III. GENERALLY APPLICABLE REQUIREMENTS

The permit holder shall comply with all applicable requirements, including those specified in the BAAQMD and SIP rules and regulations and other federal requirements cited below. These requirements apply in a general manner to the facility and/or to sources exempt from the requirement to obtain a District Permit to Operate. The District has determined that these requirements will not be violated under normal, routine operations, and that no additional periodic monitoring or reporting to demonstrate compliance is warranted. In cases where a requirement, in addition to being generally applicable, is also specifically applicable to one or more sources, the requirement and the source are also included in Section IV, Source-Specific Applicable Requirements, of this permit. This section also contains provisions that may apply to temporary sources.

Unpermitted sources are exempt from normal District permits pursuant to an exemption in BAAQMD Regulation 2, Rule 1. They may, however, be specifically described in a Title V permit if they are considered significant sources pursuant to the definition in BAAQMD Rule 2-6-239.

Portable equipment operating in accordance with the ARB portable equipment registration program and temporary equipment such as sandblasting equipment may be operated at the facility provided that the source is not significant pursuant to Rule 2-6-239. Otherwise the significant source would need to be included in the Title V permit.

The dates in parentheses in the Title column identify the versions of the regulations being cited and are, as applicable:

1. BAAQMD regulation(s): The date(s) of adoption or most recent amendment of the regulation by the District Board of Directors
2. Any federal requirement, including a version of a District regulation that has been approved into the SIP: The most recent date of EPA approval of any portion of the rule, encompassing all actions on the rule through that date

The full language of SIP requirements is on EPA Region 9's website. The address is <https://www.epa.gov/sips-ca/epa-approved-bay-area-air-district-regulations-california-sip>

NOTE:

There are differences between the current BAAQMD rules and the versions of the rules in the SIP. All sources must comply with both versions of a rule until US EPA has reviewed and approved the District's revision of the regulation.

VII. APPLICABLE EMISSION LIMITS & COMPLIANCE MONITORING REQUIREMENTS

This section has been included to summarize the applicable emission limits contained in Section IV, Source-Specific Applicable Requirements, of this permit. The following tables show the relationship between each emission limit and the associated compliance monitoring provisions, if any. The monitoring frequency column indicates whether periodic (P) or continuous (C) monitoring is required. For periodic monitoring, the frequency of the monitoring has also been shown using the following codes: annual (A), semi-annual (SA), quarterly (Q), monthly (M), weekly (W), daily (D), hourly (H), or on an event basis (E). No monitoring (N) has been required if the current applicable rule or regulation does not require monitoring, and the operation is unlikely to deviate from the applicable emission limit based upon the nature of the operation.

X. REVISION HISTORY

Final Major Facility Review Permit Issuance
(Application # 16468) December 1, 2003

Final Issuance of Reopened Permit
(Application # 8895) October 28, 2004

MACT Issuance: The Organic Liquids Distribution MACT, Subpart EEEE, and the Boiler and Process Heater MACT, Subpart DDDDD, were published, therefore the 112(j) application requirements were removed from the facility requirement table, Table IV-A, and the Custom Schedule of Compliance for Subpart EEEE was removed from the Schedule of Compliance section and Condition 21063. Subpart DDDDD was added to the source specific requirements tables for S-444 and S-460 as a future effective requirement. Subpart EEEE was added to the facility requirement table as a future effective requirement.

To replace confidential information:

- Condition 2039: The confidential claim in Part 8 was removed and replaced with the original maximum daily liquid throughput limit; this was also updated to Tables IV-AF and VII-Z for S-389. The pH monitoring from the BIF/HAF federal requirements was added to document existing monitoring.
- For Condition 3712: The confidential claim in Part 6 was removed and replaced with the original annual and daily agricultural product drum loading limits. This change was updated to Tables IV-BN and VII-BE for S-588 and noted federally enforceable. References to Parts 3 and 4, which no longer exist, were deleted from part 7.
- Condition 6859: The pH monitoring from the BIF/HAF federal requirements was added to document monitoring.
- For Condition 8894: The confidential portion of Part 3 was deleted and updated to Tables IV-BZ and VII-BP for S-647. The confidential information in Part 9 was deleted and replaced with annual POC and HCl emission limits in part 13; this was updated to Tables IV-CA and VII-BQ for S-648. The recordkeeping requirements were renumbered to Part 14 and updated to reflect daily records. The confidential information in Part 15 was deleted; this was updated to Tables IV-CB and VII-BR for S-649. The confidential information in Part 18 was deleted and updated to Tables IV-CC and VII-BS for S-650, S-651, S-652.
- For Condition 14438: The confidential information in Part 2 was deleted and updated to Tables IV-CE and VII-BU for S-662, S-663, S-664. Part 8 was corrected to refer to Parts 3 through 7, since parts 1 and 2 no longer exist.
- For Condition 15932: The confidential parts 1 and 5 were replaced with a combined POC emission limit for S-693 and S-694; recordkeeping requirements for S-693 were consolidated to Part 8 and 'offsets' was added to the basis. XI. Glossary

E 6, E 9, E 12

Very large or very small number values are commonly expressed in a form called scientific notation, which consists of a decimal part multiplied by 10 raised to some power. For example, 4.53 E 6 equals $(4.53) \times (10^6) = (4.53) \times (10 \times 10 \times 10 \times 10 \times 10 \times 10) = 4,530,000$. Scientific notation is used to express large or small numbers without writing out long strings of zeros.

EFRT

An "external floating roof tank" minimizes VOC emissions with a roof with floats on the surface of the liquid, thus preventing the formation of a VOC-rich vapor space above the liquid surface as the level in the tank drops. If such a vapor space were allowed to form, it would be expelled when the tank was re-filled. On an EFRT, the floating roof is not enclosed by a second, fixed tank roof, and is thus described as an "external" roof.
