies in reported PM2.5 data registered by low-cost sensors located within Benicia's community that are not calibrated to EPA's highest standards. A Met One BAM-1022 Federal Equivalent Method (FEM) continuous PM2.5 monitor will be installed at the BCAMP station. Co-located Purple Air PA-II-SD low-cost sensors and a complete meteorological monitoring package will provide 24 months of 2-minute resolution collocated data, enabling development of locally validated correction factors that will transform BCAMP's own community PM sensor readings into accurate, legally defensible PM2.5 measurements. The outcomes from the Project will directly support the objectives of BAAQMD's AB617 Community Health Protection Program. Without validated correction factors, the existing sensors within the community may over-estimate PM2.5 by 30 - 80% under humid, industrially influenced conditions typical of the Carquinez Strait corridor. Inaccurate data undermines community advocacy and health risk assessment. This Project delivers the calibration infrastructure and data needed to make BCAMP's monitoring scientifically defensible and directly actionable.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This Project advances the "Reduce air pollution and improve health outcomes" strategy. Specifically, it enables exposure reductions through increased community-scale

understanding of air pollution impacts. It will provide corrected PM2.5 data with information needed for community-directed actions to reduce exposure, support regulatory engagement, and enable residents to make informed health protection decisions during elevated pollution events. The Project directly responds to a community-identified monitoring gap and produces data that is immediately actionable for public health protection. Despite Valero's idling of the refinery in April 2026, the community's concerns persist about cumulative health impacts from breathing air pollution from sources within or near Benicia, including the idled Valero refinery and from other refineries in Contra Costa County whose emissions during facility events drift into Benicia. Elevated rates of asthma and cancer in the Benicia community compared to other cities in Solano County testify to on-going concerns about health risks, given residents' historic and continuing chronic daily exposures in proximity to freeways, port terminal operations, rail lines, refinery infrastructure/pipelines/storage tanks, and accounting for repeated exposures to wildfire smoke. The questionable reliability of PM2.5 data produced by low-cost sensors located in the community is little understood except by technical experts. The Project will make clear the quantitative difference in data produced by properly calibrated PM2.5 sensors and guide public understanding of data reported in relation to health risk.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Primary project location: 2970 Bayshore Road, Benicia, CA 94510 (Solano County). This is the BCAMP community air monitoring station, located on the northern industrial waterfront of Benicia, near Valero Benicia Refinery property and infrastructure, two freeways, rail lines, the Port of Benicia and surrounding fire-prone hilly environs. The project serves residents of Benicia's industrial waterfront and fenceline neighborhoods, which bear disproportionate cumulative exposure to refinery, maritime, and transportation-related emissions. The BAAQMD regulatory monitoring station at 800 E 2nd Street, Benicia is located 2.70 km (1.68 miles) southwest of the BCAMP site, demonstrating that the BCAMP-operated station fills a critical spatial gap in the existing regulatory monitoring network at this date.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents, and other key stakeholders were meaningfully involved in the determination of community needs.*

The BCAMP station was established through sustained community organizing over several decades by Benicia residents and members of the Good Neighbor Steering Committee [GNSC] a grassroots refinery watchdog group, formed in 2000, that early on identified the absence of near-source local air quality monitoring in refinery fenceline communities as a critical gap in then existing regulatory policy. Through the decades, community concerns have been identified and prioritized through the GNSC's, then BCAMP's various resident engagement activities that documented health issues associated to multiple and specific facility incidents for decades involving fires, emergency shutdown, spills, and major releases experienced by refinery fenceline neighborhood residents. *Of particular concern with community outcry* was the Air District's announcement in 2019 to the City and Benicia public of Valero's unreported 16-year daily venting from the refinery's hydrogen unit of multiple contaminants that exceeded EPA health thresholds, including benzene. BAAQMD cited gross violations and assigned the unprecedented penalty fine of $82 million**.** This major fine represents, through the Local Community Benefit Fund, the current and *only* source of Benicia community funding for this Seed grant Project application, as well as for BCAMP's Opportunity Grant application for the community-wide Benicia Air Monitoring Project – "BAM"– which is to implement a comprehensive community-based networked air monitoring and notification system, the unique element of the City's adopted Industrial Safety Ordinance, [ISO].The shared benefits of the two separately proposed BCAMP projects will manifest long-held community visions and expectations that underscored the drafting and adoption, in 2025, of the City's ISO. If fully funded, these two projects together become the first line of defense for community residents' health and safety protection and decision-making during all types of emission events now and in the future under worsening climate conditions. This Project's deployment of Purple Air sensors at 2970 Bayshore Road represents a direct community-identified benefit and community-led *additional* solution to enhance monitoring capability and capacity in Benicia and advance public knowledge of low cost PM2.5 monitors' capacity for improved data readings. The Project responds to the community's explicit need, expressed through BCAMP and the AB 617 processes, to make data from community-operated sensors scientifically valid, reliably accurate, and defensible. Community members and BCAMP advisory board have been consulted on the development of this application and have affirmed the priority of FEM-based calibration for the existing sensor network.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the*

measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.

The Project will directly demonstrate progress toward the Bay REPAIR program's goal of strengthening community-led solutions that reduce air pollution exposure in disproportionately impacted communities directly addresses the challenges facing Benicia's low-income neighborhoods adjacent to major roadways, freeways, refinery buffer zones, rail lines, port terminals, and the industrial park. Currently installed and operated PM2.5 sensors (Purple Air) within the community may not accurately reflect true PM2.5 concentrations due to sensor bias under varied aerosol and humid coastal conditions, including at BCAMP's monitoring station. National EPA correction equations, derived from background-influenced monitoring sites, may systematically underperform at this location. Thus, locally generated correction factors from this project are essential for accurate data precisely where community exposure is highest.

Measurable outcomes that will demonstrate community impact include: (1) Validated PM2.5 correction factors with $R^2 \geq 0.70$ and RMSE ≤ 7 µg/m³ vs. FEM reference, applied to BCAMP's sensor network; (2) A 2-year archive of reference-quality PM2.5 data at the fenceline location, publicly available in an open-access website archiving data; (3) A transferable correction methodology guide applicable to other fenceline sensor deployments across the Bay Area; (4) Corrected real-time air quality data delivered to BCAMP's community-facing data platforms, enabling residents to make informed health protection decisions.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

BCAMP will serve as the primary community engagement partner throughout project implementation. Corrected PM2.5 data will be shared in near real time through BCAMP's existing community communication channels, including its website, social media, and community notification systems. The Project will provide a minimum of two community outreach programs – in person workshops, forums or webinars per year, open to all Benicia residents and other interested parties. The programs will present air quality findings, sensor performance statistics, and notable pollution events captured during the monitoring period, and describe potential health risks associated with those events. Interactive data visualizations will present corrected vs. uncorrected sensor readings so community members can understand the value and accuracy of calibration

correction methodology. Quarterly data summaries will be shared with BAAQMD. Community feedback on data presentation, monitoring priorities, and project implementation will be solicited through BCAMP's established resident engagement channels, as well as performance surveys incorporated into annual project review and reporting submitted to BAAQMD. Programs will be recorded and made available through various media.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

This Project installs a Met One BAM-1022 FEM reference monitor, four Purple Air PA-II-SD sensors, and a meteorological station at the BCAMP monitoring site. With over 24 months of continuous monitoring at 2-minute data resolution, the project will collect the collocated dataset required to develop, validate, and disseminate site-specific PM2.5 correction factors for BCAMP's community sensor network. The project vision is to transform BCAMP's existing monitoring capability from approximate PM sensor readings into accurate, FEM-referenced air quality data — directly strengthening the community's ability to monitor, document, and respond to air quality impacts in cooperation with BAAQMD regulators.

Key measurable outcomes: (1) ≥ 75% data completeness per month over 24 months of FEM and PA-II collocated monitoring; (2) Validated site-specific correction factors with $R^2 \geq 0.70$ vs. FEM reference; (3) Correction factors applied to BCAMP Purple Air network data within 18 months of project start; (4) 2-year open-access archive of 2-minute PM2.5 and meteorological data deposited in a public repository; (5) QA/QC protocol and correction methodology guide published and shared with BAAQMD and other related regional community organizations.

The Benicia Community Air Monitoring Program is responsible for all Project activities: instrument procurement and installation, 24-month monitoring operations, Level 1–5 QA/QC, data analysis, correction model development and validation, and BAAQMD reporting. BCAMP serves as the site host and community engagement partner, facilitating community access to data, hosting a minimum of two annual community briefings, workshops, forums and/or webinars, and providing feedback.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Total project cost: $199,420 over 24 months (within the Seed Grant $200,000 ceiling).

Contracted Personnel & Fringe ($78,255): Principal Investigator 10% FTE; Senior Air Quality Technician 10% FTE; Junior Field Technician 30% FTE. Fringe at ~30%. Equipment ($64,900): Met One BAM-1022 FEM $PM_{2.5}$ monitor ($22,000 + $2,500 installation); meteorological station ($8,500); PurpleAir PA-II-SD sensors × 4 ($1,280); reference flow/pressure calibrator ($4,200); mid-project sensor refresh and contingency ($2,550 Y2). Supplies & Consumables ($15,600): BAM-1022 filter tape, maintenance kit, zero/span gas cylinders, software licenses, and field supplies. Travel ($4,300): In-state site travel and stakeholder meetings. Other Direct Costs ($14,600): External QA audits ($5,000); publication/open-access fees ($2,500); data repository fees ($1,000); communications ($2,400); community outreach ($2,500); report production ($1,200). Indirect Costs ($22,344): $11,172/year (12.6% of direct costs; within 15% Seed Grant limit). Total Project Cost: $199,420.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

CARB AB 617 Community Air Protection Program: The BCAMP station operates in a manner consistent with BAAQMD's AB 617 Community Health Protection Program priorities. This Project delivers the calibration infrastructure that AB 617 community monitoring efforts require to produce defensible, reference-quality data.

Bay REPAIR Program (BAAQMD): This application directly responds to the Bay REPAIR Local Community Benefits Fund, which reinvests penalties from air quality violations — including Valero Benicia Refinery violations — back into the affected communities. Installing FEM reference infrastructure at the BCAMP monitoring station is precisely the investment the Bay REPAIR program was designed to fund.

BAAQMD 2024–2029 Strategic Plan: The project advances Strategy 2.1 (Community Partnership) and Strategy 2.8 (Community-Directed Funds) by deploying regulatory-grade monitoring infrastructure in a community-operated setting.

EPA LCSQA (Low-Cost Sensor Quality Assurance) Program: The project adopts EPA's published sensor performance targets and correction factor methodology, ensuring

corrected BCAMP data meets nationally recognized quality standards and can inform AirNow/Fire and Smoke Map data quality.

Green Empowerment Zone (GEZ) — Contra Costa & Solano Counties: The project site lies within the Solano County portion of the GEZ regional initiative, and the project's community air monitoring data contributes to the environmental quality baseline needed for GEZ clean economy planning.

The City of Benicia's Industrial Safety Ordinance adopted in 2025: This Project enhances advanced capabilities of BCAMP's monitoring station. It also extends the capabilities of the ISO ordinance key element to be implemented: a networked community-based air monitoring system using various technologies and public notification strategies. NOTE: The complementary synergies of the two BCAMP projects that are being proposed and outlined in BCAMP's Opportunity grant and Seed grant applications are obviously designed to more than meet community expectations to fulfill the long-held community vision the ISO supports for providing an objective, reliable, scientifically based monitoring and notification system reporting accurate, verifiable data: together, these two projects, if funded, become the first line of defense for community health and safety protection and decision-making during all types of emission events under worsening climate conditions.

Benicia's updated Climate Action Plan: The Project addresses risks associated to climate change that involve adaptation and resiliency strategies that include emergency notification procedures, evacuation planning, and provisions for cooling protections for residents suffering under high heat conditions for multiple days in the year, and who may also be afflicted breathing polluted air while enduring other co-morbidity cumulative health problems.

The Updated Benicia General Plan: This Project enhances protection benefits provided by the General Plan's Communiy Health and Safety chapter, Goal 4.20 and Policy 4.20.1.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

BCAMP will leverage grant funding to support the technical aspects of this project with a contractor. The Project Lead's contractor selection process will be supported by the BCAMP Advisory Board – senior level experts from academia and government agencies with over 200 years of collective experience designing, executing, and managing ambient air quality monitoring programs of similar technical scope and complexity. The advisory board members have demonstrated capacity to manage federal and state environmental monitoring grants, operate continuous air monitoring

instruments per EPA QA Handbook requirements, and deliver high-quality datasets on schedule. Three BCAMP board members are also members of the Good Neighbor Steering Committee and have a range of experience managing and overseeing distributions of funds from the GNSC/Valero Settlement Agreement in 2008, negotiated for $14 million. Two million dollars of settlement funds' distribution for environmental benefits was performed through a granting program initiated by the Community Sustainability Commission created and authorized for this purpose. BCAMP's during this granting distribution process. Since 2019, BCAMP's board has managed an investment of $460,000 – the amount received outright from the Settlement Agreement and has managed the BCAMP operating budget since that time.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

BCAMP Project Lead will be supported by the BCAMP Advisory Board to manage and provide oversight for the following contracted functions:
Principal Investigator (10% FTE) — overall scientific oversight, BAAQMD reporting, manuscript lead; Senior Air Quality Technician (10% FTE) — field operations oversight, QA/QC protocol execution, SOP maintenance, data validation; Junior Field Technician (30% FTE, Months 7–24) — weekly site visits, data downloads, consumable replacement, logbook maintenance.

No additional external funding sources are currently committed. The project's open-access data archive, correction methodology guide, and peer-reviewed manuscript are expected to support future opportunities for expanded Bay Area sensor calibration programs and continued BCAMP community monitoring operations.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

No air quality permits or major environmental review permits are required for installation of monitoring equipment at BCAMP's existing community monitoring station site at 2970 Bayshore Rd in Benicia. A minor electrical work permit from the City of Benicia will be required for connection to existing site power infrastructure; this permit can be obtained within the first 30 days of project start and does not require CEQA review. The BAM1022 does not require a permit to operate as a monitoring instrument. All permit requirements can be met within the grant term.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

This project involves installation of monitoring equipment at an existing developed community monitoring site and does not involve ground disturbance, construction, or changes to land use. The project qualifies for a CEQA Categorical Exemption under Class 1 (Existing Facilities, 14 CCR § 15301), as it consists of minor alteration of an existing facility with negligible expansion of use. A Notice of Exemption will be prepared and filed with the City of Benicia and Solano County prior to project start.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

The BCAMP station at 2970 Bayshore Road is operated by BCAMP under an existing agreement with the property owner, Ruszel Woodworks. A written site access agreement authorizing installation and 24-month operation of FEM monitoring equipment will be executed with the property owner and BCAMP prior to project start. This agreement will be provided to BAAQMD as demonstration of site control at the time of Grant Agreement execution, in accordance with Bay REPAIR Guidelines § 9.3.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

The BAM-1022 FEM monitor and meteorological station will be maintained throughout the grant term under the project's Level 1–5 QA protocol, with filter tape, gas cylinders, and consumables budgeted annually. Following the grant term, BCAMP will assume operational responsibility for the PurpleAir PA-II-SD sensors, which represent minimal on-going cost (~$320/unit for replacement, no consumables). The BAM-1022, as a higher-value instrument ($22,000), will be evaluated for continued operation under future grant funding, or redeployment to another community monitoring site. Post-grant O&M costs for the BAM-1022 are not requested in this budget but will be addressed in the final project report.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Instrument failure/downtime (Likelihood: Low–Med; Impact: High): Mitigated by BAM-1022 warranty and Met One service contract option. Comprehensive spare parts inventory will be maintained for routine maintenance and repair.

PA-II sensor failure or vandalism (Likelihood: Med; Impact: Med): Mitigated by 4-unit deployment (3 operational + 1 spare); low replacement cost ($320/unit); weatherproof mounting and site security at BCAMP station.

Data communication outage (Likelihood: Med; Impact: Low–Med): Mitigated by SD card local backup on all PA-II-SD units and Data Acquisition System internal storage buffer.

Site access restriction (Likelihood: Low; Impact: High): Mitigated by site access agreement executed before project start; BAAQMD regulatory station at 800 E 2nd St identified as potential backup deployment site.

Key personnel departure (Likelihood: Low–Med; Impact: Med): Mitigated by cross-training, documented SOPs, and succession plan.

Wildfire smoke events (Likelihood: Med; Impact: Low): Represents scientifically valuable data for fenceline/background correction comparison; FEM validated at high concentrations; event flagging protocol included in QAPP.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	To deliver locally-validated $PM_{2.5}$ correction factors for the Benicia Community Air Monitoring Program (BCAMP) community sensor network at 2970 Bayshore Road — immediately adjacent to the Valero Benicia Refinery fence line — by installing and operating a 24-month FEM reference monitoring system (Met One BAM-1022) co-located with PurpleAir PA-II-SD sensors and a complete meteorological station. The project transforms BCAMP's existing PurpleAir sensor data from approximate readings subject to 30–80% humidity bias into accurate, defensible $PM_{2.5}$ measurements that directly support community health advocacy, regulatory engagement under AB 617, and resident decision-making in Benicia's disproportionately impacted fenceline community. Correction factors will be evaluated for spatial transferability to the BAAQMD background station 2.70 km away, producing guidance applicable to fenceline sensor deployments across the Bay Area.

Measurable Outcome	Indicator(s)
FEM reference monitoring system (Met One BAM-1022) and co-located PurpleAir PA-II-SD sensors operational at BCAMP fenceline station (2970 Bayshore Rd) with ≥90% instrument uptime and ≥75% valid data completeness per month throughout the 24-month monitoring period.	(a) Monthly % uptime of BAM-1022 FEM monitor; (b) % of valid hourly $PM_{2.5}$ observations per month; (c) PA-II-SD channel A/B divergence rate (flag when >70% or >5 µg/m³)
Site-specific $PM_{2.5}$ correction factors developed and validated for BCAMP PurpleAir sensor network, achieving $R^2 \geq 0.70$ and RMSE ≤ 7 µg/m³ vs. BAM-1022 FEM reference on an annual basis.	(a) R^2 between corrected PA-II and BAM-1022 (monthly and annual); (b) RMSE (µg/m³) between corrected PA-II and BAM-1022; (c) Mean bias (µg/m³ and %); (d) CV (precision, A vs. B channels) ≤ 30%
Corrected $PM_{2.5}$ data delivered to BCAMP community-facing data platforms, with site-specific correction factors applied to all BCAMP PurpleAir sensors within 18 months of project start.	(a) Date of initial EPA national correction applied to BCAMP sensors; (b) Date of site-specific correction factor applied to BCAMP network; (c) Number of BCAMP PurpleAir sensors receiving corrected data; (d) Community data platform updated with corrected values and comparison visualization
2-year open-access archive of 2-minute resolution $PM_{2.5}$ and meteorological collocated data from the BCAMP fenceline site deposited in a public repository with DOI assigned.	(a) Number of valid 2-minute records archived (target: ≥75% completeness); (b) DOI assigned to public dataset archive; (c) Correction model code deposited to public GitHub repository under open-source license

Quality Assurance Project Plan (QAPP), Standard Operating Procedures (SOPs), and transferable correction methodology guide completed and distributed to BAAQMD and regional monitoring organizations; peer-reviewed manuscript submitted.	(a) QAPP approved by BAAQMD (Month 4); (b) Number of SOPs completed and operational; (c) Correction methodology guide distributed to ≥3 regional monitoring organizations; (d) Peer-reviewed manuscript submitted to journal (target Month 22)
Benicia fenceline community residents and BCAMP stakeholders meaningfully engaged in project implementation, with ≥2 community briefings per year and quarterly data summaries delivered to the AB 617 Community Steering Committee.	(a) Number of community briefings held per year (target ≥2/year); (b) Number of community residents attending briefings; (c) Number of quarterly AB 617 Steering Committee data summaries delivered; (d) Community feedback documented and incorporated into annual project review

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. FEM Monitoring System Operational	A. Equipment procured and installed at BCAMP site	1. Procure Met One BAM-1022, meteorological station, PurpleAir PA-II-SD sensors (×4), reference flow/pressure calibrator, and ancillary equipment	BCAMP	PROJECT CONTRACTOR	Month 5
		2. Install BAM-1022, met station, and PA-II-SD sensors at 2970 Bayshore Rd; complete site integration and instrument commissioning	BCAMP	PROJECT CONTRACTOR	Month 6
		3. Program DAS for 2-minute data acquisition; verify data transmission to central server; confirm SD card local backup on all PA-II-SD units	BCAMP	PROJECT CONTRACTOR	Month 6
	B. QAPP approved and monitoring operations initiated	1. Draft QAPP per EPA QA/R-5 requirements; submit to BAAQMD for review and approval	BCAMP	BAAQMD	Month 4

		2. Complete SOPs for BAM-1022 operation, PA-II maintenance, DAS management, and Level 1–5 QA/QC procedures	BCAMP	PROJECT CONTRACTOR	Month 6
		3. Begin full 24-month continuous monitoring operations; initiate Level 1 (daily) and Level 2 (weekly) QA protocols	BCAMP	PROJECT CONTRACTOR	Month 7
	C. 24-month monitoring record maintained and validated	1. Execute monthly Level 3 QA field inspections; replace BAM-1022 filter tape and consumables; maintain site logbook	BCAMP	PROJECT CONTRACTOR	Monthly
		2. Conduct quarterly Level 4 flow audits and instrument performance checks; external QA audit annually	BCAMP	PROJECT CONTRACTOR	Quarterly
		3. Conduct annual Level 5 instrument calibration audit; complete data validation for each program year	BCAMP	BAAQMD	Month 12 & 24
2. Site-Specific Correction Factors Validated	A. Year 1 dataset compiled; EPA national correction applied as baseline	1. Compile Year 1 collocated dataset; apply EPA national correction (Barkjohn et al. 2021) as interim correction to BCAMP sensors	BCAMP	PROJECT CONTRACTOR	Month 13
		2. Generate monthly performance statistics (R^2, RMSE, mean bias) for EPA national correction vs. BAM-1022; document in progress reports	BCAMP	PROJECT CONTRACTOR	Monthly

		3. Document Year 1 correction performance and preliminary findings in Year 1 annual progress report submitted to BAAQMD	BCAMP	PROJECT CONTRACTOR	Month 14
	B. Site-specific correction models developed and cross-validated	1. Develop site-specific OLS and humidity-stratified regression correction models using Year 1 data as training dataset	BCAMP	PROJECT CONTRACTOR	Month 18
		2. Develop and evaluate Random Forest machine learning correction model using PA channels A/B, RH, temperature, and season as features	BCAMP	PROJECT CONTRACTOR	Month 20
		3. Cross-validate all correction models against Year 2 withheld data; select optimal methodology based on R^2, RMSE, and robustness	BCAMP	PROJECT CONTRACTOR	Month 22
	C. Final correction protocol documented with spatial transferability evaluated	1. Document final correction factor models with performance statistics, uncertainty bounds, and recommended application guidance	BCAMP	PROJECT CONTRACTOR	Month 23
		2. Evaluate spatial transferability of fenceline correction factors to BAAQMD background station (800 E 2nd St, 2.70 km) as independent test	BCAMP	PROJECT CONTRACTOR	Month 23

3. Corrected Data Delivered to BCAMP Platforms	A. Interim correction applied to BCAMP sensors at project start	1. Apply EPA national correction equation as interim measure to all BCAMP PurpleAir sensors upon monitoring initiation	BCAMP	PROJECT CONTRACTOR	Month 7
		2. Coordinate technical requirements for corrected data integration into community data portal and notification systems	BCAMP	PROJECT CONTRACTOR	Month 10
		3. Develop plain-language community explanation of correction methodology and its significance for fenceline air quality monitoring	BCAMP	PROJECT CONTRACTOR	Month 12
	B. Site-specific correction applied; community data platform updated	1. Apply validated site-specific correction factors to all BCAMP PurpleAir sensors upon model validation (Month 18)	BCAMP	PROJECT CONTRACTOR	Month 18
		2. Update BCAMP community data platform with corrected $PM_{2.5}$ values and corrected vs. uncorrected comparison visualization	BCAMP	PROJECT CONTRACTOR	Month 18
		3. Publish plain-language correction methodology summary for community use on BCAMP website and communications channels	BCAMP	PROJECT CONTRACTOR	Month 20
	C. Corrected data delivery sustained and packaged for post-grant BCAMP operations	1. Conduct monthly review of correction factor performance; update corrections if seasonal drift or sensor aging detected	BCAMP	PROJECT CONTRACTOR	Monthly

		2. Establish community notification protocols for elevated $PM_{2.5}$ events (AQI-based thresholds) using validated corrected data	BCAMP	PROJECT CONTRACTOR	Month 20
		3. Package final corrected dataset and operational guidance document for BCAMP continued PA-II network operation post-grant	BCAMP	PROJECT CONTRACTOR	Month 24
4. 2-Year Open-Access Data Archive with DOI	A. Data management infrastructure established	1. Establish automated data pipeline from DAS to local archive and cloud server; configure 24-hour backup cycle for all instrument data streams	BCAMP	PROJECT CONTRACTOR	Month 6
		2. Configure data quality flagging system per QAPP; archive raw 2-minute data alongside validated Level 3 data products	BCAMP	PROJECT CONTRACTOR	Month 7
	B. Year 1 validated dataset submitted to public repository	1. Complete Level 3 QA validation of full Year 1 collocated dataset (BAM-1022, PA-II, meteorological)	BCAMP	PROJECT CONTRACTOR	Month 14
		2. Submit Year 1 validated data archive to public repository with complete metadata and data quality flags	BCAMP	PROJECT CONTRACTOR	Month 14
		3. Submit Year 1 progress report to BAAQMD documenting monitoring operations, QA results, and preliminary correction factor performance	BCAMP	PROJECT CONTRACTOR	Month 24

	C. Complete 2-year dataset archived with DOI; code repository published	1. Complete Level 3 validation of full Year 2 dataset; produce final quality-assured 2-year collocated archive	BCAMP	PROJECT CONTRACTOR	Month 24
		2. Submit complete 2-year open-access archive to public repository; assign final DOI; retain data for minimum 5 years post-project	BCAMP	PROJECT CONTRACTOR	Month 24
5. QAPP, SOPs, and Correction Methodology Guide Published	A. QAPP and SOPs completed; QA operations begun	1. Draft comprehensive QAPP per EPA QA/R-5 including site description, DQOs, Level 1–5 QA protocols, and corrective action procedures	BCAMP	PROJECT CONTRACTOR	Month 6
		2. Complete SOPs for BAM-1022, PA-II sensor maintenance, DAS operations, data validation, and field safety	BCAMP	PROJECT CONTRACTOR	Month 7
		3. Initiate Level 1–5 QA operations per approved QAPP; document all activities in site logbook and data management system	BCAMP	PROJECT CONTRACTOR	Month 20
	B. Correction methodology guide drafted and peer-reviewed	1. Draft transferable QA/QC and correction methodology guide for regional monitoring organizations; include worked examples from Benicia dataset	BCAMP	PROJECT CONTRACTOR	Month 22
		2. Submit draft correction methodology guide for technical peer review by BAAQMD, external air quality experts, and BCAMP community reviewers	BCAMP	PROJECT CONTRACTOR	Month 22

		3. Finalize and submit methodology guide on correction methodology and performance to BAAQMD	BCAMP	PROJECT CONTRACTOR	Month 24
	C. Final report and deliverables distributed to stakeholders	1. Submit final project report to BAAQMD with all data, methods, results, and recommendations for future monitoring programs	BCAMP	PROJECT CONTRACTOR	Month 24
		2. Distribute finalized correction methodology guide to BAAQMD, regional air districts, and BCAMP partner organizations	BCAMP	PROJECT CONTRACTOR	Month 24
6. Community Engagement (≥2 Briefings/Year)	A. Year 1 community engagement completed	1. Host minimum 2 Year 1 community briefings for Benicia residents presenting monitoring setup, initial data, and $PM_{2.5}$ findings	BCAMP	PROJECT CONTRACTOR	TBD
		2. Deliver quarterly $PM_{2.5}$ data summaries and project status updates to BAAQMD	BCAMP	PROJECT CONTRACTOR	Quarterly
		3. Collect Year 1 community feedback on data needs, communication formats, and monitoring priorities; document in Year 1 report	BCAMP	PROJECT CONTRACTOR	Month 12
	B. Year 2 community engagement completed	1. Host minimum 2 Year 2 community briefings presenting correction factor results, validated data, and community air quality implications	BCAMP	PROJECT CONTRACTOR	TBD

		2. Continue quarterly $PM_{2.5}$ data summaries to BAAQMD; present correction methodology and outcomes	BCAMP	PROJECT CONTRACTOR	Quarterly
		3. Incorporate Year 2 community feedback into final project deliverables, data presentation formats, and community-facing summary documents	BCAMP	PROJECT CONTRACTOR	Month 24
	C. Community capacity built for ongoing corrected data use post-grant	1. Train BCAMP members on interpreting corrected PA-II sensor performance metrics, QA/QC flags, and correction factor uncertainty	BCAMP	PROJECT CONTRACTOR	Month 22
		2. Document BCAMP operational guidelines for continued PA-II network operation using validated correction factors after grant term	BCAMP	PROJECT CONTRACTOR	Month 24
		3. Present final project outcomes at public community meeting in Benicia; distribute plain-language summary report to fenceline residents	BCAMP	PROJECT CONTRACTOR	Month 24

Project Name: BCAMP Station Upgrade

Bay REPAIR
Local Community Benefits Fund – Round 1
Instruction #9: Additional Documentation

The BCAMP Board of Directors voted unanimously to apply for the proposed Bay Repair Seed Grant to upgrade PM2.5 monitoring at the BCAMP air monitoring station.

BCAMP BOD Special Meeting April 20,2026 10:30 AM Virtual

Present: David Lindsay, Kathy Kerridge, Nancy Lund, Marilyn Bardet

Absent Pat Toth Smith

Action Item:

It was moved and seconded (Kerridge,Lindsay) that the Board approve the application for a Bay Repair Seed Grant to upgrade PM2.5 monitoring at the BCAMP air monitoring station.

The motion passed 4-0.

Bay Area Air District
CLEAN AIR FOR ALL

Benicia Seed
Fresh Air Vallejo Application

Local Community Benefits Fund – Round 1
Project Narrative

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Benicia_#26LCB74_EJ_Advisory_Group
Lead Applicant Name	Fresh Air Vallejo
Project Location	Benicia (Vallejo)
Overall Funding Request	$100,000
Grant Term Request	2 Year
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	
Project Lead	
Project Location	
Project Funding Request	

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

This proposed project represents a direct and logical next step following EJ4Vallejo.

Fresh Air Vallejo (FAV) proposes to build upon its long-standing environmental justice (EJ) leadership in Vallejo by establishing and sustaining a community-led Environmental Justice Advisory Group (EJAG) that will strengthen resident advocacy for and implementation of policies related to pollution, climate resilience, and public health. Beginning in 2027, over a two-year period, FAV will: recruit and support residents and community-based organizations most impacted by pollution and health inequities; facilitate their ongoing meetings; provide leadership development and advocacy training, and; establish the infrastructure necessary for a sustainable, independent EJAG. The proposed EJAG will create a durable mechanism for organized community voice, oversight, advocacy, and participation designed to monitor and inform implementation of Vallejo's EJ policies. This will result in increased community oversight and government accountability as EJAG helps to monitor and inform implementation of:

- Vallejo's Environmental Justice Element;
- SB 1000 requirements;
- local pollution reduction commitments;
- climate resilience initiatives;
- transportation and land use decisions affecting disadvantaged communities, and;
- Just Transition priorities.

FAV has worked for more than a decade at the center of Vallejo's environmental justice movement and has consistently organized residents, elevated community concerns, and pushed public agencies and decision-makers toward stronger environmental accountability. FAV emerged over a decade ago as an all-volunteer grassroots campaign opposing a proposed slag cement plant and port in the South Vallejo neighborhood, a Disadvantaged Community that is already disproportionately burdened by industrial pollution, truck traffic, poor air quality, some of the worst childhood asthma rates in California, and other related social and health inequities. Working alongside residents, local leaders, environmental advocates, and neighborhood organizations, FAV stopped the project and prevented the introduction of an additional major pollution source into one of Vallejo's already overburdened communities. That campaign demonstrated both the power of organized resident leadership and the critical importance of sustained community-based environmental advocacy which FAV has provided to Vallejo since then. The proposed project directly advances FAV's long-term vision for Vallejo: a city where pollution is actively reduced and prevented, where environmental justice policies are implemented and enforced, where frontline communities meaningfully shape environmental decision-making, and where the health and well-being of all residents — particularly low-income communities and communities of color disproportionately burdened by pollution — are prioritized.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This project aligns strongly with the Local Community Benefit Fund strategies to "Reduce air pollution and improve health outcomes" and "Build economic resilience for a just transition." Vallejo communities experience substantial cumulative environmental burdens associated with freeway traffic, industrial activity, goods movement corridors, refinery impacts, poor air quality, legacy contamination, and climate vulnerability. Residents in many neighborhoods — particularly South Vallejo and other disadvantaged communities — experience disproportionate exposure to particulate pollution, diesel emissions, toxic contaminants, industrial dust, and transportation-related pollution that contribute to elevated asthma rates, respiratory illness, cardiovascular disease risk, and broader environmental health inequities. Vallejo has some of the highest childhood asthma rates in California, and residents repeatedly identify air quality and related health impacts as among their most urgent concerns.

For more than a decade, Fresh Air Vallejo has organized around these conditions and demanded stronger environmental accountability and public health protections. FAV successfully opposed a proposed slag cement facility and port in South Vallejo that would have introduced significant additional truck traffic, particulate pollution, and industrial impacts into an already overburdened community. FAV also advocated for accountability related to dust and particulate pollution associated with a local unpermitted cement grinding operation that affected nearby disadvantaged neighborhoods, pushed for greater transparency regarding environmental conditions and cleanup activities on Mare Island, and consistently elevated concerns regarding cumulative pollution burdens and related health impacts affecting Vallejo residents. Through this work, FAV has developed deep expertise in connecting environmental conditions, air pollution exposure, and public health impacts — particularly asthma and respiratory illness — while helping residents advocate effectively for stronger protections and enforcement.

Most recently, through the EJ4Vallejo initiative, FAV organized residents, public health advocates, community-based organizations, and technical partners around implementation of Senate Bill 1000 and development of Vallejo's first Environmental Justice Element. Through extensive outreach, workshops, surveys, listening sessions, and public engagement efforts, residents consistently emphasized the need for stronger accountability related to pollution reduction, public and environmental health protections, improvement in the related social determinants of health, climate resilience, and implementation of environmental justice commitments. Communities expressed frustration that while environmental justice policies formally exist, residents often lack sustained mechanisms to monitor implementation, advocate for enforcement, influence planning decisions, and ensure that environmental and public health priorities remain central in local policy discussions.

This project directly responds to those concerns by establishing an independent, community-led Environmental Justice Advisory Group (EJAG) capable of providing long-term oversight, accountability, and organized resident representation. The EJAG will strengthen civic infrastructure and resident leadership focused on monitoring and informing implementation of:

- Vallejo's Environmental Justice Element;
- SB 1000 requirements;
- local pollution reduction commitments;
- climate resilience initiatives;
- transportation and land use decisions affecting disadvantaged communities, and;
- Just Transition priorities.

The project will create sustained opportunities for residents most impacted by pollution and related social and health inequities to shape environmental decisions and actions affecting their neighborhoods and advocate for stronger implementation of local, regional, and statewide environmental justice protections.

The project also strongly advances the grant program's "just transition" goals. Vallejo's working-class and frontline communities have historically borne disproportionate environmental burdens associated with industrial activity, transportation infrastructure, and fossil fuel-related systems while often receiving limited economic or health benefits in return. The EJAG will provide a platform for residents to advocate for healthier and more equitable economic development, cleaner industries, climate resilience investment, and workforce pathways connected to environmental restoration, clean energy, and community health. The project recognizes that reducing pollution and improving public health must occur alongside economic transition strategies that protect vulnerable residents and ensure that disadvantaged communities benefit from cleaner and more sustainable forms of economic development.

By creating a durable, organized, and community-led environmental justice structure, the project will strengthen long-term resident power and civic participation while helping ensure that environmental justice policies translate into measurable improvements in air quality, pollution reduction, asthma and respiratory health outcomes, climate resilience, environmental accountability, and quality of life for Vallejo's most pollution-burdened communities.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

This project will serve residents across Vallejo, with a particular focus on neighborhoods experiencing the greatest cumulative environmental burdens and related health inequities. FAV will prioritize outreach, engagement, leadership development, and representation in South Vallejo, Central Vallejo, the Highway 29, Highway 37, and Interstate 80 corridors,

and neighborhoods located adjacent to industrial facilities, transportation corridors, and goods movement routes. FAV will conduct meetings, workshops, and engagement activities at accessible community-based locations throughout Vallejo, including partner organization sites, schools, community centers, neighborhood gathering spaces, and other trusted public venues. FAV's office and primary coordination activities are based in Vallejo, and the organization maintains long-standing relationships throughout the city's environmental justice communities.

FAV will prioritize participation from census tracts designated as disadvantaged communities. Because CalEnviroScreen 5.0 remains in draft form, FAV references disadvantaged communities identified through SB 535 and CalEnviroScreen 4.0. The most heavily impacted communities lie in Southwest Vallejo along the Mare Island Strait, adjacent to the site of the nation's oldest western naval shipyard. Residents in these neighborhoods experience layered, and cumulative environmental burdens associated with Interstate 80, Interstate 780, Highway 29, refinery-related pollution from industrial facilities located along the strait, and the continuing legacy of contamination associated with Mare Island. Residents consistently raise concerns regarding pollution in air, dust, soil, and water connected both to current industrial activity and historical contamination. These neighborhoods also experience elevated asthma and respiratory illness rates associated with cumulative exposure to particulate pollution, diesel emissions, industrial activity, and poor regional air quality.

Additional disadvantaged communities lie along the Highway 37 corridor, a major regional transportation artery now under consideration for substantial expansion associated with climate adaptation, transportation infrastructure, and regional growth pressures. Residents in these communities already experience significant exposure to transportation-related air pollution, diesel emissions, and climate vulnerability associated with flooding and sea level rise. Decisions related to Highway 37 expansion, land use, industrial activity, and regional growth will have long-term implications for pollution exposure, environmental health, displacement pressures, economic equity, and climate resilience in Vallejo's frontline communities.

The project builds directly upon relationships, partnerships, and community networks developed through FAV's EJ4Vallejo initiative and years of environmental justice, civic engagement, and community capacity-building work in Vallejo. Through this work, FAV has cultivated strong relationships with residents, grassroots organizations, public agencies, environmental advocates, and neighborhood leaders across Vallejo and the broader region. FAV already works extensively in many of these neighborhoods through ongoing environmental justice advocacy, outreach, education, and public engagement efforts. The organization will continue to engage residents through culturally responsive, multilingual, and accessible outreach strategies designed to ensure that residents most impacted by pollution and related health inequities can meaningfully participate in the Environmental Justice Advisory Group and broader environmental decision-making processes.

Census Tract	CalEnviroScreen 4.0 Score	CalEnviroScreen 4.0 Percentile	CalEnviroScreen 4.0 Percentile Range
6095250701	65.12	97.87	95-100% (highest scores)
6095250900	57.13	93.97	90-95%
6095251802	52.66	90.65	90-95%
6095251901	42.35	78.52	75-80%
6095251000	41.93	77.96	75-80%
6095251200	41.92	77.92	75-80%
6095251902	41.76	77.74	75-80%
6095251500	41.33	77.16	75-80%
6095251600	40.13	75.18	75-80%

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

Community engagement is central to both EJ4Vallejo and this proposed project. Over multiple years, FAV has worked closely with residents, community-based organizations, advocacy groups, and local stakeholders to identify environmental justice priorities and barriers affecting Vallejo communities. Through EJ4Vallejo, FAV conducted extensive outreach that included resident surveys, listening sessions, workshops, interviews, public meetings, one-on-one conversations, multilingual outreach, and collaborative meetings with organizations serving communities disproportionately impacted by pollution and health inequities.

FAV also engaged residents and community stakeholders in discussions related to Vallejo's Environmental Justice Element, local land use planning, transportation impacts, air quality concerns, climate resilience, and cumulative environmental burdens. Emphasis was placed on elevating the voices of communities historically underrepresented in local planning and policy processes, including low-income residents, communities of color, youth, seniors, and linguistically diverse populations.

This proposed project emerged directly from these engagement efforts and from community concerns that Vallejo lacks an ongoing, independent structure through which residents can continue to advocate for environmental justice priorities, monitor implementation of local commitments, and participate meaningfully in decision-making after EJ4Vallejo concludes.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition*

challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.

This project addresses the need for sustained community leadership, advocacy infrastructure, and accountability mechanisms related to environmental justice in Vallejo. Through EJ4Vallejo and FAV's broader community engagement work, residents consistently identified concerns related to air pollution, traffic-related emissions, industrial pollution, cumulative environmental burdens, asthma and respiratory illness, inequitable land use decisions, climate vulnerability, and limited community influence over policy implementation.

For years, FAV has helped elevate community concerns when harmful policies or poorly implemented plans threatened Vallejo neighborhoods. While these efforts produced important successes, residents continue to need a larger, more formal, and broadly representative structure capable of addressing the scale and complexity of Vallejo's environmental and related health challenges.

Many of the communities most impacted by pollution and health inequities have historically lacked consistent access to decision-making processes and the long-term civic infrastructure necessary to advocate effectively for environmental protections and equitable investment. Although environmental justice commitments exist at the state and local levels, residents repeatedly expressed concern that implementation and accountability remain limited without organized community oversight and sustained advocacy.

The proposed EJAG directly responds to these needs by creating a durable, community-led structure focused on environmental justice advocacy, resident leadership development, and ongoing engagement with local planning and policy processes. The project will particularly benefit residents in pollution-burdened and historically underserved Vallejo neighborhoods by increasing opportunities for meaningful participation in decisions affecting environmental health and quality of life.

Measurable outcomes will include establishment of the EJAG and governance structure; participation by residents and community-based organizations; leadership and advocacy training activities; community meetings and engagement efforts; recommendations and input provided to local planning and policy processes; and increased resident participation in environmental justice decision-making. Over time, these outcomes will strengthen community capacity to advocate for policies and investments that reduce pollution exposure, improve public health, and advance environmental justice in Vallejo.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members.*

Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.

FAV will use ongoing, community-centered engagement and leadership development strategies to ensure that residents remain informed, empowered, and actively involved throughout project implementation. Building on the relationships, outreach networks, facilitation methods, and trust developed through EJ4Vallejo and years of environmental justice organizing in Vallejo, FAV will conduct regular community meetings, workshops, listening sessions, trainings, and public presentations focused on project implementation, environmental justice priorities, pollution and health impacts, and opportunities for resident leadership and advocacy.

FAV will ground engagement activities in environmental justice organizing principles, popular education methods, empowerment-based facilitation, and best practices in adult education for diverse community audiences. Rather than relying on highly technical or exclusionary meeting formats, FAV will use accessible, graphic, interactive, and participatory facilitation techniques designed to build shared understanding, strengthen confidence, and increase resident capacity to engage effectively in environmental decision-making processes. Meetings and trainings will incorporate visual tools, mapping exercises, storytelling, small-group dialogue, multilingual materials, interactive exercises, and community-generated knowledge to create welcoming and inclusive spaces for participation.

FAV recognizes that many residents in Vallejo's disadvantaged communities have historically experienced exclusion, disinvestment, limited access to technical information, language barriers, and distrust of institutional planning processes. Many residents also bring lived experience, cultural knowledge, leadership potential, and deep understanding of neighborhood environmental conditions that traditional planning and policy processes often overlook or undervalue. The project therefore emphasizes relationship-building, mutual learning, and leadership development rather than one-way information sharing. FAV will work to ensure that residents most impacted by pollution, asthma, respiratory illness, transportation burdens, industrial activity, climate vulnerability, and related health inequities can meaningfully shape the Environmental Justice Advisory Group (EJAG) and broader environmental policy discussions affecting their communities.

Outreach efforts will include collaboration with trusted community-based organizations, neighborhood leaders, faith-based groups, youth leaders, environmental advocates, and public health partners. FAV will use multilingual and culturally responsive communication strategies designed to reach historically underrepresented populations, including low-income residents, communities of color, immigrants, linguistically diverse residents, seniors, and youth. Outreach methods will include social media, printed multilingual materials, direct outreach through trusted networks, community events, workshops, one-on-one conversations, and participation in neighborhood-based gatherings and partner meetings.

The EJAG itself will function as an ongoing mechanism for continuous community engagement, accountability, and leadership development. Residents and community stakeholders will have repeated opportunities to provide input through facilitated discussions, surveys, workshops, public comment opportunities, listening sessions, and direct engagement with EJAG members and FAV staff. FAV will encourage participants not only to attend meetings, but also to develop advocacy, facilitation, outreach, and leadership skills that strengthen long-term community capacity and civic participation.

FAV will document and regularly review community feedback to identify emerging concerns, participation gaps, barriers to access, and opportunities to strengthen inclusion and effectiveness. The organization will continuously adapt engagement strategies based on resident feedback and participation patterns. This iterative and community-responsive approach will help ensure that the project remains grounded in resident priorities, responsive to changing community conditions, and effective in building durable environmental justice leadership and civic infrastructure in Vallejo's frontline communities.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

FAV proposes to build upon its extensive environmental justice organizing, advocacy, and community engagement work in Vallejo by establishing and sustaining a standing, independent, community-led Environmental Justice Advisory Group (EJAG). This project represents a logical next step following years of relationship-building in Vallejo communities and completion of the EJ4Vallejo initiative, which focused on environmental justice data capacity, resident education, outreach, and community engagement related to the City's Environmental Justice Element and other local planning efforts.

The overall vision of the project is to create durable civic infrastructure that strengthens resident leadership, advocacy, accountability, and participation in environmental justice decision-making long after EJ4Vallejo concludes. The EJAG will elevate the voices of residents most impacted by pollution, health inequities, climate vulnerability, and inequitable land use decisions, while helping ensure implementation of environmental justice laws, local commitments, and pollution reduction strategies.

Major project components include:

• Recruitment and support of diverse community residents and community-based organizations to participate in the EJAG;
• Development of governance structures, operating procedures, and sustainability plans for the EJAG;
• Ongoing facilitation of meetings, workshops, and collaborative planning sessions;

• Resident leadership development, environmental justice education, and advocacy training;
• Community outreach and multilingual engagement activities;
• Coordination with community-based organizations, neighborhood leaders, and local stakeholders; and
• Community input and recommendations related to local environmental justice policies, planning, and implementation efforts.

Measurable outcomes will include establishment of a functioning EJAG and governance framework; increased resident participation in environmental justice planning and advocacy; leadership development and training participation; documented community engagement activities; recommendations and input provided to public agencies and planning processes; and strengthened community capacity to advocate for policies and actions that reduce pollution exposure and improve public health outcomes.

FAV will serve as the lead entity responsible for project coordination, facilitation, outreach, training, administration, and overall implementation. Community-based partners and residents engaged through EJ4Vallejo and related environmental justice efforts will support outreach, resident engagement, cultural and linguistic accessibility, and collaborative leadership development activities.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan*

[See Measurable Outcomes Plan PDF]

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The total proposed project budget is $100,000 over a two-year period (2027–2028) to support establishment, facilitation, and long-term sustainability of a community-led Environmental Justice Advisory Group in Vallejo. The budget builds upon the relationships, outreach infrastructure, and environmental justice leadership developed through FAV's EJ4Vallejo initiative and years of community engagement work in Vallejo.

Most project costs are allocated to direct project implementation, including support for two multi-skilled part-time contracted staff who will execute project management, materials design, community EJ education, coordination, facilitation, resident outreach, community engagement, leadership development, data collection, and administrative functions. Examples of specific activities they will lead or support include organizing co-design and facilitation of EJAG meetings with partners and residents; conducting resident leadership and environmental justice advocacy trainings; supporting multilingual outreach and social media and group communications; coordinating schedules and logistics; and developing governance and sustainability structures for the EJAG. The work will be also supported by a specialized evaluation consultant and volunteers.

The project budget also includes participant supports and accessibility investments designed to reduce barriers to participation for residents facing transportation, childcare, language, scheduling, or economic challenges. These direct project costs include: meeting and workshop community engagement expenses such as translation and interpretation services; space rentals; stipends for EJAG capacity building participation, and; a modest capacity-building set-aside for local educational speakers.

The budget also includes indirect administrative costs and a modest contingency allocation consistent with program guidelines.

The proposed budget is intentionally structured to maximize direct community benefit and strengthen long-term community capacity to advance environmental justice advocacy, accountability, pollution reduction efforts, and improved public health outcomes in Vallejo's most impacted communities.

[See Project Budget Excel File]

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project is strongly aligned with local, regional, and statewide environmental justice, climate resilience, public health, and community engagement initiatives. The project advances goals related to environmental justice, climate adaptation, emissions reduction, public participation, and equitable planning identified in a range of existing plans and frameworks.

At the regional level, the project aligns closely with the Bay Area Air Quality Management District Community Health Protection Program (AB 617), which emphasizes reducing exposure to air pollution in disproportionately impacted communities through community-centered planning, emissions reduction strategies, public participation, and collaborative decision-making.

The project also aligns with Bay Area Air Quality Management District goals to address cumulative air pollution exposure, climate vulnerability, and health inequities in communities disproportionately burdened by environmental hazards. Vallejo residents experience significant environmental burdens associated with freeway traffic, industrial activity, goods movement, refinery impacts, and legacy contamination related to the former Mare Island Naval Shipyard.

At the county level, the project aligns with the Solano County Climate Action Plan, which identifies the need for coordinated local action to address greenhouse gas emissions, public health risks, climate adaptation, transportation impacts, renewable energy development, and community engagement.

The project is additionally consistent with California's broader climate and environmental justice policy framework, including:

- California Global Warming Solutions Act of 2006
- Senate Bill 375
- Senate Bill 1000
- California Climate Adaptation and Resilience initiatives
- California Environmental Justice goals focused on meaningful community participation and reduction of cumulative pollution burdens in disadvantaged communities

The project directly supports implementation of environmental justice planning efforts underway in Vallejo, including public engagement related to the City's Environmental Justice Element and broader General Plan processes. More broadly, the project and the network maintained by FAV will contribute to regional resilience and sustainability priorities associated with climate adaptation, sea level rise planning, transportation planning related to the Highway 37 expansion, public health equity, and equitable community development throughout Solano County and the immediate North Bay region.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The project will be led by FAV leadership and [redacted], an experienced nonprofit and collaborative leader with more than 30 years of experience managing and implementing complex community-based initiatives involving environmental justice, public health, community engagement, data democratization, capacity building, facilitation, strategic planning, and cross-sector collaboration.

[redacted] has led numerous projects funded by foundations, public agencies, and regional collaboratives and has extensive experience coordinating multi-stakeholder initiatives involving residents, nonprofits, government agencies, and institutional partners. She was part of the original coalition that became FAV and introduced the organization to the field of environmental justice more than a decade ago.

FAV and [redacted] have substantial experience successfully organizing and facilitating environmental justice advocacy and community engagement efforts in Vallejo. They successfully advocated to halt a proposed slag cement facility and port project in South Vallejo and have continued working with residents, environmental organizations, public health advocates, and community-based partners on issues related to pollution, land use, transportation, climate resilience, and environmental health in Vallejo and other areas of Solano County.

Most recently, through EJ4Vallejo, [redacted] managed organizational partnerships, outreach, resident engagement, environmental justice education, data collection, public

workshops, multilingual communications, and community participation efforts related to Vallejo's Environmental Justice Element and related planning initiatives.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

FAV, with [redacted] serving as Project Lead, will oversee all aspects of project implementation, including coordination, community engagement, facilitation, outreach, leadership development, reporting, evaluation, and sustainability planning for the proposed EJAG.

The project will be managed through a collaborative and community-centered implementation approach supported by two additional contracted staff members. The project builds upon FAV's existing EJ4Vallejo partnerships and engagement infrastructure while developing sustainable leadership systems for the long term.

The Project Lead will provide strategic direction, project management, facilitation training and oversight, partnership coordination, grant management, compliance reporting, and more. Additional project support will include highly skilled, contracted implementation staff to assist with coordination, community outreach, multilingual communications, social media, participant support, logistics, documentation, and measurable outcomes tracking.

Over two years, the project is anticipated to annually utilize approximately:

- 0.20 FTE Project Director / Lead Facilitator
- 0.30 FTE Coordination, Community Outreach, and Engagement Support

These two multi-skilled part-time contracted staff will provide the "glue" for this effort, executing project management, materials design, community EJ education, coordination, facilitation, resident outreach, community engagement, leadership development, data collection, and administrative functions. Examples of specific activities they will lead or support include organizing co-design and facilitation of EJAG meetings with partners and residents; conducting resident leadership and environmental justice advocacy trainings; supporting multilingual outreach and social media and group communications; coordinating schedules and logistics; and developing governance and sustainability structures for the EJAG. The work will be also supported by a specialized evaluation consultant and multiple FAV volunteers. Additional short-term consultant support will be utilized for evaluation support as noted in the budget.

The project will also leverage FAV's substantial in-kind community relationships, partnerships, volunteer leadership, and engagement networks developed through FAV's prior environmental justice work and the EJ4Vallejo initiative.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*
    N/A - Not Applicable

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*
    N/A - Not Applicable

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*
    N/A - Not Applicable

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*
    N/A - Not Applicable

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

The primary challenge associated with this project is not establishing an Environmental Justice Advisory Group (EJAG), but creating one that is truly representative, sustainable, and capable of exercising meaningful influence over environmental decision-making long after the grant period concludes. Many residents in Vallejo's most pollution-burdened communities face significant barriers to participation, including work schedules, transportation limitations, childcare responsibilities, language barriers, economic hardship, and understandable skepticism regarding whether community engagement

efforts lead to meaningful change. In addition, many residents have experienced years of exclusion from planning and policy processes and may not initially view participation as a productive use of their limited time.

FAV will address these challenges by building upon the trust, relationships, and community networks developed through more than a decade of environmental justice organizing and through the recent EJ4Vallejo initiative. Rather than creating a new engagement process from scratch, FAV will recruit through existing relationships with residents, neighborhood leaders, community-based organizations, faith communities, public health advocates, and environmental justice partners. The project budget includes resources to reduce participation barriers through multilingual outreach, interpretation and translation services, accessible meeting locations, virtual participation options, participant support, and culturally responsive engagement methods. FAV will also utilize popular education, graphic facilitation, and community-based leadership development approaches that recognize and build upon residents lived experience and expertise.

Another challenge involves maintaining independence and credibility while engaging constructively with public agencies and decision-makers. The purpose of the EJAG is not simply to advise government but to strengthen community voice, accountability, and implementation of environmental justice commitments. FAV will address this challenge by establishing a clear governance structure, transparent operating procedures, and community-driven priorities that allow the EJAG to collaborate with public agencies while maintaining its independence and ability to advocate on behalf of impacted communities.

A third challenge involves sustaining the EJAG beyond the grant period. Many community advisory bodies lose momentum when initial funding ends or when leadership transitions occur. FAV designed this project specifically to address that risk. Throughout the grant period, FAV will develop leadership capacity among EJAG members, implement a Train-the-Trainer model, establish governance and succession structures, cultivate partnerships, and identify future funding opportunities. The project's emphasis on leadership development and sustainability planning is intended to ensure that the EJAG becomes a lasting community institution rather than a temporary grant-funded activity.

Finally, changing political priorities, staff turnover within public agencies, and shifts in local policy agendas could affect opportunities for community influence. FAV will mitigate this risk by focusing on resident leadership, community organizing capacity, and broad-based partnerships rather than relying on any single decision-maker, agency, or planning process. By strengthening long-term community capacity and creating an organized, resident-led structure, the project will remain relevant and effective even as political and institutional conditions change.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	FAV will create a sustainable, community-led Environmental Justice Advisory Group ("EJAG") in Vallejo that strengthens resident leadership and advocacy resulting in increased governmental accountability for implementation of environmental justice policies and actions that reduce pollution exposure and improve community health outcomes

Measurable Outcome	Indicator(s)
1. A sustained and functioning, community-led Environmental Justice Advisory Group ("EJAG") is established and operating in Vallejo by the end of the grant period.	• Number of EJAG members recruited and retained • EJAG Governance structure and operating procedures completed • Number of meetings held • Participation rates • EJAG Participant feedback regarding satisfaction and inclusion • EJAG Outreach and Train-the-Trainer Curriculum
2. Residents from pollution-burdened communities increase their environmental justice knowledge, advocacy skills, leadership capacity, and participation in environmental decision-making.	• Number of residents participating in trainings and workshops • Public Engagement activities • # and percentage of participants reporting increased knowledge and understanding of EJ issues and related local planning and accountability/enforcement processes • Number of residents who report increased understanding of the link between air pollution, asthma and other linked health conditions
3. Vallejo strengthens community engagement and accountability mechanisms related to environmental justice implementation, pollution reduction, public health, and Just Transition priorities.	• Number of community recommendations developed and shared with local agencies • Participation rate of historically underrepresented communities • Meetings with decision-makers • Participant perceptions of responsiveness and accountability • Documentation of community priorities reflected in policy discussions

4. The EJAG develops the leadership, partnerships, and sustainability infrastructure necessary to continue beyond the grant period.	• Train-the-Trainer curriculum completed • Sustainability plan completed • Leadership succession structure established • Partnerships secured • Future funding opportunities identified
5. Increased Community awareness of environmental justice, pollution-related health impacts, and Just Transition opportunities increases through dissemination and shared learning activities.	• Final community convening conducted • Number of participants attending • Organizational participation • Media and outreach reach • New individuals expressing interest in future EJ work

The Distal Outcome (or "Impact") of these Outcomes work will be:
Improved opportunities and structures with which the Vallejo residents most impacted by pollution and related social and health inequities will shape environmental decisions and actions affecting their neighborhoods.

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Establish environmental Justice Advisory Group: A sustained and functioning, community-led Environmental Justice Advisory Group ("EJAG") is established and operating	A. EJAG structure and recruitment framework completed	1. Identify and recruit resident and organizational participants to EJAG with multilingual popular education-style outreach and early engagement side-by-side with social media	Fresh Air Vallejo	Community-based partners	Completion Date: Q1-Q2 2027
		2. Develop EJAG governance structure and participation guidelines	Fresh Air Vallejo	Community-based partners	Completion Date: Q2 2027
		3. Conduct EJAG orientation and education sessions	Fresh Air Vallejo	Community-based partners	Completion Date: Q2 2027
	B. EJAG meetings and operations launched	1. Facilitated monthly EJAG meetings begin	Fresh Air Vallejo	EJAG members	Completion Date: Q3 2027
		2. Develop EJAG meeting agendas and materials	Fresh Air Vallejo	EJAG members	Completion Date: Q3 2027
		3. Establish ongoing meetings and participation	Fresh Air Vallejo	EJAG members	Q3 2027–Q4 2028
	C. Sustainability plan developed	1. Launch Outreach and Train-the-Trainers Plan for maintaining a standing EJAG	Fresh Air Vallejo	Community-based partners & EJAG members	Q3 2027
		2. Refine governance and operations	Fresh Air Vallejo	Community-based partners & EJAG members	Q2–Q4 2028

2. Build Sustainable Resident Leadership and Advocacy Capacity: Residents from pollution-burdened communities increase their environmental justice knowledge, advocacy skills, leadership capacity, and participation in environmental decision-making.	A. : EJ Outreach and Train-the-Trainer curriculum developed	1.Develop workshop design and facilitation guide	Fresh Air Vallejo	EJAG members	Q2 2027
		2. Develop workshop materials	Fresh Air Vallejo	EJAG members	Q2 2027
		3.Incorporate EJ 4 Vallejo data findings	Fresh Air Vallejo	EJAG members	Q2 2027
		4. Translate and adapt materials for accessibility	Fresh Air Vallejo		Q2–Q3 2027
	B. EJ Train-the-Trainer Curriculum and Outreach Workshops Piloted	1. Begin outreach workshops and leadership trainings	Fresh Air Vallejo	Community-based partners & EJAG members	Q3 2027
		2. Facilitate community outreach and discussion sessions	Fresh Air Vallejo	EJAG members	Q3 2027–Q4 2028
		3.Implement EJAG led Train-the-Trainer sessions	EJAG members	Fresh Air Vallejo	Q1–Q4 2028
	C. Resident EJ Advocacy, Leadership, and Participation Expanded	1. Support resident participation in planning and accountability efforts and processes (local and regional)	Fresh Air Vallejo	Community-based partners & EJAG members	Q4 2027–Q4 2028
		2.Coordinate public comment and advocacy opportunities	Fresh Air Vallejo	Community-based partners & EJAG members	Q4 2027–Q4 2028
		3. Mentoring emerging leaders	Fresh Air Vallejo	Community-based partners & EJAG members	Q1–Q4 2028

3: Accountability and Policy Engagement: Vallejo strengthens community engagement and accountability mechanisms related to environmental justice implementation, pollution reduction, public health, and Just Transition priorities.	a. Community Priorities Articulated	1.Gather resident concerns and recommendations	Fresh Air Vallejo	Community-based partners & EJAG members	Q3 2027–Q1 2028
	b. Engagement with Decision Makers	2.Meet with agencies and elected officials to share priorities and insights	Fresh Air Vallejo	Community-based partners & EJAG members	Q1–Q4 2028
		3.Residents participate in planning and advising implementation processes	EJAG members	Community-based partners & FAV	Q1–Q4 2028
	c. Robust Community Accountability Operating in Vallejo EJ Space	1. Track responses to and action on community priorities and implementation	Fresh Air Vallejo	Community-based partners & EJAG members	Q2–Q4 2028
		2.Develop community recommendations docket as a living document annually to be updated as new issues and situations arise	EJAG members	Community-based partners & FAV	Q1–Q4 2028

4: Sustainability: The EJAG develops the leadership, partnerships, and sustainability infrastructure necessary to continue beyond the grant period	a. Train-the-Trainer Program Institutionalized	1.Refine curriculum design based on what worked	EJAG members	Community-based partners & FAV	Q1–Q4 2028
		2.Implement refined Train the Trainer with new participants/leaders	EJAG members	Community-based partners & FAV	Q1–Q4 2028
	b. Leadership Succession Complete	1.Revisit leadership and management structure	EJAG members	Community-based partners & FAV	Q3 2028
		2.Identify future leaders and roles	EJAG members	Community-based partners & FAV	Q3 2028
	c. Sustainability Plan in Place	1.Funding strategy	Fresh Air Vallejo	Community-based partners & EJAG members	Q3 2028
		2.Partnership commitments	Fresh Air Vallejo	Community-based partners & EJAG members	Q3–Q4 2028
		3.Final sustainability plan approved by EJAG and partners	Fresh Air Vallejo	Community-based partners & EJAG members	Q4 2028

5. Increased Community awareness of environmental justice, pollution-related health impacts, and Just Transition opportunities increases through dissemination and shared learning activities.	a. Planning & preparation complete	1. Design capstone 2028 EJ community convening event to share EJAG experience and build further sustainability and visibility	Fresh Air Vallejo	Community-based partners & EJAG members	Q3 2028
		2. Recruit partners	Fresh Air Vallejo	Community-based partners & EJAG members	Q3 2028
		3.Recruit speakers	Fresh Air Vallejo	Community-based partners & EJAG members	Q3 2028
		4.Prepare accessible public facing educational material summarizing local EJ issues and lessons learned through EJAG	Fresh Air Vallejo	Community-based partners & EJAG members	Q3-Q4 2028-
	b. Event implemented	1. Conduct final 2028 EJ community convening event, generating broader-based support for EJ and Just Transition	Fresh Air Vallejo	Community-based partners & EJAG members	Q4 2028
	c. Dissemination	1. Educate public on Climate Resilience, EJ strategies by sharing lessons learned and outcomes through event participation and resulting multi-channel media dissemination	Fresh Air Vallejo	Community-based partners & EJAG members	Q4 2028
		2.Recruit additional residents of Vallejo and allies to participate in the EJ work and sustain EJAG	Fresh Air Vallejo	Community-based partners & EJAG members	Q4 2028

Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Family Harvest Farm – Economic Resilience and Public Health Through Workforce Development
Lead Applicant Name	Family Harvest Farm, a program of John Muir Land Trust
Project Location	Pittsburg, CA
Overall Funding Request	$200,000
Grant Term Request	2 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	
Project Lead	
Project Location	
Project Funding Request	

STRATEGY ALIGNMENT (10 points)

1. ***Provide a short summary (1-2 paragraphs) that outlines this project.***

   Family Harvest Farm operates a workforce development program for transition-age foster youth based on a 3.5-acre regenerative farm in Pittsburg, serving participants from Bay Point, Pittsburg, and Concord, impacted by air pollution. The program provides paid, hands-on training through urban agriculture, where apprentices are engaged in the daily operations of a working farm while receiving technical career training, mentorship, socio-emotional support, and wraparound services. Using a cohort model of up to 16 transition-age foster youth a year, participants build practical job skills, develop strong workplace habits, create professional community, and gain real work experience that prepares them to successfully enter and remain in the workforce, all while contributing to food security for themselves and their community, all of which falls within the eligible communities boundary for this grant support. By providing paid training and clear pathways to employment, the program advances economic resilience for young people navigating the transition to adulthood while improving public health and food security in East Contra Costa County.

   The program is rooted in communities located near polluting industrial infrastructure, where residents experience disproportionate air quality impacts. Through the cultivation and distribution of fresh produce, apprentices at Family Harvest Farm increase access to healthy food while participating in work that directly benefits their communities. These activities support public health by expanding access to nutritious food and contributing to healthier local environments (including through urban greening and carbon sequestration co-benefits). Family Harvest Farm advances a just transition away from a fossil-fuel based economy while investing in the health and economic stability of communities most impacted by air pollution by combining workforce development with community-based food production and access.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
   - *Reduce air pollution and improve health outcomes*
   - *Build economic resilience for a just transition*

   Family Harvest Farm's youth apprenticeship program aligns with the Local Community Benefit Fund strategy to build economic resilience for a just transition by preparing transition-age foster youth from communities most acutely impacted by air pollution to enter and succeed in the workforce. A just transition requires

that those most affected by environmental and economic inequities are equipped with the skills, experience, and support needed to participate in and benefit from an economy no longer centered around fossil fuel.

Transition-age foster youth often enter adulthood without stable employment history, profession networks and support, or technical skills that give them the confidence and know-how to secure stable and supportive employment. Family Harvest Farm addresses these barriers by providing paid, hands-on workforce training combined with personalized guidance, mentorship, and wraparound services. Apprentices build practical skills through real work on a working urban farm while developing good workplace habits like reliability, communication, financial literacy, and time management. Through a tiered apprenticeship model and ongoing support in resume development and employment navigation, while building agricultural job skills, apprentices are prepared not only to secure employment after the program, but to sustain it throughout their career. The FHF model creates a clear pathway for apprentice toward stable living-wage careers in a just-transition economy, ensuring that young people from disproportionately impacted communities, and often with intersecting identities, are positioned to participate in our region's economic transition to net zero.

The program also aligns with the Fund's strategy to reduce air pollution and improve health outcomes through multiple co-benefits. Apprentices contribute to urban agriculture that supports local food production and distribution, increasing local access to fresh and nutritious food for free in communities disproportionately impacted by environmental burdens. In addition to the public health benefits and food security benefits, FHF contributes to urban greening, which supports improved air quality and local climate resilience. Regenerative farming practices, including soil building and composting, directly contribute to carbon sequestration. In this way, FHF delivers environmental co-benefits and builds awareness and skills that are directly supportive of careers in a sustainable and low-carbon economy.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

Family Harvest Farm is located in Pittsburg, at 1300 Power Ave, bordering Highway 4 on one side and fully within a USDA-defined food desert. The program operates on a 3.5-acre urban farm and serves communities across East Contra Costa County. The program serves transition-age foster youth from

across the region, including apprentices from Pittsburg, Bay Point, and Concord. These communities are disproportionately impacted by environmental and economic disparities.

Community impact is centered in Pittsburg, where most of the food distribution and engagement takes place. Through the free onsite farm stand alone, FHF has served more than 2,150 neighbors over the past two years, distributing 10,150 pounds of fresh produce, primarily to Pittsburg residents. Additional distribution through the program's lunch program, partnership with Mount Diablo School District, and local food kitchens and food trucks has reached more than 2,617 individuals and provided approximately 939 pounds of produce to our region.

Across all program activities, including workforce development, food distribution, and community engagement (including farm tours and workshops, and our annual Harvest Festival), FHF has served nearly 4,767 individuals and distributed nearly 14,000 pounds of produce over the past two years. This level of impact is all generated from the single 3.5-acre farm and reflects the success and central role of apprentices in delivering skills and services that directly benefit their communities.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

   Family Harvest Farm's program is grounded in ongoing, place-based engagement with communities in Pittsburg and across East Contra Costa County. Community engagement is integrated into the farm's daily operations through food distribution, workshops, volunteer opportunities, and partnerships with foster-serving organizations, which creates many points of connections for community members and apprentices.

   Community needs are identified through constant and iterative communication with apprentices, community members, and our partner organizations. The farm's free farm stand serves as a primary point of community engagement, where the staff and apprentices interact regularly with Pittsburg residents navigating food insecurity. These interactions provide ongoing insight into community priorities, including their logistical wants and needs.

Family Harvest Farm also engages the broader community through workshops and educational programming that host foster youth and school-aged children from across the region. Community and program workshops, often chosen and sometime taught by the apprentices, cover a range of topics, including the history of citrus, jam and salve making, public speaking, financial health and literacy, compost extract, nonviolent communication, and plant propagation. Over the past two years, these workshops have engaged approximately 464 participants, including foster youth who are not currently enrolled in the apprenticeship program and local schools, thereby creating an accessible entry point into the program and building connections with the larger community.

Additional engagement includes a thriving volunteer program, which saw 1,049 volunteers over the past two years, as well as tours of the farm to foster children, family members, and chaperones (173 participants). During that same time, the program coordinated school-based workshops, reaching 289 individuals, and hosted plant sales that attracted 280 community members. These efforts expand access to strengthen community and provide ongoing opportunities for feedback and participation.

Apprentices play a central role in these community engagement events, interacting directly with community members and facilitating events, including assessing feedback and integrating that information into future planning. As participants from the communities being served, they bring lived experience that informs program design and ensures that activities are responsive to the community's needs.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

   Family Harvest Farm responds to the community-identified needs in Pittsburg and across the region. These communities face overlapping challenges, including limited access to fresh food in a USDA-defined food desert, exposure to air pollution, and, for our youth apprentices, a lack of accessible and paid pathways into the workforce.

For many transition-age foster youth, the transition into adulthood is complicated by a lack of employment experience or opportunity, a stable income, or access to a professional network. This creates a significant barrier to securing and keeping employment. Family Harvest Farm directly addresses this gap through our paid, structured workforce model that combines real job responsibility with mentorship, personalized guidance, and wraparound services like transportation stipends and a lunch program. Apprentices contribute to the design and are responsible for the cultivation, harvesting, and distribution of food that improves the public health of their community. This allows them to build practical skills and experience in a reliable and supportive work environment, contributing to work that is directly tied to environmental justice, public health, and a just transition from a fossil-fuel base economy.

This work exemplifies support of a just transition because it builds both technical and transferable skills for the youth apprentices through participation in a regenerative, community-based, net-zero food production system. FHF apprentices develop regenerative agricultural skills like soil health management, composting, propagation, an understanding of local food systems, resource cycles, and more. These skills are directly relevant to employment sectors in a low-carbon economy, including sustainable agriculture, land stewardship, and climate resilience. At the same time, apprentices gain experience in public-facing, community-based work through food distribution, workshops, leadership, volunteer engagement, farm tours, and more, building confidence and communication skills that are invaluable for long-term employment. Through a tiered apprenticeship model, participants advance into roles with increased responsibility and wages, while ongoing support in resume development and interviewing skills helps ensure that they are prepared to secure and retain employment as they transition out of the FHF program.

At the same time, the project addresses public health and environmental justice challenges through the community-based food production and distribution program. Over the past two years alone, the program has served approximately 11,796 individuals and distributed 10,150 pounds of produce, increasing access to fresh and nutrient-dense food in a community with few options.

The farm’s regenerative practices contribute to urban greening and carbon sequestration, supporting improved environmental conditions in neighborhoods directly affected by industrial conditions and poor air quality. In this way, FHF builds a workforce that is equipped to participate in and contribute to a more sustainable, net-zero economy.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

   Family Harvest Farm engages community members in the implementation of farm programming through constant and place-based interaction and various points of access and opportunity for participation. Community members engage directly in program activities through the weekly farm stand, workshops and demonstrations, volunteer opportunities, and public community events, where they receive program benefits including access to fresh and nutritious food, educational programming, professional development and skills building, and opportunities to contribute to program design and impact.

   Apprentices play a vital role in this engagement by interacting directly with community members during food distribution, workshops and school tours, and volunteer days. This helps to create peer-to-peer community connections that strengthen trust and relationship building and ensures that community members are regularly informed of opportunities for engagement and access to resources that we provide.

   Family Harvest Farm currently collects structured input from apprentices through quarterly surveys that asks them to assess program administration and their experience, skill development, and career readiness. These surveys gather information on confidence in job skills, interview preparedness, employment retention, socio-emotional development, goal setting, and relationship building, as well as apprentices' experience with staff and peers. This data is regularly reviewed and used to inform the workforce development program's planning and adjustments.

   With this grant funding, we will be able to expand our ability to implement a more responsive community feedback collection strategy by more intentionally gathering and integrating feedback from community members. In this way, feedback will be gathered directly at the farm stand, our most high-contact program element, where our apprentices and staff will formally collect survey information on their food access needs, preferred produce, and other ways the farm can support their public health needs. Community feedback will also be

collected during public volunteer days and workshops, where participants will be invited to share feedback on workshop topics and areas of interest for future programming. We have recently signed an MOU with the UC Master gardeners, who will cultivate a demonstration garden onsite and facilitate expanded community workshop opportunities. This will provide the neighboring community with home gardening skills, allowing them to support their own food security in their own communities.

Ongoing engagement with apprentices also provides relevant feedback on program design, as the apprentices contribute their perspectives on training, scheduling and programming, and support needs. This allows farm staff to continually improve programming based, in part, on this feedback.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

   Family Harvest Farm runs a workforce development program based in Pittsburg, CA that prepares transition-age foster youth (ages 18-24) for employment through paid, hands-on work in urban agriculture, while delivering community health and environmental co-benefits. The overall project vision is to build economic resilience for our youth apprentices while improving access to healthy food and supporting more sustainable community-centered systems in the region.

   The project consists of several interconnected components, including a tiered, progressive paid apprenticeship program, workforce development and job readiness training, community-based food production and distribution, and public and school workshops and volunteer opportunities. These components all come together to provide apprentice participants with meaningful, consistent, and supportive work experience while also creating important public health benefits for the surrounding community.

   Family Harvest Farm already closely tracks workforce program outcomes, including the number of apprentices enrolled in and competing the program, advancement through apprentice tiers, and the successful transition to other employment or continued training after the apprentice program. Other outcomes include apprentice growth in job readiness skills, confidence and socio-emotional

growth, and community building, as measured through a quarterly apprentice survey that measures areas such as communication, time management, interview readiness, and more.

Farm staff regularly tracks program data including community and apprentice participation, produce distribution including weight and product type, number of farm visitors and volunteers, and survey data collected from apprentices. This information is used not only for reporting requirements, but also to inform continuous program improvement.

Family Harvest Farm is the lead of this programming and is responsible for all aspects of project delivery, including program management, workforce development and skills training, and community engagement. Family Harvest Farm collaborates with referring agencies as part of a wraparound team to provide trauma-informed workforce development, while referring agencies provide direct services that address youths' psychosocial needs. Services offered by referring agencies include collaborative case management with FHF, housing placement and support, independent living skills development, education and employment assistance, and mental health services. In July 2023 FHF formalized the referral process ensuring that a referring agency confirms a candidate's eligibility, encourages a Release of Information be completed, and builds a connection between agencies to set up a support network that will assist the youth throughout their employment. In 2026, FHF formalized an agreement with the UC Master Garners to manage a demonstration garden. This space will be a place for community members to engage with agricultural education and learn how to grow produce in their home gardens.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*
   Attached

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*
   Attached

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

Family Harvest Farm is consistent with many regional and statewide environmental justice, public health, climate, and urban greening initiatives focused on communities disproportionately affected by industrial pollution. The project is consistent with the BAAQMD's Local Community Benefit Fund priorities and aligned with the goals of California's Community Air Protection Program and directly support California's broader climate resilience and just transition goals through our regenerative agriculture practices and workforce development model. This alignment is highlighted by the farm's newest collaboration with the Contra Costa Resource Conservation District (CCRCD). Family Harvest Farm is working with CCRCD to apply for the USDA Conservation Stewardship Program based on the regenerative practices already implemented at the farm. CCRCD has developed a Carbon Farm Plan for the site and will update the plan through the application process. Existing practices that align with these efforts include on-site bio-complete composting, native plant hedgerows, mulching, and biodynamic cover cropping designed to improve soil health and support carbon sequestration.

Several additional plans that are advanced through the work being conducted at FHF include the adopted Contra Costa County 2045 General Plan[1], including specific goals related to environmental justice, economic development, environmental justice, and sustainability, working lands, and community health, and carbon education strategies, the County's Climate Action and Adaptation Plan[2], which specifically identifies goals related to greenhouse gas reduction, green infrastructure expansion, environmental justice, and healthier communities, and the County's "Healthy Lands, Healthy People"[3] efforts focused on storing carbon through agriculture and natural land management practices. By training a new generation of agricultural and land stewardship professionals, the strategies implemented on the farm will be carried off the farm, further amplifying these impacts even further.

Family Harvest Farm advances regional public health and food access priorities through production and distribution of fresh, free produce in a USDA-defined food desert in Pittsburg.

CAPACITY (10 points)

[1] General Plan | Contra Costa County, CA Official Website
[2] Climate Action and Adaptation Plan | Contra Costa County, CA Official Website
[3] Healthy Lands, Healthy People - A Carbon Sequestration Feasibility Study | Contra Costa County, CA Official Website

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Family Harvest Farm staff has extensive experience managing and implementing the public health and workforce development program, which began in earnest in March 2020. Since that time, the program has become more refined and effective, inviting more community participation and education opportunities each year, and implementing changes to the workforce development program in ways that increase the skills and impact of participating foster youth. The current staff has demonstrated their ability to manage this project:

- [redacted] (Senior Farm Manager) grew up in the foster care system and got her start farming at the Homeless Garden project for 3 years. [redacted] went on to serve as Farm Manager at Old House Farm for 5 years and Pescadero Flowery. She joined JMLT 8 years ago and built the concept and partnerships with [redacted]. Her unique experience growing up in foster care and her passion for farming are key to the success of FHF.
- [redacted] (Work Force Development Manager) has worked in workforce development programs for 9 years. She managed the community education program for Groundwork Richmond, and the Green Teens program at Friends of the Urban Forest in San Francisco. She is a Rising Leader Fellow for justice outside and volunteered with community orgs doing outdoor excursions, urban planning and gardening with youth and transition age youth. Her focus on workforce development, specifically for youth who are typically more disenfranchised and disconnected to nature or urban forestry, has made her the perfect fit for the FHF program. Her career has been focused on engaging youth with climate and environmental justice who have typically been left out of the environmental field.
- [redacted]) has worked for East Bay Regional Parks, Alameda County Resource Conservation District, City of Berkeley, WRA Landscape Restoration, Friends of the Urban Forest doing restorative justice programming with youth outdoors, native habitat restoration, park ranger work, and urban greening program management. His unique background in land management, justice-based programming and management of grant funded environmental programs make him uniquely qualified for the FHF project.
- Family Harvest Farm is also supported by its parent organization, John Muir Land Trust, a non-profit based in Contra Costa County, which currently holds over 5,000 acres of open space in the East Bay.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

Family Harvest Farm has fully established the staffing, operations, partnerships, and infrastructure for the successful implementation of this program. The project is supported by 3 dedicated FTE employees, the Senior Farm Manager, the Associate Director, and the Workforce Development Manager, who collectively oversee farm operations, workforce development programming, apprentice support, partnership management, community engagement, program evaluation, and more.

Implementation of the project is managed through an established structure that has been developed and refined through six years of program operations and is already supporting food production and distribution, workforce development, volunteer engagement, workshops, and community programming. The Farm Manager oversees daily farm operations, regenerative agriculture practices, apprentice training and supervision, and produce production. The Workforce Development Manager leads all apprentice support services, workforce readiness, mentorship, transition planning, and ongoing support and follow-up with apprentices. The Associate Director provides overall program oversight, partner coordination, strategic program planning, gran administration, and support for implementation. The infrastructure is already in place to support program activities, including food production and community food distribution. In addition to staff and apprentice capacity, the program is grateful for substantial volunteer support through weekly community volunteer days and public engagement events.

Program recruitment and implementation is made possible through partnerships with Core Collaborators who specialize in working with foster youth. Core Collaborators provide wraparound services to employed youth during and after their time at FHF. These services include assistance with housing, counseling, child-care, and other life support issues that may become barriers to sustained employment if left unaddressed. Throughout their employment at FHF, youth receive continued support and assistance in finding long-term employment and/or returning to school. The FHF community maintains ongoing relationships with alumni through alumni dinners, and apprentice graduations. FHF regularly meets with referring foster youth agencies who refer foster youth to the apprentice program such as First Place for Youth, Contra Costa County

Employment and Human Services – Contra Costa Independent Living Skills Program, Contra Costa County Office of Education Youth Services Department, Youth Homes (TAY Program), Pacific Clinics (formerly Uplift Family Services).

Family Harvest Farm actively seeks out funding from public and private sources of various sizes and currently receives financial support from agencies like California Natural Resources Agency, California Department of Food & Agriculture, Contra Costa County, and private sources such as Kaiser Permanente, Antioch Youth of Promise, BMO, and local garden clubs. A complete list of these funding sources is provided on the *Benicia_26LCB24_JMLT_Budget,* provided with this application.

READINESS (10 points)

Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

N/A

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

N/A

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

N/A

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

N/A

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Family Harvest Farm operates from an established 3.5-acre urban farm in Pittsburg, and existing infrastructure is already in place to support ongoing programmatic success in food production, workforce development, community food distribution, and regenerative agriculture. Day-to-day operations are overseen by the Farm Manager, with support from the apprentice and volunteers. This includes irrigation management, soil stewardship, composting systems, seasonal planting and cultivation, landscape maintenance, infrastructure upkeep and expansion, and care for regenerative farming elements such as native hedgerows and cover crops. Because apprentices participate in many aspects of farm operations and stewardship, these activities are an important aspect of the workforce development and training programming.
Site sustainability is supported through a mix of donor support, restricted grant funding, volunteer engagement, and partnerships. Since necessary infrastructure and staffing is already established, project funding supports direct program implementation instead of new capital infrastructure costs.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Family Harvestr Farm's workforce development model is intentionally designed to support transition-age foster youth, a population that often faces significant barriers related to employment stability, transportation access, housing insecurity, mental health challenges, and limited access to long-term support systems, factors that can create challenges related to retention and scheduling consistency. The program addresses these barriers through a relationship-based model that combines paid employment with mentorship, individualized guidance and support, workforce readiness and skills development support, and ongoing follow-up after the program. The programs tiered structure supports retention and engagement because it creates opportunities for increased responsibility and wage increases over time.

The project faces realities of regenerative urban agriculture, which is intentionally labor-intensive. Family Harvest Farm prioritizes regenerative farm practices that minimize the use of chemical pesticides, tractors, and tillers to support soil health and provide long-term ecological resilience and carbon sequestration. Because of this, much of the farm's work is done by hand and requires substantial ongoing labor and stewardship. At the

same time, the farm's production capacity is directly connected to the apprenticeship program, which serves as the project's primary source of hands-on training. A central priority of the program is supporting apprentices in a healthy and sustainable way as they develop workforce skills, and we are careful not to overextend capacity. Balancing apprentice wellbeing and support with workforce development and operational needs of a working farm requires a high level of coordination, staffing capacity, community support, and experience. FHF continues to expand volunteer engagement and community participation to strengthen long-term program resilience and increase capacity. The program already benefits from regular volunteer support, and partnerships such as the UC Master Gardeners program. We plan to continue to build community participation and volunteer programming.

Family Harvest Farm is actively working to deepen community investment in the program by engaging more residents through food access, land stewardship, community building, and volunteer opportunities. The program regularly gathers feedback from community members regarding produce desires, workshop topics, and what knowledge they would like to learn and share, with the hope that this will shape programming in ways that strengthen neighborhood connection to the farm. This effort has already contributed to an increase in volunteer participation from nearby community members, and the program will continue to build these relationships over the next two years.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Build economic resilience for transition-age foster youth in East Contra Costa communities impacted by air pollution through paid workforce development in regenerative urban agriculture, while improving community health through fresh food access, urban greening, environmental stewardship and education, and community building.

Measurable Outcome	Indicator(s)
1. Transition-age foster youth from the Local Community Benefits Fund area increase workforce development readiness and employment stability	• Number of apprentices enrolled • Number and percent of apprentices that complete the program • Percent of apprentices reporting increased workforce confidence • Percent reporting improved job readiness skills
2. Apprentices increase skills relevant to a regenerative, low-carbon economy	• Number of apprentices trained in regenerative agriculture practices • Percent of apprentices that report an increased knowledge of sustainable food systems • Number of apprentices participating in food production and distribution activities • Apprentices advancing into leadership roles
3. Pittsburg community members increase access to fresh and nutritious food	• Number of individuals served through produce distribution • Number of pounds of produce distributed • Number of food distribution opportunities (including farm stands sales and distribution to community partners)
4. Community members increase engagement in health-promoting and	• Number of workshop participants • Number of volunteers engaged

environmentally focused programming on the farm	• Number of additional foster youth engaged through outreach programming and farm visits • Attendance at educational and community events
5. Contribution to regional environmental health through urban greening and regenerative agricultural practices	• 3.5 acres maintained under regenerative and pesticide-free practices • Implementation of composting and soil-building practices • Number of community members engaged in environmental activities on the farm
6. Program is responsive to participant priorities and feedback	• Number of and data collected from apprentice surveys • Number of community feedback solicitations made • Program adjustments informed by feedback

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Transition-age foster youth increase workforce development readiness and employment stability	A. Apprentice cohort recruitment and onboarding completed	1. Recruit apprentices in partnership with partner orgs	Associate Director (FHF)	Foster Referring Agencies	March 2026 and September 2026
		2. Conduct interview and selection	Associate Director; Workforce Development Manager (FHF)	Foster Referring Agencies	February 2026 and August 2026
		3. Complete onboarding and orientation for apprentices; establish goals	Associate Director; Workforce Development Manager (FHF)	Foster Referring Agencies; Apprentices	April 2026 and October 2026
	B. Apprentices complete structured training	1. Interview preparation, transition planning, financial literacy skills, non-violent communication, public speaking (including real-life skills)	Workforce Development Manager (FHF)	Associate Director External instructors	January-March 2026 and July-September 2026
		2. Workforce skills training by external professionals (improv, financial literacy training, etc.)	Workforce Development Manager, Farm Manager (FHF)	External instructors including finance professionals	In perpetuity
		3. Crating partnerships for continued education for the apprentices	Associate Director, Workforce Development Manager (FHF)	External partners	In perpetuity on a monthly and quarterly basis

		4. Mentorship with Workforce Development Manager	Workforce Development Manager	Apprentices and Farm Assistants	
	C. Apprentices can demonstrate skills/development	1. Leading workshops, tours, peer-to-peer training	Apprentices	FHF Staff	In perpetuity, for each cohort cycle
		2. Social media and administrative support/responsibility	Apprentices	FHF Staff and Farm Assistant	In perpetuity
		3. Successfully acquiring long-term employment after program	Apprentices	FHF Staff	January-March 2026 and July-September 2026
2. Apprentices increase skills relevant to a regenerative, low-carbon economy	A. Apprentices develop skills in regenerative urban agriculture	1. Learn technical skills training on farming (composting, plant and soil biology, irrigation, chicken & livestock care, harvesting and fieldwork, plant care, cooking using produce)	Workforce Development Manager, Farm Manager (FHF)	External instructors including agriculture professionals, master gardeners, etc.	In perpetuity
		2. Hands-on experience planting, propagation, and harvesting, with guidance and training from the UC Master Gardeners (seasonal gardens, irrigation planning and install, etc.); other external professionals; training in regenerative cultivation practices	External partners (Master Gardeners), Farm Manager (FHF)	FHF Staff	In perpetuity
	B. Apply regenerative and food systems knowledge through	1. Apprentice harvest and prepare produce	Apprentices	FHF Staff	In perpetuity Spring and Summer high season

	community food distribution	2. Apprentices participate in food distribution and farm stand operations	Apprentices	FHF Staff	In perpetuity on a weekly basis when in production
		3. Apprentices support with community workshops, volunteer events, and other community engagement activities	Apprentices	FHF Staff	In perpetuity
	C. Apprentices increase their leadership capacity and responsibility within the workforce development program	1. Implementation of a tiered apprenticeship program structure	Workforce Development Mager (FHF)	FHF Staff	Upon apprentice graduation and program openings
		2. Support and facilitate the advancement into Apprentice II and Farm Assistant roles	Workforce Development Manager (FHF)	FHF Staff	Upon apprentice graduation and program openings
		3. Support apprentices in finding activities and roles on the farm that support their specific goals, talents, and desires	Workforce Development Manager (FHF)	FHF Staff	In perpetuity
3. Pittsburg community members increase access to fresh and nutritious food	A. Ongoing farm production is maintained	1. Cultivate and maintain growing plots	Apprentices, Farm Manager (FHF)	FHF Staff	In perpetuity
		2. Harvest produce throughout the seasonal growing cycle	Apprentices, Farm Manager (FHF)	FHF Staff	In perpetuity
		3. Implement regenerative soil-building and composting practices	Apprentices, Farm Manager (FHF)	FHF Staff	Spring, Fall and Winter

	B. Community food distribution systems implemented	1. Operate free onsite farm stand	Apprentices, Farm Manager (FHF)	FHF Staff	In perpetuity
		2. Distribute produce through school and community partnership	Apprentices, Farm Manager (FHF)	FHF Associate Director	In perpetuity based on availability and partner needs
		3. Coordinate logistics related to food distribution	FHF Associate Director	Manager (FHF)	In perpetuity
	C. Food access and distribution is tracked and evaluated for improvement.	1. Record produce distribution data	Apprentices, Farm Manager (FHF)	Associate Director (FHF)	In perpetuity on a weekly basis
		2. Track number of individuals reached	Apprentices, Farm Manager (FHF)	Associate Director (FHF)	In perpetuity on a weekly basis
		3. Review trends and community needs/attitudes and integrate results into future planning	Associate Director (FHF)	FHF Staff	Quarterly
4. Community members increase engagement in health-promoting and environmentally focused programming on the farm	A. Workshops and educational programming for the community	1. Host and facilitate workshops on agriculture and food systems; provide environmentally focused educational programming for community	Farm Manager (FHF)	FHF Staff, Apprentices	In perpetuity
	B. Volunteer and community engagement events	1. Host regular volunteer days for the community on the farm	JMLT Stewardship Manager	FHF Staff, Apprentices	In perpetuity on a monthly basis
	C. Foster Youth outreach	1. Invite foster youth to workshops and public programming on farm	Associate Director (FHF)	FHF Staff	Every 6 months

		2. Conduct outreach to foster youth through community collaborator partners	Associate Director (FHF)		Every 6 months
		3. Expand participation in educational, workforce development, and volunteer opportunities for foster youth	Associate Director (FHF)	FHF Staff	Every 6 months and during special events
5. Contribution to regional environmental health through urban greening and regenerative agricultural practices	A. Maintain regenerative farming practices	1. Implement composting and soil-building practices	Manager (FHF)	Apprentices	In perpetuity
		2. Maintain regenerative cultivation practices across the farm	Manager (FHF)	Apprentices	In perpetuity
		3. Support urban greening through ongoing land stewardship	Manager (FHF), Apprentices	FHF Staff	In perpetuity
	B. Community participation in environmental stewardship	1. Engage volunteers in stewardship activities	JMLT Stewardship Manager, Manager (FHF)	FHF Staff, Apprentices	Quarterly
		2. Facilitate apprentice participation in land-based work	Manager (FHF)	FHF Staff	Quarterly
		3. Incorporate environmental stewardship into public programming	JMLT Stewardship Manager Associate Director (FHF)	FHF Staff, Apprentices	Quarterly
	C. Environmental education integrated into programming	1. Incorporate sustainable systems concepts into workshops	JMLT Stewardship Manager, Associate Director (FHF)	FHF Staff, Apprentices	Quarterly
		2. Provide education related to regenerative agriculture	Manager (FHF)	FHF Staff, Apprentices	In perpetuity

		3. Connect environmental topics to workforce development program	Manager (FHF), Workforce Development Manager (FHF)	Associate Director (FHF)	In perpetuity
6. Program is responsive to participant priorities and feedback	A. Community feedback opportunities	1. Gather feedback and participant data at farm stands/public events	Apprentices, FHF Staff		Quarterly
		2. Gather informal information through conversations with workshop and volunteer participants	FHF Staff, Apprentices		In perpetuity
		3. Document community feedback and demographics	Associate Director (FHF)		Quarterly
	B. Apprentice feedback and evaluations are collected	1. Administer quarterly apprentice surveys	Workforce Development Manager (FHF), Associate Director (FHF)		Quarterly
		2. Collect apprentice feedback on program experience and skill development	Workforce Development Manager (FHF), Associate Director (FHF)		Quarterly
		3. Review survey responses and evaluation data	Workforce Development Manager (FHF), Associate Director (FHF)		Quarterly
	C. Program updates and improvements are informed by feedback	1. Review community and apprentice feedback	Workforce Development Manager (FHF), Associate Director (FHF)		Quarterly
		2. Integrate feedback into program planning and implementation	Associate Director (FHF)	Workforce Development Manager (FHF)	In perpetuity based on capacity and programs

					most immediate needs
		3. Adjust program based on community/apprentice needs	Workforce Development Manager (FHF), Associate Director (FHF)	Workforce Development Manager (FHF)	In perpetuity based on capacity and programs most immediate needs

Project Name: Family Harvest Farm – Economic Resilience and Public Health Through Workforce Development
Lead Applicant Name: Family Harvest Farm, a program of John Muir Land Trust
Term for this budget (in years): 2 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Family Harvest Farm Associate Director	The Associate Director oversees and manages the farm's strategic development, builds partnerships, and supports apprentices' career pathways and leadership development; staff oversight and coordination with external partners and education professionals Total cost - ($49.52 (hourly rate) + $10.10 (medical, retirement, workers comp, medicare, social security))× 2080 (hours @ 100 FTE) x 2 (number of funding years) = $248,020.00 This request represents approximately 20% FTE, or 838.84	$50,000.00
Personnel/Staff Costs	Direct	Senior Farm Manager	The Senior Farm Manager is responsible for training apprentices in regenerative agriculture, overseeing farm cultivation operations, and oversees produce sales. Total cost - ($38.11 (hourly rate) + $11.94 (medical, retirement, workers comp, medicare, social security))× 2080 (hours @ 100 FTE) x 2 (number of funding years) = $208,208.00 This request represents approximately 24% of total FTE, or 990 hours.	$50,000.00
Personnel/Staff Costs	Direct	Worforce Development Manager	The Workforce Development Manager supports and empowers skill-building, goal-attainment, and transitioning into stable employment using a trauma-informed, strengths-based, and youth-centered approach. Total cost - ($39.61 (hourly rate) + $10.52 (medical, retirement, workers comp, medicare, social security))× 2080 (hours @ 100 FTE) x 2 (number of funding years) = $208,542.00	
Personnel/Staff Costs	Direct	Apprentices: 8 Apprentice I's 2 Apprentice II's	Steipends for Apprentice I & II Total cost - Apprentice I (8 total) - ($17.50 (hourly rate) + $2.11 (workers comp, medicare, social security)) x 1040 (hours @ 20 hrs/week) x 2 (number of funding years) - Apprentice II (2 total) - ($21 (hourly rate) + $2.53 (workers comp, medicare, social security)) x 1144 (hours @ 22 hrs/week) x 2 (number of funding years) = $424,195.20 TOTAL This request reporesents approximately 17.68% of the total Apprentice steipends over the two year grant program.	$75,000.00
Personnel/Staff Costs	Direct	Farm Assistants (x2)	Steipends for Farm Assistants Total cost - ($25 (hourly rate) + $3.01 (workers comp, medicare, social security)) x 1300 (hours @ 100 FTE) x 2 (number of funding years) = $145,652.00 This request represents approximately 17.16%, or 892.5 hours.	$25,000.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Farm supplies and site costs	Tools, items, and consumables required to operate a regenerative farm and workforce development program; rent and utilities - 2 years	
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Partner fees and steipends for visiting professionals; marketing costs; event vendors	Expenses related to fees and steipends for partners and educators, marketing professionals, and vendor participation during our community events	
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	Indirect Costs	Overhead associated with Family Harvest Farm programming; includes cost of grant support and administration from JMLT, bookkeeping, general administrative staff, general liability or umbrella insurance, IT infrastructure. $25,000/year x 2	

Bay Area Air District
CLEAN AIR FOR ALL

Benicia Seed

La Clinica de la Raza Application

Bay REPAIR
Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	RESPIRA
Lead Applicant Name	La Clinica de La Raza
Project Location	Benecia, Vallejo, Bay Point, Pittsburg
Overall Funding Request	$200,000
Grant Term Request	2 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	
Project Lead	
Project Location	
Project Funding Request	

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

La Clinica's proposed program RESPIRA (**R**ed comunitaria de **E**ducacion en **S**alud ambinental y **P**romocion de **I**niciativas para el **R**espeto del **A**mbiente Limpio) is designed to reduce the health impacts of asthma and environmental pollution in Benicia, Vallejo, Bay Point, and Pittsburg and its surrounding areas. Strategies used in the program will help to reduce asthma triggers among people with asthma, build community awareness and engagement on topics like asthma, respiratory illnesses and options to save in renewable energy and electric vehicle options. The program will train Community Health Educators and Promotor@s on the Asthma Home Visit curriculum using the train the trainer model focused on asthma prevention, management, air quality, and environmental health. Trained staff and Promotor@s will also offer asthma education one-time workshops to community groups and 1-1, asthma home visiting services to patients and community members with frequent visits to Emergency Department. Eligible participants identified through the workshops and home visits will also receive an air purifier to prevent asthma triggers.

This project will prioritize communities experiencing the greatest disparities in uncontrolled asthma. The priority population being targeted are more likely to live in areas with elevated air pollution due to proximity to industrial sites and major transportation corridors. The project is specifically designed to reach the following priority populations:

- African American and Native Hawaiian/Pacific Islander community members and Spanish Speakers in Vallejo
- Primarily Spanish-speaking community members in Bay Point and Pittsburg
- Residents of East Contra Costa County

RESPIRA will also implement coalition building components with the goal of implementing an annual resource community event to provide information on a variety of resources including programs that provide subsidies for renewable energy, energy efficiency and programs available to make electric vehicles more accessible. Agencies that will be engaged include the City of Pittsburg, Clean Air Coalition, Monument Impact, Pittsburg Unified School District and the Pittsburg First Five as well as community residents and Promotor@s.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This project directly aligns with the Local Community Benefit Fund strategy to reduce air pollution and improve health outcomes by combining community education, asthma prevention and management, and resident-led action to address environmental

conditions that contribute to poor respiratory health. The project focuses on low-income and multilingual communities that are disproportionately exposed to pollution and experience higher rates of asthma and other health disparities. Through asthma triggers awareness education, home visiting services, partnerships with healthcare providers, community service providers, and community leadership development, the project will help residents reduce exposure to pollution, better manage asthma, and participate in the planning of a local community awareness and engagement resource event.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The locations of the project will be Vallejo, Bay Point and Pittsburg. In Solano County La Clinica has two medical clinics in Vallejo one at 220 Hospital Drive near Sutter Hospital and a second one at 415 Georgia Street, near downtown and near the Ferry station. Both sites serve residents from Vallejo Benicia and the surrounding communities. In Contra Costa County, La Clinica has a total of three clinics in Oakley, Pittsburg, and Concord. The Pittsburg clinics is located at 2240 Gladstone Dr., the Concord clinic is located at 2000 Sierra Rd, in the heart of the Monument Corridor and a clinic in Oakley is located at 2021 Main St. between these clinics combined they serve over 15,000 patients and community members from Pittsburg, Bay Point, Antioch, Oakley and other surrounding cities.

La Clinica Community Health Education (CHE) Department Office is the hub for the Community Health Education Team and volunteer Promotor@s and is located in Pittsburg at 335 E. Leland Rd. The CHE office serves as a hub of the outreach and enrollment services for health coverage and other community outreach programs that include the mental health stigma reduction-Abriendo Mentes Cerrando Estimas-AMCE (Opening Minds Closing Stigmas) project as well as the Air Quality Outreach and Advocacy project that has done work to advocate for tobacco free parks, conduct outreach and education workshops about air quality and distributes air purifiers to community families with asthma.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The proposed project is grounded in La Clínica's ongoing engagement with residents, patients, and partners in Contra Costa and Solano County communities most affected by poor air quality and asthma. Community needs and priorities are identified through a combination of direct service experience, community outreach, prior air quality education efforts, and reports ran by IT department that identify La Clinica patients with poor asthma management who have visited the ED 3 or more times in a year. Similarly, analysis of local health data shows elevated asthma-related emergency department use in low-income communities and neighborhoods located near industrial facilities and major transportation corridors.

La Clínica's staff and Community Health Workers regularly hear from families about barriers such as poor housing conditions, limited access to asthma education, language barriers, and concern about the health impacts of pollution. These lived experiences, combined with referral patterns, program participation trends, and local public health information, help shape the project's focus on asthma prevention, air quality education, and resident leadership development.

Community-based organizations, healthcare partners, public health stakeholders, and residents have been meaningfully involved in determining community needs by informing both the identification of priority populations and the design of proposed activities. In Contra Costa, as part of the Air Quality project the CHE outreach and enrollment team has engaged 12 community members as volunteer Promotor@s in Contra Costa and 5 in Solano County. The CHE department has also developed a closed collaboration with collaborative partners that include Pittsburg Unified School District, [redacted] City of Pittsburg [redacted], First Five Community Resource Specialist and Case Manager, [redacted], Outreach Coordinator at Village Community Resource Center-[redacted] and Monument Impact Healthy Community [redacted]. These community partners along with La Clinica CHE staff and Promotor@s have come together as part of the Pittsburg reside committee to plan community activities that support air quality and environmental health awareness and engagement.

According to the Bay Area Air Quality Management District South and Central Vallejo suffer from significant high asthma rates. Emergency room visit rates in these areas have reached over 470 per 10,000 residents, which is more than triple the overall California average.

Available data also shows that in Contra Costa County, 300,000 residents live in a census tract that ranks in the 95th percentile or higher of asthma Emergency Department (ED) rates statewide. This is the highest number of people in any county in the state and the fourth highest by percent of County residents in the state. An estimated 4,950 people visit the ED for asthma each year in the county having lower socio-economic resources.

Partner organizations also serve as a source of referrals and help identify where needs are greatest, while prior collaboration with local air quality and public health efforts has reinforced the importance of combining health education with community empowerment.

The project reflects this input by centering culturally responsive outreach, bilingual education, home-based support, and a train-the-trainer model that prepares residents Promotor@s to share information and participate in local decision-making. In this way, the project is based not only on institutional assumptions; it is informed by community voice, community participation, and the practical experience of organizations and stakeholders working closest to the affected neighborhoods.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The RESPIRA project has the goal to implement a number for approaches rooted on the Spectrum of prevention. The Spectrum of Prevention is a public health framework used to address complex social and health problems by working at multiple levels of society. It was developed by the Prevention Institute and is widely used in areas such as violence prevention, substance abuse prevention, injury prevention, and health promotion.

This project will benefit the low-income and multilingual communities residing in Vallejo, Bay Point, and Pittsburg and that sometimes have lacked access to government resources and promote meaningful involvement of pollution-affected communities through participatory action. This project has the opportunity to address environmental injustices and racial health inequities by meaningfully engaging patients and community members that are overrepresented in health disparities and shifting power to groups through health education, civic empowerment, and creating pipelines for participation in local initiative decision-making.

This project aims to address environmental injustices from a public health framework perspective with the following approaches:

- Inform, Educate and Empower: Train the Trainer model that educates Promotor@s on the asthma home visits, and prepares them to participate in outreach activities and co-facilitate group workshops and asthma home visits.

- Mobilize Community Partnerships: Creating community partnerships to identify vulnerable populations and parent groups to provide workshops about asthma and air quality education as a strategy to inform, educate and identify families who can benefit from asthma home visits. Community Partnerships will also provide referrals and will work jointly to complete an annual community resource event.

- Asthma and Air Quality Awareness and education: Education group workshops in community settings to parent groups with children and 1-1 education to community members and families impacted by asthma will be provided in the form of group workshops and home visits for patients and community members impacted by asthma.

Community Impact:

Community Health Workers (CHWs) are an effective, culturally responsive, and use patient-centered strategy for engaging patients and community members and serving as a bridge between communities and health systems. Although research has consistently demonstrated their value, long-term sustainability remains a challenge. This project addresses that challenge by testing a train-the-trainer model that equitably compensates community members for their time, builds local leadership, and creates pathways for residents to move from program participation into ongoing roles in community advocacy and decision-making.

Evidence shows that power dynamics often shape which community experiences and priorities are recognized in policy development. This model responds to that reality by intentionally building the capacity of community members to participate in local stakeholder processes, civic activities, and environmental decision-making. By providing workforce and civic engagement skills, economic value, and meaningful partnerships with local agencies, the project supports a more sustainable approach to co-developing environmental justice policies and strategies. Together, these components demonstrate the feasibility and effectiveness of a comprehensive, community-driven approach to addressing environmental injustices. Over the long term, this work is intended to contribute to healthier environmental conditions, stronger community leadership, and improved health outcomes.

This project will address immediate health needs of health outcomes impacted by indoor and outdoor air quality while building a sustainable education model that empowers patients and community members on health management and environmental factors and creating pipeline for workforce and stakeholder engagement related to health and environmental equity.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

La Clínica will use a culturally responsive, community-based engagement approach to keep residents informed about project implementation and the benefits available to community members. Outreach will occur through Community Health Workers, health promoters, partner clinics, community-based organizations, workshops, home visits, and bilingual printed and digital materials. Community members will receive regular updates on project activities, training opportunities, asthma education services, air quality information, program progress, and ways to participate in community leadership and decision-making efforts. Information will be available in accessible formats and in the primary languages spoken by participants to help ensure broad and meaningful participation.

Community feedback will be solicited throughout implementation through participant surveys, discussion during trainings and workshops, direct input from Community Health Workers, follow-up conversations during home visits, and feedback shared by partner organizations. La Clínica will review this feedback on an ongoing basis to identify emerging needs, barriers to participation, and opportunities to strengthen project delivery. When feasible, feedback will be used to adjust outreach strategies, training content, scheduling, and support services so that the project remains responsive to community needs and maximizes its benefit to residents.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Vision:

Reduce asthma related morbidity and improve environmental health literacy through asthma education workshops to the general community, individualized home visits for high-risk individuals, air purifiers and organic cleaning supplies distribution to high-risk patients and coalition building to host community engagement resource events.

Project Components:

a. **Outreach:** La Clinica staff and Promotor@s will conduct outreach and education through tabling events and Asthma education workshops to identify high risk asthma individuals and link them to asthma home visits services.

b. **Health Promoter Training:** Existing volunteer Promotor@s will receive Asthma Home visit train-the-trainer to prepare them to co-facilitate asthma parent workshops and individual families home visits. The training will include components about asthma triggers in the home and community such as air quality –AQI, proper use of asthma medication, and the importance of an asthma health plan to best control their asthma.

c. Home visits outreach and recruitment: La Clinica staff and Promotor@s will conduct outreach in the community and work with La Clinica's IT department to ran reports and identify high risk asthma patients with uncontrolled Asthma who have visited the ED more than 3 times n the last year. The outreach team will also receive referrals from collaborative partners.

d. **Home Visits:** The staff will conduct asthma home visiting services for 20 families in year 1 and 25 families in year 2. Each family that participates in the home visits will receive three class series that will go into the details of asthma management, ways to prevent asthma trigger in home and in general environment, strategies to implement organic cleaning materials, how to properly utilize asthma medication, benefits of an asthma plan and at the end of the three class series will receive organic cleaning supplies (such as baking soda, vinegar) along with hypoallergenic pillow cases and sheet of the individual(s) in the household with asthma. All families who complete the asthma home visit will receive an air purifier and those with a carpet that need a carpet cleaning vacuum will receive one as well, as the amounts budgeted permit. La Clinica will obtain air purifiers from the BAAQMD air purifier program.

e. **Collaboration and Coalition building to implement coordinate activities:** La Clinica staff and Prrmotor@s will work in collaboration with the Pittsburg Resident Advisory Committee to organize a community event in the Fall of each year, targeting local families, impacted by asthma and Pittsburg families with children to provide resources available. During the event Arterra and Cool the Eart, Representatives from Clean Cars for All and MCE will be invited to provide information about EV subsidies, and green, sustainable and affordable sources of energy. One of the features of the event is to host Electric Vehicle car show, for community members to see the types of EV options and have the opportunity to ask questions about the benefits of an electric vehicle and options to make the purchase more affordable and accessible.

f. **Social Media** will also be utilized to promote information and resources including the promotion of the resource community events.

Measurable Outcomes:

1. Staff will deliver three (3) community presentations each fiscal year for a total of 6 presentations in 2 years to increase awareness about asthma management and prevention.

2. By June 2028, La Clinica staff will conduct home visits to 45 families; serving 20 families in year 1 and 25 families in year 2 to provide information and tools to manage their respiratory illness.

3. From September 2026 to June 2028, Staff and Promotoras will co-facilitate a three-session asthma education series to each enrolled family.

4. Upon completion of the home visit class series, at least 20 families in year 1 and 25 families in year 2 will receive one air purifier and safe and organic cleaning supplies to prevent asthma triggers.

5. By June 2028, there will be a total of 8 social media campaigns implemented for the target population with four campaigns each fiscal year.

6. La Clinica staff will conduct at least one community resource event each year to increase awareness of available resources for Pittsburg families, including families of children with asthma, for a total of two events during two years of the grant period.

Partners: Collaborative partners will include Pittsburg Unified School District, [redacted], City of Pittsburg [redacted], First Five Community Resource Specialist and Case Manager, [redacted], Outreach Coordinator at Village Community Resource Center- [redacted] and Monument Impact Healthy Community [redacted]. Partners will collaborate in planning community activities to support air quality and environmental health awareness and engagement.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

Personnel Salaries and Benefits:

The program manager will supervise other staff members on the grant and oversee the program implementation.

Staff will work 2 hours/week for 2 years [2 hours per week/40-hour work week = 0.05 full time equivalency (FTE) for 2 year]. Her annual salary is $126,070 and $12,607 of her salary will be charged to this grant for 2 years.
Total salary for 2 years: $126,070 x 0.05 FTE x 2 years = $12,607.

Fringe benefits will be charged at the rate of 26%
Total salary including Fringe: $12,607 + $3,278 = $15,885

Community Health Educator Lead will conduct outreach and co facilitate class series presentations in the community setting. Staff will also conduct home visits and implement class series to educate families on asthma prevention and poor air quality.

Staff will work 12 hours/week for 2 years [12 hours per week/40-hour work week = 0.3 full time equivalency (FTE) for 2 year]. Her annual salary is $74,011 and $44,407 of her salary will be charged to this grant for 2 years.
Total salary for 2 years: $74,011 x 0.3 FTE x 2 years = $44,407.

Fringe benefits will be charged at the rate of 26%
Total salary including Fringe: $44,407 + $11,546 = $55,953

Community Health Educator will conduct outreach and class series presentations in the community setting. Staff will also conduct home visits and implement class series to educate families on asthma prevention and poor air quality.

Staff will work 16 hours/week for 2 years [16 hours per week/40-hour work week = 0.4 full time equivalency (FTE) for 2 year]. Her annual salary is $66,713 and $53,370 of her salary will be charged to this grant for 2 years.
Total salary for 2 years: $66,713 x 0.4 FTE x 2 years = $53,370.

Fringe benefits will be charged at the rate of 26%
Total salary including Fringe: $53,370 + $13,876 = $67,247

Fringe Benefits:
Fringe reflects the federally negotiated current rate for the agency which is 26%. Fringe Benefits include the following: health, dental and life insurance, medical insurance, workers compensation, unemployment insurance, taxes, and retirement.

Fringe benefits are estimated at 26% of the total personnel costs. We have included $28,699.88 for benefits ($110,384.16 x 0.26 = $28,699.88 for 2 years).

Personal Salaries and Benefits
Personnel Cost of $110,384 + Benefits of $28,700 = $139,084 for 2 years

Operational (Direct) Cost

Travel: The staff will travel to the community to conduct outreach and series in the community settings. Mileage will be charged at the current federal rate of $.725 per mile. The estimated cost for staff mileage will be $1,400 for two years of the grant duration.

Office Supplies: The office supplies will include color, papers, markers, pens, toner, and poster paper to conduct outreach and class series. The estimated cost will be $33.33 per month in year 1 and $50 per month in year 2 for office supplies.

Printing: This cost will be used to print flyers and posters to promote resource events. The estimated cost is $1,154 for 2 years.

Hot spot and cell phone:
1 hot spot and cell phone - $90 per month X for FTE 75% on the grant for all staff X 12 months = $810 per year and $1,620 for two years.

Social Media-paid ads: There will be $50 per social media ad x 8 ads = $800 per year, and the total for two years is $1,600.

Home Visiting supplies: Home Visiting supplies for 45 total families , $75 per family for supplies, plus 8 families per year for a total of 16 families who need carpet cleaning vaccum will receive one upon home visit comletion at an estiamted cost of $100 per vacume. (8 per year)
(45 families x $75 for supplies)+($100 for vaccum x 16 families) = $4,975

Gift cards for participating families: Participating families will receive a $25 gift card on completion of the Home Visit class series. It will cost $1,225 for 45 families in 2 years.

45 families x $25 gift card = $1,125

Telephone: This includes land line fee for office phone communication, which will cost $2,630 for 2 years.

Community engagement event cost: Cost for event permit, rental cost for portable restrooms, tables, canopies, chairs, decorations and food. The total event cost for 2 years will be $12,875.

Promotoras Stipends: At least 25 home visits will be co-facilitated by Promotor@s 10 visits in year 1 and 15 visits in year 2, and stipends wioll be paid at the rate of $50.
25 visits x 3 series x $50 stipend = $3,750 stipends

$100 stipend per promotor@ will be provided for 18 outreach events (8 in year 1 and 10 in year 2).
18 outreach events x $100 stipend = $1,800 stipends

Community group presentations will be conducted by promotoras that include 3 presentations each year and they will receive $50 stipend amount
6 presentations x $50 = $300

The total stipend amount is $5,850

Program Activity: The total cost for outreach and education materials for Asthma home visits (i.e. lung models) and outreach event fees will be $600 for two years.

Indirect Cost: We have included indirect costs @ 15% for this project. It covers overhead for Administrative Departments such as Fiscal, Human Resources, etc.

Indirect Costs:
Personnel and Benefits $139,084 + Operational Costs $34,829 = $173,913 $173,913 x 0 .15 for indirect costs for this project = $26,086 indirect cost for 2 years

Total Proposed Budget for 2 Fiscal Years = $200,000

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project is aligned with regional and local air quality, climate, and environmental justice initiatives. It advances the Bay Area Air Quality Management District's (BAAQMD) commitment to reduce air pollution exposure in overburdened communities

and is consistent with the goals of California's Community Air Protection Program under AB 617, which emphasizes community-scale emissions reduction, air monitoring, stronger enforcement, and meaningful resident participation in solutions that improve public health. The project also supports the intent of SB 1000 by building the knowledge, leadership, and participation of residents most affected by pollution so they can engage in environmental justice and community health planning. At the local level, the project is consistent with broader climate and adaptation planning efforts in Benicia and its surroundings that recognize the need to improve air quality, reduce pollution burdens, strengthen community resilience, improve asthma conditions, and advance equity in the underserved communities.

Through this project, residents will receive training on asthma, air quality, pollution mitigation, and so they can participate more effectively in project activities. BAAQMD will be an important partner in supporting capacity building and community participation, helping connect trained residents to relevant air quality and environmental justice processes. In this way, the project does not operate separately from existing plans; it helps implement them by equipping frontline community members to shape local strategies, advocate for healthier neighborhood conditions, and contribute to long-term solutions that address environmental inequities.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Through various grant-funded initiatives, La Clínica's Community Health Education Manager has implemented multiple projects focused on asthma prevention, air quality, and environmental health. These programs have combined community engagement, health education, and environmental justice strategies to address the inequities that contribute to disproportionate asthma outcomes in underserved communities.

In 2021–2022, La Clínica received funding from Contra Costa Health to implement the In-Home Asthma Education and Mitigation Services Program. Through this program, staff conducted community outreach, completed asthma home visits for patients, and delivered air quality education to community members. This work strengthened La Clínica's capacity to provide culturally responsive asthma support while addressing environmental factors that affect respiratory health.

In 2016–2017, La Clínica secured funding from the Bay Area Air Quality Management District (BAAQMD) to implement a program focused on increasing awareness and education related to air quality in the Pittsburg community. The initiative supported community engagement in local decision-making by assessing community needs and

elevating those priorities to city officials. Community members participating in the project successfully advocated for an air monitoring station, which was ultimately approved. Building on this experience, since 2022 La Clínica has been implementing a similar initiative also funded by the BAAQMD that focuses efforts in the communities of Contra Costa and Solano counties which are disproportionately impacted by poor air quality and pollution. Through this project community residents and Promotor@s advocated for “No smoking” signs to prevent people from smoking in parks.

La Clínica has years of experience in managing health promoter programs and has also served as partners in asthma-related collaboratives. Moreover, La Clinica has a strong relationship with the community and a long history of leading community-focused projects. The proposed project will leverage these existing strengths to improve respiratory health among low-income underserved populations.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The Community Health Education Manager will take the lead role to supervise the implementation of the RESPIRA project. She will work closely with the Lead Community Health Educator and Community Health Educator to implement the various deliverables and monitor the budget expenses. Manager will also have an active role in the coordination of periodic monthly coalition meetings for the planning of community resource events.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the “Application Instructions” document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate “N/A” if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*
    No permits or approvals are required to implement the program.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*
    Not Applicable
15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*
    Not Applicable

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*
    Not Applicable

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Community Health Educators have previously received training on the Asthma Home Visit Curriculum, which included a virtual component to accommodate the COVID pandemic. Some community members who rent or sublease may be less likely to agree to an in-person home visit. In order to accommodate that preference, staff and Promotor@s will be trained on the in-person and virtual home visit curriculum.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Reduce asthma related morbidity and improve environmental health literacy through asthma education workshops, individualized home visits for high-risk individuals, air purifier and organic cleaning supplies distribution to high-risk patients and coalition building to host a community engagement resource event.

Measurable Outcome	Indicator(s)
1. Staff will deliver three (3) community presentations each fiscal year for a total of 6 presentations in 2 years to increase awareness about asthma management and prevention.	• 6 presentations in two years • 60 individuals reached in two years through presentations
2. By June 2028, La Clinica staff will conduct home visits to 45 families; serving 20 families in year 1 and 25 families in year 2 to provide information and tools to manage their respiratory illness.	• 20 families receive home visits in year 1 • 25 families receive home visits in year 2
3. From September 2026 to June 2028, Staff and Promotoras will co-facilitate a three-session asthma education series to each enrolled family.	• Conduct at least 45 asthma education series including 3 sessions in each series
4. Upon completion of the home visit class series, at least 20 families in year 1 and 25 families in year 2 will receive one air purifier and safe and organic cleaning supplies to prevent asthma triggers.	• In year 1 of the grant period, 20 families will receive information related to asthma safe cleaning supplies and in year 2, 25 families will receive information
5. By June 2028, there will be a total of 8 social media campaigns implemented for the target population with four campaigns each fiscal year.	• 4 social media campaigns in year 1 and 4 campaigns in year 2
6. La Clinica staff will conduct at least one community resource event each year to increase awareness of available resources for Pittsburg families, including families of children with asthma, for a total of two events during two years of the grant period.	• 2 community resource events in 2 years

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Staff will deliver three (3) community presentations each fiscal year for a total of 6 presentations in 2 years to increase awareness about asthma management and prevention.	A. Update and strengthen asthma education curriculum by including most recent statistical information related to asthma condition.	1. Integrate current Bay Area Air District air quality data and asthma related statistics into the curriculum.	La Clinica de La Raza (La Clinica)	N/A	August 2026
		2. Revise presentation slides, handouts, and facilitator talking points to align with current asthma education guidance.	La Clinica de La Raza	N/A	August 2026
		3. Review and approve the updated curriculum before implementing the presentations in the community.	La Clinica de La Raza	N/A	August 2026
	B. Build staff and Promotora capacity through refresher training	1. Develop a refresher training agenda and learning objectives for staff and Promotoras.	La Clinica	N/A	September 2026
		2. Conduct training on asthma triggers, inhaler uses education using culturally responsive communication strategies.	La Clinica	N/A	September 2026
		3. Evaluate staff readiness and finalize presentation assignments for community presentations.	La Clinica	None	September 2026
	C. Schedule presentation in the community settings	1. Collaborate with school districts, First 5 centers, and community partners to schedule on-site presentations.	La Clinica	PUSD, First Five, Healthy and Active Before Five,	October 2026 to June 2028

				Monument Impact and United Latino Voices.	
		2. Develop culturally and linguistically appropriate presentation materials for the target population.	La Clinica	N/A	August 2026
		3. Confirm logistics including dates, locations, outreach plans, and participant registration for all four presentations.	La Clinica	N/A	September 2026
2. By June 2028, La Clinica staff will conduct home visits to 45 families; serving 20 families in year 1 and 25 families in year 2 to provide information and tools to manage their respiratory illness.	A. Identify patients with asthma through internal data review	1 La Clínica's IT department generate an internal report to identify patients with asthma.	La Clinica	PUSD, First Five, Healthy and Active Before Five, Monument Impact and United Latino Voices.	July 2026
		2. Review report findings and prioritize patients based on need, age, and service area.	La Clinica	N/A	August 2026
		3. Develop and maintain a referral list for outreach and enrollment into the home visit program.	La Clinica	N/A	August 2026
	B. Enroll at least 45 eligible	1. Develop eligibility criteria for participation in home visit program, based on geographic	La Clinica	N/A	August 2026

	families into the home visiting program	area of residency and poorly managed asthma.			
		2. Obtain an IT patient report of Asthma patients with poorly controlled asthma who have been at the Emergency Department three or more times in the last 6 months.	La Clinica	N/A	August 2026
		3. Contact referred families, provide program information, and assess interest in participation. Confirm eligibility and complete enrollment documentation for participating families.	La Clinica	N/A	August 2026 to February 2027
	C. Implement and monitor home visit services	1. Develop structured home visit schedule for enrolled families.	La Clinica	N/A	August 2026
		2. Assign trained staff or Promotoras to participating families and initiate services.	La Clinica	N/A	August 2026
		3. Track completed visits and monitor progress toward the annual home visit target.	La Clinica	N/A	August 2026 to February 2027
3. From September 2026 to June 2028, Staff and Promotoras will co-facilitate a three-session asthma	A. Develop a 3-part home visit education series	1. Update a three-session curriculum previously developed covering asthma fundamentals, trigger reduction, and long-term self-management.	La Clinica	N/A	August 2026

education series to each enrolled family					
		2. Prepare culturally appropriate educational materials for each session.	La Clinica	N/A	September 2026
		3. Standardize home visit lesson plans and documentation tools for consistent program delivery.	La Clinica	N/A	September 2026
	B. Deliver 3-class series to each enrolled family	1. Conduct Session 1 focusing on asthma basics, symptoms, and medication use.	La Clinica	N/A	September 2026 to April 2028
		2. Conduct Session 2 addressing environmental triggers and ways to reduce exposure in the home.	La Clinica	N/A	September 2026 to April 2028
		3. Conduct Session 3 on asthma action plans, follow-up care, and long-term management.	La Clinica	N/A	September 2026 to April 2028
	C. Evaluate family learning outcomes and completion	1. Administer pre- and post-assessments to evaluate knowledge gained.	La Clinica	N/A	October 2026 to April 2028
		2. Document attendance and completion of all three sessions for each family.	La Clinica	N/A	November 2026 to April 2028
		3. Identify families needing additional support or referral after the series.	La Clinica	N/A	November 2026 to April 2028

4. At least 20 families in year 1 and 25 families in year 2 will receive information related to cleaning supplies to prevent asthma trigger and organic cleaning materials will be distributed upon completion of home visits	A. Develop and prepare educational materials	1. Identify asthma-safe cleaning supply information and healthy home educational materials.	La Clinica	N/A	August 2026
		2. Develop or adapt materials in culturally and linguistically appropriate formats.	La Clinica	N/A	August to September 2026
		3. Assemble material packets for participating families upon completion of home visits.	La Clinica	N/A	October 2026 to April 2028
	B. Distribute materials to families completing home visits	1. Review educational content with families during final home visit sessions.	La Clinica	N/A	October 2026 to April 2028
		2. Provide each family with printed materials, organic cleaning supplies, and air purifiers, and provide guidance on asthma-safe home practices.	La Clinica	N/A	October 2026 to April 2028
		3. Document distribution of materials for all participating families.	La Clinica	N/A	October 2026 to April 2028
	C. Reinforce proper use of materials and recommendations	1. Explain how safer cleaning practices can reduce asthma triggers in the home.	La Clinica	N/A	October 2026 to April 2028
		2. Address questions related to product use, storage, and environmental safety.	La Clinica	N/A	October 2026 to April 2028

		3. Conduct follow-up to confirm families received and understood the materials.	La Clinica	N/A	October 2026 to April 2028
5. By June 2028, there will be a total of 8 social media campaigns implemented for the target population with four campaigns each fiscal year.	A. Develop campaign strategy and messaging	1. Identify campaign topics related to asthma awareness, prevention, available services, and promotion of the resource fairs.	La Clinica	N/A	August 2026 to April 2028
		2. Create culturally relevant and bilingual messages for each social media ad.	La Clinica	N/A	August 2026 to April 2028
		3. Create a campaign calendar aligned with program timelines.	La Clinica	N/A	August 2026 to April 2028
	B. Design and prepare campaign materials	1. Create graphics, captions, and educational content for each ad.	La Clinica	N/A	August 2026 to April 2028
		2. Review materials for accuracy and cultural appropriateness.	La Clinica	N/A	August 2026 to April 2028
		3. Finalize campaign assets for publication across selected platforms.	La Clinica	N/A	August 2026 to April 2028
	C. Launch and monitor campaigns	1. Publish four social media campaigns during the fiscal year.	La Clinica	La Clinica Planning Department	August 2026 to April 2028
		2. Share campaign content through partner organizations and community networks.	La Clinica	La Clinica Planning Department	August 2026 to April 2028

		3. Track outreach, engagement, and audience response for each campaign.	La Clinica	La Clinica Planning Department	August 2026 to April 2028
6. La Clinica staff will conduct at least one community resource event each year to increase awareness of available resources for Pittsburg families, including families of children with asthma, for a total of two events during two years of the grant period.	A. Implement the event in the community	1. Identify the event format, target audience, and community location.	La Clinica	La Clinica Planning Department	July to September 2026 and July to September 2027
		2. Coordinate logistics including venue, date, materials, collaborative partners confirmed to do tabling and provide resources.	La Clinica	Planning committee that will include representatives from (PUSD, First Five, Healthy and Active Before Five, Monument Impact and United Latino Voices and City of Pittsburg).	July to September 2026 and July to September 2027

		3.Implement the community resource fair to promote, community building and access to resources including sustainable and affordable green options.	La Clinica	Planning committee that will include representatives from (PUSD, First Five, Healthy and Active Before Five, Monument Impact and United Latino Voices and City of Pittsburg).	September 2026 and September 2027
	B. Engage partners and promote attendance	1. Invite Pittsburg Unified School District, Village Community Resource Center, Monument Impact, First 5 Centers, East County Coalition, Arterra, Cool the Earth, and other community organizations to participate.	La Clinica	Planning committee that will include representatives from (PUSD, First Five, Healthy and Active Before Five, Monument Impact and	Fall of 2026 and fall of 2027

				United Latino Voices and City of Pittsburg).	
		2. Develop outreach materials and conduct outreach to promote the event through flyers, social media, outreach and partner networks.	La Clinica	Planning committee that will include representatives from (PUSD, First Five, Healthy and Active Before Five, Monument Impact and United Latino Voices and City of Pittsburg).	Fall of 2026 and fall of 2027
		3. Confirm partner roles, tables, and resource contributions before the event.	La Clinica	Planning committee that will include	Fall of 2026 and Fall of 2027

				representatives from (PUSD, First Five, Healthy and Active Before Five, Monument Impact and United Latino Voices and City of Pittsburg)	
	C. Evaluate event outcomes	1. Track attendance and participant demographics.	La Clinica	Agencies from the Planning Committee	Fall of 2026 and Fall of 2027
		2. Collect participant feedback on event usefulness and resource awareness.	La Clinica	Agencies from the Planning Committee	Fall of 2026 and Fall of 2027
		3. Summarize outcomes and lessons learned to improve future events.	La Clinica	Agencies from the Planning Committee	Fall of 2026 and Fall of 2027

Project Name:	RESPIRA (Red comunitaria de Educacion en Salud ambinental y Promocion de Iniciativas para el Respeto del Ambiente Limpio)
Lead Applicant Name:	La Clinica de La Raza
Term for this budget (in years):	2

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Personnel/Staff Costs	Direct	Program Manager	The program manager will supervise other staff members on the grant and oversee the program implementation. Staff will work 2 hours/week for 2 years [2 hours per week/40-hour work week = 0.05 full time equivalency (FTE) for 2 year]. Her annual salary is $126,070 and $12,607 of her salary will be charged to this grant for 2 years. Total salary for 2 years: $126,070 x 0.05 FTE x 2 years = $12,607. Fringe benefits will be charged at the rate of 26% Total salary including Fringe: $12,607 + $3,278 = $15,885	$15,885
Personnel/Staff Costs	Direct	Community Health Educator lead	Community Health Educator lead will conduct outreach and co facilitate class series presentations in the community setting. Staff will also conduct home visits and implement class series to educate families on asthma prevention and poor air quality. Staff will work 12 hours/week for 2 years [12 hours per week/40-hour work week = 0.3 full time equivalency (FTE) for 2 year]. Her annual salary is $74,011 and $44,407 of her salary will be charged to this grant for 2 years. Total salary for 2 years: $74,011 x 0.3 FTE x 2 years = $44,407. Fringe benefits will be charged at the rate of 26% Total salary including Fringe: $44,407 + $11,546 = $55,953	$55,953
Personnel/Staff Costs	Direct	Community Health Educator	Community Health Educator will conduct outreach and class series presentations in the community setting. Staff will also conduct home visits and implement class series to educate families on asthma prevention and poor air quality. Staff will work 16 hours/week for 2 years [16 hours per week/40-hour work week = 0.4 full time equivalency (FTE) for 2 year]. Her annual salary is $66,713 and $53,370 of her salary will be charged to this grant for 2 years. Total salary for 2 years: $66,713 x 0.4 FTE x 2 years = $53,370. Fringe benefits will be charged at the rate of 26% Total salary including Fringe: $53,370 + $13,876 = $67,247	$67,247
Travel	Direct	Local Travel (Mileage)	The staff will travel to the community to conduct outreach and series in the community settings. Mileage will be charged at the current federal rate of $.725 per mile. The estimated cost for staff mileage will be $1,400 for two years of the grant duration.	$1,400.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Office Supplies	The office supplies will include color, papers, markers, pens, toner, and poster paper to conduct outreach and class series. The estimated cost will be $33.33 per month in year 1 and $50 per month in year 2 for office supplies. The total will be $1,000	$1,000.00
Community Engagement	Direct	Printing	This cost will be used to print flyers and posters to promote resource events. The estimated cost is $1,154 for 2 years.	$1,154.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Hot Spot and Cell Phone	1 hot spot and cell phone - $90 per month X for FTE 75% on the grant for all staff X 12 months = $810 per year and $1,620 for two years.	$1,620.00
Community Engagement	Direct	Social Media paid ads	There will be $50 per social media ad x 8 ads = $800 per year, and the total for two years is $1,600.	$1,600.00
Community Engagement	Direct	Home Visiting Supplies	Home Visiting supplies for 45 total families , $75 per family for supplies, plus 8 families per year for a total of 16 families who need carpet cleaning vaccum will receive one upon home visit comletion at an estiamted cost of $100 per vacume. (8 per year) (45 families x $75 for supplies)+($100 for vaccum x 16 families) = $4,975	$4,975.00
Community Engagement	Direct	Gift cards for participating families	Participating families will receive a $25 gift card on completion of the Home Visit class series. It will cost $1,225 for 45 families in 2 years.	$1,125.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Telephone	This includes land line fee for office phone communication, which will cost $2,630 for 2 years.	$2,630.00
Community Engagement	Direct	Community engagement event c	Cost for event permit, rental cost for portable restrooms, tables, canopies, chairs, decorations and food. The total event cost for 2 years will be $12,875.	$12,875.00
Community Engagement	Direct	Promotoras Stipends	At least 25 home visits will be co-facilitated by Promotor@s 10 visits in year 1 and 15 visits in year 2, and stipends wiill be paid at the rate of $50. 25 visits x 3 series x $50 stipend = $3,750 stipends $100 stipend per promotor@ will be provided for 18 outreach events (8 in year 1 and 10 in year 2). 18 outreach events x $100 stipend = $1,800 stipends Community group presentations will be conducted by promotoras that include 3 presentations each year and they will receive $50 stipend amount 6 presentations x $50 = $300 The total stipend amount is $5,850	$5,850.00
Capacity-Building and Training	Direct	Program Activity	The total cost for outreach and education materials for Asthma home visits (i.e. lung models) and outreach event fees will be $600 for two years.	$600.00
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect	Indirect cost	We have included indirect costs @ 15% for this project. It covers overhead for Administrative Departments such as Fiscal, Human Resources, etc.	$26,086.00
			Only add lines above this line	
			TOTAL:	$200,000.00

Lead Applicant Budget Summary (auto-calculated)	
Total Direct Costs	$173,914.00
Total Indirect Costs	$26,086.00
Total Prof. Services & Consultants	$0.00
Total Contingency	$0.00
Total Funds Requested	$200,000.00
Cross-check Total Budget	YES
Indirect as % of Direct	15.0%
Prof. Services & Consultants as % of Direct	0.0%
Contingency as % of Direct	0.0%

Local Community Benefits Fund – Round 1
Opportunity and Catalyst Grants
Overall Narrative

General Instructions:

- The "Overall Narrative" is scored out of 50 points.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 7 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Catalyst Grant Applications in Benicia:

- Due to the ongoing strain on the Benicia community's civic and organizational capacity resulting from the impending refinery closure, Co-Applicants are not required for Catalyst Grant applications in Benicia.
- Therefore, Catalyst Grant applications in Benicia should **not** answer questions related to "Partnership Structure" (Qs #3-6). Applicants should leave these questions blank, and will not receive a score for these questions.
- The "Overall Narrative" for Catalyst Grant applications in Benicia will be scored out of 30 points.

Application Information	
Application Title	Richmond Rising Together
Lead Applicant	City of Richmond
Application Location	City of Richmond, CA (Multiple locations)
Overall Funding Request	$15,000,000
Grant Term Request	5 years

PROPOSAL VISION (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines your overall application and projects, measurable outcomes, and how your application supports the Program Goals of the Local Community Benefits Fund:*
    - Reduce air pollution or mitigate its impacts, improve public health outcomes, and build economic resilience for a just transition away from the harmful effects of a fossil-fuel-based economy.
    - Advance integrated projects to holistically meet community needs.
    - Strengthen community-driven and collaborative solutions.

Richmond Rising Together (RRT) is a comprehensive and interconnected set of climate justice projects that leverage existing and burgeoning efforts in green workforce development, urban greening, air quality improvement, and community-based climate health to meaningfully advance the Program Goals of the Local Community Benefits Fund. Development and selection of these programs was guided by the community knowledge and organizational relationships fostered through citywide planning efforts, including the Health in All Policies (HiAP) Strategy, Climate Action Plan (CAP), Richmond Park Equity Project, and the Climate Resilience Roadmap. These programs are also informed by and directly expand on the City's Richmond Rising Projects and Plans, funded by a $35 million Transformative Climate Communities (TCC) Implementation Grant, for the City and five local partners to implement greenhouse gas (GHG) reduction projects that provide health, economic, and environmental benefits to Richmond's most underserved neighborhoods.

In bringing together partners and projects across a wide range of climate justice specialties, RRT leverages and braids the unique knowledge and community relationships of each partner into a collaborative effort that serves as a catalyst to reduce air pollution, improve public health, and advance a just transition from a fossil-fuel-based economy. Deeply rooted organizations, including RYSE, Rich City Rides, LifeLong Medical, and The Black Neighborhood will provide targeted community health and workforce training to Richmond residents while directly connecting participants to programs such as the Total Transit Access Program and Richmond Moves, ensuring participants are informed and empowered to use alternative modes of transportation that improve air quality and reduce transportation burdens. The trusted relationships and community engagement capacity of these organizations are further leveraged in outreach for projects, including Resilient Homes, Advanced Energy Homes, and Rooted. RRT also continues to strengthen community trust and local knowledge through a monthly Collaborative Stakeholder Committee (CSC) of project leads and community members, participatory storytelling and video essays in partnership with STEAM the Streets, and qualitative and quantitative analyses by Rising Juntos and the University of California (UC) Berkeley Center for Global Healthy Cities. RRT also seeks to support

community resilience and planning efforts through the Mobile Energy Storage System as well as the MLK Community Center, which will be community-informed in design, programming, and long-term role as a neighborhood hub for climate resilience.

2. *Describe the community that your application will benefit, such as demographics, historical context or any other relevant details. Describe the specific populations targeted to benefit from the proposed project(s).*

The majority of urbanized census tracts in Richmond score above the 50th percentile on CalEnviroScreen 4.0. Neighborhoods including Iron Triangle, Santa Fe, North Richmond, and Coronado are within the 90th percentile, where diesel particulates and toxic releases from industrial facilities result in some of the highest rates of asthma and other respiratory issues in the state. Chemicals from industrial activities contaminate soil at 442 brownfields and Superfund sites throughout the city, and other mobile and stationary pollution sources include the Chevron Refinery and multiple freeways and railroads. The neighborhoods most impacted by pollution are predominantly low income, with a majority of residents identifying as Black or Latinx.

RRT directly addresses community needs in neighborhoods most impacted by air pollution and economic disinvestment. Resilient Homes provides roof repairs, solar panels, and electrification to low-income, single-family homes within neighborhoods in the 90th percentile of CalEnviroScreen 4.0. Advanced Energy Homes turns blighted and abandoned homes within these neighborhoods into energy-efficient affordable homes with improved indoor air quality. The MLK Community Center is in the Coronado neighborhood and will provide workforce education and employment opportunities to local residents and will be a primary community resource in the event of a natural disaster or climate-related event. Facilities Pathways will serve the youth membership of RYSE, which is over 90 percent low income and 41 percent Black, 42 percent Latinx, 9 percent Asian American, and 18 percent LGBTQ+. The Black Neighborhood's Environmental Data Fellows program will build on their history of engagement within low-income Black and Latinx communities to focus outreach and education efforts on youth residing nearest to air pollution sources. LifeLong Medical Care is a federally qualified health center; in the William Jenkins Health Center in the Iron Triangle neighborhood, 92 percent of patients live below 200 percent of the federal poverty level and 73 percent identify as Black/African American or Hispanic/Latinx. LifeLong's Asthma Health program will serve high-risk patients with asthma and other respiratory vulnerabilities, many of which are the result of poor neighborhood air quality. Additionally, Rising Juntos will focus on communities most impacted by air pollution and climate-related health risks as part of Richmond ACT, particularly neighborhoods adjacent to major sources of pollution, such as Interstate 80, Interstate 580, and the Chevron refinery and industrial corridor.

PARTNERSHIP STRUCTURE (20 points)

3. *Describe the Lead Applicant and Co-Applicant(s)' organizational missions and connections to the identified community.*

The **City of Richmond** is home to more than 114,000 residents who it serves through sustained community engagement, thoughtful planning and programming, and implementation of citywide policies and initiatives. **Groundwork Richmond**, since 2010, aims to revitalize and care for Richmond's natural spaces by increasing the community's capacity to care for their local environment, reclaiming vacant lands for conservation and recreation, and growing the urban canopy. **The Watershed Project (TWP)** aims to inspire Bay Area communities to understand, appreciate, and protect their local watersheds. Since 1997, TWP has collaborated with Richmond residents to build greater community and watershed resilience. **Richmond Trees** promotes and grows the city's urban forest and green infrastructure through community planting, tree care, education, and advocacy to improve the health and well-being of the diverse Richmond community since 2009. **GRID Alternatives (GRID)** builds community-powered solutions to advance environmental justice through renewable energy. GRID has been working in Richmond since 2004. **LifeLong Medical Care** is a multi-site federally qualified health center serving low-income communities since 1976. The William Jenkins Health Center is in Richmond's Iron Triangle neighborhood and offers behavioral health and health services. **Rich City Rides** has built and sustained community engagement in Richmond since 2012 through activities such as bike repairs, bike education/safety, and community rides in Richmond and surrounding neighborhoods. **Richmond Community Foundation** aims to mobilize the power of connection to build healthy, thriving, and equitable communities. Since 2000, Richmond Community Foundation has teamed with community groups to share resources, support programs, and raise funding for the Richmond community. **Rising Juntos** has worked since 2003 in Richmond to create an intergenerational, multicultural people's movement responsive to community needs. Rising Juntos builds power for racial, economic, and health justice for children and families in Contra Costa County. **RYSE** has reached marginalized young people in Richmond since 2008 using an integrative model that weaves together mental health support, restorative justice, creative arts and expression, basic needs, and leadership development pathways. **The Black Neighborhood (TBN)** cultivates safe spaces for Black communities where growth, connection, and wellness thrive. Since 2019, many of TBN's programs support Richmond youth and families. **STEAM the Streets** increases youth engagement in emerging career pathways and creates a more inclusive STEAM career pipeline through media, music, interactive programming, and more. STEAM has worked with Richmond communities since 2019. **UC Berkeley Center for Global Healthy Cities (CGHC)** partners with communities globally to create healthier, more inclusive, and equitable cities. CGHC has worked with the City of Richmond on program evaluation since 2010.

4. *Describe the Partnership Structure, including roles and responsibilities of the Lead Applicant and Co-Applicant(s) and decision-making processes.*

If awarded, the City and Co-Applicants will memorialize a Partnership Structure through execution of a Memorandum of Understanding (MOU). The MOU will clearly outline the City's responsibility for support and oversight of all projects, including budget management, reporting, and community engagement. The City will enter into contracts with each Co-Applicant, which shall be used as a mechanism for disbursal of funds as directed by the scope of work and budget approved by the Air District. In addition to ongoing programmatic support for each project, the City will also coordinate regular meetings with Co-Applicants to discuss updated project status, ensure timely and accurate reporting, and collaboratively problem-solve should issues arise, including coordination with the Air District. The City will also manage monthly meetings of the CSC and other community engagement events, including preparation of meeting materials, space rental and setup, and provision of childcare to support resident and neighborhood involvement in planning for and implementing projects.

As will be outlined in the MOU, Co-Applicants will be responsible for project implementation and timely submission and revisions of all required documents to the Lead Applicant. Co-Applicants will proactively communicate with the City, the CSC, and members of the public regarding potential issues, and any proposed changes to project schedules, designs, or outcomes will incorporate community and partner feedback as much as possible. Co-Applicants will also attend and participate in CSC meetings and other relevant community engagement efforts in the city to gather public input and promote project engagement. Additional information regarding CSC meetings is included in response to Question 5.

5. *Describe how the Lead Applicant will work with Co-Applicant(s) to:*
    - Coordinate overall community engagement activities.
    - Track and report on indicators to assess progress towards measurable outcomes.
    - Collect and process reporting, reimbursement and invoicing requirements.

Community Engagement: The City will be the primary party responsible for facilitating community engagement, including coordination of the CSC and other public meetings and facilitating access to the RRT Hub office and community space. The CSC is made up of one representative from each Co-Applicant and the Lead Applicant, as well as six appointed community members. CSC meetings are hosted monthly at the Nevin Community Center and include project status updates as well as presentations from project partners and other relevant community organizations to gather input, share feedback, and ensure a collaborative and community-centered approach to program implementation and decision-making. These meetings are hybrid (i.e., in-person and on

Zoom) and include free childcare, interpretation, and meals for community members. The City is also responsible for hosting and attending relevant community meetings to ensure continued resident engagement and cross-pollination across the city. The City will also be responsible for operation of the RRT Hub, a centrally located, transit-accessible office and community space that will offer meeting and work spaces for Co-Applicants, many of whom do not have dedicated facilities for community events.

Indicator Tracking: The City will manage a reporting schedule in alignment with Air District expectations and will manage and support partner access to Airtable and other collaborative tools as necessary. UC Berkeley will track indicators for each measurable outcome plan. Co-Applicants will be responsible for developing and using internal systems on an ongoing basis to track and report required data.

Reporting, reimbursement, and invoicing: The City will use reporting schedules and shared expectations to coordinate with Co-Applicants using project management tools including Airtable and SharePoint and track, collect, and report financial and programmatic data in a timely manner. The City will pay partner invoices and submit reimbursement requests to the Air District on a quarterly basis.

6. *Is the Lead Applicant or Co-Applicant(s) subject to a board or council? If yes, please describe the board or council approval process and status of approval for the projects in this application. Applications must receive any necessary board or council approvals by the time that the Grant Agreement is executed.*

Richmond City Council must approve acceptance of funds. Depending on grant requirements, this can be secured before or after application. In this case, the City has elected to secure City Council approval ahead of submitting the application. On May 26, 2026, the City Council authorized City Staff to submit the application package on behalf of the City of Richmond and the Co-Applicants. Co-Applicants will be responsible for securing approvals as necessary over the life of their project.

CAPACITY (20 points)

7. *Describe the Lead Applicant's ability to oversee overall project implementation, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to grant implementation.*

The City's Project Manager (35 percent FTE) will provide overall leadership in grant implementation, including coordination of cross-departmental and interagency activities and management of contracts and budgets as the Lead Applicant. The Associate Management Analyst (45 percent FTE) will support preparation and submission of required reports and invoices and coordination of monthly CSC meetings and other community engagement efforts. The Administrative Assistant (80 percent FTE) will provide staff support for all projects, including CSC meeting preparation, timely payment

of invoices, and development of required supporting documentation. Staffing costs will be supported with leveraged funding through July 2028; accordingly, associated budget requests reflect staff time beginning in August 2028 and extending through the remaining 41 months of the grant period. Oversight by the Community Development Director will be provided in-kind.

This team is housed within the City's Community Development Department and manages over $55 million of grant funds allocated to multi-partner projects throughout the city and will use tools and lessons learned from these experiences to coordinate with partner organizations and ensure timely delivery of all grant objectives and reporting requirements. The City has previously partnered with each of the Co-Applicants to implement successful projects similar to those proposed within this grant, including park design, tree planting, green workforce development, and renewable energy deployment.

8. *Describe the Lead Applicant's ability to manage public funds efficiently, including a description of your financial management practices. Indicate how you will track grant funds and ensure that funds are spent on appropriate grant activities.*

The City Community Development Department has a proven track record of successful oversight of projects of similar scale and scope, including the recent five-year $35 million TCC grant as well as grants from agencies including the California Department of Transportation, Metropolitan Transportation Commission, California Coastal Conservancy, CAL FIRE, and the US Environmental Protection Agency. In recent years, Richmond has adopted a balanced budget, received an increase of Richmond's bond rating, and has seen steady revenue growth.

The requested City staff positions will support coordination of budgets, expenditures, and reimbursement requests with all Co-Applicants. This team will use collaborative project management tools, including Airtable and SharePoint to monitor project schedules, track expenditures, and coordinate with Co-Applicants to process invoices and submit timely reimbursement requests to the Air District. Staff will review all submitted invoices to ensure expenditures are reasonable, properly documented, and directly tied to eligible grant activities. City staff will also ensure compliance with all procurement policies and established financial procedures and will provide up-to-date information regarding project budgets during each CSC meeting.

Application Title:

Project #	Project Title (3 words maximum)	Project Summary (1-3 sentences)	Strategy Alignment	Project Lead	% Co-Applicant Allocation (Min of 25% of Total Application Budget)	Total Project Budget - Direct Costs	Total Project Budget - Professional Services & Consultants	% Professional Services & Consultants (Max of 25% of Application Direct Costs)	Total Funds Requested	Lead Applicant Budget	Co-Applicant 1 Budget - BAMV-STS	Co-Applicant 2 Budget - GRID	Co-Applicant 3 Budget - GWR	Co-Applicant 4 Budget - LLMC	Co-Applicant 5 Budget - RCR	Co-Applicant 6 Budget - RCF	Co-Applicant 7 Budget - RTree	Co-Applicant 8 Budget - RJ	Co-Applicant 9 Budget - RYSE	Co-Applicant 10 Budget - TBN	Co-Applicant 11 Budget - TWP	Co-Applicant 12 Budget - UCB
1	MLK Community Center	The City of Richmond will complete construction documents and environmental review for the Martin Luther King Jr. Community Resilience Center, a net-zero structure with solar, battery storage, and high-efficiency air filtration designed as a clean air center and emergency hub — making it shovel-ready for construction prioritizing Richmond workers.	Both	City of Richmond	2.0%	$ 3,154,143	$ 2,271,096	72.0%	$ 3,160,793	$ 3,096,399	$ 35,230	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ 29,164
2	Mobile Energy Storage	The City of Richmond will purchase one RPS150 Mobile Energy Storage System to replace diesel generators at community events — including The Lot: Downtown Richmond Food Court, Music on the Main, and Spirit and Soul — reducing particulate matter and 0.3-1.9 metric tons of CO_2 per 8-hour event, while providing free clean power to small and emerging local vendors.	Both	City of Richmond	10.5%	$ 273,626	$ -	0.0%	$ 278,626	$ 249,462	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ 29,164
3	Richmond Moves	Bridge funding will sustain Richmond Moves for one year — the City's fully electric, on-demand microtransit service now connecting 100,500 residents to jobs, schools, healthcare, and BART — delivering an estimated 15 metric tons of CO_2 reductions annually while keeping the 75 percent of riders who lack personal vehicle access connected to employment and economic opportunity.	Both	City of Richmond	2.6%	$ 1,085,527	$ -	0.0%	$ 1,114,691	$ 1,085,527	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ 29,164
4	Rooted	The City of Richmond, Groundwork Richmond, The Watershed Project, and Richmond Trees will plant 600 trees and install 10 rain gardens in disadvantaged neighborhoods, reducing particulate matter, urban heat, and flood risk while employing and training Richmond residents in living-wage urban forestry and green infrastructure careers delivering an estimated 11-35 metric tons of CO_2 reduction/sequestration annually.	Both	City of Richmond	66.0%	$ 2,001,551	$ -	0.0%	$ 2,126,586	$ 681,239	$ 70,760	$ -	$ 500,000	$ -	$ -	$ -	$ -	$ 345,193	$ -	$ -	$ -	$ 500,230	$ 29,164
5	Total Transit Access	The City of Richmond, in partnership with MTC and BART, will provide unlimited BayPass Clipper Cards to 1,500 Richmond residents over five years through partner workforce development programs — reducing single-occupancy vehicle trips and an estimated 400–1,200 metric tons of CO_2 emissions annually while removing transportation cost barriers that prevent the city's most economically burdened residents from accessing employment opportunities.	Both	City of Richmond	2.8%	$ 994,623	$ 25,007	2.5%	$ 1,114,691	$ 1,085,527	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ 29,164
6	Resilient Homes	GRID Alternatives, with the City of Richmond and MCE Community Choice Energy, will deliver 450 kilowatts of solar power to 100 income-qualified families in the Iron Triangle, Coronado, and Santa Fe neighborhoods — combining installations with electrification, mold mitigation, and air sealing to eliminate indoor asthma triggers while providing 3,200 hours of paid solar workforce training delivering an estimated of 150 - 220 metric tons of CO_2 emissions reduction annually.	Both	GRID Alternatives	91.0%	$ 1,782,389	$ -	0.0%	$ 2,068,653	$ 186,655	$ 49,600	$ 1,801,234	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ 29,164
7	Asthma Health	LifeLong Medical Care, with the City of Richmond, will deploy up to 15 community-recruited Health Promotors annually to deliver home visits, HEPA air filtration, and asthma self-management support to 100 high-risk households — reaching 1,000 community members per year while building a paid workforce pipeline in respiratory and environmental health.	Both	LifeLong Medical Care	87.2%	$ 1,013,698	$ -	0.0%	$ 1,231,734	$ 157,760	$ 44,810	$ -	$ -	$ 1,000,000	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ 29,164
8	Climate Ambassadors	Rich City Rides will lead Climate Ambassadors for Change, a youth fellowship providing three cohorts of marginalized Richmond youth with environmental literacy, job shadowing across Richmond Rising Together projects, and hands-on workforce development — building green-sector career pathways for communities historically excluded from the clean energy industries now leading Richmond's just transition.	Build Economic Resilience for a Just Transition	Rich City Rides	81.5%	$ 1,046,019	$ -	0.0%	$ 1,242,734	$ 229,995	$ -	$ -	$ -	$ -	$ -	$ 983,575	$ -	$ -	$ -	$ -	$ -	$ -	$ 29,164
9	Advanced Energy Homes	The Richmond Community Foundation, with the City of Richmond, will remediate and transform nine blighted homes into fully electric, solar- and battery-ready advanced energy residences — eliminating combustion appliances to reduce indoor asthma triggers and lower utility bills — then sell them to first-time low- and moderate-income buyers, expanding affordable, healthy housing stock and reducing a total of 4-9 metric tons of CO_2 annually.	Both	Richmond Community Foundation	92.6%	$ 1,018,641	$ -	0.0%	$ 1,157,718	$ 85,527	$ 49,600	$ -	$ -	$ -	$ -	$ -	$ 993,427	$ -	$ -	$ -	$ -	$ -	$ 29,164
10	Richmond ACT	Rising Juntos will engage low-income families, immigrants, seniors, and unhoused residents in participatory research and advocacy to document air quality conditions, connect residents to filtration and health supports, and develop a Richmond Climate Health Road Map — building sustained community leadership to drive equitable, long-term reductions in air pollution.	Reduce Air Pollution and Improve Health Outcomes	Rising Juntos	75.2%	$ 591,924	$ -	0.0%	$ 636,924	$ 157,760	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ 450,000	$ -	$ -	$ -	$ 29,164
11	Facilities Pathways	RYSE, Inc. will engage 10 Richmond youth in a paid internship in air quality monitoring, emergency preparedness, and community outreach — strengthening RYSE Center as a clean air resilience hub serving 100 community members during poor air quality events while building paid workforce pathways in environmental health and facilities management.	Both	RYSE, Inc	78.5%	$ 315,425	$ -	0.0%	$ 364,691	$ 85,527	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ 250,000	$ -	$ -	$ -	$ 29,164
12	Environmental Data Fellows	The Black Neighborhood will lead the Environmental Data Fellows project, a paid youth fellowship providing two cohorts of Richmond youth with environmental justice education, data interpretation training, and field-based career exposure in air quality, environmental health, and climate resilience — building green workforce pathways for communities historically excluded from Richmond's growing resilience economy.	Build Economic Resilience for a Just Transition	The Black Neighborhood	54.4%	$ 479,159	$ 4,000	0.8%	$ 504,159	$ 229,995	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ 245,000	$ -	$ 29,164

Local Community Benefits Fund – Round 1
Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Richmond Rising Together
Lead Applicant Name	City of Richmond
Project Location	Richmond, CA
Overall Funding Request	$15,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	MLK Community Center
Project Lead	City of Richmond
Project Location	Richmond
Project Funding Request	$3,160,793

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The project will fund the development of construction documents for the Martin Luther King Jr Community Resilience Center (MLK Center). The MLK Center will replace a prior facility that was demolished in 2010 due to extensive water and structural damage that occurred during a major storm as well as vandalism. This facility was a gathering place for residents, particularly serving residents in Coronado and Santa Fe neighborhoods. It served local clubs, teams, and after-school programs for youth, as well as adults and seniors. On the north side, adjacent to the MLK Center, is Nystrom School, a public elementary school. The site is also directly west of and adjacent to the major amenity in the area: Martin Luther King Jr. Memorial Park. The park, which is a natural complement to the MLK Center, features a playground, a football and track field, and soccer, softball, basketball, and tennis courts. The MLK Center will also support the current and future residents of Nystrom Village, a property owned and managed by the Richmond Housing Authority, which currently consists of 51 single-story World War II-era duplexes. In the future, Nystrom Village will be redeveloped to include mixed-income development with new affordable and market-rate housing units.

This project has received funding from the Hellman Foundation as part of the Richmond Park Equity Project (RichPEP), a collaborative of community organizations and the City that are building a Black, Brown, and AAPI resident-led movement for park equity. Through the RichPEP-funds, the City implemented a community engagement process, developed conceptual designs, and is currently working to create a set of schematic design documents. Along with the construction documents for the MLK Center, the project will also complete the environmental review process. The City will continue to conduct community engagement during the grant period, reporting ongoing progress to the community. The goal is to make the project 'Shovel-Ready' by having both the construction documents and environmental review completed. By completing everything from schematic design through environmental clearance and construction documents, the project's competitiveness and eligibility for future construction-specific funding sources will be enhanced by its readiness.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

In 2019, the City worked with Trust for Public Land (TPL) and PlaceWorks, a consultant, to develop a Resilience Roadmap, which identified nine projects that could advance community sustainability objectives in the Iron Triangle, Santa Fe, and Coronado

neighborhoods. The redesign and rebuilding of MLK Center was included in this Roadmap and imagined as a Resilience Hub. The MLK Center will be rebuilt as a net-zero building with resilience features to limit air pollution and create a safe space for community members during climate-related events, including days with low air quality, and improve health outcomes during those events. Specific resilience features will be defined based on community input. The MLK Center will also be designed to provide resources to the community before, during, and after a natural disaster. As part of a recent resiliency-related community survey pertaining to the redevelopment of the MLK Center and the adjacent park, community members expressed that they would use the MLK Center as a primary "home base" to find help and organize with neighbors in the case of a natural disaster. The community desires the building to include features like energy-efficient fixtures and appliances, in addition to a solar photovoltaic system and battery storage that will reduce the greenhouse gas emissions generated by electricity use. As envisioned, the building will be zero net energy and community needs have suggested that having the ability to operate up to 72 hours or longer if a power outage occurs would serve the community. In compliance with the City's Green Building Ordinance, the completed building will be required to achieve at least a LEED Silver certification and have improved air quality indoors due to high-efficiency air filtration systems. In addition to the building, programming at the MLK Center will provide the community with resources to increase resilience. MLK Center will have the ability to provide other essential resources to community members, such as food, ice, charging stations, and basic medical supplies during a natural disaster. The MLK Center could act as a cooling center during extreme heat days and as a clean air center[1].

When this project is built, it will create construction jobs for city residents in addition to the programming positions for the various activities that the MLK Center could support, which will support long-term just transition. The City has a Local Employment Program that applies to any public works or service contract with a City subsidy of $100,000 or more, which would apply to the construction of the center. The Local Employment Program requires that at least 25 percent of new hires for public works projects be Richmond residents and that 25 percent of the total work hours for public works projects be performed by Richmond residents. The City also has a Living Wage ordinance that would apply to the construction phase to ensure that jobs related to city projects pay a living wage. Programming at the MLK Center will include educational and skill training programs to help residents find jobs. In the community resilience survey related to the MLK Center redevelopment, many respondents expressed a desire for the Center to host job fairs and have community meeting spaces and responded that they or their

[1] Krans, B., 2024, August 5, "What's in Richmond's air? New studies provide clarity on pollution and its sources." Richmondside. https://richmondside.org/2024/08/05/richmond-ca-air-pollution-sources-chevron-chemtrade-freeways/

family members would make use of job training or employment assistance programs at the center.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The MLK Center will be built at 360 Harbour Way South, next to Martin Luther King, Jr. Park. The site is to the south of Nystrom Elementary School and Richmond College Prep Charter School. Much of the surrounding area is residential, with the exception of commercial uses on Cutting Boulevard. The project is in the Coronado neighborhood and adjacent to the Santa Fe neighborhood. The project site is also close to the edge of the Iron Triangle neighborhood. It is expected that the Center will serve community members from all three neighborhoods, all of which are in the 90th percentile of CalEnviroScreen 4.0 – the highest possible score range, representing the worst air pollution in the state.

After the closure of the Kaiser shipyards in the mid-1950s, the Coronado and Santa Fe neighborhoods experienced significant economic decline, particularly among people of color.[2] The oil refinery in the area stayed open but has been a source of toxic pollution in the community. The residents in this area have been engaged in conversations about rebuilding the MLK Center and are invested in the programs and projects within their neighborhood. Despite facing ongoing economic challenges and limited investment, the community, in collaboration with the City of Richmond and other partners, has demonstrated resilience and continues to work toward improving public safety, reducing poverty, and bringing impactful programs to the area. In the past 20 years, community members have organized to fight for reinvestment in important infrastructure, programming, and community spaces to reverse this historic trend. This organizing effort includes the establishment of Nystrom United Revitalization Effort (NURVE), a comprehensive cross-sector revitalization effort created to strategically address some of the complex issues that face the area, such as physical and economic blight, crime, at-risk youth, unemployment, and poverty. NURVE is a model of grassroots-led, multi-sector revitalization in Richmond, blending community voice with government resources to tackle systemic challenges and foster sustainable neighborhood growth. Community members in Coronado, Santa Fe, and the Iron Triangle neighborhoods have worked with the City to secure funding for projects such as complete streets to promote road safety and active transportation, the redevelopment of public spaces, and landscaping to improve air quality and urban heat island effects. The California Strategic Growth

[2] City of Richmond and West Contra Costa County Unified School District, 2007, February 2007, "The Nystrom Area Community Campus: Reconnecting the Community," https://www.ci.richmond.ca.us/DocumentCenter/View/39297/NURVE-Joint-Use-Project-Report-2007pdf.

Council recently funded Richmond Rising, a suite of public health, job training, and environmental interventions focused on the three-neighborhood area.

The reconstruction of the MLK Center is an important element of this community organizing effort. The prior community center was a major community asset and provided a safe space for residents and important programming activities, and the community has been working toward reconstruction for more than 15 years. Due to a lack of funding, the City has not been able to reconstruct the center during this period. However, recent City Council support, along with $1.25 million in grant funding from the Hellman Foundation, has supported City staff in moving the redevelopment project closer to completion than it has ever been before.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

As part of the RichPEP collaborative process, the City has conducted three large community meetings about the redevelopment of the MLK Center. At the second meeting, community members were provided with a survey related to resiliency needs. The City has also conducted an in-depth survey in the neighborhoods surrounding the community center. The City visited the neighborhood councils to make presentations, shared the survey during those meetings and at various community events, provided an update to West Contra Costa Unified District staff to ensure collaboration and coordination with the Center's future partner, and attended a coffee chat event at Nystrom Elementary School attended by school staff and parents. Through the design process so far, there has been collaboration with the school district to ensure that the school has access to both the MLK Center and the connecting park. The school has also been a partner in NURVE organizing process more broadly. The West Contra Costa Unified School District, which Nystrom Elementary School is part of, is a separate agency from the City, so this coordination reflects ongoing partnership.

The resilience survey indicated that community members envision the center as not only a community center, but an important resource during future climate events. Many respondents indicated that poor air quality and/or extreme heat had affected them or their household. Respondents indicated that they would be interested in using the community center for a variety of uses in the event of a climate-related event, including having access to back-up power and/or internet service, accessing emergency food or drinking water, clean air filtration, showers and restrooms that are available during emergencies, and cooling spaces during extreme heat days. Other needs that were identified as being important to the future center included job training, programs for

youth and seniors, parenting classes, community spaces, recreation facilities, health screenings and food pantries, and mental health counseling services.

Throughout this process, the City has worked closely with NURVE, who has discussed the center at every meeting since the previous center was demolished in 2010.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The intended site for the redeveloped community center is in the Coronado Neighborhood, which is part of Census Tract 3790. According to CalEnviroScreen 4.0 (released in 2021), this census tract is in the 80th percentile of all census tracts in the state for pollution burden and the 93rd percentile for social factors that influence community vulnerability to pollution burden, indicating high levels of both pollution and social vulnerability. Diesel particulate matter is among the environmental factors that have the highest score, indicating the highest level of pollution burden, and the area has high rates of asthma, low birth weights, obesity, kidney disease, and diabetes. The redeveloped center will not only be rebuilt with resilience features to limit air pollution and greenhouse gas emissions during its operation, but it will also create a safe space with well-filtered air for community members on low air quality days. Additionally, the center will provide a cooling center on high-heat days and will be a primary community resource in the event of a natural disaster or climate-related event. Programming at the center will work in concert with other surrounding projects, such as the redesigned adjacent park, to encourage physical activity that can help address negative health outcomes in the community.

According to the 2020-2024 American Community Survey[3] just over half of residents in this census tract (51.6 percent) identify as “some other race,” while an additional 23.1 percent identify with two or more races and 16.3 percent identify as Black or African American. The majority of residents in the census tract (75.9 percent) identify as Hispanic or Latino of any race. Approximately one-third of residents in this census tract (33.5 percent) are under age 18. The previous center provided after-school programs for youth and spaces for local clubs and teams, as well as spaces and programming

U.S. Census Bureau, "ACS Demographic and Housing Estimates," American Community Survey 5-Year Estimates Subject Tables, Table DP05, 2024, < https://data.census.gov/table?q=DP05:+ACS+Demographic+and+Housing+Estimates&g=050XX00US06013$1400000 >

that served adults and seniors. The redeveloped community center will return these spaces and services to the community. The census tract also has a higher unemployment rate (7.9%) than Contra Costa County as a whole (6.5%). In addition to the construction jobs that will be created through the eventual construction of the MLK Center, programming at the center will include job fairs and employment assistance resources. The City's Recreation Division will hire additional staff to manage the center and provide programming to children, youth, and seniors.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

During the pending development of the building's schematic design, the City has continued to solicit input from the community. While current and prior phases of outreach during the development of the community center focused on soliciting input on community needs, as the construction documents are developed the goals of outreach will shift from visioning to accountability. Because the community center has been absent from the community and under discussion for many years, there is a strong desire to see the project come to fruition. Therefore, community engagement, conducted at regular intervals, will be focused on demonstrating ongoing progress. It is the City's hope that any major community input related to necessary design decisions will have been captured prior to the completion of schematic designs, which will be finished ahead of this project phase. However, if major concerns are raised during the development of construction documents, the City is committed to working with the architect to address these issues as much as possible. The City intends to conduct three phases of outreach during the grant period, at approximately equal intervals. These will involve at least one large community meeting along with presentations at neighborhood councils and NURVE meetings. Project updates will also be presented at Recreation and Parks Commission meetings, as well as at the Design Review Board.

As part of the Richmond Rising Together initiative, a Collaborative Stakeholder Committee (CSC) made up of a representative from each Co-Applicant organization as well as key stakeholders and compensated community member participants will meet monthly at the Nevin Community Center. During these meetings, Co-Applicants will share project status updates and directly engage the CSC and community members in discussions on project design and implementation. This structure ensures lessons learned across projects are leveraged towards the broader collaborative effort while creating meaningful opportunities for residents most impacted by poor air quality to learn about and engage in projects and share meaningful feedback based on their lived experiences. To reduce potential barriers and ensure maximum opportunities for

community participation, these meetings are hybrid (hosted in person and simultaneously on Zoom) and include free childcare, Spanish interpretation, and meals for community members. Meetings are recorded and posted online for viewing in Spanish and English.

STEAM the Streets will produce high-quality, community-centered storytelling that highlights local air quality and climate solutions across Richmond. In Year 5, this work will focus on highlighting efforts at the MLK Center, including the completion of construction documents and environmental review to build a new resilience hub. Through real-time footage and storytelling, this work will illustrate how thoughtful planning and redevelopment can contribute to healthier environments, improved community infrastructure, and long-term resilience in neighborhoods impacted by pollution. This storytelling will serve as the foundation for a broader community engagement campaign that translates on-the-ground climate and community development efforts into culturally relevant, accessible media. Footage captured from the MLK Center project will be incorporated directly into the youth-powered campaign and featured within the flagship climate action anthem and music video, ensuring that real, local solutions are embedded at the center of the campaign's storytelling. The campaign will bring increased visibility to these efforts, heighten awareness of available resources and solutions, and broadcast this local movement so that Richmond residents of all ages are more aware of and connected to the work happening in their community.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The project centers around the development of a complete set of construction documents that will be the basis for the construction of the MLK Center. At the completion of the project and as additional funding becomes available, the project will be shovel-ready. By completing everything from schematic design through environmental clearance and construction documents, the project's competitiveness and eligibility for future construction-specific funding sources will be significantly increased due to its high level of project readiness. Due to the City's Green Building requirements, the building design will incorporate sustainable features and elements necessary to achieve LEED Silver certification. It is expected that the development of these documents may take the entire duration of the 60-month grant period, and the measure of success for this portion of the project will be the completion of the construction documents. This work will be led by an architecture firm and appropriate subconsultants contracted by the City, and the City will provide oversight and project management of the consultant. Though the air quality, public health, and just transition

benefits of this project will begin after the construction of the building is completed, the completion of these documents will be an essential step in making the project shovel-ready and more competitive for state and federal construction grants, which will help the city deliver this crucial community asset. The City hopes that the process of constructing the building after the grant period will create up to 35-100 jobs (contractors, sub-contractors, suppliers, etc.), and that approximately 20 full-time and part-time jobs within the Center will be created after it is opened. Following the construction of the Center, the air filtration, solar generation, and solar energy storage components will reduce air pollution. Programming at the center is also expected to provide positive benefits for social and mental health, including by encouraging stronger family and community social bonds, as well as encouraging positive health-related behaviors, such as increased physical activity that can lead to decreases in diseases linked to physical inactivity.[4]

Public outreach will be ongoing throughout the grant period. While public outreach during the development of the schematic designs involved collection of input on community needs, public outreach will shift to information distribution during the process of developing construction documents. Because community members have been discussing the reconstruction of the community center for many years, ongoing reporting will be an important accountability action. However, to respect the time and energy of the community, the City will conduct at least three report-outs during the project period, both through public meetings and attendance at existing community meetings and neighborhood council meetings. Outreach efforts to share updates on the project will be conducted primarily by City staff.

The completion of the California Environmental Quality Act (CEQA) clearance process will occur simultaneously with the development of the construction documents. CEQA review will begin based on the schematic designs. The City will prepare an Initial Study to evaluate potential impacts and if necessary, mitigation measures. The study will be conducted by an outside environmental consulting firm, and the City will provide oversight and project management. The City will issue the final determination and will be a measure of success for this project.

The University of California (UC) Berkeley's Center Global Healthy Cities (CGHC) will prepare annual and end-of-project reports of data across all project partners, along with a public-facing dashboard to track progress. The dashboard will include a public comment section. CGHC will work with all Co-Applicants to co-create validated survey questions to capture the mental health impacts of air pollution and climate change (e.g.,

[4] California State Parks, 2005, "The Health and Social Benefits of Recreation," https://www.parks.ca.gov/pages/795/files/benefits%20final%20online%20v6-1-05.pdf.

climate anxiety), and whether and how project interventions are reducing stress, anxiety, and related psychosocial influences on well-being.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The budget includes funding for an architecture firm and related subconsultants to prepare construction documents and CEQA analysis and documentation for the community center. $2,054,096 of the proposed budget is allocated to the architecture construction firm that will complete construction documents, with an additional $217,000 allocated for CEQA analysis. $500,000 is budgeted for permitting costs, including review and issuance of any planning and building permits, encroachment permits, and Contra Costa Environmental Health permits as may be necessary. The budget also includes salary and benefits for 20% FTE Senior Civil Engineer ($196,436) for technical management of the CEQA review and construction document phases. The project budget also includes funding for permits for construction, including costs related to utility service connections, planning and building permits, fire permits, encroachment permits, and Contra Costa Environmental Health permits.

$49,600 is budgeted for STEAM the Streets for a Project Manager (29% FTE) and a Creative Program Lead (17% FTE) with program and administrative costs for one year to produce community-centered storytelling that highlights local air quality and climate solutions across Richmond, including the MLK Community Resilience Center.

$115,574 is for the City of Richmond Project Manager (2.80% FTE), Associate Management Analyst (3.60% FTE), and Administrative Assistant (6.40% FTE) to support execution of this project, ensure completion of grant commitments, coordinate community engagement and collaboration across projects, and manage contracting, invoicing, and payments. $13,293 will support CSC and other community meetings, shared spaces, and Richmond Rising Together outreach materials.

$29,164 is for UC Berkeley for a Project Director (16.6% FTE) and a $50/hour x 208 hours PhD student researcher to prepare annual and end-of-project reports, manage a project data dashboard, and capture the impact of the projects in reducing negative mental health impacts.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

The project is an initiative of NURVE, a community-led revitalization effort for the area around Nystrom School. The project was included in the Richmond Resilience Roadmap, which was developed as part of a Transformative Climate Communities (TCC) Planning Grant awarded to the City and its partners, and is in line with City climate resilience goals. The City Council has also included the MLK Center as a priority within its strategic goal to "improve the quality of life and community health/improve social determinants of health."

The final building will have at least a LEED Silver rating, which is in line with Strategy EE3 of the City's Climate Action Plan (CAP) ("Promote Green Building"). The solar generation and storage component of the proposed building is in line with Strategy RE1 of the CAP ("Increase Local Solar Energy Generation"). The development of the MLK Center as a resilience center is also in line with Strategy RC1 of the CAP ("Improve Community Preparedness for Climate Emergencies").

The redevelopment of the MLK Center and its planned future programming are in line with many General Plan policies. These include, but are not limited to:

- Community Facilities & Infrastructure Element Policy CF1.3: Impacts on Neighborhoods; Policy CF1.4: Concurrent Infrastructure Development; Policy CF3.1: Green Facilities; Policy CF4.1: Neighborhood-Serving Facilities; and Policy CF4.2: Neighborhood Centers
- Community Health and Wellness Element Policy HW1.3: Recreation Programs and Services; Policy HW1.4: Quality Recreational Facilities; Policy HW1.6: Safe Public Spaces and Facilities; Policy HW3.3: Emergency and Disaster Preparedness; Policy HW6.2: Workforce Training and Recruitment; Policy HW8.1: Investment in Public Facilities; Policy HW9.1: Air Quality
- Energy and Climate Change Element Policy EC3.5: City Government Operation and Policy EC4.3: Green Buildings and Landscaping

The MLK Center is also in line with Public Health Strategy 4 of the Richmond-North Richmond-San Pablo Community Emissions Reduction Plan (Assembly Bill 617). Action H 4.1 involves advocating for funding for resilience centers. The finished center will provide temporary shelter for community members during low air quality or high heat days and will serve as a resource center during natural disasters. The MLK Center will also be in line with Action H 4.2, which relates to high-efficiency air filtration systems in

areas where those will benefit vulnerable populations and places. The MLK Center will have a high-efficiency air filtration system that will help to implement this strategy.

In addition, the MLK Center also aligns with the City's Health in All Policies (HiAP) and race equity framework. Through inclusive design, participatory planning, and cross-sector collaboration, the new Center can serve as a hub for health, equity, and community empowerment, while restoring a vital cultural and health asset to Richmond.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

Project: Booker T. Anderson Community Center – Multiphase Modernization
Total Program Budget: ~$7.6 Million

The City's Public Works Department has successfully executed a multiphase rehabilitation of the 16,700-square-foot Booker T. Anderson Community Center. This project serves as a prime example of the Project Lead's ability to manage high-budget, complex capital projects from initial schematic design through construction.

Phases I & II (Complete): Successfully managed the reconstruction and infrastructure overhaul following significant fire damage. This involved coordinating technical upgrades to mechanical systems, high-efficiency HVAC, and modernized lighting and security systems. Both phases were delivered within the specified scope and budget.

Phase III (In-progress): Currently in the pre-development phase, focusing on continued building enhancements to ensure the facility meets long-term community and sustainability goals.

This project highlights the department's ability to manage multi-million-dollar budgets, coordinate complex technical upgrades, and successfully navigate the transition from design to construction completion. The Project Lead has experience ensuring these multiphase projects remain on schedule and compliant with funding requirements.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

To ensure successful implementation, the work will be managed by a .20 FTE Senior Civil Engineer from the City's Public Works Department. A separate Project Manager, Project Analyst, and Administrative Assistant will provide overall leadership in grant execution, partner coordination, reporting, and implementation across projects.

This Air District grant will serve as a foundational investment. By using these funds to complete CEQA and construction documents, the City will be positioned to move forward a project that could be supported by the following additional sources for the construction phase:

- City Capital Improvement Program (CIP) Funds: Request for local matching funds dedicated to community facility upgrades construction phase if awarded a construction-related grant.
- State and Federal Grants: The "Shovel-Ready" status achieved through this project will make the MLK Center a primary candidate for California State Parks, Strategic Growth Council grants and federal Green Building initiatives.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

The project will need to be reviewed by the City's Design Review Board and require a Conditional Use Permit by the Planning Commission. These reviews require detailed design documents, which are pending, but will be completed prior to the finalization of construction documents. The City will also complete any processes necessary to obtain permits related to utility service connections, planning, building, encroachment, and fire permits, and Contra Costa Environmental Health permits.

The project will follow the City's Green Building Ordinance (Richmond Municipal Code 6.45), and achieve a minimum of LEED Silver certification, which necessitates a structured approval sequence starting in the schematic design phase. During this phase, the project team will submit a comprehensive Green Building Project Checklist,

verified by a LEED Accredited Professional (AP), to the Building Division to ensure that sustainable strategies are integrated into the project plans. As the project progresses into the development of construction documents—a key deliverable of this project—the Building Division will perform a detailed plan check to verify that construction meets the California Building Standards Code. Concurrently with the construction documents preparation, the project will undergo CEQA review. By leveraging the internal coordination between the Public Works Department and CDD, the City will maintain a direct pipeline with the Green Building Official and Planning staff, ensuring that all design-related approvals and environmental clearances are secured within the grant performance period.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

CEQA compliance is within the scope of the project and will be completed during the grant term.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

The City will build the MLK Center on City-owned property. Therefore, the City has the necessary site control.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

The City is committed to budgeting operational and maintenance expenses within the General Fund once the construction is completed and providing staffing and programming in line with community needs. The prior community center was also included in the General Fund budget. An appropriate level of funding will be reinstated on an ongoing basis once the building is constructed. Through the Recreation Division, and in collaboration with Public Works, the City currently maintains and conducts programming at over 10 community and aquatic centers; therefore, fully understands what it takes to ensure the successful maintenance and operation of City assets.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

Changes to the building scope or community priorities could cause challenges that result in increased building costs. The extensive outreach process being undertaken now will help address the risk of changing priorities. When the development of construction documents begins, the outreach process will shift to be informational rather than input-gathering - this will help to ensure that the scope of the project does not change once the construction document development begins.

Environmental sampling will happen during the development of the construction documents, prior to the finalization of the construction documents. This may present a challenge if unexpected conditions are found on the construction site. If needed, the City will adjust the funding plan and/or adjust the design of the building to address any unexpected environmental conditions.

Securing construction funding may be a challenge. However, prior phases of this project, completed as part of the City's participation in the RichPEP collaborative, involved the development of a funding plan for this project. Therefore, the City already has a plan in place to secure construction funding. The implementation of the funding plan can occur simultaneously with the development of the construction documents so that construction can begin as quickly after the project is complete.

The three-neighborhood area surrounding the MLK Center has been the site of significant recent investment, including the development of the Richmond Wellness Trail, the future implementation of an e-bike lending library program, and landscaping projects that increase tree canopy, biodiversity, and universal accessibility of parks. This investment also includes two streetscape projects that are being constructed in the immediate vicinity of the Center and a redesign of the park that is adjacent to the site of the future community center. Coordination with surrounding projects will be an important element of the implementation process. The City will convene coordination meetings between stakeholders and relevant City staff on an ongoing basis to ensure that any utility or road work is conducted concurrently and/or in a mutually beneficial manner. The City has built strong relationships with community, which will also assist in managing difficult conversations and moving the project forward together toward a shared resolution.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	**MLK Community Center:** Advance the redevelopment of the Martin Luther King Jr. Community Center in Richmond through construction document development, environmental review, and community engagement activities that support the creation of an energy-efficient community facility offering workforce readiness programming and serving as a resilience hub where community members can seek refuge during low air quality and extreme heat events.

Measurable Outcome	Indicator(s)
1. By the end of the grant term, complete construction documents and technical planning activities necessary to advance the redevelopment of the Martin Luther King Jr. Community Center as a resilient, energy-efficient community facility.	• Completion of construction documents (target: complete set) • Completed review of construction documents against LEED certification requirements. • Completion of technical coordination and design review milestones necessary to advance the project toward construction bidding.
2. By the end of the grant term, engage 300 Richmond residents in the continued planning and redevelopment of the Martin Luther King Jr. Community Center and Resilience Hub project.	• Number of households engaged through public meetings, community presentations, and outreach activities (target: 300)
2. By the end of the grant term, complete environmental review and permitting activities necessary to advance the Martin Luther King Jr. Community Center redevelopment project toward implementation.	• Completion of California Environmental Quality Act (CEQA) review documentation required for the project • Completion of public review and comment activities associated with CEQA documentation • Completion of permitting necessary to make the project shovel-ready.

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. By the end of the grant term, complete construction documents and technical planning activities necessary to advance the redevelopment of the Martin Luther King Jr. Community Center as a resilient, energy-efficient community facility.	A. Based on the pending schematic design, develop one set of construction documents that comply with City Green Building requirements.	1. Draft one set of construction documents in order to make the project shovel-ready.	Architecture firm (TBD)	City of Richmond	Month 36
		2. Submit construction documents for review against LEED requirements as relevant documents become available to achieve LEED Silver rating (or greater).	Architecture firm (TBD)	City of Richmond	Month 36
2. By the end of the grant term, engage 300 Richmond residents in the continued planning and redevelopment of the Martin Luther King Jr. Community Center and Resilience Hub project.	A. Conduct public meetings and attend community events	1. Conduct annual public presentations related to progress on the construction documents through public meetings and/or attendance at community meetings.	City of Richmond	Architecture firm (TBD)	Months 12, 24, 36

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
3. By the end of the grant term, complete environmental review and permitting activities necessary to advance the Martin Luther King Jr. Community Center redevelopment project toward implementation.	A. Prepare Initial Study/Assessment.	1. Determine if the project is exempt from a full review.	City of Richmond		Month 3
		2. If not exempt, complete a study and identify potential impacts and mitigation options.	Environmental consulting firm (TBD)	City of Richmond	Month 27
	B. Conduct required public review of CEQA document	1. Release environmental documentation for public comment.	City of Richmond	Environmental consulting firm (TBD)	Month 30
		2. Incorporate public feedback into environmental document.	Environmental consulting firm (TBD)	City of Richmond	Month 33
	C. Finalize determination	1. Issue a final determination.	City of Richmond		Month 36
	D. Complete permit application processes	1. Obtain permits for construction including costs related to utility service connections, planning and building permits, fire permits, encroachment permits, and Contra Costa Environmental Health permits.	City of Richmond		Month 36

Project Name:	MLK Community Center
Lead Applicant Name:	City of Richmond
Term for this budget (in years):	5 Years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Professional Services & Consultants (≤25% of Direct Costs at APPLICATION level)	Direct	Architecture Firm	Architecture consulting firm to prepare construction documents	$2,054,096.00
Professional Services & Consultants (≤25% of Direct Costs at APPLICATION level)	Direct	Environmental Review Firm	Environmental review consulting firm to complete the CEQA documentation and review process	$217,000.00
Other Direct Costs	Direct	Permit Costs	Permits for construction including costs related to utility service connections, planning and building permits, fire permits, encroachment permits, and Contra Costa Environmental Health permits.	$500,000.00
Personnel/Staff Costs	Direct	City of Richmond Senior Civil Engineer	Project Manager focused on the technical management of the schematic design, environmental review, and construction document phases. 0.2 FTE x $215,390 x 3 years + 52% benefits	$196,436.00
Community Engagement	Direct	Richmond Rising Together Community Engagement Materials	Public materials for CSC meeting agendas and slides, reports as necessary for public review; branded outreach and informational materials: flyers, pamphlets, banners, and postcard mailers. $2,000/year for printing and copying + $1500/year for translation = $3500 x 5 years = $17,500. Cost to project at 1/12th for 1 of 12 projects participating: $1458	$1,458.00
Other Direct Costs	Direct	Richmond Rising Together Hub	Rental of building space for a publicly accessible office and meeting space for grant partner meetings, trainings/workshops, and community events. $1,390/month x 41 months = $56,990. Cost to project at 1/12th for 1 of 12 projects participating: $4,749	$4,749.00
Other Direct Costs	Direct	Cellular phones and service	Cellular phones and cellular service for PM I and AAA Staff. One time purchase of phones ($600/each) and monthly costs of $50/month per phone for 41 months. $600 x 2 + $50 x 41 months = $5,300. Cost to project at 1/12th for 1 of 12 projects participating: $442	$442.00
Community Engagement	Direct	Refreshment, Childcare, and Interpretation for Community Meetings	$400/event for refreshments for 30 community members + $80/event for childcare + $200/event interpretation = $680 per meeting. 41 CSC monthly meetings + 4 additional events/year x 5 years = 61 meetings x $680/meeting = $41,480. Cost to project at 1/12th for 1 of 12 projects participating: $3,457	$3,457.00
Capacity-Building and Training	Direct	City of Richmond Staff Training Costs	Workshop and conference fees ($600/year per staff member) + meals during training ($92/day x 4 days/year per staff member) = $968/staff member/year x 5 years x 3 staff = $14,520.00. Cost to project at 1/12th for 1 of 12 projects participating: $1,210	$1,210.00
Travel	Direct	Local Transportation	20 miles/month for staff to attend related community meetings throughout the City and region. 60 months x 20 miles x $0.70/mile = $840. Cost to project at 1/12th for 1 of 12 projects participating: $70	$70.00
Community Engagement	Direct	Community Workproduct Compensation for Richmond resident members of CSC	Each resident CSC member receives a $50 VISA gift card per meeting. Estimate includes 6 members at each monthly Collaborative Stakeholder Committee meeting, for 41 months. $50 card + $4 purchasing fee = $54/card x 6 residents x 41 months = $13,284. Cost to project at 1/12th for 1 of 12 projects participating: $1,107	$1,107.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Richmond Rising Together Project Website	Richmond Rising Together webpage for posting meeting materials (agendas, minutes, recordings), key reports and documents, community opportunities for project involvement, and other public information. Estimated at $50/month based on historic costs x 60 months = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Subcontractors & Vendors	Direct	Graphic Design Consultant	Development of website and project outreach materials. $150/hr for 20 hours = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Data Management Software (Airtable)	Airtable is used for tracking project budgets, deliverables, expenditures and reimbursements to-date, and other key coordination data. $720/year for 5 years based on historic costs = $3,600. Cost to project at 1/12th for 1 of 12 projects participating: $300	$300.00
Personnel/Staff Costs	Direct	City of Richmond Project Manager	Project Manager provides overall leadership in grant execution and implementation across projects. Project-specific allocation, based on anticipated support to be provided: 2.80% FTE x $17,754.47 monthly salary x 41 months = $20,382.13; Benefits at 77% of salary = $15,694.24.	$36,076.00
Personnel/Staff Costs	Direct	City of Richmond Associate Management Analyst	Project Analyst coordinates partners for CSC meetings, preparation and submission of required reports and invoices, and ongoing budget management across projects. Project-specific allocation: 3.60% FTE x $13,623.72 monthly salary x 41 months = $20,108.61; Benefits at 77% of salary = $15,483.63.	$35,592.00
Personnel/Staff Costs	Direct	City of Richmond Administrative Assistant	Administrative Assistant provides logistical and coordination support for all projects, including CSC meeting preparation, timely payment of project partner invoices, and project delivery support. Project-specific allocation: 6.40% FTE x $9,453.37 monthly salary x 41 months = $24,805.63; Benefits at 77% of salary = $19,100.34.	$43,906.00

Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Richmond Rising Together
Lead Applicant Name	City of Richmond
Project Location	Richmond, CA
Overall Funding Request	$15,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Mobile Energy Storage
Project Lead	City of Richmond
Project Location	Richmond CA
Project Funding Request	$278,626

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

The City of Richmond is seeking funding to purchase one RPS150 Mobile Energy Storage System (the system) to deliver clean, reliable, zero-emission power for City programs, projects, community events, and emergencies. The system is a trailer-mounted unit equipped with rechargeable batteries to store electricity and supply power wherever it is needed. The unit includes a variety of electrical receptacles, enabling easy connection to regular and specialized power cables. The system will replace diesel generators that currently supply electrical power for City and community events, reducing dependence on grid connections, improving air quality, and advancing the City's sustainability goals.[1]

The system's initial deployment will support The Lot: Downtown Richmond Food Court (The Lot), a weekly pop-up event for sidewalk vendors and food trucks attended by hundreds of people per week. The Lot activates an underutilized parking lot, supports small local businesses, and brings programming to the downtown Richmond/Bay Area Rapid Transit (BART) station area. The system will be available for other community events and programs, such as Music on the Main and Spirit and Soul, as well as for emergency use where a source of power is needed to augment the City's infrastructure. This resource will be provided at no cost to vendors or event organizers.

This investment will expand the City's capacity to provide flexible, environmentally responsible power solutions while supporting public events and essential services, piloting a scalable model for zero-emissions municipal operations.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

This project directly advances the Local Community Benefit Fund's strategy to reduce air pollution and improve health outcomes by replacing diesel generators and fossil fuel–based power sources with a zero-emission system. Replacing 4–8 diesel generators used for pop-up vending could avoid roughly 0.3–1.9 metric tons of CO_2 per 8-hour event, plus meaningful reductions in diesel particulate matter and NOx, depending on generator size, load, and engine age. Deploying the system at City programs and community events will significantly reduce localized emissions, including

[1] Sunjoo Hwang, Sopitsuda Tongsopit, Noah Kittner, 2023, "Transitioning from diesel backup generators to PV-plus-storage microgrids in California public buildings," *Sustainable Production and Consumption* Vol. 38, pp. 252-265, ISSN 2352-5509, https://doi.org/10.1016/j.spc.2023.04.001.

particulate matter and greenhouse gases, particularly in high-activity public spaces. By removing diesel generators, which release harmful smoke and pollutants into the air, and replacing them with clean battery power, the project will directly reduce the amount of dirty air people breathe at these sites.[2]

Additionally, the project supports economic resilience for a just transition by providing free, reliable, flexible clean energy infrastructure that benefits local businesses and community initiatives. Richmond has many small and emerging businesses that are operated out of homes, food trucks or carts, or as temporary pop-ups because the owners may not have access to permanent storefronts. Many of these businesses are owned by people of color, immigrants, families, and entrepreneurs from historically underserved communities. These businesses often face barriers such as limited access to capital, high operating costs, and inconsistent access to safe and reliable power at events and public spaces.

By supplying zero-emission power at public venues and commercial corridors, the City helps these businesses operate in cleaner, safer environments and reduce dependence on costly, polluting diesel generators. This reduces financial and logistical barriers, making it easier for small vendors to participate in local events and grow their businesses. The system creates more inclusive local business opportunities by supporting emerging entrepreneurs that are vital to Richmond's local economy and culture.

This investment strengthens Richmond's long-term transition toward a sustainable local economy while ensuring equitable access to clean energy resources and supporting the success of small, community-based businesses that reflect the City's racial and cultural diversity.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The project will initially be deployed at The Lot, at the corner of Marina Way and Macdonald Avenue in downtown Richmond. The system will provide clean, zero-emission power at the site every Tuesday and Thursday during food court operations. The system will also be deployed to support other City events and community programs

[2] Kerby, Jessica, Alok Kumar Bharati, and Bethel Tarekegne, 2022, October 10, ^th E-MOnility POwer System Integration Symposium. The Hague, Netherlands. https://www.pnnl.gov/sites/default/files/media/file/Assessing_the_energy_equity_benefits_of_mobile_energy_storage_solutions.pdf.

throughout the city, providing flexible, reliable clean energy where temporary power is needed.

Additionally, the mobile system can be used in the city in the event of flood, fire, power outage, or other emergency where temporary is needed.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The City of Richmond regularly engages residents through community events, neighborhood outreach, and emergency preparedness efforts across the city, including The Lot. Across these efforts, residents and vendors consistently emphasize the need for reliable, non-polluting power to support both everyday activities and emergency response without the impacts of diesel generators.

Community engagement for this project builds on ongoing outreach and feedback gathered through City-led initiatives, particularly related to The Lot. The Lot was created as an incubator for businesses that were displaced by the Sidewalk Vendor Ordinance, which requires vendors operating on sidewalks or in other public spaces to have business permits and tax certificates, which is a barrier for many small businesses. The Lot provides a legal way for vendors to become permitted and licensed owner/operators of food businesses. The Lot's location was previously an underutilized downtown parking lot. City leadership, in collaboration with local stakeholders and community partners, identified an opportunity to transform it into a vibrant, community-centered food court and gathering space supporting small, local food vendors.

As part of final planning for The Lot, the City conducted a bilingual (English and Spanish), web-based and paper community survey, distributed through the City Manager's Weekly Report email listserv, social media platforms, and through on-site engagement to collect public input on space usage, amenities, programming, and operational needs. Survey responses consistently highlighted the importance of clean, reliable, and quiet power to support food vendors and community gatherings without diesel fumes, noise, or air quality impacts. These findings with aligned with input City staff heard through direct outreach, in which vendors, residents, and event organizers expressed concerns about diesel generator noise, emissions, and health impacts in high-activity public spaces.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The project addresses several public health, environmental justice, and just transition challenges. Input from the survey and conversations with vendors, residents, and event organizers identified the need for a zero-emission mobile energy storage system that would meet both operational and environmental justice priorities.

Many communities in Richmond, including the location of The Lot, are overburdened by air pollution. This includes neighborhoods in Richmond that rank among the most environmentally burdened in the state, including areas identified by CalEnviroScreen 4.0 as facing high levels of air pollution and related health risks.[3] These communities are largely composed of low-income households, communities of color, and immigrants who are disproportionately impacted by poor air quality and associated health conditions, such as asthma.[4]

Replacing diesel generators with the Energy Storage System at events in these neighborhoods directly addresses community concerns about diesel generator noise, fumes, and air pollution. Without the generators running, the noise will be eliminated, as the system operates with little sound. Without the generators burning diesel fuel, event attendees will not be exposed to unpleasant fumes and localized particulate exposure produced by burning diesel fuel. This represents an improved public health outcome.

This investment strengthens Richmond's long-term transition for a sustainable local economy providing free, reliable, flexible clean energy infrastructure for small, community-based businesses. Richmond has many small and emerging businesses that operate out of homes, food trucks or carts, or temporary pop-ups because the owners may not have access to permanent storefronts. Many of these businesses are owned by people of color, immigrants, families, and entrepreneurs from historically underserved communities. These businesses often face barriers such as limited access to capital, high operating costs, and inconsistent access to safe and reliable power at events and public spaces. Supporting small and emerging businesses

[3] California Office of Environmental Health Hazard Assessment (OEHHA), 2026, May (accessed), "CalEnviroScreen 4.0. Maps & Data. https://oehha.ca.gov/calenviroscreen/maps-data.
[4] Robbennolt, Simone, and Austin Mendoze, 2025, May (accessed), "Inequity in the Air: An Analysis of Emitting Facilities and Emissions in the Bay Area," *Bay Area Equity Atlas*, https://www.bayareaequityatlas.org/research/projects/inequity-in-the-air.

in Richmond creates more and diversified employment opportunities, supporting a just transition away from an extractive, fossil-fuel based economy.

By supplying zero-emission power at public venues and in commercial corridors, the City helps these businesses operate in cleaner, safer environments and reduces financial and logistical barriers, making it easier for small vendors to participate in local events and grow their businesses. The system creates more inclusive local economic opportunities by supporting emerging entrepreneurs that are vital to Richmond's local economy and culture. The measurable outcomes of this project will demonstrate clear progress toward community impact by quantifying reductions in diesel generator use, associated emissions, and exposure to harmful pollutants at community sites such as The Lot. Once implemented, City staff will track metrics, including number of generators displaced, hours of clean energy provided, estimated reductions in greenhouse gases and diesel particulate matter, and decreased noise levels. Additional indicators, such as number of vendors and community events supported and feedback from users, will show improved site conditions and usability. Together, these data will provide tangible evidence of cleaner air, healthier environments, and more resilient, community-friendly infrastructure.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

Richmond Public Works Department and Economic Development staff will continue coordinating with local vendors, community organizations, and event partners to ensure the system is deployed in ways that maximize public health benefits and community impact. This may include prioritizing events where diesel generators are heavily used or have been identified as undesirable, or events where most vendors are from historically underserved communities.

As part of the Richmond Rising Together initiative, a Collaborative Stakeholder Committee (CSC) made up of a representative from each Co-Applicant organization as well as key stakeholders and compensated community member participants, will meet monthly. During these meetings, Co-Applicants will share project status updates and directly engage the CSC and community members in discussions on system design and use. This structure ensures lessons learned across projects are leveraged towards the broader collaborative effort while creating meaningful opportunities for residents most impacted by poor air quality to learn about and engage in projects and share meaningful feedback based on their lived experiences. To reduce potential barriers and ensure maximum opportunities for community participation, these meetings are hybrid (hosted

in person and simultaneously on Zoom) and include free childcare, Spanish interpretation, and meals for community members. Meetings are recorded and posted online for viewing in Spanish and English.

The City will provide regular updates on project implementation and benefits through multiple public communication channels, including the City Manager's Weekly Report email listserv, the City's website, social media platforms, and on-site signage at The Lot and other events where the system is deployed. Public Works and Economic Development staff will also share progress updates during monthly Richmond Neighborhood Coordinating Council meetings and community events to ensure residents and vendors are informed about the transition to zero-emission power. The City of Richmond currently has 37 neighborhood councils or homeowner associations that regularly meet to discuss local concerns.

Community feedback will be solicited through brief on-site surveys (digital QR code-based), direct vendor conversations, and outreach during community events. Feedback will focus on operational performance, noise reduction, air quality improvements, and overall user experience. Staff will review input regularly to inform deployment scheduling, operational adjustments, and future clean energy investments. Findings and improvements will be summarized in periodic public updates to demonstrate responsiveness and maintain accountability throughout grant implementation.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The vision of this project is to transition temporary and event-based municipal power sources from diesel generators to a clean, zero-emission mobile energy solution through the deployment of the RPS150 Mobile Energy Storage System. Improve air quality, reduce greenhouse gas emissions, and support small businesses and community events by providing reliable, quiet, and sustainable power for public gatherings and city operations.

The major components include procurement of one RPS150 Mobile Energy Storage System, staff training and system deployment, and coordinated use across City departments. The system will first serve The Lot: Downtown Richmond Food Court and then support additional City-hosted events, temporary operations, and emergency response needs.

Within one year of the launch of the project and through the life of the System, the project will achieve the following measurable outcomes:

- Reduce localized air pollution exposure and greenhouse gas emissions at community events and public programs in Richmond by replacing diesel generators with one zero-emission mobile energy storage system at The Lot and other City-sponsored events.
- Increase economic resilience and support community-based economic activity in Richmond by providing reliable, no-cost clean energy infrastructure for small vendors, food businesses, entrepreneurs, and community-serving events through deployment of the Mobile Energy Storage System.
- Strengthen the City of Richmond's capacity to provide resilient emergency and community-serving infrastructure by deploying a flexible mobile power system capable of supporting emergency response activities, temporary shelter operations, and critical public services during outages or disaster events.

The project will be led by the City of Richmond. The City's Economic Development Department will manage procurement while the Public Works Department will manage the operations, maintenance, scheduling, and performance monitoring. The Public Works Department will coordinate deployment with event partners to community sites to maximize benefit to vendors, residents, and visitors. Measurable outcomes will demonstrate community impact by tracking the elimination of diesel fuel use for temporary power, reductions in greenhouse gas emissions, and the number of zero-emission events powered annually.

UC Berkeley's Center Global Healthy Cities (CGHC) will prepare annual and end-of-project reports of data across all project partners, along with a public facing dashboard to track progress. The dashboard will include a public comment section. CGHC will work with all Co-Applicants to co-create validated survey questions to capture the mental health impacts of air pollution and climate change (e.g. climate anxiety'), and whether and how project interventions are reducing stress, anxiety, and related psychosocial influences on well-being.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*

The total project budget is $278,626, with the majority of funding dedicated to the acquisition of one RPS150 Mobile Energy Storage System ($200,000), which serves as the core investment and enables the replacement of diesel generators with zero-emission power at community events and emergency deployments.

Additional direct costs are $31,169 and support implementation and promotion, including:

- Branded equipment wrap for visibility ($1,412)
- delivery, setup, and commissioning ($10,000)
- Project staffing costs ($16,757)
- community-facing signage and educational materials ($3,000)

A $5,000 contingency is included to address minor repairs or unforeseen needs during initial deployment.

$13,293 will support CSC and other community meetings, shared spaces, and Richmond Rising Together outreach materials.

$29,164 is for UC Berkeley for a 17% FTE Project Director and a $50/hour x 210 hours PhD student researcher to prepare annual and end-of-project reports, manage a project data dashboard, and capture the impact of the projects in reducing negative mental health impacts.

Overall, the budget prioritizes capital investment in clean energy infrastructure while ensuring sufficient resources for deployment, maintenance, and community engagement to maximize project impact.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

This project is consistent with, and supports, the goals of multiple local and State initiatives and plans, including the City's Climate Action Plan, Community Economic Development Plan, General Plan 2030, and Resilient Richmond initiatives; regional goals set by the Bay Area Air District; and State Senate Bill 32 and Assembly Bill 617.

By replacing multiple diesel generators with a zero-emission Mobile Energy System, the project supports municipal decarbonization efforts and advances the City's commitment to cleaner air and sustainable public operations. Specifically, it is consistent with the

City of Richmond's Climate Action Plan by advancing clean energy use, reducing emissions, and improving community resilience, including the following goals:

- **Reduce Greenhouse Gas Emissions:**
  Displace diesel generators with zero-emission battery storage to directly reduce carbon dioxide (CO_2) emissions from fossil fuel combustion at community events and temporary power uses.
- **Improve Local Air Quality and Public Health:**
  Eliminate diesel particulate matter (DPM) and nitrogen oxides (NOx) emissions at community gathering sites, supporting Climate Action Plan goals to reduce exposure to harmful pollutants, particularly in overburdened neighborhoods.
- **Expand Clean Energy and Electrification:**
  Increase the use of clean, renewable-ready energy systems by deploying mobile battery storage that can integrate with solar or grid-charged electricity, advancing electrification goals.
- **Enhance Climate Resilience and Emergency Preparedness:**
  Provide reliable, portable, zero-emission power for use during outages, extreme heat events, and wildfire smoke incidents, supporting Climate Action Plan strategies for community resilience and emergency response.
- **Support Sustainable Economic Development:**
  Enable small, local vendors to operate without diesel generators, reducing operating impacts while supporting equitable access to clean infrastructure.
- **Promote Community Awareness and Engagement:**
  Demonstrate visible, real-world applications of clean energy technology at public sites like The Lot, increasing public understanding and support for climate solutions.

The project also aligns with California's Community Air Protection Program (Assembly Bill 617), which focuses on reducing air pollution in communities disproportionately impacted by industrial and transportation-related emissions. Richmond has long faced cumulative air quality burdens. Eliminating diesel generator use at public events directly reduces particulate matter (PM), NOx, and greenhouse gas emissions in high-activity community spaces.

At the regional level, the project supports Bay Area Air District goals to accelerate zero-emission technologies and reduce combustion-related emissions. Statewide, it advances California's broader climate targets under Senate Bill 32 and related legislation aimed at reducing greenhouse gas emissions and transitioning to clean energy.

This also aligns with the City's economic development and small business support efforts included in the Economic Development Strategy, as well as broader goals outlined in the General Plan 2030 and Resilient Richmond initiatives, by integrating clean energy deployment with local economic development. At the same time, it advances the City's economic development and small business support goals by lowering barriers to participation in local markets, supporting entrepreneurship, and enabling more inclusive economic activity in community spaces such as The Lot. In doing so, the project demonstrates how clean energy investments can strengthen both environmental outcomes and economic resilience, particularly for small vendors and historically underserved communities.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The Economic Development Department brings extensive experience in municipal program delivery, cross-departmental coordination, and grant administration. The Department leads initiatives that support local business development, revenue generation, and community-based economic programs, while working closely with City departments and external partners to improve service delivery and economic outcomes. Examples include activation of The Lot: Downtown Richmond Food Court to support small food vendors, administration of the ARPA Small Business Support Grant program, which provided direct financial relief to local businesses totaling $350,000, implementation of the Small Business Façade Grant Program, currently funded at $300,000, to enhance commercial corridors, and coordination of permitting and technical assistance for pop-up and mobile businesses in partnership with community-based organizations.

The City of Richmond regularly purchases vehicles and specialized equipment, which are operated and maintained to provide public services. For example, the Richmond Tool Library is a free service administered by the City that lends tools to Richmond residents with the goal of providing opportunities to be self-sufficient, to take agency over their neighborhoods, and to work towards a more sustainable city.

The City of Richmond has a fleet of over 400 units worth over $60 million and is practiced at purchasing and maintaining this large fleet. The City's current fleet includes (1) green climber LV600 remote-control tracked mower with flail heads worth $166,586 and multiple vehicles to deliver emergency response, public safety, and environmental enforcement services. These vehicles are worth $1,049,646 and include eleven (11) 2026 Chevrolet Tahoe's from the Fire Department to support fire investigation and command operations, ensuring reliable emergency response capability and modern operational readiness; eight (8) police department vehicles including three (3) 2026

Chevrolet Colorados, two (2) 2026 Chevrolet Equinox EVs, two (2) 2026 Chevrolet Trax small SUVs, and one (1) 2026 Chevrolet Suburban to support parking enforcement, cadet operations, evidence and property transport, IT and communications support, records delivery, and general police operational needs; and one (1) 2024 Chevrolet landscape dump truck (Silverado chassis with upfit) to support illegal dumping response, environmental enforcement, encampment remediation, and right-of-way maintenance.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The City of Richmond, led by the City's Economic Development Department will serve as the project lead, coordinating closely with Public Works, Finance, and other relevant departments to ensure successful implementation of the system. The Economic Development Department will oversee project management, including procurement coordination, vendor communication, deployment planning, and performance reporting. Public Works will support equipment delivery, storage, maintenance, and operational deployment across City sites and events.

Project implementation will be supported through existing staff resources which are funded through the General Fund. It is estimated that approximately 0.01 FTE from the Economic Development Department will be dedicated to project management, coordination, and reporting, with 0.01 FTE support from Public Works staff for operations and maintenance as needed.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

The proposed project involves the purchase and deployment of a mobile, trailer-mounted Mobile Energy System and does not require permanent construction, installation, or site modifications. Because the unit is mobile and designed for temporary power applications, no building or land use permits are expected to be required. The equipment is UL-listed and manufactured for U.S. deployment, ensuring compliance with applicable electrical and safety standards.

The system would be for use at City programs, events, and sites including The Lot: Downtown Richmond Food Court, and any necessary coordination will occur through the City's existing event permitting and operational processes. These approvals are routine and already managed by the City for temporary power use at public events. Because the project primarily involves equipment procurement and mobile deployment, all necessary approvals can be obtained within the grant term and are not expected to delay project implementation.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

The proposed project involves the purchase and deployment of a mobile, zero-emission energy storage system and does not include construction, ground disturbance, or permanent installation. The project is expected to qualify for a categorical exemption under the California Environmental Quality Act (CEQA) because it consists of equipment procurement and temporary mobile deployment with no potential for significant environmental impacts. The project will replace diesel generator use with a zero-emission alternative, resulting in reduced air pollutants and greenhouse gas emissions. The City of Richmond, acting as the lead agency, will complete CEQA review and file the appropriate Notice of Exemption prior to project implementation, and CEQA compliance can be completed within the grant term without delaying project deployment.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

No property acquisition, leasehold, easement, or right-of-way is required for this project. The equipment is a mobile, trailer-mounted energy storage system that will be owned and operated by the City of Richmond and deployed at City-controlled sites and permitted public event locations.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

The City of Richmond Public Works Department will oversee operations and maintenance of the Mobile Energy System, making it available for use across departments and at various community sites, during and after the grant term. The Public Works Department will receive manufacturer-provided start-up training as part of the purchase.

Routine operations will be managed by trained City staff, with maintenance performed according to the manufacturer's guidelines and warranty provisions.

The City will use the grant for expenditures related to the training, deployment, and maintenance of the system during the grant term as shown in the response to Question 9 above and in the detailed budget. After the grant period, the City's Public Works department with support from Economic Development will continue to maintain the fleet with funding from the General Fund.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

There are no known barriers to implementing this project.

Potential risks include the long-term performance and lifecycle of the battery system, proper charging and maintenance practices, theft or loss of a mobile asset, and safety concerns such as fire hazards under certain conditions. There may also be operational challenges related to ensuring that multiple City departments are aware of and able to access the resource for events.

These risks will be mitigated through manufacturer-provided training and clear operational protocols to ensure proper use, charging, and maintenance of the system. Public Works will oversee storage, deployment, and asset management using established City procedures to reduce risks related to theft, misuse, and scheduling conflicts. Safety risks will be addressed through adherence to manufacturer guidelines, built-in system protections, and staff training on safe operation.

To ensure effective use, the City will implement internal coordination and communication processes so departments are aware of and can schedule the resource. Under the current procedure for use of City resources, a department requests use of the system by contacting Public Works, which manages reservations by checking the unit's availability and confirming staff capacity for deployment. This centralized scheduling

approach ensures efficient use across events and emergency needs. Procurement risks are minimal, as the equipment is commercially available, and the City has established procurement processes to support timely acquisition.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Mobile Energy Storage: Transition temporary and event-based municipal power sources from diesel generators to a clean, zero-emission mobile energy solution through the deployment of the RPS150 Mobile Energy Storage System. Improve air quality, reduce greenhouse gas emissions, and support small businesses and community events by providing reliable, quiet, and sustainable power for public gatherings and city operations.

Measurable Outcome	Indicator(s)
1. Within 1 year, reduce localized air pollution exposure and greenhouse gas emissions at community events and public programs in Richmond by replacing diesel generators with one zero-emission mobile energy storage system at The Lot and other City-sponsored events.	▪ Number of City and community events powered by the Mobile Energy Storage System annually (Minimum target: 100) ▪ Number of diesel-powered generators replaced per event powered by the Mobile Energy Storage System (target: 4-8) ▪ Estimated reductions in greenhouse gases (target: 0.3–1.9 metric tons of CO_2 per 8-hour event)
2. Within 1 year, increase economic resilience and support community-based economic activity in Richmond by providing reliable, no-cost clean energy infrastructure for small vendors, food businesses, entrepreneurs, and community-serving events through deployment of the Mobile Energy Storage System.	▪ Number of small vendors, food businesses, entrepreneurs, or community organizations supported through Mobile Energy Storage System deployments at each event (target: 20 per event; 2,000 annually) ▪ Percentage of participating vendors reporting reduced operational costs or logistical burdens associated with fuel-powered generators, fuel purchasing, or generator transport (target: 75%) ▪ Qualitative feedback from vendors, entrepreneurs, and community organizations describing how access to clean mobile power improved participation, visibility, or business operations at events and public programs (target: 75%)
3. Within 1 year, strengthen the City of Richmond's capacity to provide resilient emergency and community-serving infrastructure by deploying a flexible mobile power system capable of supporting emergency response activities, temporary shelter operations, and critical public services during outages or disaster events.	▪ Number of emergency preparedness activities, resilience events, or emergency deployments supported by the system annually (target 2-6: annually)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. By the end of the grant term, reduce localized air pollution exposure and greenhouse gas emissions at community events and public programs in Richmond by replacing diesel generators with one zero-emission mobile energy storage system at The Lot and other City-sponsored events.	A. Procure and prepare Mobile Energy Storage System for deployment.	1. Finalize equipment specifications and execute purchase agreement with vendor.	City of Richmond		Month 2
		2. Conduct equipment inspection and setup.	City of Richmond		Month 3
		3. Establish and document operational, safety, and maintenance protocols and train staff.	City of Richmond		Month 4
	B. Deploy the Mobile Energy Storage System at The Lot Food Court.	1. Deploy system at The Lot Food Court.	City of Richmond		Month 4
		2. Test operational performance.	City of Richmond		Month 4
		3. Document first operational deployment, including lessons learned.	City of Richmond		Month 4
	C. Monitor environmental and community benefits associated with system deployment.	1. Develop deployment tracking and reporting tools for event use and generator displacement estimates.	City of Richmond		Month 5
		2. Collect participant and attendee feedback regarding reduced generator noise, diesel fumes, and event conditions.	City of Richmond	Community Partners	Ongoing

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		3. Prepare annual summary of deployment activity and estimated pollution reduction impacts.	UC Berkeley	City of Richmond	Months 12, 24, 36, 48, 60
2. Within 1 year, increase economic resilience and support community-based economic activity in Richmond by providing reliable, no-cost clean energy infrastructure for small vendors, food businesses, entrepreneurs, and community-serving events through deployment of the Mobile Energy Storage System.	A. Conduct staff training.	1. Conduct equipment training sessions with additional staff.	City of Richmond	Vendor	Month 3
		2. Refine operational, safety, and maintenance guidelines.	City of Richmond		Month 4
		3. Identify departmental users.	City of Richmond		Month 4
	B. Deploy Mobile Energy Storage System used at additional community and City events	1. Establish equipment scheduling system.	City of Richmond		Month 5
		2. Coordinate event requests.	City of Richmond		Ongoing
		3. Monitor deployment usage.	City of Richmond		Ongoing

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
3. Within 1 year, strengthen the City of Richmond's capacity to provide resilient emergency and community-serving infrastructure by deploying a flexible mobile power system capable of supporting emergency response activities, temporary shelter operations, and critical public services during outages or disaster events.	A. Prepare the Mobile Energy Storage System for emergency and resilience use.	1. Coordinate with relevant City departments regarding emergency and resilience deployment procedures.	City of Richmond		Month 6
		2. Maintain operational readiness of the system for emergency deployment and resilience activities.	City of Richmond	Vendor	Ongoing
	B. Utilize the Mobile Energy Storage System for resilience and emergency support activities.	1. Deploy the system for emergency preparedness activities, resilience events, or emergency response support as needed.	City of Richmond		Ongoing

Project Name:	Mobile Energy Storage
Lead Applicant Name:	City of Richmond
Term for this budget (in years):	5 years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Materials, Supplies & Equipment (> $5K itemized)	Direct	One Mobile Energy Storage System	Purchase of one trailer-mounted battery energy storage unit, including approximately 132 kWh of battery capacity, a 30 kW inverter, integrated controls, and built-in safety systems such as thermal management and fire suppression. This unit will serve as a zero-emission replacement for diesel generators at community events and emergency deployments.	$200,000
Community Engagement	Direct	Trailer Wrap	Custom branded equipment wrap for public visibility.	$1,412
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Delivery, setup, and commissioning	Transportation of the unit to Richmond, site setup, system testing, and commissioning to ensure the equipment is fully operational and safely integrated into City use.	$10,000
Personnel/Staff Costs	Direct	Equipment Mechanic Lead Worker	Training for Public Works and Economic Development staff on system operation, safety procedures, deployment logistics, and basic troubleshooting to support reliable day-to-day use. 7.5 hrs/year x 5 years x $70.56/hr = $2,465.63; Benefits @ 85% of Salary = $2,248.78.	$4,894
Personnel/Staff Costs	Direct	Equipment Mechanic Lead Worker	Regular system checks, software monitoring, and preventative maintenance to maintain performance, extend equipment life, and ensure safe operation during the first year. 7.5 hrs/year x 5 years x $70.56/hr = $2,465.63; Benefits @ 85% of Salary = $2,248.78.	$4,894
Community Engagement	Direct	Management Analyst	Staff participation in Neighborhood Council meetings, community events, and other outreach efforts to provide updates, gather feedback, and ensure ongoing community engagement related to the project. 12 hrs/year x 5 years x $77.43/hr = $4,645.80; Benefits @ 50% of Salary = $2,322.90.	$6,968
Community Engagement	Direct	Signage, Materials, and Public Education	Informational signage at deployment sites and educational materials to inform residents and vendors about the benefits of zero-emission power.	$3,000
Contingency (≤10% of Direct Costs at PROJECT level)	Contingency	Contingency (2.2%)	Minor repairs, replacement parts, or unforeseen operational needs that may arise during initial deployment.	$5,000
Indirect Costs (≤15% of Direct Costs at PROJECT level)	Indirect			
Community Engagement	Direct	Richmond Rising Together Community Engagement Materials	Public materials for CSC meeting agendas and slides, reports as necessary for public review; branded outreach and informational materials: flyers, pamphlets, banners, and postcard mailers. $2,000/year for printing and copying + $1500/year for translation = $3500 x 5 years = $17,500. Cost to project at 1/12th for 1 of 12 projects participating: $1458	$1,458.00
Other Direct Costs	Direct	Richmond Rising Together Hub	CSC Cost: Rental of building space for a publicly accessible office and meeting space for grant partner meetings, trainings/workshops, and community events. $1,390/month x 41 months = $56,990. Cost to project at 1/12th for 1 of 12 projects participating: $4,749	$4,749.00
Other Direct Costs	Direct	Cellular phones and service	CSC Cost: Cellular phones and cellular service for PM I and AAA Staff. One time purchase of phones ($600/each) and monthly costs of $50/month per phone for 41 months. $600 x 2 + $50 x 41 months = $5,300. Cost to project at 1/12th for 1 of 12 projects participating: $442	$442.00
Community Engagement	Direct	Refreshment, Childcare, and Interpretation for Community Meetings	CSC Cost: $400/event for refreshments for 30 community members + $80/event for childcare + $200/event interpretation = $680 per meeting. 41 CSC monthly meetings + 4 additional events/year x 5 years = 61 meetings x $680/meeting = $41,480. Cost to project at 1/12th for 1 of 12 projects participating: $3,457	$3,457.00
Capacity-Building and Training	Direct	City of Richmond Staff Training Costs	CSC Cost: Workshop and conference fees ($600/year per staff member) + meals during training ($92/day x 4 days/year per staff member) = $968/staff member/year x 5 years x 3 staff = $14,520.00. Cost to project at 1/12th for 1 of 12 projects participating: $1,210	$1,210.00
Travel	Direct	Local Transportation	CSC Cost: 20 miles/month for staff to attend related community meetings throughout the City and region. 60 months x 20 miles x $0.70/mile = $840. Cost to project at 1/12th for 1 of 12 projects participating: $70	$70.00
Community Engagement	Direct	Community Workproduct Compensation for Richmond resident members of CSC	CSC Cost: Each resident CSC member receives a $50 VISA gift card per meeting. Estimate includes 6 members at each monthly Collaborative Stakeholder Committee meeting, for 41 months. $50 card + $4 purchasing fee = $54/card x 6 residents x 41 months = $13,284. Cost to project at 1/12th for 1 of 12 projects participating: $1,107	$1,107.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Richmond Rising Together Project Website	CSC Cost: Richmond Rising Together webpage for posting meeting materials (agendas, minutes, recordings), key reports and documents, community opportunities for project involvement, and other public information. Estimated at $50/month based on historic costs x 60 months = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Graphic Design Consultant	CSC Cost: Development of website and project outreach materials. $150/hr for 20 hours = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Data Management Software (Airtable)	CSC Cost: Airtable is used for tracking project budgets, deliverables, expenditures and reimbursements to-date, and other key coordination data. $720/year for 5 years based on historic costs = $3,600. Cost to project at 1/12th for 1 of 12 projects participating: $300	$300.00

Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Richmond Moves
Project Lead	City of Richmond
Project Location	Richmond, CA
Project Funding Request	$ 1,114,691

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Richmond Moves is a low-cost, citywide, zero-emission, on-demand microtransit service operated by the City of Richmond. Launched in April 2022 as a 5.6-square-mile pilot, the service expanded in May 2025 to cover approximately 20 square miles — nearly the full city boundary. The service operates Monday through Friday, 7 a.m. to 7 p.m., with a fleet of 11 fully electric vehicles and 26 active drivers connecting residents to key destinations including Bay Area Rapid Transit (BART), the Richmond Ferry Terminal, schools, job centers, and healthcare facilities via app or phone booking.

Popular Destinations:

1. Point Pinole Regional Park
2. Walmart
3. Vista High School
4. Wildcat Canyon Regional Park
5. De Anza High School
6. Richmond High School
7. Kaiser Permanente Richmond Medical Center
8. Civic Center Plaza
9. Marina Bay

Transit Hubs:

- A Richmond BART Station
- B El Cerrito del Norte BART
- C Richmond Ferry Terminal

Since the citywide expansion, ridership has grown more than 110 percent. In 2025, the service completed 86,000 rides, with 30 percent connecting directly to BART or the Ferry Terminal. Approximately 50 percent of Richmond Moves trips replace trips that would otherwise be taken in single-occupancy vehicle (SOV) helping cars reduce local air pollution and greenhouse gas emissions.

Bay REPAIR funding will support continued operations of Richmond Moves for one additional year. Richmond residents face significant transportation barriers: the mean travel time to work is 34.8 minutes — well above the national average — and surveys of Richmond transit users found that nearly 40 trips take too long and one-third report that transit does not take them where they need to go.[1] Richmond Moves directly addresses these gaps, but sustaining the service requires stable, dedicated funding to ensure it remains affordable to all residents. The service is free for seniors and students and $2 for all other riders, making it one of the most affordable transportation options available in the

[1] DataUSA, 2026, Richmond, CA, https://datausa.io/profile/geo/richmond-ca/.

region. However, each trip costs $25 on average and the program's current funding sources are time-limited. Without a bridge to future funding, the City would face the prospect of reducing or suspending a service that 52 percent of riders depend on as their primary mode of transportation. The program is currently funded primarily through the Transit and Intercity Rail Capital Program (TIRCP), which expires in April 2027, although the City is applying for an additional funding allocation. The program is also supported with limited funds from the California Clean Mobility Options program. Bay REPAIR funding will ensure uninterrupted service delivery while the City continues to pursue long-term funding solutions — keeping Richmond's most transit-dependent residents connected to jobs, schools, healthcare, and regional transit.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

Reduce Air Pollution and Improve Health Outcomes

Richmond is home to the Chevron refinery and is bisected by major freeway corridors, including Interstate (I-) 80 and I-580. Many census tracts in Richmond rank in the top 25 percent most disadvantaged communities in the state according to CalEnviroScreen 4.0, reflecting decades of cumulative pollution exposure that have contributed to elevated rates of asthma, cardiovascular disease, and other respiratory conditions among residents. Transportation emissions are the third leading source of local air pollution, making vehicle miles traveled a critical lever for improving public health outcomes in the community.[2]

Richmond Moves directly reduces vehicle miles traveled (VMT) and single-occupancy vehicle (SOV) use by providing a shared, zero-emission alternative for trips that would otherwise occur in single-occupant gas-powered vehicles.[3] Approximately 50 percent of riders report they would have otherwise traveled by SOV. The service operates a fully electric fleet, delivering an estimated 15 tons of carbon dioxide (CO_2) reductions annually while reducing exposure to particulate matter and nitrogen oxides from tailpipe emissions in Richmond translates to tangible respiratory health benefits for a community that has long shouldered disproportionate pollution burden.

[3] California Air Resources Board (CARB), 2026, Richmond-North Richmond-San Pablo. https://ww2.arb.ca.gov/capp/com/cip/richmond-north-richmond-san-pablo.

Build Economic Resilience for a Just Transition

Richmond Moves improves access to employment, education, and regional transit for residents with limited transportation options. The citywide expansion increased service coverage from 42,300 to over 100,500 residents.[4]

The City conducts rider surveys twice a year to track rider demographics, travel behavior, and service satisfaction. The most recent survey, conducted in November 2025 with 155 respondents, provides a clear picture of who depends on the service and why: 75 percent of riders lack access to a personal vehicle, 52 percent rely on Richmond Moves as their primary mode of transportation, 31 percent use it to get to work or school, and 72 percent report saving money by using the service. Together, these findings demonstrate that Richmond Moves is not a convenience for its riders; it is an essential lifeline. By reducing transportation cost burden and expanding access to job centers, regional transit, and essential services, the program supports workforce participation and economic mobility. In addition, the program creates jobs in the clean transportation sector through employment of drivers, operators, and administrative staff.

COMMUNITY IMPACT (20 points)

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The project serves the City of Richmond, California, covering nearly the full 20-square-mile city boundary following the expansion (see map in Question 1). Richmond Moves operates as a true citywide service, connecting residents across Richmond to transit hubs, employment and education centers, healthcare facilities, and essential services within the city.

Key transit connections include Richmond BART Station, El Cerrito del Norte BART Station, and the Richmond Ferry Terminal, together accounting for 30 percent of all trips. Beyond transit access, the service connects riders to major community destinations, including Kaiser Permanente Richmond Medical Center, Richmond High School, De Anza High School, Vista High School, Hilltop Center commercial area, Walmart, and the Civic Center. Ride demand is dispersed across the full-service zone, reflecting the breadth of mobility needs the service addresses.

Richmond's transportation system has historically lacked intra-city transit options and contains significant access gaps, particularly in underserved neighborhoods, necessitating targeted investments to bridge inequities in mobility access (City of Richmond; CARB);

[4] Kinney, Mike, 2024, June 19, "City Celebrates Expansion of Richmond moves, the 'low-cost Uber.'" *Richmond Standard*. https://richmondstandard.com/richmond/2024/06/19/city-celebrates-expansion-of-richmond-moves-the-low-cost-uber/.

Richmond Moves On-Demand Shuttle | Richmond, CA - Official Website The majority of census tracts served qualify as Senate Bill (SB) 535 disadvantaged communities and rank in the top disadvantaged quartile according to CalEnviroScreen 4.0. Ridership data reflect this concentration of need: over 50 percent of trips are taken by students, 75 percent of surveyed riders lack access to a personal vehicle, and 52 percent rely on Richmond Moves as their primary mode of transportation. The service is free for seniors and students and $2 for all other Richmond residents.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

The Richmond Moves program was developed in direct response to long-standing community concerns regarding transportation inequities, air quality burdens, and limited access to regional transit connections. Resident-identified need drove the decision to launch the initial Richmond Moves pilot program and ultimately grow Richmond Moves to a citywide service in May 2025. Community engagement has been foundational to both the initial design and subsequent expansion.

The City of Richmond began identification of mobility gaps as part of its First Mile/Last Mile Transportation Strategic Plan process, which engaged over 60 stakeholder groups from Spring 2017 to Fall 2018 through focus groups, community workshops, phone interviews, and pop-up events and open houses. Stakeholders included senior centers, neighborhood organizations, employers, and education providers. Community members identified significant barriers to transit use, including unreliable service, limited connectivity, and gaps in access that prevent residents from reaching key destinations efficiently5. These findings directly informed the decision to launch the Richmond Moves program. The City then worked closely with community-based organizations, including Friends of Richmond, the Commission on Aging, and local advocacy groups serving low-income residents and seniors to validate these findings and co-develop the expanded service design to launch the citywide program.

City Transportation staff and the service provider review bi-weekly performance data to guide service adjustments. City staff participate in Board and Commission meetings such as the Commission on Aging and during city events to promote and solicit feedback on the service. The City also conducts rider surveys twice a year — distributed through the Richmond Moves app and administered in person at key community locations — to track rider demographics, travel behavior, and satisfaction. The most recent survey, conducted in November 2025 with 155 respondents, found that 92 percent of riders would be

[5] https://www.richmondca.gov/3485/First-MileLast-Mile-Transportation-Strat.

disappointed or very disappointed if the service were discontinued, indicating the importance of Richmond Moves in riders' daily lives.

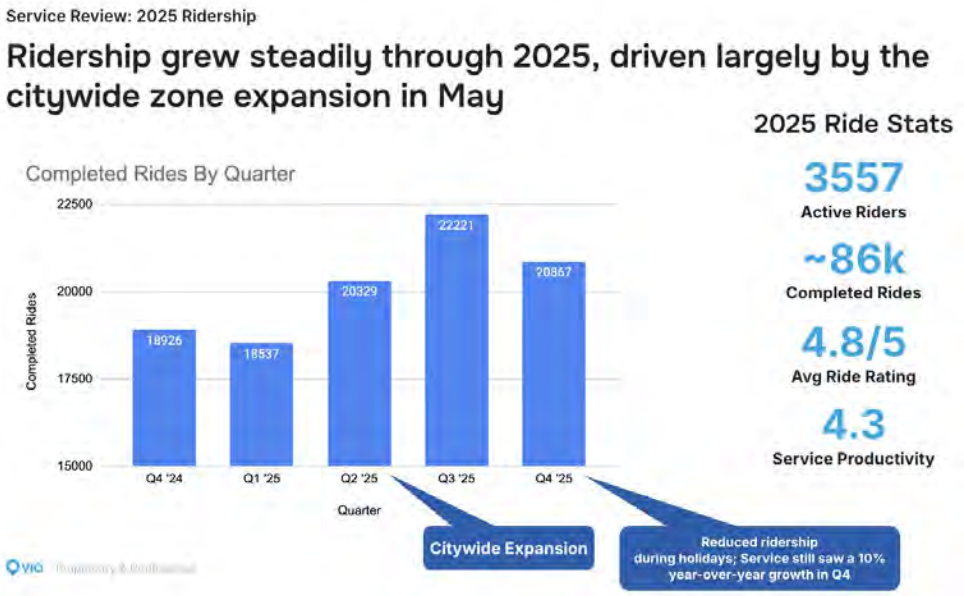
Community priorities — affordability, reliability, environmental sustainability, and equitable access — continue to shape operational decisions, including fleet electrification, electric vehicle (EV) charging reliability improvements, and ongoing ADA accessibility investments. All major service changes are evaluated through an equity lens to ensure that improvements do not disproportionately impact low-income riders, seniors, individuals with limited mobility, or households without vehicle access.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

Improving Mobility and Strengthening First-and-Last Mile Connections

The City launched Richmond Moves in April 2022 to address long trip times and transit service area gaps identified through community engagement and formalized in the City's First Mile/Last Mile Strategic Plan. Strong ridership growth and continual feedback through bi-annual rider surveys made clear that Richmond residents with limited mobility options benefited most from the service and that expanding the service area would greatly improve mobility access for more residents who need it most. The City pursued and was awarded funding through the California TIRCP, which funded the expansion of the service to nearly the full 20-square-mile city boundary. As a result, ridership has grown more than 110 percent following the expansion.

Reducing Transportation Cost Burden



The service is free for seniors and students, and $2 for all other riders, making it accessible to Richmond's most economically vulnerable residents. The City conducts rider surveys twice a year to track the service's impact on riders' daily lives. The most recent survey, conducted in November 2025 with 155 respondents, found that 72 percent of riders report saving money by using Richmond Moves. With 75 percent of riders lacking access to a personal vehicle and 52 percent relying on the service as their primary mode of transportation. These results indicate that Richmond Moves provides an essential economic lifeline as other costs of living continue to rise.

Reducing Transportation-Related Emissions in Disadvantaged Communities

Richmond is home to multiple census tracts that rank in the top quartile of disadvantaged communities under CalEnviroScreen 4.0 and SB 535, which designate the highest-scoring 25 percent of census tracts statewide based on cumulative pollution burden and socioeconomic vulnerability (CalEPA/OEHHA, 2022). Transportation emissions are also the third-leading source of local air pollution. Richmond Moves operates a fully electric fleet with approximately 50 percent of trips replacing SOV travel, resulting in an estimated 15 tons of CO_2 reductions annually in addition to meaningful reductions in particulate matter and nitrogen oxide that would otherwise be emitted from these trips taken by gas-powered SOV. The service maximizes shared mobility while minimizing VMT by consolidating trips through dynamic routing, currently achieving 4.3 rides per vehicle hour.

Improving Access to Regional Transit and Jobs

Approximately 30 percent of Richmond Moves trips connect directly to BART or the Ferry Terminal, enabling residents to access regional job centers, healthcare, and educational institutions without relying on private vehicles. The expansion increased coverage to over 100,500 residents. Approximately 31 percent of riders use the service to get to work or school, and over 50 percent of trips are taken by students, indicating that the program supports educational attainment and workforce participation.

Ridership increases quarter over quarter.

Demonstrating Progress Through Measurable Outcomes

The project will track and report the following measurable outcomes, each grounded in the service's demonstrated performance to date:

- Total annual ridership: 85,000

- Rides per vehicle hour: 4.0
- Percentage of trips connecting to public transit: 30 percent
- Annual greenhouse gas emissions reduced: 15 tons of CO_2
- Percentage of trips replacing single-occupancy vehicles: 50 percent
- Rider-reported cost savings: 70 percent of riders report saving money

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members. Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.*

The City of Richmond will implement a structured, ongoing engagement strategy to ensure community members remain informed about project progress, understand benefits, and have meaningful opportunities to shape service improvements. The City will use three primary channels: in-app rider communications and surveys; public reporting through City Council meetings and other City boards; and in-person outreach at trusted neighborhood institutions. Each channel operates on a regular cadence: bi-annual rider surveys, annual City Council updates, and community outreach events held on an ongoing basis. More information is included below.

1. In-App Rider Communication and Surveys: Richmond Moves will leverage the mobile application to: Share service updates, performance highlights, and new program benefits; notify riders of service improvements or policy changes; and conduct short in-app surveys to gather rider feedback on service quality and reliability. Push notifications and in-app messaging allow the City to reach active riders directly, while optional surveys provide real-time insights into experience.
2. Public Reporting and City Council Engagement: Project updates will be shared during Richmond City Council meetings and City or Regional boards (e.g., Commission on Aging and CCTA). These forums ensure transparency, allow live feedback, and enable dialogue between elected officials and riders.
3. Community-Based Outreach and In-Person Engagement**:** Recognizing that not all residents engage digitally, the City will conduct in-person outreach at trusted community institutions, including Richmond Senior Center, Nevin Community Center, Booker T. Anderson Jr. Community Center, local libraries, local high schools, and community events. These engagements will include informational materials, live demonstrations of the app, assistance with using the service, and opportunities for facilitated discussion.

All major service changes will be evaluated through an equity lens to ensure that improvements do not disproportionately impact low-income riders, seniors, individuals with

limited mobility, or households without vehicle access. By combining these various engagement strategies, Richmond Moves will maintain a continuous feedback loop throughout the grant term — ensuring that the project remains responsive, equitable, and aligned with Richmond residents' priorities.

As part of the Richmond Rising Together initiative, a Collaborative Stakeholder Committee (CSC) comprised of a representative from each Co-Applicant organization as well as key stakeholders and compensated community member participants will meet monthly at the Nevin Community Center. During these meetings, Co-Applicants will share project status updates and directly engage the CSC and community members in discussions on project design and implementation. This structure ensures lessons learned across projects are leveraged towards the broader collaborative effort while creating meaningful opportunities for residents most impacted by poor air quality to learn about and engage in projects and share meaningful feedback based on lived experiences. To reduce barriers to participation, these meetings are hybrid (hosted in person and on Zoom) and include free childcare, Spanish interpretation, and meals for community members. Meetings are recorded and posted online for viewing in Spanish and English.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

Richmond Moves is a citywide, zero-emission, on-demand microtransit service designed to reduce transportation-related air pollution, improve public health, and expand access to opportunity for Richmond residents — particularly those living in disadvantaged communities. The service provides free or low-cost, on-demand, shared electric rides across nearly the city, connecting residents to BART, the Richmond Ferry Terminal, schools, healthcare providers, employment centers, and essential services. Operating Monday through Friday from 7 a.m. to 7 p.m. with a fleet of 11 fully electric vehicles and 26 active drivers, Richmond Moves completed 86,000 rides in 2025 and grown over 110 percent following the expansion. Bay REPAIR funding will support continued operation of the fleet and support ridership growth and performance monitoring to ensure measurable environmental and equity impacts are sustained.

The project's measurable outcome targets are grounded in nearly four years of operational data and rider surveys collected since the program's launch in 2022 ensuring that the targets set for this grant are ambitious yet achievable.

The project will track and report the following measurable outcomes:

- Improve affordability of transportation options for Richmond Moves riders

- Strengthen first-mile/last-mile connections to regional transit
- Expand access to employment and education for Richmond Moves riders
- Reduce SOV use and greenhouse gas emissions in Richmond
- Provide safe, reliable, high-quality mobility for transit-dependent Richmond residents

Role of the Lead Applicant and Co-Applicants

The City of Richmond serves as the Lead Applicant and Project Lead, holding full responsibility for project oversight, policy direction, grant compliance, and community engagement. The City establishes service goals and performance benchmarks, manages the contract with its operating partner, and ensures the program remains aligned with Richmond's equity and sustainability priorities. The City also coordinates with regional transit partners, including BART and the Richmond Ferry Terminal, to maintain strong first-mile/last-mile connectivity across the service zone.

To implement Richmond Moves, the City contracts with Via Transportation, a leading provider of public mobility technology and operations. Over the nearly four years since the program's 2022 launch, Via has been a valuable and proven partner — helping the City grow ridership year-over-year, transition to a fully electric fleet, and successfully execute the citywide expansion. That track record gives the City confidence in continuing this collaboration for the Bay REPAIR grant term.

Under the City's direction, Via will be responsible for the day-to-day management and operation of Richmond Moves, including driver recruitment, onboarding, and management; fleet maintenance and electric vehicle charging coordination; customer support and dispatch; and ongoing data analytics and performance reporting. This partnership model ensures the City retains strategic leadership and accountability while Via delivers efficient, technology-enabled service operations on the ground.

UC Berkeley's Center Global Healthy Cities (CGHC) will prepare annual and end-of-project reports of data across all project Co-Applicants and partners, along with a public facing dashboard to track progress. The dashboard will include a public comment section. CGHC will work with all Co-Applicants to co-create validated survey questions to capture the mental health impacts of air pollution and climate change (e.g. 'climate anxiety'), and whether and how project interventions are reducing stress, anxiety, and related psychosocial influences on well-being.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space*

below to summarize the overall budget and key project costs.

The total Bay REPAIR funding request for Richmond Moves is $1,114,691 for one year of service operations. The budget reflects the City's existing contract structure with its operating partner, Via Transportation, which delivers all service under a turnkey, all-inclusive per-vehicle-hour rate.

The largest cost is service operations ($968,883), covering 10,345.79 annual vehicle hours at $93.65 per vehicle hour. This all-inclusive rate encompasses driver wages and management, fleet leasing, vehicle maintenance, EV charging, insurance, customer support and dispatch, and data analytics — providing cost predictability and eliminating deferred maintenance risk. Regulatory fees include a PUCTRA assessment (0.1% of vehicle hour fees, $969) and an Access for All fee of $0.10 per ride ($3,148), both required for Transportation Network Companies (TNCs) operating in California. Accessibility and fleet upkeep costs include one wheelchair-accessible vehicle (WAV) retrofit ($21,000) to maintain ADA compliance and two vehicle wrap replacements ($6,000). City staff time for grant compliance and performance monitoring, and community is supported through existing City resources and is not charged to this grant.

$72,234 is for the City of Richmond Project Manager (1.75% FTE), Associate Management Analyst (2.25% FTE), and Administrative Assistant (4.00% FTE) to support execution of this project, ensure completion of grant commitments, coordinate community engagement and collaboration across projects, and manage contracting, invoicing, and payments. $13,293 will support CSC and other community meetings, shared spaces, and Richmond Rising Together outreach materials.

$29,164 is for UC Berkeley for a Project Director (16.6% FTE) and a $50/hour x 208 hours PhD student researcher to prepare annual and end-of-project reports, manage a project data dashboard, and capture the impact of the projects in reducing negative mental health impacts.

ECOSYSTEM ALIGNMENT (10 points)

10. *Describe how the project is consistent with any community, local, regional or statewide initiatives or plans (e.g., Climate Action Plans, the Community Air Protection Program (AB 617) etc.).*

Richmond Moves advances adopted local, regional, and statewide climate and environmental justice priorities by pairing zero-emission mobility with measurable reductions in vehicle use and expanded transit access for disadvantaged communities.

At the local level, the project directly implements the City's General Plan 2030, Climate Action Plan, and First Mile/Last Mile Strategic Plan by closing first-mile/last-mile gaps and reducing transportation emissions. The service now covers nearly the entire city, serving approximately 100,500 residents, many of whom live in SB 535-designated disadvantaged

census tracts. Approximately 30 percent of trips connect directly to BART or the Richmond Ferry and 58 percent of surveyed riders report using Richmond Moves to connect to other transit. This strengthens regional transit integration and supports mode shift away from private vehicles.

The project is also strongly aligned with the Community Air Protection Program (Assembly Bill [AB] 617), as Richmond residents experience cumulative pollution burdens from freeway corridors and heavy industry. Richmond Moves operates a fully electric fleet, and approximately 50 percent of trips replace SOV travel, resulting in an estimated 15 tons of greenhouse gas reductions annually. With a utilization rate of 4.3 rides per vehicle hour, the service maximizes shared mobility efficiency while minimizing VMT in overburdened neighborhoods.

At the statewide level, Richmond Moves advances California's climate equity goals by delivering measurable benefits to low-income and transit-dependent residents. In Richmond, 36 percent of riders report household incomes below $50,000, 60 percent lack access to a personal vehicle, and over half of all trips are taken by students. By reducing transportation cost burden and improving access to jobs and education, the project supports both emissions reduction and economic resilience — core components of an equitable transition strategy for Richmond.

CAPACITY (10 points)

11. *Describe the Project Lead's experience managing and implementing projects of similar scope and size.*

The City of Richmond launched the Richmond Moves program in April 2022, and has successfully managed the program using a broad array of local and State funding sources. The City successfully identified, applied for, and received funding for multiple state grants including the Transit and Intercity Rail Program (TIRCP) as part of California State Transportation Agency and the Clean Mobility Options grant administered by CARB and the California Energy Commission. Additional funding was leveraged as part of the City of Richmond's Environmental and Community Investment Agreement (ECIA) grant program for reducing greenhouse gas emissions.

The City of Richmond has a strong track record managing community-centered climate and mobility initiatives beyond Richmond Moves, demonstrating its capacity to lead multi-stakeholder projects that deliver environmental and equity outcomes. Richmond has developed the Richmond Resilience Roadmap, a community-informed planning effort to advance climate mitigation, air quality improvements, and public health across the city through coordinated project planning. The City has also relaunched and expanded its electric bike-share program, deploying dozens of e-bikes and multiple docking stations to increase access to low-emission transportation options and improve active mobility for

residents. Richmond's leadership has supported Transformative Climate Communities planning and other sustainability initiatives that integrate community engagement with infrastructure implementation. Additionally, Richmond is advancing its Green-Blue New Deal, a locally led strategy to catalyze at least 1,000 green–blue jobs (i.e., skilled trade jobs that support climate resilience) to build equitable pathways into the clean economy6. These efforts demonstrate Richmond's experience managing complex, community-driven projects that combine operational delivery with measurable environmental and social benefits.

12. *Describe how the Project Lead will manage the implementation of this project, including any estimated Full Time Equivalent (FTE) positions or other resources that will be dedicated to project implementation. If applicable, describe any additional sources of funding that will be leveraged to support project completion.*

The City of Richmond has an established management structure in place to oversee the ongoing operation of Richmond Moves. The service is managed by a dedicated City Project Coordinator (1.0 FTE; to be paid via leveraged City funds) within the City's transportation division, who is responsible for day-to-day coordination, contract oversight, performance monitoring, grant compliance, and community engagement. The Project Coordinator reports to the Public Works Director, who provides executive oversight and strategic direction (approximately 0.25 FTE). This leadership structure ensures both operational accountability and alignment with the City's equity priorities.

Operational delivery is supported by a roster of approximately 15 drivers providing service under the City's contract. Via Transportation dedicates two full-time staff members to the project: a General Manager who oversees daily service operations, fleet performance, and driver management, and a Project Manager focused on service optimization, data analysis, and continuous improvement. Together, this staffing model provides strong operational oversight, data-driven performance management, and responsiveness to community feedback.

The City has successfully leveraged multiple funding sources to implement and scale Richmond Moves, including CalSTA's Transit and Intercity Rail Capital Program (TIRCP), Clean Mobility Options (CMO) funding through the State of California, and local funding through the Chevron Environmental and Community Investment Agreement. This diversified funding approach demonstrates Richmond's ability to braid state and local resources to support project implementation and long-term sustainability while maintaining compliance and fiscal accountability.

READINESS (10 points)
Projects must be ready to begin grant performance by the time Grant Agreements have

[6] https://www.ci.richmond.ca.us/4138/Green-Blue-New-Deal

been signed. Projects must be successfully completed within the grant term.

- Readiness documents, such as documentation demonstrating any necessary approvals, permits or other requirements to begin implementation, will be evaluated to assess project feasibility and compliance. Please upload readiness documentation separately, following the naming convention outlined in the "Application Instructions" document. Indicate the file name(s) of any supporting documentation in your response.
- If the readiness requirement has not yet been achieved, applicants must identify what steps will be taken to achieve the readiness requirement.
- Indicate "N/A" if the question is not applicable to the project

13. *Describe any permits or approvals required for this project, and the status of obtaining such permits or approvals. Applications must demonstrate that permits or approvals can be obtained within the grant term.*

No additional permits or discretionary approvals are required for this project. Richmond Moves is an existing, fully operational service, and the proposed grant activities — continued service operations and performance improvements — fall within the City's existing authority and contractual framework. Because the project does not involve new construction or physical infrastructure development, no land use or regulatory approvals are needed. The project is implementation-ready and can proceed immediately upon execution of the Grant Agreement.

14. *Describe any CEQA compliance required for this project, and the status of obtaining CEQA compliance.*

Richmond Moves is an existing operational microtransit service, and the activities supported under this grant do not include any new construction or physical infrastructure development; therefore, is exempt from CEQA.

15. *Describe any site control required for this project (e.g., property acquisition, leasehold, right-of-way, easement, private property permission), and the status of obtaining site control. Demonstration of site control will be required by the time of the execution of the Grant Agreement.*

No site control is required for this project since it operates on existing right-of-way.

16. *Describe how operations and maintenance of any physical infrastructure will be assured during and after the grant term. Describe any funding or financing sources that will be utilized for operations and maintenance expenses.*

Operations and maintenance for Richmond Moves is fully integrated into the project's turnkey operating model. Grant funds will primarily support ongoing service delivery,

including driver wages, vehicle leasing, insurance, charging, cleaning, maintenance, and fleet management. Vehicles are leased rather than purchased, and all maintenance, vehicle charging, and upkeep costs are bundled into a single per-vehicle-hour rate under the City's operating agreement with the mobility provider, Via. This structure ensures predictable costs, eliminates deferred maintenance risk, and guarantees that vehicles remain in a safe, reliable operating condition throughout and beyond the grant term.

The City of Richmond has demonstrated the ability to incorporate multiple funding sources to sustain operations. This diversified funding approach reduces reliance on any single source and positions the service for long-term financial sustainability. Additionally, the City will continue pursuing State, regional, and local climate and mobility funding opportunities to ensure uninterrupted service delivery and fleet maintenance beyond the grant term.

17. *Describe any specific barriers associated with your project. Explain how you would overcome any known barriers to implementing your project, or how you would address risks that cause uncertainty in implementing the project.*

One potential challenge for the project is maintaining consistent fleet availability, particularly given the reliance on EV charging infrastructure. The City and its operating partner, Via, actively monitor charger performance and vehicle uptime, and charging schedules are managed to prevent service gaps during peak demand. Preventative maintenance and contingency planning are built into the operating model to ensure that vehicle reliability does not impact rider access.

Service efficiency can also fluctuate due to rider behavior patterns, including cancellations or no-shows, which can reduce productivity and increase operating costs. The City reviews performance data on a regular basis and works with Via to adjust routing parameters, refine rider communications, and implement targeted policy updates when necessary to maintain strong utilization and service quality.

Like many publicly funded mobility programs, long-term operational funding requires careful planning. Richmond has addressed this by diversifying funding sources and maintaining a flexible, per-vehicle-hour cost structure that allows service levels to scale responsibly based on available resources. Continuous performance monitoring ensures the service remains cost-effective and sustainable within the grant term and beyond.

Bay REPAIR
Local Community Benefits Fund – Round 1
Measurable Outcomes Plan

The Measurable Outcomes Plan describes the measurable outcomes that will be achieved for each Project during the grant term and the indicators you will use to measure progress against those anticipated outcomes.

The Plan will further detail how you expect to achieve those outcomes through the completion of milestones (significant markers in a project, such as deliverables, events or completed phases of work) and execution of specific tasks, along with partner roles and completion date for each task.

Note: *Please include as many Measurable Outcomes as you expect your project to deliver and as many Milestones and Tasks as necessary to achieve those Measurable Outcomes. The template includes space for six Measurable Outcomes, three Milestones per Measurable Outcome and three Tasks per Milestone, but the template should be modified to remove or add additional space as needed for your specific Measurable Outcomes Plan.*

Project Vision:	Richmond Moves is a citywide, zero-emission, on-demand microtransit service operated by the City of Richmond to provide affordable first-mile/last-mile (FMLM) connections, general mobility, and safe transportation for residents across nearly the entire city boundary. Bay REPAIR funding will support continued service operations, reliability improvements, and targeted access enhancements to ensure Richmond Moves delivers measurable environmental and economic benefits to Richmond's most pollution-burdened neighborhoods.

Measurable Outcome	Indicator(s)
1. Improve affordability of transportation options for Richmond Moves riders	▪ % of riders report saving money on transportation costs (biannual rider survey (target: 70% of riders)
2. Strengthen first-mile/last-mile connections to regional transit for Richmond residents	▪ % of completed trips connect directly to BART or the Richmond Ferry Terminal (target: 30% of completed trips)
3. Expand access to employment and education for Richmond Moves riders	▪ % of riders use the service to get to work or school (target: 31% of riders) ▪ % of trips taken by students (target: at least 50% of trips)
4. Reduce single-occupancy vehicle use and greenhouse gas emissions in Richmond	▪ % of trips replace SOV travel, tons of CO_2 reduced annually (target: 50% of trips replaced, ▪ ~15 tons CO_2 reduced annually)
5. Provide safe, reliable, high-quality mobility for transit-dependent Richmond residents	▪ # of completed rides (target: 85,000) ▪ # of rides per vehicle hour (target: 4.0) ▪ Average rider rating (target: 4.5/5)

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
1. Improve affordability of transportation options for Richmond Moves riders within one year	A. Conduct first biannual rider affordability survey	1. Design and distribute rider survey via app and in-person at key community locations	Via Transportation	City of Richmond	Month 6
		2. Analyze survey results and report on cost savings indicators	Via Transportation	City of Richmond	Month 6
	B. Conduct second biannual rider affordability survey	1. Distribute and analyze follow-up survey; compare results to Month 6 baseline	Via Transportation	City of Richmond	Month 12
2. Strengthen first-mile/ last-mile connections to regional transit for Richmond residents	A. Maintain and monitor transit hub connectivity	1. Monitor percentage of trips connecting to BART and Richmond Ferry Terminal monthly (target: 30% of trips)	Via Transportation	City of Richmond	Monthly
		2. Collaborate with transit providers to better align services and schedules	City of Richmond	Via Transportation	Ongoing
	B. Promote service as first-mile/last-mile solution	1. Reach at least 500 local residents through outreach at BART stations and Ferry Terminal to increase rider awareness	Via Transportation	City of Richmond	Biannual
		2. Deploy in-app messaging highlighting transit connections with the goal of reaching at least 500 users	Via Transportation	City of Richmond	Ongoing

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
	C. Report transit connectivity outcomes	1. Include transit connection rate in quarterly performance reports	Via Transportation	City of Richmond	Quarterly
3. Expand access to employment and education for Richmond Moves riders	A. Track rider trip purpose	1. Monitor rider trip purpose data through biannual surveys	Via Transportation	City of Richmond	Biannual
		2. Analyze share of trips taken by students (target: 50%)	Via Transportation	City of Richmond	Biannual
	B. Reach at least 300 individuals through outreach at schools and employment centers	1. Partner with Richmond Unified School District and local employers to promote service	City of Richmond	Via Transportation	Biannual
4. Reduce single-occupancy vehicle use and greenhouse gas emissions in Richmond	A. Track SOV replacement rate	1. Monitor SOV replacement data through biannual rider surveys	Via Transportation	City of Richmond	Biannual
		2. Optimize shared trip routing to maximize pooling and minimize VMT	Via Transportation	City of Richmond	Ongoing
	B. Calculate and report annual GHG reductions	1. Calculate annual CO_2 reductions and VMT displacement	Via Transportation	City of Richmond	Month 12
		2. Include emissions reduction data in annual performance report	City of Richmond	Via Transportation	Month 12

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
5. Provide safe, reliable, high-quality mobility for transit-dependent Richmond residents	A. Maintain service availability and ridership	1. Maintain minimum vehicle deployment levels during all service hours	Via Transportation	City of Richmond	Ongoing
		2. Monitor weekly ridership trends and adjust service parameters as needed	Via Transportation	City of Richmond	Weekly
	B. Maintain service productivity	1. Maintain ≥4.0 rides per vehicle hour through routing optimization	Via Transportation	City of Richmond	Quarterly
		2. Reduce cancellations and no-shows to protect completed ride totals	Via Transportation	City of Richmond	Ongoing
	C. Monitor and report service quality	1. Maintain ≥4.5/5 average rider satisfaction rating	Via Transportation	City of Richmond	Quarterly
		2. Include ridership, productivity, and satisfaction data in quarterly performance reports	Via Transportation	City of Richmond	Quarterly
	D. Increase number of Richmond Moves drivers with WAV training	1. Conduct WAV-specific driver training and maintenance for at least 10 drivers	Via Transportation	City of Richmond	Ongoing
	E. Maintain equitable fare structure	1. Maintain free fares for seniors and students throughout grant term	City of Richmond	Via Transportation	Ongoing

Measurable Outcome	Milestone	Tasks	Lead Entity	Supporting Entity(ies)	Completion Date
		2. Track ridership by demographic group to ensure service distribution is either proportional to the city's demographics or overserving historically underserved populations (low-income communities and communities of color)	Via Transportation	City of Richmond	Biannual
	F. Monitor safety performance	1. Review telematics and safety data monthly. Utilize insights to inform driver safety training protocols.	Via Transportation	City of Richmond	Monthly
		2. Report safety metrics in quarterly performance reports	Via Transportation	City of Richmond	Quarterly

Project Name: Richmond Moves
Lead Applicant Name: City of Richmond
Term for this budget (in year 5 Years

Cost Category	Cost Type	Cost Item	Cost Description	Total Cost
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Vehicle hours	10,345.79 annual vehicle hours at a rate of $93.65. All-inclusive rate for Via's turnkey solution.	$968,883.06
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Regulatory fees - PUCTRA	0.1% of vehicle hour fees	$968.88
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Regulatory fees - Access for All	$0.10 fee per ride	$3,148.06
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	WAV retrofit replacements	Cost to retrofit 1 vehicle for wheelchair accessibility. WAV stands for wheelchair accessible vehicle	$21,000.00
Subcontractors & Vendors (excluding Professional Service Consultants)	Direct	Vehicle wrap replacements	2 vehicle wrap replacements	$8,000.00
Community Engagement	Direct	Richmond Rising Together Community Engagement Materials	Public materials for CSC meeting agendas and slides, reports as necessary for public review; branded outreach and informational materials: flyers, pamphlets, banners, and postcard mailers. $2,000/year for printing and copying + $1500/year for translation = $3500 x 5 years = $17,500. Cost to project at 1/12th for 1 of 12 projects participating: $1458	$1,458.00
Other Direct Costs	Direct	Richmond Rising Together Hub	Rental of building space for a publicly accessible office and meeting space for grant partner meetings, trainings/workshops, and community events. $1,390/month x 41 months = $56,990. Cost to project at 1/12th for 1 of 12 projects participating: $4,749	$4,749.00
Other Direct Costs	Direct	Cellular phones and service	Cellular phones and cellular service for PM I and AAA Staff. One time purchase of phones ($600/each) and monthly costs of $50/month per phone for 41 months. $600 x 2 + $50 x 41 months = $5,300. Cost to project at 1/12th for 1 of 12 projects participating: $442	$442.00
Community Engagement	Direct	Refreshment, Childcare, and Interpretation for Community Meetings	$400/event for refreshments for 30 community members + $80/event for childcare + $200/event interpretation = $680 per meeting. 41 CSC monthly meetings + 4 additional events/year x 5 years = 61 meetings x $680/meeting = $41,480. Cost to project at 1/12th for 1 of 12 projects participating: $3,457	$3,457.00
Capacity-Building and Training	Direct	City of Richmond Staff Training Costs	Workshop and conference fees ($600/year per staff member) + meals during training ($92/day x 4 days/year per staff member) = $968/staff member/year x 5 years x 3 staff = $14,520.00. Cost to project at 1/12th for 1 of 12 projects participating: $1,210	$1,210.00
Travel	Direct	Local Transportation	20 miles/month for staff to attend related community meetings throughout the City and region. 60 months x 20 miles x $0.70/mile = $840. Cost to project at 1/12th for 1 of 12 projects participating: $70	$70.00
Community Engagement	Direct	Community Workproduct Compensation for Richmond resident members of CSC	Each resident CSC member receives a $50 VISA gift card per meeting. Estimate includes 6 members at each monthly Collaborative Stakeholder Committee meeting, for 41 months. $50 card + $4 purchasing fee = $54/card x 6 residents x 41 months = $13,284. Cost to project at 1/12th for 1 of 12 projects participating: $1,107	$1,107.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Richmond Rising Together Project Website	Richmond Rising Together webpage for posting meeting materials (agendas, minutes, recordings), key reports and documents, community opportunities for project involvement, and other public information. Estimated at $50/month based on historic costs x 60 months = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Subcontractors & Vendors	Direct	Graphic Design Consultant	Development of website and project outreach materials. $150/hr for 20 hours = $3,000. Cost to project at 1/12th for 1 of 12 projects participating: $250	$250.00
Materials, Supplies & Equipment (> $5K itemized)	Direct	Data Management Software (Airtable)	Airtable is used for tracking project budgets, deliverables, expenditures and reimbursements to-date, and other key coordination data. $720/year for 5 years based on historic costs = $3,600. Cost to project at 1/12th for 1 of 12 projects participating: $300	$300.00
Personnel/Staff Costs	Direct	City of Richmond Project Manager	Project Manager provides overall leadership in grant execution and implementation across projects. Project-specific allocation, based on anticipated support to be provided: 1.75% FTE x $17,754.47 monthly salary x 41 months = $12,738.83; Benefits at 77% of salary = $9,808.90.	$22,548.00
Personnel/Staff Costs	Direct	City of Richmond Associate Management Analyst	Project Analyst coordinates partners for CSC meetings, preparation and submission of required reports and invoices, and ongoing budget management across projects. Project-specific allocation: 2.25% FTE x $13,623.72 monthly salary x 41 months = $12,567.88; Benefits at 77% of salary = $9,677.27.	$22,245.00
Personnel/Staff Costs	Direct	City of Richmond Administrative Assistant	Administrative Assistant provides logistical and coordination support for all projects, including CSC meeting preparation, timely payment of project partner invoices, and project delivery support. Project-specific allocation: 4.00% FTE x $9,453.37 monthly salary x 41 months = $15,503.52; Benefits at 77% of salary = $11,937.71.	$27,441.00

Project Narrative

Instructions:

- The "Project Narrative" is scored out of 100 points.
- Each unique project must submit a separate Project Narrative, Measurable Outcomes Plan and Budget.
- Do not delete the included questions.
- Formatting may be used to organize responses. Avoid excessive formatting so that responses are easy to read.
- Links to external websites will not be reviewed or considered.
- Narratives should not exceed 15 pages. Applications are encouraged to be concise and do not need to use the full page limit.
- Once complete, save this file as a PDF.

Application Information (Seed, Opportunity and Catalyst Grants)	
Application Title	Richmond Rising Together
Lead Applicant Name	City of Richmond
Project Location	Richmond, CA
Overall Funding Request	$15,000,000
Grant Term Request	5 years
Project Information (Opportunity and Catalyst Grants Only)	
Project Title	Rooted
Project Lead	City of Richmond
Project Location	Multiple locations; Richmond, CA
Project Funding Request	$2,126,586

STRATEGY ALIGNMENT (10 points)

1. *Provide a short summary (1-2 paragraphs) that outlines this project.*

Rooted in Community: Planting Trees for a Healthy Richmond (Rooted) brings together the City of Richmond and three local nonprofits, Groundwork Richmond, The Watershed Project (TWP), and Richmond Trees, who will plant and care for 600 trees and install 10 rain gardens to improve the urban canopy in Richmond. The nonprofits will lead community engagement to build resident ownership of newly planted trees and rain gardens, conduct plantings, and organize volunteer support. The City will coordinate with the nonprofits on site selection and maintenance. Groundwork Richmond and TWP employ local residents to install green infrastructure and offer skills-training programs for residents. The project will address significant gaps in urban tree canopy and create job training opportunities in multiple neighborhoods, including many areas that are considered Disadvantaged Communities under Senate Bill (SB) 535, while delivering an estimated of 11-35 metric tons of CO_2 reduction annually.

2. *Briefly describe how the project aligns with at least one of the Local Community Benefit Fund's strategies:*
    - *Reduce air pollution and improve health outcomes*
    - *Build economic resilience for a just transition*

The proposed environmental improvements support community health by lowering exposure to air pollution and heat-related risks, while contributing to improved roadway safety and enhancing overall neighborhood livability. Additionally, the project will offer job skills training and exposure to fields that support climate resilience.

Reducing Air Pollution and Improving Health Outcomes

This project aligns with the Local Community Benefit Fund strategy to reduce air pollution and improve health outcomes as a comprehensive climate adaptation strategy that addresses air quality, extreme heat, and flooding in a single, nature-based approach. The most climate vulnerable communities face compounding hazards and require integrated solutions. The project will reduce air pollution and improve health outcomes because trees and rain gardens naturally filter particulate matter (PM2.5) to improve respiratory health. As planting efforts will focus on Assembly Bill (AB) 617-designated underserved neighborhoods, residents who are most impacted by air pollution will be prioritized in this project. The plantings will sequester carbon by removing carbon dioxide from the air and storing it in the soil and in tree biomass, directly reducing greenhouse gases in the atmosphere. Additionally, trees indirectly mitigate the effects of greenhouse gases by introducing passive cooling strategies. The expanded urban forest and stormwater capture infrastructure will reduce flood risk from sea-level rise and

intensifying storms by increasing the amount of permeable ground surface, filter pollutants from runoff water, and lower ambient air and surface temperatures to mitigate urban heat island effects.

Street trees are increasingly recognized as a transportation safety and public health strategy because they help calm traffic and create safer, more comfortable streets for people walking and biking. Research shows that tree-lined streets can create a traffic calming effect by visually narrowing the roadway and increasing driver attentiveness, which can lead to lower vehicle speeds. Lower speeds are strongly associated with reductions in both the frequency and severity of traffic [1] From a public health perspective, even modest reductions in vehicle speed can significantly decrease the likelihood of serious injury or death in crashes involving pedestrians and cyclists. Slower traffic also improves perceived safety, encouraging more walking, biking, and outdoor activity, which supports physical and mental health outcomes. The project will look for opportunities to plant trees on streets with higher injury rates and/or community perception of a need for traffic calming.

Building Economic Resilience for a Just Transition

The community activation and training models used by Groundwork Richmond and TWP align with the Local Community Benefit Fund's strategy to build economic resilience for a just transition. TWP will build long-term green jobs and community wealth by investing in a permanent workforce of Richmond residents, students, young adults, and small-business local landscapers trained in native plant installation, stormwater system maintenance, and urban forestry. By hiring from the community and ensuring living wages and benefits, the project creates pathways away from the harmful effects of a fossil fuel-based economy and toward a thriving green economy. Groundwork Richmond will teach youth aged 14-18 in the Green Team program about green skills, climate resiliency, and urban forestry. Groundwork Richmond will also hire and train young adults ages 18-25 for the Workforce Development Program in urban forestry and green skills. Through hands-on experience planting and caring for trees, local residents not only gain skills and knowledge, but also the confidence and self-efficacy to succeed in the workforce in the long term.

COMMUNITY IMPACT (20 points)

---

[1] Wolf, K.L. 2010. *Safe Streets - A Literature Review. In: Green Cities: Good Health (www.greenhealth.washington.edu).* College of the Environment, University of Washington. https://depts.washington.edu/hhwb/Thm_SafeStreets.html

3. *Describe the location of your project. If applicable, please include an address. If multiple locations or neighborhoods are served by your project, please list all.*

The City of Richmond will coordinate with community partners working citywide and help to identify priority tree planting locations in areas with gaps in the urban canopy. Where possible, this will also include plantings on streets that are in the Multimodal High Injury Network, as identified by the Local Roadway Safety Plan.

TWP and Groundwork Richmond will work within neighborhoods in North Richmond and South Richmond that face critical, compounding climate risks. These neighborhoods are considered Disadvantaged Neighborhoods under SB 535 according to CalEnviroScreen 4.0 analysis of environmental burden:

- The Eastshore, Laurel Park, Pullman, Cortez-Stege, Panhandle Annex, Parkview, Richmond Village/Metro Square, Santa Fe, Iron Triangle, Coronado, Belding Woods, Atchison Village, Point Richmond, and Park Plaza neighborhoods in south Richmond.
- The Fairmede-Hilltop, Shields Reid, Parchester Village, and Hilltop Village neighborhoods in north Richmond.

Richmond Trees will plant throughout the city, with tree planting focused on residential streets and public right-of-way planting strips where additional canopy can be supported. Specific locations will be identified in coordination with residents and the City, in flexible relationship with the other nonprofits and overall capacity needs.

4. *Describe community engagement efforts related to the project. Describe the methods used to identify community needs and priorities, and how community-based organizations, residents and other key stakeholders were meaningfully involved in the determination of community needs.*

In 1998, the City of Richmond established the Urban Forest Advisory Committee (UFAC) to support the Parks and Landscaping Superintendent in promoting a healthy urban forest for the greater community through volunteer project development and related activities. The UFAC scope was expanded in 2015 to include promoting and fostering public awareness, education, volunteerism, and public-private partnerships to support urban forestry initiatives. In 2017, the City adopted its Urban Greening Master Plan, which created a community-led vision to guide and coordinate future greening projects in Richmond. It included a citywide tree inventory, an appendix for urban forest best practices, and a living list of approved street trees for the city. The community engagement activities associated with the development of the Urban Greening Master

Plan created an opportunity for the City to collect resident feedback as a means of ground-truthing the results of the analysis, including a Project Advisory Group. City staff also conducted demonstrations and presentations at an Arbor Day event, created a website for the plan, hosted a community kick-off event, and participated in neighborhood council meetings. A youth-focused video called *Greening Richmond Together* was also released and promoted by community groups.

For many years, the City has been actively engaged in community-driven efforts to address environmental justice issues through collaborative projects such as Richmond Rising (a five-year suite of projects funded by the Transformative Climate Communities Program, awarded in 2022) and the Richmond Park Equity Project collaborative (active since 2022). In both of these initiatives, City staff directly engage community leaders and partners with community organizations to conduct outreach and engage residents in efforts to enact meaningful change in the city's environment. As part of Richmond Rising, a Collaborative Stakeholder Committee has been meeting monthly since 2023, directly engaging community members in discussions on neighborhood tree planting.
Each of the nonprofits has a long history of working with community members on greening efforts in the city:

The Watershed Project

TWP has been active in the Richmond community since 1996. TWP stewards and maintains anchor sites throughout Richmond, including the Booker T. Anderson Community Center and Park in the South area and the Rheem Creek Flood Risk Reduction Project in North Richmond. These anchor sites are community hubs from which active stewardship, outreach, and engagement are conducted. In addition to public volunteer and educational events, TWP canvasses the surrounding neighborhoods and attends neighborhood council meetings to identify community needs and priorities. Residents have consistently identified poor air quality, extreme heat, and flooding as priority concerns, particularly in neighborhoods with high exposure to traffic and industrial emissions and limited tree canopy. The Watershed Project has consistently heard from residents, schools, and local partners that environmental improvements should also create local economic opportunity. Needs for paid training and workforce pathways in urban forestry and green infrastructure were identified both in the Richmond Blue-Green Jobs Report and through testimonials collected during TWP's monthly stewardship activities. Community members highlighted interest in hands-on training connected to maintaining bioswales, rain gardens, urban trees, and other nature-based infrastructure, particularly for local youth and residents disproportionately impacted by pollution and heat.

Groundwork Richmond

Groundwork hosts and supports valued community events and regularly attends neighborhood council meetings, the Urban Forestry Advisory Commission, strategic planning sessions with the City, State and federal agencies, and partner community-based organizations since 2010. Groundwork Richmond has planted over 5,000 trees in the most vulnerable communities in Richmond. Groundwork Richmond is a founding member of Friends of the Richmond Greenway (FORG), the Richmond Outdoor Coalition, and the California Outdoor Coalition, which all convene grassroots organizations to address environmental challenges.

Richmond Trees

Founded in 2011, Richmond Trees collaborates informally with local organizations and participates in community events to understand neighborhood priorities and build trust. Planting locations are generated through resident requests and proactive neighborhood outreach, including door-to-door canvassing, attending community events, and building ongoing relationships with community members to support long-term stewardship. Richmond Trees consistently engages volunteers throughout the city, the East Bay, and Marin County to attend community tree planting and tree care events in Richmond.

5. *Describe how your project addresses the community needs identified in the previous question, including the specific communities your project will benefit. Describe the environmental justice, public health and/or just transition challenge(s) that your application seeks to address. Describe how the measurable outcomes achieved through your application will demonstrate progress towards achieving community impact.*

The project directly addresses environmental justice and public health challenges identified through ongoing community engagement conducted by partner organizations working in Richmond neighborhoods. Residents have consistently identified flooding, extreme heat, and poor air quality as priority concerns, particularly in neighborhoods with limited tree canopy and high exposure to traffic and industrial emissions.

The project addresses these challenges through an approach that combines urban forestry, green stormwater infrastructure, and community workforce development. As a historically and actively industrial city, Richmond residents are environmentally burdened, particularly in neighborhoods with limited shade and green infrastructure. Neighborhoods identified for tree planting include communities within the Path to Clean Air Community Emissions Reduction Plan area, which are AB 617-designated communities where residents experience disproportionate exposure to particulate matter ($PM_{2.5}$). This project addresses ongoing environmental challenges in Richmond, including air pollution, urban

heat, and uneven tree canopy distribution. By installing trees, rain gardens, and rainwater harvesting systems in public spaces, at residential properties, and at community sites, the project will expand critical vegetative cover throughout the city. This vegetative cover filters airborne pollutants, reduces localized urban heat-island effects, and captures stormwater runoff to prevent flooding and build climate resilience. By planting street trees, the project directly improves neighborhood conditions: enhancing air quality, reducing heat, and creating slower, more comfortable, livable streets.

TWP, Groundwork Richmond, and Richmond Trees intend to plant a combined 600 trees along with 10 rain gardens and other stormwater capture systems to help grow Richmond's urban forest. This will be achieved through the Adopt-a-Tree program, planting trees and rain gardens in street wells in City-owned planting strips, planting trees in parks throughout the city, and planting trees in participating community members' yards and at community sites such as local churches. The City is presently working to develop an updated tree inventory and new Urban Forest Management Plan that will inform the siting of trees in public spaces and help to ensure that trees planted as part of this project will be cared for on a long-term basis. The project partners will work with residents and community groups to identify planting sites on privately owned land and support maintenance of these trees. Planting on privately owned land can help fill gaps in the tree canopy in areas where street tree planting may not be feasible.

Participating partner organizations have also heard community feedback that there is a need for safe opportunities for local youth. To ensure that current and future investments in climate adaptation measures benefit community members, the project will incorporate workforce development training and internship opportunities for local residents. Youth-focused opportunities will address the need for safe spaces for youth identified by the community. A program run by TWP will provide training and stipends for community members to clean their neighborhood, participate in local creek cleanups and tree plantings, and encourage others to participate in neighborhood greening efforts. Volunteer workdays will provide an opportunity to learn about tree planting and its benefit to the community.

Measures of success will include the number of trees and rain gardens planted and the number of community members engaged in volunteer workdays, internships, the Block Ambassador program, and trainings.

COMMUNITY ENGAGEMENT (10 points)

6. *Describe the methods that will be used to engage community members on implementation progress and project benefits available to community members.*

Describe the methods that will be used to solicit community feedback during grant implementation, and how that feedback will be considered.

The outreach approach will build a network of support that extends beyond planting day so people can grow their stewardship skills alongside their neighbors. Groundwork Richmond, TWP, and Richmond Trees will lead engagement on project benefits, implementation progress, and feedback. The City will support outreach efforts. The partner organizations will maintain direct communication with residents receiving trees, providing guidance on care, and encouraging ongoing stewardship. Feedback will be gathered informally through conversations with residents, volunteers, and community participants during and after planting activities. This feedback will be used to refine planting locations, improve event coordination, and strengthen long-term tree care efforts.

In addition to direct outreach to participating households, the nonprofits will engage community members through neighborhood council meetings, demonstration events, social media campaigns, and partnerships with local community-based organizations. Outreach materials and workshops will be provided in multiple languages to ensure accessibility for Richmond's diverse populations.

STEAM the Streets will produce high-quality, community-centered storytelling that highlights local air quality and climate solutions across Richmond. In Year 3, this work will focus on highlighting tree planting and rain garden installations, with a focus on neighborhoods most impacted by pollution. This storytelling will illustrate how urban greening strategies can reduce air pollution, improve environmental health, and create more resilient and livable communities. This will serve as the foundation for a broader community engagement campaign that translates on-the-ground climate solutions into culturally relevant, accessible media. Footage captured from tree planting and rain garden installations will be incorporated into a youth-powered campaign and featured within a flagship climate action anthem and music video. The campaign will bring increased visibility to these efforts, heighten awareness of available resources and solutions, and broadcast this local movement so that Richmond residents of all ages are more connected to the work happening in their community.

TWP will recruit a network of "Block Ambassadors" who will receive a stipend for their time and expertise. Block Ambassadors will serve as public ambassadors and proponents of urban greening efforts within their community by helping recruit fellow community members, raising awareness of available project benefits and ongoing progress with their friends and colleagues, and reporting back on any issues or complications adopters may have with their trees or green landscapes.

Richmond Trees will engage community members throughout project implementation through hands-on planting events, direct outreach, and ongoing communication with participating residents. Volunteers from Richmond, Marin, and neighboring communities will be invited to participate in planting days, creating opportunities for broad community involvement and shared investment in Richmond's neighborhoods.

The project will engage within the neighborhoods where planting will occur by building a network of neighbors, local groups, and community-centered organizations, as well as small businesses who are interested in planting trees and native plant-based rain gardens to green their streets and reduce air pollutants in their community. The goal of the project is to layer benefits each step of the way to inspire public involvement and amplify community investment, leading to green nodes that grow into green corridors.

As part of the Richmond Rising Together initiative, a Collaborative Stakeholder Committee (CSC) consisting of a representative from each Co-Applicant organization as well as key stakeholders and compensated community member participants will meet monthly at the Nevin Community Center. During these meetings, Co-Applicants will share project status updates and directly engage the CSC and community members in discussions on project design and implementation. This structure ensures lessons learned across projects are leveraged towards the broader collaborative effort while creating meaningful opportunities for residents most impacted by poor air quality to learn about and engage in projects and share meaningful feedback based on their lived experiences. To reduce potential barriers and ensure maximum opportunities for community participation, these meetings are hybrid (hosted in person and simultaneously on Zoom) and include free childcare, Spanish interpretation, and meals for community members. Meetings are recorded and posted online for viewing in Spanish and English.

MEASURABLE OUTCOMES PLAN (30 points)

7. *Provide a summary of the major components of this project, including the overall project vision, measurable outcomes, role of the Applicant and any additional partners.*

The project's overall vision is to cultivate a denser tree canopy and foster interconnected neighborhoods that embrace climate-smart solutions to make communities healthier and more resilient. By planting trees to improve air quality and training local youth and adults for high-road green economy careers with long-term advancement opportunities, this initiative actively drives both environmental restoration and equitable economic development connected to the clean-economy transition.

The outcomes of this project will demonstrate progress toward improving community

health and environmental conditions and build local economic resilience for a just transition. These measurable outcomes will include improving air quality and expanding the urban canopy, increasing community participation in climate resilience activities, and expanding readiness for green jobs. Indicators will include the number of trees planted and established, the number of participants trained in climate adaptation techniques, volunteer and intern participation levels, local landscape contractors engaged, and successful tree survival over the maintenance period.

The organizations will each serve as the primary implementing organization for their scopes of work, responsible for tasks such as site coordination, volunteer management, education, training, planting, and early-stage maintenance, where applicable. The City of Richmond, as Lead Applicant, will provide overall coordination and administrative oversight.

The City of Richmond's role in the project will be to:

- Coordinate project implementation, partner collaboration, and annual check-ins
- Review planting sites, approve species, and support permitting/site preparation
- Provide technical guidance to ensure planting and maintenance meet City standards
- Support volunteer events, limited storage/watering, and outreach materials
- Incorporate planted trees into the City database and long-term maintenance program

All nonprofit partners' roles include:

- Attend a kick-off meeting with all project partners to establish a work plan, community engagement plan, and a common understanding of workflows
- Attend annual check-in meetings with partners
- Engage residents in site selection, planting, and ongoing care
- Support two annual volunteer planting events (Arbor Day and MLK Day of Service)
- Partner with the City of Richmond to select planting sites, conduct site assessments, implement tree planting best practices, and submit planting and maintenance records for inclusion in the City's database.

TWP's role in the project will be to:

- Plant and maintain 100 trees, install up to 10 rain gardens, train youth and local landscape contractors in green infrastructure practices, support block ambassadors, and conduct outreach through canvassing, workshops, and demonstrations.

Groundwork Richmond's role in the project will be to:

- Plant and maintain 200 trees, train youth and workforce participants in urban forestry and environmental justice, and host five community planting events.

Richmond Trees' role in the project will be to:

- Plant and maintain 300 street trees while mobilizing volunteers for long-term stewardship.

Project workforce participants will also be participants in the Total Transit Access Pilot Program (TTA Pilot) for the duration of their participation in the workforce program. The TTA Pilot will bolster Groundworks Richmond's workforce development goals by providing unlimited transit passes for participants to access work sites, which will reduce transportation cost burden and encourage use of public transit for future work opportunities and personal use. UC Berkeley's Center Global Healthy Cities (CGHC) will prepare annual and end-of-project reports of data across all project partners, along with a public facing dashboard to track progress. The dashboard will include a public comment section. CGHC will work with all Co-Applicants to co-create validated survey questions to capture the mental health impacts of air pollution and climate change (e.g., climate anxiety), and whether and how project interventions are reducing stress, anxiety, and related psychosocial influences on well-being.

8. *Use the Measurable Outcomes Plan TEMPLATE document to fill out the required fields related to measurable outcomes, indicators and project plan; no written responses are required here on this "Project Narrative" document.*

9. *Use the Budget TEMPLATE document to fill out a project budget. Use the space below to summarize the overall budget and key project costs.*
