Facility Name: New United Motor Manufacturing

Permit for Facility #: A1438

### I. STANDARD CONDITIONS

#### A. Administrative Requirements

The permit holder shall comply with all applicable requirements in the following regulations:

BAAQMD Regulation 1 - General Provisions and Definitions

(as amended by the District Board on  $\frac{5/2}{01}7/09/08$ );

SIP Regulation 1 - General Provisions and Definitions

(as approved by EPA through 6/28/99);

BAAQMD Regulation 2, Rule 1 - Permits, General Requirements

(as amended by the District Board on  $\frac{8}{1/01}\frac{11}{19/08}$ );

SIP Regulation 2, Rule 1 - Permits, General Requirements

(as approved by EPA through 1/26/99);

BAAQMD Regulation 2, Rule 2 - Permits, New Source Review

(as amended by the District Board on  $\frac{5}{17}$ /006/15/05);

SIP Regulation 2, Rule 2 - Permits, New Source Review and Prevention of Significant Deterioration

(as approved by EPA through 1/26/99);

BAAQMD Regulation 2, Rule 4 - Permits, Emissions Banking

(as amended by the District Board on  $\frac{5/17/0012/21/04}{2}$ );

SIP Regulation 2, Rule 4 - Permits, Emissions Banking

(as approved by EPA through 1/26/99); and

BAAQMD Regulation 2, Rule 6 - Permits, Major Facility Review

(as amended by the District Board on 4/16/03).

#### B. Conditions to Implement Regulation 2, Rule 6, Major Facility Review

- 1. This Major Facility Review Permit was issued on \_\_\_\_\_\_\_\_, and expires on \_\_\_\_\_\_\_. The permit holder shall submit a complete application for renewal of this Major Facility Review Permit no later than \_\_\_\_\_\_\_, and no earlier than \_\_\_\_\_\_\_. If a complete application for renewal has not been submitted in accordance with this deadline, the facility may not operate after \_\_\_\_\_\_\_\_. If the permit renewal has not been issued by \_\_\_\_\_\_\_\_, but a complete application for renewal has been submitted in accordance with the above deadlines, the existing permit will continue in force until the District takes final action on the renewal application. (Regulation 2-6-307, 404.2, 407, & 409.6; MOP Volume II, Part 3, §4.2)
- 2. The permit holder shall comply with all conditions of this permit. The permit consists of this document and all appendices. Any non-compliance with the terms and conditions of this permit will constitute a violation of the law and will be grounds for enforcement action; permit termination, revocation and re-issuance, or modification; or denial of a permit renewal application. (Regulation 2-6-307; MOP Volume II, Part 3, §4.11)
- 3. In the event any enforcement action is brought as a result of a violation of any term or condition of this permit, the fact that it would have been necessary for the permittee to halt or reduce the permitted activity in order to maintain compliance

### I. Standard Conditions

with such term or condition shall not be a defense to such enforcement action. (MOP Volume II, Part 3, §4.11)

- 4. This permit may be modified, revoked, reopened and reissued, or terminated for cause. (Regulation 2-6-307, 409.8, 415; MOP Volume II, Part 3, §4.11)
- 5. The filing of a request by the facility for a permit modification, revocation and reissuance, or termination, or the filing of a notification of planned changes or anticipated non-compliance does not stay the applicability of any permit condition. (Regulation 2-6-409.7; MOP Volume II, Part 3, §4.11)
- 6. This permit does not convey any property rights of any sort, or any exclusive privilege. (Regulation 2-6-409.7; MOP Volume II, Part 3, §4.11)
- 7. The permit holder shall supply within 30 days any information that the District requests in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. (Regulation 1-441, Regulation 2-6-409.4 & 501; MOP Volume II, Part 3, §4.11)
- 8. Any records required to be maintained pursuant to this permit which the permittee considers to contain proprietary or trade secret information shall be prominently designated as such. Copies of any such proprietary or trade secret information which are provided to the District shall be maintained by the District in a locked confidential file, provided, however, that requests from the public for the review of any such information shall be handled in accordance with the District's procedures set forth in Section 11 of the District's Administrative Code. (Regulation 2-6-419; MOP Volume II, Part 3, §4.11)
- 9. Proprietary or trade secret information provided to EPA will be subject to the requirements of 40 CFR Part 2, Subpart B Public Information, Confidentiality of Business Information. (40 CFR Part 2)
- 10. The emissions inventory submitted with the application for this Major Facility Review Permit is an estimate of actual emissions for the time period stated and is included only as one means of determining applicable requirements for emission sources. It does not establish, or constitute a basis for establishing, any new emission limitations. (MOP Volume II, Part 3, §4.11)
- 11. The responsible official shall certify all documents submitted by the facility pursuant to the major facility review permit. The certification shall state that based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete. The certifications shall be signed by a responsible official for the facility. (MOP Volume II, Part 3, §4.11
- 12. The permit holder is responsible for compliance, and certification of compliance, with all conditions of the permit, regardless whether it acts through employees, agents, contractors, or subcontractors. (Regulation 2-6-307)

### C. Requirement to Pay Fees

The permit holder shall pay annual fees in accordance with District Regulation 3, including Schedule P. (Regulation 2-6-402 & 409.13, Regulation 3; MOP Volume II, Part 3, §4.12)

### I. Standard Conditions

### D. Inspection and Entry

Access to Facility: The permit holder shall provide reasonable access to the facility and equipment which is subject to this permit to the APCO and/or to his or her designee. (Regulation 1-440, Regulation 2-6-409.3; MOP Volume II, Part 3, §4.14)

#### E. Records

- 1. The permit holder must provide any information, records, and reports requested or specified by the APCO. (Regulation 1-441, Regulation 2-6-409.4)
- 2. Notwithstanding the specific wording in any requirement, all records for federally enforceable requirements shall be maintained for at least five years from the date of entry. (Regulation 2-6-501, Regulation 3; MOP Volume II, Part 3, §4.7)

#### F. Monitoring Reports

Reports of all required monitoring must be submitted to the District at least once every six months, except where an applicable requirement specifies more frequent reporting. The first reporting period for this permit shall be December 18, 2002, to May 31, 2003. The report shall be submitted by June 30, 2003. Subsequent Monitoring reports shall be submitted for the following periods: June July 1st through November December 30th 31st and December January 1st through May June 31st 30th, and are due on the last day of the month after the end of the reporting period. All instances of non-compliance shall be clearly identified in these reports. The reports shall be certified by the responsible official as true, accurate, and complete. In addition, all instances of non-compliance with the permit shall be reported in writing to the District's Compliance and Enforcement Division within 10 calendar days of the discovery of the incident. Within 30 calendar days of the discovery of any incident of non-compliance, the facility shall submit a written report including the probable cause of non-compliance and any corrective or preventative actions. The reports shall be sent to the following address:

Director of Compliance and Enforcement Bay Area Air Quality Management District 939 Ellis Street San Francisco, CA 94109 Attn: Title V Reports

(Regulation 2-6-502, Regulation 3; MOP Volume II, Part 3, §4.7)

#### **G.** Compliance Certification

Compliance certifications shall be submitted annually by the responsible official of this facility to the Bay Area Air Quality Management District and to the Environmental Protection Agency. The certification period will be December 1stJanuary 1st to November 30thDecember 31st. The certification shall be submitted by December January 31st of each year. The certification must list each applicable requirement, the compliance status, whether compliance was continuous or intermittent, the method used to determine compliance, and any other specific information required by the permit. The permit holder may satisfy this requirement through submittal of District-generated Compliance Certification forms. The certification should be directed to the District's Compliance and Enforcement Division at the address above, and a copy of the certification should be sent to the Environmental Protection Agency at the following

#### I. **Standard Conditions**

address:

Director of the Air Division USEPA, Region IX 75 Hawthorne Street San Francisco, CA 94105

Attention: Air-3

(MOP Volume II, Part 3, §4.5 and 4.15)

### **H.** Emergency Provisions

- 1. The permit holder may seek relief from enforcement action in the event of a breakdown, as defined by Regulation 1-208 of the District's Rules and Regulations, by following the procedures contained in Regulations 1-431 and 1-432. The District will thereafter determine whether breakdown relief will be granted in accordance with Regulation 1-433. (MOP Volume II, Part 3, §4.8)
- 2. The permit holder may seek relief from enforcement action for a violation of any of the terms and conditions of this permit by applying to the District's Hearing Board for a variance pursuant to Health and Safety Code Section 42350. The Hearing Board will determine after notice and hearing whether variance relief should be granted in accordance with the procedures and standards set forth in Health and Safety Code Section 42350 et seq. (MOP Volume II, Part 3, §4.8)
- 3. Notwithstanding the foregoing, the granting by the District of breakdown relief or the issuance by the Hearing Board of a variance will not provide relief from federal enforcement. (MOP Volume II, Part 3, §4.8)

#### I. Severability

In the event that any provision of this permit is invalidated by a court or tribunal of competent jurisdiction, or by the Administrator of the EPA, all remaining portions of the permit shall remain in full force and effect. (Regulation 2-6-409.5; MOP Volume II, Part 3, §4.10)

#### J. Miscellaneous Conditions

1. The maximum capacity for each source as shown in Table II-A is the maximum allowable capacity. Exceedance of the maximum allowable capacity for any source is a violation of Regulation 2, Rule 1, Section 301. (Regulation 2-1-301)

#### K.Accidental Release

This facility is subject to 40 CFR Part 68, Chemical Accident Prevention Provisions. The permit holder shall submit a risk management plan (RMP) by the date specified in §68.10. The permit holder shall also certify compliance with the requirements of Part 68 as part of the annual compliance certification, as required by Regulation 2, Rule 6. (40 CFR Part 68, Regulation 2, Rule 6)

## II. Equipment

## **Table II C – Significant Sources**

Each of the following sources are exempt pursuant to the requirements of BAAQMD Regulation 2, Rule 1. However, they are significant because estimated emissions exceed 2 TPY.

S#	Description*	Make or Type	Model	Capacity
48	Bumper Molding Operation	Custom Made	N/A	N/A

## III. GENERALLY APPLICABLE REQUIREMENTS

The permit holder shall comply with all applicable requirements, including those specified in the BAAQMD and SIP Rules and Regulations and other federal requirements cited below. These requirements apply in a general manner to the facility and/or to sources exempt from the requirement to obtain a District Permit to Operate. The District has determined that these requirements will not be violated under normal, routine operations, and that no additional periodic monitoring or reporting to demonstrate compliance is warranted. In cases where a requirement, in addition to being generally applicable, is also specifically applicable to one or more sources, the requirement and the source are also included in Section IV, Source-Specific Applicable Requirements, of this permit. This section also contains provisions that may apply to temporary sources.

The dates in parentheses in the Title column identify the versions of the regulations being cited and are, as applicable:

- 1. BAAQMD regulation(s): The date(s) of adoption or most recent amendment of the regulation by the District Board of Directors
- 2. Any federal requirement, including a version of a District regulation that has been approved into the SIP: The most recent date of EPA approval of any portion of the rule, encompassing all actions on the rule through that date

The full language of SIP requirements is on EPA Region 9's website. The address is: included at the end of this permit.

http://yosemite.epa.gov/r9/r9sips.nsf/Agency?ReadForm&count=500&state=California&cat=Bay+Area+Air+Quality+Management+District-Agency-Wide+Provisions.

#### NOTE:

There are differences between the current BAAQMD rules and the version of the rules in the SIP. All sources must comply with <u>both</u> versions of the rule until US EPA has reviewed and approved the District's revision of the regulation.

## IV. SOURCE-SPECIFIC APPLICABLE REQUIREMENTS

The permit holder shall comply with all applicable requirements, including those specified in the BAAQMD and SIP Rules and Regulations and other federal requirements cited below. The requirements cited in the following tables apply in a specific manner to the indicated source(s).

The dates in parentheses in the Title column identify the versions of the regulations being cited and are, as applicable:

- 1. BAAQMD regulation(s): The date(s) of adoption or most recent amendment of the regulation by the District Board of Directors.
- 2. Any federal requirement, including a version of a District regulation that has been approved into the SIP: The most recent date of EPA approval of any portion of the rule, encompassing all actions on the rule through that date.

The full text of each permit condition cited is included in Section VI, Permit Conditions, of this permit. The full language of SIP requirements is on EPA Region 9's website. The address is: included at the end of this permit. All other text may be found in the regulations themselves.

### V. SCHEDULE OF COMPLIANCE

The permit holder shall comply with all applicable requirements cited in this permit. The permit holder shall also comply with applicable requirements that become effective during the term of this permit on a timely basis.

#### VI. PERMIT CONDITIONS

Any condition that is preceded by an asterisk is not federally enforceable.

Note: All italics lettering contains explanatory material for the permit proposal and will be deleted in the final permit.

#### Condition # 207

For S2, PASSENGER BODY ELPO DIP TANK,

S3. PASSENGER BODY ELPO OVEN

S60, PASSENGER UNDERCOATING BOOTH

S61, Passenger Blackout Chassis Booth

S62. Passenger Fuel Tank Booth

S63, PASSENGER PROTECTIVE GAS TANK OVEN

S71, PASSENGER CAVITY WAX BOOTH

S72, PASSENGER PVC EXTERIOR, UNDERBODY & ENGINE WAX BOOTH

S73. PASSENGER EXTERIOR WAX HOT AIR DRYER

S101, Spare Parts ELPO DIP Tank

S102, SPARE PARTS ELPO OVEN

S801, STAMPING PLANT FUGITIVE SOLVENT EMISSION

S802, STAMPING PLANT FUGITIVE MACHINING

S803, PASSENGER SEALER DECK LINE (FUGITIVE)

S804. PASSENGER FUGITIVE REPAIR PRIMING

S805, BODY SHOP ASSEMBLY AREAS

S807. PASSENGER ANTI-CHIP WHEELHOUSE BOOTH

S808, PASSENGER SEALER-ANTICHIP OVEN

S813. PASSENGER FUGITIVE TRIAL APPLICATION AREA—BEAD SEALER

#### 1. EMISSIONS LIMITATION

- a. Total emissions for the sources listed for Condition 207, not including any reduction due to abatement devices and activities, shall not exceed 459.2 tons of VOC during any consecutive 12-month period. Total emissions of organic compounds, including reductions due to abatement measures, shall not exceed 250.5 tons of VOC per year. (basis: Cumulative Increase)
- b. Fugitive emissions for S801, S802, S803, S804, S805, and S813 shall be calculated based upon materials used and the materials' VOC content. Total fugitive emissions from S801, S802, S803, S804, S805, and S813, shall not exceed 69 tons during any consecutive 12-month period or 6.8 tons per month. (basis: Cumulative Increase)
- e. Compliance with emission limitations shall be demonstrated by calculation, utilizing material usage rates and VOC content, unless other methods are specified or approved in writing by the APCO. (basis: Cumulative Increase)

Permit for Facility #: A1438

# VI. Permit Conditions

d. Calculated or Controlled emissions for the listed materials shall not exceed those listed in the Emissions Limitation Table for these sources:

<sup>(\*)</sup>All material usage and VOC content are expressed excluding water.

- b. NUMMI may petition the APCO to accept alternative usage and/or VOC content limits equivalent to the specified values in VOC Material Content and Use Table, Table 1. (basis: Cumulative Increase)
- e. If any District regulation, specifies more stringent requirements that those listed in the VOC Material Content and Use Table, Table 1, or other parts of these conditions, then the more stringent requirement shall apply. (basis: Regulation 1-102)

Permit for Facility #: A1438

#### VI. Permit Conditions

# 3. EMISSION CONTROL EQUIPMENT

Abatement equipment must be operating during periods of passenger vehicle or passenger spare/small parts production and during subsequent clean-up operations. Abatement equipment is not required to operate during periods when there are no VOC emissions. (basis: BACT)

#### a. SPARE PARTS ELPO OVEN CATALYTIC THERMAL OXIDIZER (A102)

- 1. Catalytic thermal oxidizer (A102) shall be maintained and operated continuously for S102, Spare Parts ELPO Oven, with a minimum destruction efficiency of 60% or an outlet concentration of 10 ppm by volume or less. The minimum destruction/operating temperature shall be 800 °F. The destruction temperature shall be continuously recorded using chart or digital recorders. (basis: Cumulative Increase)
- 2. NUMMI shall conduct a source test for this abatement system (A102), once per calendar year. The source test shall measure both the inlet and outlet concentrations of the non-methane hydrocarbons abated by the system. (basis: Cumulative Increase)
- 3. Within 60 days of the source test, a report shall be provided to the District. This 60-day period may be extended to 90 days, if NUMMI can demonstrate to the satisfaction of the APCO that the additional time is required. If the source testing indicates any violation of the permit conditions for Condition 207, NUMMI shall report such violation to the Director of Enforcement within 10 days of discovery pursuant to Standard Condition 1.F. (basis: Cumulative Increase, Regulation 2-6-501, MOP Volume II, Part 3, Section 4.7)

#### b PASSENGER SEALER OVEN THERMAL OXIDIZER

- 1. All volatile organic compound (VOC) emissions from S808, Passenger Sealer-Antichip Oven, shall be abated by thermal incineration (A809). The thermal oxidizer (A809) shall be source tested as required in Part 3 of Condition # 207 to determine net mass emissions of POC as described in the following procedure:
  - a. The net mass emissions of POC shall be determined for the sources listed above with their respective coating sources combined. To determine the net mass emissions, the following shall be calculated and/or measured:
  - b. POC emissions on a pounds per unit basis [A] shall be determined by multiplying the annual coating usage with the POC content and dividing by the annual production rate.
  - e. POC emissions to each booth and oven Thermal Oxidizer (averaged, using the data obtained from at least 3 current source tests) shall be determined using District approved source testing methods [B].

# VI. Permit Conditions

d. POC emissions from each booth and oven Thermal Oxidizer (averaged, using the data obtained from at least 3 current source tests) shall be determined using District approved source testing methods [C].

- e. [B] and [C] shall each be divided by the production rate measured during the source test yielding a pounds per unit basis. [B] and [C] shall be each multiplied by the annualized units per hour and divided by the source test measured units per hour rate.
- f. The net mass emissions shall be calculated by subtracting the measured POC emissions from the inlet from the calculated POC emissions and adding the measured POC emissions from the outlet [A-B+C].
- g. The determined value [A-B+C] shall be multiplied by the actual annual production rate.
- h. Within 60 days of the source test, a report shall be provided to the District. This 60-day period may be extended to 90 days, if NUMMI can demonstrate to the satisfaction of the APCO that the additional time is required. If the source testing indicates any violation of the permit conditions (total mass emission greater than emission limits for coating line (booth(s) and oven(s) combined)), NUMMI shall report such violation to the Director of Enforcement within 10 days of discovery pursuant to Standard Condition 1.F. (basis: Cumulative Increase, Regulation 2-6-501, MOP Volume II, Part 3, Section 4.7)
- 2. S808 Passenger Sealer-Antichip Oven, cooling tunnel and setting zone emissions shall be controlled by thermal incineration with the following parameters.
  - a. 1400°F minimum destruction temperature unless NUMMI can demonstrate to the satisfaction of the APCO that the permit—conditions can be met with the Thermal Oxidizer (A809) operating at a lower temperature.
  - b. VOC destruction efficiency of 98.5% by weight whenever the inlet concentration of VOC to the Thermal Oxidizer (A 808) is equal to or greater than 500 ppmv, measured as methane. Below a concentration of 500 ppmv, either the precursor organic destruction efficiency shall be a minimum of 95% by weight or total non-methane organic carbon emissions from the outlet of the Thermal Oxidizer (A809) shall be 10 ppm by volume or less.
  - e. The destruction temperature shall be recorded using chart or digital recorders. (basis: Cumulative Increase; BACT)
- 3. The thermal oxidizer shall be source tested once per calendar year, unless a different schedule is approved by the APCO, and maintained on a regular basis. Records of the source test results and completed maintenance activities shall be kept for a minimum of 5 years from the date of the source test report and the date of the maintenance activity. (basis: BACT)

Permit for Facility #: A1438

#### VI. Permit Conditions

#### 4. ALLOWABLE TEMPERATURE EXCURSION(S)

- a. 1. NUMMI may operate the Thermal Oxidizer (A809) below 1400 degrees F only in compliance with the temperature excursion parameters set forth in Parts 4b and 4c of Condition 207. (basis: BACT)
- 2. NUMMI may operate the Thermal Oxidizer (A102) below 800 degrees F only in compliance with the temperature excursion parameters set forth in Parts 4b and 4c of Condition 207. (basis: BACT)
- b. The minimum temperature and abatement efficiency requirements for Thermal Oxidizers located at NUMMI shall not apply during an "Allowable Temperature Excursion", provided that the controller set temperature is at or above the minimum temperature requirement. An Allowable Temperature Excursion is one of the following:
  - 1. A temperature excursion not exceeding 20 degrees F below the minimum; or
  - 2. A temperature excursion period or period(s) aggregating 15 minutes or less in any hour or less; or
  - 3. A temperature excursion greater than 15 minutes but less than 3 hours in duration, provided that all of the following are satisfied:
    - a. There are no more than 2 excursions per facility (Plant No. A1438) per calendar day;
    - b. There are no more than 2 excursions per abatement device per month; and
  - e. There are no more than 5 excursions per facility (Plant No. A1438) per month. (basis: Cumulative Increase)
- e. NUMMI shall keep records to demonstrate that it meets all qualifying criteria for Allowable Temperature Excursions are met, including but not limited to the following:
  - 1. Starting date and time, and the duration of each Allowable Temperature Excursion;
  - 2. Minimum temperature during each Allowable Temperature Excursion;
  - 3. Number of Allowable Temperature Excursions (>15 minutes) per abatement device per month;
  - 4. Total number of Allowable Temperature Excursions (> 15 minutes) for the facility per month. A summary of these records shall be included in NUMMI's monthly report to the District. To satisfy the NSPS requirement of 40 CFR 60, Subpart MM, a declaration is also required in NUMMI's monthly report if there are no temperature excursions.

(basis: Cumulative Increase)

d. The District may revise or revoke the allowable temperature excursion(s) section of Condition 207, if source operations change significantly such that the basis for granting this condition is no longer valid. (basis: Cumulative Increase)

Permit for Facility #: A1438

# VI. Permit Conditions

#### 5 RECORD KEEPING AND REPORTING

- a. All records required by Condition 207 shall be kept and made available for District inspection for a period of 5 years following the date of entry. (basis: Cumulative Increase)
- b. For all paints, primers, sealants, coatings, solvents and miscellaneous cleaning materials used for the sources listed for Condition 207, monthly records of material usage must be kept for five years. A monthly report including material usage and a summary of total actual organic emissions from all sources applicable to Condition 207 shall be submitted to the District within 30 days after the end of each month. If the total organic emissions for any month exceeds 41.6 tons, the District shall be notified in writing within 30 days of the report as to what steps will be taken to assure that the limit of 459.2 tons per year will not be exceeded. (basis: Cumulative Increase)
- c. The temperature chart or digital recorder is subject to the parametric monitoring and recordkeeping requirements of Regulation 1-523. (basis: Regulation 1-523)

#### **6.SAMPLING**

Samples of coating materials shall be made available to the District upon request by the APCO. (basis: Regulation 1-441)

#### 7. ENFORCEMENT

Violation by NUMMI of any of the conditions set forth in this permit shall subject NUMMI to enforcement action under Chapter 4 of Part 4 of Division 26 of the California Health and Safety Code. (basis: Regulation 1-401)

# 8. MISCELLANEOUS

- a. All equipment, facilities, and systems installed or used to achieve compliance with the terms and conditions of this Permit to Operate shall at all times be maintained in good working order. (basis: Cumulative Increase)
- \*b. For the purpose of these conditions, any reference to "NUMMI" shall be deemed to also refer to the NUMMI's agents, contractors, subcontractors, assignees, or joint venture partners, as well as to any party brought in to operate the proposed facility, as appropriate. (basis: Regulation 1-241)
- c. The APCO shall have the right to inspect and audit all records required to be maintained by Section 5 of Condition 207, and any other records in the NUMMI's possession which may indicate the nature or quantity of emissions from the facility. (basis: Regulation 1-441)

VI. Permit Conditions

d. The APCO shall have access to any portion of the plant to conduct source tests or inspections. (basis: Regulation 1-440)

e. Nothing in these conditions shall be construed to allow the violation of any law or of any rule or regulation of the Bay Area Air Quality Management District, the State of California or the United States Environmental Protection Agency. (basis: Regulation 1-103)

#### 9. SEVERABILITY

The provisions of these conditions are intended to be severable, and, if any individual condition or provision hereof is held to be invalid by order of the Hearing Board of the Bay Area Air Quality Management District, by order of any court competent jurisdiction, or for any other reason, the remainder of these conditions shall not be affected. (basis: Regulation 1-109)

#### 10. CORRECTIVE PLAN

The corrective plan is a means for NUMMI to correct occasional exceedances, to stay within the yearly limits and thus to remain in compliance with District Regulations. If any of the annual or monthly material usage limits are exceeded, NUMMI shall implement abatement measures to prevent the recurrence of the type of incident which caused the excess. This plan is intended to provide a mechanism for bringing NUMMI back into compliance should a temporary exceedance occur. This plan does not constitute an alternative means of compliance. (basis: Cumulative Increase)

- a. If an exceedance of either usage or emission limits specified in Sections 1 and 2 of Condition 207, from the applicable sources covered by Condition 207 becomes apparent, NUMMI shall notify the District and will include a Corrective Plan with the next monthly report for the month after the exceedance is reported. (basis: Cumulative Increase)
- b. The corrective Plan will include a method to make up the exceedance within the three-months following the exceedance. For these purposes the exceedance will be calculated on a plant-wide basis, and an excess in one parameter can be balanced by an equivalent reduction in another. (basis: Cumulative Increase)
- c. The plan to reduce emissions pursuant to part 10.b will indicate the time periods during which each step will be taken. (basis: Cumulative Increase)
- d. If a second or subsequent monthly exceedance occurs in any 12 month consecutive period for the same usage or emission limit, after the month following the first exceedance, the annual limit will be reduced for only the following year by one-half the

Permit for Facility #: A1438

# VI. Permit Conditions

amount of the second or subsequent exceedance. (basis: Cumulative Increase)

- e. If, during any consecutive 12-month period, the annual emission limit is exceeded, the annual limit for only the following year will be reduced by an amount of one-half the exceedance. (basis: Cumulative Increase)
- f. Correcting an exceedance may be accomplished by the following methods:
  - 1. reducing the production rate,
  - 2. altering the paint composition,
  - 3. improvement of transfer efficiencies,
  - 4. installation of abatement devices,
  - 5. any other method approved by the APCO.

(basis: Cumulative Increase)

# Condition # 207

This condition was amended by Application 17748 in July,

2008

- S61, PASSENGER BLACKOUT CHASSIS BOOTH
- S62, PASSENGER FUEL TANK BOOTH
- S63, PASSENGER PROTECTIVE GAS TANK OVEN
- S101, SPARE PARTS ELPO DIP TANK
- S102, SPARE PARTS ELPO OVEN
- S801, STAMPING PLANT FUGITIVE EMISSIONS
- S804, PASSENGER FUGITIVE REPAIR PRIMING
- S805, BODY SHOP ASSEMBLY AREAS

#### 1. EMISSIONS LIMITATION

a. Total emissions for the sources listed for Condition 207, including reductions due to abatement measures, shall not exceed 110.10 tons of VOC per year.

(basis: Cumulative Increase)

- b. Fugitive emissions for S801, S804, and S805, shall be calculated based upon materials used and the materials' VOC content. Total fugitive emissions from S801, S804, and S805, shall not exceed 63.60 tons during any consecutive 12-month period or 6.35 tons per month. (basis: Cumulative Increase)
- c. Compliance with emission limitations shall be demonstrated by calculation, utilizing material usage rates and VOC content, unless other methods are specified or approved in writing by the APCO.

(basis: Cumulative Increase)

d. Emissions for the listed materials shall not exceed those listed in the Emissions and VOC Limitation Table for these sources:

Table 1 Emission and VOC Content Limitation Table

Permit for Facility #: A1438

# VI. Permit Conditions

Material	Total	VOC Content <sup>*</sup>	* So	urce Number(s)

- (\*) All VOC content are expressed excluding water.
- (\*\*) Expressed value includes water.
- e. If any District regulation specifies more stringent requirements that those listed in the Emissions and VOC Content Limitation Table, or other parts of these conditions, then the more stringent requirement shall apply. (basis: Regulation 1-102)
- 2. Deleted for Application 16438
- 3. EMISSION CONTROL EQUIPMENT

Abatement device A102, Spare Parts ELPO Oven Catalytic Thermal Oxidizer, must be operating during periods of spare/small parts production and during subsequent clean-up operations. Abatement equipment is not required to operate during periods when there are no VOC emissions. (basis: BACT)

# a. SPARE PARTS ELPO OVEN CATALYTIC THERMAL OXIDIZER (A102)

1. Catalytic thermal oxidizer (A102) shall be maintained and operated continuously for S102, Spare Parts ELPO Oven, with a minimum destruction efficiency of 60% or an outlet concentration of 10 ppm by volume or less.

The minimum destruction/operating temperature shall be 800 degrees F. The destruction temperature shall be continuously recorded using chart or digital recorders. (basis: Cumulative Increase)

2. NUMMI shall conduct a source test for this abatement system (A102), once per calendar year. The source test shall measure both the inlet and outlet concentrations of the non-methane hydrocarbons abated by the system. (basis:

Permit for Facility #: A1438

# VI. Permit Conditions

# **Cumulative Increase**)

3. Within 60 days of the source test, a report shall be provided to the District. This 60-day period may be extended to 90 days, if NUMMI can demonstrate to the satisfaction of the APCO that the additional time is required. If the source testing indicates any violation of the permit conditions for Condition 207, NUMMI shall report such violation to the Director of Enforcement within 10 days of discovery pursuant to Standard Condition 1.F. (basis: Cumulative Increase, Regulation 2 -6-501, MOP Volume II, Part 3, Section 4.7)

#### b. PASSENGER SEALER OVEN

- 1. Emissions from sources S62 and S63 will not require abatement by thermal oxidization provided owner/operator limits coatings used at the source to those with a maximum VOC content of 0.28 lbs per gallon and total POC emissions, including emissions from cleanup activities for sources S62 and S63 do not exceed 4.0 tons for any 12 month consecutive period. (basis: Cumulative Increase, BACT)
- 2. To demonstrate compliance with Part 3.b.1 of Permit Condition 207, the owner/operator shall document and maintain objective evidence of the VOC content of all VOC containing materials used at S62 and S63. The owner/operator of S62 and S63 shall ensure that the laboratory VOC content is determined using EPA Method 24, or other method determined by the District to be equivalent to BAAQMD Laboratory Method 22. (basis: Cumulative Increase, BACT)
- 4. ALLOWABLE TEMPERATURE EXCURSION(S)
- a. NUMMI may operate the Thermal Oxidizer (A102) below 800 degrees F only in compliance with the temperature excursion parameters set forth in Parts 4.b and 4.c of Condition 207. (basis: BACT)
- b. The minimum temperature and abatement efficiency requirements for Thermal Oxidizers located at NUMMI shall not apply during an "Allowable Temperature Excursion", provided that the controller set temperature is at or above the minimum temperature requirement. An Allowable Temperature Excursion is one of the following:
  - 1. A temperature excursion not exceeding 20 degrees F below the minimum; or
  - 2. A temperature excursion period or period(s) aggregating 15 minutes or less in any hour or less; or
  - 3. A temperature excursion greater than 15 minutes but less than 3 hours in duration, provided that all of the following are satisfied:
    - a. There are no more than 2 excursions per facility (Plant No. A1438) per calendar day;

Permit for Facility #: A1438

# VI. Permit Conditions

- b. There are no more than 2 excursions per abatement device per month; and
- c. There are no more than 5 excursions per facility (Plant No. A1438) per month. (basis: Cumulative Increase)
- c. NUMMI shall keep records to demonstrate that it meets all qualifying criteria for Allowable Temperature Excursions are met, including but not limited to the following:
  - 1. Starting date and time, and the duration of each Allowable Temperature Excursion;
  - 2. Minimum temperature during each Allowable Temperature Excursion;
- 3.Number of Allowable Temperature Excursions (>15 minutes) per abatement device per month;
  - 4. Total number of Allowable Temperature Excursions (> 15 minutes) for the facility per month. A summary of these records shall be included in NUMMI's monthly report to the District. To satisfy the NSPS requirement of 40 CFR 60, Subpart MM, a declaration is also required in NUMMI's monthly report if there are no temperature excursions. (basis: Cumulative Increase)
- d. The District may revise or revoke the allowable temperature excursion(s) section of Condition 207, if source operations change significantly such that the basis for granting this condition is no longer valid. (basis:Cumulative Increase)

# 5. RECORD KEEPING AND REPORTING

- a. All records required by Condition 207 shall be kept and made available for District inspection for a period of 5 years following the date of entry. (basis: Cumulative Increase)
- b. For all paints, primers, sealants, coatings, solvents and miscellaneous cleaning materials used for the sources listed for Condition 207, monthly records of material usage must be kept for five years. A monthly report including material usage and a summary of total actual organic emissions from all sources applicable to Condition 207 shall be submitted to the District within 30 days after the end of each month. If the total organic emissions for any month exceeds 14.00 tons, the District shall be notified in writing within 30 days of the report as to what steps will be taken to assure that the limit of 118.0 tons per year will not be exceeded.(basis: Cumulative Increase)
- c. The temperature chart or digital recorder is subject to the parametric monitoring and recordkeeping requirements of Regulation 1-523. (basis: Regulation 1-523)

#### 6. SAMPLING

Samples of coating materials shall be made available to the District upon request by the APCO. (basis: Regulation 1-441)

Permit for Facility #: A1438

# VI. Permit Conditions

# 7. ENFORCEMENT

Violation by NUMMI of any of the conditions set forth in this permit shall subject NUMMI to enforcement action under Chapter 4 of Part 4 of Division 26 of the California Health and Safety Code. (basis: Regulation 1-401)

#### 8. MISCELLANEOUS

- a. All equipment, facilities, and systems installed or used to achieve compliance with the terms and conditions of this Permit to Operate shall at all times be maintained in good working order. (basis: Cumulative Increase)
- \*b. For the purpose of these conditions, any reference to "NUMMI" shall be deemed to also refer to the NUMMI's agents, contractors, subcontractors, assignees, or joint venture partners, as well as to any party brought in to operate the proposed facility, as appropriate. (basis:Regulation 1-241)
- c. The APCO shall have the right to inspect and audit all records required to be maintained by Section 5 of Condition 207, and any other records in the NUMMI's possession which may indicate the nature or quantity of emissions from the facility.

  (basis: Regulation 1-441)
- d. The APCO shall have access to any portion of the plant to conduct source tests or inspections. (basis: Regulation 1-440)
- e. Nothing in these conditions shall be construed to allow the violation of any law or of any rule or regulation of the Bay Area Air Quality Management District, the State of California or the United States Environmental Protection Agency.

  (basis: Regulation 1-103)

#### 9. SEVERABILITY

The provisions of these conditions are intended to be severable, and, if any individual condition or provision hereof is held to be invalid by order of the Hearing Board of the Bay Area Air Quality Management District, by order of any court competent jurisdiction, or for any other reason, the remainder of these conditions shall not be affected. (basis: Regulation 1-109)

#### 10. CORRECTIVE PLAN

The corrective plan is a means for NUMMI to correct occasional exceedances, to stay within the yearly limits and thus to remain in compliance with District Regulations. If any of the annual or monthly material usage limits are exceeded, NUMMI shall implement abatement measures to prevent the recurrence of the type of incident which caused the excess. This plan is intended to provide a mechanism for bringing NUMMI back into compliance should a temporary exceedance occur. This plan does not constitute an alternative means of compliance. (basis: Cumulative Increase)

a. If an exceedance of emission limits specified in the Emission and VOC Content Limitation Table of Condition 207, from the applicable sources covered by Condition

Permit for Facility #: A1438

# VI. Permit Conditions

207 becomes apparent, NUMMI shall notify the District and will include a Corrective Plan with the next monthly report for the month after the exceedance is reported.(basis:Cumulative Increase)

- b. The corrective Plan will include a method to make up the exceedance within the three-months following the exceedance. For these purposes the exceedance will be calculated on a plant-wide basis, and an excess in one parameter can be balanced by an equivalent reduction in another. (basis:Cumulative Increase)
- c. The plan to reduce emissions pursuant to part 10. b will indicate the time periods during which each step will be taken. (basis: Cumulative Increase)
- d. If a second or subsequent monthly exceedance occurs in any 12 month consecutive period for the same usage or emission limit, after the month following the first exceedance, the annual limit will be reduced for only the following year by one-half the amount of the second or subsequent exceedance. (basis: Cumulative Increase)
- e. If, during any consecutive 12-month period, the annual emission limit is exceeded, the annual limit for only the following year will be reduced by an amount of one-half the exceedance. (basis: Cumulative Increase)
- f. Correcting an exceedance may be accomplished by the following methods:
  - 1. reducing the production rate,
- 2. altering the paint composition,
- 3. improvement of transfer efficiencies,
- 4. installation of abatement devices,
- 5. any other method approved by the APCO.

(basis: Cumulative Increase)

#### Condition # 4159

For S900, LIME SLURRY TANK

- 1. New United Motor Manufacturing Inc. shall maintain the Lime Dust Collector Baghouse (A900) in good working condition. The baghouse shall operate five minutes before, during, and five minutes after dry lime is added to the Lime Slurry Tanks (S900). (basis: Cumulative Increase)
- 2. The pressure drop across the baghouse (A900) shall be a minimum of 1 inch of water and a maximum of 5 inches of water. (basis: Regulation 2-6-409.2)
- 3. A record of pressure drop readings for each use of the baghouse (A900) shall be maintained. In addition to pressure drop notations, the record shall contain time, date, and the name or initials of the individual taking the readings. Records shall be retained for a period of at least 5 years from the date of entry and made available to District staff upon request. (basis: Regulation 2-6-409.2)

Permit for Facility #: A1438

#### VI. Permit Conditions

#### Condition # 4281

For S3, Passenger Body Elpo Oven:

- 1. Abatement equipment must be operating during passenger vehicle production and during subsequent clean-up operations. Abatement equipment is not required to operate during periods when there are no VOC emissions. (basis: BACT)
- 2. VOC emissions from S3 Passenger Body Elpo Oven shall be abated by A4 Thermal Oxidizer. (basis: Cumulative Increase)
- 3. The Thermal Oxidizer (A4) shall be maintained at a minimum destruction efficiency of 90% and a minimum afterburner temperature of 1200°F, except under conditions set forth in Parts 4b, 4c, and 4d of Condition 207, Allowable Temperature Excursion(s). (basis: Cumulative Increase)
- 4. Daily records of continuous temperature measurements for the Thermal Oxidizer (A4) shall be made and made available to District inspection for a period of 5 years from the date the record was made. The temperature chart or digital recorder is subject to the parametric monitoring and recordkeeping requirements of Regulation 1-523. (basis: BACT, Regulation 1-523)
- 5. NUMMI shall perform a District approved source test on A4 Thermal Oxidizer to determine destruction efficiency at least once per calendar year. (basis: Cumulative Increase)
- 6. NUMMI shall receive approval from the District's Source Test Manager for installation of new testing ports, platforms and source testing procedures. NUMMI shall notify the Source Test Manager at least two weeks prior to any source test. Complete reports demonstrating compliance with Part 3 of Condition 4281 shall be submitted to the District's Source Test Section within sixty (60) days of completion of the source test. This period may be extended to 90 days, if NUMMI demonstrates to the satisfaction of the APCO that additional time is required. (basis: Cumulative Increase)
- 7. deleted [date of Title V permit].
- 8. NUMMI shall conduct a source test of the Thermal Oxidizer (A4) once per calendar year. The thermal oxidizer (A4) shall be source tested to determine net mass emissions of POC as described in the following procedure:
  - a. The net mass emissions of POC shall be determined for the sources listed above with their respective coating sources combined. To determine the net mass

# VI. Permit Conditions

emissions, the following shall be calculated and/or measured:

- b. POC emissions on a pounds per unit basis [A] shall be determined by multiplying the annual coating usage with the POC content and dividing by the annual production rate.
- c. Measured POC emissions to the Thermal Oxidizer (averaged, using the data obtained from at least 3 current source tests) shall be determined using District approved source testing methods [B].
- d. Measured POC emissions from the Thermal Oxidizer (averaged, using the data obtained from at least 3 current source tests) shall be determined using District approved source testing methods [C].
- e. [B] and [C] shall each be divided by the production rate measured during the source test yielding a pounds per unit basis. [B] and [C] shall be each multiplied by the annual units per hour and divided by the source test measured units per hour rate.
- f. The net mass emissions shall be calculated by subtracting the measured POC emissions from the inlet from the calculated POC emissions and adding the measured POC emissions from the outlet [A-B+C].
- g. The determined value [A-B+C] shall be multiplied by the actual, annual production rate.
- h. Annual emissions shall not exceed the limit specified in Part 1(d) of Condition 207.
- i Within 60 days of the source test, a report shall be provided to the District. This 60-day period may be extended to 90 days, if NUMMI can demonstrate to the satisfaction of the APCO that the additional time is required. If the source test indicates any violation of the permit conditions (total mass emission greater than emission limits for coating line (booth(s) and oven(s) combined), NUMMI shall report such violation to the Director of Enforcement within 10 days of determining that a violation has occurred. basis: Cumulative Increase, Manual of Procedures, Volume II, Part 3, Section 4.7)
- 9. All source test records for the Thermal Oxidizer (A4) shall be maintained and made available for District inspection for a period of 5 years from the date the record was made. (basis: Cumulative Increase)

# VI. Permit Conditions

#### **Condition # 7343**

For S1809, STAMPING BODY & ASSEMBLY:

1. The coating usage rate for this source shall not exceed the following limits:

Coating	gal/yr	gal/mo
Sealant	17,875	1,859
Adhesive	8,500	884
Various	117,166	12,185

One or more of these usages may increase above the specified limits if there is a corresponding usage decrease for one or more of the coatings, based on controlled emissions, so that the allowable emissions limit for this source is not exceeded. (basis: Cumulative Increase)

- 2. Records for each of the coatings shall be kept on a quarterly basis. These records shall be used to determine whether the monthly usage limit is exceeded based on a three-month average. For coatings that are common to more than one production line, the aggregate monthly reported usages for the lines shall be verified by comparison with the usage records of that material. The records shall be kept and made available for District inspection for a period of five years from the date of entry. (basis: Cumulative Increase)
- 3. The VOC emissions from this source shall not exceed 74.66 tons per year. (basis: Cumulative Increase)

#### **Condition # 7364**

For S1021, Underbody, Engine & Exterior Wax Booth:

1. The VOC content of each coating shall not exceed the following:

Coating	lbs VOC/gal
Underbody Wax	0.73
Engine Wax	0.54
Exterior Wax	1.50
Hinge Wax	6.92

(basis: BACT, Cumulative Increase)

2. The coating usage rate for this booth shall not exceed any of the following:

gal/yr	<del>gal/mo</del>
gai/yi	gai/ino
31 772	3 304
31,774	3,307
1.05/	203
	31,//2

#### VI. Permit Conditions

Exterior Wax	<del>24,635</del>	<del>2,562</del>
Hinge Wax	2.566	267

One or more of these limits may increase above the specified limits if there is a corresponding decrease for other coatings, based on controlled emissions, so that total emissions for this source do not exceed the limit specified in Part 5 of Condition # 7364. (basis: Cumulative Increase)

- 3. Monthly usage records for each of the coatings shall be kept. The records shall be kept and made available for District inspection for a period of five years from the date of entry. (basis: Cumulative Increase)
- 4. Wax shall be applied using a "squirt gun" or brush. No air-atomized spray gun shall be used. (basis: BACT)
- 5. The VOC emissions from this source shall not exceed either of the following:

2.46 tons/month

23.69 tons/year

(basis: Cumulative Increase)

#### **Condition # 7799**

For S806, GASOLINE DISPENSING FACILITY:

\*1. Pursuant to BAAQMD Toxics Section Policy, this facility's gasoline throughput shall not exceed 1.1 million gallons in any consecutive 12-month period. (basis: Cumulative Increase)

#### **Condition # 9156**

For S1001, TRUCK ED BATH

S1002, TRUCK ED OVEN

S1003, TRUCK ED DRY SAND BOOTH

S1004, TRUCK METAL REPAIR BOOTH

S1005, TRUCK PVC UNDERCOAT AREA

S1006, TRUCK ANTI CHIP BOOTH

S1007, TRUCK SEALER OVEN

S1008, TRUCK PRIME BOOTH

S1009, TRUCK PRIME OVEN

S1010, TRUCK OFF-LINE REPAIR

S1011, TRUCK DRY SAND BOOTH

S1012, TRUCK TOUCH UP BOOTH

S1014, TRUCK TOPCOAT BOOTH I

# VI. Permit Conditions

S1015, TRUCK TOPCOAT OVEN

S1017, TRUCK TOUCH UP BOOTH

S1018, TRUCK BLACKOUT BOOTH

S1019, TRUCK CAVITY WAX BOOTH

S1020, OFF-LINE ASSEMBLY PAINT HOSPITALS (TRUCK)

S1021, TRUCK UNDERBODY, ENGINE & EXTERIOR WAX BOOTH

S1053, TRUCK WAX DRY OFF BOOTH (ELECTRIC)

S1056 TRUCK ASH, BOILER #1

S1057 TRUCK ASH. BOILER #2:

Conditions Common to All Sources for the Truck Vehicle Line (Excluding Storage Tanks, Cold Cleaners, Air Supply Houses, Door Air Heaters, Boilers, and Standby Generators):

- 1. The permitted emission levels for the truck line were fully offset in Application 3611. (basis: Regulation 2-2-302)
- 2. NUMMI shall not substitute any materials for those specified in the Health Risk Assessment (HRA), without prior notification and approval of the District, if such substitution would result in:
  - a) an increase in the quantity of permitted air toxic compounds emitted,
  - b) the addition of air toxic compounds which were not listed in the HRA, or
  - c) an increase in the permitted VOC content or air toxic compound content for each coating category contained in the HRA.

(basis: Toxics)

- 4. Monthly compliance reports showing coating and clean-up usage and calculated emissions shall be submitted to the District. (basis: Cumulative Increase)
- 5. The VOC emissions from non-combustion operations for the truck vehicle line shall not exceed 779.17 tons per year. (basis: Cumulative Increase)
- \*6. Total emissions of the following compounds from non-combustion operations on the second vehicle line shall not exceed the following:

Carcinogen	lbs/year
Benzene	157.0
1,4 Dioxane	141.0
Formaldehyde	3342
Methylene Chloride	684.8
Perchloroethylene	1341.9
Vinvl chloride	2.8

NUMMI shall demonstrate annual compliance with these limits. (basis: Toxics)

7. In accordance with Section 2-2-412, Source Obligation, Relaxation of Enforceable Conditions: If any requirement of Regulation 2-2 would be triggered by an existing source solely because of a relaxation of any limitation on the emission of a

# VI. Permit Conditions

pollutant, the requirements of Regulation 2-2 shall apply to the source in the same way as to a new or modified source or stationary source otherwise subject to this Rule. (basis: Regulation 2-2-412)

- 8. The combined total natural gas usage for all truck line combustion sources shall not exceed 8.6 million therms per year. Monthly records of natural gas usage shall be maintained for 5 years from date of entry and shall be made available to District personnel upon request. (basis: Cumulative Increase)
- 9. For determining compliance with emissions and/or usage limits, a year is any consecutive twelve month period; a month is a calendar month. (basis: Cumulative Increase)

#### **Condition # 9158**

For S1002, TRUCK ED OVEN S1007, TRUCK SEALER OVEN, S1009, TRUCK PRIME OVEN, AND S1015, TRUCK TOPCOAT OVEN:

- 1. VOC emissions from the oven and cooling tunnel shall be abated by thermal oxidation (A10022, A1007, A1009, A1015).
  - a. The net mass emissions of POC shall be determined for the sources listed above with their respective coating sources combined. To determine the net mass emissions, the following shall be calculated and/or measured:
  - b. POC emissions on a pounds per unit basis [A] shall be determined by multiplying the annual coating usage with the POC content and dividing by the annual production rate.
  - c. Measured POC emissions to each Thermal Oxidizer (averaged, using the data obtained from the 3 most recent source tests) shall be determined using District approved source testing methods [B].
  - d. Measured POC emissions from each oven Thermal Oxidizer (averaged, using the data obtained from the 3 most recent source tests) shall be determined using District approved source testing methods[C].
  - e. [B] and [C] shall each be divided by the production rate measured during the source test to yield a pounds per unit basis. [B] and [C] shall be each multiplied by the annualized units per hour and divided by the source test measured units per hour rate.

# VI. Permit Conditions

f. The net mass emissions shall be calculated by subtracting the measured POC emissions from the inlet from the calculated POC emissions and adding the measured POC emissions from the outlet [A-B+C].

- g. The determined value [A-B+C] shall be multiplied by the actual annual reduction rate.
- h. Within 60 days of the source test, a report shall be provided to the District. This 60-day period may be extended to 90 days, if NUMMI can demonstrate to the satisfaction of the APCO that the additional time is required. If the source test indicates any violation of the permit conditions (total mass emission greater than emission limits for coating line (booth(s) and oven(s) combined), NUMMI shall report such violation to the Director of Enforcement within 10 days of determining that a violation has occurred.(basis: BACT; Manual of Procedures, Volume II, Part 3, Section 4.7)
- 2. The thermal oxidizers (A10022, A1007, A1009, A1015) shall achieve the following:
  - a. The minimum oxidizer operating temperature shall be 1400 degree F, regardless of inlet concentration.
  - b. At oxidizer inlet VOC concentrations greater 1200 ppm as C1, the minimum oxidizer destruction efficiency shall be 98% by weight or total non-methane organic hydrocarbon emissions from the outlet of the thermal oxidizer shall be 10 ppm or less by volume.
  - c. At oxidizer inlet VOC concentrations from 500 ppm to 1200 ppm as C1, the minimum oxidizer destruction efficiency shall vary linearly with VOC concentration from 95 to 98% by weight or total non-methane organic hydrocarbon emissions from the outlet of the thermal oxidizer shall be 10 ppm or less by volume. (basis: BACT)
- 3. The thermal oxidizer firebox shall be equipped with APCO approved continuous temperature measuring and recording instrument. The temperature measuring and recording instrument shall be installed, calibrated and maintained according to the manufacturer's specifications. The temperature chart or digital recorder is subject to the parametric monitoring and recordkeeping requirements of Regulation 1-523.
- 4. The thermal oxidizers (A10022, A1007, A1009, A1015) shall be source tested once per calendar year to verify compliance with Parts 1 and 2 of Condition 9158 and maintained according to manufacturer's specifications. Records of the source test results shall be kept for a period of five years following the date of entry. (basis: Cumulative Increase)
  - a. Each of the Truck Line Oven thermal oxidizers (A10022, A1007, A1009, A1015)

## VI. Permit Conditions

shall be source tested for NOx and CO emissions once per calendar year, after notification to the APCO. If the total carbon monoxide (CO) emissions from all the thermal oxidizers of the Truck Line exceed the PSD Modeling threshold dictated in Regulation 2-2-305 (dated June 7, 1994), NUMMI shall submit a PSD Modeling Protocol to the APCO for review before implementation of the PSD Air Quality Analysis, as specified in Regulation 2-2-414 (dated June 7, 1995). The PSD Modeling Protocol shall be submitted to the District within 90 days of the source test report date. To calculate CO emissions, NUMMI shall use the most recent source test derived emission factors for thermal oxidizer burner warm-up and normal operations. NUMMI shall use an 1,200 hours per year for the thermal oxidizer burner warm-up and 5,400 hours per year for normal burner operations to estimate combustion emissions, unless NUMMI can demonstrate a more accurate method. (basis: Cumulative Increase)

- 5. All records required in Parts 3 and 4 of Condition 9158 shall be kept and made available for District Inspection for a period of five years following the date of entry. (basis: Cumulative Increase)
- 6. Only natural gas, propane, LPG, or butane shall be used as a fuel for these sources. (basis: Cumulative Increase)
- 7. Except during periods of thermal oxidizer start-up and burner warm-up operations (when oxidizer temperature is at or below 1200 degrees F), emissions of oxides of nitrogen, measured as NO2, from this source shall not exceed 0.1 lb NOx per million BTU. (basis: Cumulative Increase)
- 8. The VOC emissions from these sources shall not exceed any of the:

Source		tons/month	tons/year
S1002	Truck ED Oven	0.33	3.21
S1007	Truck Sealer Oven	1.31	12.56
S1009	Truck Prime Oven	0.53	5.09
S1015	Topcoat Oven	0.69	6.59

(basis: Cumulative Increase)

- 9. The minimum temperature and abatement efficiency requirements for Thermal Oxidizers located at NUMMI shall not apply during an "Allowable Temperature Excursion" below the minimum temperature requirement, provided that the controller set temperature is at or above the minimum temperature requirement. An Allowable Temperature Excursion is one of the following:
  - a. A temperature excursion no more than 20 degrees F below the requirement; or
  - b. A temperature excursion period(s) aggregating 15 minutes or less in any hour; or

# VI. Permit Conditions

- c. A temperature excursion longer than 15 minutes but shorter than 3 hours in duration, provided that all of the following are satisfied:
  - i. There are no more than 2 excursions per facility (Plant No. A1438) per calendar day;
  - ii. There are no more than 2 excursions per abatement device per month; and
  - iii. There are no more than 5 excursions per facility (Plant No. A1438) per month. (basis: Cumulative Increase)
- 10. NUMMI shall keep records to demonstrate that all qualifying criteria for Allowable Temperature Excursions are met, including the following:
  - a. Starting date and time and the duration of each Allowable Temperature Excursion;
  - b. Minimum temperature during each Allowable Temperature Excursion;
  - c. Number of Allowable Temperature Excursions (>15 minutes) per abatement device per month;
  - d. Total number of Allowable Temperature Excursions (>15 minutes) for the entire facility per month.

A summary of these records shall be included in NUMMI's monthly report to the APCO. To satisfy the NSPS requirement of 40 CFR 60, Subpart MM, a negative declaration is also required in NUMMI's monthly report if there are no temperature excursions. (basis: Cumulative Increase)

- 11. The District may revise or revoke Parts 9 and 10 of Condition 9158 if source operations change significantly such that the basis for granting this condition is no longer valid. (basis: Cumulative Increase)
- 12. Abatement equipment must be operating during periods of truck line production and during clean-up operations following production. Abatement equipment is not required to operate during periods when there are no VOC emissions. (basis: BACT)

#### **Condition # 9159**

For S1005, TRUCK UNDERCOAT AREA

1. The VOC content of each coating shall not exceed the following:

Coating lbs VOC/gal
PVC Undercoat 0.6
(basis: BACT, Cumulative Increase)

2. The coating usage rate for this booth shall not exceed either of the following limits:

Coating gal/yr gal/mo PVC Undercoat 291,757 30,343

# VI. Permit Conditions

unless NUMMI can demonstrate that the emissions do not exceed the limit specified in Part 5 of Condition # 9159. (basis: Cumulative Increase)

- 3. Monthly usage records for each of the coatings shall be kept. The records shall be kept and made available for District inspection for a period of five years from the date of entry. (basis: Cumulative Increase)
- 4. Only High-Volume-Low Pressure (HVLP), electrostatic, and/or APCO approved paint equipment with equivalent or higher transfer efficiency shall be used to apply coatings. Air-atomized spray equipment may be used to apply Repair, Blackout, and Soft-Chip coatings. (basis: BACT)
- 5. The VOC emissions from this source shall not exceed either of the following:

2.73 tons/month

26.3 tons/year

(basis: BACT, Cumulative Increase)

- 6. deleted [12/13/04].
- 7. deleted [12/13/04].
- 8. Particulate emissions from this source shall be abated by 99%. (basis: BACT)
- 9. To minimize the amount of clean-up solvent used in the Undercoat Booth, NUMMI shall cover all robots, where practical. (basis: BACT)

#### **Condition # 9161**

For S1006, Truck Anti Chip Booth:

1. The VOC content of each coating shall not exceed the following:

Coating	lbs VOC/gal
Anti-Chip I	4.06
Anti-Chip II	1.42
Repair Primer	4.63

(basis: BACT, Cumulative Increase)

2. The coating usage rate for this booth shall not exceed any of the following:

Coating	gal/yr	gal/mon
Anti-Chip I	11,628	1,209
Anti-Chip II	29,413	3,059

# VI. Permit Conditions

Repair Primer 233 24

One or more of these usages may increase above the specified limits provided there is a corresponding usage decrease for one or more of the coatings, based on controlled emissions, so that total emissions for this source do not exceed the emissions limit specified in Part 5 of Condition # 9161. (basis: Cumulative Increase)

- 3. Monthly usage records for each of the coatings shall be kept. Monthly records shall be totaled for each consecutive 12-month period. The records shall be kept and made available for District inspection for a period of five years from the date of entry. (basis: BACT)
- 4. Only High-Volume-Low Pressure (HVLP), electrostatic, and/or APCO approved application equipment with equivalent or higher transfer efficiency shall be used to apply coatings. Air-atomized spray equipment may be used to apply Repair, Blackout, and Soft-Chip coatings. (basis: BACT)
- 5. The VOC emissions from this source shall not exceed either of the following:

3.20 tons/month 30.76 tons/year

(basis: Cumulative Increase)

# VI. Permit Conditions

#### **Condition # 9163**

For S1008, TRUCK PRIME BOOTH:

1. The VOC content of each coating shall not exceed the following:

Coating	lbs VOC/gal
Primer	4.08
Int. Color	4.46
Others-Repair	4.63
Soft-Chip	7.09
(basis: BACT, Cumi	ulative Increase)

2. The coating usage rate for this booth shall not exceed any of the following limits:

Coating	gal/yr	gal/mo
Primer	62,129	6,461
Int. Color	26,973	2,805
Others-Repair	233	24
Soft-Chip	9,908	1,030

One or more of these usages may increase above the specified limits if there is a corresponding usage decrease for one or more of the coatings, based on controlled emissions, so that total emissions for this source do not exceed the limit specified in Part 5 of Condition # 9163. (basis: Cumulative Increase)

- 3. Monthly usage records for each of the coatings shall be kept. Monthly records shall be totaled for each consecutive 12-month period. The records shall be kept and made available for District inspection for a period of five years from the date of entry. (basis: Cumulative Increase)
- 4. Only High-Volume-Low Pressure (HVLP), electrostatic, and/or APCO approved application equipment with equivalent or higher transfer efficiency shall be used to apply coatings. Air-atomized spray equipment may be used to apply Repair, Blackout, and Soft-Chip coatings. (basis: BACT)
- 5. The VOC emissions from this source shall not exceed either of the following:

11.01	tons/month
105.9	tons/year

(basis: Cumulative Increase)

- \*6. Only natural gas, propane, LPG, or butane shall be used as a fuel for this source. (basis: Regulation 2-1-103)
- 7. Except during periods of thermal oxidizer start-up and burner warm-up operations

# VI. Permit Conditions

(when oxidizer temperatures is at or below 1200 degrees F), emissions of oxides of nitrogen, measured as NO2, from this source shall not exceed 0.1 lb NOx per million BTU. (basis: Cumulative Increase)

- 8. Particulate emissions from this source shall be abated by 98%. (basis: BACT)
- 9. All VOC emissions from the soft-chip, automatic, flash off and setting zones in the booth shall be controlled by the activated carbon system (A10082) and the thermal oxidizer (A1008) required for the booth (S1008). This includes VOC emissions from clean-up and wet-down operations occurring during the normal hours of operation. (basis: BACT)
- 10. The thermal oxidizer shall achieve the following level of control:
  - a. The minimum oxidizer operating temperature shall be 1400 degrees F, regardless of inlet concentration.
  - b. When oxidizer inlet VOC concentrations are greater than 1200 ppm as C1, the minimum allowable oxidizer destruction efficiency shall be 98.5% by weight or total non-methane organic hydrocarbon emissions from the outlet of the thermal oxidizer shall be 10 ppm or less by volume.
  - c. When oxidizer inlet VOC concentrations from 500 ppm to 1200 ppm as C1, the minimum allowable oxidizer destruction efficiency shall vary linearly with VOC concentration from 95 to 98.5% by weight or total non-methane organic hydrocarbon emissions from the outlet of the thermal oxidizer shall be 10 ppm or less by volume.

(basis: BACT)

- 11. The thermal oxidizer (A1008) firebox shall be equipped with APCO approved continuous temperature measuring and recording instrument. The temperature measuring and recording instrument shall be installed, calibrated and maintained according to the manufacturer's specifications. The temperature chart or digital recorder is subject to the parametric monitoring and recordkeeping requirements of Regulation 1-523. (basis: BACT, Regulation 1-523)
- 12. The VOC reduction efficiency of the activated carbon system (A10082) shall be at least 90% by weight. (basis: BACT)
- 13. The activated carbon system (A10082) and the thermal oxidizer (A1008) shall be source tested once per calendar year to verify compliance with Parts 10 and 12 of Condition 9163. Each of the Truck Line thermal oxidizers shall be source tested for NOx and CO emissions once per calendar year, after notification to the APCO. If the total carbon monoxide (CO) emissions from all the thermal oxidizers of the Truck

# VI. Permit Conditions

Line exceed the PSD Modeling threshold in Regulation 2-2-305 (dated June 7, 1994), NUMMI shall submit a PSD Modeling Protocol to the APCO for review before implementation of the PSD Air Quality Analysis, as specified in Regulation 2-2-414 (dated June 7, 1995). The PSD Modeling Protocol shall be submitted to the APCO within 90 days of the source test report date. To calculate CO emissions, NUMMI shall use the most recent source test derived emission factors for thermal oxidizer burner warm-up and normal operations. NUMMI shall use 1,200 hours per year for the thermal oxidizer burner warm-up and 5,400 hours per year for normal burner operations to estimate combustion emissions, unless NUMMI can demonstrate a more accurate method. (basis: BACT)

- 14. The activated carbon system (A10082) and the thermal oxidizer (A1008) shall be maintained according to the manufacturer's specifications. (basis: Cumulative Increase)
- 15. All records required in Parts 11 and 13 of Condition 9161 shall be kept and made available for District Inspection for a period of five years following the date of entry. (basis: Cumulative Increase)
- 16. To minimize the amount of clean-up solvent used in the booth, NUMMI shall:
  - a. Provide a paper, plastic lining, or protective removable coating for the walls and fixtures of the booth, except over doors and windows.
  - b. Cover all robots, where practical.
  - c. Replace the paper/plastic lining, or protective removable coating on an as needed basis. (basis: BACT)
- 17. The minimum temperature and abatement efficiency requirements for Thermal Oxidizers located at NUMMI shall not apply during an "Allowable Temperature Excursion" below the minimum temperature requirement, provided that the controller set temperature is at or above the minimum temperature requirement. An Allowable Temperature Excursion is one of the following:
  - a. A temperature excursion not exceeding 20 degrees F below the requirement; or
  - b. A temperature excursion period(s) aggregating 15 minutes or less in any hour; or
  - c. A temperature excursion greater than 15 minutes but less than 3 hours in duration, provided that all of the following are satisfied:
    - i. There are no more than 2 excursions per facility (Plant No. A1438) per calendar day;
    - ii. There are no more than 2 excursions per abatement device per month; and
    - iii. There are no more than 5 excursions per facility (Plant No. A1438) per month.

# VI. Permit Conditions

(basis: Cumulative Increase)

- 18. NUMMI shall keep records to demonstrate that all qualifying criteria for Allowable Temperature Excursions are met including but not limited to the following:
  - a. Starting date and time and the duration of each Allowable Temperature Excursion;
  - b. Minimum temperature during each Allowable Temperature Excursion;
  - c. Number of Allowable Temperature Excursions (>15 minutes) per abatement device per month;
  - d. Total number of Allowable Temperature Excursions (> 15 minutes) for the entire facility per month.

A summary of these records shall be included in NUMMI's monthly report to the APCO. To satisfy the NSPS requirement of 40 CFR 60, Subpart MM, a negative declaration is also required in NUMMI's monthly report if there are no temperature excursions. (basis: Cumulative Increase)

- 19. The District may revise or revoke Parts 17 and 18 of Condition 9161 if source operations change significantly such that the basis for granting this condition is no longer valid. (basis: Cumulative Increase)
- 20. Abatement equipment must be operated during periods of truck line production and during cleanup operations following production. Abatement equipment is not required to operate during periods when there are no VOC emissions. (basis: BACT)

#### **Condition # 9164**

For S1014, TRUCK TOPCOAT BOOTH-I:

- 1. All VOC emissions from the automatic, flash off and setting zones of the booth shall be controlled by the activated carbon systems (A10143 and A10144) and the thermal oxidizers (A10141 and A10142) required for the Truck Topcoat Booth (S1014). This includes VOC emissions from clean-up and wet-down operations occurring during the normal hours of operation. (basis: BACT)
- 2. The thermal oxidizers (A10141 and A10142) shall achieve the following level of control:
  - a. The minimum thermal oxidizer operating temperature shall be 1400 degrees F, regardless of inlet concentration.
  - b. At thermal oxidizer inlet VOC concentrations greater 1200 ppm as C1, the minimum allowable oxidizer destruction efficiency shall be 98% by weight or total non-methane organic hydrocarbon emissions from the outlet of the thermal oxidizer shall be 10 ppm or less by volume.

# VI. Permit Conditions

c. At thermal oxidizer inlet VOC concentrations from 500 ppm to 1200 ppm as C1, the minimum allowable oxidizer destruction efficiency shall vary linearly with VOC concentration from 95 to 98% by weight or total non-methane organic hydrocarbon emissions from the outlet of the thermal oxidizer shall be 10 ppm or less by volume. (basis: BACT)

- 3. The thermal oxidizer fireboxes shall be equipped with APCO approved continuous temperature measuring and recording instrument. The temperature measuring and recording instrument shall be installed, calibrated and maintained according to the manufacturer's specifications.
  - a. The temperature chart or digital recorder is subject to the parametric monitoring and recordkeeping requirements of Regulation 1-523. (basis: BACT, Regulation 1-523)
- 4. The VOC reduction efficiency of the rotary drum carbon beds (A10143 and A10144) shall be at least 90% by weight. (basis: BACT, Cumulative Increase)
- 5. The activated carbon systems (A10143 and A10144) and the thermal oxidizers (A10141 and A10142) shall be source tested once per calendar year to verify compliance with Parts 1, 2 and 4 of Condition 9164. Records of the source test results and maintenance schedule shall be kept for a period of five years following the date of entry.
  - a. Each of the Truck Line thermal oxidizers shall be source tested for NOx and CO emissions once per calendar year, after notification to the APCO. If the total carbon monoxide (CO) emissions from all the thermal oxidizers of the Truck Line exceed the PSD Modeling threshold dictated in Regulation 2-2-305 (dated June 7, 1994), NUMMI shall submit a PSD Modeling Protocol to the APCO for review before implementation of the PSD Air Quality Analysis, as specified in Regulation 2-2-414 (dated June 7, 1995). The PSD Modeling Protocol shall be submitted to the APCO within 90 days of the source test report date. To calculate CO emissions, NUMMI shall use the most recent source test derived emission factors for thermal oxidizer burner warm-up and normal operations. NUMMI shall use an 1,200 hours per year for the thermal oxidizer burner warm-up and 5,400 hours per year for normal burner operations to estimate combustion emissions, unless NUMMI can demonstrate a more accurate representation. (basis: BACT)
- 6. The activated carbon systems (A10143 and A10144) and the thermal oxidizers (A10141 and A10142) shall be maintained in accordance with manufacturer's specifications. (basis: Cumulative Increase)
- 7. All records required in Parts 3 and 5 of Condition 9164 shall be kept and made available for District Inspection for a period of five years following the date of entry.

# VI. Permit Conditions

(basis: BACT)

- 8. Only natural gas, propane or butane shall be used as a fuel for this source. (basis: Cumulative Increase)
- 9. Except during periods of thermal oxidizer start-up and burner warm-up operations (when oxidizer temperature is at or below 1200 degrees F), emissions of oxides of nitrogen, measured as NO2, from this source shall not exceed 0.1 lb NOx per million BTU. (basis: Cumulative Increase)
- 10. To minimize the amount of clean-up solvent used in the booth, NUMMI shall:
  - a. Provide a paper, plastic lining, or a-protective removable coating for the walls and fixtures of the booth, except over doors and windows.
  - b. Cover all robots, where practical.
  - c. replace the paper/plastic lining, or protective removable coating on an as needed basis. (basis: BACT)
- 11. To minimize the amount of purge solvent used in S1014 Topcoat Booths I, NUMMI shall coat at least 2 vehicles between purge cycles for the two most popular colors. (basis: BACT)
- 12. The minimum temperature and abatement efficiency requirements for Thermal Oxidizers located at NUMMI shall not apply during an "Allowable Temperature Excursion" below the minimum temperature requirement, provided that the controller set temperature is at or above the minimum temperature requirement. An Allowable Temperature Excursion is one of the following:
  - a. A temperature excursion not exceeding 20 degrees F below the requirement; or
  - b. A temperature excursion period(s) aggregating 15 minutes or less in any hour; or
  - c. A temperature excursion greater than 15 minutes but less than 3 hours in duration, provided that all of the following are satisfied:
    - i. There are no more than 2 excursions per facility (Plant No. A1438) per calendar day;
    - ii. There are no more than 2 excursions per abatement device per ealendar month; and
    - iii. There are no more than 5 excursions per facility (Plant No. A1438) per month. (basis: Cumulative Increase)
- 13. NUMMI shall keep records to demonstrate that all qualifying criteria for Allowable Temperature Excursions are met including but not limited to the following:
  - a. Starting date and time, and the duration of each Allowable Temperature Excursion;
  - b. Minimum temperature during each Allowable Temperature Excursion;
  - c. Number of Allowable Temperature Excursions (>15 minutes) per abatement device per month;

# VI. Permit Conditions

d. Total number of Allowable Temperature Excursions (>15 minutes) for the entire facility per month. A summary of these records shall be included in NUMMI's monthly report to the APCO. To satisfy the NSPS requirement of 40 CFR 60, Subpart MM, a negative declaration is also required in NUMMI's monthly report if there are no temperature excursions.

(basis: Cumulative Increase)

- 14. Abatement equipment must be operating during periods of truck line production and during clean-up operations following production. Abatement equipment is not required to operate during periods when there are no VOC emissions. (basis: BACT)
- 15. The VOC content of each coating shall not exceed the following:

Coating	lbs VOC/gal
Solids	3.54
Base Coat	4.79
Clear Coat	4.12
Other-Repair	4.63

(basis: Cumulative Increase)

16. The coating usage rate for this booth shall not exceed any of the following limits:

gal/yr	gal/mon
26,927	2,800
53,211	5,534
70,094	7,290
349	36
	26,927 53,211 70,094

One or more of these coating usages may increase above the specified usage limit provided there is a corresponding decrease for one or more of the coatings, based on controlled emissions so that total emissions for this source are not exceeded. (basis: Cumulative Increase)

- 17. Monthly usage records for each of the coatings shall be kept. The records shall be kept and made available for District inspection for a period of five years from the date of entry. (basis: Cumulative Increase)
- 18. Only High-Volume-Low Pressure (HVLP), electrostatic, and/or APCO approved application equipment with equivalent or higher transfer efficiency shall be used to apply coatings. Air-atomized spray equipment may be used to apply Repair, Blackout, and Soft-Chip coatings. (basis: Cumulative Increase)
- 19. The VOC emissions from this source shall not exceed either of the following:

13.60	tons/month
130.76	tons/year

Permit for Facility #: A1438

# VI. Permit Conditions

(basis: Cumulative Increase)

20. Particulate emissions from this source shall be abated by 98%. (basis: BACT)

#### **Condition # 9166**

For S1012, TOUCH UP BOOTH:

- 1. The owner/operator of S1012 Touch Up Booth shall not exceed 417 gallons per year of touch up coating during any consecutive twelve-month period: (basis: Cumulative Increase)
- 2. The owner/operator may use coatings specified in Condition 9166 in excess of that limit specified in Part 1 of Permit Condition 9166, provided that the owner/operator can demonstrate that all of the following are satisfied:
  - a. Total POC emissions from S-1012 do not exceed 2002 pounds in any consecutive twelve month period;
  - b. The use of these materials does not increase toxic emissions above any risk screening trigger level.

(basis: Cumulative Increase)

- 3. To determine compliance with the above conditions, the owner/operator shall maintain the following records and provide all of the data necessary to evaluate compliance with the above conditions, including the following information:
  - a. Quantities of each type of coating used at this source on a monthly basis.
  - b. If a material other than those specified in Part 1 of Permit Condition 9166 is used, POC and toxic component contents of each material used; and mass emission calculations to demonstrate compliance with Condition 2, on a monthly basis;
  - c. Monthly usage and/or emission calculations shall be totaled for each consecutive twelve-month period.

All records shall be retained on-site for five years, from the date of entry, and made available for inspection by District staff upon request. These recordkeeping requirements shall not replace the recordkeeping requirements contained in any applicable District Regulations. (basis: Cumulative Increase)

#### Condition # 9167

For S1053, TRUCK WAX DRY OFF BOOTH (ELECTRIC):

1. The VOC emissions from this source shall not exceed either of the following emission limits:

Permit for Facility #: A1438

# VI. Permit Conditions

Source tons/mo tons/year S1053 Truck Wax Dry Off Booth 1.64 15.79

(basis: Cumulative Increase)

#### **Condition # 9170**

For S1018, BLACKOUT BOOTH:

1. The VOC content of the coating shall not exceed the following limit:

Coating lbs VOC/gal Blackout 2.95

(basis: BACT, Cumulative Increase)

2. The coating usage rate for this booth shall not exceed either of the following:

Coating gal/yr gal/mo Blackout 12,317 1,281

(basis: Cumulative Increase)

- 3. Monthly usage records for each of the coatings shall be kept. Monthly records shall be totaled for each consecutive 12-month period. The records shall be kept and made available for District inspection for a period of five years from the date of entry. (basis: Cumulative Increase)
- 4. The VOC emissions from this source shall not exceed either of the following:

1.89 tons/month

18.17 tons/year

(basis: Cumulative Increase)

#### **Condition # 9171**

For S1019, TRUCK CAVITY WAX BOOTH:

1. The VOC content of each coating shall not exceed the following:

Coating lbs VOC/gal

Cavity Wax 0.73

(basis: BACT, Cumulative Increase)

2. The coating usage rate for this booth shall not exceed either of the following:

Coating gal/yr gal/mon Cavity Wax 15,406 1,602

(basis: Cumulative Increase)

Permit for Facility #: A1438

# VI. Permit Conditions

3. Monthly usage records for each of the coatings shall be kept. Monthly records shall be totaled for each consecutive 12-month period. The records shall be kept and made available for District inspection for a period of five years from the date of entry. (basis: Cumulative Increase)

- 4. Only High-Volume-Low Pressure (HVLP), electrostatic, and/or APCO approved application equipment with equivalent or higher transfer efficiency shall be used to apply coatings. (basis: BACT)
- 5. The VOC emissions from this source shall not exceed either of the following:

0.58 tons/month 5.62 tons/yr

(basis: Cumulative Increase)

#### **Condition # 9172**

For S1020, OFF-Line Assembly Paint Hospital S (Truck):

1. The VOC content of each coating shall not exceed the following:

Coating	lbs VOC/gal
Solids	3.54
Base Color	4.79
Clear Coat	4.12
Lacquer	6.61

(basis: BACT, Cumulative Increase)

2. The coating usage rate for this booth shall not exceed any of the following:

Coating	gal/yr	gal/mon
Solids	629	65
Base Color	893	93
Clear Coat	1,734	180
Lacquer	279	29

One or more of these usages may increase above specified limits if there is a corresponding usage decrease for one or more of the coatings, based on controlled emissions, so that total emissions for this source are not exceeded. (basis: Cumulative Increase)

3. Monthly usage records for each of the coatings shall be kept. Monthly records shall be totaled for each consecutive 12-month period. The records shall be kept and made available for District inspection for a period of five years from the date of entry. (basis: Cumulative Increase)

# VI. Permit Conditions

4. Only cup guns and brushes shall be used in this area. [basis: Cumulative Increase]

5. The VOC emissions from this source shall not exceed either of the following:

0.81 tons/month

7.75 tons/year (basis: Cumulative Increase)

#### **Condition # 9174**

For S1056, TRUCK ASH BOILER # 1, AND S1057, TRUCK ASH BOILER # 2:

- 1. Only natural gas, propane, LPG, or butane shall be used as a fuel at this source for this source. (basis: Cumulative Increase)
- 2. Emissions of oxides of nitrogen shall not exceed 30 ppm at 3 percent oxygen, dry basis, averaged over any one-hour period. (basis: BACT, Cumulative Increase)
- 3. This boiler shall be operated and maintained according to the manufacturer's specifications. (basis: Cumulative Increase)
- 4. All source test records and preventative maintenance records shall be kept and made available for District Inspection for a period of five years following the date of entry. (basis: Cumulative Increase)
- 5. To demonstrate compliance with Part 2, S1056 and S1057 shall be source tested once per calendar year for NOx and CO, unless a different schedule is approved. A minimum of two weeks notification shall be given to the District's Source Test Manager, prior to NUMMI initiating any source test for these boilers. Source testing shall be performed to determine the NOx and CO emissions of the sources, in accordance with the District's Manual of Procedures. Stack sampling ports and platform(s) shall be provided for these sources exhaust stacks. Records of the source test results shall be kept. All records shall be kept and made available for District inspection for a period of five years following the date of entry (basis: Regulation 2-6-409.2)

#### **Condition # 9175**

For S1803, TRUCK SEALER DECK (FUGITIVE)

1. The VOC content of the coating shall not exceed the following limit:

Coating lbs VOC/gal

Bead Sealer 0.25

Permit for Facility #: A1438

# VI. Permit Conditions

(basis: BACT, Cumulative Increase)

2. The coating usage rate shall not exceed any of the following:

Coating gal/yr gal/mon Bead Sealer 110,236 11,465

unless NUMMI can demonstrate that emissions from the source does not exceed the limit specified in Part 5 of Condition # 9175. (basis: BACT, Cumulative Increase)

- 3. Monthly usage records for each of the coatings shall be kept. Monthly records shall be totaled for each consecutive 12-month period. The records shall be kept and made available for District inspection for a period of five years from the date of entry. (basis: Cumulative Increase)
- 4. Only High-Volume-Low Pressure (HVLP), electrostatic, and/or APCO approved application equipment with equivalent or higher transfer efficiency shall be used to apply coatings. Air-atomized spray equipment may be used to apply Repair, Blackout, and Soft-Chip coatings. (basis: BACT)
- 5. The VOC emissions from this source shall not exceed either of the following:

0.29 tons/month

2.76 tons/year

(basis: Cumulative Increase)

#### **Condition # 9257**

For S1001, TRUCK ED BATH:

1. The VOC content of the coating shall not exceed any of the following limit:

Coating lbs VOC/gal

ELPO Primer 0.59

(basis: BACT, Cumulative Increase)

2. The coating usage rate for this booth shall not exceed any of the following limits:

Coating gal/yr gal/mon ELPO Primer 107,371 11,167

Unless NUMMI can demonstrate that emissions are below the limit specified in Part 5 of Condition # 9257. (basis: Cumulative Increase)

- 3. Monthly usage records for each of the coatings shall be kept. Monthly records shall be totaled for each consecutive 12-month period. The records shall be kept and made available for District inspection for a period of five years from the date of entry. (basis: Cumulative Increase)
- 4. Deleted.
- 5. The VOC emissions from this source shall not exceed either of the following:

0.99 tons/month

9.5 tons/year

(basis: Cumulative Increase)

# VI. Permit Conditions

#### **Condition # 9877**

For S1810, Cleaning Materials:

1. The solvent usage rate shall not exceed the following:

Operation	gals/yr	gal/mo
Wipe & Clean-up	17,616	1,832
Cleaning Solvent	164,050	17,061

One or more of these usages may increase above the specified limit if there is a corresponding usage decrease for one or more of the solvents, based on controlled emissions so that total allowable emissions for this source are not exceeded. (basis: Cumulative Increase)

- 2. Usage records for each of the solvent operations shall be kept on a monthly basis. (basis: Cumulative Increase)
- 3. The VOC emissions from this source shall not exceed either of the following:

28.3 tons/month 272 tons/year

(basis: Cumulative Increase)

4. NUMMI shall recover at least 65% of all cleaning solvent. Records of the amounts of solvent recovered shall be kept on a monthly basis. Monthly excursions below the percent recovery limit are allowed as long as the annual VOC emission limit for clean up solvent is not exceeded. (basis: BACT)

#### **Condition # 10011**

For S1010, TRUCK OFF-LINE REPAIR, AND S1017, TRUCK TOUCH UP BOOTH:

1. The VOC content of each coating shall not exceed the following:

Coating	lbs VOC/gal
Repair Primer	4.63
Solids (repair)	3.54
Base Coat (repair)	4.79
Clear Coat (repair)	4.12
Solids (lacq. repair)	6.32
Base Coat (lacq. repair)	6.41
Clear Coat (lacq. repair)	6.30
Adhesion Promoter	6.61
Anti-Chip I	4.06
Anti-Chip II	1.42

# VI. Permit Conditions

(basis: BACT, Cumulative Increase)

2. The coating usage rate for this booth shall not exceed any of the following:

Coating	gal/yr	gal/mo
Repair Primer	837	87
Solids (repair)	606	63
Base Coat (repair)	857	89
Clear Coat (repair)	1,665	173
Solids (lacq. repair)	691	72
Base Coat (lacq. repair)	963	100
Clear Coat (lacq. repair)	1,576	164
Adhesion Promoter	1,238	128
Anti-Chip I	38	4
Anti-Chip II	10	1

One or more of these usages may increase above the specified limit if there is a corresponding usage decrease for one or more of the coatings, based on controlled emissions, so that total emissions for this source are not exceeded. (basis: Cumulative Increase)

- 3. Monthly usage records for each of the coatings shall be kept. Monthly records shall be totaled for each consecutive 12-month period. The records shall be kept and made available for District inspection for a period of five years from the date of entry. (basis: Cumulative Increase)
- 4. Only cup guns and brushes shall be used in this area. [basis: Cumulative Increase]
- 5. The VOC emissions from the sources shall not exceed either of the following:

2.38 tons/month

22.91 tons/year

(basis: Cumulative Increase)

Permit for Facility #: A1438

# VI. Permit Conditions

#### **Condition # 10320**

For S57, BUMPER TOPCOAT BOOTH,

- S58, BUMPER TOPCOAT OVEN,
- S59, BUMPER PRIME BOOTH,
- S65, BUMPER PRIME OVEN,
- S960, PLASTIC PLANT BOOTH AND GENERAL CLEANING
- S961, Bumper Release Cleaning & Polish
- S964, COLD CLEANER
- S965, PLASTIC PLANT THINNER STORAGE TANK
- S992, PLASTIC PLANT THINNER STORAGE TANK
- S1070. INSTRUMENT PANEL BOOTH.
- S1071 INSTRUMENT PANEL OVEN, AND
- S1072, GENERAL CLEANING & PAINT CLEANING
- S1509, Protectoseal Cleaning Tank:
- 1. All conditions shall be in effect at all times during equipment operation, including period of equipment start-up. For the purposes of determining compliance with emissions and/or usage limits, a year is defined as a twelve month consecutive period; a month is defined as a calendar month. (basis: Cumulative Increase)
- 2. The combined total natural gas usage for all bumper and Instrument Panel line combustion sources shall not exceed 3.16 Million (MM) Therms per year. Records of natural gas usage shall be maintained for five (5) years from the date of entry and shall be made available to District personnel upon request. (basis: Cumulative Increase)
- 3. Only natural gas, propane, butane, and LPG shall be used as a fuel for any heater boxes used for sources S58, S65, and S1071. (basis: Cumulative Increase)
- 4. The total NOx emissions from the combustion equipment for the sources listed for Condition 10320 shall not exceed 26.16 tons per year. (basis: Cumulative Increase)
- 5. The total CO emissions from the combustion equipment for the sources listed for Condition 10320 shall not exceed 46.48 tons per year. (basis: Cumulative Increase)
- \*6. NUMMI shall not substitute any materials for those described in this permit application's Health Risk Assessment (HRA), which would trigger a toxics review, and which would result in:
  - a) an increase in the quantity of permitted air toxic compounds emitted,
  - b) The addition of unpermitted air toxic compounds emitted, which were not listed in the permit application HRA, or
  - e) an increase in the permitted VOC content or air toxic compound content for each coating category as specified in the permit application Health Risk Assessment

# Permit for Facility #: A1438

#### VI. **Permit Conditions**

without prior notification and approval of the APCO. (basis: Toxics)

- 7. In order to demonstrate compliance with Parts 4 and 5 of Condition 10320, NUMMI shall calculate the NOx and CO mass emission rates quarterly, using natural gas usage records and District approved NOx and CO emission factors. The NOx and CO emission factors for the thermal oxidizer (A571) for S57, S58, S59, S65, S1070 and S1071 shall be obtained from the results of the source tests, required by the District in Part 23 of Condition 10320. (basis: Cumulative Increase)
- 8. Abatement equipment (A571) must be operated during periods of instrument panel and/or bumper line production (sources S57, S58, S59, S65, S1070 and S1071) and during cleanup operations following production. Abatement equipment is not required to operate during periods when there are no VOC emissions. For S1070, if waterborne coating is used exclusively, abatement by A571 is not required. (basis: BACT)
- 9. In no event shall the total combined, annual coating emissions from sources S57, S58, S59, and S-65 combined exceed 173 tons per year of POC. (basis: Cumulative Increase)
- 10. The total coating usage for sources S57, S58, S59, and S65 shall not exceed the following specified limits unless NUMMI can demonstrate to the satisfaction of the APCO that a change in coating limits and/or composition will not result in emissions exceeding those in Part 9 of Condition 10320:

Primer	61,606 gallons per year
Non-Metallic	
High Solids	32,586 gallons per year
Base Coat	37,127 gallons per year
Clear Coat	48,350 gallons per year

One or more of the usages may increase above the specified limit if there is a corresponding usage decrease for one or more of the other coatings, so that total emissions do not exceed the emission limit, specified in Part 9 of Condition 10320. NUMMI shall provide documentation to demonstrate compliance with Part 9 of Condition 10320 within 10 days of the exceedance of any of the coating limits. The total controlled emission limit for these spray booths (S57 and S59) and the associated ovens (S58 and S65) must be maintained at all times. (basis: Cumulative Increase; MOP Volume II, Part 3, Section 4.7)

- 11. Adhesion promoting material may be used at sources S57, S58, S59, and S65 provided the total emissions for the sources do not exceed the limitations specified in Part 9 of Condition 10320. (basis: Cumulative Increase)
- 12. Only High-Volume-Low-Pressure (HVLP), electrostatic, and/or APCO approved

Permit for Facility #: A1438

# VI. Permit Conditions

application equipment with equivalent or higher transfer efficiency shall be used to apply coatings in sources \$57, \$59, and \$1070. (basis: BACT)

- 13. To minimize the amount of clean-up solvent used in the booths, NUMMI shall:
  - a. Provide a paper or plastic lining, or protective removable coating for the walls and fixtures of the booth, except over doors and windows.
  - b. Cover all robots, where practical.
  - e. Replace the paper/plastic lining, or protective removable coating on an as needed basis. (basis: BACT)
- 14. NUMMI shall maintain the following data:
  - a) deleted 12/13/2004.
  - b) Amount and type of coating applied.
  - c) Amount of clean-up solvent used.
  - d) Amount of coating and solvents purchased.
  - e)Monthly compliance reports showing coating and clean-up usage and calculated emissions shall be submitted to the District Director of Enforcement.
  - f)Records shall be available for District inspection for a period of at least 5 years following the date of entry. (basis: Cumulative Increase)
- 15. Primary method for removal of particulate matter from S57 and S59 shall be a water contact scrubbing system. The overall control efficiency of the system shall be 98%. Any downtime of the water contact scrubber system shall be recorded. Such records shall be made available for inspection upon request and kept for a minimum of 5 years from the date of record.(basis: BACT, Cumulative Increase)
- 16. All VOC emissions from the automatic, flash off and setting zones of the Bumper Booths (S57 and S59) and the manual zone of Bumper Booth #2 (S59) shall be abated by the thermal oxidizer (A 571). This includes VOC emissions from clean-up and wet-down operations occurring during normal operating hours. (basis: BACT, Cumulative Increase)
- 17. The VOC emissions from sources S57, S58, S59, S65, S1070 and S1071 shall be abated by the thermal oxidizer (A571). This shall not apply to S-1070 during periods when waterborne coating is used exclusively. (basis: BACT, Cumulative Increase)
  - a. The net mass emissions of POC shall be determined for the sources listed in Condition 10320 with their respective coating sources combined. To determine the net mass emissions, the following shall be calculated and/or measured:
  - b. POC emissions on a pounds per unit basis [A] shall be determined by multiplying the annual coating usage with the POC content and dividing by the annual production rate.

#### VI. Permit Conditions

c. Measured POC emissions to each booth and oven Thermal Oxidizer (averaged, using the data obtained from at least 3 current source tests) shall be determined using District approved source testing methods [B].

- d. Measured POC emissions from each booth and oven Thermal Oxidizer and carbon concentrator (averaged, using the data obtained from at least 3 current source tests) shall be determined using District approved source testing methods [C].
- e. [B] and [C] shall each be divided by the production rate measured during the source test yielding a pounds per unit basis. [B] and [C] shall each be multiplied by the annual units per hour and divided by the source test measured units per hour rate.
- f. The net mass emissions shall be calculated by subtracting the measured POC emissions from the inlet from the calculated POC emissions and adding the measured POC emissions from the outlet [A-B+C].
- g. The determined value [A-B+C] shall be multiplied by the actual, annual production rate.
- h. Within 60 days of the source test, a report shall be provided to the District. This 60-day period may be extended to 90 days, if NUMMI can demonstrate to the satisfaction of the APCO that the additional time is required. If the source test indicates any violation of the permit conditions (total mass emission greater than emission limits for coating line (booth(s) and oven(s) combined), NUMMI shall report such violation to the Director of Enforcement within 10 days of determining that a violation has occurred .(basis: BACT; Manual of Procedures, Volume II, Part 3, Section 4.7)

(basis: BACT, Cumulative Increase)

- 19. The operating temperature for the Thermal Oxidizer (A571) may fall below 1400 degrees F if the source complies with the temperature excursion parameters set forth in Parts 26 and 27 of this condition. (basis: BACT, Cumulative Increase)
- 20. The minimum destruction efficiency of the Thermal Oxidizer (A571) shall be 98.5% by weight, whenever the VOC inlet concentration is greater than or equal to 500 ppmv, measured as methane. Below a concentration of 500 ppmv, the minimum destruction efficiency shall be 95% by weight or total non-methane organic carbon emissions from the outlet of the thermal oxidizer shall be 10 ppm by volume or less. (basis: BACT, Cumulative Increase)
- 21. The NOx emissions from the burners of the thermal oxidizer (A571) shall not exceed 1.72 tons per month. (basis: Cumulative Increase)

Permit for Facility #: A1438

# VI. Permit Conditions

22. The combustion chamber for the thermal oxidizer (A571) shall be equipped with District approved continuous temperature measuring and recording instrument. The temperature measuring and recording instrument shall be installed, calibrated and maintained according to the manufacturer's specifications.

- a. The temperature chart or digital recorder is subject to the parametric monitoring and recordkeeping requirements of Regulation 1-523. (basis: BACT, Regulation 1-523)
- 23. The thermal oxidizer (A571) shall be source tested once per calendar year. After prior notification to the District's Source Test Manager, source testing shall be performed to determine the VOC control efficiency of the abatement devices and the nitrogen oxide and carbon monoxide emissions, in accordance with the District's Manual of Procedures. Records of the source test results shall be kept and made available for District inspection for a period of five years following the date the report was completed. (basis: BACT, Cumulative Increase)
- 24. Within 60 days of the completion of any source testing, a report documenting the results shall be provided to the District. This 60 day period may be extended to 90 days, if NUMMI can demonstrate to the satisfaction of the APCO that the additional time is required. If source testing indicates any violation of the permit conditions, NUMMI shall report such violation to the Director of Enforcement within 10 days of determining that a violation has occurred and also within the final report. (basis: Cumulative Increase; MOP Volume II, Part 3, Section 4.7)
- 26. The minimum temperature and abatement efficiency requirements for Thermal Oxidizers located at NUMMI shall not apply during an "Allowable Temperature Excursion" below the minimum temperature requirement, provided that the controller set temperature is at or above the minimum temperature requirement. An Allowable Temperature Excursion is one of the following:
  - a. A temperature excursion not exceeding 20 degrees F below the requirement; or
  - b. A temperature excursion period(s) aggregating less than or equal to 15 minutes in any hour; or
  - c. A temperature excursion greater than 15 minutes but less than 3 hours in duration, provided that all of the following are satisfied:
    - i. There are no more than 2 excursions per facility (Plant No. A1438) per day;
    - ii. There are no more than 2 excursions per abatement device per month; and
    - iii. There are no more than 5 excursions per facility (Plant No. A1438) per month. (basis: Cumulative Increase)
- 27. NUMMI shall keep records to demonstrate that all qualifying criteria for Allowable

Permit for Facility #: A1438

# VI. Permit Conditions

Temperature Excursions are met including but not limited to the following:

- Starting date and time, and the duration of each Allowable Temperature Excursion;
- b. Minimum temperature during each Allowable Temperature Excursion;
- c. Number of Allowable Temperature Excursions (> 15 minutes) per abatement device per month;
- d. Total number of Allowable Temperature Excursions (> 15 minutes) for the entire facility per month.

A summary of these records shall be included in NUMMI's monthly report to the District. To satisfy the NSPS requirement of 40 CFR 60, Subpart MM, a negative declaration is also required in NUMMI's monthly report if there are no temperature excursions. (basis: Cumulative Increase)

- 28. The District may revise or revoke Parts 26 and 27 of Condition 10320 if source operations change significantly such that the basis for granting this condition is no longer valid. (basis: Cumulative Increase)
- 31. In no event shall the total annual emissions from the combination of S960, S961, S964, S1072 and S1509 exceed 134.51 tons per year of POC. (basis: Cumulative Increase)
- 32. Clean-up solvent usage for sources S960, S961, S964, S1072, and S1509 shall be collected and recovered at 77% or greater. Monthly excursions below the percent recovery limit are allowed as long as the annual VOC emission limit for clean up is not exceeded. (basis: BACT)
- 33. Paint and solvent from sources S960, S961, S964, S1072, and S1509 shall be recovered in an enclosed collection system and shipped to either a solvent recycler or proper disposal facility. (basis: BACT)
- 34. For the following sources, S960, S961, S1072, S964, and S1509, NUMMI shall record the amount of clean-up solvent used monthly. To verify compliance, monthly reports showing clean-up usage and calculated emissions shall be submitted to the Director of Enforcement. Records shall be available for District inspection for a period of at least 5 years following the date on which such data or reports are recorded or made. (basis: Cumulative Increase)
- 41. In no event shall the total combined, annual coating emissions from sources \$1070 and \$1071 exceed 21.49 tons per year of POC. (basis: Cumulative Increase)

Permit for Facility #: A1438

# VI. Permit Conditions

42. The total coating usage at sources S1070 and S1071 shall not exceed the following specified limits unless NUMMI can demonstrate to the satisfaction of the APCO that a change in coating limits and/or composition will not result in emissions exceeding those in Part 41 of Condition 10320:

```
Top Coat (Solventborne) 36,865—gal/year
Top Coat (Waterborne) 16,189 gal/year (less water)
```

(basis: Cumulative Increase)

- 43. The natural gas heater boxes for the IP Oven (S1071) shall utilize low-NOx burners. (basis: BACT)
- 44. The owner/operator shall abate S1070 with a water contact scrubbing system with an overall control efficiency of 90%. Any downtime of the water contact scrubber system shall be recorded. Such records shall be made available for inspection upon request and kept for a minimum of 5 years from the date of record. (basis: Cumulative Increase)
- 47. The permit holder shall operate the zeolite concentrator (A592) to abate the organic emissions from source S59 Bumper Prime Booth with a minimum destruction efficiency of 90%. To verify compliance with this requirement, the permit holder shall conduct a District approved source test once per calendar year, unless a different schedule is approved. After prior notification to and approval from the District's Source Test Manager, source testing shall be performed to determine the VOC control efficiency of the abatement devices, in accordance with the District's Manual of Procedures. Records of the source test results and shall be kept. All records shall be kept and made available for District inspection for a period of five years following the date of entry. (basis: BACT).

#### Condition # 10320

For S57, BUMPER TOPCOAT BOOTH,

S58, BUMPER TOPCOAT OVEN,

S59, BUMPER PRIME BOOTH,

S65, BUMPER PRIME OVEN,

S964, COLD CLEANER

S965, PLASTIC PLANT THINNER STORAGE TANK

S992, PLASTIC PLANT THINNER STORAGE TANK

S1070, INSTRUMENT PANEL BOOTH,

S1071 INSTRUMENT PANEL OVEN, AND

S1072, GENERAL CLEANING & PAINT CLEANING

S1509, PROTECTOSEAL CLEANING TANK:

Permit for Facility #: A1438

# VI. Permit Conditions

1. All conditions shall be in effect at all times during equipment operation, including period of equipment start-up. For the purposes of determining compliance with emissions and/or usage limits, a year is defined as a twelve month consecutive period; a month is defined as a calendar month. (basis: Cumulative Increase)

- 2. The combined total natural gas usage for all bumper and Instrument Panel line combustion sources shall not exceed 3.16 Million (MM) Therms per year. Records of natural gas usage shall be maintained for five (5) years from the date of entry and shall be made available to District personnel upon request. (basis: Cumulative Increase)
- 3. Only natural gas, propane, butane, and LPG shall be used as a fuel for any heater boxes used for sources S58, S65, and S1071. (basis: Cumulative Increase)
- 4. The total NOx emissions from the combustion equipment for the sources listed for Condition 10320 shall not exceed 26.16 tons per year. (basis: Cumulative Increase)
- 5. The total CO emissions from the combustion equipment for the sources listed for Condition 10320 shall not exceed 46.48 tons per year. (basis: Cumulative Increase)
- \*6. NUMMI shall not substitute any materials for those described in this permit application's Health Risk Assessment (HRA), which would trigger a toxics review, and which would result in:
  - a) an increase in the quantity of permitted air toxic compounds emitted,
  - b) The addition of unpermitted air toxic compounds emitted, which were not listed in the permit application HRA, or
  - c) an increase in the permitted VOC content or air toxic compound content for each coating category as specified in the permit application Health Risk Assessment without prior notification and approval of the APCO. (basis: Toxics)
- 7. In order to demonstrate compliance with Parts 4 and 5 of Condition 10320, NUMMI shall calculate the NOx and CO mass emission rates quarterly, using natural gas usage records and District approved NOx and CO emission factors. The NOx and CO emission factors for the thermal oxidizer (A571) for S57, S58, S59, S65, S1070 and S1071 shall be obtained from the results of the source tests, required by the District in Part 23 of Condition 10320. (basis: Cumulative Increase)
- 8. Abatement equipment (A571) must be operated during periods of instrument panel and/or bumper line production (sources S57, S58, S59, S65, S1070 and S1071) and during cleanup operations following production. Abatement equipment is not required to operate during periods when there are no VOC emissions. For sources S59 and S1070, if waterborne coating is used exclusively, abatement by A571 is not required. (basis: BACT)
  - 9. In no event shall the total combined, annual coating emissions from sources S57, S58, S59, and S-65 combined exceed 173 tons per year of POC. (basis: Cumulative Increase)

Permit for Facility #: A1438

# VI. Permit Conditions

10. The owner/operator shall ensure that the following VOC content limits for different coatings mentioned below are not exceeded:

Coating	VOC Limit (lbsVOC/Gal)
Primer (solvent-borne)	4.10
Primer (water-borne)	1.27 (includes water)
Non-metallic high solids	4.70
Basecoat	4.70
Clearcoat	4.20

(basis: BACT, Cumulative Increase)

- 11. Adhesion promoting material may be used at sources S57, S58, S59, and S65 provided the total emissions for the sources do not exceed the limitations specified in Part 9 of Condition 10320. (basis: Cumulative Increase)
- 12. Only High-Volume-Low-Pressure (HVLP), electrostatic, and/or APCO approved application equipment with equivalent or higher transfer efficiency shall be used to apply coatings in sources S57, S59, and S1070. (basis: BACT)
  - 13. To minimize the amount of clean-up solvent used in the booths, NUMMI shall:
    - a. Provide a paper or plastic lining, or protective removable coating for the walls and fixtures of the booth, except over doors and windows.
    - b. Cover all robots, where practical.
    - c. Replace the paper/plastic lining, or protective removable coating on an as needed basis. (basis: BACT)
  - 14. NUMMI shall maintain the following data:
  - a. deleted 12/13/2004.
  - b. Amount and type of coating applied.
  - c. Amount of clean-up solvent used.
  - d. Amount of coating and solvents purchased.
- e. Monthly compliance reports showing coating and clean-up usage and calculated emissions shall be submitted to the District Director of Enforcement.
- f. Records shall be available for District inspection for a period of at least 5 years following the date of entry. (basis: Cumulative Increase)
- 15. Primary method for removal of particulate matter from S57 and S59 shall be a water contact scrubbing system. The overall control efficiency of the system shall be 98%.

  Any downtime of the water contact scrubber system shall be recorded. Such records shall be made available for inspection upon request and kept for a minimum of 5 years from the date of record.(basis: BACT, Cumulative Increase)

Permit for Facility #: A1438

#### VI. Permit Conditions

16. All VOC emissions from the automatic, flash off and setting zones of the Bumper Booths (S57 and S59) and the manual zone of Bumper Booth #2 (S59) shall be abated by the thermal oxidizer (A 571). This includes VOC emissions from clean-up and wet-down operations occurring during normal operating hours. (basis: BACT, Cumulative Increase)

- 17. The VOC emissions from sources S57, S58, S59, S65, S1070 and S1071 shall be abated by the thermal oxidizer (A571). This shall not apply to sources S-59 and S-1070 during periods when waterborne coating is used exclusively. (basis: BACT, Cumulative Increase)
  - a. The net mass emissions of POC shall be determined for the sources listed in Condition 10320 with their respective coating sources combined. To determine the net mass emissions, the following shall be calculated and/or measured:
  - b. POC emissions on a pounds per unit basis [A] shall be determined by multiplying the annual coating usage with the POC content and dividing by the annual production rate.
  - c. Measured POC emissions to each booth and oven Thermal Oxidizer (averaged, using the data obtained from at least 3 current source tests) shall be determined using District approved source testing methods [B].
  - d. Measured POC emissions from each booth and oven Thermal Oxidizer and carbon concentrator (averaged, using the data obtained from at least 3 current source tests) shall be determined using District approved source testing methods [C].
  - e. [B] and [C] shall each be divided by the production rate measured during the source test yielding a pounds per unit basis. [B] and [C] shall each be multiplied by the annual units per hour and divided by the source test measured units per hour rate.
  - f. The net mass emissions shall be calculated by subtracting the measured POC emissions from the inlet from the calculated POC emissions and adding the measured POC emissions from the outlet [A-B+C].
  - g. The determined value [A-B+C] shall be multiplied by the actual, annual production rate.
  - h. Within 60 days of the source test, a report shall be provided to the District. This 60-day period may be extended to 90 days, if NUMMI can demonstrate to the satisfaction of the APCO that the additional time is required. If the source test indicates any violation of the permit conditions (total mass emission greater than emission limits for coating line (booth(s) and oven(s) combined), NUMMI shall report such violation to the Director of Enforcement within 10 days of determining that a violation has occurred (basis: BACT; Manual of Procedures, Volume II, Part 3, Section 4.7)

Permit for Facility #: A1438

#### VI. **Permit Conditions**

(basis: BACT, Cumulative Increase)

- 19. The operating temperature for the Thermal Oxidizer (A571) may fall below 1400 degrees F if the source complies with the temperature excursion parameters set forth in Parts 26 and 27 of this condition. (basis: BACT, Cumulative Increase)
- 20. The minimum destruction efficiency of the Thermal Oxidizer (A571) shall be 98.5% by weight, whenever the VOC inlet concentration is greater than or equal to 500 ppmv, measured as methane. Below a concentration of 500 ppmy, the minimum destruction efficiency shall be 95% by weight or total non-methane organic carbon emissions from the outlet of the thermal oxidizer shall be 10 ppm by volume or less. (basis: BACT, Cumulative Increase)
- 21. The NOx emissions from the burners of the thermal oxidizer (A571) shall not exceed 1.72 tons per month. (basis: Cumulative Increase)
- 22. The combustion chamber for the thermal oxidizer (A571) shall be equipped with District approved continuous temperature measuring and recording instrument. The temperature measuring and recording instrument shall be installed, calibrated and maintained according to the manufacturer's specifications.
  - a. The temperature chart or digital recorder is subject to the parametric monitoring and recordkeeping requirements of Regulation 1-523. (basis: BACT, Regulation 1-523)
- 23. The thermal oxidizer (A571) shall be source tested once per calendar year. After prior notification to the District's Source Test Manager, source testing shall be performed to determine the VOC control efficiency of the abatement devices and the nitrogen oxide and carbon monoxide emissions, in accordance with the District's Manual of Procedures. Records of the source test results shall be kept and made available for District inspection for a period of five years following the date the report was completed. (basis: BACT, Cumulative Increase)
- 24. Within 60 days of the completion of any source testing, a report documenting the results shall be provided to the District. This 60-day period may be extended to 90 days, if NUMMI can demonstrate to the satisfaction of the APCO that the additional time is required. If source testing indicates any violation of the permit conditions, NUMMI shall report such violation to the Director of Enforcement within 10 days of determining that a violation has occurred and also within the final report.
  - (basis: Cumulative Increase; MOP Volume II, Part 3, Section 4.7)
- 26. The minimum temperature and abatement efficiency requirements for Thermal Oxidizers located at NUMMI shall not apply during an "Allowable Temperature Excursion" below the minimum temperature requirement, provided that the controller set temperature is at or above the minimum temperature requirement. An Allowable Temperature Excursion is one of the following:

Permit for Facility #: A1438

# VI. Permit Conditions

a. A temperature excursion not exceeding 20 degrees F below the requirement; or

- b. A temperature excursion period(s) aggregating less than or equal to 15 minutes in any hour; or
- c. A temperature excursion greater than 15 minutes but less than 3 hours in duration, provided that all of the following are satisfied:
- i. There are no more than 2 excursions per facility (Plant No. A1438) per day; ii. There are no more than 2 excursions per abatement device per month; and iii. There are no more than 5 excursions per facility (Plant No. A1438) per month. (basis: Cumulative Increase)
- 27. NUMMI shall keep records to demonstrate that all qualifying criteria for Allowable Temperature Excursions are met including but not limited to the following:
  - a. Starting date and time, and the duration of each Allowable Temperature Excursion;
  - b. Minimum temperature during each Allowable Temperature Excursion;
  - <u>c. Number of Allowable Temperature Excursions (> 15 minutes) per abatement device per month;</u>
  - d. Total number of Allowable Temperature Excursions (> 15 minutes) for the entire facility per month.
- A summary of these records shall be included in NUMMI's monthly report to the District. To satisfy the NSPS requirement of 40 CFR 60, Subpart MM, a negative declaration is also required in NUMMI's monthly report if there are no temperature excursions. (basis: Cumulative Increase)
- 28. The District may revise or revoke Parts 26 and 27 of Condition 10320 if source operations change significantly such that the basis for granting this condition is no longer valid. (basis: Cumulative Increase)
- 31. In no event shall the total annual emissions from the combination of S964, S1072 and S1509 exceed 134.51 tons per year of POC. (basis: Cumulative Increase)
- 32. Clean-up solvent usage for sources S964, S1072, and S1509 shall be collected and recovered at 77% or greater. Monthly excursions below the percent recovery limit are allowed as long as the annual VOC emission limit for clean up is not exceeded. (basis: BACT)
- 33. Paint and solvent from sources S964, S1072, and S1509 shall be recovered in an enclosed collection system and shipped to either a solvent recycler or proper disposal facility. (basis: BACT)
- 34. For the following sources, S1072, S964, and S1509, NUMMI shall record the amount of clean-up solvent used monthly. To verify compliance, monthly reports showing clean-up usage and calculated emissions shall be submitted to the Director of Enforcement. Records

Permit for Facility #: A1438

# VI. Permit Conditions

shall be available for District inspection for a period of at least 5 years following the date on which such data or reports are recorded or made.

(basis: Cumulative Increase)

- 41. In no event shall the total combined, annual coating emissions from sources S1070 and S1071 exceed 21.49 tons per year of POC. (basis: Cumulative Increase)
- 42. Coatings used at sources S1070 and S1071 shall not have a VOC content exceeding the limits in the following table:

Coating VOC Limit (lbs VOC/Gal)

Topcoat (solvent-borne) 6.70

Topcoat (water-borne) 2.93 (less water)

(basis: Cumulative Increase)

- 43. The natural gas heater boxes for the IP Oven (S1071) shall utilize low-NOx burners. (basis: BACT)
- 44. The owner/operator shall abate S1070 with a water contact scrubbing system with an overall control efficiency of 90%. Any downtime of the water contact scrubber system shall be recorded. Such records shall be made available for inspection upon request and kept for a minimum of 5 years from the date of record. (basis: Cumulative Increase)
- 47. The permit holder shall operate the zeolite concentrator (A592) to abate the organic emissions from source S59 Bumper Prime Booth with a minimum removal efficiency of 90%. To verify compliance with this requirement, the permit holder shall conduct a District approved source test once per calendar year, unless a different schedule is approved. After prior notification to and approval from the District's Source Test Manager, source testing shall be performed to determine the VOC control efficiency of the abatement devices, in accordance with the District's Manual of Procedures. Records of the source test results and shall be kept. All records shall be kept and made available for District inspection for a period of five years following the date of entry. (basis: BACT).
- 48. If the owner/operator of S59 exclusively uses a water-borne primer with a VOC content not exceeding 1.27 lbs VOC per gallon of material, the requirement for abating POC emissions from S59 with abatement devices A571 and A592, or their subsequent replacements, shall not apply. (basis: BACT)
- 49. If the owner/operator of S59 exclusively uses a water-borne primer compliant with Part 48 of Permit Condition 10320, the annual total unabated POC emissions from S59 shall not exceed 38.30 tons. At no time shall the total annual POC emissions from S57, S58, S59 and S65 combined exceed 173 tons, as specified in Part 9 of Permit Condition 10320. (basis: Cumulative Increase)

Permit for Facility #: A1438

#### VI. Permit Conditions

50. If the owner/operator of S59 uses a solvent-borne primer with a VOC content greater than specified in Part 48 of Permit Condition 10320, the requirement for abating POC emissions from S59 using abatement devices A571 and A592, or their subsequent replacements, shall apply. (basis: BACT, Cumulative Increase)

#### Condition # 10481

For S1061, Truck Axle Booth S1062, Truck Axle Oven, And S1063, General Truck Axle Booth and Area Cleaning, and S1510. Cold Cleaner:

Conditions Common to All Sources of the Axle Line:

- 1. All conditions shall be in effect at all times during equipment operation, including period of equipment start-up. For the purposes of determining compliance with emissions and/or usage limit, a year is any twelve month consecutive period; a month is defined as a calendar month. (basis: Cumulative Increase)
- 2. The combined total natural gas usage for all Axle Line combustion sources shall not exceed 1.2 Million (MM) Therms per year. Monthly records of natural gas usage shall be maintained for five years from the date of entry and shall be maintained available for District personnel upon request. (basis: BACT)
- 3. Only natural gas, propane, butane, and LPG shall be used as a fuel for the heater boxes of these sources. (basis: Cumulative Increase)
- 4. The total NOx emissions from the combustion equipment of the Axle Line shall not exceed 6.06 tons per year. (basis: Cumulative Increase)
- 5. The total CO emissions from the combustion equipment of the Axle Line shall not exceed 2.52 tons per year. (basis: Cumulative Increase)
- \*6. NUMMI shall not substitute any materials for those described in this permit application's Health Risk Assessment (HRA), which would trigger a toxics review, and which would result in:
  - a) an increase in the quantity of permitted air toxic compounds emitted,
  - b) the addition of unpermitted air toxic compounds emitted, which were not listed in the permit application HRA, or
  - e) an increase in the permitted VOC content or air toxic compound content for each coating category as specified in the permit application Health Risk Assessment.

without prior notification and approval of the APCO. (basis: Toxics)

7. In order to demonstrate compliance with Parts 4 and 5 of Condition 10481, NUMMI

Permit for Facility #: A1438

#### VI. Permit Conditions

shall calculate the NOx and CO mass emission rates quarterly, using natural gas usage records and District approved NOx and CO emission factors. The NOx and CO emission factors for the Axle Booth (S1061) and Axle Oven (S1062) shall be obtained from the results of the source tests. The owner/operator of S1061 and S1062 shall perform a District approved source test one per Title V permit term for NOx and CO emissions to verify the emissions of Part 4 and 5 of Condition 10481 (basis: Cumulative Increase)

- 8. Abatement equipment must be operated during periods of axle production and during cleanup operations following production. Abatement equipment is not required to operate during periods periods when there are no VOC emissions. (basis: BACT)
- 9. In no event shall the total annual emissions from the combination of S1063 and S1510 exceed 22.32 tons per year of POC. (basis: Cumulative Increase)
- 10. NUMMI shall maintain records of the following data for S1063 (General Truck Axle Booth and Area Cleaning) and S1510 (Cold Cleaner):
  - a. Amount of clean-up solvent used.
  - b. To verify compliance, monthly reports showing clean-up usage and calculated emissions shall be submitted to the Director of Enforcement. (basis: Cumulative Increase)
- 11. Records required for Condition No. 10481 shall be made available for District inspection for a period of 5 years from the date such data was recorded or reports made. (basis: Cumulative Increase)

#### **Condition # 10484**

For S1061, TRUCK AXLE COATING BOOTH, AND S1062, TRUCK AXLE OVEN:

- 1. In no event shall the total annual coating emissions from Axle Booth (S1061) and Axle Oven (S1062) combined exceed 12.22 tons per year of POC. (basis: Cumulative Increase)
- 2. The total coating usage for the sources listed in Condition 10484 shall not exceed the following specified limit unless NUMMI can demonstrate to the satisfaction of the APCO that a change in coating usage and/or composition will not result in emissions exceeding those in Part 1 of Condition 10484:

Off-Line Coating 11,108 gallons per year (basis: Cumulative Increase)

Permit for Facility #: A1438

# VI. Permit Conditions

- 3. Only High Volume Low Pressure (HVLP), electrostatic, and/or APCO approved application equipment with equivalent or higher transfer efficiency shall be used to apply coatings. (basis: BACT)
- 4. NUMMI shall not apply off-line coating in S-1061 and S-1062 having a VOC content in excess of 2.2 lbs/gal. [basis: BACT]
- 5. NUMMI shall use no solvent for purge cleaning of the paint lines. (basis: BACT)
- 6. The VOC emissions per axle shall not exceed 0.087 lb per axle coated. (basis: BACT)
- 7. NUMMI shall maintain the following data:
  - a) Deleted 12/13/2004.
  - b) Amount and type of coating applied.
  - c) Amount of clean-up solvent used.
  - d) Deleted 12/13/2004.
  - e) To verify compliance, monthly compliance reports—showing coating and clean-up usage and total calculated emissions and averaged-monthly emissions per axle shall be submitted to the District Director of Enforcement. The format and content of the compliance reports must be submitted to the APCO for prior approval.

All records required for Condition 10484 shall be available for District inspection for a period of at least 5 years following the date of entry. (basis: Cumulative Increase)

8. The owner/operator shall abate S1061 with a water contact scrubbing system with an overall control efficiency of 90%. Any downtime of the water contact scrubber system shall be recorded. Such records shall be made available for inspection upon request and kept for a minimum of 5 years from the date of record.(basis: BACT)

#### **Condition # 10578**

For S1050, Truck Fuel Tank Coating Booth, And S1051, Truck Fuel Tank – Heater Box:

- 1. In no event shall the total annual coating emissions from Truck Fuel Tank Booth (S1050) and Truck Fuel Tank Oven (S1051) combined exceed 11.68 tons per year of POC. (basis: Cumulative Increase)
- 2. The total coating usage for the sources specified in Condition 10578 shall not exceed the following specified usages limits unless NUMMI can demonstrate to the satisfaction of the APCO that a change in coating limits and/or composition will not

Permit for Facility #: A1438

# VI. Permit Conditions

result in emissions exceeding those in Part 1 of Condition 10578:

Tank Body 24,598 gallons per year

Fastener 9,048 gallons per year

One or more of these coating limits may increase above the specified limits if there is a corresponding usage decrease for one or more of the coatings, based on controlled emissions, so that total emissions, as specified in Part 1 of Condition 10578, for this source are not exceeded. (basis: Cumulative Increase)

- 3. Only High-Volume Low-Pressure (HVLP), electrostatic, and/or APCO approved application equipment with equivalent transfer efficiency (at least 55% Transfer Efficiency for Tank Body coating) shall be used to apply coatings. (basis: BACT)
- 4. NUMMI shall maintain the following data:
  - a) Deleted 12/13/2004.
  - b)Amount and type of coating applied.
  - c)Amount of clean-up solvent used.
  - d) Monthly compliance reports showing coating and clean-up usage and calculated emissions shall be submitted to the District Director of Enforcement.

Records shall be available for District inspection for a period of at least 5 years following the date of entry. (basis: Cumulative Increase)

- 5. Any particulate matter exhausted from the booth (S1050) shall be vented to the Thermal Oxidizer (A809). (basis: Cumulative Increase)
- 6. The POC emissions from the Truck Fuel Tank Oven (S1051) shall be abated by a Thermal Oxidizer (A809). The Thermal Oxidizer (A809) shall be source tested as required in Part 10 of Condition # 10578 to determine net mass emissions, using the following procedure:
  - a. The net mass emissions of POC shall be determined for the booth (S1050) and oven (S1051) combined. To determine the net mass emissions, the following shall be calculated and/or measured:
  - b. POC emissions shall be determined by coating usage and POC content [A].
  - c. Measured POC emissions to A809 Thermal Oxidizer (averaged, using the data obtained from at least 3 current source tests) shall be determined using District approved source testing methods [B].
  - d. Measured POC emissions from A809 Thermal Oxidizer (averaged, using the data obtained from at least 3 current source tests) shall be determined using District approved source testing methods [C].
  - e. The net mass emissions shall be calculated by subtracting the measured POC emissions from the inlet from the calculated POC emissions and adding the measured POC emissions from the outlet [A-B+C].
  - f.The determined value [A-B+C] shall be prorated for production and annualized for the hours of operation. (basis: Cumulative Increase)

# VI. Permit Conditions

g. Within 60 days of the source test, a report shall be provided to the District. This 60-day period may be extended to 90 days, if NUMMI can demonstrate to the satisfaction of the APCO that the additional time is required. If the source test indicates any violation of the permit conditions (total mass emission greater than emission limits for coating line (booth(s) and oven(s) combined), NUMMI shall report such violation to the Director of Enforcement within 10 days of determining that a violation has occurred .(basis: BACT; Manual of Procedures, Volume II, Part 3, Section 4.7)

- 7. The minimum operating temperature for the Thermal Oxidizer (A809) shall be 1400 degrees F. The Thermal Oxidizer (A809) may operate below 1400 degrees F if the source complies with the temperature excursion parameters set forth in Parts 13 and 14 of this condition. (basis: BACT)
- 8. The minimum destruction efficiency of the Thermal Oxidizer (A809) shall be 98.5% by weight, whenever the VOC inlet concentration is greater than or equal to 500 ppmv, measured as methane. Below a concentration of 500 ppmv, the minimum destruction efficiency shall be 95% by weight or total non-methane organic carbon emissions from the outlet of the Thermal Oxidizer (A809) shall be 10 ppmv or less. (basis: BACT, Cumulative Increase)
- 9. The combustion chamber of the Thermal Oxidizer (A809) shall be equipped with District approved continuous temperature measuring and recording instrument. The temperature measuring and recording instrument shall be installed, calibrated and maintained according to the manufacture's specifications. (basis: Cumulative Increase)
- 10. The Thermal Oxidizer (A809) shall be source tested once per calendar year, unless a different schedule is approved. After prior notification to and approval from the District's Source Test Manager, source testing shall be performed to determine the VOC control efficiency of the abatement devices, in accordance with the District's Manual of Procedures. Stack sampling ports and platform(s) shall be provided at the booth exhaust stacks, the oven exhaust stacks, the inlet and outlet of the Thermal Oxidizer (A809). Records of the source test results shall be kept. All records shall be kept and made available for District inspection for a period of five years following the date the report was completed. (basis: BACT)
- 11. Within 60 days of the source testing, a report shall be provided to the District. If the source testing indicates any violation of the permit conditions, NUMMI shall report such violation to the Director of Enforcement within within 10 days of determining that a violation has occurred and also within the report. (basis: BACT; MOP Volume II, Part 3, Section 4.7)
- 12. Low-NOx burners shall be used in the Truck Line Gas Tank Oven (S1051). (basis:

Permit for Facility #: A1438

# VI. Permit Conditions

BACT)

- 13. The minimum temperature and abatement efficiency requirements for Thermal Oxidizers located at NUMMI shall not apply during an "Allowable Temperature Excursion" below the minimum temperature requirement, provided that the controller set temperature is at or above the minimum temperature requirement. An Allowable Temperature Excursion is one of the following:
  - a. A temperature excursion not exceeding 20 degrees F below the requirement; or
  - b. A temperature excursion period(s) aggregating 15 minutes or less in any hour; or
  - e. A temperature excursion greater than 15 minutes but less than 3 hours in duration, provided that all of the following are satisfied:
    - i. There are no more than 2 excursions per facility (Plant No. A1438) per calendar day;
    - ii. There are no more than 2 excursions per abatement device per month; and
    - iii. There are no more than 5 excursions per facility (Plant No. A1438) per month. (basis: Cumulative Increase)
- 14. NUMMI shall keep records to demonstrate that all qualifying criteria for Allowable Temperature Excursions are met including but not limited to the following:
  - a. Starting date and time, and the duration of each Allowable Temperature Excursion:
  - b. Minimum temperature during each Allowable Temperature Excursion;
  - e. Number of Allowable Temperature Excursions (> 15 minutes) per abatement device per month;
  - d. Total number of Allowable Temperature Excursions (> 15 minutes) for the entire facility per month.

A summary of these records shall be included in NUMMI's monthly report to the District. To satisfy the NSPS requirement of 40 CFR 60, Subpart MM, a negative declaration is also required in NUMMI's monthly report if there are no temperature excursions. (basis: Cumulative Increase)

- 15. The District may revise or revoke parts 13 and 14 of Condition 10578 if source operations change significantly such that the basis for granting this condition is no longer valid. (basis: Cumulative Increase)
- 16. All conditions shall be in effect at all times during equipment operation, including period of equipment start-up. For the purposes of determining compliance with emissions and/or usage limits, a year is defined as a twelve month consecutive month period; a month is defined as a calendar month. (basis: Cumulative Increase)
- 17. NUMMI shall not substitute any materials for those described in this permit application's Health Risk Assessment (HRA), which would trigger a toxics review, and which would result in:

Permit for Facility #: A1438

# VI. Permit Conditions

- a) an increase in the quantity of permitted air toxic compounds emitted,
- b) the addition of unpermitted air toxic compounds emitted, which were not listed in the permit application HRA, or
- e) an increase in the permitted VOC content or air toxic compound content for each coating category as specified in the permit application Health Risk Assessment without prior notification and approval of the District. (basis: Toxics)
- 18. The combined total natural gas usage for S1050 and S1051 shall not exceed 0.13 million therms per year. Monthly records of natural gas usage shall be maintained for five years and shall be made available to District personnel upon request. (basis: Cumulative Increase)
- 19. Abatement equipment must be operating during periods of fuel tank production and during cleanup operations following production. Abatement equipment is not required to operate during periods periods when there are no VOC emissions. (basis: BACT)

#### **Condition # 10709**

For S406, WINDSHIELD WASHER FLUIDABOVE GROUND STORAGE TANK:

- 1. The total liquid throughput for Storage Tank S406 shall not exceed 530,170 gallons during any consecutive twelve (12) month period. (basis: Cumulative Increase)
- 2. Only windshield washer fluid shall be stored in tank S406. (basis: Cumulative Increase)
- 3. The following records shall be kept on site and made available for District inspection for a period of 5 years from the date of entry:
  - a. The type and amount of all materials stored in the tank and the dates and amounts when materials are added or removed. (basis: Cumulative Increase)

#### **Condition # 13984**

For S1511, TRUCK ELPO RESIN STORAGE TANK:

- 1. The liquid throughput for Storage Tank S1511 shall not exceed 283,000 gallons during any consecutive 12-month period. (basis: Cumulative Increase)
- 2. Only ELPO Resin materials with a vapor pressure less than 0.5 psia shall be stored in tank S1511. (basis: Cumulative Increase)
- 1. The following records shall be kept on site and made available for District inspection for a period of 5 years of entry:

Permit for Facility #: A1438

# VI. Permit Conditions

a. The type and throughput of materials stored in tank S1511 summarized on a monthly basis. (basis: Cumulative Increase)

Conditions Common to All Sources of the Passenger Paint Shop:

1. All conditions shall be in effect at all times during equipment operation, including period of equipment start-up, unless otherwise indicated.

For the purposes of determining compliance with emissions and/or usage limits, a year is defined as any twelve month consecutive period; a month is defined as a calendar month. (basis: Cumulative Increase)

2. The minimum temperature and abatement efficiency requirements for Thermal Oxidizers located at NUMMI shall not apply during an "Allowable Temperature Excursion" below the minimum temperature requirement, provided that the controller set temperature is at or above the minimum temperature requirement. An Allowable

Permit for Facility #: A1438

# VI. Permit Conditions

Temperature Excursion is one of the following:

- a. A temperature excursion not exceeding 20 degrees F below the requirement; or
- b. A temperature excursion period(s) aggregating less that or equal to 15 minutes in any hour; or
- e. A temperature excursion greater than 15 minutes but less than 3 hours in duration, provided that all of the following are satisfied:
  - i. There are no more than 2 excursions per facility (Plant No. A1438) per day;
  - ii. There are no more than 2 excursions per abatement device per month; and
  - iii. There are no more than 5 excursions per facility (Plant No. A1438) per month.

(basis: Cumulative Increase)

- 3. NUMMI shall keep records to demonstrate that all qualifying criteria for Allowable Temperature Excursions are met including but not limited to the following:
  - a. Starting date and time, and the duration of each Allowable Temperature Excursion;
  - b. Minimum temperature during each Allowable Temperature Excursion;
  - c. Number of Allowable Temperature Excursions (> 15 minutes) per abatement device per month;
  - d. Total number of Allowable Temperature Excursions (> 15 minutes) for the entire facility per month.

A summary of these records shall be included in NUMMI's monthly report to the District. To satisfy the NSPS requirement of 40 CFR 60, Subpart MM, a negative declaration is also required in NUMMI's monthly report if there are no temperature excursions. (basis: Cumulative Increase)

- 4. The District may revise or revoke parts 2 and 3 of Condition 14205 if source operations change significantly such that the basis for granting this condition is no longer valid. (basis: Cumulative Increase)
- 5. Total emissions of organic compounds from the North Passenger Paint Shop sources, calculated on the basis of coating and solvent usage and including any reductions due to abatement, shall not exceed 719.23 tons per year (TPY) of POC. (basis: Cumulative Increase)
- 6. The combined total natural gas usage for all North Passenger Paint Shop combustion sources shall not exceed 9.63 Million (MM) Therms per year. Monthly records of natural gas usage shall be maintained for five years—from the date—of entry and shall be maintained available for District personnel upon request. NUMMI shall only use a District approved gas meter. (basis: Cumulative Increase)
- 7. Only natural gas, propane, butane, and LPG shall be used as a fuel for combustion equipment for sources S3009, S3015, and S3017. (basis: Cumulative Increase)

#### VI. Permit Conditions

8. Manual touch-up or repair operations may be performed in the North Passenger Paint Shop booth and oven sources. The total usage of coating for manual touch-up or repair shall not exceed 6,906 gallons per year, or result in POC emissions exceeding 19.91 tons per year. (basis: Cumulative Increase)

- 9. The total NOx emissions from the combustion equipment (including Booth Air Supply Houses, Oven Heater Boxes, Thermal Oxidizers, and Boiler) of the North Passenger Paint Shop sources shall not exceed 40.54 tons per year. (basis: Cumulative Increase)
- 10. The total CO emissions from the combustion equipment (including Booth Air Supply Houses, Oven Heater Boxes, Thermal Oxidizers, and Boiler) of the North Passenger Paint Shop sources shall not exceed 50.46 tons per year. (basis: Cumulative Increase)
- 11. NUMMI shall maintain the following data:
  - a) Usage records of each coating shall be kept on a monthly basis.
  - b) Amount of clean-up solvent used shall be kept on a monthly basis.
  - e) d. Monthly reports showing coating and clean-up usage and calculated emissions shall be submitted to the Director of Enforcement. If an exceedance is calculated, NUMMI shall submit a written report with this monthly report to the District to demonstrate that the overall North Passenger Paint Shop sources will not exceed the overall emissions limit specified in Part 5 of Condition 14205.

Records shall be available for District inspection for a period of at least five years following the date of entry. (basis: Cumulative Increase)

- 12. In order to demonstrate compliance with Parts 9 and 10 of Condition 14205, NUMMI shall calculate quarterly the NOx and CO mass emission rates, using natural gas usage records and District approved NOx and CO emission factors. The NOx and CO emission factors for the Thermal Oxidizers (A3008, A3014, and A3016), Booths (S3008, S3014, S3016) and Ovens (S3009, S3015, and S3017) shall be based on the results of the most recent source tests, required by the District. The owner/operator shall perform District approved source test of nitrogen oxide and carbon monoxide emissions from the combustion equipment of the axle line once per Title V permit term to verify compliance with Part 9 and 10 of Condition 14205. (basis: Cumulative Increase)
- 13. Abatement equipment must be operated during periods of passenger vehicle production and during cleanup operations following production. Abatement equipment is not required to operate during periods periods when there are no VOC emissions. (basis: BACT)

# VI. Permit Conditions

submit a written report with this monthly report to the District to demonstrate that the overall North Passenger Paint Shop sources will not exceed the overall emissions limit specified in Part 5 of Condition 14205.

Records shall be available for District inspection for a period of at least five years following the date of entry. (basis: Cumulative Increase)

- 12. In order to demonstrate compliance with Parts 9 and 10 of Condition 14205, NUMMI shall calculate quarterly the NOx and CO mass emission rates, using natural gas usage records and District approved NOx and CO emission factors. The NOx and CO emission factors for the Thermal Oxidizers (A3008, A3010, A3014, and A3016), Booths (S3008, S3014, S3016) and Ovens (S3007, S3009, S3015, and S3017) shall be based on the results of the most recent source tests, required by the District. To verify compliance with Parts 9 and 10 of Condition 14205, NUMMI shall perform District approved source tests for nitrogen oxide and carbon monoxide emissions from the combustion equipment of the oven heater boxes, once per Title V permit term. (basis: Cumulative Increase)
- 13. Abatement equipment must be operated during periods of passenger vehicle production and during cleanup operations following production. Abatement equipment is not required to operate during periods periods when there are no VOC emissions. (basis: BACT)
- 14. All volatile organic compound (VOC) emissions from Source 3007, NPS ELPO Oven, shall be abated by thermal oxidizer, A3010, NPS ELPO Oven Thermal Oxidizer. (basis:Cumulative Increase, BACT)
- 15. Thermal oxidizer, A3010, shall be operated and maintained in accordance with manufacturer specifications. (basis: Cumulative Increase, BACT)
- 16. A3010 shall be equipped with APCO approved continuous temperature measuring and recording instrumentation. The temperature and measuring recording instruments shall be installed, calibrated and maintained according to the manufacturer's specification. Daily records of continuous temperature measurements for the Thermal Oxidizer (A3010) shall be made and made available to District inspection for a period of 5 years from the date the record was made. The temperature chart or digital recorder is subject to the parametric monitoring and recordkeeping requirements of District Regulation 1-523. [basis: BACT, Regulation 1-523]
- 17. The thermal oxidizer, A-3010, shall comply with the following parameters:
  - a. The minimum operating temperature shall be 1200 °F, regardless of the inlet concentration, unless owner/operator can prove to the satisfaction of the APCO that the required abatement efficiency can be achieved at a lower temperature.
  - b. The minimum abatement efficiency for A3010 shall be as follows:
  - i.90% destruction efficiency by weight or

Permit for Facility #: A1438

# VI. Permit Conditions

ii. Total non-methane organic hydrocarbon emissions from the outlet of A3010 shall be 10 ppm or less by volume or

- iii. Total emissions from outlet of A3010 shall not exceed 0.12 lbs VOC per gallon of electrophoretic primer used. (basis: BACT, District Regulation 8-13-306)
- A3010 shall be source tested once per calendar year. If the source test indicates any violation of the permit conditions, the owner/operator shall report such violation to the Director of Enforcement within 10 days of determining that a violation has occurred.

  Records of source test results shall be kept for a period of five years following the date of entry. (basis: BACT; Manual of Procedures, Volume II, Part 3, Section 4.7)
- 19. Only natural gas, propane, LPG, or butane shall be used as a fuel for abatement device A3010. (basis: Cumulative Increase)

#### Condition # 14206

For S3008, PRIME BOOTH, AND S3009, PRIME OVEN:

- 1.In no event shall the annual coating emissions (not including manual touch up or repair) from these two sources (S3008 and S3009) combined exceed 130.94 tons per year or 16.36 tons per month of POC, unless NUMMI notifies the District within 30 calendar days of such an exceedance and submits a written report with the scheduled, monthly report to demonstrate that the overall North Passenger Paint Shop sources will not exceed the overall emissions limit specified in Part 5 of Condition 14205. (basis: Cumulative Increase)
- 2. The total coating usage limits (not including manual touch-up or repair) for these two sources (S3008 and S3009) shall not exceed the following specified limits unless NUMMI can demonstrate to the satisfaction of the APCO that a change in coating usage and/or composition will not result in emissions exceeding those in Part 1 of Condition 14206:

Coating	<del>Gallons/Year</del>	Gallons/Month
Primer	60,869	<del>- 7,608</del>
Interior Color	32,435	<del>-4,054</del>
Black Out	<del>8,105</del>	<del>1,013</del>
Soft-Chip	<del>8,225</del>	<del>-1,028</del>

One or more of these usages may increase above the specified limit if there is a corresponding usage decrease for one or more of the other coatings, which is based on controlled emissions, so that total emissions do not exceed the limit, specified in Part 1 of Condition 14206. NUMMI shall provide documentation to demonstrate compliance with Part 1 of Condition 14206 within 30 days of the exceedance of any of the coating limits. (basis: Cumulative Increase)

#### VI. Permit Conditions

3. The natural gas heater boxes for the Primer Oven (S3009) shall utilize low NOx burners or equivalent. Low-NOx burners in heater boxes are typically estimated to emit 0.1 pound per million BTU. If source tests indicate that emissions are higher than 0.1 pound per million BTU, then NUMMI shall provide a detailed explanation and/or other documentation to verify that low-NOx burners are indeed being used correctly. (basis: Cumulative Increase)

- 4. Only High-Volume-Low-Pressure (HVLP), electrostatic, and/or APCO approved application equipment with equivalent or higher transfer efficiency shall be used to apply coatings. Air-atomized spray equipment may be used to apply Repair, Blackout, and Soft-Chip coatings. (basis: BACT)
- 5. The Thermal Oxidizer (A3008) shall remain in operation during clean-up operations for at least thirty minutes after production. (basis: BACT)
- 6. To minimize the amount of clean-up solvent used in the booth, NUMMI shall:
  - a. Provide a paper or plastic lining, or protective removable coating for the walls and fixtures of the booth, except over doors and windows.
  - b. Cover all robots, where practical.
  - c. Replace the paper/plastic lining, or protective removable coating on an as needed basis.

(basis: BACT)

- 7. NUMMI shall abate particulate emissions from S3008 with a water contact scrubber sytem with an overall control efficiency of 98%. Any downtime of the water contact scrubber system shall be recorded. Such records shall be made available for inspection upon request and kept for a minimum of 5 years from the date of record.(basis: BACT)
- 8. POC emissions from the Primer Booth (S3008) autozone shall be controlled a Thermal Oxidizer (A3008), with the option of being concentrated first by an Activated Carbon Adsorber (A30082). This includes POC emissions from clean-up and wet-down operations occurring during the normal hours of operation. (basis: BACT)
- 9. The POC emissions from the Primer Oven (S3009) shall be abated by a Thermal Oxidizer (A3008). (basis: BACT)
- 10. The minimum operating temperature for the Thermal Oxidizer (A3008) shall be 1400 degrees F. The Thermal Oxidizer (A3008) may operate below 1400 degrees F if the source complies with the temperature excursion parameters set forth in Parts 2 and 3 of Condition 14205. (basis: BACT)

# VI. Permit Conditions

11. The VOC destruction efficiency of the Thermal Oxidizer (A3008) shall be maintained at a minimum of 98.5% by weight, whenever the inlet concentration of VOC to the Thermal Oxidizer (A3008) is equal to or greater than 500 ppmv, as measured as methane. Below a concentration of 500 ppmv, the precursor organic destruction efficiency shall be kept at a minimum of 95% by weight or total non-methane organic carbon emissions from the outlet of the Thermal Oxidizer (A3008) shall be 10 ppm by volume or less. (basis: BACT)

- 12. The combustion chamber of the Thermal Oxidizer (A3008) shall be equipped with District approved continuous temperature measuring and recording instrument (analog or digital). The temperature measuring and recording instrument shall be installed, calibrated and maintained according to the manufacture's specifications.
  - The temperature chart or digital recorder is subject to the parametric monitoring and recordkeeping requirements of Regulation 1-523. (basis: BACT, Regulation 1-523)
- 13. The Thermal Oxidizer (A3008) shall be source tested once per calendar year, unless a different schedule is approved. After prior notification to the District's Source Test Manager, source testing shall be performed to determine the VOC control efficiency of the abatement devices, in accordance with the District's Manual of Procedures. Records of the source test results shall be kept. All records shall be kept and made available for District inspection for a period of five years following the date of entry. (basis: BACT)
- 14. Within 60 days of the completing any source testing, a report shall be provided to the District. This 60 day period may be extended to 90 days, if NUMMI can demonstrate to the satisfaction of the APCO that the additional time is required. If the source testing indicates any violation of the permit conditions, NUMMI shall report such violation to the Director of Enforcement in within within 10 days of determining that a violation has occurred and also within the report. (basis: BACT; MOP Volume II, Part 3, Section 4.7)
- 17. To demonstrate compliance with Part 3 of Condition 14206, the heater boxes of NPS Prime Oven (S3009) shall be source tested once per calendar year to determine the NOx emission rate (lb/MMBTU). After prior notification to the District's Source Test Manager, source testing shall be performed in accordance with the District's Manual of Procedures. Results of the source test shall be submitted to the District for review and approval within 60 days of the source test. Records of the source test results shall be kept and made available for District inspection for a period of five years following the date of entry. (basis: Regulation 2-6-409.2)
- 18. The permit holder shall operate the carbon concentrator (A30082) to abate the

Permit for Facility #: A1438

# VI. Permit Conditions

organic emissions from source S3008 NPS Booth—will a minimum destruction efficiency of 90%. To verify compliance with this requirement, the permit holder shall conduct a District approved source test once per calendar year, unless a different schedule is approved. After prior notification to and approval from the District's Source Test Manager, source testing shall be performed to determine the VOC control efficiency of the abatement devices, in accordance with the District's Manual of Procedures. Records of the source test results and shall be kept. All records shall be kept and made available for District inspection for a period of five years following the date of entry. (basis: BACT).

# Condition # 14206

For S3008, PRIME BOOTH, AND S3009, PRIME OVEN:

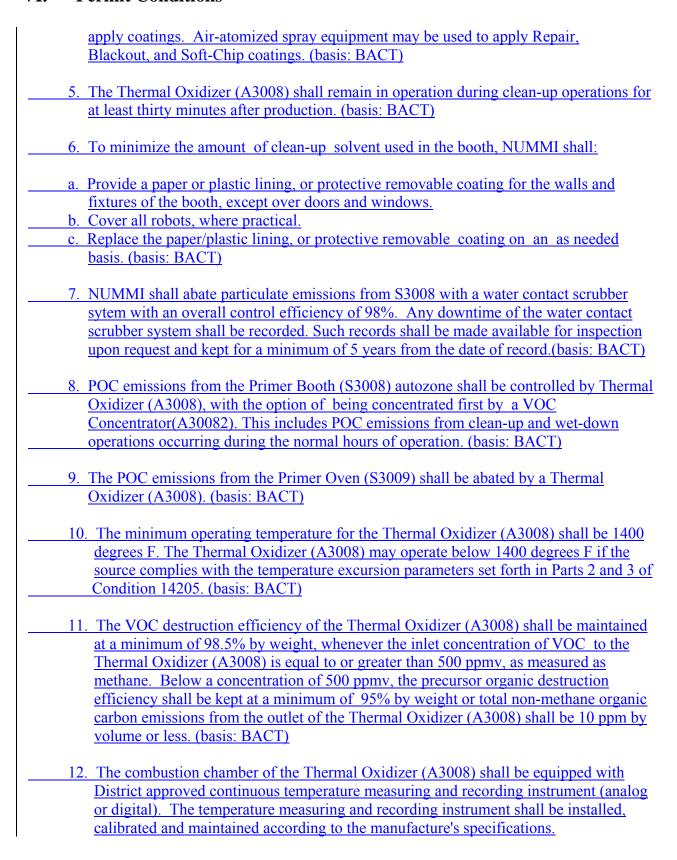

- 1. In no event shall the annual coating emissions (not including manual touch-up or repair) from these two sources (S3008 and S3009) combined exceed 160.14 tons per year or 20 tons per month of POC, unless NUMMI notifies the District within 30 calendar days of such an exceedance and submits a written report with the scheduled, monthly report to demonstrate that the overall North Passenger Paint Shop sources will not exceed the overall emissions limit specified in Part 5 of Condition 14205. (basis: Cumulative Increase)
- 2. The owner/operator of S3008 and S3009 shall ensure that coatings used do not exceed the following VOC content limits:

Coating	VOC Limit (lbs VOC/Gal)
Primer	4.0
Interior Color	4.12
Black Out	4.12
Soft Chip	6.96
Antichip	4.13
(basis: Cumulative Increase)	

- 3. The natural gas heater boxes for the Primer Oven (S3009) shall utilize low-NOx burners or equivalent. Low-NOx burners in heater boxes are typically estimated to emit 0.1 pound per million BTU. If source tests indicate that emissions are higher than 0.1 pound per million BTU, then NUMMI shall provide a detailed explanation and/or other documentation to verify that low-NOx burners are indeed being used correctly. (basis: Cumulative Increase)
- 4. Only High-Volume-Low-Pressure (HVLP), electrostatic, and/or APCO approved application equipment with equivalent or higher transfer efficiency shall be used to

- 14. Within 60 days of the completing any source testing, a report shall be provided to the District. This 60 day period may be extended to 90 days, if NUMMI can demonstrate to the satisfaction of the APCO that the additional time is required. If the source testing indicates any violation of the permit conditions, NUMMI shall report such violation to the Director of Enforcement within 10 days of determining that a violation has occurred and also within the report. (basis: BACT; MOP Volume II, Part 3, Section 4.7)
- Prime Oven (S3009) shall be source tested once per calendar year to determine the NOx emission rate (lb/MMBTU). After prior notification to the District's Source Test Manager, source testing shall be performed in accordance with the District's Manual of Procedures. Results of the source test shall be submitted to the District for review and approval within 60 days of the source test. Records of the source test results shall be kept and made available for District inspection for a period of five years following the date of entry. (basis: Regulation 2-6-409.2)
  - 16. The permit holder shall operate the VOC concentrator (A30082) to abate the organic emissions from source S3008. NPS Booth shall have a minimum removal efficiency of 90%. To verify compliance with this requirement, the permit holder shall conduct a District approved source test once per calendar year, unless a different schedule is approved. After prior notification to and approval from the District's Source Test Manager, source testing shall be performed to determine the VOC control efficiency of the abatement devices, in accordance with the District's Manual of Procedures. Records of the source test results and shall be kept. All records shall be kept and made available for District inspection for a period of five years following the date of the source test. (basis: BACT).

#### **Condition # 14207**

For S3014, NPS TOP COAT BOOTH #1,

- S3015, NPS TOPCOAT OVEN #1,
- S3016, NPS TOPCOAT BOOTH #2, AND
- S3017, NPS TOPCOAT OVEN #2:

Permit for Facility #: A1438

#### VI. Permit Conditions

1. In no event shall the annual coating emissions (not including manual touch-up or repair) from the Topcoat Booths and Ovens (\$3014, \$3015, \$3016, and \$3017) combined exceed 250.5 tons per year or 31.3 tons per month of POC, unless NUMMI notifies the Director of Enforcement within 30 calendar days of such an exceedance and submits a written report with the scheduled, monthly report to demonstrate that the overall North Passenger Paint Shop sources will not exceed the overall emissions limit specified in Part 5 of Condition 14205. (basis: Cumulative Increase)

2. The total coating usage (not including manual touch-up or repair) for the sources, \$3014, \$3015, \$3016, and \$3017, shall not exceed the following specified limits unless NUMMI can demonstrate to the satisfaction of the APCO that a change in coating limits and/or composition will not result in emissions exceeding those Part 1 of Condition 14207:

Coating	<del>Gallons/Yr</del>	Gallons/Mon
Base Coat	123,552	<del>15,444</del>
Clear Coat	91,289	<del>11,411</del>
Non-Met High-Solids	<del>52,452</del>	<del>6,557</del>

One or more of these coatings limits may increase above the specified limit if there is a corresponding usage decrease for one or more of the other coatings, such that total emissions do not exceed the limit, specified in Part 1 of Condition 14207. NUMMI shall provide documentation to demonstrate compliance with Part 1 of Condition 14207 within 30 days of the exceedance of any of the coating limits. (basis: Cumulative Increase)

- 3. The natural gas heater boxes for the Topcoat #1 and #2 Ovens (S3015 and S3017) shall utilize low-NOx burners or equivalent. Low-NOx burners in heater boxes are typically estimated to emit 0.1 pound per million BTU. If source tests indicate that emissions are higher than 0.1 pound per million BTU, NUMMI shall provide a detailed explanation and/or other documentation to verify that low-NOx burners are indeed being used correctly. (basis: Cumulative Increase)
- 4. Only High-Volume-Low-Pressure (HVLP), electrostatic, and/or APCO approved application equipment with equivalent or higher transfer efficiency shall be used to apply coatings. Air-atomized spray equipment may be used to apply Repair, and Blackout coatings. (basis: BACT)
- 5. The Thermal Oxidizers (A3014 and A3016) shall remain in operation during clean-up operations for at least thirty minutes after production. (basis: BACT)
- 6. To minimize the amount of clean-up solvent used in the booth, NUMMI shall:

  a. Provide a paper or plastic lining, or a protective removable coating for the walls

# VI. Permit Conditions

and fixtures of the booth, except over doors and windows.

- b. Cover all robots, where practical.
- c. Replace the paper/plastic lining, or protective removable coating on an as needed basis. (basis: BACT)
- 7. Primary method for removal of particulate matter from S3014 and S3016 shall be a water contact scrubbing system (A30141). The overall control efficiency of the system shall be 98%. Any downtime of the water contact scrubber system shall be recorded. Such records shall be made available for inspection upon request and kept for a minimum of 5 years from the date of record. (basis: BACT)
- 8. POC emissions from each Topcoat #1 and 2 Booth (S3014 and S3016) autozone shall be controlled by a Thermal Oxidizer (A3014 abating S3014 and A3016 abating S3016) with the option of being concentrated by Activated Carbon Adsorbers (A30142 and A30162). This includes POC emissions from clean-up and wet-down operations occurring during the normal hours of operation. (basis: BACT)
- 9. The POC emissions from the Topcoat #1 and #2 Ovens (S3015 and S3017) shall be abated by a Thermal Oxidizer (A3014 and A3016, respectively). (basis: BACT)
- 10. The minimum operating temperature for the Thermal Oxidizers (A3014 and A3016) shall be 1400 degrees F. The Thermal Oxidizers (A3014 and A3016) may operate below 1400 degrees F if the source complies with the temperature excursion parameters set forth in Parts 2 and 3 of Condition 14205. (basis: BACT)
- 11. The minimum destruction efficiency of the Thermal Oxidizer (A3014 and A3016) shall be 98.5% by weight, whenever the POC inlet concentration is greater than or equal to 500 ppmv, measured as methane. Below a concentration of 500 ppmv, the minimum destruction efficiency shall be 95% by weight or total non-methane organic carbon emissions from the outlet of the Thermal Oxidizers (A3014 and A3016) shall be 10 ppmv or less. (basis: BACT)
- 12. The combustion chamber of the Thermal Oxidizers (A3014 and A3016) shall be equipped with District approved continuous temperature measuring and recording instrument (analog or digital). The temperature measuring and recording instrument shall be installed, calibrated and maintained in accordance with the manufacture's specifications.
  - The temperature chart or digital recorder is subject to the parametric monitoring and recordkeeping requirements of Regulation 1-523. (basis: BACT, 1-523)
- 13. The Thermal Oxidizers (A3014 and A3016) shall be source tested once per calendar year, unless a different schedule is approved. After prior notification to and approval from the District's Source Test Manager, source testing shall be performed to determine the VOC control efficiency of the abatement devices, in accordance with

Permit for Facility #: A1438

#### VI. Permit Conditions

the District's Manual of Procedures. Records of the source test results and shall be kept. All records shall be kept and made available for District inspection for a period of five years following the date of entry. (basis: BACT)

- 14. Within 60 days of the above described source testing, a report shall be provided to the District. This 60 day period may be extended to 90 days, if NUMMI can demonstrate to the satisfaction of the APCO that the additional time is required. If source testing indicates any violation of the permit conditions, NUMMI shall report such violation to the Director of Enforcement in the report. (basis: BACT)
- 17. To demonstrate compliance with Part 3 of Condition 14207, the heater boxes of Topcoat Ovens #1 and #2 shall be source tested once per calendar year to determine the NOx emission rate (lb/MMBTU). After prior notification to the District's Source Test Manager, source testing shall be performed in accordance with the District's Manual of Procedures. Results of the source test shall be submitted to the District for review and approval within 60 days of the source test. Records of the source test results shall be kept and made available for District inspection for a period of five years following the date of entry. (basis: Regulation 2-6-409.2)

#### Condition # 14207

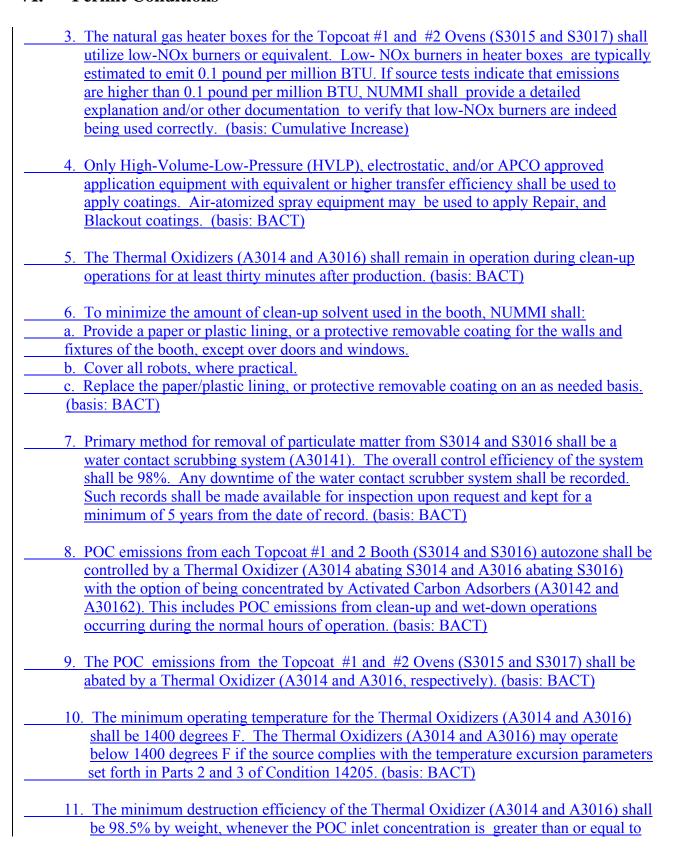

For	S3014, NPS TOP COAT BOOTH #1,
	S3015, NPS TOPCOAT OVEN #1,
	S3016, NPS TOPCOAT BOOTH #2, AND
	S3017, NPS TOPCOAT OVEN #2:

- 1. In no event shall the annual coating emissions (not including manual touch-up or repair) from the Topcoat Booths and Ovens (S3014, S3015, S3016, and S3017) combined exceed 250.5 tons per year or 31.3 tons per month of POC, unless NUMMI notifies the Director of Enforcement within 30 calendar days of such an exceedance and submits a written report with the scheduled, monthly report to demonstrate that the overall North Passenger Paint Shop sources will not exceed the overall emissions limit specified in Part 5 of Condition 14205. (basis: Cumulative Increase)
  - 2. The owner/operator of Topcoat Booths and Ovens (S3014, S3015, S3016 and S3017) shall ensure that the topcoat materials used do not exceed the following VOC content limits:

Coating	VOC Limit (lbs VOC/Gal)
Basecoat	4.88
Clear Coat	4.12
Non-Met High Solids	3.59
(basis: Cumulative Increas	<u>se)</u>

Permit for Facility #: A1438

#### VI. Permit Conditions

500 ppmv, measured as methane. Below a concentration of 500 ppmv, the minimum destruction efficiency shall be 95% by weight or total non-methane organic carbon emissions from the outlet of the Thermal Oxidizers (A3014 and A3016) shall be 10 ppmv or less. (basis: BACT)

12. The combustion chamber of the Thermal Oxidizers (A3014 and A3016) shall be equipped with District approved continuous temperature measuring and recording instrument (analog or digital). The temperature measuring and recording instrument shall be installed, calibrated and maintained in accordance with the manufacture's specifications.

The temperature chart or digital recorder is subject to the parametric monitoring and recordkeeping requirements of Regulation 1-523. (basis: BACT, 1-523)

- 13. The Thermal Oxidizers (A3014 and A3016) shall be source tested once per calendar year, unless a different schedule is approved. After prior notification to and approval from the District's Source Test Manager, source testing shall be performed to determine the VOC control efficiency of the abatement devices, in accordance with the District's Manual of Procedures. Records of the source test results and shall be kept. All records shall be kept and made available for District inspection for a period of five years following the date of entry. (basis: BACT)
- 14. Within 60 days of the above described source testing, a report shall be provided to the District. This 60 day period may be extended to 90 days, if NUMMI can demonstrate to the satisfaction of the APCO that the additional time is required. If source testing indicates any violation of the permit conditions, NUMMI shall report such violation to the Director of Enforcement in the report. (basis: BACT)
  - 15. To demonstrate compliance with Part 3 of Condition 14207, the heater boxes of
    Topcoat Ovens #1 and #2 shall be source tested once per calendar year to determine the
    NOx emission rate (lb/MMBTU). After prior notification to the District's Source Test
    Manager, source testing shall be performed in accordance with the District's Manual of
    Procedures. Results of the source test shall be submitted to the District for review and
    approval within 60 days of the source test. Records of the source test results shall be
    kept and made available for District inspection for a period of five years following the
    date of entry. (basis: Regulation 2-6-409.2)

#### **Condition # 14210**

For S3500, COLD CLEANER,

S3501, COLD CLEANER,

S3502. COLD CLEANER, AND

S30960, GENERAL CLEANING AND PAINT CLEANING:

#### VI. Permit Conditions

1. In no event shall the total annual emissions from the combination of S3500 through S3502 Cold Cleaners and S30960 Fugitive Cleanup exceed 321.03 tons per year or 40.13 tons per month of POC, unless NUMMI notifies the Director of Enforcement within 30 calendar days of such an exceedance and submits a written report with the scheduled, monthly report to demonstrate that the overall North Passenger Paint Shop sources will not exceed the overall emissions limit specified in Part 5 of Condition 14205. (basis: Cumulative Increase)

- 2. Clean-up solvent usage shall be collected and recovered at 65% or greater (overall), as demonstrated by comparing gross solvent usage records to throughput of solvent recovery tank and/or disposal records. Monthly excursions below the percent recovery limit are allowed as long as the annual VOC emission clean up is not exceeded. (basis: BACT)
- 3. Purged paint and solvent shall be recovered in an enclosed collection system and shipped to a solvent recycler or proper disposal site. (basis: BACT)

#### **Condition # 14211**

For S3503, NPS PURGE THINNER TANK, AND S3505, NPS WASTE SOLVENT TANK:

- 1. This source shall be used to store materials for the passenger line coating operation. (basis: Cumulative Increase)
- 2. This source shall be equipped with a submerged fill pipe. (basis: Regulation 8-5-301.1)

#### **Condition # 15149**

For S2826, PLASTIC PLANT BAYCO PART Cleaning Oven

- 1. Visible emissions from this source shall not exceed Ringelmann 0.5. (basis: BACT)
- 2. Source S2826 shall be checked for visible emissions monthly during daylight hours, while the equipment is operating. If any visible emissions are detected, the operator shall take corrective action within one week, and check for visible emissions after corrective action is taken. If no visible emissions are detected, the operator shall continue to check for visible emissions at the same frequency. (basis: Regulation 2-6-409.2)
- 3 Records of all visible emissions checks shall be kept, noting the person performing the check, and all corrective action taken at Source S2826. The

#### VI. Permit Conditions

records shall be retained for five (5) years from the date of entry and shall be made available to District personnel upon request. (basis: Regulation 2-6-409.2)

#### **Condition # 16780**

For

S1504, COLD CLEANER TANK

AND 92007 Co

S2007, COLD CLEANERS:

- 1. In no event shall the combined annual emissions from the operation of S1504S2007, exceed 5,068 pounds of precursor organic compounds during any consecutive twelvementh period. (basis: Cumulative Increase)
- 2. Unless NUMMI can demonstrate to the satisfaction of the APCO, through monthly record keeping and VOC calculations, that an alternative type or amount of material usage will not result in VOC emissions exceeding those limits set in Part 1 of Condition 16780 or increase toxics emissions above any risk screening trigger level, the following usage limits shall not be exceeded while operating the sources-covered by Condition 16780:
  - a. Combined, net Net usage of Safety Kleen 105 shall not exceed 160 gallons during any consecutive twelve- month period.
  - b. Combined, net Net usage of System One Ashland Solvent shall not exceed 60 gallons during any consecutive twelve-month period.
  - c. <u>Combined, net Net</u> usage of NUMMI Solvent IV shall not exceed 500 gallons during any consecutive twelve- month period. (basis: Cumulative Increase)
- 3. In order to verify compliance with the above conditions, the following records shall be maintained in a District approved log and kept on site and made available for District inspection for a period of 5 years from the date on which a record is made:
  - a. The type and net amount of solvent used monthly.
  - b. The monthly quantities shall be totaled on a consecutive 12-month basis. (basis: Cumulative Increase)

#### **Condition # 17797**

For S41, Passenger Body Phosphate Washer

1. Only use natural gas as a fuel for this source (basis: Regulation 9-1-304).

**Condition # 18533** 

#### VI. Permit Conditions

#### For S1900, PLASTIC PARTS ADHESION OPERATION

- 1. Usage of adhesion promoter at S-1900 shall not exceed 50 gallons in any consecutive twelve month period, unless otherwise allowed in part 2 of this condition. (basis: Cumulative Increase, Toxics)
- 2. Material usage in excess of that specified in part 1 of this condition, may be used at S-1900 provided NUMMI can demonstrate that both of the following are satisfied:
  - a. Total POC emissions from S-1900 do not exceed 81 pounds in any consecutive twelve month period; and
  - b. The use of these materials does not increase toxic emissions above any risk screening trigger level listed in Table 2-1-316 of Regulation 2-1. (basis: Cumulative Increase or Toxic Risk Screen)
- 3. To demonstrate compliance with parts 1 and 2 of this condition, NUMMI shall maintain the following records and provide all of the data necessary to evaluate compliance with the stipulations of this condition, including, but not necessarily limited to, the following information:
  - a. Monthly usage of all POC containing materials used;
  - b. If a material other than that specified in part 1 is used or a material specified in part 1 is used in excess of the limit specified in part 1 and/or 2a, POC and toxic component contents of each material used; and mass emission calculations to demonstrate compliance with parts 1 and 2a, on a monthly basis;
  - e. Monthly usage and/or emission calculations shall be totaled for each consecutive twelve month period.

All records shall be recorded in a District approved log. All records shall be retained on site for 5 years, from the date of entry, and made available for inspection by District staff upon request. These recordkeeping requirements shall not replace the recordkeeping requirements contained in any applicable District Regulations. (basis: Cumulative Increase, Toxic Risk Screen)

#### **Condition # 19492**

For S1901, Offline Export Final Repair Area/Booth

- 1a. Usage of final repair coating at S-1901 shall not exceed 425 gallons in any consecutive twelve month period, unless otherwise allowed in part 2 of this condition.
- 1b. Usage of cleanup solvent (i.e., Isopropanol) at S-1901 shall not exceed 5 gallons in any consecutive twelve month period, unless otherwise allowed in part 2 of this condition. (basis: Cumulative Increase)

Permit for Facility #: A1438

#### VI. Permit Conditions

2. Material usage in excess of that specified in part 1 of this condition, may be used at S-1901 provided NUMMI can demonstrate that both of the following are satisfied:

- a. Total POC emissions from S-1901 do not exceed 2,073 pounds in any consecutive twelve month period; and
- b. The use of these materials does not increase toxic emissions above any risk screening trigger level listed in Table 2-1-316 of Regulation 2-1.

(basis: Cumulative Increase or Toxic Risk Screen)

- 3. To demonstrate compliance with parts 1 and 2 of this condition, NUMMI shall maintain the following records and provide all of the data necessary to evaluate compliance with the stipulations of this condition, including, but not necessarily limited to, the following information:
- a. Monthly usage of all POC containing materials used;
- b. If a material other than that specified in part 1 is used or a material specified in part 1 is used in excess of the limit specified in part 1 and/or 2a, POC and toxic component contents of each material used; and mass emission calculations to demonstrate compliance with parts 1 and 2a, on a monthly basis;
- c. Monthly usage and/or emission calculations shall be totaled for each consecutive twelve-month period.

All records shall be recorded in a District-approved log. All records shall be retained on-site for years, from the date of entry, and made available for inspection by District staff upon request. These recordkeeping requirements shall not replace the recordkeeping requirements contained in any applicable District Regulations.

(basis: Cumulative Increase, Toxic Risk Screen)

#### Condition # 22541

This condition was amended by Application 17748 in July, 2008

Conditions for S-3022, NPS Passenger ELPO Dip Tank:

#### 1. EMISSIONS LIMITATION

The owner/operator shall ensure that ED6650 Lead-free Cationic bath or other equivalent material, applied at S-3022 satisfies all of the following conditions:

- a. Total POC emissions from S-3022 do not exceed 60.20 tons in any consecutive twelvemonth period.
- b. The VOC content of any material used at S-3022 does not exceed 0.61 pounds of VOC per gallon.

Permit for Facility #: A1438

#### VI. Permit Conditions

c. The usage of materials at S-3022 does not cause toxic emissions above any chronic trigger level listed in Table 2-5-1 in District Regulation 2-5.
 [Basis: Cumulative Increase and BACT]

#### 2. RECORD KEEPING AND REPORTING

- a. To demonstrate compliance with Part 1 of this permit condition, the owner/operator shall document and maintain objective evidence of the following information:
  - 1) Type, monthly usage and VOC contents of all VOC containing materials (specifically ELPO Resin and ELPO Pigment) used at S-3022. The owner/operator of S-3022 shall ensure that the Laboratory VOC content value is determined per EPA Method 24 (or other method determined by the BAAQMD to be equivalent to BAAQMD Laboratory Method 22);
  - 2) If a material other than that specified in Part 1 is used, toxic component contents of each material used and
  - 3) Mass VOC emission calculations to demonstrate compliance with Part 1.a, on a monthly basis; Monthly emission calculations shall be totaled for each consecutive twelve-month period.
    - [Basis: Cumulative Increase, BACT]
- b. All records shall be retained on site for five years, from the date of entry and made available for inspection by the District staff upon request. These recordkeeping requirements shall not replace the recordkeeping requirements contained in any applicable District regulation. [Basis: Cumulative Increase, BACT]

#### Condition # 22542

Conditions for S-3024, NPS PVC Undercoat Booth:

#### 1. EMISSIONS LIMITATION

The owner/operator shall ensure that Penguin Coating TU500 or other equivalent material, applied at S-3024 satisfies all of the following conditions:

- a. Total POC emissions from S-3024 do not exceed 14.50 tons in any consecutive twelvemonth period.
- b. The VOC content of any material used at S-3024 does not exceed 0.41 pounds of VOC per gallon.
- c. The usage of materials at S-3024 does not cause toxic emissions above any chronic trigger level listed in Table 2-5-1 in District Regulation 2-5. [Basis: Cumulative Increase and BACT]

#### 2. RECORD KEEPING AND REPORTING

Permit for Facility #: A1438

#### VI. Permit Conditions

a. To demonstrate compliance with Part 1 of this permit condition, the owner/operat	or shall
document and maintain objective evidence of the following information:	

- i. Type, monthly usage and VOC contents of all VOC containing materials used at S-3024. The owner/operator of S-3024 shall ensure that the Laboratory VOC content value is determined per EPA Method 24 (or other method determined by the BAAQMD to be equivalent to BAAQMD Laboratory Method 22);
  - ii.If a material other than that specified in Part 1 is used, toxic component contents of each material used and
  - iii. Mass VOC emission calculations to demonstrate compliance with Part 1.a, on a monthly basis; Monthly emission calculations shall be totaled for each consecutive twelve-month period. [Basis: Cumulative Increase, BACT]
- b. All records shall be retained on site for five years, from the date of entry and made available for inspection by the District staff upon request. These recordkeeping requirements shall not replace the recordkeeping requirements contained in any applicable District regulation. [Basis: Cumulative Increase, BACT]

#### **Condition # 22543**

Conditions for S-3025, NPS Passenger Bead Sealer Operations:

#### 1. EMISSIONS LIMITATION

The owner/operator shall ensure that Penguin Seal 1652P bead sealer or other equivalent material, applied at S-3025 satisfies all of the following conditions:

- a. Total POC emissions from S-3025 do not exceed 5.40 tons in any consecutive twelvemonth period.
- b. The VOC content of any bead sealer batch used at S-3025 does not exceed 0.20 pounds of VOC per gallon.
- c. The usage of bead sealer at S-3025 does not cause toxic emissions above any chronic trigger level listed in Table 2-5-1 in District Regulation 2-5.
   [Basis: Cumulative Increase and BACT]

- 2. RECORD KEEPING AND REPORTING
  - a. To demonstrate compliance with Part 1 of this permit condition, the owner/operator shall document and maintain objective evidence of the following information:
  - i. Type, monthly usage and VOC contents of all VOC containing materials used at S-3025. Certificates of Analysis submitted with each batch by Sunnex and/or other NUMMI vendors shall be used to determine VOC contents of materials used at S-3025. The owner/operator of S-3025 shall ensure that the Laboratory VOC content value listed on

Permit for Facility #: A1438

#### VI. Permit Conditions

each Certificate of Analysis is determined per EPA Method 24 (or other method determined by the BAAQMD to be equivalent to BAAQMD Laboratory Method 22);

- ii. For each batch delivered to NUMMI, Certificates of Analysis for all bead sealers used showing the VOC content in lbs/gallon and the test method used for the analysis;
- iii. If a material other than that specified in Part 1 is used, toxic component contents of each material used and
- iv. Mass VOC emission calculations to demonstrate compliance with Part 1.a, on a monthly basis; Monthly emission calculations shall be totaled for each consecutive twelve-month period. [Basis: Cumulative Increase, BACT]
- b. All records shall be retained on site for five years, from the date of entry and made available for inspection by the District staff upon request. These recordkeeping requirements shall not replace the recordkeeping requirements contained in any applicable District regulation. [Basis: Cumulative Increase, BACT]

#### Condition # 22544

Conditions for S-592, NPS Passenger ELPO Resin Storage Tank:

- 1. The owner/operator shall not exceed a total liquid throughput at S-592 of 420,000 gallons during any consecutive twelve-month period. [Basis: Cumulative Increase]
- 2. The owner/operator shall ensure that only ELPO Resin materials with a vapor pressure less than 0.5 psia be stored in tank S-592. [Basis: Cumulative Increase]
- 3. The owner/operator shall ensure that loading of ELPO Resin materials into S-592 be accomplished using a submerged fill system complying with District Regulation 8-5-302.

  [Basis: District Regulation 8-5-302]
- 4. The owner/operator shall ensure that total POC emissions based on the maximum throughput in Part 1, do not exceed 294 pounds in any consecutive twelve-month period.
- [Basis: Cumulative Increase]
- 5. In order to demonstrate compliance with Part 1, the owner/operator of tank S-592 shall either maintain the total monthly throughput of each material stored, summarized on a consecutive twelve-month basis in a District approved log, or shall be able to generate these records within three business days. These records shall be kept on site and made available for District inspection for a period of five years from the date that the record was made. [Basis: Cumulative Increase, Recordkeeping]

Permit for Facility #: A1438

#### VI. Permit Conditions

#### Condition # 22545

Conditions for S-593, NPS Passenger ELPO Pigment Storage Tank:

- 1. The owner/operator shall not exceed a total liquid throughput at S-593 of 42,000 gallons during any consecutive twelve-month period. [Basis: Cumulative Increase]
- 2. The owner/operator shall ensure that only ELPO Pigment materials with a vapor pressure less than 0.5 psia be stored in tank S-593. [Basis: Cumulative Increase]
- 3. The owner/operator shall ensure that loading of ELPO Pigment materials into S-593 be accomplished using a submerged fill system complying with District Regulation 8-5-302. [Basis: District Regulation 8-5-302]
- 4. The owner/operator shall ensure that total POC emissions based on the maximum throughput in Part 1, do not exceed 387 pounds in any consecutive twelve-month period. [Basis: Cumulative Increase]
- 5. In order to demonstrate compliance with Part 1, the owner/operator of tank S-593 shall either maintain the total monthly throughput of each material stored, summarized on a consecutive twelve-month basis in a District approved log, or shall be able to generate these records within three business days. These records shall be kept on site and made available for District inspection for a period of five years from the date that the record was made. [Basis: Cumulative Increase, Recordkeeping]

#### Condition # 24057

For S71, Passenger Cavity Wax Booth:

#### 1. EMISSIONS LIMITATION

The owner/operator shall ensure that Tectyl 555 cavity wax or other equivalent material applied at S71 satisfies all of the following conditions:

- a. Total POC emissions from S71 do not exceed 8.70 tons in any consecutive twelve-month period.
- b. The VOC content of any material used at S71 does not exceed 3.40 pounds of VOC per gallon.

Permit for Facility #: A1438

#### VI. Permit Conditions

c. The usage of materials at S71 does not cause toxic emissions above any chronic trigger level listed in Table 2-5-1 in District Regulation 2-5. [Basis: Cumulative Increase and BACT]

#### 2. RECORD KEEPING AND REPORTING

- a. To demonstrate compliance with Part 1 of this permit condition, the owner/operator shall document and maintain objective evidence of the following information:
  - 1) Type, monthly usage and VOC contents of all VOC containing materials (specifically Cavity Wax) used at S71. The owner/operator of S71 shall ensure that the Laboratory VOC content value is determined per EPA Method 24 (or other method determined by the BAAQMD to be equivalent to BAAQMD Laboratory Method 22);
  - 2) If a material other than that specified in Part 1 is used, toxic component contents of each material used and
  - 3) Mass VOC emission calculations to demonstrate compliance with Part 1.a, on a monthly basis; Monthly emission calculations shall be totaled for each consecutive twelve-month period.
    - [Basis: Cumulative Increase and BACT]
- b. All records shall be retained on site for five years, from the date of entry and made available for inspection by the District staff upon request. These recordkeeping requirements shall not replace the recordkeeping requirements contained in any applicable District regulation. [Basis: Cumulative Increase and BACT]

#### Condition # 22820

For	S1060, Plastic Paint Shop Emergency Standby Diesel Engine
	S1600, SUB 5 Emergency Standby Diesel Engine
	S1601, Truck Paint Emergency Standby Diesel Engine
	S1602, Security Emergency Standby Diesel Engine
	S1603, Hazardous Materials Building Emergency Standby Diesel Engine
	S1604 Waste Water Treatment Plant Emergency Standby Diesel Engine

- \*1. The owner/operator shall not exceed 20 hours per year per engine for reliability-related testing. [Basis: "Stationary Diesel Engine ATCM" section 93115, title 17, CA Code of Regulations, subsection (e)(2)(A)(3) or (e)(2)(B)(3)]
- \*2. The owner/operator shall operate each emergency standby engine only for the following purposes: to mitigate emergency conditions, for emission testing to demonstrate compliance with a District, State or Federal emission limit, or for reliability-related activities (maintenance and other testing, but excluding emission testing). Operating while mitigating emergency conditions or while emission testing to show compliance with District, State or

Permit for Facility #: A1438

#### VI. Permit Conditions

Federal emission limits is not limited. [Basis: "Stationary Diesel Engine ATCM" section 93115, title 17, CA Code of Regulations, subsection (e)(2)(A)(3) or (e)(2)(B)(3)]

- \*3. The owner/operator shall operate each emergency standby engine only when a non-resettable totalizing meter (with a minimum display capability of 9,999 hours) that measures the hours of operation for the engine is installed, operated and properly maintained. [Basis: "Stationary Diesel Engine ATCM" section 93115, title 17, CA Code of Regulations, subsection(e)(4)(G)(1)]
- \*4. Records: The owner/operator shall maintain the following monthly records in a District-approved log for at least 36 months from the date of entry (60 months if the facility has been issued a Title V Major Facility Review Permit or a Synthetic Minor Operating Permit). Log entries shall be retained on-site, either at a central location or at the engine's location, and made immediately available to the District staff upon request.
  - a. Hours of operation for reliability-related activities (maintenance and testing).
  - b. Hours of operation for emission testing to show compliance with emission limits.
  - c. Hours of operation (emergency).
  - d. For each emergency, the nature of the emergency condition.
  - e. Fuel usage for each engine(s).

[Basis: "Stationary Diesel Engine ATCM" section 93115, title 17, CA Code of Regulations, subsection (e)(4)(I), (or, Regulation 2-6-501)]

\*5. At School and Near-School Operation:

If the emergency standby engine is located on school grounds or within 500 feet of any school grounds, the following requirements shall apply:

The owner/operator shall not operate each stationary emergency standby diesel-fueled engine for non-emergency use, including maintenance and testing, during the following periods:

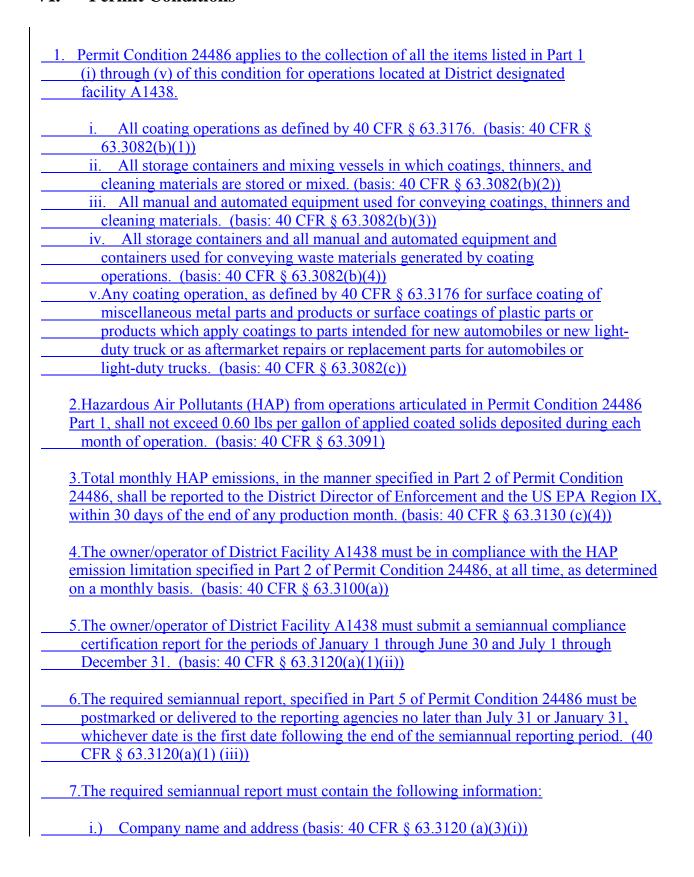

- a. Whenever there is a school sponsored activity (if the engine is located on school grounds)
- b. Between 7:30 a.m. and 3:30 p.m. on days when school is in session. "School" or "School Grounds" means any public or private school used for the purposes of the education of more than 12 children in kindergarten or any of grades 1 to 12, inclusive, but does not include any private school in which education is primarily conducted in a private home(s). "School" or "School Grounds" includes any building or structure, playground, athletic field, or other areas of school property but does not include unimproved school property.

[Basis: "Stationary Diesel Engine ATCM" section 93115, title 17, CA Code of Regulations, subsection (e)(2)(A)(1)] or (e)(2)(B)(2)]

content, the density, and the volume fraction of each coating used for electrodeposition primer, primer-surfacer, topcoat, final repair, glass bonding primer, and glass bonding adhesive operations. Deadener, adhesive and sealer materials that are not part of Facility A1438 glass bonding systems are exempt from this requirement. (basis: 40 CFR § 63.3130 (c)(1)) iii.) Monthly records showing the volume used, the mass fraction organic HAP content, and the density for each thinner used for electrodeposition primer, primersurfacer, topcoat, final repair, glass bonding primer, and glass bonding adhesive operation. Thinners used for deadener and for adhesive and sealer materials that are not part of Facility A1438 glass bonding operations are exempt from this requirement. (basis: 40 CFR § 63.3130 (c)(2)) iv.) For each deadener material and for each adhesive and sealer material, a record showing the mass used in each month, and the mass organic HAP content. (basis: 40 CFR § 63.3130 (c)(3)) The owner/operator must develop and implement a work practice plan to minimize organic HAP emissions from the storage, mixing, and conveying of coatings, thinners, and cleaning materials used in, and waste materials generated by, all coating operations for which HAPS emission limits are applicable. The plan must specify practices and procedures to ensure that, at minimum, the following elements are addressed. (basis: 40 CFR § 63.3094 (b)) i. All organic HAP containing coatings, thinners, cleaning materials, and waste materials must be stored in closed containers. (basis: 40 CFR § 63.3094 (b)(1)) ii. The risk of spills of organic HAP containing coatings, thinners, cleaning materials. and waste materials must be minimized. (basis: 40 CFR § 63.3094 (b)(2)) iii. Organic HAP containing coatings, thinners, cleaning materials, and waste materials must be conveved from one location to another in closed containers or pipes. (basis: 40 CFR § 63.3094 (b)(3)) iv. Mixing vessels, other than day tanks equipped with continuous agitation systems, which contain organic HAP containing coatings and other materials must be closed except when adding to, removing, or mixing the content. (basis: 40 CFR § 63.3094 (b)(4)v. Emissions from organic HAP must be minimized during cleaning of storage, mixing and conveying equipment. (basis: 40 CFR § 63.3094 (b)(5)Minimize organic HAP emissions from cleaning and from purging equipment associated with applicable operations identified in Part 1 of Permit Condition 24486. (basis: 40 CFR § 63.3094 (c)) vii. At minimum the plan must address each of the following operation in which organic HAP containing materials are used or in which there is a potential for organic HAP emissions. a. Vehicle body wipe emissions b.Coating line purging c.Flushing of coating systems

#### VI. **Permit Conditions**

d.Cleaning of spray booth grates
e.Cleaning of spray booth walls
f.Cleaning of spray booth equipment
g.Cleaning of external spray booth area
h.Housekeeping items not address by items a through g of Part 10
(vii) of Permit Condition 24486. (basis: 40 CFR § 63.3094
(c)(1)(i) through (viii))
viii. Copies of the current work practice plan developed in accordance
with Part 10 of Permit Condition 24486, as well as plans developed within the
preceding 5 years must be available on-site for inspections and copying by
both the District and US EPA. (basis: 40 CFR § 63.3094(f))
11. The owner/operator of District Facility A1438 shall develop and implement a written
startup, shutdown and malfunction plan (SSMP). The plan must conform to the
specifications detailed in 40 CFR § 63.6(e)(3). (basis: 40 CFR § 63.6(e)(3))
i. The SSMP must contain the following element
a. Detailed procedures for operating and maintaining abated sources during periods
of startup, shutdown and malfunctions.
b. A program of corrective action for malfunction incidents
c. A list of pollution control and monitoring equipment (basis: 40 CFR
§ 63.6(e)(3))
ii. During periods of startup, shutdown, and malfunction, the owner/operator must
operate and maintain applicable sources identified in the SSMP in a manner consistent
with documented SSMP procedures. (basis: 40 CFR § 63.6(e)(3)(ii))
iii. When action taken by the owner/operator of District Facility A1438
during a startup, shutdown or malfunction, including actions taken to
correct a malfunction, are consistent with the procedures specified in the
SSMP, the owner/operator of District Facility A1438 must keep records to
demonstrate that procedures in the SSMP was followed. The records may take the
form of a checklist or other effective form of recordkeeping that confirms
conformance with the SSMP for that event. (basis: 40 CFR § 63.6(e)(3)(iii))
iv. Records specified in Permit Condition 24486 Part 11 (iii) shall be
maintained and made readily available for District or appropriate agency inspection
for a period of 5 years from the date the record was made. (basis: 40 CFR §
<u>63.10(3))</u>
v.Copies of the SSMP, including revisions, must be maintained and made readily
available for District or other appropriate agencies, for inspection and copying for a
period of 5 years. (basis: 40 CFR § 63.6(e)(3)(v))
vi. If the SSMP fails to address or inadequately addresses an event that meets the
characteristic of a malfunction but was not included in the SSMP at the time the plan was
developed, the owner/operator shall, within 45 days after the event, revise the SSMP to
include detailed procedures for operating and maintaining the affected source(s) during
similar malfunction events and a program of corrective actions for similar

Permit for Facility #: A1438

## VI. Permit Conditions

malfunctions of processes or air pollution control and monitoring equipment. (basis: 40 CFR § 63.6(e)(3)(viii))

vii. Each revision of the SSMP must be reported to the District and US EPA

Region IX in the semiannual report required by Permit Condition 24486 Part 5.

(basis: 40 CFR § 63.6(e)(3)(viii))

## VII. APPLICABLE LIMITS & COMPLIANCE MONITORING REQUIREMENTS

This section has been included only to summarize the applicable emission limits contained in Section IV, Source-Specific Applicable Requirements, of this permit. The following tables show the relationship between each emission limit and the associated compliance monitoring provisions, if any. The monitoring frequency indicates whether periodic (P) or continuous (C) monitoring is required. For periodic monitoring, the frequency of the monitoring has also been shown, using the following codes: annual (A), quarterly (Q), monthly (M), weekly (W), daily (D), or on an event basis (E). No monitoring (N) has been required if the current applicable rule or regulation does not require monitoring, and the operation is unlikely to deviate from the applicable emission limit based upon the nature of the operation.

Note that emission limits indicated in each table are combined emission limits for sources identified in table, unless otherwise specified in individual emission limits.

This section is only a summary of the limits and monitoring requirements. In the case of a conflict with any requirement in Sections I-VI, the preceding sections take precedence over Section VII.

## VIII. TEST METHODS

The test methods associated with the emission limit of a District regulation are generally referenced in Section 600 et seq. of the regulation. The following table indicates only the test methods associated with the emission limits referenced in Section VII, Applicable Limits & Compliance Monitoring Requirements, of this permit.

Applicable		
Requirement	<b>Description of Requirement</b>	Acceptable Test Methods
BAAQMD	Ringelmann No. 1 Limitation	Manual of Procedures, Volume I, Evaluation of Visible
6- <u>1-</u> 301		Emissions; US EPA Method 9
BAAQMD	Tube Cleaning	Manual of Procedures, Volume I, Evaluation of Visible Emissions
6- <u>1-</u> 304		
BAAQMD	Particulate Weight Limitation	Manual of Procedures, Volume IV, ST-15, Particulates Sampling:
6- <u>1-</u> 310		US EPA Method 5, Determination of Particulate Matter Emissions
		<u>from Stationary Sources</u>
SIP	Ringelmann No. 1 Limitation	Manual of Procedures, Volume I, Evaluation of Visible
<u>6-301</u>		Emissions; US EPA Method 9
SIP	Tube Cleaning	Manual of Procedures, Volume I, Evaluation of Visible Emissions
<u>6-304</u>		
SIP	Particulate Weight Limitation	Manual of Procedures, Volume IV, ST-15, Particulates Sampling;
<u>6-310</u>		US EPA Method 5, Determination of Particulate Matter Emissions
		from Stationary Sources
BAAQMD	Miscellaneous Operations	Manual of Procedures, Volume IV, ST-7, Non-Methane Organic
8-2-301		Carbon Sampling; or EPA Method 25 or Determination of Total
		Gaseous Nonmethane Organic Emissions as Carbon, or
		EPA Method 25A, Determination of Total Gaseous Organic
		Concentration Using a Flame Ionization Analyzer
BAAQMD	Final Limits	Manual of Procedures, Volume II, Method 21.
8-3-302		
BAAQMD	Limitation on Solvents and	Manual of Procedures, Volume IV, ST-7, Non-Methane Organic
8-4-302	Surface Coatings (3/17/82)	Carbon Sampling Manual of Procedures, Volume IV, ST-7,

## IX. PERMIT SHIELD

Not Applicable.

## X. REVISION HISTORY

Final Title V Permit (Application 16480):

December 18, 2002

Significant Revision (Applications 6914, 7048, 7119,

7151, 8370, 8419, and 8493):

December 13, 2004

- Change of responsible official;
- Renaming of permitted sources to clarify actual operational use;
- Deletion of permitted sources which have been removed;
- Replacement of permitted abatement devices which have been replaced;
- Removal of sources which have been determined exempt;
- Change of conditions for existing sources (incorporating District applications);
- Removal of particulate monitoring for dry filters, which has been determined to be unnecessary;
- Addition of particulate monitoring for scrubbers;
- Correction of erroneous information.

Minor Revision (Application 12215):

October 24, 2007

Modify permit condition numbers 9158, 9163 and 9164 to include the following:
 Total non-methane organic hydrocarbon emissions from the outlet of the thermal oxidizers shall be 10 ppm or less by volume. These changes specify that the thermal oxidizers used to abate emissions from NUMMI's truck line operations will be in compliance in the event the outlet emissions from the thermal oxidizers are less than or equal to 10 ppm by volume of non-methane hydrocarbons.

Minor Revision Renewal Title V Permit (Application 1221516248): October 24,

2007

## XI. Glossary

#### **ACT**

Federal Clean Air Act

#### **APCO**

Air Pollution Control Officer

#### **BAAQMD**

Bay Area Air Quality Management District

#### **BACT**

Best Available Control Technology

#### Basis

The underlying authority, which allows the District to impose requirements.

#### CAA

The federal Clean Air Act

## **CAAQS**

California Ambient Air Quality Standards

#### **CEQA**

California Environmental Quality Act

#### **CFR**

The Code of Federal Regulations. 40 CFR contains the implementing regulations for federal environmental statutes such as the Clean Air Act. Parts 50-99 of 40 CFR contain the requirements for air pollution programs.

#### CO

Carbon Monoxide

#### **Cumulative Increase**

The sum of permitted emissions from each new or modified source since a specified date pursuant to BAAQMD Rule 2-1-403, Permit Conditions (as amended by the District Board on 7/17/91) and SIP Rule 2-1-403, Permit Conditions (as approved by EPA on 6/23/95). Used to determine whether threshold-based requirements are triggered.

#### **District**

The Bay Area Air Quality Management District

#### Dscf

**Dry Standard Cubic Feet** 

#### **EPA**

The federal Environmental Protection Agency.

## XI. Glossary

#### Excluded

Not subject to any District Regulations.

#### Federally Enforceable, FE

All limitations and conditions which are enforceable by the Administrator of the EPA including those requirements developed pursuant to 40 CFR Part 51, subpart I (NSR), Part 52.21 (PSD), Part 60, (NSPS), Part 61, (NESHAPs), Part 63 (HAP), and Part 72 (Permits Regulation, Acid Rain), and also including limitations and conditions contained in operating permits issued under an EPA-approved program that has been incorporated into the SIP.

#### FP

Filterable Particulate as measured by BAAQMD Method ST-15, Particulate.

#### HAP

Hazardous Air Pollutant. Any pollutant listed pursuant to Section 112(b) of the Act. Also refers to the program mandated by Title I, Section 112, of the Act and implemented by both 40 CFR Part 63.

#### **Major Facility**

A facility with potential emissions of: (1) at least 100 tons per year of regulated air pollutants, (2) at least 10 tons per year of any single hazardous air pollutant, and/or (3) at least 25 tons per year of any combination of hazardous air pollutants, or such lesser quantity of hazardous air pollutants as determined by the EPA administrator.

#### **MFR**

Major Facility Review. The District's term for the federal operating permit program mandated by Title V of the Act and implemented by District Regulation 2, Rule 6.

#### MOP

The District's Manual of Procedures.

#### **NAAQS**

National Ambient Air Quality Standards

#### **NESHAPs**

National Emission Standards for Hazardous Air Pollutants. See in 40 CFR Part 61.

#### **NMHC**

Non-methane Hydrocarbons (Same as NMOC)

#### **NMOC**

Non-methane Organic Compounds (Same as NMHC)

#### **NO**x

Oxides of nitrogen.

## XI. Glossary

#### **NPOC**

Non-precursor organic compounds

#### NSPS

Standards of Performance for New Stationary Sources. Federal standards for emissions from new stationary sources. Mandated by Title I, Section 111 of the Act, and implemented by 40 CFR Part 60 and District Regulation 10.

#### **NSR**

New Source Review. A federal program for pre-construction review and permitting of new and modified sources of air pollutants for which the District is classified "non-attainment". Mandated by Title I of the Clean Air Act and implemented by 40 CFR Parts 51 and 52 as well as District Regulation 2, Rule 2. (Note: There are additional NSR requirements mandated by the California Clean Air Act.)

## **Offset Requirement**

A New Source Review requirement to provide federally enforceable emission offsets at a specified ratio for the emissions from a new or modified source and any pre-existing cumulative increase minus any onsite contemporaneous emission reduction credits. Applies to emissions of POC, NOx, PM10, and SO2.

#### **Phase II Acid Rain Facility**

A facility that generates electricity for sale through fossil-fuel combustion and is not exempted by 40 CFR 72 from Titles IV and V of the Clean Air Act.

#### POC

Precursor Organic Compounds

#### **PM**

**Total Particulate Matter** 

#### PM10

Particulate matter with aerodynamic equivalent diameter of less than or equal to 10 microns

#### **PSD**

Prevention of Significant Deterioration. A federal program for permitting new and modified sources of air pollutants for which the District is classified "attainment" of the National Air Ambient Quality Standards. Mandated by Title I of the Act and implemented by both 40 CFR Part 52 and District Regulation 2, Rule 2.

#### SIP

State Implementation Plan. State and District programs and regulations approved by EPA and developed in order to attain the National Air Ambient Quality Standards. Mandated by Title I of the Act.

#### SO<sub>2</sub>

Sulfur dioxide

## XI. Glossary

### THC

Total Hydrocarbons (NMHC + Methane)

#### Title V

Title V of the federal Clean Air Act. Requires a federally enforceable operating permit program for major and certain other facilities.

#### TOC

<u>Total Organic Compounds (NMOC + Methane, Same as THC)</u>

### **TRMP**

Toxic Risk Management Plan

### **TSP**

**Total Suspended Particulate** 

### **VOC**

Volatile Organic Compounds

#### **Units of Measure:**

bhp	=	brake-horsepower
btu	=	British Thermal Unit
g	=	grams
gal	=	gallon
hp	=	horsepower
hr	=	hour
lb	=	pound
in	=	inches
max	=	maximum
$m^2$	=	square meter
min	=	minute
mon	=	month
mm	=	million
ppmv	=	parts per million, by volume
ppmw	=	parts per million, by weight
psia	=	pounds per square inch, absolute
psig	=	pounds per square inch, gauge
scfm	=	standard cubic feet per minute
yr	=	year
-		

## XI.APPLICABLE STATE IMPLEMENTATION PLAN

The Bay Area Air Quality Management District's portion of the State Implementation Plan can be found at EPA Region 9's website. The address is:

http://yosemite.epa.gov/r9/r9sips.nsf/Agency?ReadForm&count=500&state=California&cat=Bay+Area+Air+Quality+Management+District-Agency-Wide+Provisions
